Mr. Trevelyan, in his 'Life of Lord Macaulay,' tells a story which illustrates Austin's brilliancy as a converser, while on a visit to Lord Lansdowne at Bowood. Macaulay and Austin happened to get upon college topics one morning at breakfast. 'When the meal was finished they drew their chairs to either end of the chimney-piece, and talked to each other across the hearthrug, as if they were on a first-floor in the old court of Trinity. The whole company—ladies, artists, politicians, and diners-out—formed a silent circle round the two Cantabs, and, with a short break for lunch, never stirred till the bell warned them that it was time to dress for dinner.' Having chosen law as a profession, Austin entered as a student at the Middle Temple, read in the chambers of Sir William Follett, then in the height of his fame as an advocate, and was called to the bar in 1827. He joined the Norfolk circuit; and went the

Ipswich, Bury, and Norwich sessions. The reputation which he brought from Cambridge was sustained in London, and his conversational powers were regarded by those who knew Macaulay and Sydney Smith as unmatched. He wrote much for the 'Parliamentary History and Review,' and contributed occasionally for the 'Retrospective Review' and the 'Westminster Review.' But his rapid success at the bar soon led him to quit all literary labour. The late Mr. Sumner, who met Austin frequently in 1839, describes him as 'the first lawyer in England *me jūdice*,' adding that he was 'a more animated speaker than Follett; perhaps not so smooth and gentle, neither is he ready or instinctively sagacious in a law argument, and yet he is powerful here, and immeasurably before Follett in accomplishments and liberality of view. He is a fine scholar, and deeply versed in English literature and the British constitution.' It was the wish of Austin's friends that he should enter parliament, and the elder Mill used his offices with Joseph Hume to get him returned for Bath. But he never presented himself as a candidate to any constituency. In 1841 he was made queen's counsel. Such was his professional position that he is said to have been offered the solicitor-generalship. His success at the parliamentary bar was unprecedented. In 1847, the year of the railway mania, his income was enormous—the computations of it vary from 40,000*l.* to 100,000*l.* There is a story that, when he left his chambers one morning in the year of the great gold discoveries, some one wrote on the door 'Gone to California;,' and there is another of his having been seen riding in the park during the height of the parliamentary session, and of his saying to one who asked how he came to be there, that he was doing equal justice to all his clients. At the parliamentary bar there linger traditions of his skill as a cross-examiner and his oratorical force. The trying work of his profession had overtaken a constitution never very strong; and in 1848 he retired from practice with a large fortune. From that time to that of his death he lived in retirement, reading much, interested in public affairs, but withdrawn from all active participation in them, and content to do his duties as a landlord. He indulged his passion for the ancient classics, and kept abreast of modern literature. He lost the anti-theological asperity which had in early years marked his speculative opinions, and 'wisely or unwisely,' writes one who knew him well, 'in his later years he accepted the religion of his country in the manner sanctioned by Elisha and practised by Socrates.' He was

high-steward of Ipswich and chairman of the quarter-sessions of East Suffolk, and his duties in that position he performed admirably. Throughout the twenty-six years which elapsed between his quitting the bar and his death the world received no hint that the forensic equal of Follett and Scarlett, the most eloquent disciple of Bentham, the rival in conversation of Macaulay and Sydney Smith, was still living; and the news of his death, on 21 Dec. 1874, was a surprise to many of his old friends who believed that he had long ago passed away. He married, in 1856, Harriet Jane, daughter of the late Captain Ralph Mitford Preston Ingelby. He died at Brandeston Hall, near Wickham Market, on 21 Dec. 1874.

[Fortnightly Review, March 1875; Law Times, 2 Jan. 1875; Bain's Life of James Mill; John Stuart Mill's Autobiography; Moultrie's Dream of Life.] J. M.-L.

AUSTIN, HENRY (17th cent.), was the author of a poem called 'The Scourge of Venus, or the Wanton Lady. With the Rare Birth of Adonis. The Second Impression, corrected and enlarged, by H. A.' (1614). It has been reprinted in Dr. Grosart's 'Occasional Issues of Unique and Extremely Rare Books' (1876). The poem was for long anonymous beyond its initials on the title-page and the 'epistle to the reader,' but an incidental reference to it by Thomas Heywood discloses its authorship. In his address to the reader before his 'Brazen Age' (1613) Heywood writes:—'What imperfection soeuer it haue, hauing a brazen face it cannot blush; much like a Pedant at this Towne, who, when all trades fail'd, turn'd Pedagogue, and once insinuating with me, borrowed from me certaine Translations of Ouid, as his three books "De Arte Amandi," and two, "De Remedio Amoris," which since, his most brazen face hath most impudently challenged as his own, wherefore I must needs proclaime it as far as *Ham*, where he now keeps schoole, *Hos ego versiculos feci, tulit alter honores*, they were things which out of my iuniority and want of iudgement, I committed to the veiw of some priuate friends, but with no purpose of publishing, or further communicating the. Therefore I wold entreate that *Austin*, for so his name is, to acknowledge his wrong to me in shewing them, and his owne impudence and ignorance in challenging the. But courteous Reader, I can onely excuse him in this, that this is the *Brazen Age*.'

This invective referred to the first edition of the 'Scourge,' published in 1618. It is noticeable and suggestive that H[enry] A[ustin], so far from pleading guilty or ac-

knowledging Heywood's claim, quietly republished his poem, and, what must have been exasperating to Heywood, with Heywood's own publisher of the 'Brazen Age.' A third edition appeared in 1620, also printed by Nicholas Okes. The full justice of Heywood's accusation may be reasonably doubted. Its *gravamen* seems at most to amount to this, that Austin had constructed his poem by help of Heywood's 'juvenile' translations, and in his rather ambiguous epistle to the reader Austin apparently admits so much. 'If it were my owne wit,' he says in reference to his book, 'and you condemne it, I should be ashamed of my publike intrusion; but since it was the labour of a man wel-deserving, forbear open reprehending: For as I haue heard, 'twas done for his pleasure, without any intent of an Impression: thus much I excuse him that I know not, and commend that which deserueth well. If I be partiall, I pray patience.' The 'Scourge of Venus' shows traces of the influence of Shakespeare's poems upon its author.

[Dr. Grosart's Occasional Issues (1876), as above.] A. B. G.

AUSTIN, JOHN (1613-1669), a catholic writer under the pseudonym of WILLIAM BIRCHLEY, was born in 1613 at Walpole in Norfolk, and studied under Mr. Trevillian in the grammar school of Sleaford, Lincolnshire, for a year and a half before entering the university of Cambridge, where he was admitted a pensioner of St. John's College under Mr. Clerke. He remained at St. John's till about 1640, when, having embraced the catholic religion, he found it necessary to quit the university. He entered as a student at Lincoln's Inn, and there is reason to believe that he distinguished himself as a lawyer; but the turbulence of the times and his religious belief prevented him from continuing the practice of his profession as a means of livelihood. During the civil war he resided for some time as tutor in the family of Walter Fowler, Esq., of St. Thomas in Staffordshire. About 1650 he returned to London. In a postscript to one of his works, the second part of the 'Christian Moderator' (1652), Austin alludes to a mournful event, by which he was unexpectedly called into the country; and as, after this date, he was enabled to retire to private lodgings in the metropolis, it has been inferred that he had acquired some property by the death of a relative. His death occurred in Bow Street, Covent Garden, in the summer of 1669, and he was buried in the parish church of St. Paul.

The Rev. John Sergeant, in the epistle dedicatory to the second edition of Austin's

'Devotions' (Rouen, 1672), says of his deceased friend the author: 'He was a Gentleman, so far from retirement, that his Chamber was generally open to Multitudes, who either lov'd his friendly Affability, or needed his useful Advice or Charitable Assistance. His Conversation and outward behaviour were exceedingly cheerful and pleasant. He appear'd Severe in nothing but sincere Honesty, in nothing Singular but perfect Innocence consistent with so much Freedom. The Great Business of his Life, that concern'd Heaven, was transacted in the inmost recess of his Soul, and never disclos'd it self without reluctance and constraint. He was a Traveller, and brought home from Forreign Countries all that could conduce to a Manly becomingness and wise carriage, leaving the Extravagancies and follies where he found them. He was well skill'd in the best of our European Languages, and an absolute Master of our own.' And Dodd (*Church History*, iii. 257) says: 'Mr. Austin was a gentleman of singular parts and accomplishments, and so great a master of the English tongue that his stile still continues to be a pattern for politeness. His time was wholly spent in books and learned conversation; having the advantage of several ingenious persons' familiarity, who made a kind of Junto in the way of learning—viz., Mr. Thomas Blount, Mr. Blackloe, Francis St. Clare [Christopher Davenport], Mr. John Serjeant, Mr. Belson, Mr. Keightley, &c., all men of great parts and erudition, who were assistants to one another in their writings.'

Austin's works are: 1. 'The Christian Moderator, or Persecution for Religion condemned; By the Light of Nature, Law of God, Evidence of our own Principles' [London], 1651, 4to, pp. 28. The postscript is signed William Birchley. This first part was reprinted in 'An Introduction to the Bishop of Bangor's Intended Collection of Authorities,' 1718. A second part appeared in 1652 'with an Explanation of the Roman Catholic Belief, concerning these four points: Their Church, Worship, Justification, and Civill Government.' A third part was published in 1653, entitled 'The Christian Moderator, or The Oath of Abjuration arraign'd by the Common Law and Common sence, Ancient and modern Acts of Parl., Declarations of the Army, Law of God and consent of Reformed Divines. And humbly submitted to receive Judgment from this Honorable Representative.' The anonymous author of 'The Beacon flaming with a Non obstante' (1652) asserts that the 'Christian Moderator' was written by Father Christopher Davenport, better known as Franciscus à Sancta Clara; but Anthony à Wood

informs us that the Rev. John Sergeant assured him that it was the production of Austin, who was his particular friend, and formerly his contemporary at St. John's College, Cambridge. Dodd and Butler are of the same opinion. In this work Austin, assuming the disguise of an independent, shows that Catholics did not really hold the odious doctrines vulgarly attributed to them, and makes an energetic appeal to the independents to extend to the adherents of the persecuted church such rights and privileges as were granted to other religious bodies. A violent reply to this plea for toleration was published in a book called 'Legenda Ligneæ,' by D. Y., 1652. 2. 'Reflections upon the Oaths of Supremacy and Allegiance; or, The Christian Moderator, the fourth part. By a Catholick gentleman, an obedient son of the Church, and loyal subject of His Majesty,' 1661. 3. 'Devotions. First part, In the Antient Way of Offices. With Psalms, Hymns, and Prayers; for every day in the Week, and every Holiday in the Year,' second edition, corrected and augmented, Rouen, 1672, 8vo. This was a posthumous edition brought out by Sergeant, who remarks that Austin composed these 'Devotions,' which 'were long used by divers private friends, and transcripts of them so multiply'd, that they were already become half publick, ere he thought fit to let them be printed.' Sergeant adds that 'less than a year had vended the whole first impression;' but when or where the first edition was published is unknown. There was an edition at Paris in 1675, and a third volume of the work was written, but never published. Dodd mentions that the prayers were added to the work by Austin's friend, Mr. Keightley, 'which some have been pleased to quarrel with, upon a pretence that they favour'd Mr. Blackloe's opinion concerning the middle state of souls. A handsomely printed edition of the 'Devotions' was published at Edinburgh in 1789. In the preface it is stated that 'the "Devotions" were at first published in two volumes. The second, from what cause we know not, is now almost neglected. It consisted of the four gospels reduced to the form of lessons; besides which a third volume remains in manuscript.' Numerous editions of the 'Devotions' were published by the celebrated Dr. Hickes for the use of his protestant congregation, and consequently the book was commonly known among protestants as 'Hickes's Devotions.' 4. 'The Four Gospels in One,' in short chapters, with a verse and prayer at the end of each; mentioned by Butler, who gives no date nor imprint. This doubtless formed the second volume of the first edition of the 'Devotions.' A 'protestantized' ver-

sion of it was published under the title of 'The Harmony of the Holy Gospels, digested into one History, according to the order of time, done originally by the author of the Devotions by way of Offices, publish'd by Dr. Hickes. Reformed and Improved by James Bonnel, London, 1705. 5. 'A Letter from a Cavalier in Yorkshire to a Friend.' 6. 'A Punctual Answer to Dr. John Tillotson's Book, called the Rule of Faith;' an unfinished work, only six sheets being printed. 7. Several anonymous pamphlets against the Assembly of Divines at Westminster.

AUSTIN, JOHN (1717-1784), an Irish Jesuit, was born in Dublin 12 April 1717, and entered the Society of Jesus in Champagne 27 Nov. 1735. After completing the higher studies, he was employed in teaching humanities for several years, and he held the office of prefect of the Irish College at Poitiers. In 1750 he returned to Dublin, where he obtained renown as a preacher. He was professed of the four vows 2 Feb. 1754. Topham Bowden, an English protestant, in his 'Tour through Ireland' (1791), remarks 'that Austin was a very remarkable character, of extraordinary learning and piety; he was a great preacher, and injured his health by his exertions in the pulpit.' Father Austin died in Dublin 29 Sept. 1784, and was buried in St. Kevin's churchyard. The inscription over his grave describes him as 'pius, doctus, indefessus operarius, apostolicis confectus laboribus. Divites admonuit, pauperes sublevavit, juventutem erudit, orphanis loco parentis fuit, de omni hominum genere præclarè meruit, omnibus omnia factus ut omnes Christo lucrificaret.' His portrait, painted by Petrie, and engraved by Brocas, was published in 1792.

AUSTIN, JOHN (fl. 1820), a Scotch inventor, was a native of Craigton. He published at Glasgow, in or about 1800, a system of 'Stenography which may be learned in an hour; on a single folio engraved sheet, price 2s. 6d. A note at the end announces the publication of a complete system by the same author, price one guinea, but this does not appear to have been brought out. He was also the author of an elaborate work

entitled 'A System of Stenographic Music, invented by J. Austin, Glasgow. Dedicated to the Musical World, in English, French, Italian, German, and other Languages,' Glasgow, 50 engraved pages, oblong folio, no date, but published, according to the British Museum catalogue, about 1820. On the title-page is an engraved portrait of the author, who states in the preface that 'the design of this work is to represent to the musical world a new, easy, concise, and universal method of writing music completely on one line only, and adapted to all kinds of vocal and instrumental music and musical instruments, whereby an expert writer may note it down as he hears it performed, so that to those who make it their amusement or profession it will be equally interesting, together with the pleasure of improving and profiting by the art,' and, in conclusion, he remarks that 'if the shorthand writer is pleased in taking from the mouth of an orator, the musical stenographer will be no less so when catching those dulcet sounds which vibrate through the soul, convincing her that she is more than mortal.' Austin likewise appears to have turned his attention to the improvement of weaving machines.

[Thompson Cooper, in *Notes and Queries*, 3rd series, ix. 533; Works cited above; Evans's Catalogue of Portraits, ii. 20.] T. C.

AUSTIN, JOHN (1790-1859), the celebrated jurist, was born 3 March 1790. He was the eldest son of Jonathan Austin, of Creeting Mill, in Suffolk—a remarkable man of sturdy good sense and great mental vigour, who had made a fortune by taking government contracts during the French war. About the age of sixteen, John Austin entered the army, and served for several months with his regiment in Sicily, under the command of Lord William Bentinck. He remained in the army about five years, and then sold his commission and began to study for the bar, to which he was called in 1818 by the Inner Temple. His name appears for the first time in 1819, in the 'Law List,' as an equity draftsman, practising at 2 Old Square, Lincoln's Inn. He is said to have gone the Norfolk circuit; but his name does not occur in the list of counsel practising upon it. About this time Austin became acquainted with James Mill and his son, John Stuart Mill. With the latter in the winter of 1820-21 he went through a course of legal reading. It included a considerable part of Blackstone and Heineccius. In 1820 Austin married a gifted lady, Miss Sarah Taylor, of Norwich. In June 1821 their only child, Lucie, afterwards Lady Duff Gordon, was born.

'They lived,' writes Mrs. Ross, in a sketch of her grandfather's and grandmother's lives, 'in Queen Square, Westminster, almost next door to the house belonging to Mr. James Mill, the historian of British India, and their windows looked into the garden of Jeremy Bentham. These were the most intimate friends of John Austin; and here, it may be said, the utilitarian philosophy of the nineteenth century was born. Bentham's garden was the playground of Lucie Austin and the young Mills; his coachhouse was turned into a gymnasium, and his flower-beds were intersected by threads and ropes to represent the passages of a panopticon prison.' In the drawing-room of the modest London house of the Austins was often found a brilliant company. There might be seen, in his old age, Bentham, the two Mills, Carlyle, the rising lawyers Bickersteth, Erle, and Romilly; wits of the brilliancy of Charles Buller, Sydney Smith, and Luttrell; and among poets, critics, and statesmen, Rogers, Jeffrey, and Lansdowne. Austin did not obtain at the bar the success to which his great talents, acuteness, and powers of lucid and eloquent exposition entitled him in the opinion of his friends. His inability to work rapidly, his habit of taking trouble quite out of proportion to the importance of the matter in hand, were grave obstacles. His health was uncertain; he was subject to fits of feverishness which left him in a state of extreme debility. 'If John Austin had had health, neither Lyndhurst nor I should have been chancellor,' Brougham is said to have observed; and, no doubt, Austin's friends entertained the highest hopes of his success. Finding his profession unremunerative and uncongenial, he gave up in 1825 all thoughts of practice, though not until 1829 did his name disappear from the list of those who took out certificates as equity draftsmen. In 1826 the university of London (now University College) was established mainly through the efforts of Austin's friends; and he was appointed by the council to the chair of jurisprudence. He took great pains to prepare himself for the task. He resolved to go to Germany, and profit by the teaching of the great jurists who flourished there. He visited Heidelberg, where Thibaut then taught the civil law. He then settled for six months at Bonn, where a group of brilliant scholars, including Niebuhr, Brandis, Schlegel, Arndt, Mackeldey, and Heffter, resided. There, with the assistance of a young *privatdozent*, he read many German works on law. He returned to England in the spring of 1828, and began his lectures at University College. His class was never large; but it included several men

who rose to eminence, among others Sir George Cornewall Lewis, Lord Belper, Lord Romilly, Lord Clarendon, Mr. Charles Villiers, Mr. Hare, and Mr. Whiteside, subsequently lord chief justice of Ireland. Congenial occupation seemed to be before him. He was enthusiastic and zealous, and his earnest and eloquent exposition seemed likely to attract many students. 'Demand explanations and ply me with objections—turn me inside out,' was his characteristic advice to them. But again he was unsuccessful. Pupils flocked to the lecture-room of his colleague, Mr. Amos; his was almost deserted. The number of men attending his lectures dwindled down to five (*SARGANT'S Essays*); and it soon became plain that there was in England no demand for teaching of a high order in jurisprudence. 'There is some hope,' said the *'Law Magazine'* in 1832, 'of his being induced to prepare a course on the Roman law, or the law of nations, for the ensuing session. But it is almost too much to ask him to make an extraordinary exertion for such a meagre audience as he hitherto has had.' Seeing no prospect of obtaining even the small audience with which he would have been content, he resigned his chair in 1832. The year before he published an 'outline' of his course of lectures; and this, corrected and enlarged, was appended to his work, *'The Province of Jurisprudence determined,'* which was published in 1832. It was, at first, little read; and its value was not always appreciated by the few who read it. Lord Melbourne's remark about it, as recorded in the Greville memoirs, expressed a too common opinion. 'In answer to the observation that "the Austins were not fools," he said, "Austin? Oh, a damned fool! Did you ever read his book on Jurisprudence?" I said I had read a great part of it, and that it did not appear to be the work of a fool. He said that he had read it all, and that it was the dullest book he ever read, and full of truisms elaborately set forth' (iii. 138). In 1833 Austin was appointed by Lord Brougham a member of the Criminal Law Commission. He did not find the position or the opportunities of giving effect to his views all that he desired. 'He used to come home,' writes his wife, 'from every meeting of the commission disturbed and agitated, and to express his repugnance to receiving the public money for work from which he thought the public would derive little or no benefit. Some blurred and blotted sheets which I have found bear painful and affecting marks of the struggle that was going on in his mind between his own lofty sense of dignity and duty and the more ordinary sense of duty which subordinates public-

to private obligation.' He accordingly resigned his position upon the commission. In 1834 he was requested by the society of the Inner Temple to deliver a course of lectures on jurisprudence; but they, too, failed to attract students, and they were soon discontinued. His powerful friends, however, still entertained the highest opinion of his capacity, and a new channel of activity was opened to him. In 1836 he and his friend, Sir George Cornewall Lewis, were appointed commissioners to inquire into the administration and state of government of the island of Malta. The task was eminently congenial to a man of Austin's acquirements. The commissioners were instructed to examine into the laws and usages, the administration of the government, the state of the judicature, the civil and ecclesiastical establishments, the revenue, trade, and resources of the island; and they were also requested to make suggestions as to changes which they thought advisable. No commission ever did its work more carefully, and its reports to the colonial office are remarkable papers, dealing with great ability and thoroughness with some of the most important questions of political economy and jurisprudence. Among those possessed of permanent interest are the despatch urging the establishment in Malta of liberty of printing and publishing; the history of the origin of the corn monopoly in that island; the account of the government charities, of which last paper Lord Glenelg, the colonial secretary, said: 'It is impossible that all the necessary facts should have been brought together with greater brevity and clearness, or that the principles which should direct his Majesty's government should have been stated with greater force and perspicuity.' The reform of the tariff which the commission effected was pronounced by Sir James Stephen 'the most successful legislative experiment he had seen in his time.' What was the precise share which Austin had in the laborious work is a little uncertain; but his peculiar ideas and vigorous language are often clearly discernible—for example, in the account of the history of Maltese law and the proposals with respect to legal education. The elaborate ordinance as to liberty of printing and publishing is interesting as a sample of his style of legal drafting. The commission did not accomplish all that was anticipated, and the government of Malta has been repeatedly subjected to considerable changes since 1837. But Austin did much to improve the institutions of the island. Being ill when he returned from Malta, he went to Carlsbad, and spent there the summers of 1841, 1842, and 1843. The winters

he passed in Dresden and Berlin, where he and his wife knew most of the eminent men of the time. While living at Dresden he wrote for the 'Edinburgh Review' a refutation of the arguments in favour of protectionism propounded by Dr. List in 'Das nationale System der politischen Oekonomie.' Though regarding Dr. List's 'desultory' treatise as 'a theory of trade unworthy of grave criticism,' he refuted it with unsparing thoroughness. To see his copy of List's work preserved in the Austin collection in the Inner Temple Library—the book copiously annotated in a bold, clear hand, and scored as a lawyer might score his brief—is to get an idea of the conscientious zeal which Austin carried into all he executed. Austin was at this time under the spell of German scholarship, and he wrote with fervour of his obligation to a land in which he and his wife had so long lived. 'Germany is one of the countries which we respect the most, and to which we are the most attracted, having found in the works of her philosophers, her historians, and her scholars, exhaustless mines of knowledge and instruction, and exhaustless power of pleasure or consolation. Above all we admire the spirit of comprehensive humanity which generally comes through the writings of her classical authors; and it is one of the causes of quarrel with Dr. List that he labours to diffuse a spirit of exclusive and barbarous nationality in the country of Leibnitz, Kant, and Lessing.' To the 'Edinburgh Review' of January 1847 he contributed an elaborate article on centralisation. Taking as his text 'De la Centralisation,' by Timon [Cormenin], and other French works, he endeavoured to dissipate the crowd of fallacies which had gathered round the idea of centralisation. He sought to clear up certain ideas concerning it, and, among them, the confusion between centralisation and over-government, and the common assumption that the former is incompatible with free or popular government, or local government of popular origin. The article concluded with two suggestions still well worthy of consideration—one that the function of private or specific legislation ought to be delegated to subordinate judicial functionaries; the other that there should be a permanent commission, composed of experienced lawyers, whose business it would be to examine and report upon bills submitted to either house of parliament.

In 1844-48 Austin lived in Paris. Shortly after his arrival he was made by the Institute a corresponding member of the moral and political class. Driven from France by the revolution, he settled with his wife at Weybridge in Surrey, where they took a 'long,

low rambling old house,' and there the remainder of his days was spent in retirement. It was the happiest period of his life. His interest in jurisprudence, political economy, and politics was undiminished. He followed the course of events with unflagging interest. The *coup d'état* deeply excited his wrath, and Napoleon III was an especial object of aversion to him. 'I can see him now,' writes a relative, 'with his magnificent hazel eyes flashing as he struck the table with his fist, saying "By God, sir, he is a scoundrel!"' Dissatisfied with all he did, Austin wrote little. He could not even be induced to prepare a second edition of his work on jurisprudence. In 1859 he wrote an article intended as a review in one of the quarterlies of Earl Grey's book on 'Parliamentary Reform.' It was rejected by the editor, and he published it as a pamphlet under the title of 'A Plea for the Constitution.' It was an acute defence of the English constitution as it existed and a warning of the danger of widening the suffrage and putting political power into the hands of people who were not fit to use it. 'It will be remarked,' he says in a sentence in the preface, which strikes the keynote of the pamphlet, 'by those who do me the honour of reading the essay, that the consequences I anticipate from any parliamentary reform are all of them mischievous.' The whole essay indicates that Austin's political opinions had been much influenced by his residence abroad; that the 'insane' revolution of 1848 had inspired him with dread of democracy, and that he had abandoned most of the political ideas of Bentham and the radical friends of his youth. He died in December 1859, just as his principles with respect to codification were triumphing in India. His death was little noted; even the legal journals of the time did not mention it; and Mr. J. S. Mill's article in the 'Edinburgh Review' of October 1863 was the first intimation to the majority even of English lawyers that they had lost a great jurist. In 1861 his widow edited a new edition of the 'Province of Jurisprudence,' and added to it a preface, in which she told the chief facts of her husband's life with much pathos. Two years afterwards she published two volumes of his lectures, or such remains of them as she, with remarkable sagacity and zeal, could discover. She was engaged in preparing another edition when she died, and the work was completed by Mr. Robert Campbell. The record of Austin's life is, in many respects, one of failure and disappointment. 'I was born out of time and place,' he himself said. 'I ought to have been a schoolman of the twelfth century or a German professor.' Asked why he did not do more for his brother, the

brilliant and successful Charles Austin said: 'John is much cleverer than I, but he is always knocking his head against principles.' He found for his teaching no appreciative public. When first published his 'Province of Jurisprudence' was little noticed. The hope expressed in one of his lectures that laymen would come to take an interest in jurisprudence was crushed by his failure to procure the attention even of lawyers. Abroad he was, and still is, little known. His name is not found in such a work as 'Holtzendorff's Rechts-Lexicon,' which contains notices of almost every obscure mediæval jurist; and German jurists still confound law proper with morality, as if he had never written. It is doubtful whether he even made in the last forty-two years of his life, by his profession, by his pen, or as a lecturer, a hundred pounds. The end of his life was, to use his wife's words, one of obscure and honourable poverty. There is no reason, however, to lay the blame of this neglect solely upon an inappreciative generation. He was not well equipped for active work. Outwardly austere, he had also a softness of nature which unfitted him for the battle of life. His friend, John Stuart Mill, who has sketched his character with kindly but truthful touches, points out one signal weakness when he says: 'The strength of will of which his manner seemed to give such strong assurance expended itself principally in manner. He spent so much time and exertion on superfluous study and thought that, when his work ought to have been completed, he had generally worked himself into an illness without having finished what he undertook.' His style, too, militated against him. It was clear, and occasionally eloquent; but it abounded in repetitions and amplifications which, however suitable in an instrument settled by an equity draftsman, were repulsive even to intelligent readers. Though a brilliant talker—Macaulay said that he scarcely knew his superior—he wrote in a manner which repelled and disheartened even his admirers. In some respects his labours have been as successful as he could have desired. He helped to revolutionise jurisprudence. He found it, in spite of Hobbes's and of Bentham's labours, an undigested mass of loose theories and vague terminology. The late Mr. Phillimore, speaking of the terminology used by English lawyers, compares it with too much appropriateness to 'the gabble of bushmen in a craal.' Austin introduced exactness of thought and expression. He gave to such terms as 'law,' 'status,' 'sovereignty,' a degree of precision unknown before. He clearly distinguished law proper

from objects to which, by metaphor or analogy, it is extended. He showed the relation of custom to law. He described the nature of judicial legislation and its disadvantages without repeating Bentham's exaggerated vituperation. Not the least of Austin's services is that he gave a great impetus to the work of codification. It is inaccurate to speak of his main doctrines as truisms. The best proof of this is that they are still unknown to, or opposed by, the chief jurists of Germany and France. A reaction against his teaching has, it is true, begun. Sir Henry Maine and other students of law from its historical side have criticised his conception of law—general commands of a superior enforced by sanctions—as inapplicable to much that should form part of jurisprudence; and the tendency is to extend that science beyond positive law, to which he would confine it. It is said that he did not take sufficient account of the genesis of law. He confined the domain of positive law to 'law set by a sovereign body of persons, to a member of the independent political society wherein that person or body is sovereign or supreme.' Having regard to Austin's definitions of sovereign and political society, it is often objected that he would exclude from jurisprudence law as known in all barbarous and semi-barbarous and not a few civilised societies. It is also urged that his account of customary law as being either positive morality or law properly so called, only by reason of its being the command of the sovereign, is violently at variance with facts. There is not universal agreement as to the accuracy of his criticisms on the classification of Gaius and Justinian. It is often also objected that he who sought to confine jurisprudence to its true domain too frequently diverges into the region of politics, religion, or ethics. But his work has stood remarkably well the test of criticism. The majority of the objections to Austin's method and conclusions come to little more than a contention that jurisprudence may with advantage be studied historically as well as analytically, and that a large class of facts excluded by his definition from that science must always have especial interest for the jurist.

[Austin's Introduction to Lectures on Jurisprudence; Mill's Autobiography; Parliamentary Papers for 1839, vol. xvii.; Times 12 Aug. 1867; Mrs. Ross's Preface to Lady Duff Gordon's Letters from Egypt.] J. M.-I.

AUSTIN, ROBERT, D.D. (Æ. 1644), puritan divine, published in 1644 a tract, entitled 'Allegiance not impeached, viz. by the Parliament's taking up of Arms (though

against the King's Personall Commands) for the just Defence of the Kings Person, Crown, and Dignity, the Laws of the Land, Liberties of the Subject, &c., 4to. In an 'address to the reader,' the author protests that he had lost much by siding with the parliament; that he had been actuated solely by motives of patriotism in publishing his views to the world; and that he looked forward to the time when the king would 'return in safety, and his throne be established in judgment and in justice.' In 1647 Austin published 'The Parliaments Rules and Directions concerning Sacramental Knowledge drawn into Questions and Answers,' a duodecimo of eight leaves.

[Works.]

A. H. B.

AUSTIN, SAMUEL, the elder (*fl.* 1629), religious poet, was the son of Thomas Austin, Esq., of Lostwithiel, Cornwall. He entered Exeter College, Oxford, in 1623, at the age of seventeen, took the degree of B.A. in 1627, and that of M.A. in 1630, 'about which time, being numbered with the Levites,' he 'was beneficed in his own country' (Wood, *Athen. Oxon.* ed. Bliss, ii. 499). At Oxford he spent much time in composing a long poem on scriptural subjects, which was given to the world in 1629 under the title of 'Austin's Urania, or the Heavenly Muse,' 8vo. In the dedication to Dr. Prideaux, rector of Exeter College, the author describes the difficulties under which the book was written: 'If you knew but the paines I have suffer'd in travell hereof, how many precious houres and dayes I have detain'd from those sports and vanities which are common to others; yea, how much time I have stolne from my other private studies (which lay of necessitie on mee in this place), and sacred them only to this . . . in briefe, what heavy and hard conflicts, and what a tedious travell I have had (as God knowes) in the producing of it, I dare promise my selfe it would make your yielding heart e'en bleed to thinke on't. . . . But now (thanks bee to my God) I have at length finished it.' Such prefatory words as these do not tempt the reader to proceed; but on the next page is a most interesting address in verse to 'my ever honoured friends, those most refined wits and favourers of most exquisite learning, Mr. M. Drayton, Mr. Will. Browne, and my most ingenious kinsman, Mr. Andrew Pollexfen.' It is pleasant to see with what affection and respect this devout young aspirant to poetic honours addresses the authors of the 'Polyolbion' and of 'Britannia's Pastorals,' and implores them to neglect the rural Pan and sing the praises of Divine Providence. Was it in answer to

this appeal that Michael Drayton, in 1630, when publishing his 'Muses' Elysium,' appended to the dainty pastorals, as leaden weights to drag them down, his 'Noah's Flood' and 'David and Goliath'? The 'Urania' itself is not so poor as one would have supposed from the author's admissions in the dedication. Book i. describes the Fall of Man, and book ii. deals with the Redemption. The verse runs fluently, and is not disfigured by harsh grammatical constructions. Evidently the writer had given a close study to 'Britannia's Pastorals,' but though there is little to blame, there is little to commend, and we must be content to admire the piety rather than the poetry of Austin's 'Urania.'

[Wood, *Athen. Oxon.* ed. Bliss, ii. 499; Corser's *Collectanea*, i. 85-90; Boase and Courtney, *Biblioth. Cornub.* i. 8.] A. H. B.

AUSTIN, SAMUEL, the younger (*fl.* 1658), poetical writer, inherited little of his father's humility, and seems, indeed, to have been an arrant coxcomb. He became a commoner of Wadham College, Oxford, in 1652, took his B.A. degree in 1656, and afterwards migrated to Cambridge. At Oxford he made a laughing-stock of himself by his inordinate self-conceit. Wood is very severe on him: 'Such was the vanity of this person that he, being extremely conceited of his own worth, and overvaluing his poetical fancy more than that of Cleveland, who was then accounted the "hectoring prince of poets," fell into the hands of the satirical wits of this university, who, having got some of his prose and poetry, served him as the wits did Tho. Coryat in his time.' These pieces of verse and prose, rendered more ridiculous by grotesque alterations and additions, were published in 1658 'by express order from the Wits,' under the title of 'Naps upon Parnassus; a sleepy Muse nipt and pincht, though not awakened.' A number of satirical commendatory verses is prefixed, among the contributors to which were Thomas Flatman, fellow of New College; Thomas Sprat, of Wadham College, afterwards bishop of Rochester; George Castle, of All Souls'; Alexander Amidei, a Jew and teacher of Hebrew at Oxford; Sylvanus Tylour, of All Souls', and others. At the restoration of Charles II, Austin came before the public with a fulsome 'Panegyrrick' (1661). Luckily this awkward attempt in the Pindaric measure fell stillborn from the press. In a prefatory note to the 'Panegyrrick' he threatens that 'the author, according as these find acceptance, intends a larger book of poems.' Then he enumerates the subjects

that he intends to take in hand, among which are 'Christ's Love to his Church, shadowed out in Joseph and Potiphar's Daughter in a familiar Dialogue betwixt them,' 'Two Lovers in one Heart,' 'The Young Man's speech to a silent Woman,' &c. What became of him after the publication of the 'Panegyrick' is not known.

[Wood, Athen. Oxon. ed. Bliss, ii. 499, iii. 675; Corser's Collectanea, i. 90-93; Boase and Courtney, Biblioth. Cornub. i. 8.] A. H. B.

AUSTIN, SAMUEL (d. 1834), water-colour painter, was a native of Liverpool. He commenced life as a banker's clerk, but eventually gave up a good position in order to devote himself entirely to the art in which he had excelled as an amateur, and of which he was enthusiastically fond. He exhibited water-colour drawings at the Society of British Artists from 1824 to 1826, and from 1827 at the annual exhibitions of the Society of Painters in Water-Colours, of which body he was elected an associate in the last-named year. He painted landscapes, and occasionally rustic figures; but his best works were coast scenes, introducing boats and figures, some of which were from sketches in Holland, France, and on the Rhine. An example of his work, 'Shakespeare's Cliff, Dover, with Luggers on the Beach,' is in the South Kensington Museum. A 'View of Dort' has been engraved after him by William Miller. He died at Liverpool in July 1834.

[Redgrave's Dictionary of Artists of the English School, 1878; Society of British Artists, Exhibition Catalogues, 1824-6; Society of Painters in Water-Colours, Exhibition Catalogues, 1827-34.] R. E. G.

AUSTIN, SARAH (1798-1867), translator, wife of John Austin the jurist, was born at Norwich in 1798. Her father, John Taylor, a yarn maker of that city, and a descendant of John Taylor, a celebrated divine, was a man of literary tastes. Her mother, whose maiden name was Susanna Cook, was accomplished and beautiful. Sarah Austin, who was the youngest of her family, received an excellent education under the direction of her mother. She was remarkably handsome and attractive, and it caused some surprise in Norwich when she married the grave John Austin [see AUSTIN, JOHN]. The marriage, which took place in 1820, was a union of rare intellectual sympathy, and one to which she brought an unusual share of devotion. During the first years of their married life they lived in Queen's Square, Westminster. Mrs. Austin's stately yet charming manners, her talk always full of information, interest-

ing and sensible, if not brilliant, and her many-sided nature made her many warm friends. The younger Mill testified the esteem which he felt for her by the title of *Mutter*, by which he always addressed her. The only child of the marriage, Lucie (afterwards Lady Duff Gordon), was born in 1821. Her husband's scanty measure of success stimulated Mrs. Austin's literary labours, and for many years she was unceasingly busy with her pen. In 1833 she published 'Selections from the Old Testament,' arranged under heads to illustrate the religion, morality, and poetry of the Hebrew Scriptures. 'My sole object has been,' she wrote in the preface, 'to put together all that presented itself to my own heart and mind as most persuasive, consolatory, or elevating, in such a form and order as to be easy of reference, conveniently arranged and divided, and freed from matter either hard to be understood, unattractive, or unprofitable (to say the least) for young and pure eyes.' In the same year she published one of the many admirable translations by which she is best known: 'Characteristics of Goethe from the German of Falk, Von Müller, and others,' with valuable original notes, illustrative of German literature. Her own criticisms are few, but they are excellent, and are marked by that temperance and good sense which distinguished every line she wrote.

In 1834 she translated 'The Story without an End' by Carové, and this admirable translation has since been often republished. In the same year she translated the famous report on the 'State of Public Instruction in Prussia,' addressed by Cousin to Count Montalivet, minister of public instruction. In the preface she pleads eloquently for the cause of national education. 'Society,' she says, 'is no longer a calm current, but a tossing sea; reverence for tradition, for authority, is gone. In such a state of things who can deny the absolute necessity of national education?' In 1839 she returned to the same subject in a pamphlet, originally published in a short-lived periodical, Cochrane's 'Foreign Quarterly Review.' Arguing from the experience of Prussia and France, she urged the establishment in England of a national system of education. One of her last publications (1859) consisted of two letters addressed to the 'Athenæum' on girls' schools and on the training of working women. In these she shows that she had modified her opinions. Speaking of the old village schools, she admits that the teachers possessed little book lore. They were often widows 'better versed in the toils and

troubles of life than in chemistry or astronomy. . . . But the wiser among them taught the great lessons of obedience, reverence for honoured eld, industry, neatness, decent order, and other virtues of their sex and stations, and trained their pupils to be the wives of working men. In 1827 Mrs. Austin went with her husband to Germany and settled in Bonn. She collected in her long residence abroad materials for her work, 'Germany from 1760 to 1814,' which was published in 1854. Some chapters of it had previously appeared as articles in the 'Edinburgh Review' and the 'British and Foreign Review.' This book, by which she is best known, still holds its place as an interesting and thoughtful survey of German institutions and manners. In the autumn of 1836 she accompanied her husband to Malta, busying herself while there with investigations into the remains of Maltese art. On their return from that island, she and her husband went to Germany. Thence they passed to Paris, where they remained until they were driven home by the revolution of 1848. In 1840 she translated Ranke's 'History of the Popes,' which was warmly praised by Lord Macaulay and Dean Milman. When this translation was published, her intimate friend Sir George C. Lewis wrote to her saying, 'Murray is very desirous that you should undertake some original work. Do you feel a *Beruf* of this sort?' But she did not feel such a *Beruf*; most of her subsequent works consisted of translations. In 1861 she wrote, as a preface to a new edition of 'The Province of Jurisprudence determined,' a memoir of her husband full of pathos. From that time to 1863 she was laboriously engaged in preparing for the press a large mass of manuscript notes of his lectures, and in that year appeared 'Lectures on Jurisprudence, or the Science of Positive Law.' She was meditating the preparation of a new edition when she died on 8 Aug. 1867 at Weybridge from an acute attack of heart disease. Sarah Austin did not possess genius, but all she wrote is marked by nice discrimination and the touch of the true literary artist. Her style is clear, unaffected, and forcible. She had a high standard of the duties of a translator, and she sought to conform rigorously to it. 'It has been my invariable practice,' she herself said, 'as soon as I have engaged to translate a work, to write to the author of it, announcing my intention, and adding that if he has any correction, omission, or addition to make, he might depend on my paying attention to his suggestions.' She did much to make the best minds of Germany

familiar to Englishmen, and she left a literary reputation due as much to her conversation and wide correspondence with illustrious men of letters as to her works.

The following is a list of her principal works, besides those already named: 1. 'Translation of a Tour in England, Ireland, and France by a German Prince,' 1832. 2. 'Translation of Raumer's England in 1835,' 1836. 3. 'Ranke's History of the Popes,' 1840. 4. 'Fragments from German Prose Writers,' 1841. 5. 'Niebuhr's Stories of the Gods and Heroes of Greece,' 1843. 6. 'Ranke's History of the Reformation in Germany,' 1845. 7. 'Translation of Guizot on the Causes of the Success of the English Revolution,' 1850. 8. 'Letters of Sydney Smith,' 1855 (second volume of Lady Holland's Life and Letters). 9. 'Memoirs of the Duchess of Orleans,' 1859. 10. 'Lady Duff Gordon's Letters from Egypt,' edited by Mrs. Austin, 1865.

[John Stuart Mill's Autobiography; Sir George C. Lewis's Letters; Times, 12 Aug. 1867; Athenæum, August 1867.] J. M. L.

AUSTIN, WILLIAM (1587-1634), miscellaneous writer, was a barrister of Lincoln's Inn, and resided for many years in Southwark, where he acquired a great local reputation. His works, which are mainly of a religious character, were all published posthumously, but in his lifetime he distributed copies of them among his friends, among whom he reckoned James Howell, the author of the 'Epistolæ Ho-Elizianæ,' and his neighbour, Edward Alleyn, the founder of Dulwich College. Austin's name appeared, with those of the chief contemporary men of letters, on the proposed list of members of the Royal Academy of Literature, projected in 1620, but subsequently abandoned (*Archæologia*, xxxii. 142). In a letter dated 20 Aug. 1628 Howell thanks Austin in extravagant terms for 'that excellent poem . . . upon the Passion of Christ' which 'transported me into a true Elysium,' and urges him to publish 'the other precious pieces of yours which you have been pleased to impart unto me' (*Epist. Ho-El.* bk. i. sect. 5, § 12). But Austin died on 16 Jan. 1633-4 at the age of forty-seven without having followed his friend's advice. He was buried in the parish church of St. Mary Overy or St. Saviour's, Southwark, on which he and his family had bestowed many rich gifts (Stow, *Survey of London* (1633), 453 b). An elaborate monument still stands above his grave. It bears a curious inscription, and was erected by Austin himself from his own designs to the memory of his first wife.

In 1635 there appeared a folio volume en-

titled 'Devotionis Augustinianæ Flamma, or Certayne Devout, Godly, and Learned Meditations: written by the Excelently Acomplisht Gentleman, William Austin of Lincolnes Inne, Esquier.' The title-page, which contains an admirably engraved portrait of the author, states that the work had been 'set forth after his decease by his deare wife and executrix, Mrs. Anne Austin.' The book opens with a meditation for Lady day, written in 1621, and closes with a funeral sermon in prose, and an epicedium or funeral dirge in verse, composed by Austin for himself, in which he deplores the loss of his first wife and many of his children. Two series of poems, entitled respectively 'Carols for Christmas Day' and 'Meditations for Good Friday,' are included in the volume, and to the latter Howell probably referred in the letter already noticed. Almost every page of the book displays a wide knowledge of the Bible and patristic literature, and justifies to some extent a friend's estimate of Austin as 'a gentleman highly approved for his religion, learning, and exquisite ingenuity.' A second edition of the 'Meditations' was published in 1637, and its success encouraged Austin's friends to produce in the same year another of his works entitled 'Hæc Homo, wherein the Excellency of the Creation of Woman is described by way of an Essay,' 12mo. The book consists of dreary scholastic disquisitions based on scriptural and classical quotations, and is said to have been suggested by Agrippa's 'De Nobilitate et Præcellentia Fœminæ Sexus.' It is inscribed to 'Mistresse Mary Griffith,' to whom the editors refer as the author's 'paterne.' Before 1671, a third work of Austin's, a translation of Cicero's 'Cato Maior, or the Book of Old Age . . . with annotations upon the men and places,' 12mo, was published by a London stationer into whose hands the manuscript had accidentally fallen. It reached a second edition in 1671, and a third in 1684.

[Corser's *Collectanea Anglo-Poetica*, i. 94; Lowndes's *Bibliographers' Manual*; Prefatory Addresses in Austin's *Hæc Homo* and *Cato Maior*; Rendle's *Old Southwark*, pp. 188-90; Le Neve, *Monumenta Anglicana*, 1600-49, p. 146; Stow's *Survey of London*, ed. Strype, ii. 16.] S. L.

AUSTIN, WILLIAM (Æ. 1662), a writer of verse and classical scholar, was the son of William Austin, the religious writer, and was a barrister of Gray's Inn. On the marriage of Charles II with Catherine of Braganza, Austin wrote two poems to celebrate the union, which were 'presented to their majesties' on their passage down the Thames from Hampton Court to Whitehall (23 Aug.

1662). The first was entitled 'A Joyous Welcome to the most Serene and most Illustrious Queen of Brides, Catherine the Royal Spouse and Consort of Charles II,' London, 1662, folio, and the second 'Triumphus Hymenæus, London's solemn Jubilee for the most auspicious Nuptials of their great Sovereign, Charles the Second,' London, 1662, folio. Both poems were elaborately printed, and are now highly prized as bibliographical rarities. They are full of bombastic eulogy, and are crowded with classical allusions, explained in voluminous and learned notes. In an address to the reader Austin not inaptly refers to his work as 'this thatcht Tugurium of Poesie.' In 1664 he produced a doggerel poem of similar calibre, bearing the title of 'Atlas under Olympus. An Heroick Poem by William Austin, of Gray's Inn, Esq. London, printed for the author, 1664,' 8vo. It was dedicated to Charles II and Monck, duke of Albemarle, and was a fulsome panegyric upon their achievements. Almost every line is based on a classical quotation, which is printed in each case at the foot of the page. Austin's most readable production is a prosaic description in verse of the plague of London. Its title runs: 'Επιλοιμα ἐπὶ or the Anatomy of the Pestilence. A Poem in three parts, describing the deplorable condition of the city of London under its mercilese dominion, 1665. What the Plague is, together with the causes of it. As also, the Prognosticks and most effectual meanes of safety both preservative and curative. By William Austin, of Grayes Inne, Esq.' London, 1666, 8vo. In an address to the reader it is stated that the poem was written at the request of 'very worthy persons in the countrey at the time of the sickness when the mortality in London' reached 'seven or eight thousand a week with some hundreds over and above.' Although Austin here dispenses with classical allusions and annotations, he employs a number of Latin and Greek words in a slightly Anglicised form. A portrait of the author is prefixed to the volume. Austin was buried in the parish church of Southwark, near the monument of his father, but the year of his death is uncertain.

[Corser's *Collectanea Anglo-Poetica*, i. 93-6; Hazlitt's *Bibliographical Collections*; prefatory addresses in Austin's *Poems*; Stow's *Survey of London*, ed. Strype, ii. 15.] S. L.

AUSTIN, WILLIAM (1754-1798), a physician of extensive practice, and author of a treatise on the stone, was born at Wotton-under-Edge, in Gloucestershire, 28 Dec. 1754. His forefathers for several generations had

been clothiers in the town. William was the youngest of eight children. After receiving a classical education at the local grammar school he was admitted, in 1773, a commoner of Wadham College, Oxford. Here he began the study of Hebrew, and had in a short time made sufficient progress to obtain an exhibition. In body as well as mind he was distinguished by the extraordinary energy which he threw into his pursuits. He often walked from Oxford to London in a day, and, though a man of slender make, mowed an acre of heavy grass in a single day with his unaided scythe. He became a scholar of his college, and, as he had successfully studied Hebrew to obtain one exhibition, now mastered botany to gain another. His studies in botany determined his choice of a profession in the direction of physic. He made, however, one more learned digression, and, after graduating B.A. in 1776, was elected assistant tutor to Dr. White, Laudian professor of Arabic. After giving some lectures on Arabic, Austin in 1779 came to London and began his medical studies in earnest at St. Bartholomew's Hospital. Percival Pott, the famous surgeon, formed a high opinion of Austin, and said to Earle, his colleague: 'You will see Austin at the head of his profession.' Austin went back to Oxford, and proceeded M.A. 1780, M.B. 1782, M.D. 1783. Among his many tastes was one for mathematics, and in 1781 he published some remarks on Euclid, Books I. to VI. In the same year, and after he had begun to practise as a physician at Oxford, he lectured on mathematics during the absence of the Savilian professor of geometry. In 1784 he planned, but did not deliver, a course of lectures on physiology, and in 1785 he was elected professor of chemistry. He became also physician to the Radcliffe Infirmary. In 1786, on a vacancy at St. Bartholomew's, Dr. Austin was elected physician to that hospital, and removed to London. He rapidly acquired a large private practice, but continued his chemical studies, and was the first to institute regular chemical lectures in the school of St. Bartholomew's. In 1790 he delivered the Gulstonian Lectures at the College of Physicians, of which he had been elected a fellow in 1787. The lectures were on the stone, and were published in 1791. Dr. Austin was twice married, and left four children by Miss Margaret Alanson, his second wife. He died on 21 Jan. 1793 of a rapid febrile disorder. He is known to have written sermons, but none of these have been printed, and his short mathematical treatise is not now to be found. Two papers (1788 and 1789) of his on 'Heavy Inflammable Air' were read before the Royal Society (*Phil.*

*Trans.* lxxx. 51). His Gulstonian Lectures are printed as 'A Treatise on the Origin and Component Parts of the Stone in the Urinary Bladder' (London, 1791). This work contains a series of experiments made according to the defective chemistry of their time and of no permanent value. Their erroneous result is 'that the stone is formed generally in very small part, and often in no degree whatever, from the urine as secreted by the kidneys, but chiefly from the mucus produced from the sides of the different cavities through which the urine passes;' and this led the author to a melancholy conclusion as to a common form of the affection: that 'those who suffer this species of the disorder must either bear it for life or submit to a dreadful alternative, to an operation which few surgeons ever acquire the art of performing dexterously, and which, performed even by the most skilful, is by far the most dangerous of any that is practised in surgery.' The imperfect chemistry of his time was sufficient to lead Austin to one accurate conclusion, the variety of composition of hard concretions found throughout the body; and he also points out correctly that the hard matter found in the arteries of old people is calcareous, while the white substance covering the surface of gouty joints is not so. His last remark as to lithotomy led his surgical colleague, James Earle, to write a defence of the operation, in which he states that Austin afterwards modified his gloomy views as to the treatment of stone. Earle showed his remarks to Austin shortly before the doctor's death, and is the author of the kindly memoir of Austin prefixed to 'Practical Observations on the Operation for the Stone,' London, 1796.

[Earle's Memoir; Munk's College of Physicians, ii. 377.] N.M.

AUSTIN, WILLIAM (1721-1820), engraver and draftsman, was born in London in 1721. He was a pupil of George Bickham; but after having engraved a few plates, chiefly landscapes of no great merit, he relinquished the practice of the art, and devoted the remainder of his life to teaching drawing, first in London and afterwards in Brighton. Among his engravings are four plates of the 'Ruins of Ancient Rome,' after Pannini, four plates of the 'Ruins of Palmyra,' six 'Sea-pieces,' after Van Goyen, and 'The Four Times of the Day,' views in Holland after Waterloo, Ruissdael, Van Goyen, and Van der Neer. He likewise engraved with Paul Sandby, Vivares, and others, some views of 'Windsor Park' and 'Virginia Water,' and also published in 1781

a series of thirty plates, slightly etched from drawings by Andrea Locatelli, entitled 'A Specimen of Sketching Landscapes.' He for some time kept a print-shop, and published some political caricatures, which were mostly directed against the French, and in support of the administration of Charles James Fox. Six of these, 'French Spies attacked by British Bees,' and others, were engraved by himself in 1780. He died at Brighton 11 May 1820, at the age of ninety-nine.

**AUVERQUERQUE**, COUNT OF (1641-1708). [See *NASSAU*, HENRY.]

**AVANDALE**, LORD. [See *STEWART*.]

**AVELING**, THOMAS WILLIAM BAXTER (*d.* 1884), independent minister, received his theological training at Highbury College, and in 1838 was appointed to the pastorate of the Kingsland Congregational Church. Here he acquired a high reputation for eloquence and learning, and his connection with the congregation was only terminated by his death, which took place at Reedham, near Croydon, 3 July 1884. In 1876 he was appointed chairman of the Congregational Union. He was also for many years the honorary secretary of the Asylum for Fatherless Children at Reedham. Some years before his death he received from the Washington University the degree of D.D. During his half-century of ministerial labour he published a large number of sermons and other fugitive pieces, and one work of a more substantial character, viz. 'Memorials of the Clayton Family,' 8vo, 1867, which, as it contains correspondence never before published of the Countess of Huntingdon and other persons eminent in the religious world of the last century, has some pretensions to the character of an original authority.

[*Times*, 5 July 1884; *Congregational Year-book*; *Brit. Mus. Cat.*] J. M. R.

**AVERELL**, ADAM (1754-1847), Irish primitive Wesleyan clergyman, was born on 7 May 1754 at Mullan, county Tyrone, where his family had settled in the sixteenth century. His parents were of the established church, and related to Dr. John Averell, bishop of Limerick, who died in 1771, aged 58. In 1773 Averell went to Trinity College, Dublin, the provost being the Right Hon. Francis Andrews, nephew of Bishop Averell. In 1774 he became private tutor to Sir Richard St. George. He was ordained at Clonfert by Bishop Cope on 25 July 1777, but took no charge. At this period he met John

Wesley in Dublin, and heard him preach. In 1781 he went to Eton with his pupils; the next year he became alienated from his patron, St. George. On 18 Dec. 1785 he married the daughter and heiress of the Rev. R. Gregory of Tentower, Queen's County. He was at this time in the habit of preaching against the methodists, and lived as a man of the world, enjoying cards, hunting, and dancing. Two circumstances produced a change—the reading of Wesley's 'Appeal,' and an illness which seized him during some private theatricals. Becoming evangelical in his views and habits, he acted as curate to Dr. Ledwich at Aghaboe, 1789-91. He was offered in 1792 a curacy at Madeley, but preferred to exercise a gratuitous ministry nearer home. On 7 Oct. 1792 he preached for the first time to a methodist congregation; in 1796 the Dublin conference admitted him to full connection. In 1797 he was separated from his wife. In the division which was the result of the controversy respecting the administration of the sacraments by the preachers (1814-18), Averell took a prominent part with the conservatives who adhered to Wesley's polity, declaring on 21 Jan. 1818 at Clones that the methodists 'are not a church but a religious society.' The first meeting of the Primitive Wesleyan Methodist Conference was held on 10 July 1818; Averell was elected president, and constantly re-elected till after 1841, when his infirmities led him to decline office. He died on 16 Jan. 1847. The primitive Wesleyan body he represented (re-united since 1878, with few exceptions, to the Irish Wesleyan Conference) must not be confounded with the primitive methodists of English origin, who go to an opposite extreme.

[*Memoirs* by Alexander Stewart and George Revington, 1849, where a portrait is given.] A. G.

**AVERY**, BENJAMIN, LL.D. (*d.* 1764), physician, was originally a presbyterian minister at Bartholomew Close, London, but quitted the ministry in 1720, in consequence of the Salters' Hall controversy on subscription, 1719. He practised as a physician, and was treasurer of Guy's Hospital. He retained the confidence of his presbyterian brethren, and acted for several years as secretary to the dissenting deputies, organised 1732, for the protection of the rights and redress of the grievances of the three denominations. He also rendered important services to political and theological liberalism by contributing to the 'Occasional Papers,' collected in three volumes, 1716-19, sometimes called the 'Bagweell' papers, from a word formed

by the initials of their authors' surnames (Simon Browne, Avery, B. Grosvenor, D.D., Sam Wright, D.D., John Evans, D.D., Jabez Earle, D.D., Moses Lowman, Nathaniel Lardner; see *Monthly Repos.*, 1813, p. 443. Lowndes, under 'Occasional Papers,' erroneously gives Barnes for Browne, Eames for Earle, and omits Lardner), and not to be confounded with the 'Occasional Paper,' 1697-8, by Bishop Willis. Avery also conducted the 'Old Whig, or Consistent Protestant,' a weekly publication, 18 March 1735 to 13 March 1738, his chief coadjutors being G. Benson, S. Chandler, B. Grosvenor, C. Fleming, J. Foster, and M. Towgood; the collected issue, in two volumes, 1739, is not complete. In 1728 Avery edited James Peirce's posthumous sermons and 'Scripture Catechism;' he was probably the author of the Latin inscription prepared for Peirce's tomb. He was not concerned in the 'Independent Whig,' 20 Jan. 1720 to 4 Jan. 1721, edited by Thomas Gordon (reissued 1732-5 and 1743). He was a trustee of Dr. Williams's Library, 1728-64, and his portrait hangs in the library. He died 23 July 1764.

[Evans's List, Dr. Williams's Library; Bohn's Lowndes, 1864, pp. 1714, 2892; Turner's Lives of Eminent Unitarians, 1840, i. 207; Christian Reformer, 1843, p. 162; Inquirer, 29 June 1878.]  
A. G.

**AVERY, JOHN** (? fl. 1695), was a pirate, whose depredations in the Eastern seas, in the year 1695, occasioned much embarrassment to the East India Company and to the government. Having fitted out in the West Indies a ship mounting 46 guns, and with a motley crew of 130 men, he established himself at Perim and levied toll on all vessels passing in or out of the Red Sea, and especially on a large ship belonging to the Mogul himself, which he taxed to the extent of upwards of 300,000*l*. The Mogul retaliated on the company's officers at Surat, and put a stop to the English trade; but Avery, satisfied, for the time being, with his booty, and perhaps anticipating danger, returned to the West Indies, sold his ship, and dispersed the crew. Several of these were afterwards caught in Ireland or England, and some were executed; but of Avery himself—notwithstanding large rewards offered for his apprehension by both the government and the company—nothing was ever positively known. The received story is that he was a native of Plymouth; that, on his return to England, he lived for some time at Bideford; and that, having been cheated out of his vast wealth by some Bristol merchants, he died there, of rage and vexation, in extreme

poverty. But the authority for these statements is extremely doubtful.

[John Bruce's *Annals of the Hon. East India Company*, vol. iii. pp. 188-223; Hamilton's *New Account of the East Indies* (1727), vol. i. p. 42; Captain Johnson's *General History of the Pyrates* (1724), p. 45, &c. Other and more detailed accounts—e.g. 'The Life and Adventures of Captain John Avery . . . now in possession of Madagascar, written by a person who made his escape from thence (1700);' or, 'The King of Pirates, being an account of the famous enterprises of Captain Avery, the mock king of Madagascar, in two letters from himself' (1720), which has been attributed to Defoe—are fiction, with scarcely a substratum of fact.] J. K. L.

**AVESBURY, ROBERT** OF. [See ROBERT.]

**AVERSHAW, LOUIS JEREMIAH**. [See ABERSHAW.]

**AVISON, CHARLES** (1710?-1770), musician, born at Newcastle, studied music in Italy, and on his return to England became a pupil of Geminiani. In 1736 he was appointed organist of St. Nicholas, at Newcastle, in which town he spent the remainder of his life. In 1752 he published his celebrated 'Essay on Musical Expression,' a work which created at the time considerable sensation by the boldness the author displayed in acknowledging his preference for the French and Italian school, and depreciating the Germans, with Handel at their head. The essay was translated into German, and was answered in 1753 by Dr. Hayes's 'Remarks on Mr. Avison's Essay,' which was published anonymously, though the name of the author was an open secret. Avison replied in the same year, but it was generally considered that Hayes had the best of the argument, although Avison's work was superior from a literary point of view. Avison died at Newcastle 9 May 1770. Besides his essay he published several sets of sonatas and concertos, some of which long continued popular, and he also edited an edition in eight volumes of Marcello's *Psalms*. A life by Avison is prefixed to the first. Very little is known of his life, but he had the reputation of being a man of great culture and polish, and for many years was the chief of a small circle of musical amateurs in the north of England who were devoted to his views.

**AVONMORE, VISCOUNTS**. [See YELVERTON.]

**AWDELAY, JOHN** (fl. 1426), was a canon of the monastery of Haghmon, Shrop-

shire, in the early part of the fifteenth century. He wrote some verses, chiefly devotional, which are preserved among the Douce MSS. in the Bodleian Library. A selection from these pieces was made by Mr. J. O. Halliwell in 1844 for the Percy Society. The author describes himself as deaf and blind. Judged by his writings, he seems to have been of an unworldly and devout character. The verses have some interest as being early specimens of the Salopian dialect.

[Percy Society Publications, 1844.]

A. H. B.

**AWDELAY**, or **AWDELEY**, **JOHN**, otherwise called **JOHN SAMPSON** and **SAMPSON AWDELAY** (fl. 1559-1577), was a London printer and miscellaneous writer. Dibdin assumed that he was an original member of the Stationers' Company, which was incorporated by charter in 1556; but from a reference to him in the company's register of that date, he would appear to have been merely a printer's apprentice at the time (*ARBER'S Transcript of the Stationers' Register*, i. 47). Before 1559, however, he had become a freeman of the company; on 24 Aug. of that year he 'presented' an apprentice of his own, and on 6 Nov. obtained licenses for printing his first publication, a 'morning and evenyng prayer.' From 1561 to 1571 his name occurs repeatedly in the Stationers' Registers as obtaining licenses for printing books and pamphlets, and as 'presenting' apprentices, and throughout those years he apparently drove a thriving trade. On several occasions he was fined for illegally printing 'other men's copy,' and on 22 July 1561 a penalty of 'xij<sup>d</sup>' was imposed on him 'for that he ded revile Rychard Lante with unseemly words.' The last mention of him in the Stationers' Registers is under the year 1577, when with other printers he signed a petition to the queen against certain monopolies in printing recently granted by her, and nothing is known of him after that date. He dwelt in Little Britain Street, described on his title-pages as 'without Aldersgate' or 'by Great S. Bartholomew's.'

Awdelay's publications were of an essentially popular kind, and consisted mainly of ballads, news sheets, and religious tracts. One of the most important books reprinted and published by him was Fitzherbert's 'Boke of Husbandry.' Many of his publications were of his own composition. One of the earliest of them, 'The Wonders of England,' 1559, a folio sheet of eleven ten-line stanzas, relating to English historical events from the death of Edward VI to the accession of Elizabeth, was from his pen. But the most

important of his literary efforts was a little volume entitled 'The Fraternitie of Vacabondes,' licensed about July 1561, and published by himself in 1565. It is an elaborate description of the habits and organisation of the beggars of the day, and is of great value to the student of social history. On the back of the title-page are some doggerel verses by the author. It was reprinted in 1565 and in 1575, and Harman's 'Caveat,' a book on the same subject published in 1567, was obviously largely indebted to it. Awdelay was strongly opposed to catholicism, and wrote some verses to warn 'the symple sorte' against its delusions, as a preface to 'A briefe Treatise agaynst certayn Errors of the Romish Church, by Gregory Scot,' published by him in 1574. Awdelay's other works were: 1. 'Ecclesi. xx., Remember death and thou shalt never sinne,' 30 April 1569 (sheet). 2. 'Cruel Assault of God's Fort,' in verse (sheet). 3. 'Epitaph upon Death of Mayster John Veron, preacher. Quod John Awdelay' (fol. sheet). 4. 'A Godly Ditty or Prayer to be song unto God for the preservation of his Church, our Queene and Realme, against all Traytours, Rebels, and Papistical Enemies, by John Awdelay,' 1570 (broadside). 5, 6. It is probable that the epitaphs of 'Doctour Hodden' and 'Masterr Fraunces Benyson,' published by Awdelay in 1570-1, were also written by him.

S. L.

**AXTEL**, **DANIEL** (d. 1660), parliamentarian, of whose early life nothing is known, was of good family, and apprentice to a grocer in Watling Street—facts not then inconsistent with each other. At a fast-day sermon he was convinced of the righteousness of the parliament cause, and forthwith entered the army. He rose to the rank of lieutenant-colonel, and was active in the 'Purge' associated with the name of Colonel Pride, and in the subsequent transactions leading to the king's trial. On that occasion he commanded the soldiers in Westminster Hall. He accompanied Cromwell in his Irish expedition, and was appointed governor of Kilkenny. When the Long parliament had been expelled and Henry Cromwell took charge of Ireland, Axtel was one of the malcontents who de-

murred to his authority and resigned their commissions, but resumed his position in 1659. After the Cromwell family had fallen from power, and Ludlow had taken the command of the soldiers in Ireland, Axtel was one of those sent back to England to maintain the republic against the imminent Restoration. But when Monk was marching on London, and Lambert advanced to oppose him, Lambert's troops, the Irish contingent of which was under Ludlow's officers, revolted to their former Cromwellian commanders, and so weakened Lambert's army that Monk marched on peaceably to London. Axtel retired into private life, only emerging to support Lambert in his futile attempt to revolt, April 1660. At the Restoration Axtel was exempted from the bill of indemnity in July, and from the general pardon in August. On 10 Oct. he was arraigned at the Old Bailey for compassing and imagining the death of the king. The chief overt acts adduced in support of the charge were his command of soldiers at the trial, his threat to shoot Lady Fairfax for her interruption of the proceedings, his beating the soldiers to make them cry 'justice' and 'execution,' and his personal insults to Charles. These last he positively denied; for the rest he pleaded justification, since what he had done was by the authority of parliament and the command of Fairfax. He made the absurd suggestion that he might have beaten the soldiers for crying out, and repeated their words, 'I'll justice you!' 'I'll execution you!' and added, 'But the word execution of justice is a high and glorious word.' The court disposed of his main plea by the reminder that the House of Commons had been reduced to its eighth part by the violence of the army, twenty-six only voting for the act in question, and that, even had the house retained its full numbers, it could still have possessed no coercive power over the sovereign. After protesting that he had had no hand in the king's death, Axtel was condemned. Then his self-confidence returned. He was murdered, he said, for the good old cause. He assumed the tone of a martyr, and even ventured a prophecy that the surplice and Common Prayer Book would not be long in England. He bewailed his general depravity, but justified everything he had done, and hinted a parallel between his own sufferings and those of the Redeemer. The sentence for treason was fully carried out, and his head was set up 'on the further end of Westminster Hall.'

[Ludlow's Memoirs; State Trials.] R. C. B.

AYLESBURY, SIR THOMAS (1576-1657), a patron of mathematical learning, was

born in London in 1576, the second son of William Aylesbury and Anne Poole, his wife. Of his father's position nothing is known beyond the fact mentioned by Lloyd (*Memoirs* (1677), p. 699), that his ancestors were high-sheriffs of Bedfordshire and Buckinghamshire in the reigns of the second and third Edwards. From Westminster School Aylesbury passed in 1598 to Christ Church, Oxford, where he took the degrees of B.A. and M.A. in 1602 and 1605 respectively. His strict application to study, especially of a mathematical kind, brought him into favourable notice; and on quitting college he was appointed secretary to the Earl of Nottingham, lord high admiral of England. So well did he use the opportunities both of improvement and distinction offered by this post, that he was continued in it by Buckingham, Nottingham's successor (1618), who befriended him actively, procuring for him the additional offices of one of the masters of requests and master of the mint, with (19 April 1627) the title of baronet. This prosperity enabled him to exercise the utmost liberality towards men of learning. To the indigent he allowed regular pensions, or maintained them at his country seat in Windsor Park, while many more enjoyed his patronage and the hospitality of his table in London. Amongst his dependants were Thomas Warner, a mathematician, who at his request wrote a treatise on coins and coinage; Thomas Allen, of Oxford, whom he recommended to Buckingham, and who made him the depository of his astrological writings; and the celebrated Thomas Harriot, who bequeathed to him, with Viscount Lisle and Robert Sidney, the whole of his valuable papers. Many of these, with other precious manuscripts and rare books collected by or bestowed upon him, were either lost during the civil war, or sold in Aylesbury's time of distress abroad. For in 1642 he was, as a steady royalist, stripped of his fortune and places, and on the death of the king retired with his family to Antwerp, whence he removed in 1652 to Breda, and there died in 1657 at the age of 81. He was, Anthony à Wood says, 'a learned man, and as great a lover and encourager of learning and learned men, especially of mathematicians (he being one himself), as any man in his time.' He had issue one son, William Aylesbury, and a daughter Frances, married to the great Earl of Clarendon, by whom she became the mother of Anne Hyde, first wife of James II., and mother of the two queens, Mary and Anne.

[Biog. Brit. (1747), i. 308; Wood, *Fasti Oxon.* i. 306; *Archæologia*, xxxii. 142.]

A. M. C.

**AYLESBURY, THOMAS** (fl. 1622-1659), theologian, was educated at Cambridge, where he took the degrees of M.A. and B.D. By incorporation he was granted similar degrees at Oxford, the first on 9 July 1622, and the second on 10 July 1626. He was the author of: 1. 'Sermon preached on Paul's Cross, June 1622, on Luke xvii. 37,' London, 1623. 2. 'Paganisme and Papisme parallel'd and set forth in a Sermon at the Temple Church upon the Feast Day of All Saints, 1623, by Thomas Aylesbury, Student in Divinite' (dedicated to the Earl of Southampton). 3. 'Treatise of the Confession of Sin, with the Power of the Keys,' 1657. 4. 'Diatribæ de æterno divini benepaciti circa creaturas intellectuales decreto, ubi patrum consulta, scholasticorum scita et modernorum placita ad Sacræ Scripturæ amussim et orthodoxæ ecclesiæ tribunal deferuntur,' Cambridge, 1659, and republished (according to Watt) in 1661. This work, which, like all Aylesbury's writings, was of a strongly Calvinistic character, was dedicated to the protestant churches of Europe.

[Wood's *Fasti Oxon.* (ed. Bliss), i. 408, 427; Watt's *Bibliotheca Britannica*; S. D. U. K. Biog. Diet.; Brit. Mus. Cat.] S. L.

**AYLESBURY, WILLIAM** (1615-1656), a translator from the Italian, who, although a supporter of Charles I, obtained an office under the Commonwealth, was the son of Sir Thomas Aylesbury [see **AYLESBURY, SIR THOMAS**]; in 1628 he became a gentleman-commoner at Christ Church, Oxford, and took his bachelor's degree in 1631, at the early age of sixteen (Wood, *Fasti Oxon.* i. 460). His sister Frances married Sir Edward Hyde, afterwards Lord Clarendon. Although possessing a large fortune, Aylesbury soon afterwards became, at the invitation of Charles I, governor to the young Duke of Buckingham and his brother, Lord Francis Villiers, and travelled with them through France and Italy. In 1640 Aylesbury was residing at Paris, and in his correspondence with his brother-in-law, Sir Edward Hyde, which is preserved in the Bodleian Library among the 'Clarendon Papers,' bitterly lamented the course of English politics under the Long parliament. In the middle of May 1641 he returned from Paris to London with the Earl of Leicester, the English ambassador at the French court, with whom he had been apparently living in an official capacity for some months (*Cal. State Papers*, 1640-1, pp. 558, 561, 562). Shortly afterwards he presented his former pupils to the king at Oxford, who promised him the next vacancy among the grooms of the chambers, but the promise was never

fulfilled, and Aylesbury continued in the service of the Duke of Buckingham, as his agent, until the final defeat of the royalists.

During his interview with Charles I, the king urged Aylesbury, who was well acquainted with Italian, to continue a translation of Davila's 'History of the French Civil Wars,' which he had just begun, and during the following years he was mainly engaged in the work; but he was only in England at intervals, and witnessed his royal patron's disasters from the safe distance of Paris or Rome. He and his friend, Sir Charles Cottrel, who materially aided him, received, however, frequent encouragement from the king. In spite of his political troubles, Charles, in fact, read through the whole of the manuscript before the book was printed. The translation was published with a dedication to the king in 1647, and bore the title, 'The Historie of the Civil Warres of France, written in Italian by H. C. Davila. Translated out of the originall.' London, 1647, fol.

On the fall of Charles I, Aylesbury sought refuge with his father, first at Amsterdam, and afterwards at Antwerp; and he took under his protection his sister, Lady Hyde. But his poverty, caused by the confiscation of the property of his family, forced him in 1650 to return to England, and retiring to the neighbourhood of Oxford, he lived on the charity of his more fortunate friends. Early in 1656, however, he obtained the office of secretary to Major-general Sedgwick, who had just been appointed governor of Jamaica, and finally left England. For a few months he took an active part in the government of the island, but he died on 24 Aug. in the same year. A letter conveying the news of his death to Secretary Thurloe describes him as 'a man well versed in the weighty affairs of state, who in his counsels and advice, both to army and fleet, was very useful, for the want of which we shall have more and more to grieve.' Aylesbury's translation of Davila was republished in 1678 with a preface by Sir Charles Cottrel, who there claimed for himself the execution of the greater part of the original version.

[Wood, *Athen. Oxon.* (ed. Bliss), iii. 440; *Biographia Britannica*; Macray's *Calendar of Clarendon State Papers*, i. and ii.; *Addit. MS.* 15857, f. 23; *Thurloe's State Papers*, v. 154, 155, 170; Dedication to the translation of Davila (1647); Prefatory Address to the edition of 1678.] S. L.

**AYLESFORD, EARL OF.** [See **FINCH.**]

AYLETT, ROBERT (1583-1655?), was author of a volume of religious verse entitled 'Divine and Moral Speculations in Metrical Numbers upon Various Subjects. By Doctor R. Aylet, one of the Masters of the High Court of Chancery. London . . . 1654.' It was dedicated to 'Henry Lord Marquesse of Dorchester and his incomparable lady,' as 'the humblest of their servants.' There are prefixed commendatory poems by Sir Robert Beaumont, Bart., and James Howell, and a W. Martin. In some copies there is inserted before the title-page a cunningly engraved portrait, with this inscription on the upper left-hand corner, 'Æt. 52, 1635.' Aylett was thus born about 1583. He was educated at Trinity Hall, Cambridge, and commenced LL.D. in 1614. He is represented as a hard student who lightened his professional labours with 'the relaxation of poetry.' Except his odd 'A Wife not ready-made but bespoke, by Dicus the Batchelor, and made up for him by his fellow shepherd Tityrus; in four pastoral eclogues' (1653), his entire verse is 'sacred.' Its main feature is pious aphoristic thought, after the type of George Herbert's poems of 'The Temple.' His 'Divine and Moral Speculations' start with a semi-paraphrase of the 'Song of Songs,' which is succeeded by 'The Brides Ornaments'—a series of meditations of 'Heavenly Love,' 'Humility,' 'Repentance,' 'Faith,' 'Hope,' 'Justice and Righteousness,' 'Truth,' 'Mercy,' 'Fortitude,' 'Heavenly Knowledge,' 'Zeal,' 'Temperance,' 'Bounty,' 'Joy,' 'Prudence,' 'Obedience,' 'Meeknesse,' 'God's Word,' 'Prayer,' &c. These 'four books' of meditations are followed firstly by 'Five Moral Meditations' of 'Concord and Peace, Chastity, Constancy, Courtesy, and Gravity,' and secondly by 'Five Divine and Moral Meditations' of 'Frugality, Providence, Diligence, Labour and Care, and Death.' The whole closes with 'A Funerall Elegy, consecrated to the memory of his ever honoured lord John King, late Lord Bishop of London.' We gather from the volume two personal facts, (a) that his 'muse' had been 'whilome swayed by lust of youth' to spend 'her strength in idle wanton toys,' but was now summoned to holy strains; (b) that he was in 1654 a sufferer from ague (p. 476).

The 'Divine and Moral Speculations' were probably published separately long before 1654. Earlier impressions are found of two other poems by Aylett: 'Svsanna, or the Arraignment of the Two Unjust Elders' (in four books), and 'Joseph, or Pharaoh's Favorite'—both of which are often bound up with the 'Speculations,' and usually dated 1654. Of 'Svsanna' an anonymous R. C.

(wrongly assigned to Richard Crashaw) wrote:—

In all thy poems thou dost wondrous well,  
But thy Susanna doth them all excell.

Of 'Joseph' another wrote:—

Susanna was of all thy poems best,  
But Joseph her excels, as she the rest.

'Peace with her Four Gardens' (1622) (mentioned along with others in *Censura Literaria*, vol. v.) was incorporated with the 'Meditations' above enumerated, as was 'Thrift's Equipage' (1622).

Anthony à Wood queried whether Dr. Aylett were not author of 'Britannia Antiqua Illustrata,' published under the name of Aylett Sammes. Aylett disappears about 1655.

[Works, ut supra; Cens. Liter.; Wood's Fasti Oxon. (Bliss), i. 328, ii. 363; Granger's Portraits; Hazlitt's Handbook.] A. B. G.

AYLIFFE, JOHN, LL.D. (1676-1732), jurist, was born at Pember, Hampshire, in 1676. He was educated at Winchester and New College, Oxford, where he matriculated February 1696, became B.A. 1699, M.A. 1703, LL.B. and LL.D. 1710. Up to 1710 he practised as a proctor in the chancellor's court, and 'had a prospect,' he tells us, 'of succeeding to some chancellorship or other preferment in the church of the like nature.' But his political opinions stood in the way. He was an ardent whig at a time when Oxford was the home of Jacobitism; and as he seems to have omitted no occasion of making his opinions known, he was subjected, according to his own account, to 'lawsuits and other persecutions, for the sake of my adhering to the principles of the Revolution; which shall be the test of my loyalty so long as I live.' What these lawsuits and other persecutions were we have no means of knowing; but the publication of the book from which we quote this complaint brought his sufferings to a climax. In 1712, on the advice of his friends, he issued a specimen of a work on Oxford for which he had collected materials while practising in the chancellor's court; but, whether from a belief that he would so sketch the history of the university as to malign the Stuarts, or that he would pry too curiously into the internal affairs of colleges, the scheme was received with such disfavour that he had thoughts of abandoning it. The book was published, however, in 1714, about a week before the queen's death. A few months afterwards Ayliffe was summoned before the university court at the suits of Dr. Gardiner, then vice-chancellor, and of Dr. Braithwaite, the former vice-

chancellor, for certain words highly reflecting on them. In the passage which gave offence (i. 216) he had gone out of his way to say that the funds of the Clarendon Printing House had been misappropriated—an accusation which he afterwards said should have been made more specifically, as he had evidence to prove that Gardiner was a partaker in the spoil. The result was that Ayliffe was expelled from the university, and deprived of all privileges and degrees. Meanwhile he was attacked by Cobb, the warden of New College, for another passage (i. 322), where he remarked on the thin crop of eminent men of which that college could then boast 'through the supine negligence of a late warden, and the discouragements arising from domestick quarrels, and the forgetfulness of such as owe some gratitude to the memory of a munificent founder.' He was accused, moreover, of disobedience, and of having in a conversation with one Prince threatened to pistol the warden. This last charge Ayliffe did not deny. According to his own account he had said 'that if the warden should distress him by any unjust expulsion, he might be driven to such an extremity for want of a subsistence (having only a fellowship to live on) as to pistol the warden; and the said Prince did readily agree with this respondent, that it was only doing himself justice.' Rather than make submission he resigned his fellowship. The whole story is told in a pamphlet, called the 'Case of Dr. Ayliffe at Oxford,' and published in 1716. In the 'Gent. Mag.' (lxxiv. 646) the pamphlet is referred to as 'a vindication of himself,' and certainly its heated style and the nature of the legal knowledge which it displays leave little doubt that Ayliffe either wrote or inspired it. Apart from the matters directly in question he mentions among the real causes of the proceedings his insinuation that the unwillingness of several colleges to give him an account of their benefactors was 'an argument of their perverting the uses of the charity,' his protest against the negative voice claimed by some heads of colleges, and his political opinions. On the last point there is some confirmation in a letter from Oxford published in the 'Political State of Great Britain' (1716, xii. 649). The writer gives instances to show how difficult it was for a whig to live at Oxford, and says: 'Dr. Ayliffe too must be publicly expelled. Several points were pretended, but they were easily seen thro'. If Oxford be a Jacobite seminary, who can expect Hanoverian principles should be there tolerated?' And Amherst tells us of a public speech delivered just after the king's accession, in which Ay-

liffe was violently abused, and which contained the words: 'hisce mediis ad aulam affectat viam; abeat, discedat; conveniunt mores' (*Terra Filius*, xiv.) The greater part of Ayliffe's 'Ancient and Present State of Oxford,' which occasioned these attacks, is avowedly an abridgment of Wood's 'History and Antiquities of Oxford,' 'deliver'd,' as he says, 'from the many errors and evident partiality of that laborious undertaker and searcher into antiquities.' The work enters into legal details at tedious length, and is now nearly forgotten. Ayliffe's chief titles to fame are his two treatises on the canon law and the civil law, into which he threw the whole learning of his life. The 'Parergon Juris Canonici Anglicani' appeared in 1726, and, though time and the labours of later writers on ecclesiastical law have diminished its value, it is still regarded as a work of high authority (see 'Veley v. Burder,' 12 A. and E. 302). He died 5 Nov. 1732. In 1734 was published the first volume of a 'New Pandect of the Civil Law,' which he had written some years before, but had kept back from lack of subscriptions. There was at the time an awakening interest in the civil law, and Ayliffe designed his book not only for the lawyer, but also for the politician and the diplomatist. He considered, moreover, that his subject had a higher educational value than philosophy. 'Whoever consults Justinian's Institutes,' he had said in his history of Oxford, 'will find more sound reasoning therein than in all the works of Ramus, Ockham, and the rest of that tribe.' Ayliffe's treatise has been described as dull, tedious, and confused (*Browne's Comp. View of the Civil Law*, p. ii), and with some justice; for under his great weight of learning he did not move easily. And this may be the reason why, in spite of its comprehensiveness and accuracy, it has not had the reputation of works so much inferior as Wood's 'Institutes' and Taylor's 'Elements.' Though never finished, it remains to our own day the most elaborate treatise on modern Roman law written in English.

1. 'The Ancient and Present State of the University of Oxford,' 2 vols, 1714, reprinted in 1728. The appendix contains a number of charters, decrees, &c., relating both to Oxford and Cambridge. 2. 'The Case of Dr. Ayliffe at Oxford: giving, first, an Account of the Unjust and Malicious Prosecution of him in the Chancellor's Court of that University, for Writing and Publishing a Book, entitled the *Ancient and Present State of the University of Oxford*: And secondly, an Account of the Proceedings had against him

in his College, chiefly founded on the Prosecution of the University; whereby he was oblig'd to quit the one, and was expell'd the other, 1716. Probably written by Ayliffe.) 3. 'Parergon Juris Canonici Anglicani; or a Commentary by way of Supplement to the Canons and Constitutions of the Church of England,' &c., 1726; 2nd edition, 1734. The titles are alphabetically arranged. There is an historical introduction, and appended to the work is a catalogue of the monastic and religious houses dissolved by Henry VIII, with their yearly value. 4. 'The Law of Pledges, or Pawns, as it was in use among the Romans, and as it is now practiced in most foreign Nations,' 1732. This was a publication by anticipation of Book IV. Tit. 18 of the work on the civil law, and was addressed to the House of Commons, then making inquiries into what Ayliffe called 'the dark recesses and male-practices of pawn-brokers and their accomplices in iniquity.' 5. 'A New Pandect of Roman Civil Law, as anciently established in that Empire, and now received and practiced in most European Nations,' &c., vol. i., 1734. The second volume never appeared. The entry of '2 vols.' in the 'Biblioth. Jurid.' of Lipenius is a mistake.

[The Case of Dr. Ayliffe at Oxford; references to himself in his other works; Notice by Burton in S. D. U. K. Biog. Dict.; Gent. Mag. lxxiv. 646, 855, lxxxix. 956; Rawlinson's MSS. fol. 16, 105.] G. P. M.

AYLMER, CHARLES, D.D. (1786-1847), an Irish Jesuit, born at Painstown, county Kildare, 29 Aug. 1786. He entered the Society of Jesus at Stonyhurst College, in Lancashire, and was created D.D. in 1814 while at Palermo, where he was stationed for several years. For the use of the British catholics in that city he, in conjunction with two of his brethren, Paul Ferley and Bartholomew Esmonde, compiled 'A short Explanation of the Principal Articles of the Catholic Faith' (Palermo, at the royal printing-office), 1812, 12mo; and 'The Devout Christian's Daily Companion, being a Selection of pious Exercises for the use of Catholics' (Palermo, 1812, 12mo). He became rector of Clongowes College, in Ireland, in 1817, was professed of the four vows 16 Jan. 1820, and lived in Dublin from about the year 1821 till his death on 4 July 1847. He was superior of the Dublin Residence in 1816, 1822, and 1829 (when the first stone of the church in Gardiner Street was laid), and again in 1841. Father Aylmer promoted in Dublin a society for the printing of catholic books. His brother was an officer of

Austrian cuirassiers, and was considered one of the best swordsmen in that service.

[Caballero, Bibliothecæ Scriptorum Soc. Jesu Supplementa. Supplementum alterum (Rome, 1816), 3; Hogan's Chronological Cat. of the Irish Province S. J. 88; Narbone's Bibliografia Sicola, iii. 342; De Backer's Bibliothèque des Ecrivains de la Société de Jésus (1869), 348.] T. C.

AYLMER, JOHN (1521-1594), bishop of London, whose name, contracted from the Saxon Æthelmær, appears also as Ælmer or Elmer, was born of an ancient family long resident at their ancestral seat of Aylmer Hall, in the parish of Tivetshall St. Mary, Norfolk. When a schoolboy he attracted the notice of Henry Grey, marquis of Dorset, and afterwards duke of Suffolk, by whose liberality he was sent to be educated at Cambridge. He is said to have been a fellow of Queens' College, at that time a noted resort of the more advanced reformers, but this is a matter of some uncertainty. He proceeded B.A. in 1541, and, shortly after taking orders, was installed by his patron as his private chaplain and also as tutor to his children at Bradgate in Leicestershire. In this latter capacity he became the instructor of Lady Jane Grey, whose testimony to his merits as one who taught 'gently,' 'pleasantly,' and 'with such fair allurements to learning,' is preserved in the well-known story told by Ascham (*Scholemaster*, ed. Mayor, pp. 33-34). He appears to have turned his advantages at Cambridge to good account, for Thomas Becon, in his 'Jewel of Joy' (*Works*, ed. Ayre, ii. 424), speaks of him as being at this time 'excellently well learned' in both Latin and Greek.

On 15 June, 1553, Aylmer was installed archdeacon of Stow, in the diocese of Lincoln, but having ventured in convocation to oppose the doctrine of transubstantiation, he was deprived of all his preferments, and soon afterwards fled for safety to the Continent. He resided first at Strassburg, and afterwards at Zürich, both chief centres of reunion for the Marian exiles, until the accession of Elizabeth. During these years he occupied himself with the instruction of sundry young English gentlemen who had also temporarily quitted their country, and also in assisting John Fox, the martyrologist, in a Latin translation of the 'Acts and Monuments.' The fact that Aylmer was solicited by Fox to render him this assistance is evidence of his reputation as an accurate Latin scholar, while Aylmer's testimony (that of no lenient critic) to the correctness and merits of Fox's great work is still

on record (STRYPE, *Life of Aylmer*, 8-10). On the accession of Elizabeth he returned to England, and was appointed one of eight divines to hold a disputation at Westminster with a corresponding number of Roman Catholics. He was restored to the archdeaconry of Stow in 1559. In 1562, through the influence of one of his pupils abroad (Thomas Dannet) with Cecil, he was promoted to the valuable archdeaconry of Lincoln, and received three prebends in Lincoln cathedral. For the next fourteen years he resided in that city, and occasionally assisted Archbishop Parker in his efforts on behalf of learning by researches in the cathedral library. He sat in convocation in 1562, and subscribed to the Thirty-nine Articles. In 1573 he received by accumulation the degrees of B.D. and D.D. at Oxford.

On 24 March, 1576-7, Aylmer was consecrated bishop of London in succession to Sandys, and from this time his arbitrary and unconciliatory disposition comes frequently into unpleasant prominence. He quarrelled with his predecessor (a man like himself of hot temper) respecting their relative claims to the revenues of the bishopric, and again on the question of dilapidations. His rule of his diocese was characterised by exceptional severity, fines and sentences of imprisonment being frequently imposed on those who differed from him on doctrinal questions, whether puritans or catholics. A young bookseller who had sold a copy of the celebrated 'Admonition to Parliament,' a work attributed to Cartwright, in which the episcopal office in the abstract and the actual holders of it in the English church were alike unsparingly criticised, was also committed by him to prison. He used his best endeavours to crush the recently revived university press at Cambridge (*State Papers, Domestic*, Eliz. clxi. 1). The unpopularity which he evoked by these and similar measures is indicated by an information which was laid against him about this time for having felled all the elms at Fulham, a charge which Strype denounces as a 'shameful untruth.' Aylmer appears, however, to have become conscious that his opportunities for usefulness in his diocese were to a great degree lost, and made more than one unsuccessful attempt to obtain his removal to a less laborious see, to Ely or Winchester. Whitgift, who appears to have approved his policy in general, appointed him to preach before the queen on her birthday in 1583; but Aylmer having shortly after ventured to obtain the royal warrant for committing Cartwright, the great puritan leader, to prison, Elizabeth, with her habitual dis-

ingenuousness, deeming it prudent to disavow the proceedings, manifested signs of her displeasure. His enemies, who were not few, endeavoured to avail themselves of this circumstance by bringing forward charges against him of misappropriation of the episcopal revenues, an accusation which he appears to have successfully repelled by furnishing Burghley with a detailed account of his financial position and that of the see. In the same year, when on a visitation in Essex, he only escaped a public insult in Maldon Church through having been apprised of the design beforehand. Having learned the names of the instigators, he showed his usual resentful temper by sending them to prison. It is not surprising to find that when, in 1588, the Martin Marprelate tracts appeared, Aylmer was singled out for their fiercest satire. The closing years of his life showed, however, no softening in his policy. He took a leading part in the deprivation of Robert Cawdrey, a clergyman at Luffenham, for some injudicious remarks respecting the prayer-book—a measure that resulted in four years of irritating litigation. He also suspended, on like grounds, 'silver-tongued Smith,' a young and able divine, and the most popular preacher of the day; and again (much against the wish and advice of Burghley) Robert Dyke, of St. Albans.

Elizabeth appears to have been desirous of seconding Aylmer's wish to be removed to another see, and suggested that of Worcester, and Bancroft as his successor in London. Negotiations with this view were accordingly commenced, but Aylmer's impracticability of temper led him to insist on conditions which Bancroft would not accede to, and after three ineffectual endeavours to arrive at an understanding the latter abstained from all further discussion on the subject. Shortly before his death, however (3 June, 1594), Aylmer expressly intimated his hope that Bancroft might succeed him (*MSS. Baker*, xxxvi. 335).

He was interred in St. Paul's Cathedral, but the 'fair stone of grey marble' which marked the place of his interment no longer appears. The inscription, which was altogether free from fulsome eulogy, sentimentiously recorded that he

Ter senos annos Præsul; semel Exul, et idem  
Bis Pupil in causa religionis erat.

He married Judith Bures, a lady of Suffolk, by whom he had seven sons and three daughters: Of the former, one (Samuel) was sheriff for the county of Suffolk; another (John) was knighted, and resided at

Rigby in Lincolnshire. Later descendants of Aylmer are Colonel Whitgift Aylmer, who died 1701 (LE NEVE, *Monum. Angl.*, 1650-1718, pp. 190, 197), and Brabazon Aylmer, Esq., of the Middle Temple, who married Miss Bragge 31 July 1735 (*Gent. Mag.*, 1735, p. 500 a). Aylmer was succeeded in his see after some interval by Richard Vaughan, whom he had befriended in his lifetime, and who appears to have been related to him either by marriage or descent (BAKER, *Hist. of St. John's College*, ed. Mayor, p. 255).

Aylmer is supposed to be designated by Spenser in his 'Shepherd's Calendar' (July) under the name of Morrell, the 'proude and ambitious pastour'—the name being formed by syllabic transposition from Elmer, just as Algrind, in the same eclogue, is formed from Grindal. The puritans in like manner nicknamed him Marelme (*Hay any Worke for Cooper*, ed. Petheram, pp. 24, 26).

It can hardly be questioned that, both from his views and his temperament, Aylmer was ill qualified to fill the episcopal office in the trying times in which he lived. He gave especial offence to the puritans by his endeavour to introduce that conception of Sunday observance which the Anglican party at large subsequently sanctioned, and his practice of playing at bowls on the sacred day was a source of much scandal (MARPRELATE's *Epistle*, pp. 6, 52, 54). Like Laud, whom in some respects he much resembles, he deserves to be commended for his attachment to learning and for his discerning patronage of scholars. He was an accomplished logician, was well acquainted with Hebrew, Greek, and Latin, had studied history, and had the reputation of being a good civilian. His reputation as a scholar and a writer is indicated by the fact that, like Dr. Still and Alexander Nowell, he was requested to compose a confutation of the 'Disciplina' of Walter Travers, the recognised text-book of both the earlier and the later puritanism (CHURTON's *Nowell*, p. 223); Burghley also urged upon him the task of replying to the 'Ten Reasons' of Campian, the Jesuit. With neither of these requests did he think fit, however, to reply.

The only one of his works that here calls for notice is his reply to the 'Monstrous Regiment of Women' of John Knox, entitled 'An Harborowe for faithfull and trewe Subjects, against the late blowne Blaste, concerning the Government of Women. Strasburgh, 1559'—a composition the merits of which are admitted by Knox's own biographer, Dr. M'Crie. Of his other writings (chiefly sermons and devotional works)

full particulars will be found in Cooper's 'Athenæ Cantabrigienses,' ii. 171-2.

B. M.

AYLMER, MATTHEW, LORD AYLMEER (d. 1720), admiral and commander-in-chief, was the second son of Sir Christopher Aylmer of Balrath, county Meath, and entered the navy under the protection of the Duke of Buckingham, as a lieutenant, in 1678. Early in the following year he was advanced to the rank of captain; and he appears to have served almost constantly, during the next ten years, on the coast of Algiers and in the Mediterranean. In October 1688 he was appointed captain of the Swallow in the Thames, but at once gave in his allegiance to the cause of the Revolution. In 1690 he commanded the Royal Katherine, and, in the battle off Beachy Head, was one of the seconds to Sir Ralph Delavall who commanded the blue squadron; and in 1692, still in the Royal Katherine, was one of the seconds of the commander-in-chief at Barfleure. In February 1693 he was advanced to the rank of rear-admiral, and to that of vice-admiral in 1694, when he accompanied Admiral Russell to the Mediterranean, and was also appointed a lord of the admiralty. After the peace of Ryswick he was sent, in 1698, as commander-in-chief, again into the Mediterranean, principally to confirm the treaties with the regencies of Tripoli, Tunis, and Algiers; which he happily accomplished, and returned home towards the end of the next year. In Nov. 1699, being, it is said, dissatisfied at the appointment of Admiral Churchill to the admiralty, he retired from active service, though he continued to act as one of the commissioners of the navy till July 1702. He took no part whatever in naval affairs beyond sitting in parliament as baron or member for Dover, till after the death of Prince George, and the retirement of Churchill in Nov. 1709, when he was appointed commander-in-chief of the fleet. In the following July, whilst cruising in the Soundings, he fell in with a French squadron and convoy, of which only one merchantman and the Superbe, of 56 guns, were captured; the rest escaped, owing, it was alleged, to the

haziness of the weather. The want of success served the new ministry as an excuse to supersede him, which they did in January 1711. He held no further command till the accession of George I, when he was again appointed commander-in-chief, ranger of Greenwich Park, and governor of Greenwich Hospital. This office he held till his death; and during that time succeeded in establishing the hospital school for the sons of seamen, which gradually developed into a magnificent institution. In April 1717 he became one of the lords commissioners of the admiralty, but he resigned the appointment early the next year, when he was advanced to be rear-admiral of the United Kingdom, and at the same time raised to the peerage of Ireland as Lord Aylmer of Balrath. He had been elected whig M.P. for Portsmouth in 1695, and for Dover in 1697, 1713, and 1715. He was captain of Deal Castle. He died 18 Aug. 1720.

A portrait, half-length, presented by his descendant, the fifth Lord Aylmer, is in the Painted Hall at Greenwich.

[Charnock's Biog. Nav. ii. 35; Brit. Mus. MSS. Add. 28122/4; Official Papers in the Public Record Office.] J. K. L.

AYLOFFE, JOHN (d. 1685), satirist, educated at Trinity College, Cambridge, wrote one of the most drastic and powerful satires against the Stuarts, entitled 'Marvell's Ghost.' It was furtively circulated as a broadside, but was included in Nichols's 'Select Collection of Poems' (iii. 186), together with another poem 'On the Cambridge Commencement' (iii. 188-9). Aylofffe was executed before the gate of the Inner Temple on 30 Oct. 1685 for his participation in the Rye House plot. He went with the Earl of Argyle into Scotland, where he was taken, and made an attempt to destroy himself by inflicting a terrible wound in his belly. At his execution it came out that he was of the Temple; had been a 'clubber at the King's Head Tavern,' and 'a green-ribbon man.' 'Marvell's Ghost' is as burning and passionate in its invective as any of Marvell's own. A relative, William Aylofffe, wrote a poem on the death of Charles II and accession of James II.

[Brit. Museum Broadside; Hunter MSS. 24, 490; Dryden Miscell.; Macaulay's Hist. c. 5.]

A. B. G.

AYLOFFE, SIR JOSEPH (1709-1781), baronet, an eminent antiquary, was the great grandson of Sir William Aylofffe, first baronet, through his third wife [see AYLOFFE, WILLIAM, *ad fin.*], and was the son of Joseph Aylofffe, barrister-at-law of Gray's Inn and sometime recorder of Kingston-upon-Thames,

who died in 1726. Born about 1709, Aylofffe was educated at Westminster, was admitted a student of Lincoln's Inn in 1724, and spent some time at St. John's College, Oxford, before 1728. In 1730 he succeeded, as sixth in succession, to the family baronetcy on the death of his unmarried cousin, the Rev. Sir John Aylofffe, a descendant of the first family of the original holder of the title. Sir Joseph seems very early in life to have manifested an interest in antiquities, which received at once the recognition of the learned, although for many years he was merely collecting information and published nothing. On 10 Feb. 1731-2 he was elected a fellow of the Society of Antiquaries, and on 27 May of the same year a fellow of the Royal Society. Seven years later he became a member of the well-known literary club—'the Gentlemen's Society at Spalding.' But he did not confine himself altogether to antiquarian research. In 1736-7 he was appointed secretary to the commission superintending the erection of Westminster Bridge; in 1750 he was auditor-general of the hospitals of Bethlehem and Bridewell; and in 1763, on the removal of the state archives from Whitehall and the establishment of a State Paper Office at the Treasury, he was nominated one of its three keepers. In 1751 Aylofffe took a prominent part in procuring a charter of incorporation for the Society of Antiquaries, of which he was for many years a vice-president, and at its meetings he very frequently read papers. He died at Kensington on 19 April 1781, and with him the baronetcy became extinct. He married, about 1734, Margaret, daughter of Charles Railton of Carlisle, by whom he had one son, who died of small-pox at Trinity Hall, Cambridge, in 1756. Both father and son were buried in Hendon churchyard. Sir Joseph was the intimate friend of his colleague at the State Paper Office, Thomas Astle, and of Richard Gough; the latter described Aylofffe as the English Montfaucon.

Aylofffe's published writings belong to his later life, and were never very successful with the general public. In 1751 he circulated proposals for printing by subscription the debates in parliament prior to the Restoration, in eight octavo volumes. But little favour was apparently extended to the scheme; although in 1773 it was advertised that the first volumes would soon be sent to press, none appear to have been published (cf. *Rawlinson MSS.* in the Bodleian, s. v. 'Aylofffe'). It was also in 1751 that Sir Joseph issued a prospectus inviting subscribers for a translation of Diderot's and D'Alembert's 'Encyclopédie,' with additional or expanded articles on subjects of

English interest. But the first number, which was published on 11 June 1752, obtained such scanty support, and was so severely handled in the 'Gentleman's Magazine' (xxii. 46), that the project was immediately abandoned. Some years previously Ayloffe had induced Joshua Kirby, a well-known draughtsman of Ipswich, to prepare a number of engravings of the chief buildings and monuments in Suffolk, and twelve of them were published with descriptive letterpress by Ayloffe in 1748. It was Ayloffe's intention to introduce Kirby's drawings into an elaborate history of the county upon which he was apparently engaged for the succeeding fifteen years. In 1764 he had made so much progress in collecting and arranging his materials that he published a lengthy prospectus for the publication of an exhaustive 'Topographical and Historical Description of Suffolk,' but unfortunately he here again received too little encouragement to warrant him in pursuing his elaborate plan. Subsequently he contributed several memoirs to 'Archæologia,' the journal of the Society of Antiquaries, which were highly valued at the time. On 25 Feb. 1763 he 'communicated' an interesting 'Copy of a Proclamation (1563) relating to Persons making Portraits of Queen Elizabeth' (ii. 169-170). In 1773 and 1774 there appeared in 'Archæologia' (iii. 185-229, 239-272, 376-413) three papers by Ayloffe, describing (1) a picture at Windsor of the famous interview in 1520 between Henry VIII and Francis I; (2) four pictures at Cowdray near Midhurst, the property of Lord Montague, illustrating Henry VIII's wars in France in the latter part of his reign; and (3) the opening of the tomb of Edward I at Westminster in 1774, an exhumation that Ayloffe with Daines Barrington superintended. Another paper prepared for the Society of Antiquaries, 'On Five Monuments in Westminster Abbey,' was published separately, with engravings, in 1780. An account of the chapel on London Bridge, by Ayloffe, was published with a drawing by George Vertue in 1777.

In 1772 Ayloffe published the work by which he is still known to historical students. It is entitled 'Calendars of the Ancient Charters . . . and of the Welch and Scottish Rolls now remaining in the Tower.' In a lengthy introduction the author impresses on historians the necessity of scholarly research among the state papers. The book was begun by the Rev. Philip Morant, who was at one time employed at the State Paper Office, and was published at first anonymously. But in 1774 a new issue gave Sir Joseph Ayloffe's name on the title-page.

Ayloffe also revised for the press new editions of Leland's 'Collectanea' (1771) and of the 'Liber Niger Scaccarii' (1771), and added valuable appendices of original illustrative documents. He saw through the press John Thorpe's 'Registrum Roffense,' which was published in 1769 by the compiler's son. Ayloffe's 'Collections relative to Saxon and English Laws and Antiquities' remain in manuscript at the British Museum (*Addit. MS.* 9051). We have been unable to trace the whereabouts of his other manuscript collections, which were clearly very numerous, and are stated by contemporaries to have been invaluable so far as they related to the abbey and city of Westminster. His library was sold by Leigh and Sotheby soon after his death.

[Annual Register for 1781; Gent. Mag. for 1781; Nichols's Literary Anecdotes and Illustrations of Literature; Burke's Extinct Peerage, p. 30; Morant's History of Essex; Brit. Mus. Cat.] S. L.

AYLOFFE, WILLIAM (d. 1585), judge of the Queen's Bench, was descended from a very ancient family settled originally in Kent and subsequently in Essex, whose origin has been traced to Saxon times. On 14 Feb. 1553-4 he was admitted a student of Lincoln's Inn, where two other near relatives, bearing the same name, distinguished themselves in the sixteenth century, and in 1560 he was called to the bar. After being appointed 'reader' at his inn of court in Lent term, 1571, he was made serjeant-at-law in 1577, at the same time as Sir Edmund Anderson, afterwards the well-known lord chief justice of the Common Pleas. A notice of a banquet in the Middle Temple hall, given by Ayloffe with other barristers upon whom a similar distinction had just been conferred, to celebrate their promotion, is preserved among the Ashmolean MSS. at Oxford (*Ashm. MS.* 804, ii. 1). No record is known of Ayloffe's elevation to the bench, but he is found acting as judge in the court of Queen's Bench in 1579 (*Calendar of State Papers*, 1547-1580, p. 637), and his judgments are reported by Dyer, Coke, and Savile after that date, which may therefore be regarded as the probable year of his appointment. He was present in 1581 at the trial of Edmund Campion and other seminary priests, and special attention is called to the part he played on that occasion in a pamphlet published by English catholics at Paris shortly afterwards, and bearing the title 'An Epistle of Comfort to the Reverend Priestes and to the Honorable, Worshipful and other of the Laye sort restrained in Durance for the Catholike Fayth,'

12mo. It is there stated (p. 202), on the evidence of eye-witnesses, that while sitting in court after the other judges had retired, and while the jury were considering their verdict, Ayloffe took off his glove and found his hand and ring covered with blood without any apparent cause, and that, in spite of his endeavours to wipe it away, the blood continued to flow as a miraculous sign of the injustice that polluted the judgment-seat. Some correspondence of Ayloffe and the lord mayor of London about the appointment of his brother as town clerk, are among the city archives for 1580 and 1581 (*Remembrancia*, pp. 149, 150, 271).

Ayloffe died on 8 Nov. 1585. He married Jane, daughter of Sir Eustace Sulyard, by whom he had three sons. A baronetcy conferred by James I in 1612 upon William, the eldest of them, who had been knighted in 1603, continued in the family till 1781. Sir William, the first baronet, was thrice married, and a large family survived him.

[Foss's Judges of England, v. 445; Wright's Essex, ii. 443-4; Burke's Extinct Baronetage, p. 30; Notes and Queries (2nd series), iii. 376.]

S. L.

**AYLWARD, THEODORE** (1730-1801), musician, was born, probably at Chichester, in 1730. Of his early life and education nothing is known, though when young he seems to have sung at Drury Lane Theatre. He became a member of the Royal Society of Musicians 9 July 1763 (*Records of Roy. Soc. Musicians*), and was elected by a unanimous vote into the Madrigal Society 15 Nov. 1769 (*Records of Madrigal Soc.*). He was appointed organist of St. Lawrence Jewry in 1762, a post he held until 1788. In 1764 he was organist of Oxford Chapel, and from 1768 to 1781 organist of St. Michael's, Cornhill. In 1771 he was appointed professor of music at Gresham College, and in 1788 he succeeded Edward Webb as organist of St. George's Chapel, Windsor. In November 1791 he took the accumulated degrees of Mus. Bac. and Mus. Doc. at Oxford. He died at Windsor 27 Feb. 1801, and was buried in St. George's Chapel. Aylward published a few songs, duets, glees, and organ pieces; but most of his music is still in manuscript.

[Appendix to Bemrose's Choir Chant Book (1882); Catalogue of Collection of Music School, Oxford; Gent. Mag. 1801.] W. B. S.

**AYLWORTH, WILLIAM**, jesuit. [See HARCOURT.]

**AYMER** or **ÆTHELMÆR** (ÆTHELMAR) DE VALENCE, or DE LUSIGNAN (*d.* 1260), bishop of Winchester, was a younger son of Isabella, widow of King John, by her

second husband, Hugh X, count of La Marche. Isabella having died in 1246, and the fortunes of their house being depressed in consequence of the failure of their father's rebellion, Guy of Lusignan, William of Valence, and Aymer, who was then in orders, came to England in 1247 to enrich themselves. Henry III received his half brother with great joy. Besides procuring several livings for Aymer, he compelled different bishops and abbots to assign him 'innumerable' pensions, so that his revenues soon equalled those of an archbishopric. Among the various acts of injustice by which the king enriched his brother at this time, the strong pressure put on the abbot of Abingdon to force him to present Aymer to the rich church of St. Helen in that town excited special indignation. On the resignation of Nicolas, bishop of Durham, in 1249, Henry tried hard to procure the election of his brother. In spite, however, of the king's threats, the chapter rejected Aymer as too young and too ignorant for the office, and Henry was for the time forced to be content with adding the rectory of Wearmouth to his many benefices. So numerous had these and other sources of revenue become, that it was said Aymer might well forget what they were and what each was worth, and he was obliged to appoint a steward to manage his rapidly-increasing wealth. When William, bishop of Winchester died in 1250, Henry determined that his brother should succeed him, and sent two of his chief clerks to persuade the monks to elect him. They refused on account of his youth, his lack of full orders, for he was only an acolyte, and his ignorance. Then the king himself visited the chapter, and commanded them with threats to elect his brother. The monks yielded, for they knew that there was no help to be had from the pope. Very sorrowfully they obeyed the king's command, for the Poitevin thus forced upon them as the head of their noble and wealthy church could not speak their language, and would, they believed, avoid consecration, for they knew that he only sought the revenues of the see. Aymer was elected on 4 Nov. 1250, and his election was confirmed at Lyons by Innocent IV on 14 Jan. of the following year. On his return to England he gave a splendid banquet at Winchester to the king and queen to celebrate his entrance on his office. Few, if any, of his guests were Englishmen, and this neglect of the native nobility did not escape remark. The papal confirmation was doubly scandalous in the eyes of Englishmen. Not only was Aymer, they said, the first to hold an English bishopric without being a

bishop, but the pope gave him leave to retain the revenues he derived from the church before his consecration. Although he was now splendidly provided for, the king forced the abbot of St. Albans to grant him a yearly pension of ten marks.

The bishop-elect of Winchester attended the assembly of bishops held at London on 13 Oct. 1252 to deliberate on the pope's grant to the king of a tenth of the revenues of the clergy for three years. Robert Grosseteste, bishop of Lincoln, opposed the demand. Aymer argued that, as pope and king were united, the clergy had no choice; and that, as the French had agreed to a like demand, the English ought to do the same. He seems, however, to have said this as the king's advocate, for he agreed with Grosseteste and most of the other bishops in refusing to be bound by the grant. The king was very wroth with him for this, and when Aymer took leave of him with the words, 'I commend you to the Lord God,' answered, 'And I you to the living devil,' reproaching him bitterly with ingratitude. Soon after this Aymer quarrelled with Boniface of Savoy, archbishop of Canterbury, the uncle of the queen. During the archbishop's absence from England, he instituted a certain clerk as prior of the hospital of St. Thomas the Martyr, at Southwark. The archbishop's official, finding that the rights of Canterbury had been infringed on, called on the prior to resign, and on his refusal excommunicated him. The prior continued contumacious, and the official had him seized and taken to the archbishop's manor of Maidstone. When Aymer heard this, he gathered a band of men, and with the connivance of William, his brother, and John of Warrenne, his brother-in-law, sent them to seize the official. They sought him at Southwark and then at Maidstone, and not finding him there, set fire to the house. At last they found him at the manor of Lambeth, and brought him with many insults to Farnham. Aymer did not dare to keep him, and drove him from the castle. The archbishop excommunicated all concerned in this outrage. Aymer, however, commanded the dean of Southwark and others to declare the sentence of no effect. The foreigners at the court were divided, the Poitevins against the Provençals, the king's men against the queen's men, while the English heartily wished that they would destroy one another. The archbishop succeeded in stirring up popular feeling against the bishop-elect by laying his case before the university of Oxford. At the festival of Epiphany in the next year, the king as usual being at Winchester for Christmas, a reconciliation was arranged, and Aymer swore that the

violence done was without his knowledge and will. In the parliament held at London in April 1253, the bishop-elect, with two others, was sent by the bishops to the king to entreat him to allow the church liberty of election. Henry answered that the bishops of his appointment had better resign, and turning to Aymer, reminded him how he had gained his bishopric for him by threats and entreaties when, on account of his youth and his ignorance, he ought to have been at school. The next year Aymer appears to have promised to join the king, who was then fighting in Gascony.

Aymer made the monks of Winchester bitterly repent their compliance with the king's order to elect him, for he greatly oppressed them, keeping them shut up in the church for three days without food. They fled from his violence, and took shelter in other monasteries. He dispossessed the prior, and filled the convent with men of a baser sort, whom he made monks of his house. Even the king disapproved of his violence. The prior appealed to Rome. Henry warned his brother of the insatiable thirst of the papal court for gold, and in answer Aymer boasted that the spring of his wealth would not dry up. His gifts exceeded the gifts of the prior, and he gained the suit. The prior he had set up kept his office, but his false monks grew weary of their life and left the convent, and he made the old monks come back to their house again. He managed to get some profit even out of his suit with the prior. In order to gain money to carry on their case, the convent had recourse to the Caursins (or Caorsini), the great money-lenders of the day. Aymer paid the debt on condition of receiving the isle of Portland and some other places from the convent. After he was dead the monks petitioned the king that these places might be given back to them, for they said that they had been taken from them unlawfully. Aymer had no sympathy with English feeling in any shape, and when in 1255 the bishops were in difficulty owing to the demands of Rustand, the papal envoy, they suspected that his heart was not with them, and so took no counsel with him. In 1256 he was in Poitou from 25 Jan. to 17 Sept. On the death of Walter Gray, archbishop of York, the king refused to confirm the election of Sewall de Bovill, for he hoped to get the archbishopric for Aymer. Sewall, however, lost no time in applying to Rome; his election was confirmed by the pope, and the king's scheme failed. In January 1257 Aymer was sent on an embassy to France to gain a prolongation of the truce. Later in the year he was again sent with other ambassadors

to the French court to demand the English rights, but he and his fellows had nothing but hard words. He was foremost in persuading Richard of Cornwall to accept the crown of Germany offered to him in this year. When in 1258 the parliament of Oxford created a committee of twenty-four for the redress of the grievances set forth in a petition of the barons, Aymer and his brothers, Guy and William, were among the twelve nominated by the king. They refused to swear to the provisions drawn up for the reform of the state, and would not give up the royal castles they held. For fear of Earl Simon, William, Guy, and Geoffrey left Oxford suddenly, and fled to Aymer at Wolvesey. The castle was attacked by the barons. In the negotiations which followed it was at first proposed to allow William and Aymer to remain in the country; but it was finally decided that all the brothers should go with their followers. Their property was seized, and they were not allowed to carry away more than 6,000 marks. The feeling against Aymer was very strong. Not long before this his men had ill-used and slain a clerk who had been appointed by John FitzGeoffrey to a church of which he claimed the patronage; and when complaint was made to the king, Henry excused him. It was generally believed that before he and his brothers left England they poisoned the Earl of Gloucester and others at a feast at Aymer's house at Southwark. On their arrival in France they met with a cold reception. Aymer asked leave to stay in Paris to study. As, however, the French queen complained that the Poitevins had insulted her sister, the Queen of England, Lewis would not have them in his capital. Almost as soon as they landed they were followed by Henry of Montfort, eager to avenge the insults they had heaped on his father. He stirred up the French against them. Aymer and his brothers shut themselves up in Boulogne, and were kept in there almost by a kind of blockade. At last the bishop-elect was allowed to pass into Poitou. The castellan of Dover intercepted 1,000 marks which were being sent to him from England. Part of this sum was employed by the barons in defraying the expenses of an embassy they sent to Rome to complain of his conduct. The ambassadors carried letters setting forth the mischief and wickedness of which he had been guilty, urging the pope to annul his appointment, and declaring that the barons were determined not to allow him to return, and that even were they otherwise minded, the people of England would never suffer it. The next year, 1259, the chapter of Winchester elected Henry Wingham, the chancellor,

to the bishopric, and the king conferred the election conditionally, declaring his approval in case Aymer was unable to obtain consecration. Alexander IV, however, was by no means inclined to listen to the representations of the baronial party, and on 16 May 1260 consecrated Aymer at Rome. The bishop set out on his journey to England, intending to lay the country under an interdict in case he was not received. He died in Paris on 4 Dec., to the great joy of the English people. His body was buried in Paris, and his heart was sent to Winchester Cathedral, where his tomb may still be seen, and where, it is strange to read, many miracles were worked.

AYMER DE VALENCE (*d.* 1324), EARL OF PEMBROKE and lord of Montignac, was the third son of William of Valence, half-brother of Henry III and of Joan, daughter of Warine of Munchensi. His elder brothers died during the lifetime of their father, and Aymer succeeded to the earldom in 1296. He served in Flanders in 1297, and in Scotland in 1298. In 1302 he was employed in an embassy to France, and the following year assisted in making peace with Philip IV. He received a grant of land in Scotland, and built himself a castle at Selkirk. When Edward made war on Robert Bruce in 1306, Aymer was appointed guardian of Scotland, and led the van of the army. Bruce advanced to the neighbourhood of Perth and challenged him to battle. Aymer answered that he would not fight on that day, but on the same evening made a sudden attack on the Scots, and defeated them in the wood of Methven (TRIVER). He took captive the wife and daughter of the Scottish king, and crossed to Kantire, hoping to find Bruce himself. There he took Nigel Bruce, and sent him to Berwick, where he was put to death. The next year, on 10 May, he was defeated by Bruce at Loudon Hill, and forced, though without much loss, to retire to the castle of Ayr. There he and the Earl of Gloucester were besieged until the king sent a force to relieve them. On the accession of Edward II, Aymer lost the guardianship of Scotland. He was deeply offended at the insolence of Gaveston, who gave him the nickname of Joseph the Jew, because he was tall and of a pallid countenance (WALSINGHAM). When he and other great nobles attended the tournament held by Gaveston at

Wallingford, they were treated with insult, and for this and other reasons they took counsel together against him. In 1309 the earl joined with the other lords at the parliament held at Stamford in sending a letter to Clement V, remonstrating with him on his usurpations. He was one of the foremost of the discontented nobles who the next year were expressly forbidden to attend the parliament in arms. He disregarded the order, and, appearing with the rest in military array, demanded the appointment of a council of reform. The first step in the formation of this council was the choice of two earls by the bishops, and Aymer was one of the two then chosen to select the ordainers. When the king marched northwards, Pembroke and the other ordainers refused to leave London, but sent the number of men they were bound by their service to supply.

On the recall of Gaveston in 1312 the lords of Lancaster's party sent the Earls of Pembroke and Warenne against him. They besieged Gaveston in Scarborough Castle. He surrendered on 19 May, receiving a promise from Pembroke that his life should be spared. Pembroke took him towards Wallingford, and lodged him at Deddington. In his absence the Earl of Warwick seized on Gaveston, carried him to Gaversike, and there put him to death. Enraged at the dishonour thus done to his word, Pembroke left the Lancastrian lords, and joined himself to the court party. About this time he and Lord Badlesmere rescued Lady Clifford from the constable of Barnard Castle, who had carried her off. He went to France to seek aid for the king, and on his return negotiated between him and the earls. On 20 Sept. he appeared before a meeting of the Londoners at the Guildhall, and demanded the obedience of the city for the king. A fierce riot broke out, and the earl and his companions barely escaped in safety. His position seems to have been rather that of leader of the party opposed to Lancaster, to whom he never forgave the death of Gaveston, than of a supporter of the king's policy (STUBBS, *Const. Hist.* ii. 341). He received a grant of the New Temple and of other lands of the Templars in London. After long negotiations, in which Pembroke acted as one of the royal commissioners, peace was made with the Lancastrian earls. The affairs of Scotland demanded instant attention, and the king made him lieutenant of that country, and sent him on to insure the safety of the royal army in its northward march. Pembroke shared in the king's defeat at Bannockburn on 24 June 1314, and saved himself by flight. The next year he was sent with Lord

Badlesmere to secure the marches against the Scots (RYMER, *Fœdera*, ii. 524). He was also employed to quell the insurrection at Bristol. In 1316 he went on an embassy to the pope. On his way home he was taken prisoner by a Burgundian named Moiller, who declared that the King of England owed him wages for service he had done him. He took the earl into Germany, and kept him until he was ransomed (MURMUTH; LELAND, *Collect.* ii. 548, 2nd ed.). In September 1317 he persuaded Edward not to provoke the Earl of Lancaster (MON. MALM.). On 24 Nov. he entered into a bond with Roger d'Amory and Badlesmere, by which the confederates, who formed themselves into a kind of third party, agreed to work together to gain supreme influence in the council (STUBBS, *Const. Hist.* ii. 342). The party thus formed rapidly increased in power, and succeeded in effecting a formal pacification of the kingdom. In virtue of this agreement, signed at Leek on 9 Aug. 1318, a new council was appointed, in which Pembroke held a conspicuous place. On 24 March 1319 he sat with the earl marshal in the chapter-house of St. Paul's to hear and compose certain quarrels that had arisen among the citizens of London, and later in the same year accompanied the king on his unfortunate expedition against Berwick. At Christmas he negotiated a two years' truce with the Scots. Although he was at least secretly in league with Roger of Mortimer and the other lords who in 1321 ravaged the lands of the Despensers, he nevertheless assumed the part of a mediator, and pressed the king to banish his favourites. The Earl of Lancaster declared that he had acted treacherously, and advised the discontented lords to have nothing to do with him. When Edward at last took up arms, he once more attempted to mediate, and failing in this attempt, actively upheld the king. On 22 March 1322 he joined in the judgment and condemnation of Lancaster. He received Higham Ferrers and other of the earl's lands in Northamptonshire. Later in the year he accompanied the king in his expedition against Scotland, and on 30 May 1323 arranged a truce of thirteen years with the Scots. In 1324 Pembroke died suddenly near Paris, while on an embassy to Charles IV. He married three times. His third wife, married on 5 July 1321, was Mary of Chatillon, daughter of Guy IV, Count of St. Pol, the foundress of Pembroke Hall at Cambridge. He had no issue by any of his wives, and his childless death was held to be a just punishment of the part he took in the condemnation of the Earl of Lancaster (WALSINGHAM, ii. 195).

W. H.

AYREMINNE, or AYERMIN, RICHARD DE (d. 1340?), chancellor of the dioceses of Norwich and Salisbury, was younger brother of William de Ayreminne, bishop of Norwich [q. v.]. He was probably in early life a clerk of the exchequer. He became prebendary of York in 1316. On 26 May 1324 he was made keeper of the rolls in the place of his brother William. Between 16 Nov. and 12 Dec. of the same year he kept the great seal during the absence of the chancellor, Robert de Baldock, in Scotland. On 4 July 1325 Henry Cliff was substituted for Richard de Ayreminne in the keepership of the rolls, probably in consequence of the quarrel of his brother William with Edward II as to his right to the see of Norwich. In September 1325 Richard was appointed rector of Elveley (Alveley, co. Salop), and made by his brother chancellor of his diocese of Norwich. But shortly afterwards he, with another brother, Adam, left for France to join his brother William. In 1326 Edward II issued a writ complaining of the refusal of the brothers to appear before him, and directing the Archbishop of York to secure their attendance. After Edward III's accession in 1327 Richard was made clerk of the privy seal, and subsequently guardian of the Jewish converts for life. On 7 June 1339 he resigned this post. He was appointed chancellor of the diocese of Salisbury 16 July 1339 ; and since a successor to him was nominated in 1340, that year has been assumed to be the date of his death.

[Le Neve's *Fasti* ; Blomefield's *Norwich*, i. 501 ; Rymer's *Fœdera*, iii. 791, iv. 61, 161, 804 ; Foss's *Judges*, iii. 214-15.] S. L.

AYREMINNE, or AYERMIN, WILLIAM DE (d. 1336), bishop of Norwich, was descended from an ancient family settled at Osgodby, Lincolnshire. He was the eldest of three brothers, of whom Richard obtained many ecclesiastical offices [see AYREMINNE, RICHARD DE], and Adam became archdeacon of Norfolk. In early life William was probably a clerk of the exchequer. He sat in the parliament of Carlisle in 1306-7 as proxy for St. Augustine's Abbey, Canterbury. In 1316 he was deputed to record the proceedings of the parliament of Lincoln. In August of this year he became master of the rolls,

and he temporarily performed for many years before and after this date the duties of both the keeper of the great seal and of the chancellor. In 1317 he was made guardian of the Jewish converts' house for life, although previously the office had only been held during the king's pleasure (TOVERY'S *Anglia Judaica*, 222). In 1319 he joined the Archbishop of York, the Bishop of Ely, and other ecclesiastics, who with a force of eight thousand men attempted to resist an invasion of the Scots in the North. The army was defeated near the river Swale with great slaughter. William was taken prisoner, and was not released for several months. In 1324 he resigned the mastership of the rolls to his brother Richard, and became keeper of the king's privy seal. In the church he meanwhile secured much preferment, although he was always manœuvring to obtain more. He was rector of Wearmouth and canon of St. Paul's, Lincoln, York, Salisbury, Hereford (1320), and Dublin. He held three prebends at Lincoln. In July 1325, while in France, he received news of the death of Salmon, bishop of Norwich. The pope was then at Avignon, and Ayreminne at once obtained his nomination to the vacant see, regardless of the known intention of Edward II to bestow the bishopric on his chancellor, Baldock. But there seems little doubt that William was living in France at the time, engaged in settling a dispute between the kings of England and France as to the possession of land in Aquitaine. His conduct of this business appears to have displeased Edward II, who had instructed him to offer certain concessions to France, which he failed to do. He had, however, friends at Rome, who undoubtedly obtained for him the papal nomination in 1325 to the see of Norwich, and he was consecrated bishop in France, 15 Sept. 1325, by the pope's agents against Edward's wish. In the course of the following year he returned to England, after frequent refusals to answer the king's summons to explain his recent conduct, and appears to have been reconciled to Edward II, in spite of the suspicions with which the Despencers and Baldock viewed him. He vigorously supported Edward III on the abdication of Edward II, and in 1331 held the office of treasurer. He died 27 March 1336, at his house at Charing, near London, and was buried in Norwich Cathedral. The old verdict on his career, which stigmatised him as 'crafty, covetous, and treasonable,' seems substantially just.

port, 381, 384, 385; Rolls of Parliament, i. 190, 298, 350-1; Rymer's *Fœdera*, vols. iii. and iv. *passim*.] S. L.

AYRES, JOHN (*n.* 1680-1700), an eminent English penman, was of very humble origin, but the date and place of his birth are unknown. Coming up from the country a poor lad, he became footman to Mr. William Ashurst, alderman of London, then resident at Hornsey, who was knighted in 1689, and lord mayor of London in 1693-4. His master, taking a great liking to him, sent him to school, where he attained great efficiency in writing and arithmetic. He continued some years in Ashurst's service, but marrying a fellow-servant with 200*l.*, he was enabled to set up as a teacher of writing and accounts in St. Paul's Churchyard, where his industry and ability soon procured him so many scholars that his income from teaching alone was nearly 800*l.* a year.

About 1680 he commenced the execution and publication of those calligraphic works which have made him so famous as one of the great reformers in the writing commonwealth, and the introducer into this country of the beautiful Italian hand. Robert More, in his essay on the 'First Invention of Writing,' prefixed to his own 'Specimens of Penmanship' (1716?), says: 'The late Colonel Ayres (a disciple of Mr. Topham) introduced the bastard Italian hand amongst us, which by the best masters has been admitted, naturalised, and improved. Nor is it a diminution of our characters which survive him that therein the colonel was the common father of us all. He carried the glory of English penmanship far beyond his predecessors.' Ayres continued teaching and publishing scholastic works until his sudden death, from apoplexy, while regaling some friends at Vauxhall. The date of this occurrence is not known; but it was before 1709, as Rayner, his scholar, who published his 'Paul's Scholar's Copy Book' in that year, alludes to his death.

His contemporaries speak of him as 'colonel' and 'major,' in reference, apparently, to his position in some of the city bands.

The works which he issued from the Rolling Press were: 1. 'The Accomplished Clerk, a Copy Book shewing the natural Freedom of y<sup>e</sup> Pen in Writing all the usual hands of Eng<sup>d</sup> [*sic*], by John Ayres. Sold at the Hand and Pen in St. Paul's Churchy<sup>d</sup>.' This was engraved by the celebrated John Sturt, and apparently issued about 1680, since in 1700 he reproduced the work as (2) 'The Accomplished Clerk Re-graved,' and in the

preface speaks of his 'first essays, twenty years before, to introduce the engraving of writing, and overcome the difficulty of making the graver come up nicely to the nature and freedom of the pen.' (Only three of the twenty-five plates were from the original work.) 3. A work which seems to have been a second issue of his first book, 'The Accomplished Clerk, or Accurate Penman,' dedicated to his former teacher, Mr. Thomas Topham, and dated 25 April 1688. The last of these twenty-five specimens is a fine instance of the softness, delicacy, and ornamental beauty of the new Italian hand. 4. 'The Tradesman's Copy Book, or Apprentice's Companion, showing Varieties of Receipts, Bills, &c. written in all the modish Running-hands now used,' 20 pl. ob. 4to, 1687. 5. 'The Youth's Introduction to Trade; an Exercise Book.' 6. 'The Paul's School Round-hand, Strong Running-hand, and Mercantile Round-hand,' engraved by Sturt, 1700. 7. 'Alamode Secretarie, or Practical Penman, a Writing Book,' also engraved by Sturt, 28 long 8vo pl. 8. 'The Penman's Daily Practise, Shewing much Variety of Command of hand,' which he calls 'a cyfering book,' 34 plates of alphabets and tables of arithmetic, engraved by Sturt (*n.d.*). 9. 'The Writing Master, or Tutor to Penmanship,' 50 large plates of all the Varieties of English Writing (*n.d.*). 10. 'A Striking Copy Book,' 14 plates of capital-letters. 11. 'Materot Redivivus, the Italian M<sup>r</sup>., Shewing the great Variety and beauty of the Italian hand,' 1690. (Materot was the famous penman of Paris.) The grandest, however, of all his works was 12. 'A Tutor to Penmanship or the Writing Master,' which he dedicated to King William III in a most pompous and yet interesting address. It was in two parts, with 48 large obl. fol. plates. Engraved by John Sturt, who also puts forward a long and curious address. The preface is dated 15 Jan. 1697-8. Ayres's portrait was in this work, also in the 'Accomplished Clerk' (No. 3 above); but in the British Museum copies these works from Sturt's graver are wanting. There are only five of these famous books of penmanship in our national collection.

Ayres also published 'Arithmetic made Easie for the Use and Benefit of Tradesmen,' 1693, dedicated to his former master, Sir William Ashurst, Knt. The second edition, 'much corrected and enlarged,' 1695, is in 12mo, 190 pp. There were many editions before and after his death; the twelfth, published in 1714, has additional pages on bookkeeping by Charles Snell, his fellow-pupil and former rival in

the reform of the art of writing, with whom it was said he had many bickerings in the course of their joint career. Ayres's poorly executed 'effigies' is given in the later editions of his 'Arithmetic.'

[Robert More, *First Invention of Writing*, 1716; William Massey, *Origin of Letters*, 1763; Ayres's Works; Chalmers's Biog. Dict.]

J. W.-G.

AYRES, PHILIP (1638-1712), the author of numerous books and pamphlets, flourished in the latter part of the seventeenth century; was born at Cottingham, and educated at Westminster, and St. John's College, Oxford. He became tutor in the family of Montagu Garrard Drake, of Agmondesham, Bucks, and lived in the family till his death, 1 Dec. 1712. His chief work is his 'Lyric Poems made in imitation of the Italians,' 1687, a not uninteresting collection of original pieces and translations. One copy of verses is addressed to 'his honoured friend' John Dryden. The following is a list of Ayres's works in chronological order: 1. 'A short Account of the Life and Death of Pope Alexander VII, by P. A. Gent.,' 1687. 2. 'Pax Redux, or the Christian Reconciler. Done out of the French by P. A.,' 1670. 3. 'The Fortunate Fool, written in Spanish by A. G. de Salas Barbadillo. Translated by Philip Ayres, Gent.,' 1670. 4. 'Count Nadasdy's Hungarian Rebellion, translated by P. A. Gent.,' 1672. 5. 'The Count of Gabalis,' 1680, from the French of the Abbé de Montfaucon de Villars. 6. 'Emblemata Amatoria. Emblems of Love. In four languages, Lat., Engl., Ital., Fr.,' 1683. 7. 'The Voyages and Adventures of Captain Barth. Sharp and others in the South Sea, &c.,' 1684. 8. 'Vox Clamantis, or an Essay for the Honour, Happiness and Prosperity of the English Gentry,' 1684. 9. 'Mythologia Ethica, or Three Centuries of Æsopian Fables in English,' 1689. 10. 'The Revengeful Mistress, being an Amorous Adventure of an English Gentleman in Spain,' 1696.

[Corser's Collectanea, i. 104-108; British Museum Catalogue; Rawlinson MSS. i. 197.]

A. H. E.

AYRTON, EDMUND (1734-1808), the most distinguished member of a race of musicians, was born at Ripon, where he was baptised 19 Nov. 1734. His father was one Edward Ayrton (1698-1774), a 'barber-chirurgeon,' of Ripon, who was appointed alderman of that town 14 Aug. 1758, and mayor 1 Jan. 1760. Edward Ayrton's eldest son, William (baptised 18 Nov. 1726), was organist of Ripon Minster from 7 June 1748 until

his death, which took place 2 Feb. 1799. By his wife Catherine (who died at Chester 19 Sept. 1819) he had two sons, both of whom were organists of Ripon Minster. The elder of these, William Francis Morel, was born in 1778, and succeeded to his father's post on 25 June 1799. Soon after he moved to Chester, where he died 8 Nov. 1850. His brother, Thomas, was born in 1782, and was organist of Ripon Minster for nearly twenty years before his death, which took place 24 Oct. 1822. Edmund Ayrton, the second son of Edward Ayrton, the barber-surgeon, was originally destined for the church, but, displaying considerable musical talent, was placed under Dr. Nares, the organist of York Minster. He succeeded William Lee as organist, auditor, and rector chori of Southwell Minster in 1754. Here he married, on 20 Sept. 1762, Ann, the daughter of Benjamin Clay, by whom he had fourteen children, several of whom died in infancy. Ayrton became a member of the Royal Society of Musicians on 2 June 1765 (*Records of Roy. Soc. of Musicians*). In 1764 he was appointed a gentleman of the Chapel Royal, and soon after became a vicar choral of St. Paul's Cathedral, and a lay vicar of Westminster Abbey. He succeeded Nares as master of the children of the Chapel Royal in 1780. Ayrton took the degree of Mus. Doc. at Cambridge in 1784, on which occasion the anthem he wrote as an exercise was performed in the church of Great St. Mary's, and afterwards in London at the peace thanksgiving at St. Paul's on 29 July 1784. The Oxford degree of Mus. Doc. (ad eundem) was conferred upon him in 1788. Dr. Ayrton's wife died on 14 May 1800; he resigned the mastership of the children in 1805, and died on 22 May 1808, at 24 James Street, Buckingham Gate, Westminster, a large house with a garden of some three acres, but which had the reputation of being haunted, so that Ayrton had occupied it for many years at a low rent. He was buried in the west cloisters of Westminster Abbey on 28 May. His sister married Nicholas Thomas Dall, the Danish painter.

W. B. S.

AYRTON, MATILDA CHAPLIN, M.D. (1846-1883), one of those medical students to whose energy Englishwomen are indebted for their existing opportunities of studying and practising medicine, was born at Honfleur in 1846. Her maiden name was Matilda

Chaplin. After devoting herself to art for some years, she commenced in 1867 the study of medicine, which she pursued unceasingly until her death. She spent two years at the London Medical College for Women; and having passed the preliminary examination at Apothecaries' Hall in 1869, she presented herself for the later examination, but was refused admission on the ground of her sex. Thereupon she at once proceeded to Edinburgh, and matriculated there. But here again instruction in the highest branches of medicine was denied her. The aid of the law was invoked to reverse the decision of the authorities, but judgment was in 1872 finally given against women students. Mrs. Ayrton took, however, high honours in anatomy and surgery at the extramural examinations held in 1870 and 1871 at Surgeons' Hall, Edinburgh. In 1871, when she found the chief medical classes in England and Scotland closed to her, she resolved to complete her education at Paris, where every facility was afforded her. The university of Paris recognised her abilities by bestowing upon her the degrees of *Bachelier ès-Sciences* and *Bachelier ès-Lettres*. But, although studying regularly at Paris, Miss Chaplin did not sever her connection with Edinburgh, and still attended some of the classes open to her there. In 1872 she married Mr. William Edward Ayrton, an Edinburgh student, and a distinguished pupil of Sir William Thomson. Early in the following year she obtained a certificate in midwifery from the London Obstetric Society, the only medical qualification then obtainable by women in England, and shortly afterwards accompanied her husband to Japan, where he had been appointed to a professorship in the Imperial College of Engineering. In Japan Mrs. Ayrton pursued some interesting anthropological researches, and opened a school for native midwives, in which she lectured herself, with the aid of an interpreter. In 1877 signs of consumption made themselves apparent, and Mrs. Ayrton returned to Europe. In 1879 she took the degree of M.D. at Paris, and presented as her thesis the result of her Japanese studies, which was printed under the title of '*Recherches sur les dimensions générales et sur le développement du corps chez les Japonais*' (Paris, 1879). Later Mrs. Ayrton became a licentiate of the King and Queen's College of Physicians in Ireland, and, although the only female candidate, came out first in the examination. In 1880 Mrs. Ayrton lived in London, chiefly studying diseases of the eye at the Royal Free Hospital. But her health was rapidly breaking down. She was compelled for the next

two years to winter abroad, but at the hospital of Algiers during one winter, and in the physiological laboratory at Montpellier during another, she continued her studies. Mrs. Ayrton died in London on 19 July 1883, aged 37. Her daughter (Edith) married in 1903 Mr. Israel Zangwill.

From the time of her journey to Japan Mrs. Ayrton contributed to the '*Scotsman*' and other periodicals a large number of articles on very various topics, including Japanese politics and customs, and the educational problems of the West. She published in London in 1879 a little book entitled '*Child Life in Japan*,' which was illustrated from her own sketches. Mrs. Ayrton always took a lively interest in attempts to improve the educational opportunities and social position of women. She actively added to establish a club for women students in Paris, and the Somerville Club for women in London.

[Memorial notice by Eliza Orme, in the *Englishwoman's Review* for 15 Aug. 1883; *Les Femmes et les Professions Libérales en Angleterre*, by Professor Charles Rémy, in *Le XIXe Siècle*, 23 Aug. 1883; information from Prof. W. E. Ayrton.] S. L.

AYRTON, WILLIAM (1777-1858), musical writer, younger son of Dr. Ayrton [see AYRTON, EDMUND], was born in London in 1777. On 17 May 1803 he married Marianne, the daughter of Dr. Arnold, the composer. In 1816 he went abroad to engage singers for the Italian opera at the King's theatre, of which he undertook the direction in the following year, producing for the first time in England Mozart's '*Don Giovanni*,' and introducing to English audiences such great artists as Pasta, Camporese, Crivelli, and Ambrogetti. In spite of a very successful season Ayrton was obliged by the disputes of the company to retire from the direction. In 1821 he again (under the management of Ebers) took the post of musical director, but owing to the factious opposition he encountered from the committee he was again forced to resign. The remainder of his life he devoted entirely to literary pursuits, in which, both as a critic and writer in music, he occupied for many years a position far in advance of his contemporaries. From 1823 to 1833 he edited and contributed largely to the '*Harmonicon*,' a periodical the value of which has hardly been exceeded by any of its successors. In 1834-5 he published his '*Sacred Minstrelsy*,' and in 1834-5-6 the work known as the '*Musical Library*,' one of the earliest and best cheap collections of vocal and instrumental music. Ayrton was a F.R.S., a F.S.A., and one of

the original members of the Royal Institution and the Athenæum Club. He died at Bridge Street, Westminster, 8 March 1858.

AYSCOUGH, ANNE. [See ASKEW, ANNE.]

AYSCOUGH, FRANCIS, D.D. (1700-1768), divine, was born at St. Olave's, Southwark, in 1700, became a member of Corpus Christi College, Oxford, on 28 March 1717, and graduated M.A. in 1723. After taking orders he was admitted probationer fellow of his college on 16 Jan. 1727, and after two years of probation became a candidate for an actual fellowship. Without giving any reason the president and majority of the fellows voted against his admission; whereupon Ayscough appealed to the visitor, the Bishop of Winchester. The college pleaded that they had a right to make elections to fellowships without being responsible to the visitor, but the plea was overruled by the bishop, and the college was compelled to receive Ayscough and pay the costs of the proceedings. In 1735 he took the degree of D.D., and in the following year published 'A Sermon preached before the House of Commons on Friday, 30 Jan. 1735-6, being the anniversary of the martyrdom of King Charles I.' In 1740 he became clerk of the closet to Prince Frederick, and was presented by him to the rectory of Northchurch, Berkhamstead. The right of presentation was disputed by the chapter of Windsor, but the case was decided in the prince's favour. At Oxford he had been during the years 1726-8 tutor to George Lyttelton, afterwards first baron Lyttelton [q. v.], whose sister Ann he married. By Lord Lyttelton's influence he was for a time preceptor to George III before his accession, and to his brother Edward, Duke of York. Finally he was appointed dean of Bristol in 1761. He died on 16 Aug. 1768. He left a son [see AYSCOUGH, GEORGE EDWARD].

[Nichols's *Literary Anecdotes*, iii. 181, viii. 433, ix. 531; *Proceedings of Corpus Christi College, Oxford*, in the case of Mr. Ayscough Vindicated, 1730; *Catalogue of Graduates of Oxford* from 1659 to 1814; *S.D.U.K. Biog. Dict.*; *Rawlinson MSS.* v. 218.] A. H. B.

AYSCOUGH, GEORGE EDWARD (d. 1779), dramatist and traveller, was the son of Dr. Francis Ayscough, dean of Bristol, by a sister of the first Lord Lyttelton. For some time he held a commission in the Guards. In 1776 he

produced at Drury Lane a version of the 'Semiramis' of Voltaire, Mr. Yates representing the chief character; an epilogue was provided by Sheridan. The tragedy obtained eleven representations, and the English author enjoyed three benefits on account of it. On the first performance Captain Ayscough's brother officers attended in great force and secured the success of 'Semiramis.' In the 'Biographia Dramatica' Ayscough is described as 'a fool of fashion,' 'a parasite of Lord Lyttelton'; and his tragedy is condemned as contemptible. He left England on account of his failing health, and afterwards published some account of his travels in Italy. He was the editor of the *Miscellaneous Works* of his uncle, Lord Lyttelton, published in 1774.

[Genest's *History of the Stage*, 1832.] D. C.

AYSCOUGH, SAMUEL (1745-1804), librarian and index-maker, was the grandson of William Ayscough, a stationer and printer of Nottingham, where he introduced the art of typography about 1710, and died on 2 March 1719, and the son of George Ayscough, who succeeded to his father's business, which he carried on upwards of forty years. George Ayscough was much esteemed in the neighbourhood, and was connected with some of the most respectable families in the county. His first wife died childless. He then married Edith, daughter of Benjamin Wigley of Wirksworth, by whom he had a son, Samuel, and a daughter, Anne. He inherited a good business, but, instead of devoting his energies to its development, launched into various wild speculations, among others being one to extract gold from the dross of coals. Having in this way gradually got rid of nearly all his money, about the year 1762 he took a large farm at Great Wigston in Leicestershire, where he was still more unfortunate, losing not only the remainder of his own property, but the fortunes of his two children.

Samuel Ayscough was born in 1745, and was educated at the free grammar school in Nottingham. The son assisted his father in the successive failures of business, speculations and farm. At last, when complete ruin confronted the family, Samuel hired himself to take care of a mill in the neighbourhood, and bravely laboured as a working miller to keep his father and sister. The new start in life proved unsuccessful, but an old schoolfellow and intimate friend of early life, Mr. Eamer (afterwards Sir John Eamer, lord mayor of London), hearing of his distress, about the year 1770 sent for him to come to town, clothed him, and procured for him a situation as overlooker of street-paviors. It

was doubtless this employment which gave him the capacity for such rude labour as index-making. Soon afterwards he entered the shop of Mr. Rivington, bookseller, of St. Paul's Churchyard, and subsequently obtained an engagement at a very modest salary as assistant in the cataloguing department under the principal librarian of the British Museum. This was the turning-point of his laborious and useful career. His value was soon recognised by a small increase in his weekly stipend, and he was able to occupy some of his leisure in arranging private libraries. These additions to his income, added to some assistance from Mr. Eamer, enabled him to send for his father, whom he maintained in comfort till his death, in November 1783. Ayscough's excellent catalogue of the undescribed manuscripts in the British Museum was commenced in April 1780 and published in 1782 by leave of the trustees, but as a private venture of the compiler. The plan of the book was original, and the publication reflects credit upon the enterprise of Ayscough, who claims (Preface, p. x) that no work of like extent was ever completed in so short a time. He acknowledges the help received from previous catalogues and occasionally from frequenters of the reading room, but to all intents and purposes the two quarto volumes were the work of Ayscough's unaided efforts. He states that the catalogue was drawn up on 20,000 separate slips of paper. Each manuscript was specially examined. The classification is ample, and two indexes, the first of the numbers of the manuscripts and pages of the catalogue where they are described, and the second of all names mentioned in the two volumes, render the book of easy reference. In 1783 he issued anonymously a small pamphlet in reply to the 'Letters of an American Farmer,' printed the year before by Mr. Hector St. John [Crèvecoeur], a French settler. Ayscough contended that the writer was neither a farmer nor a native of America, and that his sole purpose was to encourage foreigners to emigrate to that country, called by a reviewer in the 'Gentleman's Magazine' (1783, liii. 1036) 'an insidious and fatal tendency, which this writer, as an Englishman, is highly laudable for endeavouring to detect and counteract.'

After wearily waiting for fifteen years, during which time he had vainly applied for five different vacancies, about 1785 Ayscough was appointed an assistant librarian at the museum. He had long desired to take holy orders, and in spite of some difficulties, the exact nature of which cannot be traced, was at length enabled to accomplish his

desire. The precise period of the event is uncertain. Nichols places it soon after 1785, and a notice of the death of the father (*Gentleman's Magazine*, liii. 982) supports this view; but he styles himself 'clerk' on the title of his 'Catalogue' (1782), and a letter of the father, dated 13 Jan. 1781 (NICHOLS'S *Illustrations*, iii. 571), styles the son 'Rev.' He was ordained to the curacy of Normanton-on-Soar in Nottinghamshire, and afterwards appointed assistant curate of the parish of St. Giles-in-the-Fields. Here his regular attendance to his duties and excellent character gained him the friendship of Dr. Buckner, afterwards bishop of Chichester, Mr. Southgate, Dr. Willis, and other eminent persons. A general index to the 'Annual Register' (1758-80), which came out in 1783, is ascribed to Ayscough without sufficient evidence. In 1786 the conductors of the 'Monthly Review' brought out an index to the first seventy volumes of that periodical, compiled by Ayscough, the first volume consisting of the articles, &c., classified under subjects with a full index, and the second forming an alphabetical index to passages in the body of the 'Review.' A continuation extending to the eighty-first volume, and issued in 1796, was from the same hand. His publications so far had been of a private nature; his next appearance was in connection with his official position. The catalogue of books in the British Museum, printed in 1787, 2 vols. folio, was compiled by Dr. P. H. Maty, S. Harper, and Ayscough; one-third of the work is due to the latter. On 12 March 1789 he was elected a fellow of the Society of Antiquaries.

All students of the history of the eighteenth century are grateful to Ayscough for his share in indexing the 'Gentleman's Magazine' (1731-86), consisting of the two volumes printed in 1789, the first of which includes an index of the essays, dissertations, and historical passages in one alphabet, and the second being divided into four parts, is devoted respectively to poetry, names of persons, plates, and books noticed. Useful as it is, the index is not by any means perfect. The lists of persons in each volume of the periodical had unfortunately never been furnished with christian names, and where more than one reference occurred no sort of distinction was introduced. This method was continued by Ayscough in his general index, so that in the case of common names, such as Smith or Williams, there are hundreds of references, making the task of hunting up any particular fact almost hopeless. In the continuation on the same plan, published in 1821, the evil is made worse by the increase of the materials, so

that there are no less than 2,411 entries under Smith without further particulars. It has been calculated that, owing to the time taken up in referring back to each volume, it would occupy eighty hours of hard work to look through all the Smiths in search of one particular individual of that name (see *WHEATLEY'S What is an Index?* p. 46). Until Ayscough brought out his 'Index' in 1790 there was no concordance to Shakespeare. This was a speculation on the part of the publisher, John Stockdale, who paid two hundred guineas for the index, which was specially designed to accompany his edition of the 'Dramatic Works,' in 2 vols. roy. 8vo. In this excellent compilation the words are arranged alphabetically with the lines in which they occur, then the name of the play, and in five separate columns the act, scene, page, column, and line. The last three particulars of course refer only to the edition of 1790, but the index may be made to serve any other text. Francis Twiss compiled a 'Verbal Index' in 1805, not so useful as that of Ayscough, and both were superseded by Mrs. Cowden Clarke's valuable 'Concordance' (1845). All three are devoted to the plays alone, and require to be supplemented by Mrs. Furness's 'Concordance to Shakespeare's Poems' (1874). There is still no complete concordance to the entire works.

Ayscough was chosen to deliver the Fairchild lectures, established in 1729 by Thomas Fairchild, gardener, of Shoreditch, who bequeathed a sum of money for a sermon on each Whit-Tuesday on the 'Wonderful Works of God in the Creation.' The first sermon was delivered by Ayscough in 1790 before the Royal Society at Shoreditch Church, and he completed the series of fifteen sermons in 1804. They were to have been printed after his death, but never appeared.

Dr. Birch had left for press among his papers at the Museum a collection of historical letters written during the reigns of James and Charles, which Ayscough proposed to publish if he could find two hundred subscribers at a couple of guineas apiece. But it was left to Mr. R. F. Williams to carry the scheme into effect in 1849, when the documents were printed under the title of 'The Court and Times of James I and Charles I,' 4 vols. 8vo. An important work which still remains in manuscript is Ayscough's catalogue of the ancient rolls and charters in the British Museum, forming three large folio volumes, with two indexes, the first to names of places and some other matters, and the second to names of persons. A table of contents records the number of charters, rolls, and seals at 16,000. The preparation of

the catalogue occupied from 8 May 1787 to 18 Aug. 1792, with a few additions subsequently made. It is still used for reference. Ayscough's last work at the Museum consisted in arranging the books in classes and cataloguing the King's Tracts.

About a year before his death he was presented to the small vicarage of Cudham in Kent by Lord Chancellor Eldon. Although from his official position he was permitted non-residence, he conscientiously fulfilled his religious duties, making the journey of seventeen miles each Saturday, and returning on the Monday. He never passed the work-house without calling to read prayers or to preach. He took great pains to excel as a preacher. In the national library may be seen a copy of Letsome's 'Preacher's Assistant' (1753, 2 parts, 8vo) marked with those sermons which might be consulted at the Museum, and with twenty-one leaves of manuscript additions not taken notice of by Letsome. Ayscough's salary had been recently increased, which, added to his clerical preferment, placed him in a position of comparative comfort; but his bountiful disposition led him to spend all his modest income, and he scarcely left sufficient to meet the claims upon his executors. In 1802 he edited, with John Caley, a volume of the patent rolls in the Tower, but does not seem to have been concerned in the 'Taxatio Ecclesiastica Nicholai IV' (1802) also published by the Record Commission, and sometimes ascribed to him. He died of dropsy in the chest, at his apartments in the Museum, on 30 Oct. 1804, and was buried in the cemetery of St. George's, Bloomsbury, behind the Foundling Hospital.

Ayscough has been termed the 'Prince of Index-makers,' and if the title conveys any idea of the extent and usefulness of his labours he well deserves it. Besides the many works already spoken of, he compiled the indices to Bridges' 'Northampton' (which took him nine months), to Manning's 'Surrey,' and, according to Nichols, the indices to the 'New Review,' edited by Dr. Maty. His life of indexing produced him altogether about 1,300*l.*, not to be compared with the vast sums gained by those fortunate persons who jobbed the indices to the journals of parliament, but sufficiently handsome when one remembers the usual rate of pay for such work. Ayscough was no mere drudge, but did his laborious tasks with careful skill and loving diligence, and the variety of his services is not to be exceeded in the annals of literary hewing and delving. In spite of imperfect education and a youth of toil, he attained by his own exertions a very extensive knowledge of history, an-

tiquities, and bibliography. His acquirements in palæography caused him to be in request for copying documents and to assist in the arrangement of the records in the Tower. He was a frequent contributor to the 'Gentleman's Magazine.' Although somewhat blunt in manner, students found in him a ready and accomplished helper. His friend Nichols (*Gentleman's Magazine*, lxxiv. 1094) pays a touching tribute to his good heart and benevolent character. He was of tall and bulky figure, as is shown by his portrait (*ib.* 1804, lxxiv. 1093). A friend tells a long story (*ib.* 1811, p. 319) about a young lady who was reproved for her want of attention when being shown the 'curiosities' by Ayscough, 'than whom perhaps a kinder-hearted, better-humoured man never existed,' and 'who, although an old bachelor, was a great admirer of beauty.' One of the duties of the assistant librarians was to take round the parties of visitors, and Ayscough, unlike some of his brother officers, seems to have taken an interest in this service.

Besides two contributions to the 'Archæologia' (1797) and his share in the production of several books, Ayscough published the following works: 1. 'A Catalogue of the MSS. preserved in the British Museum hitherto undescribed, consisting of 5,000 volumes, including the collections of Sir Hans Sloane, the Rev. Thomas Birch, and about 500 volumes bequeathed, presented, or purchased at various times,' London, 1782, 2 vols. 4to. 2. 'Remarks on the Letters from an American Farmer; or a detection of the errors of Mr. J. Hector St. John, pointing out the pernicious tendency of those letters to Great Britain,' London, 1788, 8vo (Anon.). 3. 'A General Index to the Monthly Review from its commencement to the end of the 70th volume [1749-84],' London, 1786; a continuation down to the 81st volume (1784-9) was compiled by Ayscough in 1796, 8vo; and there is a continuation by another hand down to 1816. 4. 'A General Index to the first fifty-six volumes of the Gentleman's Magazine, from its commencement in 1731 to the end of 1786,' London, 1789, 2 vols. 8vo; continued by Nichols to 1818, 2 vols. 8vo, with an index to the plates (1731-1818), by Ch. St. Barbe. 5. 'An Index to the remarkable words and passages made use of by Shakespeare, calculated to point out the different meanings to which the words are applied,' London, 1790, roy. 8vo; reprinted in Dublin 1791, and 'second edition, revised and enlarged,' London, 1827, demy 8vo; the last is adapted to the edition of the plays published in 1823 by the booksellers. 6. 'A general index to the

first 20 volumes of the British Critic, in two parts; part i. contains a list of all the books reviewed, part ii. an index to the extracts, criticism, &c.,' London, 1804, 8vo (Anon.), continued by Dr. Blagdon.

H. R. T.

AYSCOUGH, WILLIAM, LL.D. (1450), bishop of Salisbury, is believed to have come of an ancient Lincolnshire family seated at Kelsey. The date of his birth is unknown, and the only thing which gives an interest to his name is the manner of his death. Indeed all that is recorded of him before he was made a bishop is that his name occurs in the list of prebendaries of Sutton in Lincoln Cathedral, where he was installed on 10 Nov. 1436. But on 11 Feb. 1438 he was promoted by papal bull to the bishopric of Salisbury, and was consecrated at Windsor on 20 July following; on which promotion he gave up his prebend. He was Henry VI's confessor, and appears to have been constantly called to council by that king, whom he married to Margaret of Anjou, at Titchfield, on 22 April 1445. He was also one of the bishops who examined Eleanor Cobham, the wife of Humphrey, Duke of Gloucester, for sorcery. His continual residence at court seems to have been the principal cause of complaint against him in his own diocese, where bishops were expected to keep open house with the profuse hospitality of the middle ages. It was, in fact, a novelty in those days for a bishop to be a king's confessor; and it exposed him to the further criticism that if he was the king's confessor and an influential member of the council he was responsible for everything that was done amiss. Nothing but covetousness, it was believed, could have reconciled him to the atmosphere of the court if he had given the king good advice without effect. These feelings found a vent one day when he really did visit his diocese. In that year of civil tumult, 1450, at the very time that Jack Cade and his followers were upon Blackheath just before they entered London, the bishop said mass at Edington, in Wiltshire, on 29 June, the feast of St. Peter and St. Paul. The sacred rite was scarcely completed when the people in church dragged him from the altar and

carried him forcibly up a neighbouring hill, with his alb and stole upon him; then beat him and killed him with murderous weapons, stripping his body naked to the skin and leaving it lying in the fields unburied. Nor was their fury satiated even after the deed, but they tore his bloody shirt to pieces, and bore the fragments away with them in triumph, glorying in what they had done.

[Fuller's Worthies (ed. Nichols), ii. 10; Will. Wyrcestre; Davies's English Chronicle (Camd. Soc.), 58, 61, 64; Gascoigne's Theol. Dict. (Locie Libro Veritatum), ed. Rogers, 39, 42, 168, 174.]  
J. G.

**AYSCU, or AYSCOUGH, EDWARD** (fl. 1633), historian, was educated at Christ's College, Cambridge, where he graduated B.A. in 1590. He afterwards resided at Cotham, in Lincolnshire, from which place he dates the preface to his only work, 'A Historie containing the Warres, Treaties, Marriages, and other occurrents betweene England and Scotland, from King William the Conqueror untill the happy Union of them both in our gracious King James. With a briefe declaration of the first Inhabitants of this Island: And what severall Nations have sithence settled them-selves therein one after an other,' London, 1607, 4to. Ayscu appears to have been living in 1633.

[Cal. of State Papers, Dom., James I (1623-5), 128; Charles I (1627-8), 168, 232; (1629-31), 179, 236; (1633-4), 368; (1634-5), 466; MS. Addit. 5862, f. 34; Nicolson's Engl. Hist. Lib. (1786), 60.]  
T. C.

**AYSCUE, SIR GEORGE** (fl. 1646-1671), admiral, belonged to an old Lincolnshire family, many members of which took a prominent part in public affairs before and during the civil war. His father, William, was gentleman of the privy chamber to Charles I., by whom George was knighted, but for what reason or service no record remains. So far as we know, he held no command in the navy before 1646, when he was captain of the Expedition, one of the ships appointed for the winter guard. A few months later he was captain of the *Antelope*, and, in 1648, of the *Lion* (*Life of Penn.*, i. 226, 236, 255), and throughout these services he appears to have ranked as one of the seniors in the fleet. During this time the navy had taken no distinct part in the struggle that was raging on shore, but had guarded England's coasts unaffected by party politics. In 1648, when the king was a prisoner and the Prince of Wales had fled the country, this neutrality could no longer be maintained, and in June a

part of the fleet, under the command of Vice-Admiral William Batten, refusing obedience to the parliamentary authorities, weighed anchor from the Downs, and went over to Holland. That the whole or a still greater part did not go, was attributed mainly to the influence of Ayscue, whose service was rewarded by an appointment in the following year as admiral of the Irish seas. In this capacity, with his flag on board the *St. Andrew*, he was actively engaged in the operations on the coast of Ireland, and more especially in the relief of Dublin when besieged by the Marquis of Ormond, and for his conduct there he was officially thanked by order in parliament, dated 28 July 1649.

In April 1651, as second to Blake, he was engaged in the reduction of Scilly, then held for the Prince of Wales by Sir John Grenville, and was afterwards sent to the West Indies in command of a squadron, with which he reduced Barbadoes, after a stout defence on the part of Lord Willoughby, its royalist governor. Antigua, Nevis, St. Christopher's, as well as the settlements on the coast of Virginia, surrendered without further resistance, and Ayscue, finding his work in the West Indies finished, returned to England. He arrived at Plymouth in the end of May 1652, bringing in with him a number of Dutch merchant ships captured in accordance with the orders for reprisals which had been issued several months before the actual outbreak of the war. A few days later, having intelligence of a Dutch fleet sailing westward, he put to sea, and found it, on 12 June, a little to the west of the Lizard. It was, in fact, the outward-bound trade, under the convoy of a number of men-of-war, and, when attacked by Ayscue's squadron, stood stoutly on the defensive, and got away with the loss of some five ships. After this Sir George went round to the Downs, where he was left by Blake to command, and where, on 3 July, he was attacked by the Dutch with a much superior force. They were, however, unable to overcome the advantage of position, and were driven back; whilst Ayscue, following up his success, fell in with a number of Dutch merchant ships, of which he captured seven, and sank or ran ashore many more. Presently, however, the Dutch returned, mustering 102 men-of-war, besides ten fire-ships, against which Ayscue could oppose no more than sixteen vessels. Batteries for his support were erected on shore, but it might well have gone hard with him if a fortunate shift of wind had not driven the Dutch back (*Calendar of State Papers*, 11 July; WHITELOCKE, 13 July).

Afterwards, having received large reinforcements, which raised his fleet to some fifty sail all told, he went round to Plymouth, and off that port, on 16 Aug., met the Dutch under De Ruyter, whose force, on a comparison of the many differing and opposing estimates, may be considered to have been equal to that with Ayscue. After a close and confused action, which lasted from two or three o'clock in the afternoon till nightfall, the fleets separated without any decided advantage on either side. During the next day they lay in sight of each other, neither of them wishing to begin or to appear to shun a renewal of the fight; but towards evening the Dutch pursued their way to the westward, and the English, too shattered to follow them, went into Plymouth. Both claimed and have continued to claim the victory, which, so far as the immediate contest was concerned, belonged to neither, though undoubtedly the advantage rested with De Ruyter, since he had protected his convoy and pursued his voyage. And this would seem to have been the opinion of the parliament; for with implied, if not expressed censure, they superseded Ayscue in his command, assigning him, however, a pension of 300*l.* a year. Either by inheritance, by commerce, or by prize-money, Sir George would seem by this time to have amassed a comfortable fortune. Whitelocke relates how, on 13 Aug. 1656, the ambassador of Sweden was elaborately entertained at Sir George Ayscue's house in Surrey (Ham-Haw in the parish of Chertsey). 'The house,' he writes, 'stands environed with ponds, moats, and water, like a ship at sea: a fancy the fitter for the master's humour, who is himself so great a seaman. There, he said, he had cast anchor and intended to spend the rest of his life in a private retirement.' Within two years, however, he was persuaded by Cromwell to go to Sweden and take the command of the Swedish fleet; and though no opportunity for active service occurred, he stayed in Sweden, presumably as adviser on naval affairs, until the Restoration, when he returned to England, and was appointed one of the commissioners of the navy. On the outbreak of the second Dutch war, in 1664, he was appointed rear-admiral of the blue, and served in that rank in the action of 3 June 1665, with his flag in the *Henry*. On the Duke of York's quitting the fleet he was made vice-admiral of the red, under Lord Sandwich. The following spring he was admiral of the blue, in the *Royal Prince*; but on 30 May, when Prince Rupert had taken part of the fleet away to the westward, and with him Sir Thomas Allin, the admiral of the white, Ayscue was appointed

admiral of the white in the division of the fleet that remained with Monk: and it was as admiral of the white that he took part in the four days' engagement off the North Foreland (*State Papers, Domestic*, Charles II, vol. clvii. No. 57, Clarke to Williamson, 30 May, 1666). On the third day of this great battle, whilst endeavouring to join Prince Rupert's division, which had just come on the scene, the *Royal Prince* struck on the *Gallop*—a dangerous shoal on the Essex coast—was surrounded by the Dutch and captured. They were unable, however, to get the ship off, and eventually set her on fire; but they carried Sir George Ayscue a prisoner to Holland, and are said, by all our contemporary writers, to have shown a most ignoble exultation over their illustrious captive. That they paraded him through their towns, exhibiting him to the populace, seems to be well established, even if we are unwilling to believe that they first painted him and fastened a tail on him (*Calendar*, 10 July 1666). He was kept a prisoner till after the peace, in October 1667. He arrived in London in November, and on the 12th was presented to the king, by whom he was graciously received. It may be doubted whether he ever served again, though he is said on doubtful authority to have hoisted his flag in 1668 on board the *Triumph*, and again in 1671 on board the *St. Andrew*. In the third Dutch war, beginning in 1672, he held no command; and it would therefore appear probable that he died about that time; but no record of his death has been preserved. His portrait by Lely is in the Painted Hall at Greenwich.

Sir George Ayscue always wrote his name thus; but contemporary writers, with the carelessness of their age, misspelt it, among many other ways, Ayscough and Askew.

[Campbell's *Lives of the Admirals*; Charnock's *Biog. Nav.* i. 89; *Calendars of State Papers*, 1649–52, 1660–66; *Pepys's Diary*; Whitelocke's *Memorials*; Brandt's *Vie de De Ruyter*. A number of contemporary pamphlets, mostly bearing such titles as 'A Bloody Fight,' or 'Another Bloody Fight at Sea' (*Brit. Mus. Catalogue*, s.n. 'Ayscue, George'), are mere crude, hasty, and exaggerated reports, without any authority.]

J. K. L.

AYTON, RICHARD (1786–1823), dramatist and miscellaneous writer, was born in London in 1786. His father, a son of William Ayton, banker in Lombard Street, removed some time afterwards to Macclesfield, Cheshire, and at the grammar school of that town young Ayton obtained a good elementary knowledge of Latin and Greek. In accordance with the wish of his father, who

died in 1799, that he should be educated for the bar, he was sent to study law at Manchester, and at the end of a year became the pupil of a barrister in London; but conceiving from the beginning a distaste for the profession, he never set himself seriously to prepare for it. As soon as he came of age, he retired to the coast of Sussex, resolved to limit his expenses to his comparatively small income, and to consult only his own inclinations in the occupation of his time. There he amused himself with desultory reading and active outdoor exercise, boating being his special delight. In 1811 he returned to London, and accepted a situation in a public office; but this he relinquished in 1813, to accompany William Daniell, A.R.A., in a voyage round Great Britain. An account of the voyage, with views drawn and engraved by Daniell, appeared in 8 vols. folio, 1814-25 [see DANIELL, WILLIAM]; but the letterpress of only the first two volumes is by Aytoun. Disagreeing with Daniell in regard to his plans for the future volumes, Aytoun declined to proceed further with the book, and betook himself to play-writing. Two of his farces, acted at Covent Garden, were total failures; but he adapted from the French several pieces for the English Opera House with moderate success. During a voyage between Scarborough and London, Aytoun was nearly shipwrecked, and received an injury to his ankle which confined him to bed for more than a year. In the spring of 1821 he was sufficiently recovered to go to the coast of Sussex, but his health continued uncertain and precarious. In July 1823 his illness assumed so serious a form, that he removed for medical advice to London, where he died shortly afterwards. During the last eighteen months of his life Aytoun occupied himself in the composition of a number of essays, chiefly on pastimes and similar subjects, written in a genial and playful spirit, and displaying considerable sprightliness and humour. These, with a short memoir prefixed, were published in 1825.

[Memoir in *Edinburgh Magazine*, new series, x. 254-5, which contains some additional details to those given in *Monthly Magazine*, iv. 153-4, and *Gent. Mag.* vol. lxxvii. part 2, pp. 731-2.]

T. F. H.

AYTON, or AYTOUN, SIR ROBERT (1570-1638), poet, was a descendant of the Norman house of De Vescy, lords of Sprouston in Northumberland. Gilbert de Vescy, a younger son of the family, settled in Scotland in the reign of King Robert Bruce, having received from him the lands of Aytoun in Berwickshire. Thereupon he changed his name to that of his estate.

In Berwickshire the Aytouns continued as landowners until James III (1460-1488), when a brother of the family of Home married the heiress, and carried the lands into that house. The uncle of the heiress, her father's younger brother, Andrew Aytoun, was captain of Stirling Castle and sheriff of Elgin and Forres during the reign of James IV (1488-1513). For 'faithful services' the king gave him several charters, confirming him in the lands of Nether Dunmure, Kilgour, and Glenduckie in western Fifeshire. By a new charter from the crown somewhat later these lands were constituted into a barony called Aytoun, the proprietor being designated 'of that ilk.'

This Captain Aytoun of Stirling had three sons and seven daughters. John, eldest son, succeeded his father in the estate of Aytoun; Robert, second son, obtained the estate of Inchdairnie; and Andrew, third son, succeeded in 1567 Robert Aytoun, his first cousin, in the estate of Kinaldie, which had come into the family about 1539. Andrew Aytoun, who was a student of the university of St. Andrews in 1539, married Mary Lundie, and she bore him three sons and two daughters. John, the eldest, succeeded to the estate of Kinaldie in 1590; Andrew, second son, proceeded to Ireland; and the third son was Robert, who devoted himself to literature.

Sir Robert Aytoun was born at the castle of Kinaldie, in the parish of Cameron, near St. Andrews, in 1570. He proceeded to the university of St. Andrews (St. Leonard's College) in 1584, and took his degree of M.A. in 1588. He obtained his patrimony in 1590, and thereupon went on the usual round of continental travel. He also studied civil law at the university of Paris. According to Thomas Dempster (*Historia Eccles. Gentis Scotorum*), 'he long cherished useful learning in France, and left there distinguished proof and reputation of his worth' in certain verses in Latin, Greek, and French. An overlooked book by David Echlin [Echlinus], 'Periurium Officium: ad Vere Nobilem et Generosum optimeque de me meritum virum Robertum Aytoun Equitem . . . 1626,' more than bears out the laudation of Dempster. He is thus addressed:—

Rarum Aytone decus Britanniarum  
Musarum soboles Apollinisque . . .

Aytoun returned from the continent in 1603, bringing over with him a Latin poem in hexameters, addressed to James I: 'De Fœlici, et semper Augusto, Jacobi VI, Scotia Insularumque adiacentium Regis, Imperio nunc recens florentissimis Angliæ et Hiberniæ

Scep̄tris amplificato Roberti Aytoni Scoti Panegyris. Paris, 1603.' He was cordially received at the English court. He rose at once into royal favour, and shared in the king's lavish if rather indiscriminate bounty to his fellow-countrymen. He was appointed gentleman of the bedchamber and private secretary to the queen. He received knighthood at Rycot on 30 Aug. 1612. He was sent as ambassador to Germany to deliver the king's 'Apology,' before published anonymously, but now avowed and 'delivered' to all the sovereigns of Europe by its complacent author. On 11 Dec. 1619 he obtained a grant of 500*l.* per annum on certain 'royal profits' (*Docquet Book of Exchequer*) for 'thirty-one years;' but in 1620 this was commuted for a life-pension of the same amount. Dr. Charles Rogers has printed a number of his letters on these and other 'affairs.' In 1623 he was a candidate in competition with Bacon for the provostship of Eton. It fell to Sir Henry Wotton, notwithstanding an application addressed to James by Aytoun in verse. This correspondence and casual notices in state and domestic papers show him to have been on intimate terms with the literary men of the period. 'Rare Ben' told Drummond of Hawthornden proudly that 'Sir Robert Aytoun loved him [Jonson] dearly.' Aubrey says of him that 'he was acquainted with all the wits of his time in England,' and that 'he was a great acquaintance of Mr. Thomas Hobbes, of Malmesbury, who told me he made use of him (together with Ben Jonson) for an Aristarchus, when he drew up his epistle dedicatory for his translation of Thucydides.'

On the death of James I in 1625, all his offices and honours were continued to him by Charles I and Queen Henrietta Maria.

In 1633-4 he is found mixed up with a 'patent' quarrel. In 1636 he was appointed master of the royal hospital of St. Katherine, with 200*l.* a year. He was also made master of requests and of ceremonies and privy councillor. In his various offices, and on receiving his successive advances, it was acknowledged in his lifetime that 'he conducted himself with such moderation and prudence that when he obtained high honours in the palace, all held he deserved greater.' He died at Whitehall, February 1637-8, in his sixty-ninth year, having a few days before prepared his will. He was buried in Westminster Abbey, and his great monument, which includes his lifelike bust, 'remains with us unto this day.' He is thus entered in the Register of Westminster: '1637-8, Feb. 28, Sir Robert Aytoun, secretary to his

majesty, near the steps ascending to King Henry VII's chapel' (CHESTER, p. 133).

The literary repute of Sir Robert Aytoun is as much of a paradox as Sir Edward Dyer's. His Latin productions are stilted and unmellicious, mere echoes of the iron age of classic Latinity, and simply grotesque beside Buchanan's and Johnston's. Sir John Scot of Scotstarvet indeed gives him a relatively large space in his 'Delitiae Poet. Scot.,' but simply from his contemporary repute. Among his Latin poems appear several epitaphs and epigrams celebrating eminent contemporaries. The latest event to which any of them refers is the death of Buckingham in 1628, commemorated in elegiacs. Aytoun's 'Diofantus and Charidora' has a certain interest as having been among the earlier writing in English by a Scot, but it is poor in substance. His 'Inconstancy Upbraided' has a ring of truthfulness and touches of music. Such praise as is due to the elegant trifles of an accomplished man of the world is all that can be allowed his poems. If it could be proved that he wrote 'I do confess thou'rt smooth and fair,' of which Burns gave a Scottish version, it would not be necessary to modify this estimate; and it is all but certain that Sir Robert Aytoun did not write it. For (a) in the manuscript of his poems (*Add. MS.* 10308), so reverentially collected and prepared by Sir John Aytoun, his nephew and successor in the estate, it does not appear; (b) neither does it appear in Dr. Rogers's manuscript, also carefully and critically compiled; (c) while in Watson's 'Scots Poems,' which contains other of his poems with his name, this particular poem is placed apart and under no author's name. It seems clear that it came to be ascribed to him from confusion of its title, 'To an Inconstant Mistress,' with his 'Inconstancy Upbraided.' Sir Robert himself made no claim to be a poet. As Sir John Aytoun in his epistle (*Add. MS. ut supra*) put it, 'The author of these ensuing poems did not affect the name of a poet, having neither publisht in print nor kept coppies of anything he writt, either in Latin or English.' A copy of his 'Basia' is in the Drummond collection of the university of Edinburgh. Dr. Charles Rogers, first in 1844, very uncritically, and more recently in a revised 'privately printed edition,' showing some advance on the former, yet needing improvement, published the poems of Aytoun, with a full if rather discursive life.

[Rogers's edition of Aytoun's poems; Campbell's Introduction to the History of Poetry in Scotland, 1798; notice by John Hill Burton

in S.D.U.K. Biog. Dict.; Dr. Irving; Public Records; Hew Scott's *Fasti Ecclesiae Scotticae*, 1869 (4to), i. 462, 464; Chester's Reg. of Westminster Abbey; Hobbes of Malmesbury's *Life and Works*—Aytoun assisted in his *Thucydides*; Addit. MS. 10308, in the Brit. Mus. Library; Rogers without any authority includes 'Auld Lang Syne' (pp. i and ii) and Raleigh's 'Sweet Empress' in Aytoun's Poems.]

A. B. G.

**AYTOUN, WILLIAM EDMONDS-TOUNE** (1813-1865), poet, born in Edinburgh on 21 June 1813, was the son of Roger Aytoun, writer to the signet, and of Joan Keir. Through both father and mother he belonged to old Scottish families, his progenitors on the father's side being the Aytouns of Inchdairnie in Fifeshire, and the Edmonstounes, formerly of Edmonstoun and Ednam, and afterwards of Corehouse in Lanarkshire, and on the mother's side the Keirs of Kinmonth and West Rhynd in Perthshire. Among his ancestors he counted Sir Robert Aytoun [q. v.], who followed James VI to England, and was attached to the court till his death in 1638, when he was buried in Westminster Abbey, having been a friend of all the leading men of letters in London, including Ben Jonson and Hobbes of Malmesbury, and himself taken rank among them as a poet. In that character he is chiefly known as the reputed author of two songs, which Burns worked into more modern shape, one of them being 'Should auld acquaintance be forgot,' the song, of all others, dear to Scotchmen [see **AYTON** or **AYTOUN**, **SIR ROBERT**]. Both Aytoun's parents were of literary tastes; and by his mother he was early imbued with a passion for ballad poetry and an imaginative sympathy for the royal race of Stuart. She had seen much of Sir Walter Scott in his boyhood and youth, and supplied his biographer Lockhart with many of the details for his life of Scott. Her knowledge of ballad lore was great, and was very serviceable in enabling her son to fill up gaps, and to correct false readings when preparing his edition of the 'Ballads of Scotland' in 1858. Aytoun was educated at the Edinburgh academy and university, and wrote verses fluently and well while still a student. At the age of seventeen he published a small volume called 'Poland, Homer, and other Poems,' in which the qualities of his later style were already apparent. He thought of going to the English bar, but after a winter in London, attending the courts of law, he abandoned this intention. Aytoun disliked the idea of following his father's profession, but after a residence of some months at Aschaffenburg, where he

devoted himself with enthusiasm to the study of German literature, he returned to Edinburgh. Having no fortune, he put aside the thought of devoting himself to literary pursuits, resumed his place in his father's office, and was admitted as a writer of the signet in 1835. The discipline of his legal practice was of great use in giving him a power of mastering the details of political and other questions which was of distinct service to him at a later period. In 1840 he was called to the Scottish bar, which had more attraction for him than the irksome monotony of a solicitor's practice, and made a fair position for himself there during the years in which he remained in active practice. His heart, however, was in literary pursuits, and he had already begun to feel his way in them by translations from Uhland, Homer, and others, as well as in original poems, which appeared in 'Blackwood's Magazine' during the years from 1836 to 1840. Between that period and 1844 he worked together with [Sir] Theodore Martin in the production of what are known as the 'Bon Gaultier Ballads,' which acquired such great popularity that thirteen large editions of them were called for between 1855 and 1877. They were also associated at this time in writing many prose magazine articles of a humorous character, as well as a series of translations of Goethe's ballads and minor poems, which, after appearing in 'Blackwood's Magazine,' were some years afterwards (1858) collected and published in a volume. It was during this period that Aytoun began to write the series of ballads known as 'Lays of the Cavaliers,' which first drew attention to him as an original poet, and which have taken so firm a hold of the public that no less than twenty-nine editions of them have appeared, eleven of them since Aytoun's death in 1865. In 1844 he became one of the staff of 'Blackwood's Magazine,' to which he continued till his death to contribute political and other articles on a great variety of subjects with unflagging industry and a remarkable fertility and variety of resource. Among these were several tales, in which Aytoun's humour and shrewd practical sense were conspicuous. Of these perhaps the most amusing were 'My First Spec in the Biggleswades,' and 'How we got up the Glenmutchkin Railway, and how we got out of it;' and they had a most salutary effect in exposing the rascality and folly of the railway mania of 1845. People laughed, but they profited—for a time—by the lessons there read to them. In 1845 Aytoun was appointed professor of rhetoric and belles lettres in the univer-

sity of Edinburgh. Here he was in his element; and he made his lectures so attractive that he raised the number of students from 30 in 1846 to upwards of 1,850 in 1864. His professorial duties did not interfere with his position at the bar, and in 1852, when the tory party came into power, they requited his services as a political writer by appointing him sheriff of Orkney. In the following year Oxford conferred on him the honorary degree of D.C.L. The duties of Aytoun's sheriffship did not engross much of his time. These, and his work as professor, both most conscientiously discharged, left him leisure for literary work. In 1854 he produced the dramatic poem 'Firmilian,' perhaps the most brilliant of his works, which was written in ridicule of the extravagant themes and style of Bailey, Dobell, and Alexander Smith. It was, however, so full of imagination and fine rhythmical swing, that its object was mistaken, and what was meant for caricature was accepted as serious poetry. In 1856 Aytoun published 'Bothwell,' a poetical monologue, dealing with the relations between the hero and Mary Queen of Scots. It contained many fine passages, and three editions of it were published. In 1858 he published a collection, in two volumes, of the 'Ballads of Scotland,' carefully collated and annotated, of which four editions, the last in 1860, have been published. In 1861 his novel of 'Norman Sinclair' was published; it had already appeared in 'Blackwood's Magazine,' and is interesting for its pictures of society in Scotland, as Aytoun saw it in his youth, and for many passages which are, in fact, autobiographical. About this time Aytoun's health began to fail, and his spirits had sustained a shock, from which he never wholly

recovered, in the death (15 April 1859) of his wife, the youngest daughter of Professor Wilson (Christopher North), whom he had married in April 1849, and to whom he was devotedly attached. He sought relief in hard work, but life had thenceforth lost much of its zest for him. Being childless, its loneliness became intolerable, and in December 1863 he married again. But by this time his constitution was seriously shaken, and on 4 Aug. 1865 he died at Blackhills, near Elgin, whither he had gone to spend the summer in the hope of recruiting his health. Aytoun's life had been, upon the whole, a happy one. He was of a genial, kindly disposition, full of playfulness, and of original and cultured humour, warmly esteemed by his friends, and constant in his attachments to them. Nature and education fitted him for a man of letters, and he took delight in the very varied literary labours by which his free and facile pen enriched the pages of 'Blackwood's Magazine,' and added a few books to literature of permanent interest.

His published works are:—1. 'Poland, Homer, and other Poems,' Edinburgh, 1832. 2. 'The Life and Times of Richard the First,' London, 1840. 3. 'Lays of the Cavaliers,' Edinburgh, 1848, 29th edition 1883. 4. 'Bon Gaultier's Ballads' (jointly with Theodore Martin), London, 1855, 13th edition 1877. 5. 'Bothwell,' London, 1856. 6. 'Firmilian,' 1854. 7. 'Poems and Ballads of Goethe' (jointly with Theodore Martin), London, 1858. 8. 'Ballads of Scotland,' 2 vols. London, 1858, 4th edition 1870. 9. 'Nuptial Ode to the Princess Alexandra,' London, 1863. 10. 'Norman Sinclair,' 3 vols. London, 1861.

## B

**BAALUN**, or **BALUN**, **JOHN DE** (d. 1235), justice itinerant, was a baron who possessed estates in Gloucestershire, Herefordshire, and Wiltshire, and was descended from one Hameline de Baalun, who came over with the Conqueror, built the castle of Abergavenny, and died in 1089. His father was Reginald de Balun, and in 1207 John de Balun paid a fine for the lands of Hameline, on behalf of his father, to Geoffrey Fitz-Ace and Agnes, his wife, and 100 marks and a palfrey to the king. In 12 John (1210–11) Balun accompanied the king to Ireland, but at the end of John's reign lost his lands for taking part in

the barons' attack upon the king. On the accession of Henry III he was restored on returning to his allegiance, and in 9 Henry III (1224–5) was appointed a justice itinerant for Gloucestershire along with Matthew de Pateshull, archdeacon of Norfolk, Richard de Veym, and the abbot of Tewkesbury. He died in 1235. His son John paid 100*l.* for his relief, and did homage for his inheritance, and, dying in 1274, was succeeded by another of John's sons, Walter (*Abb. Rot. Orig. i.* 24). A justice itinerant who was appointed 9 Henry III and died in the following year (1226) bore the name of **ROGER DE BAALUN**

or BALUN, and was probably a son or grandson of Wynebald de Balun of Eastington Manor, in Gloucestershire, brother of Hameline de Balun.

#### BAAAN. [See DE BAAAN.]

**BABBAGE, CHARLES** (1792-1871), mathematician and scientific mechanician, was the son of Mr. Benjamin Babbage, of the banking firm of Praed, Mackworth, and Babbage, and was born near Teignmouth in Devonshire on 26 Dec. 1792. Being a sickly child he received a somewhat desultory education at private schools, first at Alphington near Exeter, and later at Enfield. He was, however, his own instructor in algebra, of which he was passionately fond, and, previous to his entry at Trinity College, Cambridge, in 1811, he had read Ditton's *'Fluxions'*, Woodhouse's *'Principles of Analytical Calculation'*, Lagrange's *'Théorie des Fonctions'*, and other similar works. He thus found himself far in advance of his tutors' mathematical attainments, and becoming with further study more and more impressed with the advantages of the Leibnitzian notation, he joined with Herschel, Peacock (afterwards Dean of Ely), and some others, to found in 1812 the *'Analytical Society'* for promoting (as Babbage humorously expressed it) 'the principles of pure *D*-ism in opposition to the *Dot*-age of the university.' The translation, by the three friends conjointly (in pursuance of the same design), of Lacroix's *'Elementary Treatise on the Differential and Integral Calculus'* (Cambridge, 1816), and their publication in 1820 of two volumes of *'Examples'* with their solutions, gave the first impulse to a mathematical revival in England, by the introduction of the refined analytical methods and the more perfect notation in use on the continent.

Babbage graduated from Peterhouse in 1814 and took an M.A. degree in 1817. He did not compete for honours, believing Herschel sure of the first place, and not caring to come out second. In 1815 he became possessed of a house in London at No. 5 Devonshire Street, Portland Place, in which he resided until 1827. His scientific activity was henceforth untiring and conspicuous. In 1815-17 he contributed to the *'Philosophical Transactions'* three essays on the calculus of functions, which helped to found a new, and even yet little explored, branch of analysis. He was elected a fellow of the Royal Society in 1816. He took a prominent part

in the foundation of the *Astronomical Society* in 1820, and acted as one of its secretaries until 1824, subsequently filling the offices, successively, of vice-president, foreign secretary, and member of council. In 1825 he joined with Herschel in repeating and extending Arago's experiments on the magnetisation of rotating plates, reaching the conclusion that 'in the induction of magnetism, time enters as an essential element' (*Phil. Trans.* cxv. 484). The *'astatic'* needle in its present form was devised for use in these researches (*ib.* p. 476).

It was at Cambridge about 1812 that the first idea of calculating numerical tables by machinery occurred to Babbage. The favourable opinion of Wollaston encouraged him in 1819 to make a serious effort towards its realisation. Machines, such as had existed since Pascal's time, for performing single arithmetical operations, afforded neither saving of time nor security against error, since the selection and placing of a number of arbitrary figures was no less laborious and uncertain than the calculation itself. The essential novelty of Babbage's design consisted in setting wheelwork to develop the numerical consequences of the law of any given series, thus insuring the accurate calculation of an entire table without any further trouble to the operator than a few original adjustments. The mathematical principle selected by him as the basis of his invention was the *'method of differences'*, by which it appears that the numbers composing nearly all arithmetical series can be formed by the repeated addition to fundamental numbers of a common difference or *'element'*—a process eminently capable of being performed by machinery.

A small engine, of which he constructed a model on this system between 1820 and 1822, was described by Babbage in a note read before the *Astronomical Society* on 14 June 1822 (*Memoirs*, i. 309). The announcement was received with enthusiasm, and the highest anticipations were formed as to the results eventually to be derived from the invention (see *DAILY in Phil. Mag.* lxxiii. (1824) 355, and *Astr. Nach.* No. 46). It was rewarded on 13 June 1823 with the first gold medal bestowed by the society, in presenting which the president, Mr. Colebrooke, declared it to be 'in scope, as in execution, unlike anything before accomplished to aid operose computations' (*Mem. R. A. Soc.* i. 509).

Babbage now proposed to construct a machine upon a greatly enlarged scale, and made his views on the subject public in a letter dated 3 July 1822, addressed to Sir Humphry

Davy, president of the Royal Society. The prospect of vastly increased facility and accuracy in the production of the innumerable tables needed in navigation, astronomy, &c., could not be overlooked by the government, and the practicability of the scheme was on 1 April 1823 officially submitted to the judgment of the Royal Society. Having been favourably reported upon, an interview took place in July between Babbage and the chancellor of the exchequer (Mr. Robinson), at which some indistinct verbal agreement was come to. The upshot was that, aided by a grant of 1,500*l.* from the Civil Contingencies Fund, the works were without delay set on foot, and were continued actively for four years. At the end of that time Babbage went abroad under medical advice, and devoted a year to completing his extensive acquaintance with the resources of British mechanical art by the study of foreign workshops and factories. The results were embodied in an admirable little treatise 'On the Economy of Machinery and Manufactures' (1832, 4th edition 1835), of which the merit was attested by translation into four languages, and by reprints in America.

On his return to England towards the close of 1828 fresh applications to the treasury became necessary, which, after the council of the Royal Society had repeated its verdict of encouragement, and the Duke of Wellington, by a personal inspection of the works, had convinced himself of their satisfactory progress, were liberally responded to. Nevertheless, little more was done. Misunderstandings arose with Clement, the engineer; the previous prompt payment of his bills was suspended; and the removal of his business from Lambeth to the neighbourhood of Babbage's residence, No. 1 Dorset Street, Manchester Square, where the government had caused fire-proof buildings to be erected for the reception of the drawings and workshops, was made the occasion of an extravagant claim for compensation. On its refusal he withdrew his men, carried off (as he was legally entitled to do) the valuable tools made at the expense of his employers, and thus brought about a complete deadlock in the construction of the machine. In the interval of a year and a quarter which elapsed before an accommodation could be arrived at, Babbage's speculative mind had grasped the principle of an entirely new invention. The powers foreseen by him for the 'analytical engine' not only transcended, but superseded, those of its predecessor. It promised to do the work of the 'difference engine' with greatly increased rapidity, besides executing operations of a far higher range of

complexity. These views he considered it his duty to communicate to the government, but failed, during *eight years*, to elicit any answer to the question whether, under the altered circumstances, they desired the fulfilment of his original (implied) engagement with them. At length, on 4 Nov. 1842, Mr. Goulburn (Sir Robert Peel's chancellor of the exchequer) acquainted him with the final decision to abandon, on the ground of excessive and indefinite expense, a construction which had already cost 17,000*l.* of public money, besides (probably) about 6,000*l.* of the inventor's private means.

The machine, of which the plan was thus rendered abortive, was to have had twenty places of figures with six orders of differences, and included mechanism for printing its results. A small portion, put together in 1833, capable of calculating to the third difference, gave a highly satisfactory earnest of the working of the whole. It was shown at the International Exhibition of 1862, and is now in the South Kensington Museum. An elaborate article on the subject by Dr. Lardner, published in the 'Edinburgh Review' for July 1834, led to the construction of the Swedish difference engines by Scheutz of Stockholm (whose original inventiveness Babbage was foremost in acknowledging), one of which was used by the late Dr. Farr in computing the 'English Life Table,' No. 3 (1864). As further secondary, but most important, results of Babbage's labours may be mentioned, first, improvements in machinery and tools, stated by Lord Rosse (*Proc. R. Soc.* vii. 257) to have more than repaid the sum expended on the unfinished machine; secondly, the invention of a scheme of notation applicable to the interpretation of all mechanical actions whatever, first explained in a communication by Babbage to the Royal Society, 16 March 1826 ('On a Method of expressing by Signs the Action of Machinery,' *Phil. Trans.* cxvi. part ii. 250), and afterwards more fully developed to meet the requirements of the analytical engine.

The capabilities of the new machine, to the perfecting of which Babbage devoted thirty-seven years of his life and no inconsiderable share of his fortune, were not limited, like those of the difference engine, to the tabulation of a particular function, but extended over a wide range of analysis. Two sets of perforated cards, similar to those used in Jacquard's looms, prescribed in the one case the numbers to be worked with ('variable cards'), and in the other the kind and sequence of operations to be performed upon them ('operation cards'). A committee appointed by the British Association

in 1872 (including the names of Cayley and Clifford), to report upon the feasibility of the design, recorded their opinion that its successful realisation might mark an epoch in the history of computation equally memorable with that of the introduction of logarithms (*Report*, 1878, p. 100); yet did not counsel the attempt, the state of the drawings not being such as to admit of any reasonable estimate as to cost, strength, or durability, being founded upon them. This extraordinary monument of inventive genius accordingly remains, and will doubtless for ever remain, a 'theoretical possibility.'

Babbage occupied the Lucasian chair of mathematics at Cambridge during eleven years (1828-39), but delivered no lectures. He attended in 1828 the meeting of 'Naturforscher' at Berlin, and the scientific congress of Turin in 1840, when he was received with singular and unexpected favour by the king, Charles Albert (see chap. xxiv. of his *Passages in the Life of a Philosopher*). The drawings and models of the analytical engine exhibited by him on that occasion formed the subject of a valuable essay by Menabrea (*Bibl. Un. de Genève*, t. xli. October 1842), translated, with copious notes, by Ada, Lady Lovelace (TAYLOR's *Scientific Memoirs*, iii. 666). His outspoken attack upon the management of the Royal Society in a volume entitled 'The Decline of Science in England' (1830) contributed materially to the origin of the British Association in the following year. Of this body he acted as one of the trustees during six years (1832-8), and originated the statistical section at the Cambridge meeting in 1833. The foundation, moreover, of the Statistical Society of London on 15 March 1834 was mainly his work. Amongst his ingenious ideas, that of signalling by 'occulting solar lights,' brought into practice by the Russians during the siege of Sebastopol, deserves mention. It had been recommended by him as a mode of identification for lighthouses (see his tract, *Notes respecting Lighthouses*, 1852). He twice—in 1832 and 1834—unsuccessfully contested the borough of Finsbury on liberal principles. Nor were what he regarded as his equitable claims to remunerative employment under government recognised. He was, however, a member of scientific bodies in all parts of the world, including the Paris Academy of Moral Sciences, the Royal Irish and American Academies.

In his latter years Babbage came before the public chiefly as the implacable foe of organ-grinders. He considered that one-fourth of his entire working power had been destroyed by audible nuisances, to which his

highly-strung nerves rendered him peculiarly sensitive. In the decay of other faculties, his interest and memory never failed for the operations of the extensive workshops attached to his house. There what might be called the wreckage of a brilliant and strenuous career lay scattered, and thence, after his death on 18 Oct. 1871, some fragmentary portions of the marvellous engine destined to have indefinitely quickened the application of science to every department of human life, were collected and removed to the South Kensington Museum.

Of the eighty works enumerated by Babbage himself (*Passages*, &c. pp. 493-6) scarcely one, except the 'Economy of Manufactures,' can be regarded as a finished performance. The rest are mostly sketches or enlarged pamphlets, keen and suggestive, but incomplete. The 'Comparative View of the various Institutions for the Assurance of Lives' (1826), however, though not exempt from error, was a highly useful work, and one of the first attempts to popularise the subject. It contained a table of mortality deduced from the experience of the Equitable Society, to the construction of which Babbage had been led by his appointment as actuary to the Protector Life Assurance Company (No. 1) on its establishment in 1824 (see WATFORD's *Insurance Cyclopædia*, iii. 10). The book was reviewed at length in the 'Quarterly' and 'Edinburgh' Reviews (January and March, 1827), was translated into German, and its table of mortality adopted by the Life Assurance Bank of Gotha, founded in 1829. The 'Table of Logarithms of the Natural Numbers from 1 to 108000' (1827), to the preparation of which Babbage devoted singular care, is still in repute. Several foreign editions were printed from the stereotyped plates. The 'Ninth Bridge-water Treatise' (1837, 2nd edition 1838), a work nobly planned, but very partially executed, was remarkable as one of the earliest attempts to reconcile breaches of continuity with the government of the universe by law, and vindicated the serviceableness of mathematics to religion. A volume entitled 'The Exposition of 1851; or Views of the Industry, the Science, and the Government of England' (1851), is the diatribe of a disappointed man, and, like his autobiographical 'Passages from the Life of a Philosopher' (1864), is disfigured by personal allusions, in giving utterance to which he wronged his better nature.

**BABELL** or **BABEL**, **WILLIAM** (1690?-1723), musician, was the son of a bassoon-player, and received his first musical instruction from his father. He was for some time the pupil of Dr. Pepusch, under whose care he attained to great proficiency as a player both on the harpsichord and violin, and to some skill in composition. He was appointed one of George I.'s private musicians, and was also given the post of organist of All Hallows, Bread Street. Such celebrity as he attained was due rather to his arrangements for the harpsichord of popular airs from the operas of Handel and others, than to any original work of his own. He may claim to be regarded as the originator of those 'transcriptions' which have since his day been so fashionable in a certain circle of the world of music. Burney criticises him very severely, accusing him of 'wire-drawing the favourite songs of the opera of Rinaldo, and others of the same period, into showy and brilliant lessons, which by mere rapidity of finger in playing single sounds, without the assistance of taste, expression, harmony, or modulation, enabled the performer to astonish ignorance, and acquire the reputation of a great player at a small expense.' Hawkins, however, considers them to have deserved the celebrity which they attained. Besides these arrangements there exist several collections of solos for the violin, oboe, German flute, &c., and some concertos for 'small flutes' and violins mentioned by Hawkins. A *Vivace* with florid variations, and a *Gavotte* and *Aria* in manuscript, are contained in the British Museum (*Add. MS.* 31577). He died at Canonbury on 23 Sept. 1723, his early death being probably due to his intemperate habits. He was buried in All Hallows Church.

**BABER**, **HENRY HERVEY** (1775-1869), philologist, was born in 1775. He was educated at Oxford, and took his degree as master of arts in 1805. Two years later he entered the service of the British Museum, and in 1812 was promoted to the office of keeper of the printed books, in the general duties of which post, and in work upon the catalogue of books in the collection, he was actively engaged for twenty-five years. Besides his keepership, Baber also held the rectory of Stretham in Cambridgeshire, to which he was appointed in 1827. In the year 1837 he resigned his post at the British Museum, and retired to his rectory. His resignation was partly made in

consequence of a recommendation of a parliamentary committee in 1836, that officials of the museum should not hold any other situation conferring emoluments or entailing duties. Mr. Baber died on 28 March 1869, at the age of 94. His chief published work was an edition of the Old Testament portion of the Codex Alexandrinus, 'Vetus Testamentum Græcum e Codice MS. Alexandrino . . . typis ad similitudinem ipsius codicis Scripturæ fideliter descriptum cura et labore H. H. Baber,' 3 vols. London, 1816-21 [28], fol.

**BABER**, **SIR JOHN**, M.D. (1625-1704), physician to Charles II, was the son of John Baber, recorder of Wells, Somersetshire, and was born 18 April 1625. He was educated at Westminster school, whence he was elected in 1642 a student of Christ's College, Oxford. He graduated bachelor of medicine 3 Dec. 1646, being admitted by virtue of the letters of Colonel John Lambert, governor of the garrison for Oxford. Proceeding to the continent, he studied medicine at Leyden, and on 10 Nov. 1648 took the degree of M.D. at Angers. On his return to England he was made M.D. at Oxford 18 July 1650, candidate of the College of Physicians, London, 4 July 1651, and a fellow 17 Aug. 1657. He commenced to practise in London, his residence being in King Street, Covent Garden. Through the recommendation of a near neighbour, Dr. Manton, rector of St. Paul's, Covent Garden, who, with other presbyterian divines, had taken a prominent part in the restoration of Charles II, he was made physician to the king, the honour of knighthood being also bestowed on him 19 March 1660-1. Baber was frequently made use of by Charles in his negotiations with the puritans. North, who styles him 'a man of finesse,' states that he was 'in possession of the protectorship at court of dissenting preachers.' In September 1669 he informed Dr. Manton of the king's intention to do his utmost to 'get them accepted within the establishment;' but it would appear that Charles made use of him to inspire trust in intentions which were at the best feeble and vacillating. Baber died in 1704. He was three times married, and had three sons by his first marriage, but no issue by the other two marriages.

**BABINGTON, ANTHONY** (1561-1586), leader of a catholic conspiracy against Queen Elizabeth, was descended from a family of great antiquity. John de Babington, who traced his ancestry to the Norman era, was, in the reign of Henry III, the owner of the district round Mickle and Little Babington, or Bavington, in Northumberland. By the marriage, early in the fifteenth century, of Thomas Babington, the fifth in descent from John, with the heiress of Robert Dethick, of Dethick, the main branch of the family became identified with Derbyshire, and by a series of intermarriages with neighbouring heiresses acquired additional property in adjoining counties. A northern branch of the family continued to flourish till the eighteenth century, and offshoots of the Derbyshire branch settled in Leicestershire and Oxfordshire. Lord Macaulay was named after his father's brother-in-law, Thomas Babington, of the Leicestershire branch, in whose house at Rothley Temple he was born.

Anthony was born at Dethick in October 1561. He was the third child and eldest son of Henry Babington, of Dethick, by his second wife, Mary, daughter of George, Lord Darcy, of Darcy, and granddaughter of Thomas, Lord Darcy, who was beheaded in 1538 as a principal actor in the Pilgrimage of Grace. Anthony's father is said to have been 'inclined to papistrie,' and to have 'had a brother that was a doctor of divinitie' of the same religious profession. He died in 1571, at the age of forty-one, and left Anthony his infant heir. To his three guardians—his mother, the descendant of a catholic rebel, to her second husband, Henry Foljambe, and to Philip Draycot, of Paynsley, Staffordshire—Anthony was indebted for his education. Although all the three outwardly conformed to protestantism, they were undoubtedly secret adherents of the Roman catholic faith, and in that belief Anthony was brought up. He apparently remained at Dethick till about 1577, only diversifying his life with occasional visits to Draycot's house at Paynsley, where his Roman catholic predilections were sedulously encouraged. There, too, he made the acquaintance of Margery, Draycot's daughter, whom he seems to have married about 1579, when barely eighteen. For a short time, probably before his marriage, he served as page to Queen Mary of Scotland, when she was imprisoned at Sheffield under the care

of the Earl of Shrewsbury, and he then became passionately devoted to her and her cause. In 1580 Babington came to London, with the avowed intention of studying law, and he is stated to have entered as a student at Lincoln's Inn. But he soon abandoned all prospects at the bar for fashionable town life. His wealth, his cultivated intelligence, his charm of manner, his handsome features, secured for him a good reception at court, and he met there many young men of his own creed, infatuated admirers of Queen Mary, whom Jesuit conspirators from the Continent were drawing into treasonable practices. Early in 1580, on the arrival of Edmund Campion and Parsons, the Jesuits, in disguise in England, Babington joined a number of youths of good family in the formation of a secret society for the protection and maintenance of Jesuit missionaries in England. To the conversion of 'heretics' (i.e. protestants) all the members swore to devote their persons and abilities and wealth. On 14 April 1580 Pope Gregory XIII sent them a message blessing the enterprise (cf. SIMPSON's *Edmund Campion*, p. 157). Babington and his friends—Lady Babington, of Whitefriars, London, and Lady Foljambe, of Walton, Derbyshire—did all in their power to advance the society's cause, and frequently invited Fathers Campion and Parsons to lodge in their houses on their secret tours through England in 1580 and 1581. Early in 1582, after the capture and execution of Campion, Babington withdrew to Dethick. In the same year he came of age, and assumed the management of his vast landed property. He acknowledged the disinterested care with which his stepfather Foljambe had administered his estates during his minority by settling upon him an annuity of one hundred marks. At the same date the names of Babington and of his wife appeared in a list of Derbyshire recusants (*Cal. State Papers*, 1581-90, p. 88). Subsequently Anthony travelled in France and made the acquaintance of Charles Paget and Thomas Morgan, Mary Stuart's emissaries at Paris, who were vigorously plotting with Spain in their mistress's behalf. According to a passage in Leti's 'Vita di Sisto V' (iii. 103, ed. 1821), Babington extended his journey to Rome, and was accompanied by many fellow-members of the Roman catholic secret society. Queen Mary's friends abroad evidently marked Babington out, while on the continent, as a fitting leader of a catholic insurrection in England. After his return, in 1585, they sent him letters to be delivered to the imprisoned queen. But it was not until April 1586 that he was induced to take the leading

part in the task of organising the famous conspiracy called after him, which aimed at a general rising of the catholics in England, the murder of Elizabeth and her chief advisers, and the release of Mary Stuart. John Ballard, a catholic priest of Rheims, had, in 1585, paid many secret visits to England at the instigation of the queen's supporters in France, and had secured promises of aid from the catholic gentry throughout the country towards a vigorous attack on the existing order of things. To him Babington chiefly looked for guidance. Ballard represented that the plot had already received the approval of the Spanish ambassador at Paris, and was to be supplemented by a foreign invasion. Babington eagerly consented to charge himself with the murder of Elizabeth and the release of Mary, and selected as his assistants a number of young catholic gentlemen, all members of the secret society formed in 1580. On 12 May 1586 Don Bernardino de Mendoza, the Spanish ambassador in Paris, who placed the fullest reliance in Babington, wrote to his government that news of the death of Elizabeth might be soon expected (*Papiers d'Etat*, Bannatyne Club, iii. 411). Throughout June 1586 the conspirators met in city taverns or in St. Giles's Fields almost nightly. To six of them was delegated the task of assassinating Elizabeth; for Babington, who also talked vaguely of sacking London, was reserved the duty of liberating Mary from the custody of Sir Amias Paulet at Chartley. Before the close of July all was finally determined. Babington was very sanguine of success, frequently entertained his associates at supper in London inns and at his house in Barbican, and had his portrait drawn, surrounded by his friends, and subscribed with the verse—

Hi mihi sunt comites, quos ipsa pericula ducunt,

a motto that was afterwards prudently changed to the enigmatic 'Quorsum hæc alio properantibus?' The conspirators appear to have heard mass regularly at a house in Fetter Lane, and to have been generally known among catholics at home and abroad as 'the pope's white sons for divers pieces of services, which they do to Rome against this realm' (FOLYER, *Records*, i. 205).

Babington's conduct was throughout marked by much 'foolish vanity.' From the first he was desirous that Mary should be informed of his plans, and was anxious to receive from her special marks of favour. As early as 29 April 1586 Morgan wrote to her from Paris that Babington was jealous of another person, whose services she had pre-

ferred to his, and that it would be expedient for her to send him an expression of gratitude by letter. On 28 June Mary sent Babington a friendly note. On 12 July the young conspirator forwarded to the Scottish queen a long reply, describing all the means to be taken for the murder of Elizabeth, and for her own deliverance. Five days later Mary wrote in answer a favourable criticism of the plot, and demanded further information. On 3 Aug. Babington informed her that a servant of Ballard had turned traitor, but, begging her not to falter, promised to carry out the enterprise or die in the attempt. Meanwhile, Mendoza was watching from Paris all the movements of Babington and his associates with the utmost anxiety, and he forwarded to Philip II on 13 Aug. a long account of their methods and of their hopes and fears. They had, he wrote, supporters throughout the country; they wanted a definite assurance that help would reach them from the Low Countries and Spain without delay; they relied on no foreign prince except Philip. The arrangements were so perfected that as soon as the queen was assassinated, the ships in the Thames were to be seized, and Cecil, Walsingham, Hunsdon, and Knollys to be captured or killed. Mendoza finally pointed out that this was the most serious of all catholic plots as yet attempted, but that all depended on the successful accomplishment of the murder of the queen. The original of this interesting letter is preserved among the Simancas archives, and its margin is scored with notes in the autograph of Philip himself. In reply the king dwelt with admiration on Babington's courage, and announced his resolve that the holy enterprise ('tan santa empresa') should not fail for lack of his assistance in money and troops (*Papiers d'Etat*, iii. 433-54).

But Babington was throughout in fear of treachery, and in this he was fully justified. Almost from the first Walsingham's spies had known of the conspiracy: by means of Godfrey Gifford, one of Ballard's adherents won over to the service of the government, every action of Babington and his associates was reported to the government during the months of June and July, and all their letters, which were always in cipher and in French, intercepted and deciphered before they were delivered. In July warrants against Ballard and Babington were prepared; but Walsingham was in no hurry to arrest the conspirators, and awaited further revelations from his spies. The letters that finally passed between Babington and Queen Mary proved to him that further delay was unnecessary, and on 4 Aug. Ballard was suddenly

seized, after a meeting of the conspirators in London. No hint was given at the time that the government had information against any other member of the band, but Babington had been for some days previously thoroughly alarmed, and had already applied to Walsingham for a passport to France, where he promised to act as a spy upon Elizabeth's enemies. He had told his friends at the same time that his visit to France was necessary to supervise the final arrangements for a foreign invasion. But no passport was given him, and with unpardonable cowardice he subsequently sent word to Walsingham that he could reveal, if he chose, a dangerous conspiracy. Still Walsingham made no sign, but his servants were ordered to keep a careful watch upon Babington. One night the young man was invited to sup with them, but while in their company he caught sight of a memorandum concerning himself in Walsingham's handwriting. He hurried from the room on a trivial pretence, changed clothes with a friend who lived at Westminster, and hid himself in the thickest part of St. John's Wood. There he was joined by some of his associates. Babington disguised himself by cutting off his hair and staining his skin with walnut-juice, and travelled to Harrow, where he was sheltered by one Jerome Bellamy, a recent convert to catholicism. But before the end of August he was discovered and taken to the Tower. All the other conspirators were captured a few days later. On 13 and 14 Sept. Babington, Ballard, and five other young men (Chidock Titchbourne, Thomas Salisbury, Robert Barnewell, John Savage, and Henry Donn) were tried before a special commission. Babington did not attempt to conceal his guilt: he declared all 'with a mild countenance, sober gesture, and a wonderful good grace; but he laid the blame on Ballard. Ballard acknowledged the justice of the rebuke, and told Babington, before the court, that he wished the shedding of his blood could save his young companion's life. Two days later, seven more of the conspirators (Edward Abington or Habington, Charles Tilney, Edward Jones, John Charnock, John Travers, Jerome Bellamy, and Robert Gage) were tried. Sentences of hanging and quartering were passed on all the band. On 19 Sept. Babington wrote to Elizabeth, imploring her to work upon him 'a miracle of mercy,' if not for his own sake for that of his distressed family. To a friend he offered, on the same day, 1,000*l.* if his release could be procured. The next morning—on the day appointed for his execution—he explained the cipher which had been used in the letters to and from Mary.

Babington's prayers for pardon were not entertained, and on Tuesday 20 Sept. he and Ballard, with five of their companions, were drawn on hurdles 'from Tower Hill, through the citie of London, unto a fildes at the upper end of Holborne, hard by the high way side to S. Giles, where was erected a scaffold convenient for the execution' (*The Censure of a Loyall Subject*, 1587). A great crowd collected to see the conspirators die. Babington declared from the scaffold that no private ends had influenced him, but that he honestly believed himself engaged in 'a deed lawful and meritorious.' Ballard suffered first, and Babington witnessed his barbarous death. According to an eye-witness he showed to the last 'a signe of his former pride' by standing, instead of praying on his knees, 'with his hat on his head as if he had been but a beholder of the execution' (*The Censure*). He himself followed Ballard, and underwent diabolical tortures. He was still alive when taken down from the gallows, and exclaimed, 'Parce mihi, Domine Jesu,' while the executioner was using the knife upon him (cf. Mendoza's account sent to Philip II 20 Oct. in *Papiers d'Etat*, iii. 481). When Elizabeth was informed of the revolting cruelty of his death, she directed that the other conspirators, who were to be executed on the following day, should hang till they were dead. Babington expressed anxiety on the scaffold as to the fortunes of his property. By law the crown confiscated it all; but the entailed estates of Dethick, Derbyshire, and Kingston, Nottinghamshire, his largest manors, were allowed to pass to his brothers Francis and George. Some of his lands, and almost all his personal property, were granted by Elizabeth to Sir Walter Raleigh. Elizabeth herself took a valuable clock. At Dethick were found many books on theological controversies, and 'papers of prophecies' foretelling Elizabeth's downfall. According to the evidence of some of his tenants, examined previous to his death, Babington had been a hard landlord, and had systematically raised his rents. Shortly before his arrest he sold a large house in Derby, called Babington Hall, which was pulled down about 1822. Its site is still marked by Babington Lane. A cenotaph in Kingston Church, Nottinghamshire, among the tombs of other members of Babington's family, bears no inscription, and is locally believed on doubtful evidence to have been erected to the conspirator's memory (*Gent. Mag.* new ser. vii. 287). By his wife Margery, Babington had an only daughter, who died at the age of eight, in all probability before her father (*Harl. MS.* 1537, f. 115*v*).

The discovery and death of Babington formed the subject of many contemporary ballads (cf. *Notes and Queries*, 1st ser. v. 572). One of them, full of valuable biographical details, entitled 'The Complainte of Anthonie Babington,' by Richard Williams, is among the Arundel MSS. (418, art. 3) at the British Museum. Another, entitled 'A proper new ballad, breiefely declaring the Death and Execution of fourteen most wicked Traitors,' which bitterly vituperates 'proud young Babington,' has been reprinted in J. P. Collier's 'Broadside Ballads' (1868), pp. 36-41. A third poetical tract is entitled 'A short discourse; expressing the substance of all the late pretended treasons against the Queenes Maiestie;' and a fourth, by William Kempe, who is to be distinguished from the actor of the same name, bears the title 'A dutiful invective against the moste haynous treasons of Ballard and Babington,' 1587. A full description of the execution is found in 'The Censure of a Loyall Subject,' by [George] W[hettstone], 1587. Dr. George Carleton gives an account of the conspiracy in his 'Thankfull Remembrance' (1609), and reproduces there the picture of Babington and his confederates drawn in 1586. A Dutch translation of the correspondence between Babington and Queen Mary was circulated in Holland and the Low Countries in 1587.

The historical importance of the conspiracy lies in Mary Stuart's complicity. The discovery of the letter sent by her to Babington approving of the murder of Elizabeth in July 1586 brought her to the scaffold. Apologists for Mary in vain deny the genuineness of this letter, and represent it to have been a forgery of Walsingham. Babington never doubted its authenticity, and, as we have seen, on the day of his death fully explained the cipher in which it was written. And Mendoza, the Spanish ambassador at Paris, writing to Philip II on 10 Sept., states that Mary had written him a letter which left no doubt in his mind that she was fully acquainted with the whole business (*Papiers d'Etat*, iii. 458). In the presence of evidence of this kind, it is impossible to attach any weight to Mary's indignant denial at Fotheringhay of all knowledge of Babington and his conspiracy (*State Trials*, i. 1182). But it is unnecessary, on the other hand, to credit the rumour circulated, as it was said, on the authority of Cecil, that Queen Mary had resolved to marry Babington.

[Collectanea Topog. and Genealog. viii. 313 et seq.; W. D. Cooper's Notices of Anthony Babington, reprinted from the Reliquary for April 1862; State Trials, i. 1127 et seq.; Thorpe's

Cal. Scottish Papers; Cal. **BABINGTON, BENJAMIN GUY** (1794-1866), physician and linguist, was the son of Dr. William Babington, and was born in Guy's Hospital when his father was resident apothecary there. He entered the navy as a midshipman, and served at Walcheren and Copenhagen, but left the service early, and, having obtained a nomination for the Indian civil service, studied at Haileybury College, and was appointed to the Madras presidency. He possessed a remarkable faculty for languages, and soon became distinguished as an oriental scholar. He translated into English the Tamul-Latin Grammar of C. J. Beschius, and published other translations. Though a man of powerful frame, Babington found the climate of India trying to his health, and, returning to England, studied for his father's profession at Guy's Hospital and Cambridge. Entering the university comparatively late in life, and a widower with a family, he did not (says his contemporary, Sir James Alderson) go out in honours, but became M.D. in 1830. He was elected fellow of the College of Physicians, 1831; assistant physician to Guy's Hospital, 1837; and full physician in 1840. He was also fellow of the Royal Society, and in 1861 president of the Royal Medical and Chirurgical Society. He was the founder, and for some years the president, of the Epidemiological Society. He was appointed by the crown a member of the medical council of the General Board of Health. He was also physician to the Deaf and Dumb Hospital, and to other charities. He resigned his appointments at Guy's Hospital in 1855, and died on 8 April 1866.

Dr. Babington was a man of remarkable and very versatile intellectual power. He was proficient in several sciences, and in all of them exact and thorough. Soon after his appointment at Guy's Hospital he gave much attention to the subject of animal chemistry, and assisted Sir Astley Cooper, Dr. Bright, and others of his colleagues by making analyses of morbid products. He also wrote in the 'Medico-Chirurgical Transactions' two memoirs on the blood, in one of which he described the fat constantly present in the serum; in another he employed for the first time an expression now always used for the fluid portion of the blood, 'liquor sanguinis.' He wrote some more strictly medical papers in the 'Guy's Hospital Reports,' which are

thoroughly done, but not very notable. He translated from the German Hecker's 'Epidemics of the Middle Ages,' and edited a translation of Feuchtersleben's 'Medical Psychology' for the Sydenham Society (London, 1847).

Those who knew Dr. Babington best had the highest opinion of his abilities; by the profession in general he was greatly respected, but he hardly enjoyed the public reputation or gained the success which might have been considered his due. Partly this was owing to his retiring and unambitious character; partly, perhaps, to his having entered the profession somewhat late in life. He was a man of genial character, and physically well-favoured. His wife, a daughter of Mr. Benjamin Tayler, died before him.

Dr. Babington wrote no independent and separate work in medicine, but published: 1. 'A Grammar of the High Dialect of the Tamil Language. Translated from the Latin of Constantius Josephus Beschius,' Madras, 1822, 4to. 2. 'The Adventures of the Gooroo Paramartan,' by C. J. Beschius. With a translation and vocabulary (Tamil and English), London, 1822, 4to. 3. 'The Vedāla Cadai, being the Tamil version of a collection of ancient tales in Sanscrit,' translated by B. G. Babington. Oriental Translation Fund, London, 1831, 8vo. 4. 'An Account of the Sculptures and Inscriptions at Mahāma Laipūr, in Captain M. W. Carr's Descriptive Papers relating to the Seven Pagodas on the Coromandel Coast,' Madras, 1869, 8vo. 5. An English Translation of Hecker's 'The Black Death in the Fourteenth Century,' London, 1833, 12mo. (This is included in the translation of Hecker's 'Epidemics of the Middle Ages,' London, 1844 (Sydenham Society) and 1859.) Besides papers in 'Guy's Hospital Reports': 'Cases of Small-Pox which occurred in the Deaf and Dumb Asylum,' series 1, i. 159; 'Experiments and Observations on Albuminous Fluids,' series 1, ii. 534; 'Observations on Epilepsy,' series 1, vi. 1; 'On Chorea,' series 1, vi. 411. Also papers in the 'Philosophical Transactions,' in the 'Cyclopædia of Anatomy and Physiology,' and elsewhere.

J. F. P.

**BABINGTON, BRUTE** (d. 1610), bishop of Derry, is said to have been a native of Cheshire. He was admitted into Christ's College in 1572, was B.A. 1575-6, and became a fellow in 1576. He was incorporated at Oxford 15 July 1578, on the same day with

Gervase Babington. He was collated to the prebend of Bishopshall, in Lichfield Cathedral, 18 Sept. 1592. He was also rector of Thurcaston, Leicestershire, and Tatenhill, Staffordshire. On the death of Dr. Boleyn, Babington applied for the deanery of Lichfield unsuccessfully. On 6 July 1603 he complains to the Earl of Shrewsbury that the chancellor of the diocese, Zachary Babington, had obstructed his suit and dispossessed him of his divinity lectureship. In 1610 he was appointed to the bishopric of Derry, after some opposition from supporters of Dean Webb: resigning Thurcaston 8 Nov. 1610, but holding his prebend and Tatenhill *in commendam*. He was consecrated at Drogheda, and died in 1611, probably on 10 Sept. O'Sullivan tells the story that his death was ascribed to a divine punishment for his sacrilege in attempting to burn a statue of the Virgin Mary, which, however, remained unconsumed, while the perpetrators of the outrage were either struck dead on the spot, or, like the bishop himself, died a lingering death.

[Le Neve's Fasti, i. 590, iii. 316; Dyer's Hist. of Camb. Univ. ii. 65; O'Sullivan's Hist. Cath. iv. 13; Cal. State Papers (Dom. 1603-10), pp. 614, 641, (Irish, 1608-10) pp. 448, 487, 490; Cotton's Fasti Eccl. Hib. iii. 316, v. 254; Lodge's Illustrations (1838), iii. 36; Talbot Papers, M. 97, 374; Ware's Bishops of Ireland (Harris), 292; Willis's Cathedrals, i. 427; Wood's Fasti (Bliss), i. 211.]  
T. A. A.

**BABINGTON, FRANCIS** (d. 1569), Oxford divine, is said to have been a native of Leicestershire; to have entered Christ's College, Cambridge, in 1544, and to have taken his B.A. degree in 1548-9. Two years later he was appointed fellow of St. John's, and in 1552 became M.A. By 1555 he must have changed his religion, for at that date his name is found appended to the Roman catholic articles of belief (LAMB, *Camb. Doct.* 176). About the same time he seems to have transferred his residence to Oxford, where he 'incepted' in arts 1554. (GUTH'S Wood, App. 95). After three years he was unanimously chosen proctor of his new university (1557), being already a fellow of All Souls. In 1557 and 1558 he successively took his bachelor's and doctor's degree in divinity; but Wood adds a special warning that such rapid promotion was only due to the fact that the university was very empty, and wanted 'theologists' to perform the requisite offices. 'There were only three doctors in theology who proceeded in six years; and sermons were so rare, that scarce one was given.' It is only fair, however, to

add that in another passage Wood mentions Francis Babington as renowned for his philosophical and logical disputations.

In 1559 the Queen's visitors removed Dr. Wright from the mastership of Balliol, and appointed Dr. Babington in his stead; for with him conscience never seems to have stood in the way of preferment. Nor had Dr. Babington any objection to heaping together a plurality of livings and offices. Between 1557 and 1560 he was rector of at least four parishes, Milton Keynes, Twyford, Sherrington Aldworth, and Adstock; and two or three of these he must have held together. Besides these preferments he was, in May 1560, appointed rector of Lincoln College, and was Sir John Mason's commissary or vice-chancellor in 1560, 1561, and 1562. He even held the Lady Margaret readership in divinity for 1561, although the statutes forbade its being held by the vice-chancellor. In March 1562, he appears in conjunction with 'Anthony Forster, of Cumnore, gent.' (Sir W. Scott's Tony Foster), as assisting in forcing a protestant warden upon the Roman catholic fellows of Merton College. Wood has given a graphic description of the whole scene (*Annals*, anno 1562). Dr. Babington was the Earl of Leicester's chaplain, and seems about this time to have been high in favour with that nobleman. Anthony à Wood tells us that he was one of Leicester's five most trusted advisers in Oxford, and was chosen to preach Amy Robsart's funeral sermon at St. Mary's, on which occasion he 'tript once or twice by recommending to his auditors the virtues of that lady so pitifully murdered instead of so pitifully slain.' His text was 'Beati mortui qui in Domino moriuntur' (1560) (BARTLETT's *Cumnor*). In the same year Dr. Babington stood as the representative of the more conservative party for the deanery of Christ Church against Dr. Sampson, the great pillar of the puritanical body. Strype, in his account of this contest, describes Dr. Babington as 'a man of mean learning and of a complying temper' (*Annals of Refor.* i. chap. 43), and it is hardly necessary to say that he failed in his candidature. He seems by this time to have been losing Leicester's favour, and was more than suspected of being a concealed papist. In 1563 he had to resign the rectorship of Lincoln, and two years later was forced to flee beyond seas, where he is said to have died in 1569.

[Cooper's *Athen. Cantab.* i. 557; Wood's *Athenæ Oxonienses*, Fasti, and History and Antiquities of Oxford; Lipscombe's History of Buckingham, ii. 515, iii. 133, iv. 249, 336; Nares's *Burghley*, i. 55; and authorities cited above.]

T. A. A.

BABINGTON, GERVASE (1550-1610), bishop in succession of Llandaff, Exeter, and Worcester, is described in his 'Effigies before his Works' (published posthumously in 1615) as aged fifty-nine; and assuming this to have been his age at death (in 1610), the date of his birth has been set down as 1551, though doubts are raised by Dr. Berkenhout (KIPPIS's *Biogr. Brit.* i. 413). From the 'Reg. Bancroft' (as cited in LE NEVE's *Fasti*, by Hardy, iii. 66) we learn that his age at death was sixty, and thus 1549 or 1550 was the date of his birth. Fuller (in his *Abel Redivivus*, 1651, and *Church History*, 1655) states that he was of Nottinghamshire, while Izacke ('Catal. of Bishops of Exeter,' in *Antiq. of Exeter*), and after him Prince (*Worthies of Devon*) claim him for Devonshire. Sir William Musgrave's 'MS. Memoranda' (KIPPIS, as before) confirm Fuller, and connect him with the ancient family of the Babingtons of Nottinghamshire [see BABINGTON, ANTHONY]. Of his early education nothing has been transmitted. He was first sent to Cambridge University, being entered at Trinity College, of which he became fellow (*Preface to his Questions and Answers to the Ten Commandments*). As was not infrequent, he passed to Oxford University, where, on 15 July 1578, he was incorporated M.A. (Wood's *Fasti*, ed. Bliss, i. 211). He returned to Cambridge, and became known as a 'hard student' of theology. In the dedicatory epistle to his collected works (published in 1615), addressed to the brothers William earl of Pembroke and Philip earl of Montgomery, it is told how their father had received Babington at his house as tutor to the family, having been 'sent thither by the ancients and heads of the said university.' And mention is made of the intimate relations in which he stood to their mother,

Sidney's sister, Pembroke's mother.

He was credited with having assisted her in her versification of the Psalms, but on shadowy grounds: 'For it was more than a woman's skill to express the sense so rightly as she hath done in her verse, and more than she could learn from the English and Latin translations' (KIPPIS, as before, i. 412). Ballard gravely controverts the allegation, which originated with Sir John Harington (*Brief View*, 1653, and BALLARD's *Memoirs of British Ladies*).

By his patron's influence he was appointed treasurer of Llandaff, collated 28 Jan. 1589-90 (LE NEVE's *Fasti*, ii. 262). He had previously, in 1583, obtained the prebend of Wellington in Hereford Cathedral (*ibid.*

i. 581). By the same influence he was elected bishop of Llandaff 7 Aug. 1591, confirmed on the 27th, and consecrated at Croydon on the 29th (*Reg. Whity*. i. fol. 77, and *LE NEVE*). Four years later he was translated to the see of Exeter, elected 4 Feb. 1594-5, and enthroned 22 March (*ibid.*). He is severely condemned for having alienated from this bishopric 'the rich and noble manor of Crediton, in the county of Devon,' which Prince pronounces 'an irreparable injury.' Finally, he was nominated by the queen to Worcester, on 30 Aug. 1597, elected 15 Sept., and confirmed 4 Oct. (*ibid.*). Among other subsidiary offices held by him was that of queen's counsel for the Marches of Wales (*FULLER*). Early in 1600 Babington was believed to favour the Earl of Essex. On 5 March 1599-1600 Chamberlain wrote to Carleton that Queen Elizabeth had called him to account while he was preaching a sermon before her, because of the hints he made in behalf of the earl. In 1604 Babington was summoned to the Hampton Court conference. He died 17 May 1610, and was buried in his cathedral.

Before and after his advances in the church Babington was a constant preacher and a laborious student. Lovers of Elizabethan literature contend eagerly for copies of his many little quartos, some of the rarest of which are to be found in the British Museum. In 1583 he issued his 'Very fruitful exposition of the commandements by way of questions and answers,' which was republished in 1590, and again about 1600. A similar work on the Lord's Prayer was issued in 1588. In 1584 appeared his 'Briefe conference betwixt man's frailtie and faith wherein is declared the true use and comfort of those blessings pronounced by Christ in the fifth of Matthew. . . . Laide downe in order of dialogue.' This was republished in 1590 and again in 1596. In 1592 the first edition was published of 'Certaine, plaine, briefe, and comfortable notes upon everie chapter of Genesis,' of which an enlarged edition appeared in 1596 and 1602. In 1604 he issued his 'Comfortable notes upon the bookes of Exodus and Leviticus.' Several sermons preached at St. Paul's Cross by Babington were also published. The great folio of his works (edited by Miles Smith, afterwards bishop, and T. C.), having been issued originally in 1615, was republished in 1622 and 1637. The volume consists of Babington's 'Comfortable Notes upon the Five Books of Moses, also an exposition upon the Creed, the Commandments, the Lord's Prayer, with a conference betwixt man's frailtie and faith, and three sermons,' &c. Throughout his multiplied divisions are scholastic and complicated; his

reading extensive and varied. He was well acquainted with Hebrew and Greek, and his style is quaint and pleasant. Some passages from Babington's treatise on the commandments, in which the vices of his age are forcibly exposed and attacked, are reprinted in the New Shakspeare Society's edition of Stubbes's 'Anatomy of Abuses,' pt. i. pp. 75-93. A sermon preached by Babington in 1590, and published in his 'Works,' was reprinted by Sir Richard Hill as an appendix to his 'Apology for Brotherly Love,' in 1798.

[In addition to authorities quoted, see Willis's Survey of the Cathedrals, 1727; Godwin de Præsul., 1616; Hooker's Catalogue of the Bishops of Exeter; Strype's Whitgift; Berkenhout's Biogr. Literaria, i. 244-5; Cal. State Papers (Dom.), 1595, 1600, 1608.] A. B. G.

**BABINGTON, HUMFREY, D.D.** (1615-1691), divine, the second son of Humfrey Babington of Rothley Temple, Leicestershire, was educated at Trinity College, Cambridge. He succeeded Sanderson, on his appointment to the bishopric of Lincoln, as rector of Boothby Paine in Lincolnshire. He preached a sermon at the Lincoln assizes, which, at the request of his hearers, was published at Cambridge in 1678. It is a curious instance of the style of the time, being elaborately learned and crammed with quotations in Latin and Greek, and even Hebrew. Its political views may be estimated by its assertion that 'monarchy is the best safeguard to mankind, both against the great furious bulls of tyrannical popery, and the lesser giddy cattle of schismatical presbytery.' This sermon probably procured him the degree of D.D. *per literas regias* in 1669. He afterwards became vice-master of Trinity College, built two sets of rooms for the use of the Babington family in the college, and founded the Barrow Hospital.

[Notes and Queries, 2nd series, ix. 152, 195; Brit. Mus. Cat.] R. B.

**BABINGTON, JOHN** (fl. 1635), mathematician and gunner, published in 1635 a folio volume, entitled 'Pyrotechnia, or a Discourse of Artificiall Fireworks,' to which was added a 'Short Treatise of Geometrie . . . with the tables for the square root to 25,000, and the cubick root to 10,000 Latus, wherein all roots under those numbers . . . are extracted onely by ocular inspection.' The first part of the book, which dealt with the use of fireworks for military purposes as well as for amusements, was dedicated to the 'Earl of Newport, Master of his Majesties Ordnance,' and in the preface the author says of him-

self, 'I have been for certaine yeeres past, and so at present am, one of the inferiour gunners of his Majestie.' Three copies of English verses in praise of the author are prefixed, of which one is by John Bate, the author of 'Mysteries of Nature and Art.' The second part, the geometrical treatise, was especially designed for the use of guns, and is dedicated to 'Sir John Heyden, Lieutenant of his Majesties Ordnance.' The logarithmic tables, which form the third part of the book, were the earliest published in England. A portrait of Babington by J. Droeshout is in the Duke of Devonshire's copy of the work at Chatsworth.

[Babington's work; Chatsworth Libr. Cat.; Brit. Mus. Cat.] R. E. A.

**BABINGTON, SIR WILLIAM**, (*d.* 1455), judge, of an ancient Northumbrian family, was the second son of Sir John Babington, Knt., of East Brigford in the county of Nottingham, by Benedicta, daughter of Simon Ward, Esq., of Cambridgeshire, who held the offices of escheator (a functionary whose business it was to safeguard the interests of the crown in escheats, wardships, and the like incidents of the royal prerogative) for the counties of Northampton and Rutland, and custos of the castle and manor of Okeham. Babington married Margery, daughter of Sir Peter Martell, Knt., of Chilwell in Nottingham, through whom he became possessed of estates in that place, and by whom he had five sons and five daughters. He was appointed king's attorney on 16 Jan. 1414, and in the following year (11 July 1415) was commanded to take the rank of serjeant-at-law, at that time one of greater dignity than that of king's attorney, but generally shunned as a barren and expensive honour. Accordingly, in company with several other 'apprentices of the law' who were summoned about the same time, he neglected to appear to the writ, and it was only under pressure of an order from parliament (November 1417) that he and his colleagues were induced to comply. This incident is referred to by Pym in his speech in impeachment of the Duke of Buckingham (in 1626) as one which might be distorted, though manifestly irrelevant, into a precedent for the practice of compelling the purchase of titles of honour, which was one of the offences with which the duke was charged. It is about this date (1417) that Babington's name begins to appear with frequency in the year books. His rise henceforward must have been rapid, for he was appointed chief baron of the exchequer in 1419, and in 1420 justice of the common bench. In 1423 he became chief justice of

the common bench, and so continued until 1436, when he retired. In that year his name appears in the list of those called upon to contribute to the loan raised for the purpose of infusing new vigour into the war in France, the sum exacted from him being 100*l.* He endowed the Babington chantry at Flaforth in Nottinghamshire with some houses and rents, and is said by Foss to have founded 'a chantry for two chaplains at the altar of St. Catherine in the church at Thurgarton' in the same county. There occurs in the St. Alban's Registry the following memorandum: 'For one cup given to W. Babington, Knt., Chief Justice of the Common Bench, for favours done to the Monastery, c. s.' Babington died in 1455, and was buried at Lenton Priory in Nottinghamshire.

[Burke's Landed Gentry; Foss's Judges; Rot. Parl. iv. 107, 1353; State Trials, ii. 1315, 1353; Dugdale's Chronica Series, 57, 58, 62; Proceedings of the Privy Council, 316, 327; Calendarium Inquisitionum post mortem et Escætarum, iv. 263, 298.] J. M. R.

**BABINGTON, WILLIAM** (1756-1833), physician and mineralogist, was born at Portglenone, near Coleraine, in the county of Antrim, Ireland. He was first apprenticed to a practitioner at Londonderry, and afterwards completed his medical education at Guy's Hospital, London, but without at that time taking a medical degree. In 1777 he was made assistant surgeon to Haslar (Naval) Hospital, and held this appointment four years. He then obtained the position of apothecary to Guy's Hospital, and also lectured on chemistry in the medical school attached to the hospital. Of these appointments Babington made stepping-stones to a higher professional position. He resigned the post of apothecary, and, having obtained the necessary degree of M.D. from the university of Aberdeen in 1795, was in the same year elected physician to Guy's Hospital. In 1796 he was licentiate of the College of Physicians, and remained so till 1827, when he received the unusual honour of being elected fellow by special grace. In 1831 he was made honorary M.D. by the university of Dublin. He ceased to be physician to Guy's in 1811.

Dr. Babington was a very able and successful physician, whose skill and knowledge are attested by the general verdict of his contemporaries; while a not less unanimous voice testifies to the elevation and purity of his character. 'History does not supply us,' says Dr. Munk, 'with a physician more loved or more respected than was Dr. Babington.'

If in the course of his busy life he made no conspicuous addition to the science of medicine, it was that his energies were devoted to the sciences of chemistry and mineralogy. He lectured on chemistry at Guy's Hospital for many years, and published some memoirs in 'Nicholson's Journal.' In mineralogy his interest was still greater, and he achieved more. While apothecary to Guy's Hospital he became possessed of the valuable cabinet of minerals which had belonged to the Earl of Bute; of this he made an elaborate catalogue, which probably served as the foundation of one of his books. His works on mineralogy are described by Mr. Greenough, president of the Geological Society in 1834, as having well represented the state of the science when they were written, but they have long ceased to have any importance. Dr. Babington did more by encouraging science than by his own work; and as such he has some claim to be regarded as the founder of the Geological Society. The circumstances are thus stated by Mr. Greenough (Presidential Address to the Geological Society, 1834): "In 1807, with a view to enable Count Bournou, of whom he had been a pupil, to publish his elaborate monograph on the carbonate of lime, Dr. Babington invited [to his own house] a number of gentlemen the most distinguished for their zeal in the prosecution of mineralogical knowledge. A subscription was opened and the necessary sum readily collected. The object having been accomplished, other meetings of the same gentlemen took place, for the joint purpose of friendly intercourse and mutual instruction. From such small beginnings sprang the Geological Society, and among the names of those by whose care and watchfulness it was supported during the early period of its history that of Dr. Babington must always stand conspicuous." He was president of the society in 1822, but did not contribute to its 'Transactions.' It is recorded that after this he took lessons in geology of a Mr. Webster, and attended the chemical lectures at the London University the year before his death. He was appointed by government one of the referees to put a price upon the Greville collection of minerals, bought by the nation, and now in the British Museum. Dr. Babington was elected a fellow of the Royal Society, and took part in founding the Hunterian Society. He rapidly acquired a large and lucrative practice, and continued in the full exercise of professional and scientific activity till within four days of his death, which occurred from influenza, during the severe and destructive epidemic of that disease in London, on 29 April 1833.

Dr. Babington was buried in the church of St. Mary's, Aldermanbury. Four years after his death a monument was erected to him in St. Paul's Cathedral by public subscription. Behnes being the sculptor. His bust is in the College of Physicians, and his portrait by Medley has been engraved by Branwhite. He left a son, Benjamin Guy Babington, also physician to Guy's Hospital, and one of his daughters married the eminent physician, Dr. Richard Bright.

He wrote: 1. 'A Systematic Arrangement of Minerals reduced to the Form of Tables, founded on the joint consideration of their chemical, physical, and external characters,' 4to, 1795. 2. 'A new System of Mineralogy in the form of a Catalogue, after the manner of Baron Born's Catalogue of the Fossils of Mdle. E. de Raab,' 4to, 1799. 3. 'A Catalogue of the genuine and valuable Collection of Minerals of a Gentleman Deceased' (by Dr. Babington and others), 8vo, London, 1805. 4. 'Syllabus of the Course of Chemical Lectures at Guy's Hospital,' 1789, &c. 5. 'A Case of Exposure to the Vapour of Burning Charcoal' (Med.-Chirurg. Transactions, vol. i. 1806).

[Annual Biography and Obituary, 1834; Gent. Mag. 1833; Munk's Roll Coll. Physicians, ii. 451; Medical Gazette, 1833.] J. F. P.

**BABYON, or BABYO, or BABION, PETER** (*n.* 1317-1366), poet and divine in the reign of Edward II, by birth an Englishman, was educated from his earliest youth in the *littera humaniores* by masters of approved ability and long experience. He practised so diligently both prose and verse writing that he soon became an elegant poet and most adept rhetorician. His compositions excited the wonder of the age in which he lived. When speaking of him as a poet, Pits says that he was chiefly remarkable for talents which are rarely found in combination—

Ingenium felix, inventio, lucidus ordo,  
Gratia, majestas, ad rem bene congrua verba.

As his judgment became more matured by years, he was unwilling to spend all his life and all his ability in exercises of ordinary choice. He therefore betook himself to the reading of the holy scriptures, and in the midst of that labour he undertook the task of preaching the divine word, for which his previous education had so eminently qualified him. All the polite learning of his youth was now devoted to this sacred purpose. He achieved, as might be expected, a great success, and made for himself a name amongst theologians of no little fame. He was still living, according to Possevin, in 1366. His

chief work was a 'Commentary on the Gospel of St. Matthew,' in one book, which is bound up in the older editions of the works of St. Anselm. His other works are 'De officio Missæ Liber unus;' 'Sermonum Septuaginta Liber unus;' 'Homiliarum Liber unus;' 'Comœdia carmine Liber unus;' 'Carminum divorsorum Liber unus.'

[Jöcher's Gelehrten-Lexicon; Pits, De Illustribus Angliæ Scriptoribus, p. 406; Bale's Scriptor. Brit. p. 467; Oudin, De Script. Eccles. iii. 799; Possevino's Apparatus Sacer. ii. 240; Tanner's Bibl. Brit.-Hibern. p. 59; MS. Bibl. Bodl. Arch. B. 52; MS. Cotton. Titus A. xx. 30; Theoph. Raynaud, De malis ac bonis Libris, p. 126.] J. M.

**BACHE, FRANCIS EDWARD** (1833-1858), musician, born 14 Sept. 1833 at Birmingham, was the eldest son of Samuel Bache [q.v.]. From a very early age he showed extraordinary talent for music, learning assiduously the piano, organ, and violin, in the last of which instruments he made such progress under the tuition of Alfred Mellon as to play in the orchestra of the Birmingham festivals of 1846 and 1847. Having determined to adopt music as his profession, he left school in the summer of 1849, and, after studying for a short time with Mr. James Stimpson, came to London, and continued his studies with Sir Sterndale Bennett. In Oct. 1850 he obtained the post of organist at All Saints Church, Gordon Square, and in November of the same year his first overture was performed at the Adelphi Theatre. From 1849 to 1853 he worked hard in London, teaching, studying, and composing numerous pianoforte pieces. In Oct. 1853 he went to Leipzig, where he remained till the end of the following year, returning to England, after a short stay in Paris, in 1855. He obtained an appointment as organist at Hackney, but he was soon forced by illness to return home. In 1856 Bache went to Algiers, where for a time the consumptive symptoms from which he suffered were arrested. From Algiers he returned by way of Paris to Leipzig, spending the following winter in Rome. In June 1857 he returned home, and spent the next winter at Torquay, but on his return to Birmingham in April 1858 he gradually sank, dying on 24 Aug. of the same year. In estimating Bache's position as a composer, it cannot be denied that as far as regards his published works his promise was greater than his performance; of his unpublished works, which include two complete operas, a polonaise for pianoforte, orchestra, &c., there has been, unfortunately, no opportunity of judging the

merits. But though much that he wrote was obviously the ephemeral and immature work of one whose powers were prevented by illness from attaining their full development, yet there are some of his compositions, notably amongst his songs, which show that he was possessed of genius of no mean order, and which will continue to occupy an honoured position amongst the best productions of English musicians.

[The Christian Reformer for December 1858; information from Miss Constance Bache.]

W. B. S.

**BACHE, SAMUEL** (1804-1876), unitarian minister, was born on 24 Dec. 1804 at Bridgnorth, where his father, Joshua Tilt Bache (*d.* 28 Oct. 1837, aged 63), was a grocer. His mother was Margaret Silvester, of Newport, Salop. On her death, in 1808, he was entrusted to his father's sister, Mrs. Maurice, at Stourbridge, and he became the pupil of Rev. Ebenezer Beasley, a dissenting minister at Uxbridge. He was some time assistant in the school of the Rev. Lant Carpenter, LL.D., at Bristol, and was educated for the ministry (January 1826-29) at Manchester College, York, under Charles Wellbeloved (theology), John Kenrick, M.A. (classics), and William Turner, M.A. (science). He was minister at the Old Meeting, Dudley, 1829-32, and in 1832 became colleague of John Kentish (1768-1858) at the New Meeting, Birmingham (Priestley's congregation), and married Emily (*d.* 1855), second daughter of the Rev. Edward Higginson of Derby (1781-1832), whose eldest daughter, Helen (*d.* 1877), was the wife of the Rev. James Martineau. He had seven children, of whom F. E. Bache, the composer [see BACHE, FRANCIS EDWARD], was the eldest; another is Walter Bache, the musician; the youngest son, John Kentish, some time a dissenting minister, took Anglican orders in 1876. For many years Mr. Bache kept a school. In 1859 he took a leading part with the Rev. Dr. Miller, rector of St. Martin's, in the establishment of Hospital Sunday, an institution originated in Birmingham. He was visitor of Manchester New College, London, 1861-65. In 1862 the New Meeting, Moor Street, was sold to Roman Catholics, the congregation removing to a handsome structure in Broad Street, called the Church of the Messiah (foundation laid 11 Aug. 1860). Mr. Bache had as colleague in 1863-7 the Rev. Henry Enfield Dowson. In 1868 he resigned the ministry from failing health, and, being afflicted with softening of the brain, he resided for the last two years of his life in the house of a physician at Gloucester, where he died

on 7 Jan. 1876. He was a preacher and public man of strong powers, correct attainment, and cultivated taste; formal and urbane in manner. Among unitarians he represented that conservative school which aims to carry out the principles of Locke's 'Reasonableness of Christianity,' regarding Jesus Christ as the miraculously attested exponent of a pure morality and a simple theology, and the revealer, by his resurrection, of an eternal life. On 23 May 1866 he proposed the embodiment in the constitution of the British and Foreign Unitarian Association of a 'recognition of the special divine mission and authority, as a religious teacher, of Jesus Christ,' which was met by carrying the previous question. A list of twenty-two of his publications (1833-70) is given by J. Gordon, including 'Harmony of Science and Revelation,' 1839; 'Funeral Sermon for J. Kentish,' 1853; 'Exposition of Unitarian Views of Christianity,' 1854; 'Miracles the Credentials of the Christ,' 1863.

[Roll of Students Man. New Coll. 1868; Birm. Daily Gazette, 13 Jan. 1876; Funeral Sermon by John Gordon, 1876; Unitarian Chronicle, 1832; Report of B. and F. Unit. Ass. 1866; Beale's Memorials of Old Meeting Ho. Birm. 1832.] A. G.

**BACHE, SARAH** (1771?-1844), hymn writer, was born at Bromsgrove, but brought up at Worcester by relatives named Laugher, members of the Rev. T. Belsham's congregation. Rev. Timothy Laugher, of Hackney (*d.* 1769), was her uncle, and she was a cousin of Joshua Tilt Bache. She removed to Birmingham (before 1791, for she had attended the ministry of Dr. Priestley), and for many years kept the Islington School, in conjunction with a half-sister, Miss Penn. Another half-sister, Anna Penn, married the Rev. Lant Carpenter, LL.D. She was the author of the hymn 'See how he loved,' which first appeared in the Exeter collection in 1812, compiled by Dr. Carpenter. She died at Birmingham on 23 July 1844, *æt.* 74.

[Chn. Reformer, 1844, obituary by N. (Rev. John Kentish); Birm. Daily Gazette, 13 Jan. 1876.] A. G.

**BACHHOFFNER, GEORGE HENRY** (1810-1879), one of the founders of the London Polytechnic Institution, and in his day a well-known and popular lecturer on scientific subjects, was a native of London. It was in 1837 that he, in conjunction with a few others, established the Polytechnic, which was intended for a place of popular instruction, and, indeed, while it was under Bachhoffner's control, sufficiently fulfilled

that intention. Here he held the position of principal of the department of natural and experimental philosophy till 1855. Afterwards he became lessee and manager of the Coliseum in the Regent's Park, and there gave lectures similar to the courses he had established at the Polytechnic. In the later part of his life he held a post as registrar of births and deaths in Marylebone. Bachhoffner was an inventor, and took out several patents for inventions connected with the electric telegraph, gas stoves, oil lamps, &c.

[The above details were communicated by some of Dr. Bachhoffner's relatives.] H. T. W.

**BACK, SIR GEORGE** (1796-1878), admiral and Arctic navigator, was born at Stockport, in Cheshire, and entered the navy as midshipman of the *Arethusa* in 1808. He was present at the destruction of the batteries at Lequeitio, in the north of Spain, and after being repeatedly under fire was, in 1809, taken prisoner by the French at Deba, while on a cutting-out expedition with the *Arethusa's* boats. The prisoners were sent to St. Sebastian, and Back was small enough to be carried in one of the panniers of a sumpter mule across the Pyrenees. While a prisoner at Verdun, he occupied himself in the study of mathematics, French, and drawing. In the winter of 1813-14 he travelled on foot through a large part of France, and on reaching England was appointed midshipman to the *Akbar*, and in her served against the French on the North American station. The *Akbar* was dismasted in a hurricane off Cape Hatteras, and nearly foundered. In 1816 she was paid off, and in 1817 Back was appointed admiralty mate of the *Bulwark*. Next year he volunteered for service in the Trent, under Franklin, who was then entering on the first modern voyage of discovery in the Spitzbergen seas. Of that voyage his friend—afterwards Admiral—Beechey is the graphic historian. On his return he rejoined the *Bulwark*, but in the very next year set out with Franklin on his expedition by land to the Coppermine river, the object of which was to determine the latitude and longitude of the northern coast of North America, and the trend of the coast east of the Coppermine. In that terrible expedition it was to Back's dauntless determination that the safety of the survivors was to a great extent due. At Fort Enterprise Franklin sent him back to Fort Providence, and he was in imminent danger of starvation on the way. In five months he travelled 1,204 miles on snow shoes, with no other covering at night in the woods but a blanket and a deerskin, when the ther-

mometer was frequently at 48 deg. and once at 67 deg. below zero, and sometimes without tasting food for two or three days at a time. Later on, when Franklin was in dire straits, he again sent Back to get help from the Indians, and after incredible exertions and sufferings, and after seeing one of his companions die on the road, he succeeded in his mission just in time to save Franklin's life. On coming back to England he was made lieutenant in 1822. In 1823 he was appointed to the *Superb*, and sailed to the West Indies. Next year, while at Lisbon, he was invited to join Franklin's expedition to the Mackenzie river, and hastened to do so. In that memorable expedition he rendered Franklin signal service, especially in his dealings with the Esquimaux, and on coming home in 1827 found himself promoted to the rank of commander. His repeated applications for a ship met with no response, and he went to Italy to improve himself in the arts. At Naples he heard of the supposed loss of Captain Ross in the Arctic regions, and offered the Royal Geographical Society to go in search of him. He had been informed by Copper Indians on his previous journey of the existence of a river rising in the neighbourhood of the Great Slave Lake, and debouching on the Polar Sea, and by tracing this river to its mouth he hoped to make his way to Regent's Inlet, where he thought Captain Ross might be beset. The council accepted his offer, and a grant from government, supplemented by a public subscription, supplied the funds for the expedition, on which he set out with only one companion of his own rank, Dr. Richard King, as surgeon and naturalist, in February 1833. His instructions were, in brief, first to make for the sea by the aforesaid river and, if possible, aid Captain Ross, and, secondly, to survey the sea-coast as far as possible. The first winter was spent by him at Fort Reliance—a house which he constructed near the Great Slave Lake, when himself half starved and amid starving Indians. The cold was so extreme that while washing his face close to a fire his hair froze before he could dry it. In April he received news of Captain Ross's arrival in England, but he was ordered to push on to the river and survey the coast thence to Cape Turnagain. His first difficulty was to discover where the river lay, and to avoid embarking on the wrong one. The name of it was Thlew-ee-choh-deeseth, or Great Fish River, and how doggedly he traced it to the sea, amid perils from the ice and the rapids, managing the Indians, and making friends with the Esquimaux, he has vividly recounted

in his 'Narrative of the Arctic Land Expedition to the Mouth of the Great Fish River, in 1834 and 1835.' The narrative is beautifully illustrated by sketches made by himself. Some falls on the river Ah-hel-Dessy, which he named Parry Falls, he describes as far surpassing the Falls of Niagara in splendour of effect. The ice prevented his proposed survey of the coast, and after again wintering at Fort Reliance he reached La Chêne, the Hudson's Bay station, whence he had started over two years before, in August 1835, having since he quitted it travelled 7,500 miles, including 1,200 of discovery. Besides his discovery of a river, over 440 miles long, he had made important observations of the *Aurora Borealis*, and had given the name of Montreal to an island, afterwards to be so sadly familiar in connection with the fate of Franklin. In October he reached England, was awarded the Geographical Society's gold medal, and was promoted by the admiralty to the rank of captain, by order in council—an honour which no other officer in the navy had received except William IV. In the following year he was, at his own proposal, appointed to the command of an expedition, the object of which was to complete the coast line between Regent's Inlet and Cape Turnagain. On his return home he published a narrative of his voyage, and a terrible story it is. Off Cape Comfort the ship was frozen in, and then drifted up Frozen Channel. From December to March she was driven about, and floated powerless till 10 July, and for three days was on her beam ends, but on the 14th suddenly righted. When 'it wanted but one day to complete four months since the ship had been thrown upon the ice,' she was 'once more in her own element, and subject to the will of man.' But the crazy vessel nearly sank in a gale as she crossed the Atlantic, and it was not till 3 Sept., 'fifteen months since the pleasing sound of a falling anchor had greeted' his ears, that she anchored in Lough Swilly. Two extracts from Back's account of this voyage will illustrate the perils which he encountered, and the style in which he narrated them. 'The ship was still setting fast along shore and much too close to the fixed ice, but it was not till 8 P.M. that any suspicious movement was noticed near us. Then, however, a continually increasing rush was heard, which at 10.45 P.M. came on with a heavy roar towards the larboard quarter, upturning in its progress, and rolling onward with it, an immense wall of ice. This advanced so fast that though' all hands were immediately called they had barely time, with the greatest exertion, to extricate three

of the boats, one of them, in fact, being hoisted up when only a few feet from the crest of the solid wave, which held a steady course direct for the quarter, almost overtopping it, and continuing to elevate itself until about twenty-five feet high.' 'On 14 July they beheld the strange and appalling spectacle of what may be fitly termed a submerged berg, fixed low down, with one end to the ship's side, while the other, with the purchase of a long lever advantageously placed at a right angle with the keel, was slowly rising towards the surface. Meantime, those who happened to be below, finding everything falling, rushed or clambered on deck, where they saw the ship on her beam ends, with the lee boats touching the water, and felt that a few moments only trembled between them and eternity. Yet in that awful crisis there was no confusion.' It may be safely said that few sailors ever survived more terrible perils and hardships than Back did in the two expeditions under Franklin, and the two which he commanded himself. 'Arctic work,' as Lord Brougham said of Franklin, 'had got into his blood,' and he could not help going again and again if he had the chance. But the exposure and anxiety of eleven years' service in the northern seas at last told even on his iron frame. For six years he was more or less an invalid, and was never sufficiently restored to resume the ordinary duties of his profession afloat. In 1837 he received from the Geographical Society both its medals. In 1839 he was knighted. He also received the gold medal of the Geographical Society of Paris, and was presented with a service of plate by the subscribers to the Arctic Land Expedition. He was employed by government to report on the harbour of Holyhead, but afterwards lived in retirement on half-pay. He was a vice-president and long on the council of the Geographical Society, and contributed many reports. He was made admiral in 1857, and was also D.C.L. and F.R.S. Of all these honours he was indeed worthy, for in bravery, intelligence, and love of adventure he was the very model of an English sailor. Sir George died 23 June 1878.

[Information given by the Rev. Henry Back; Narrative of an Expedition in H.M.'s ship *Terror*, in the years 1836-7; Narrative of the Arctic Land Expedition to the mouth of the Great Fish River in 1833-5, both by Back; Journey to the Shores of the Polar Sea, and Second Journey to the Shores of the Polar Sea, by Franklin.]

A. H. B.-r.

**BACKHOUSE, EDWARD (1808-1879)**, author of 'Early Church History,' was born at Darlington on 8 May 1808. He lived from

early boyhood at Sunderland, where he was partner in collieries and in the bank with which his family had been connected for many years. He took no active part in business, and was a man of cultivated tastes, fond of travel, a good amateur painter, and a student of natural history. He devoted himself chiefly to the promotion of philanthropic and religious purposes. He was a most generous and judicious supporter of various institutions in Sunderland, and is said to have spent over 10,000*l.* a year in charities. In politics he was an energetic liberal, and especially interested in questions bearing directly upon morality. In later life he was a prominent opponent of the Contagious Diseases Acts. He was a devoted member of the Society of Friends, to which his family belonged. He began to preach in 1852, and two years later was 'recognised' as a minister. He married Katharine Mounsey in 1856. He had no family, but he always delighted in the society of children and the promotion of their happiness. In 1874 he was impressed by the belief that he ought to devote himself to writing upon church history. He laboured at this task till his death on 22 May 1879. His manuscripts were entrusted to Mr. Charles Tylor, who published in 1884 'Early Church History to the Death of Constantine; compiled by the late Edward Backhouse; edited and enlarged by Charles Tylor.' The book, which makes no pretence to profound research, is interesting as an account of the early church by an intelligent writer from the quaker point of view.

[Preface to Early Church History by Charles Tylor; Northern Echo, 24 May 1879; Sunderland Daily Echo, 23 and 28 May 1879; information from the family.] L. S.

**BACKHOUSE, WILLIAM (1593-1662)**, Rosicrucian philosopher, a younger son of Samuel Backhouse, Esq., of Swallowfield, in Berkshire, was born in that county 17 Jan. 1593, and entered Christ Church, Oxford, as a commoner, in 1610, but left the university without taking a degree. At length, settling on his patrimony, he devoted his time to the study of the occult sciences, became a renowned alchemist, Rosicrucian, and astrologer, and gave great encouragement to those who were addicted to similar pursuits, especially Elias Ashmole, whom he adopted as his son, and to whom he freely imparted the arcana of his mysterious lore. The subjoined laconic entries in Ashmole's diary show the intimacy of the friendship subsisting between them:—26 April 1651: 'Mr. William Backhouse, of Swallowfield, in com. Berks, caused me to call him father thenceforward.' 10 June

1651: 'Mr. Backhouse told me I must now needs be his son, because he had communicated so many secrets to me.' 10 March 1652: 'This morning my father Backhouse opened himself very freely, touching the great secret.' And finally, under date 13 May 1653, Ashmole writes: 'My father Backhouse lying sick in Fleet Street, over against St. Dunstan's church, and not knowing whether he should live or die, about eleven of the clock told me, in syllables, the true matter of the Philosopher's Stone, which he bequeathed to me as a legacy.' It is almost superfluous to add that no hint is given as to the nature of this wonderful secret. Backhouse died at Swallowfield 30 May 1662. He married Ann, daughter of Bryan Richards of Hartley Westfield, Hampshire, by whom he had two sons (who predeceased him), and a daughter, Flower, who married, first, William Bishop, of South Warnborough, Hampshire, and secondly, her father's kinsman, Sir William Backhouse, Bart., who died 22 Aug. 1669.

Backhouse left in manuscript: 1. 'The pleasant Founteine of Knowledge: first written in French anno 1413, by John de la Founteine of Valencia in Henault;' translated into English verse in 1644. MS. Ashmol. 58. 2. A translation of 'Planctus Naturæ: The Complaint of Nature against the Erroneous Alchymist, by John de Mehung.' MS. Ashmol. 58, art. 2. 3. 'The Golden Fleece, or the Flower of Treasures; in which is succinctly and methodically handled the stone of the philosophers, his excellent effectes and admirable vertues; and, the better to attaine to the originall and true meanes of perfection, enriched with Figures representing the proper colours to lyfe as they successively appere in the pratise of this blessed worke. By that great philosopher, Solomon Trismosin, Master to Paracelsus;' a translation from the French. MS. Ashmol. 1395. Wood adds that 'he was also the inventor of the "Way wiser" in the time of George Villiers, the first duke of Bucks.'

[MS. Addit. 14284 f. 20; Lives of Ashmole and Lilly (1784), 313, 314, 315, 319, 329, 335; Wood's *Athenæ Oxon.* ed. Bliss, ii. 86, iii. 575, iv. 355, 361, 715, Fasti, i. 422; Black's Cat. of Ashmol. MSS. 94, 221, 222, 514, 529, 533, 1089.]  
T. C.

**BACKWELL, EDWARD** (d. 1683), alderman, a celebrated London goldsmith, and the principal founder of the banking system in England, was descended from a family which at a very early period had settled at Backwell, Somersetshire. The earliest member of the family of whom there is special mention is Roger de Backwell, who

was one of the squires to Lord James Audley at the battle of Poitiers in 1356. Edward Backwell was the second son of Barnaby Backwell of Backwell, who, after his marriage to Jane, daughter of John Temple, Esq., of Burton Dassett, Buckinghamshire, settled in that county (Pedigree from manuscript in possession of William Praed, Esq., of Tyringham, printed in LIPSCOMB'S *Buckinghamshire*, iv. 376). Possibly the father had some business connection with London, for John, the eldest son, like his younger brother Edward, married the daughter of a London merchant. The earliest mention of Edward Backwell in the State Papers is under date 30 April 1650, as having been asked to 'provide 500*l.* in pieces of eight.' In 1653 he has a bill of 1,380*l.* for the victualling of ships. That he was already a person of considerable wealth and enterprise is proved by his purchase from the parliament of Old Busby Park and other grounds connected with Hampton Court Palace, which after a long negotiation were rebought from him by the Commons in the beginning of 1654 for 6,202*l.* 17*s.* The principal causes of the rapid fortunes made at this time by the more enterprising of the goldsmiths are stated, in a curious pamphlet, published in 1676, entitled 'The Mystery of the New-fashioned Goldsmiths or Bankers discovered,' to have been the facilities afforded them for obtaining large profits by melting down money of more than the proper weight, and the introduction of the system of taking money on deposit and lending it again at a higher rate of interest. The deposit system may be said to have originated about the time of the civil war. After Charles I in 1640 seized 200,000*l.* which, according to the custom of the period, was lodged for safety in the Tower, it gradually became a habit to lodge money with the goldsmiths. The goldsmiths, who already were money changers, now became money borrowers and lenders. For the money deposited they gave receipts called 'goldsmiths' notes,' the earliest kind of bank notes issued in England. There is every reason to suppose that Backwell was the chief originator of the system, as he was undoubtedly the most successful and best known banker of his day. Besides the rents of the country gentlemen, the goldsmiths received clandestinely from servants the money of their masters, which was lent them at the rate of 4*d.* per cent. per day. The deposits were lent out by the goldsmiths at a high rate of interest to necessitous merchants; and in addition to this, as is stated in the pamphlet above quoted, 'when Cromwell usurped the government, the greatest of them began to deal with him to supply his wants of money upon

great advantage, especially after they had bought those dollars whereof he robbed the Spaniards to about the value of 300,000*l*. The 'dollars' referred to are the 'eight-and-thirty wagonloads of real silver' (CARLYLE, *Cromwell*, iv. 224) taken by Blake when he captured and burned the Plate fleet, and which Cromwell sold to Sir Thomas Viner and Edward Backwell, who together paid for it 130,000*l*., and coined it at the Tower mint on their own charge.

The dealings of Backwell with Cromwell were not remembered against him at the Restoration, for he was not only able to carry on a much more lucrative banking business under the auspices of Charles II, but was employed to negotiate the king's principal money transactions. 'As soon,' we are told, 'as the parliament had voted the king certain sums of money out of particular taxes, the bankers advanced at once the money voted by parliament, and were repaid in weekly payments at the exchequer as the taxes were received.' In 1660 (or 1666) an accusation was brought against Backwell for concealing large sums from the king; but, as it had no result, it probably originated in envy. In addition to the king and the queen mother, most of the nobility and persons of celebrity, the farmers of customs, the excise, several city companies, the East India Company, and all the leading goldsmiths had accounts with Backwell. His shop, which bore the sign of the Unicorn, was situated at the south end of Exchange Alley, next to Lombard Street, its site being now probably occupied by No. 70. In 1663 his premises were greatly extended, but they were burned down in the great fire of 1666, when, at the request of the king, he obtained accommodation in Gresham House. Pepys, who was on intimate terms with him and mentions him frequently in his 'Diary,' refers to his having a residence in Mark Lane. He was the owner of several farms, one of which was at Crestloe near Aylesbury, and he also bought in 1668 an estate at Buckeworth, Huntingdonshire, in addition to which his name several times occurs in county histories as the temporary possessor of estates which doubtless had come into his hands through the pecuniary difficulties of their owners. The wife of Backwell, whom Pepys praises for her beauty and sprightliness, was his second wife Mary, daughter of Richard Leigh of Warwickshire, who died in 1670, and was buried in St. Helen's Church, Bishopsgate (MALCOLM, *Londinum Redivivum*, iii. 556). Of the death of his first wife, Alice Brett, the daughter of a London merchant, there is no record.

In October 1662 Backwell was sent to Paris to receive the money (180,000*l*.) for the sale of Dunkirk to the French; and for discharging this duty he obtained from the king in 1664 a present of 1,500*l*. That he was employed by the king in negotiations of even greater importance, is evident from an entry in the State Papers in 1664 of 12,000*l*. paid to him for secret services without account, and in 1665 of 1,750*l*. After the treaty of Dover in 1670 he was also a frequent intermediary in the money transactions between Charles II and Louis of France. Under date of 21 Jan. 1666, there is an entry in the State Papers of a 'warrant for Edward Backwell to be a baronet;' but possibly he declined the honour. The prediction of Pepys that 'the king and kingdom must as good as fall with that man' was scarcely fulfilled; for when Charles in 1672 found himself involved in hopeless money difficulties he had recourse to the expedient of closing the exchequer. Of the 1,328,526*l*. in the exchequer, the amount borrowed from Backwell was 295,995*l*. In the year 1673, as appears from the 'Commons' Journal,' his name was sent to the House of Commons as elected to represent Wendover, but on petition the name of Thomas Wharton was inserted instead. Towards the close of the year, we find from 'Hatton's Correspondence' (Camden Society, 1878, i. 101) that he had been sued by several of his creditors and judgment given against him. Indeed it was currently, though erroneously, reported, that it was for refusing to interfere on his behalf that Sir Orlando Bridgman, the lord keeper, was removed from office. 'Backwell,' says Hatton, 'moved the late L<sup>d</sup> Keeper upon pretence y<sup>t</sup> he had lent all y<sup>e</sup> money to y<sup>e</sup> king, whose exchequer was now shut up, to grant him an injunction to stop y<sup>e</sup> proceedings of all his creditors, and for denying this it is generally reported y<sup>e</sup> seales were taken away.' Whether Backwell subsequently obtained an injunction to stop the proceedings of his creditors does not appear, but possibly it was at this time that, as tradition has it, he took refuge in Holland. He discontinued in any case his banking business, and in the list of the merchants and bankers of London for 1677 (the oldest printed list, republished in 1878) the name of John Ballard appears as occupying his shop at the Unicorn, Lombard Street. In whatever way he satisfied the claims of his creditors, he continued till 1674 comptroller of the customs at a salary of 250*l*. a year; and he was also frequently employed by the king in receiving sums of money from abroad. The letters patent granted under the great

seal in 1677 to each of the goldsmiths who had lent money to the exchequer, 'of a yearly rent for ever upon the revenue of the excise, equal in value to the interest of their debts after the rate of 6 per cent. per annum,' must have removed the money embarrassments of Backwell, and, as the whole debt was discharged in the reign of William IV, his heirs ultimately suffered no pecuniary loss by the transaction. The statement of Mr. Hilton Price that Backwell removed to Holland in 1676 and died there in 1679, is contradicted, not merely by the pedigree printed in Lipscomb's 'History of Buckinghamshire,' which gives the year of his death as 1683, but also by the fact that he was a member for Wendenover in the parliament of 1679, and in the Oxford parliament of 1681.

Backwell was chosen an alderman for Bishopsgate ward 31 Jan. 1659-60, and was discharged from that office on payment of 700*l.* on 13 June 1661.

The unverified tradition that Backwell took refuge from his creditors in Holland and died there seems to have had its origin in a statement of Cole (*MSS.* xxxviii. 389) that he heard the two maiden daughters of Tyingham, grandson of Edward Backwell, say in their father's lifetime at Tyingham, that 'Alderman Backwell, on some failure of the government security, was forced to retire to Holland, where he died, and being embalmed was brought over to England and buried at Tyingham.' As Tyingham Backwell died in 1754, or only seventy years after the death of his grandfather, a part of the main substance of his daughters' statement is doubtless correct; but as there is no record of a failure of government security after 1677, he had no reason for remaining after this in retirement in Holland, and possibly at the time of his death was there merely on business.

John Backwell, eldest son of Alderman Backwell by his first wife, succeeded to the property of Tyingham through marriage with Elizabeth, only daughter of Sir William Tyingham. John Backwell's son Tyingham married Elizabeth, daughter of Sir Francis Child the elder [q. v.], banker, by whom he had two sons, Barnaby and William, both of whom became partners of Child. The latter son in 1756 began a bank of his own in Pall Mall.

[Lipscomb's History of Buckinghamshire; Diary of Samuel Pepys; Cole's *MSS.* vol. xxxviii.; State Papers, Domestic Series; The notices of Backwell by F. G. Hilton Price in Temple Bar or some Account of 'Ye Marygold' (1875), in Handbook of London Bankers (1876), and especially in vol. vi. part i. (1883) of Transactions of

London and Middlesex Archaeological Society, pp. 191-230. These notices are in several respects incomplete, but contain various interesting particulars of Backwell, gleaned from his ledgers in possession of Messrs. Child.] T. F. H.

**BACON, ANN, LADY** (1528-1610), mother of Francis Bacon, was second daughter of Sir Anthony Cooke [q. v.]. Her mother was Ann, daughter of Sir William Fitzwilliam, of Gains Park, Essex. Her eldest sister was Mildred, second wife of William Cecil, Lord Burghley; of three younger sisters, Katharine became the wife of Sir Henry Killebrew; Elizabeth, the wife of (1) Sir Thomas Hoby, (2) Lord Russell, son of Francis, earl of Bedford; and Margaret married Sir Ralph Rowlett 27 June 1558.

Ann was born in 1528, and had the same liberal education as her elder sister Mildred, and indeed all the remarkable household, under the vigilant eyes of a father 'eminent in the whole circle of arts and learning.' When her father was appointed tutor to young Edward VI, Ballard and subsequent authorities allege that his daughter Ann was associated with him as governess. She very early won repute for learning, being reported to read Latin, Greek, Italian, and French 'as her native tongue.' It was probably in 1556-7 that she married Sir Nicholas Bacon. Anthony, the first child of this marriage, was born in 1558; the younger son, Francis, was born on 22 Jan. 1560-1.

Lady Bacon's religious faith grew with her years, and all her extant letters testify to her puritan fervour. Before her marriage, she is believed to have translated into English some sermons of Bernardine Ochine; and the little volume entitled 'Foureteene Sermons of Barnardine Ochyne . . . translated . . . in to oure natyue tounge by A. C.' (1550?), and dedicated to the translator's mother, has been attributed to Ann Cooke. The fourteen sermons were reprinted in the collection of Ochine's sermons issued by John Day, the printer. In 1564 Lady Bacon was occupied with a translation from the Latin of Bishop Jewel's 'Apologie of the Church of England.' She received permission from the author to publish the work (1564), and benefited by the assistance of her husband's friend, Archbishop Parker. The 'Apologie' was reprinted in 1600. Theodore Beza, who learned of her piety and ability from her son Anthony, dedicated to her his 'Meditations.'

It is as a letter-writer that Lady Bacon appears in her most attractive light. Most of her extant letters are addressed to her sons Anthony and Francis, and have been printed in Spedding's 'Life of Bacon.' Of her solicitude for the spiritual welfare of her

sons, and of the jealousy with which she regarded her authority over them long after they had reached manhood, they all give ample proof. She is always fiercely rebuking them for disregard of her wishes, and seeking to keep herself informed of all the details of their daily life. Plays and masques were abominations to her; the nonconformists she admired, and in one long letter to Lord Burghley she prayed that they might be treated fairly. All her letters are interspersed with lavish quotations from Greek and Latin. Her mind gave way during the later years of her protracted life. 'She was but little better than frantic in her age,' writes Bishop Goodman in his 'Court of James I,' i. 285 (cf. SPEDDING'S *Life*, iv. 217). But she lived on little noticed until 1610. A letter from Bacon, dated 27 Aug. 1610, invites Sir Michael Hicks to 'the mournful occasion' of her funeral (SPEDDING'S *Letters and Life*, iv. 216-18). When her illustrious son drew up his own last will, its second clause ran: 'For my burial, I desire it may be in St. Michael's Church, near St. Albans—there my mother was buried' (*ibid.* vii. 539).

[Kippis's Biogr. Britannica, iv. 96-8; Ballard's *Memoirs of British Ladies*, 126-32 (2nd edit.); Birch's *Memoirs of the Reign of Queen Elizabeth*; Spedding's *Life of Bacon*, vols. i.-iv.; Goodman's *Court of King James the First*, i. 285.] A. B. G.

BACON, ANTHONY (1558-1601), diplomatist, and friend of the Earl of Essex, was born in 1558, probably at Gorhambury, Hertfordshire. He was the elder of the two sons of Sir Nicholas Bacon, lord keeper, by his second wife, Ann, daughter of Sir Anthony Cooke. The younger son was the great Francis Bacon. From infancy Anthony was in very delicate health. In a letter dated 17 June 1560 his father writes of his recovery from a dangerous fever. At fourteen his sight was in danger. Throughout his life he was lame. On 5 April 1573 he and his brother Francis went into residence at Trinity College, Cambridge, as fellow-commoners. They matriculated on 10 June, and shared the same rooms. Their tutor was John Whitgift, master of the college and afterwards archbishop of Canterbury. They remained at Cambridge till Christmas 1575, but between August 1574 and the following March the plague kept them from the university. They were both diligent students, but Whitgift's accounts of the money spent 'for Anthone beeing syck' between 1573 and 1575 prove his studies to have been repeatedly interrupted by serious illness. In

June 1576 the two brothers were admitted 'ancients' (being the sons of a judge) of Gray's Inn. In February 1578-9 their father died, and Anthony succeeded to much of his landed property in Hertfordshire and Middlesex. The estate of Gorhambury in the former county was bequeathed to his mother for her life, with remainder to himself. His half-brother, Nathaniel Bacon, Sir Nicholas's second son by his first marriage, disputed these bequests; but the quarrel, on being referred to Lord Treasurer Burghley, the husband of Lady Bacon's sister, Mildred, and thus Anthony's uncle by marriage, was settled in Anthony's favour.

Late in 1579 Bacon set out, at Lord Burghley's suggestion, on a long continental tour in search of political intelligence. He stayed for some time at Paris, and there, to the alarm of his relatives—all sturdy protestants—he made, for diplomatic purposes, the acquaintance of William Parry, LL.D., an English catholic refugee, who was executed for treasonable conspiracy in London in 1585. Bacon began, very soon after his arrival on the continent, to correspond regularly with Walsingham, and in 1580 he entertained at Paris one of Walsingham's secretaries, Nicholas Faunt, who became his most intimate friend and correspondent. In August 1580 Anthony removed to Bourges, whence he wrote two very affectionate letters to his uncle Burghley (14 Jan. and 13 Feb. 1580-1; *Cal. State Papers*, 1581-90, pp. 2, 5), but the corrupt life led by the inhabitants of the city induced him to hurry thence to Geneva. There he lodged in the house of Theodore Beza, who esteemed him so highly as to dedicate, 'out of respect to him,' his 'Meditations' to his mother, Lady Bacon, and to send to Lord Burghley for presentation to the university of Cambridge an ancient copy of the Pentateuch in six languages (STYKE'S *Annals*, iii. i. 110, ii. 197). Early in 1582 he was staying at Lyons, whence he journeyed to Montpellier and Toulouse. In May of that year he received permission through Faunt to remain abroad for three years longer. He afterwards proceeded to Marseilles and to Bordeaux, where he was living at the close of 1583. Thence he forwarded letters addressed by the Duke de Montmorency to Elizabeth, and she expressed to him, through the Earl of Leicester, her satisfaction in having 'so good a man as you to have and receive letters by' (7 Oct. 1583). Bacon used his influence at Bordeaux to improve the position of the protestants there, an undertaking in which, as he wrote to his old tutor, Whitgift, then archbishop of Canterbury, he ran the risk of personal danger, and he made the acquaintance of

Montaigne, the essayist. After some fifteen months' sojourn at Bordeaux, he removed to Bearn, where he visited Henry of Navarre and met Lambert Daneau, an eminent protestant theologian, better known as DANÆUS. Daneau dedicated to Anthony his commentary on the minor prophets, which was published at Geneva in 1586; and in the 'Epistola Dedicatoria' speaks with affectionate admiration not only of Anthony himself, but of his father, Sir Nicholas, and of his half-brother, Edward. Early in 1585 Bacon settled at Montauban, and for the five following years lived on close terms of intimacy with Navarre's counsellors, the leaders of protestant France. In 1590 he was driven from Montauban by the persecution of Madame du Plessis, who desired him to marry her daughter, and he retired for a second time to Bordeaux. He subsequently made friends with Anthony Standen, an English catholic—well known as a spy of Walsingham—who was at the time in prison at Bordeaux on suspicion of holding treasonable correspondence with Spain. Bacon's influence with the English government procured his release in 1591, and Standen was afterwards one of Bacon's many regular correspondents. At the end of 1591 Bacon returned to England, where he arrived in very poor health in February 1591-2. During his continental tour Bacon had corresponded regularly with Walsingham's secretary, Faunt, with his brother, and with the English agents in various parts of Europe. Very many of these letters are extant in manuscript, and prove him to have utilised every opportunity of obtaining information on foreign politics.

But his mother and brother had by no means approved of his long absence, and Lady Bacon had exerted all her influence with the English ministers to induce them to recall him earlier. She had feared the effects on his religious opinions of his intimacy with foreign papists, and had found his vast expenditure a severe strain upon her own resources, and his health a continual source of anxiety. As early as 1583 she, with Francis Bacon and Walsingham, had entreated him to leave Bordeaux for England on account of 'the troubled state of France' and 'the sickly state of his body.' In 1586 Walsingham sent Anthony a message of recall from the queen, but this was disregarded. In 1589 Lady Bacon contrived to have Anthony's servant, Lawson, who brought despatches to Burghley, arrested on suspicion of being a papist, and Bacon had to send a friend, Captain Allen, to England to reassure her on this point. His subsequent relations with Anthony Standen confirmed

in his mother's eyes her worst suspicion of his religious instability. In his pecuniary difficulties there was more substantial ground for Lady Bacon's dissatisfaction. Anthony was clearly living beyond his means. In 1584 Francis drafted in his behalf a power of attorney enabling persons in England to raise money on his landed property. While at Montauban he was constantly borrowing money of the King of Navarre and of his counsellors, and his mother declared at the time that 'she had spent her jewels to supply him, and had borrowed the last money she had sent him of seven different persons.'

But Lady Bacon's anger cooled as soon as she heard of her son's arrival in England, and she desired Faunt, an undoubted protestant, to conduct him to his brother's lodgings at Gray's Inn. Soon afterwards she addressed to him a series of letters which prove how sincere was her interest in his physical and spiritual welfare. In August 1592 he stayed with her at Gorbamby, but gout prostrated him there, and he was unable to pay his respects to Queen Elizabeth—a duty that he never found an opportunity of performing later, and thus fatally injured his chances of preferment. When Bacon sought the favour of his uncle, Lord Burghley, in the hope of securing a post at court, he was disgusted to receive nothing but fair words—such words, according to his own account, as 'make fools fain, and yet even in these no offer or hopeful assurance of real kindness, which I thought I might justly expect at the lord treasurer's hands, who had inned my ten years' harvest into his own barn without any half-penny charge.' In February 1592-3 he was returned to parliament as M.P. for Wallingford, and did not increase his influence with his powerful relative by opposing a government bill imposing new penalties on recusants.

Early in 1593 he took the decisive step of entering the service of the rival of the Cecils, the Earl of Essex [see DEVEREUX, ROBERT, second Earl of Essex, 1567-1601], to whom, he says, he found (1592) his brother 'bound and in deep arrearsages,' and in whom he recognised 'rare virtues and perfections.' Francis, in his 'Apologie . . . concerning the late Earle of Essex,' claimed to have been the author of this arrangement (SPENDING'S *Life*, iii. 143). Anthony—'being' (in his brother's words) 'a gentleman whose ability the world taketh knowledge of for matters of state, especially foreign'—undertook in Essex's behalf to obtain earlier foreign intelligence than the queen's advisers were in the habit of receiving, and the earl hoped to secure the royal favour permanently by com-

municating Bacon's information to Elizabeth. To Essex Anthony remained faithful till death, and worked industriously for seven years as his private 'under-secretary of state for foreign affairs.' So long as this relationship lasted, Essex's confidence in Anthony increased year by year, and they corresponded with each other on terms of closer and closer intimacy. And Anthony never ceased to urge his brother to remain firm in his adherence to their common patron. But Burghley still continued to hold out shadowy hopes of preferment to both the brothers, and wrote to their mother (29 Aug. 1593) that they were 'so qualified in learning and virtue, as if they had a supply of more health they wanted nothing.'

Anthony at once entered into elaborate correspondence with agents in Scotland, where Essex was anxious to advance James VI's claims to the English throne. He was soon fully trusted by King James, and received in 1594 the king's thanks for the zeal he was displaying in his behalf. With the French king, Henry IV, Bacon similarly endeavoured to keep on the friendliest terms. On 14 April 1596 Henry sent Bacon an autograph letter, in which he expressed his high esteem of his 'prudence in the conduct of public affairs,' and in May of the same year Anthony was visited by the Duke de Bouillon, Henry IV's envoy to England. His regular correspondents from 1596 onwards included Sir Thomas Bodley, the English ambassador at the Hague; Sir Anthony Sherley, the far-famed traveller; John Napier, the Scotch inventor of logarithms, who sent him mathematical papers; Dr. Hawkins, the ambassador at Venice; and Sir Thomas Challoner, an accomplished scholar, whom Anthony had introduced into Essex's service.

Bacon lived until 1594 chiefly with his brother Francis, either at Gray's Inn or at Twickenham Park, by the Thames. At intervals he visited his mother at Gorham-bury, or went to reside at Kingston and Redbourne in Hertfordshire, where he had inherited property from his father. In 1594 he hired a house in Bishopsgate, London, but its contiguity to the Bull Inn—a play-house—was so bitterly disapproved of by his mother, that in the following year he removed to Chelsea. In October 1595 Essex invited him to take up his residence in Essex House by the Strand, and, in spite of Lady Bacon's protest that such a step would expose him to the taunt that he was no longer Essex's 'worthy friend,' but 'his follower'—'a rare kind of good wit and speech'—the invitation was gratefully accepted. The gout and stone still oppressed him, and money troubles did not cease. Before the close of

1598 he sold his estate of Baily, and he was constantly borrowing of his friends in the following years, but these loans were often contracted to supply Francis's needs rather than his own. Early in 1595 he made a fruitless application to his uncle, Sir Henry Killigrew, for a loan of 200*l*. In 1597 Essex in vain appealed to Nicholas Bacon, Anthony's half-brother, to assist him. The only one of his half-brothers who showed Anthony any kindness was Edward Bacon, and Anthony endeavoured in 1597 to obtain a small post at court for him from Sir Robert Cecil, who 'had of late professed very seriously an absolute amnesty of all misconceits passed.' In 1600 Bacon seems to have contemplated the alienation of Gorhambury, which his brother Francis, then no longer poor, was anxious to secure for himself.

In Francis's advancement at court and in health Anthony meanwhile showed an assiduous anxiety. Constantly in his correspondence with Essex in 1596 he implores his patron to secure for Francis the mastership of the rolls. Francis, who had the highest opinion of Anthony's political abilities, partially reciprocated these kindnesses, but the fraternal sentiment was certainly better developed in Anthony than in his brother. At one time Francis was endeavouring, through his friend Sir John Fortescue, to bring Anthony's diplomatic services to the notice of the queen, but the scheme met with no success. Francis also dedicated the first edition of his essays (published in 1597) to Anthony, and he wrote there: 'I sometimes wish your infirmities translated upon myself, that her majesty might have the service of so active and able a mind and I might be with excuse confined to those contemplations and studies for which I am fittest.' Anthony, in his cherished hope that Francis would still adhere to Essex, was anxious that the dedication should be transferred to the earl, and at once forwarded a copy to him begging for 'leave to transfer any interest unto your lordship, then humbly to crave your honourable acceptance and trustworthy protection [for the book].'

In the early months of 1596 the court-factions of Essex and the Cecils (Sir Robert Cecil was then secretary of state) were in hot dispute as to the advantages to be derived from the Cadiz expedition, upon which Essex was resolved, and Anthony did his best to support his friend's policy. In the autumn of the same year his aunt, Lady Russell, made a strong endeavour to detach him from Essex. The attempt was doubtless prompted by Lady Bacon, who preferred the serious demeanour of her brother-in-law Burghley to

the impulsiveness and gaiety of Anthony's patron. Lady Russell told Bacon that he was too well beloved in Scotland to be a true Englishman, and that he had not only abandoned the kind old nobleman (Burghley), but did him ill offices, not only with the earl here but in France and Scotland. She proceeded to reproach him (in his mother's vein) with all his past life, and he defended himself in a detailed speech which is very useful to his biographer. An account of the lengthy interview was sent by Bacon to Essex, and there Anthony stated that there was a mortal enmity between himself and his cousin, Sir Robert Cecil (which seems in the next year to have somewhat abated), and he reiterated 'the entire devotion of his heart' to the earl. On the return of Essex from Cadiz, where he had been hampered by the home government in all his movements, he forwarded to Anthony from Plymouth a 'True Relation of the Action' for publication; but the council forbade this step, and Bacon had a number of manuscript copies and translations distributed in Scotland, the Low Countries, and France (cf. *Cal. State Papers*, 1598-1601, p. 203). In 1597 Bacon was returned to parliament a second time as M.P. for Oxford, and in the same year Essex parted from him to take the command of another expedition by sea against Spain; but its failure to gain any decisive victory brought Essex into disfavour with the queen, and he retired for a time from public life, only to re-enter it to involve himself in more serious complications. Bacon had twice in the early part of the year warned Essex against allowing acts prompted by personal pique to give colour to the malicious reports of his enemies, and Essex in 1598 addressed to Bacon, as his 'true friend,' a paper for publication to refute the report that he was 'the only hinderer of the peace and quiet of his country.' A manuscript copy of this tract is in the Public Record Office; it was published for the first time in 1603.

With the close of 1597 Bacon's correspondence with Essex comes to an end, and it has been reasonably inferred that the later letters were burnt by Anthony to prevent their exposure and misapplication when Essex was in disgrace in 1599 and 1600. After Essex's return to England from Ireland and his imprisonment in the former year, Bacon was ordered by the queen to quit Essex House (10 March 1599-1600), so that the earl might be kept in confinement there. Both Francis and Anthony seemed to be then working together in the earl's behalf. On 5 June 1600 Essex was sentenced, after an informal trial at York House, to virtual

suspension from all his offices of state. Francis, although he acted with the government on this occasion, took no prominent part in the proceedings, and immediately afterwards, at Anthony's suggestion, he drew up a pretended correspondence between Anthony and the earl, in which the attempt was made to 'picture forth unto her Majesty my Lord's mind to be such as . . . her Majesty would fainest know it.' Here Francis, in his brother's name, begged Essex not to despair, but humbly to wait for a change of fortune, while, as the spokesman of Essex, he represented Anthony to be the most devoted of the earl's friends. The letters, 'by the advice of Mr. Anthony Bacon and with the privy of the said earl, were to be showed to Queen Elizabeth' (cf. *Addit. MS.* 4130 f. 50).

Nearly three months later Essex was released from confinement (26 Aug. 1600). Soon afterwards he entered into further clearly treasonable practices, and was arrested again (8 Feb. 1600-1). An important part in the prosecution was then entrusted to Francis Bacon, and Essex suffered on the scaffold (25 Feb. 1600-1). At the final trial Essex referred to the correspondence between himself and Anthony, drawn up by Francis in the preceding June, as proof of the latter's sudden change of front. Although we have no direct information as to Anthony's relations with the earl or with his brother during the last six months of Essex's life, it is clear that Anthony anticipated as little as the earl the rôle played by Francis in its closing scenes. From a long letter addressed (30 May 1601) to Anthony by an anonymous writer, which was never seen by him, for he died some days before it was written (CAMDEN, *Annales*, ed. Hearne, 957-61), we learn that Anthony was interesting himself to the last to prove his patron innocent of the worst accusations brought against him. The story related by Sir Henry Wotton—at one time a secretary of Essex and the companion of Anthony Bacon—to the effect that Anthony—'a gentleman' (in Wotton's words) 'of important feat but nimble head'—was faithless to the earl, and extorted money from him on several occasions by threatening either to reveal diplomatic secrets to the Cecils, or to abandon Essex's service, may justly be rejected as false (cf. *Reliquiæ Wottonianæ*, p. 13; *Notes and Queries*, 2nd ser. iii. 121, 190, 252). We know that Anthony received little or no money from Essex. He had lodgings in Essex House, but maintained himself out of his private resources. Soon after his removal thither his mother, who treated him as a wayward child to the last,

complained of his extravagant expenditure in coals (BIRCH's *Memoirs*, ii. 371). So far from growing rich in Essex's household, it is clear that he grew poorer and poorer. Essex appears to have promised, and to have made some effort, to repay him for his self-denying services, but the schemes did not take effect. 'The Queen hears,' wrote Chamberlain to Carleton (28 June 1599), 'that he [Essex] has given Essex House to Antony Bacon, which displeases her; I believe it is but instead of 2,000*l.* he meant to give him with a clause of redemption for that sum' (*Cal. State Papers*, 1598-1601, p. 222).

Anthony died just before 27 May 1601, three months after his patron's execution, aged 43. Doubtless the shock which the last events of Essex's life caused him hastened his death. 'Anthony Bacon,' writes Chamberlain to Carleton under date 27 May 1601, 'died not long since, but so far in debt that I think his brother [to whom his property reverted] is little the better by him.' After James I's arrival in England in May 1603, Francis sought the favour of the king mainly on the ground of 'the infinite devotion and incessant endeavours (beyond the strength of his body and nature of the times) which appeared in my good brother towards your majesty's service . . . all which endeavours and duties for the most part were common to myself with him, though by design (as between brethren) dissembled' (SPEDDING's *Life*, iii. 62-3). On 25 Aug. 1604 Francis received the grant of a pension of 60*l.* a year, in consideration (in the words of the patent) of his brother's 'good, faithful, and acceptable service' (RYMER's *Fœdera*, xvi. 597). There seems every reason to accept Dr. Birch's inference that this grant formed the king's reply to Francis's petition of the previous year (*Historical View*, p. xx).

Bacon's voluminous correspondence, in sixteen volumes, is mainly preserved in Lambeth Palace Library, to which it was presented by Archbishop Tenison. There are sixteen volumes of transcripts from the Lambeth papers at the British Museum (*Addit. MSS.* 4109-24). Some additional letters are also at the museum, and others are in the Public Record Office. These letters and papers are the only source of Anthony Bacon's biography, but they cover far more ground than his personal history. Besides the letters from and to his mother, his steward, his creditors, his brother, his friends, doctors, and money-lenders, there are notes of political intelligence from spies and ambassadors stationed in all parts of Europe. His papers present, in fact, as full a picture of European history of the period as any extant collection

of documents. Mr. Spedding, who made an examination of the manuscripts, described Bacon as a grave, assiduous, energetic, religious man, remarkable for his power of attaching men to him, generous beyond his means, a little too apt to suspect and resent an injury, driven at times into injustice by pecuniary embarrassments, but generally fair and tolerant. We should add that in his religious opinions he showed a liberality far in advance of his age. He did not permit his strong personal sympathy with the principles of the Reformation to debar him from numbering men of other religious professions among his friends. His epistolary style, although occasionally cumbersome in expression, is full of quaint humour, and the writer's unswerving honesty of purpose gives a very pathetic interest to the whole of his correspondence with Essex.

[Dr. Thomas Birch printed in 1754, in two volumes, a large number of extracts from the Anthony Bacon MSS. at Lambeth, under the title of 'Memoirs of the Reign of Queen Elizabeth,' but he injured the literary effect of the letters by transferring them, in almost all cases, from the first to the third person. Dr. Birch also made use of a few of these papers in his *Historical View of the Negotiations between France and England, 1592-1617*, published in 1749, and has given an account of Bacon in the introduction, pp. xix-xxii, which proves of very little value. Mr. Spedding, in the first three volumes of his life of Bacon, makes many references to Anthony Bacon. See also Dr. Abbott's *Bacon and Essex (1877)*; Devereux's *Lives and Letters of the Earls of Essex*; Cooper's *Athenæ Cantab.* ii. 314-16; Todd's *Cat. Lambeth MSS.*]

S. L.

BACON, FRANCIS (1561-1626), lord chancellor, born at York House on 22 Jan. 1561, was the son of Lord Keeper Bacon, by his second wife, Ann, second daughter of Sir Anthony Cooke, and sister of the wife of Sir William Cecil, better known by his later title as Lord Treasurer Burghley. In April 1573, at the age of twelve years and three months, he entered Trinity College, Cambridge, leaving it in March 1575. On 27 June 1576 he was admitted to Gray's Inn.

Bacon was thus destined to the profession of the law. Few youths of his age, however, are content to look forward to a life of merely professional success; and in Bacon's case, partly by reason of his own mental qualities, and partly by reason of the influence of the exciting events of the great national struggle in the heart of which he lived, the visions of youth were peculiarly far-reaching. The boy already longed not merely to do something for the defence of protestantism against

its enemies, and something for the improvement of the government of his native country, both which thoughts were likely to arise in the mind of Elizabeth's 'young lord keeper,' as she playfully called him, but also to achieve a task which was peculiarly his own, to create a new system of philosophy to replace that of Aristotle, not merely for the satisfaction of the cravings of his own speculative reason, but for the practical benefit of humanity at large.

In 1576 young Bacon was attached to the embassy of Sir Amias Paulet to France. He was still abroad when, on 20 Feb. 1579, his father died, leaving him with but a small fortune. On his return to England, which followed soon after he received the bad news, he devoted himself to the study of the law, though he was not without hope of more suitable work. In 1580, at least, he was looking to his uncle, Lord Burghley, to support a suit for some kind of preferment, the exact nature of which is unknown. As, however, he did not receive a favourable answer, he continued his legal studies, and on 27 June 1582 was admitted utter barrister.

Bacon's rise in life was brought about by his election to the parliament which met on 23 Nov. 1584, in which, no doubt through Burghley's interest, he sat for the borough of Melcombe Regis. The time was one in which the greatest questions were at issue. The danger arising from the activity of the supporters of Mary Stuart was coming to a head, and at the same time, though the queen and the House of Commons were completely at one in their desire to establish the national independence by keeping the catholics in check, there was a division of opinion between them on the form of religion to be maintained in the country, the commons wishing to see the established religion modified in the direction of Calvinistic puritanism, and the queen wishing to preserve the worship of the Prayer-book intact.

Bacon's views upon the political situation were embodied in a 'Letter of Advice to Queen Elizabeth,' written in the end of 1584 or the beginning of 1585. There is nothing crude or immature in this his first political memoir. Every line of it, in fact, is full of a wisdom too far in advance of the time to be palatable either to the queen or to the commons. Most remarkable at that day was Bacon's recommendation of the best mode of dealing with the catholics. Arguing on the hypothesis that they were the queen's enemies, he spoke of the impossibility of contenting them, and of the danger of driving them to despair. The latter, however, was precisely what the government

was doing by urging the oath of supremacy. It would, thought Bacon, be 'better to frame the oath in this sense: That whosoever would not bear arms against all foreign princes, and namely the pope, that should any way invade her majesty's dominions, should be a traitor.' Having thus not merely anticipated but improved upon the oath of allegiance of 1606, he touched upon another string. 'For preachers,' he wrote, 'because thereon grows a great question, I am provoked to lay at your highness's feet my opinion touching the preciser sort, first protesting . . . that I am not given over, no, nor so much as addicted, to their preciseness; therefore till I think that you think otherwise, I am bold to think that the bishops in this dangerous time take a very evil and unadvised course in driving them from their cures.' His reasons were two: first, because it injured the queen's reputation to have it known that there were divisions amongst her protestant subjects; and secondly, 'because, in truth, in their opinions, though they are somewhat over squeamish and nice, and more scrupulous than they need, yet with their careful catechizing and diligent preaching they bring forth that fruit which your most excellent majesty is to wish and desire, namely the lessening and diminishing of the papistical number.' Other suggestions for indirectly weakening the catholics follow, after which the writer turns his attention to foreign affairs.

By any one who wishes to understand Bacon's career this letter should be attentively studied. He must very early have got into the habit of entertaining thoughts for which persons in authority were not yet ripe, and of looking about for means by which he might alter their judgment. The way open now was not open then. He could not stir up opinion by public writing or public speaking. His words as a member of parliament would not go beyond the walls of parliament, and were likely to fall on deaf ears within them. Not only did the one way of influencing the course of affairs lie in ability to win the queen and those immediately around her, but Bacon was well content that it should be so. In the queen and her council, with all their defects, was to be found the regulative authority which controlled the manifestations of the national life, and Bacon had no wish to subordinate the queen's government to the irregular impulses of a House of Commons untrained by experience in the management of great affairs. To say this is to say that Bacon must look to achieve a statesman's ends by the means of a courtier, to gain access, to offer services,

to watch the rise and fall of favourites. To do so soon became a habit with him, but there is nothing to show that it was ever repulsive to him. The breadth of his intellect left little room for any strength of emotional nature. In the 'Letter of Advice' there is a singular want of enthusiasm where enthusiasm would be expected in so young a writer.

In the parliament which met on 29 Oct. 1586 Bacon sat for Taunton. In the course of this year he became a bencher of Gray's Inn, and was thus enabled to plead in the courts of Westminster. In the parliament which was opened on 4 Feb. 1589 Bacon was member for Liverpool. He had by this time caught the ear of the house, and was frequently employed on committees. He was aware, however, of the importance of gaining the queen to his views. The execution of Mary and the defeat of the Armada, indeed, had made the question of the treatment of catholics less pressing; but the appearance of the Marprelate libels had brought into greater prominence the question of the conduct to be pursued towards the puritans. In 'An Advertisement touching the Controversies of the Church of England,' a paper written in 1589 though not printed till 1640, Bacon amplified the opinion which he had expressed in the 'Letter of Advice,' deprecating the factious temper of the puritans on the one hand, and the rigid insistence on conformity by the government on the other.

It was Bacon's fate through life to give good advice only to be rejected, and yet to impress those who received it with a sufficiently good opinion of his intellectual capacity to gain employment in work which hundreds of other men could have done as well. At the end of 1589 or the beginning of 1590 Bacon wrote a letter in the name of Sir Francis Walsingham in defence of the queen's proceedings in ecclesiastical causes. He must have longed to get an opportunity of doing more than this, and now that opportunity seemed to have arrived at last.

At some time, probably not later than July 1591, Bacon made the acquaintance of the young Earl of Essex. In this way began the first of Bacon's so-called friendships. That the earl soon became warmly attached to Bacon is beyond doubt. The intelligent, but impulsive and passionate nobleman of twenty-three found in the cool and wary adviser, who was in years his senior, those qualities so different from his own which were likely to rivet his affection. It was Bacon's misfortune that he never passed through the stage of admiration which goes far to develop a complete character. The

author of the 'Letter of Advice' knew himself to be capable of giving lessons in politics to Burghley, and, if he did not expect intellectual assistance from Essex, he failed to perceive that the young nobleman's generosity of temper was at least as admirable as any power of brain could possibly be. In his intercourse with men there was none of that intellectual give-and-take which is the foundation of the highest friendship. What he gave was advice, the best that he had at his disposal. What he hoped to receive, as he looked back upon the past after fourteen years, may be given in his own words: 'I held at that time,' he wrote, 'my lord to be the fittest instrument to do good to the state; and therefore I applied myself to him in a manner which I think happeneth rarely among men.' In 1596 he put it in another way, in asking Essex 'to look about, even jealously a little if you will, and to consider whether I have not reason to think that your fortune comprehendeth mine' (SPEDDING, ii. 40; see also ABBOTT'S *Bacon and Essex*, 36). It is not necessary to suppose that Bacon meant to refer merely to his personal fortune. That would no doubt be included, but the allusion must in fairness be understood to imply that he looked to Essex to carry through to success all that Bacon was, the political reformer as well as the aspirant after promotion.

Of the nature of the advice given to Essex by Bacon during the early years of their intimacy we have no direct evidence. In November 1592 he wrote a set of discourses to be used in a 'device' prepared by Essex (*A Conference of Pleasure*, edited by Spedding), and shortly afterwards he enlarged one of these discourses into an argumentative defence of the queen's government, under the title of 'Certain Observations made upon a Libel published this present year, 1592,' and which therefore must have been composed before 25 March 1593, according to our present reckoning. Before that date, on 19 Feb., a new parliament met, in which Bacon sat for the county of Middlesex.

The circumstances under which this parliament met were critical. A Spanish intrigue in Scotland had been discovered, and the queen stood in need of supply to enable her to defeat it. The committee of the lower house appointed to consider the amount reported in favour of granting two subsidies with their accompanying four-fifteenths and tenths, in spite of the prevalent feeling against giving more than one subsidy at a time. Upon this, however, the commons were sent for to the upper house, and were informed by Burghley not only that the lords would not consent to a bill granting less than three subsidies, but

also that the amount to be granted must be discussed at a conference. In the commons Bacon led the opposition to this proposal. He was ready to vote for increased supply, but he objected to join with the lords in a discussion about supply as prejudicing the privileges of the lower house. The result was that after some days' confused discussion the lords tacitly abandoned their claim to join with the commons in discussing a subsidy.

So far Bacon had only come into open collision with the lords, though there can be little doubt that the demand of the lords was made at the instance of the queen. The next stage of the debate brought him into collision directly with the crown. In their original statement the lords had proposed that three subsidies payable in three years should be granted, whereas the practice had been that each subsidy should be spread over two years. In speaking for the government Sir R. Cecil now contented himself with asking that the three subsidies should be payable in four years. Bacon, however, opposed the demand on the ground that by causing discontent this increase of the burden of taxation would do more harm than good. Though it is not known what he himself proposed, except that he wished to spread the payment over six years and in some way to mark the payment of the last subsidy as extraordinary, yet, as the house unanimously decided against him, 'we may,' as Mr. Spedding says, 'at least conclude that there was no popular party in opposition strong enough to be worth conciliating at the expense of offending the party in power.'

There is every reason to believe that Bacon's opposition was a conscientious one. When called on by Burghley for an explanation, he simply claimed his right to speak according to his conscience. Every personal reason must have influenced him to make an apology, as he was at the time in pecuniary difficulties, and, though the evidence is not complete, it would seem that at this time he was again contemplating a withdrawal from the court. The attorney-generalship was, moreover, likely to be vacant, and, though Coke was a candidate for the office, some one, probably Essex, urged Bacon to apply for it, and warmly advocated his cause with the queen. Elizabeth, however, was too angry with his behaviour in parliament even to see him. On 25 Jan. 1594 Bacon removed one objection to his promotion, that he had never held a brief, by appearing in court, where he acquitted himself so well that Burghley congratulated him on his success, and the reputation thus gained he increased by further

arguments on 5 and 9 Feb. Yet, though Essex with all the impetuosity of his nature continued to plead for Bacon, Burghley stood firmly by Coke, and by the end of March 1594 it was understood that Bacon's suit for the attorney-generalship was finally rejected. The solicitor-generalship was, however, now vacant; and as both Essex and Burghley concurred in recommending him for that, there would have been no difficulty in his way if he could have soothed the displeasure of Elizabeth.

At last, in the beginning of June 1595, Bacon learned from Burghley that the queen was still offended with him for his conduct in parliament. If Elizabeth was waiting for an apology, Bacon had none to offer. 'It is not unknown to your lordship,' he wrote to Burghley, 'that I was the first of the ordinary sort of the lower house of parliament that spake for the subsidy; and that which I after spake in difference was but in circumstance of time and manner, which methinks should be no great matter, since there is variety allowed in counsel, as a discord in music to make it more perfect.' Such language did not satisfy the queen, and on 5 Nov. the solicitor-generalship was given to Serjeant Fleming.

The story just told is not only most creditable to Bacon; it settles in his favour the question whether he was the fawning sycophant which he has been represented as being. Everything that he could desire for the higher and the lower objects of his life was in the scale on one side; on the other the mere confession that he had done wrong where he believed himself to have done right. Nor can the evidence in his favour be set aside as merely proving that he still retained the ingenuousness of youth. During the life which remained to him he was consulted on a great variety of subjects under a great variety of circumstances. An intellectual unity pervades the whole of the advice which he gave. He may sometimes have held his tongue when he knew that his counsel would be disregarded, but he never prophesied smooth things to suit the wishes of those by whom his counsel was required.

To the impetuous Essex, who had thrown himself heart and soul into Bacon's suit, the result of his repeated applications was a deep disappointment. Too generous to feel only his own share in the rebuff, he offered to do his best to make up the loss to Bacon. 'Master Bacon,' he said, according to the account of the conversation subsequently given by Bacon himself, 'the queen hath denied me yon place for you, and hath placed another; I know you are the least part of

your own matter, but you fare ill because you have chosen me for your mean and dependence; you have spent your time and thoughts in my matters. I die if I do not somewhat towards your fortune; you shall not deny to accept a piece of land which I will bestow upon you.' Bacon told the earl that it was not well for him to turn his estate into obligations, for he would find bad debtors. As Essex continued to press the gift, Bacon accepted it. 'My lord,' he said, 'I see I must be your homager and hold land of your gift; but do you know the manner of doing homage in law? Always it is with a saving of his faith to the king and his other lords; and therefore, my lord, I can be no more yours than I was, and it must be with the ancient savings.'

The land which Bacon received was probably in Twickenham Park, and was afterwards sold by him for 1,800*l*. The manner in which the gift was made and received was characteristic of both parties.

Bacon's next letter to Essex contained a warning similar to that which he had given in conversation: 'I reckon myself as a common—and as much as is lawful to be enclosed of a common, so much your lordship shall be sure to have.' He seems to have begun to think that Essex was too self-willed and impetuous to be the instrument for the public good which he had hoped that he would be. Before the end of the year 1595, however, Essex had fully recovered the queen's good graces, and Bacon employed himself in drawing up a 'device' to be presented by Essex on the anniversary of her accession.

In the letter just quoted Bacon expressed a wish to retire from the practice of the law, and to devote himself to philosophy. His pecuniary embarrassments, which were the greater from his long expectancy of office, probably stood in the way. The queen was at least sufficiently favourable to him now to employ him as one of her learned counsel. Though Essex warmly recommended him in May 1596 for the mastership of the rolls, he did not himself make suit for it after his late disappointment.

The year 1596 marks the highest point in the life of Essex. In the capture of Cadiz he acquitted himself well in every respect. On his return home he showed himself capacious and jealous of his fellow commanders, whilst the favour which he acquired in the eyes of soldiers and sailors might easily make him a dangerous man to a queen who had no standing army on which to rely. It was to this latter point especially that Bacon applied himself in a letter of advice written to Essex

on 4 Oct., a letter in which Bacon unintentionally displays the worst side of his character as fully as he did afterwards in the 'Commentarius Solutus' of 1608. At the bottom the advice given is thoroughly sound. Essex is to convince the queen that he is not a dangerous person by avoiding further connection with military enterprises, and by shunning all suspicion of popularity, that is to say, of courting the people with the object of obtaining an independent position in opposition to the government. All this, however, is fenced about with recommendations to use a variety of petty tricks, to make agreeable speeches, and to appear otherwise than he is. No doubt the character of Elizabeth has to bear much of the blame for the possibility that such advice could be given, but Bacon cannot be altogether cleared. Firm as a rock on the principles on which he acted, he had learned early and too well the lesson that it was only by personal flattery and petty hypocrisies that he could hope to accomplish his ends.

It was at this time that Bacon was preparing for publication the shrewd observations on men and affairs which appeared under the name of the 'Essays.' The dedication to his brother Anthony in the first edition is dated 30 Jan. 1597, and a copy was sold on 8 Feb. One passage has a special pathos in it: 'There is little friendship in the world, and least of all between equals, which was wont to be magnified, whose fortunes may comprehend the one the other.' In his letter of advice Bacon had written to Essex that 'your fortune comprehendeth mine.' In the 'Essays' he shows his belief that the obligation of friendship ought to be mutual, though it looks also as if he were longing for a friend who might give him counsel as well as receive it. If he had this feeling, it would explain his dedication to his brother instead of the earl better than other reasons which have been suggested. His relations with his brother seem to have come nearer to his ideal of friendship than anything which he found elsewhere.

If Bacon wanted friendship, he also wanted money. In the spring of 1597 he obtained, in vain, the good word of Essex to help him to a marriage with a rich young widow, Lady Hatton, and about the same time he offered a reversion of the clerkship of the Star Chamber, which had been given him some time before by the queen, to lord keeper Egerton for his son, on condition of arriving through his mediation at the mastership of the rolls. The mere proposal would properly shock us at the present day; and if, as seems probable, Bacon's second letter of 12 Nov., in which

his offer was repeated, was written after he knew that Egerton had been named a member of the commission which had been appointed to examine certain charges brought against the actual holder of the clerkship, the transaction assumes an aspect which ought to have opened Bacon's eyes to its questionable character, though, judging from his subsequent proceedings as chancellor, his eyes were very hard to open.

In the parliament which opened on 24 Oct. 1597, Bacon, as member for Southampton, had the satisfaction of seeing legislation proposed and carried for objects of which he heartily approved, such as the maintenance of husbandry and the relief of the poor.

In the meanwhile Bacon's doubts of the possibility of making a statesman of Essex must have been growing. In the summer of 1597 the earl was absent from England on what is known as the Island Voyage. On his return after failing to capture the Spanish treasure fleet, he showed himself more discontented and unreasonable than ever. Bacon, who wished him to give up military enterprises, was not likely to obtain a cordial response from a man who would resent such a proposal as thrusting him off a field in which he believed himself specially qualified to shine, in order to give him a position in which Bacon would be his master and inspirer. However this may have been, in the middle of February 1598 circumstances concurred to assist Bacon's wishes. The secretary, Sir Robert Cecil, left England on a diplomatic mission to France, and Essex was employed to do his work in his absence. At this time, therefore, Bacon thought the opportunity had come to fix Essex in the career of a statesman by interesting him in that problem of the government of Ireland which was one of the most important of the political questions of the day. In a letter of advice he skilfully selected the ground on which he was most sure of gaining the good will of Essex, by speaking of the subject as 'one of the aptest particulars for your lordship to purchase honour upon.' For the present, however, he contented himself with recommending Essex to take advice from those who were best qualified to give it.

Essex appears to have been willing enough to take up the Irish question, and to have listened to Bacon's advice on the subject of the negotiations which were then pending with Tyrone. Before anything was settled, however, Essex's hot temper had again blazed up into defiance of the queen; and though a reconciliation was effected about the end of October, it was then too late to bring Ireland into order by peaceful statesmanship, as the

greater part of the country was already in insurrection.

In the meanwhile Bacon's own private necessities had been growing upon him, and on 23 Sept. he was arrested for debt. He was not long detained, and soon after he recovered his freedom he found the whole world agitated by the question whether Essex was to take the command in Ireland or not.

Of the whole of the advice given by Bacon to Essex on his assumption of the Irish command we cannot speak with certainty. In his subsequent 'Apology' Bacon said that he had dissuaded Essex from going, on the ground that he would not only risk the loss of the queen's favour, but would find the Irish as difficult to conquer as the Romans had found the Gauls, Britons, or Germans. On the other hand we have an actual letter in which Bacon encourages Essex to go, on the grounds that he is likely to succeed, and that, as the Romans gained greater glory by reducing to civilisation barbarians like the Germans and Britons, he might gain glory by bringing the Irish under a just and civil government. He ends by begging Essex to remember 'that merit is worthier than fame,' and 'obedience is better than sacrifice,' and, in short, that he is not to act in the hot-headed manner usual to him. It is possible, as Dr. Abbott has suggested (*Bacon and Essex*, 115), that there was but one letter, and that Bacon's memory played him false; and it is also possible that there were really two written, the one before Essex had made up his mind, and the other after he had determined on his course, and that Bacon might urge at one time that people like the Britons and Gauls were hard to conquer, and at the other that glory might be achieved by bringing them under law and order. Such repetitions are very much after Bacon's style. At all events, even if this explanation be rejected, it is plain from the published letter that Bacon took the opportunity of warning Essex against a very real danger in his path.

On 27 March 1599 Essex set out. He was neither a good strategist nor a good administrator. By the beginning of August he had lost the greater part of his army in useless marches, so that the Irish council advised him not to proceed to Ulster against the chief rebel, Tyrone, that year at all. Just at this time, however, he received a letter from the queen forbidding him to return to England before he had attacked Tyrone. On this Essex lost his temper, and talked wildly to his confidants of going to England with two or three thousand soldiers, apparently to drive away from the queen those enemies to whose influence he attributed his misfortunes.

The idea, however, was promptly abandoned. Essex marched into Ulster, failed signally, and, fearing what might be the effect on the queen if his rivals had the telling of the tale, took ship for England, and on 28 Sept. presented himself before Elizabeth in his travel-stained attire. He was well received at first, but before night was ordered to keep his chamber and satisfy the lords of the council. A day or two later Essex was transferred to the custody of the lord keeper. The queen did not wish to be hard with him. Bacon did what he could to encourage her in this frame of mind, and to urge Essex to submission. As nothing was yet known of the earl's conversation about bringing 3,000 men to England, he might reasonably hope to accomplish his object. The queen, however, insisted on a public declaration of the offences of Essex in the Star Chamber, which took place 29 Nov. As Essex was not called upon to answer, he grew more popular than ever, as a man struck without the means of making a defence.

Bacon was not present in the Star Chamber. From the disjointed evidence which has reached us, it is impossible to track his conduct in details. He seems to have wished to see Essex once more in favour at court, and removed from further temptation to aspire after success in a military career for which he had shown himself unfit. To accomplish this he had to use his utmost diplomacy, as Elizabeth was bent on humbling Essex and punishing him in some way for his misconduct. Bacon, therefore, with the best wish to serve Essex, would have to suggest not such treatment as he considered Essex to have merited, but the least bad treatment which would seem at any given moment to be likely to satisfy the queen. Add to this that even his mind did not work with the accuracy of a calculating machine, but was liable to make mistakes, and even—as appears from his letter to the queen on his absence from the Star Chamber—to occasional ill-temper, and there will be no difficulty in understanding how it was that he offended both parties, and was thought by the queen to be remiss in her service, and by the numerous friends of Essex to be betraying his patron.

At last, on 5 June 1600, Essex had to submit to an informal trial at York House. In the proceedings, which were intended to satisfy public opinion, Bacon, as one of the queen's learned counsel, took part. He admits that he handled his part of the charge 'not tenderly,' as it was only by a show of vigour that he would be able to retain the queen's favour so as to be able to use his

influence on behalf of Essex. It is no wonder that his conduct did not appear to the friends of Essex in the same light as it did to himself. His calculation, however, was for the time justified by the result, and in six weeks after the proceedings Essex was once more at liberty, though he was debarred from appearing at court.

In a letter to Essex of 20 July Bacon used words which may be taken as expressing his innermost thoughts on his relation to Essex: 'I desire your lordship,' he wrote, 'also to think that though I confess I love some things much better than I love your lordship, as the queen's service, her quiet and contentment, her honour, her favour, the good of my country, and the like, yet I love few persons better than yourself, both for gratitude's sake and for your own virtues, which cannot hurt but by accident or abuse.'

Before long Bacon was called on to weigh one against the other his obligations to the queen and the earl. As months passed on without bringing with them a restoration to favour, the discontent of Essex took the form of wild projects, ultimately settling down into a determination to make himself master of the court by violence, to bring to justice his enemies amongst the queen's ministers, and to substitute for them himself and his supporters. On 8 Feb. 1601, having reason to suppose that his purpose was known, he was persuaded by his followers to betake himself to the city with some two hundred armed men at his heels, and to call on the citizens to rally round him. Failing to gain support he returned to Essex House, and was soon a prisoner in the hands of the government. On 11 Feb. Bacon was appointed among others to investigate the causes of the sudden revolt, and on the 18th information was obtained which brought to light the earl's previous treasonable intrigues. On the 19th Essex was brought up for trial.

In obtaining the conviction which followed, Bacon was most serviceable. He called back the attention of the court from Coke's digressions, and he fixed upon Essex the responsibility for his actions, arguing that they afforded evidence of an intention to collect an armed force, and that for 'armed petitioners' to present petitions 'must needs bring loss of liberty to the prince,' and was therefore treasonable.

To Bacon's conduct on this occasion exception has been taken on two grounds. In the first place, it has been said that he ought not to have appeared against his benefactor at all. That the course which he took indicates poverty of moral feeling cannot be denied. Yet our sentiment on the precedence of personal over political ties is based upon our in-

creased sense of political security, and is hardly applicable to a state of affairs in which anarchy, with all its attendant miseries, would indubitably follow on the violent overthrow of the queen's right to select her ministers, even if her person continued for a time to be outwardly respected; and it is, at all events, one which Bacon studiously renounced from the very beginning of his connection with Essex. In the second place it has been alleged (ABBOTT, *Bacon and Essex*, 194-242) that Bacon sinned in charging Essex with a consistent purpose of treason which was foreign to his nature. It is no doubt true that Essex never did anything consistently, and that an analysis of character would spare his heart at the expense of his head. It does not, however, follow that Bacon went deliberately wrong. On the day of the trial he had only very recently become acquainted with the earl's very questionable proceedings in Ireland, and it was only in consonance with the weak side of his intellect to adopt a compact theory rather than one which left room for vagueness and uncertainty. As was afterwards the case in the opinion which he formed of Raleigh's guilt in the Guiana voyage, he left out of sight those tentative and shadowy intentions which had no place in his own mental constitution. At all events, whatever the character of Essex may have been, his actions were none the less dangerous to the state. A government without the protection of an armed force was liable to be overturned by a man who, like Essex, was the darling of the military class which was at that time forming, without that tie of discipline which, in standing armies, counterbalances the tendency of military men to use force rather than persuasion. The new form of danger which had succeeded to the danger from a feudal nobility lent weight to the opinion to which Bacon gave expression in his attack on Essex: 'You, my lord,' he said, 'should know that though princes give their subjects cause of discontent, though they take away the honours they have heaped upon them, though they bring them to a lower estate than they raised them from, yet ought they not to be so forgetful of their allegiance that they should enter into any undutiful act, much less upon rebellion, as you, my lord, have done.' To Bacon the maintenance of the authority of the state was a sacred work, and in the sixteenth century the authority of the queen was the equivalent of the authority of the state.

The two years which succeeded the trial of Essex were not years of great importance in Bacon's life. He drew up the official declaration of the treason of Essex, but that

paper was so altered by others that it is impossible to say how much proceeded from himself.

In the parliament which met on 27 Oct. 1601 Bacon contributed to induce the house to apply to the queen by petition to redress the grievance caused by monopolies instead of proceeding in a more offensive manner by bill. In the autumn of 1602, after the defeat of the Spanish invasion of Ireland, he wrote a letter to Cecil, in which he boldly advocated, for that country, a toleration in religion, and the establishment of courts to do justice unfettered by the technicalities of English law. English and Irish were to be treated as one nation. In Ireland, however, the difficulty of maintaining order, in consequence of the inability of the English exchequer to maintain there a large military force, always stared the reformer in the face, and Bacon, like the rest of his contemporaries, had no better remedy to propose than the introduction of English settlers as a standing garrison, a plan which, when actually adopted, spoiled the whole scheme of reform.

The death of Elizabeth on 24 March 1603 opened a new prospect to Bacon, which might be turned to account if he could gain the ear of James. At first, however, his hope of usefulness was rather discouraged by the change. He was indeed continued as one of the king's learned counsel, and on 23 July was knighted at the same time as three hundred others; but neither Coke nor Cecil was likely to help him to that familiarity of access to James which he had long enjoyed at Elizabeth's court. It was probably in these days of expectancy that he wrote the 'Apology' concerning the late Earl of Essex, of which the earliest known printed copy bears the date of 1604. During the same period, besides a slight sketch of a poem to that great work on the interpretation of nature which was never quite out of his mind, he dedicated to James a paper on the mode of carrying out the union between Scotland and England which they both desired, and another on the pacification and edification of the church of England, in which he once more restated those comprehensive and tolerant principles which animated his former treatise on the same subject. James was to Bacon, at this stage of his career, very much what Essex had been before, a man powerful for carrying out Bacon's plans; but with this difference, that he was himself the head and representative of the state, and that in his case, therefore, there could never be that collision between personal and political claims to devotion which had brought about so tragic an ending to Bacon's relations with the favourite of Elizabeth. Unfortunately, though

the natures of Essex and James were entirely dissimilar, they were equally incapable of serving Bacon's high purposes, the king's want of earnestness and unsteadiness of purpose being as fatal to his chance of proving a successful ruler as the inconsistent vehemence of the earl. In weighing the terms of adulation in which Bacon continued to address him to the end, it must, however, be remembered that, if there was some hypocrisy, it was for the most part unconscious, and that Bacon's hopeful disposition was apt to fix as long as possible rather on the signs favourable to success than upon the indications of failure. In James's case the reasons for hoping better things than ultimately resulted from his reign were certainly not wanting. The mind of the new king was capable of taking in large ideas, and he had a dislike of intolerance which promised well, and which must have led Bacon to contrast him favourably with the average Englishman of the time, whose views were represented in the House of Commons.

An unhappy indication of the mode in which James was likely to deal with the ideas which he had in common with Bacon was given at the Hampton Court conference which opened on 14 Jan. 1604, where the intention of introducing rational reforms in the church was smothered in an outbreak of temper, and was followed before long by a resolution to draw the bonds of conformity even more tightly than in the days of Elizabeth.

To James's first parliament, which met on 19 March 1604, Bacon was returned for both Ipswich and St. Albans. He sat for the former. The possibility that his scheme of church reform might be to some extent carried out, was not quite at an end. Bacon, when he took his seat, might still hope to do something in this direction, and might cherish even greater hopes in the direction of the union with Scotland. Yet it would be to misunderstand Bacon to associate him merely with the desire to pass particular reforms. Eager as he was to provide remedies for the disorders of his time, he was still more eager to avert that breach of sympathy between the king and the House of Commons which is now understood to have been the root of the miseries of the seventeenth century far more than any special tyrannical propensities of the Stuart kings. It was this intuitive perception of the source of danger which raises Bacon to the first rank amongst statesmen, whilst, at the same time, his failure to recognise that it was as impossible to bring James and the House of Commons to work together, as it had been to bring Elizabeth and Essex to work together—a failure the causes of which lay in Bacon's

moral as well as his intellectual nature—led to the great catastrophe of his misused life.

The session of 1604 gave Bacon many opportunities of exercising his reconciling powers. The commons wanted to obtain from the king the redress of grievances arising from feudal tenures, from purveyance, and other antiquated rights of the crown, without sufficiently acknowledging the necessity of providing a sufficient income for the fulfilment of the duties of government. On the other hand, James was anxious to press on the union with Scotland without fitting consideration of the prejudices of his new subjects. On all these points, as well as on certain questions of privilege which arose, Bacon had much to say, and what he did say was conciliatory in the best way, by suggesting plans which might carry out the most justifiable desires of both parties. When, however, the end of the session arrived on 7 July, Bacon had effected no reconciliation. The question of the union was referred to a joint committee of Scottish and English commissioners to be put in shape for a future parliament; and the question of the grievances had been discussed with such acrimony, that, in dismissing the commons, the king gave vent to his feelings in a speech of mere scolding.

The breach thus accomplished was practically final; but it was not in Bacon's nature, perhaps not in the nature of any man, to acknowledge that the case was hopeless. His own political position was very similar to his scientific position. In both he had teaching to give which his own generation was incapable of comprehending. In both, therefore, all that he could really hope to accomplish was to expound his principles in such a way that future generations might act upon them. It is no wonder that from time to time he felt regret that he had not devoted himself to a scientific life, especially as he was himself unaware that he had not the qualifications of a scientific observer. It is no wonder either that, in addition to the attraction of worldly success, the great attraction of possibly averting the coming evil weighed with him in chaining him to the oar of political service. In so doing he no doubt underestimated the obstacles caused by the commonplace industry of men like Coke and Cecil, and overestimated the receptivity of James's mind. The fact is, that he stood to the English revolution with all its miseries as Turgot stood to the French revolution, and he was as distrustful as Turgot was of the domination of elected political assemblies. Turgot's stern independence of character, however, contrasts nobly with Bacon's suppleness; but both Bacon and Turgot undertook a task

in itself impossible, that of reconciling classes who already stood too far apart to be reconciled.

For the moment Bacon found employment suitable to him. He was chosen as one of the commissioners to discuss with the Scottish commissioners the terms of union. His interest in the matter had gained him the notice of James, and on 18 Aug. 1604 he was confirmed by patent in his office of learned counsel, with a pension of 60*l.* a year. He was soon busy in drawing up papers on the subject of the union. The actual business of discussion between the commissioners began on 29 Oct., and the last meeting was held on 6 Dec. Bacon, who had been an active member of the commission, might have expected to be soon employed in defending its scheme in the House of Commons. As it happened, however, partly through the prorogation of parliament, and partly through the interruption caused by the Gunpowder Plot, the subject was not brought forward till nearly two years later, towards the end of 1606. Bacon had therefore time to devote himself to literary work. About the end of October 1605 he published his 'Advancement of Learning.' In a letter to Sir T. Bodley he gave vent to his feeling of satisfaction in returning to the work in which he was able to do his best in the place of work in which others did not allow him to do his best. 'I think,' he wrote, 'no man may more truly say with the Psalmist, *Multum incola fuit anima mea*, than myself. For I do confess, since I was of any understanding, my mind hath in effect been absent from that I have done; and in absence are many errors which I do willingly acknowledge, and amongst the rest this great one that led the rest: that knowing myself by inward calling to be fitter to hold a book than to play a part, I have led my life in civil causes, for which I was not very fit by nature, and more unfit by the preoccupation of my mind.' This confession must not be taken too literally. Every man deeply engaged in politics sighs at times for a freer life; and if Bacon had a special reason for longing for it, in order that he might develop his scientific work, it is unnecessary to suppose that, except in moments of weariness, he regarded his political work as unworthy of himself.

In the session of 1605-6, which followed the Gunpowder plot, Bacon was once more immersed in civil causes, contributing to the discussion on purveyance and supply, the chief business of the session, that of providing new laws against the Catholics being in other hands. The sense of a common danger to king and people arising from the Gun-

powder plot had, however, brought about a more friendly temper, which was shown in the grant of three subsidies with their accompanying fifteenths.

On 27 May parliament was prorogued. On 10 May Bacon had been married to Alice Barnham, whose father had been a sheriff of London [see BARNHAM, BENEDICT], and was dead, and whose mother, a 'little violent lady,' as Chamberlain calls her, had married Sir John Packington. About the same time Bacon had a prospect of legal promotion. In October 1604 there had indeed been a vacancy in the solicitor-generalship; but as Bacon did not at that time even ask for the place, it is probable that he did not wish to have it as long as the attorney-generalship was held by Coke. On 29 June 1606 this obstacle was removed by Coke's promotion to the bench as chief justice of the common pleas. The attorney-generalship, however, was given to Hobart, upon which Bacon wrote to the king, reminding him that promotion had been promised to him, and asking that a suggestion which had been already made, of appointing him solicitor-general and providing for Doderidge, the actual solicitor-general, in another way, might be carried out. In the same way he wrote to Ellesmere and Salisbury. Nothing, however, was done for the present, and it was only in the beginning of 1607 that Bacon received a distinct promise of the place whenever Doderidge should be removed. It is quite possible that the obstacle lay with Cecil, now known as the Earl of Salisbury, who was as profuse in promises as Bacon was in commitments, but no evidence exists on the point. It is possible too, though evidence is here equally wanting, that the king was attracted to Bacon by his energy in supporting the union with Scotland in parliament, and was thus led to overrule Salisbury's objections.

The session which opened on 18 Nov. 1606 was mainly taken up in discussing the proposals of the commissioners for the union. They had suggested, besides measures for the abolition of hostile laws and for the extradition of criminals, to which no serious opposition was offered, one for freedom of commercial intercourse, and another for the naturalisation of Englishmen in Scotland and of Scots in England. To both these latter proposals the sentiment of the House of Commons was incurably hostile. Bacon, who had taken no inconsiderable part as a commissioner in drawing up the plan, now became its warmest champion in the House of Commons. The view taken in the house was the narrow one which was natural to occur to average human intelligence. The commercial rivalry of the poor and hardy Scots was a

danger which every one could foresee. To look forward imaginatively to the value of the union required either the mind of a Bacon, or one which, like that of James, was brought to consider the question from a special point of view. Bacon's great speech, delivered on 17 Feb. 1607, seems to indicate that in the high view which he took of the subject he stood alone, and he found himself obliged to refer to the natural belief that he spoke to please the king rather than to satisfy his conscience. 'If any man,' he said, 'shall think that I have sung *placebo* for mine own particular, I would have him know that I am not so unseem in the world but that I discern it were much alike for my private fortune to rest a *placebo* in this business. But I have spoke out of the fountain of my heart. *Credidi, propter quod locutus sum*—I believed, therefore I spake. So as my duty is performed.' There is every reason to suppose that Bacon spoke truly on the 17th. From a letter written on the 22nd we learn that he had received the promise of the solicitor-generalship, for which he had long been hoping. All through the session he struggled in the cause of the union. Long before parliament was prorogued on 4 July, however, it was evident that, as far as the commons were concerned, it was hopeless to expect to gain their consent to the king's proposals. On 25 June Bacon became solicitor-general. The post was not indeed as important as it is now, but it gave a definite place in the service of the crown with the hope of rising higher, as well as an income of about 1,000*l.* a year, equivalent to one of about 4,000*l.* at the present day.

For the time being Bacon acquired no political influence. Salisbury had possession of the king's ear, and Bacon was not likely to be allowed to reach it. It is, therefore, all the more interesting to know something of his political views at a time when they were not warped by the consciousness of the possession of power. This we are enabled to do through a paper, entitled 'A View of the Differences in question betwixt the King's Bench and the Council in the Marches,' which was written not later than June 1606, and therefore at least a year before Bacon secured his first important advancement.

The paper refers to a quarrel which had sprung up between the president and council of Wales and the court of King's Bench, which claimed a right to interfere with the jurisdiction of the former body over the four English border counties. In the course of this quarrel the question was mooted whether the king could give jurisdiction without the authority of an act of parliament. In argu-

ing in the affirmative, Bacon fell back on the assertion: 'that the king holdeth not his prerogatives of this kind mediately from the law, but immediately from God, as he holdeth his crown; and though other prerogatives by which he claimeth any matter of revenue, or other right pleadable in his ordinary courts of justice, may be there disputed, yet his sovereign power, which no judge can censure, is not of that nature; and therefore whatsoever partaketh or dependeth thereon, being matter of government and not of law, must be left to his managing by his council of state. . . . God forbid also, upon pretence of liberties or laws, government should have any head but the king. For then, as the popes of Rome, by making their seat the only oracle of God's religion, advanced themselves first above religion, and then above God; so we may fear what may in time become of our laws, when those reverend fathers, in whose breasts they are safe, shall leave them to others, perchance of more ambition and less faith.'

From these words, and still more from the part of the paper headed 'The Reasons of Convenience or Inconvenience,' it is evident from what quarter Bacon apprehended danger. The lawyers struggling for fees and importance, the members of the House of Commons as yet with no experience in the conduct of national politics, and with no definite leadership, would put an end to all intelligent guidance of the state. 'All who know those parts,' he writes, 'must acknowledge that the power of the gentry is the chief fear and danger of the good subject there; and even this is the sum of all their heinous complaints against the president and council, that for incontinency, striking, and every disorder, they are forthwith molested with process and fines.' Further, if the jurisdiction were taken away, those who sought for justice would be put to the expense of seeking it at Westminster. In order that justice might be done, the king's authority must be maintained. Bacon evidently thought that it was not to be had from the rule of an assembly in which the country gentlemen were predominant. So opposed was this view to the course which national progress took, that it is difficult for us now to put ourselves in Bacon's position or to realise the earnestness with which he threw himself into the cause of the supremacy of the monarchy as a means of carrying out what would now be considered as radical reforms in spite of a conservative and interested opposition.

Bacon's position was, in fact, not unlike that of Burke in the eighteenth century. Both these great men were anxious to effect important improvements, and both of them:

in accordance with that law of our nature by which desire for change in one direction is always accompanied by a strong dislike of change in another, were as conservative in their respect for the existing constitution as they were eager to cut themselves loose from the old moorings in political action. What the Rockingham whigs were to Burke, King James was to Bacon, the depository of existing constitutional authority, with the help of which the ignorant masses—to Bacon the masses represented in the House of Commons, to Burke the masses unrepresented in it—might safely be controlled.

It was only in the nature of things that Bacon should think more of James, as Burke thought more of Rockingham, than he was really worth; and Bacon unfortunately had none of that moral dignity which Burke possessed. He calculated on winning ground by appealing to the lower side of men's natures as well as to the higher. He had had a bad training in the court of Elizabeth, and there was nothing in his nature to make that training innocuous.

To give us an insight into Bacon's mind, we have a collection of private memoranda known as the 'Commentarius Solutus,' set down in the end of July and the beginning of August 1608. It is full of hints as to the advancement of his great schemes in science and politics as well as to the advancement of his own fortunes. Great ideas jostle with small ones, and the thought of a restoration of philosophy or of laying the foundations of a showy and attractive foreign policy is found side by side with a plan for flattering the lord chamberlain who might be helpful, or exposing the demerits of an attorney-general who is a rival. Altogether Bacon's character is nowhere else depicted so completely as a whole as in these loose jottings.

To the same year are to be assigned the treatise 'In felicem memoriam Elizabethæ,' which, as composed in honour of a sovereign who had no longer anything to give, is valuable as another key to Bacon's real thoughts, and a 'Discourse on the Plantation of Ireland,' presented to the king as a new-year's gift at the opening of 1609. As, however, the question of the treatment of the native population, which is now known to have been the most important part of the business, is not even alluded to, it is enough to speak of the paper as containing excellent advice, on the hypothesis that such a settlement as that which was proposed was a good thing in itself.

Bacon's correspondence during 1609 is the best evidence that he was not making way with James as a political adviser. Salisbury,

in fact, blocked his path, having become lord treasurer in 1608, and being now at the height of his credit as a financial reformer, with hopes of so far increasing the revenue and diminishing the expenditure of the crown as to restore the financial balance. Letters to Toby Matthew, on the other hand, show Bacon pushing forward the 'Instauratio Magna' which was to reform philosophy, and one of them of 10 Oct. was accompanied by a fragment of the work, supposed to have been the 'Redargutio philosophiarum.' About the same time he sent to Andrewes his 'Cogitata et Visa,' and on 17 Feb. 1610 forwarded to Toby Matthew his 'De Sapientia veterum.'

By this time parliament was already in session, having met on 9 Feb. With his longing for harmony between the public powers, Bacon must have felt this session to be unusually trying. Salisbury, having failed to bring about a balance between revenue and expenditure, attempted to strike a bargain with the commons which came to be known as the Great Contract. It was precisely the method which Bacon thoroughly distrusted. He thought that failure in making a bargain would only leave both sides more irritated with one another than before, and he knew that Salisbury had already caused considerable irritation by laying on the new impositions, the levy of which was justified as legal by the judgment of the court of Exchequer in Bate's case, but which alarmed the House of Commons as endangering the principle of the parliamentary basis of taxation. On the legal question involved, Bacon argued in defence of the king's claim; but his argument was no measure of his political judgment, and he was probably well satisfied at the compromise offered by James, by which the commons were to grant about two-thirds of the impositions levied, whilst James was to bind himself never to levy more without their consent. In the same way Bacon would, no doubt, have been pleased if the Great Contract could have been carried into effect, by which James was to abandon his income from feudal tenures and other obnoxious sources, while he was to receive in exchange 200,000*l.* a year, a sum which, though it would not make him altogether independent of future subsidies, would, with the exercise of due economy, raise him above that constant necessity of courting the commons for subsistence' sake which Bacon deprecated. Bacon, however, can hardly have felt much surprise when both bargains were wrecked in the following session, and when, on 29 Feb. 1611, James dissolved his first parliament in anger.

During the next fifteen months there is little of political importance from Bacon's pen. The only exception is his 'Advice touching Sutton's Estate.' He must have felt that as long as Salisbury lived there was no chance of gaining the king's ear for his greater projects, though he succeeded in obtaining from him a promise of the attorney-generalship whenever it fell vacant. In writing to Salisbury he continued to use the language of high-flown compliment; but the thorough hatred with which he regarded the lord treasurer, whose policy he despised, and to whose personal intervention he ascribed his own long exclusion from political influence, burst out after Salisbury's death on 24 May 1612 in the essay 'On Deformity,' which he now added to a new edition of his essays.

A week after Salisbury's death Bacon offered his political services to the king. 'The great matter and most instant for the present,' he wrote, 'is the consideration of a parliament for two effects: the one for the supply of your estate, the other for the better knitting of the hearts of your subjects unto your majesty, according to your infinite merit, for both which parliaments have been and are the ancient and honourable remedy. Now, because I take myself to have a little skill in that region, as one that ever affected that your majesty might in all your causes not only prevail, but prevail with the satisfaction of the inner man; and though no man can say but I was a perfect and peremptory royalist, yet every man makes me believe that I was never one hour out of credit with the lower house, my desire is to know whether your majesty will give me leave to meditate and propound unto you some preparative remembrances touching the future parliament.' This letter was followed by another, in which Bacon directly offered to abandon the law for the council table. It was perhaps in pursuance of this idea that Bacon asked for the mastership of the wards vacant by Salisbury's death, and drew up a declaration to be made by the new master on his entry upon office. He was, however, disappointed, as the place was given to Sir George Carew, and on Carew's dying shortly afterwards it was given, not to Bacon, but to Sir Walter Cope. It is said that on this latter occasion he was so certain of success that he 'put most of his men into new cloaks.' Some jester observed 'that Sir Walter was master of the wards, and Sir Francis Bacon of the liveries.'

During the year and a half which followed Salisbury's death Bacon found employment as solicitor-general in a charge against the Countess of Shrewsbury for assisting the flight of Arabella Stuart, and in another charge

against Whitelocke for what was considered to be an attack on the king's prerogative. Of far greater importance is the use which he made of James's permission to write to him on affairs of state, which might possibly pave the way to the higher political employment for which he had asked.

Of summoning parliament there was no immediate thought. It was still believed possible that a body of sub-commissioners, of whom Bacon was one, might succeed where Salisbury had failed, in procuring an adequate revenue for the crown without recurring to parliament. On 18 Sept. 1612 Bacon wrote to the king to have patience, begging him not again to have his wants and necessities in particular, as it were, hung up in two tablets before the eyes of his 'lords and commons to be talked of for four months together.' Some months later, when the scheme of supplying the king without a parliament had broken down, these words were expanded by their writer into a series of remarkable state papers, in which he indicated the relations which ought to subsist between king and parliament.

In these papers there is indeed much which it is impossible to regard with complete satisfaction. There is in them too much respect for mere management, and too strong an inclination to regard the opposition to the king as in the main personal. Yet, on the whole, the ground which they take is unassailable. There is to be no more bargaining between king and subjects. The king is to show his determination to lead in the right direction, and to be content to wait till his subjects are prepared to follow. He is not to press for supply, but to wait till the commons are sufficiently impressed with his devotion to the nation to offer him all that he needs. 'In bargains,' wrote Bacon in some notes which he drew up for the king's speech to the new parliament, 'the manner is for either part chiefly to take care of the other. "*Charitas non quaerit quæ sua sunt.*" The king to take care of his subjects, and the subjects to take care of their king.' The easiest way to understand Bacon's political position is to read these papers in connection with the paper on the jurisdiction of the council of Wales, in which he advocates the maintenance of prerogative government in the interests of the humbler classes, and with the papers on the church, in which he advocates a relaxation of the restrictions on nonconformity.

To carry out this programme would have been to avert the evils of the next half-century. No one to whose mind the history of that half-century is present can agree with those numerous writers who speak of Bacon's political work as inferior to his scientific. He

was the one man capable of preventing a catastrophe by anticipating the demands of the age. Humanity would have been at least as much benefited if the civil war, with its attendant evils, could have been made impossible, as it was by the completion of the 'Novum Organum'. Unhappily for Bacon he could publish as much of the 'Novum Organum' as he could find time to write; but he could not procure acceptance for his political ideas. Salisbury and Coke turned a deaf ear to all of them; the House of Commons would take part of them, and James another part, whereas it was only in their entirety that they could exercise a healing influence.

In the advice given to James in 1618 it becomes manifest that Bacon could not venture to lay his whole thoughts before the king. There is a reticence in it on the higher matters of statesmanship, which does not suit the trusted adviser. Even the argument cut short was too large for James. He opened the parliament of 1614 with a renewed attempt to bargain with the commons, and without any serious attempt to come to a friendly understanding with them on the subject of the impositions. The result was that after a stormy session parliament was dissolved, and James once more thrown on his own resources.

Bacon's personal position in the second parliament of James was as high as it had been in the first. On 27 Oct. 1618 he had become attorney-general, and the commons on meeting declared that no attorney-general in future should sit in the house; but they made a special exception in Bacon's favour. He was in 1614 elected for Ipswich, St. Albans, and Cambridge University, and sat for the last constituency. He had reason to think that if a reconciliation could be effected between the king and the house he was himself specially qualified by his relations with both parties for bringing it about.

Perhaps if any date can be fixed as that on which Bacon's chance of serving the nation politically was at an end, it is that of the dissolution which took place on 7 June 1614; James then deliberately took one way, and the nation took another. Yet it does not follow that Bacon was likely to see that this was the case. Of James's secret understanding with the Spanish ambassador, which preceded the dissolution, he was entirely ignorant, and he may have argued that as it was by disregarding his advice that James had failed, it was possible that he would be better listened to on a subsequent occasion. Add to this his inborn habit of placing himself on the side of authority, and the difficulty which any man would feel in throwing up a course of life on which he has embarked, and it be-

comes unnecessary to throw undue stress upon that which, after all, must not be left out of calculation—his disinclination, after tasting the allurements of competency and station, to choose, in advanced middle age, obscure poverty as his bride. Yet, however we may explain Bacon's choice, his future life was sad enough, and that none the less because he was not himself conscious of wrong. The support of power for the sake of doing good became a support of power from which no good was to be hoped. The lower part of Bacon's nature was perhaps not more active than it had been before; but the higher part had no prospect of being called into action. The subservience to authority and the flattery of the great were there as they had been before; but not only was there nothing to show in return, but the impartial spectator has to acknowledge that it ought to have been evident to Bacon himself that there never would be any prospect of his being able to accomplish any statesmanlike work.

That Bacon did not see this may have been to some extent owing to his view of the political circumstances of the time. Even before Salisbury's death James had taken a liking to a young Scotchman, Robert Carr, and had successively created him Viscount Rochester and Earl of Somerset. The young man had attached himself to Lady Essex, procured her divorce from her husband under circumstances which appear to us to be peculiarly disgraceful, though it is only fair to remember that the divorce was approved at the time by Andrewes, and had married her with every demonstration of James's satisfaction. As the new countess of Somerset was a Howard, James's favourite and James through him were brought into close connection with the family of the Howards, and more especially with its leading member, the Earl of Northampton. Northampton was a concealed catholic, and an advocate of a Spanish alliance. He had done all he could to frustrate the meeting of the parliament of 1614, and was suspected of having a hand in the disputes which brought about a dissolution. His death, however, which took place on 15 June 1614, removed from the scene a powerful influence hostile to Bacon's ideas; and Bacon, who had followed the fashion by presenting a gorgeous masque on the occasion of Somerset's marriage, but who had never shown any inclination to support the policy of Somerset and the Howards, may have thought once more after Northampton's death that his chance of gaining the king's ear was more favourable than it had been before.

Nor was this all. A quarrel was impending between James and Coke, on which all

Bacon's sympathies were on the side of James. As Bacon had pleaded for a larger statesmanship than Salisbury's, he now pleaded for statesmanship itself as against the technical legality of Coke. His fundamental strength lay in recognition of the truth that political wisdom is greater than legality. His fundamental weakness lay in his failure to discover that political wisdom was not to be expected from James, and that consequently it would be necessary to reconstruct the whole framework of the state.

The claim of the judges to be the supreme mediators in political disputes had ripened partly through the weakness of the king, and partly through the wide learning and masterful temper of Coke, who had reduced the other judges to be scarcely more than satellites of himself. In 1613 the struggle between Bacon and Coke was opened by the removal of the latter, at Bacon's advice, from the chief justiceship of the common pleas to that of the king's bench, where it was thought that he would be less able to do mischief.

On the question of the issue of a demand for a benevolence, Bacon and Coke did not come into collision. Bacon strongly advised that it should be as voluntary in reality as it was in name, but as he was not a privy councillor he had nothing to do with any pressure that was put on those who were backward. In the prosecution of St. John in 1615 for the abusive terms in which he had urged resistance to the benevolence, the language used by Bacon may have been justly aimed at so intemperate an opponent of the government as St. John was, but it shows an entire incapacity to understand the grounds on which honourable men were at this time tending to resist the court.

The actual collision between Bacon and Coke was brought about by the proceedings taken against Edmond Peacham, a clergyman of Somerset, amongst whose papers had been found a paper reprobating the king's proceedings, and apparently intended to be read from the pulpit in the form of a sermon. The council, knowing that grave dissatisfaction existed, suspected that Peacham was only the mouthpiece of others, and ordered him to be tortured, in the hope of obtaining disclosures from him. Of his torture Bacon was an official witness, but he had nothing to do with the order for it, though there is no reason to suppose that he would have objected. As, however, the torture produced no hint of a conspiracy, the government resolved to proceed against Peacham himself on a charge of treason. It had, in fact, resolved, even before the torture, to consult the judges of the king's bench as to whether Peacham's offence was treasonable or not.

To consult the judges was at that time the usual practice. In this case, however, there was a special difficulty. Coke's masterful temper, combined with his legal attainments, was apt to reduce the other judges to dependence on himself, and James therefore ordered that the four judges should be consulted individually. To this unusual proceeding Coke not unnaturally objected. 'Such particular and auricular taking of opinions,' he said, 'is not according to the custom of the realm.' The three puisne judges gave a compliant answer. Bacon, as attorney-general, was intrusted with the examination of Coke, and, as might have been expected, did not receive a reply which was satisfactory to himself. Whatever might be the true decision according to the legal doctrines then prevalent, it is evident that Coke and Bacon approached the constitutional question from opposite points of view. Coke wished the bench to be so organised as to be appealed to as an independent authority between the crown and the subject. Bacon, with a wider political instinct, wished to confine it to purely legal questions, leaving political matters to political men. He forgot to ask whether James, standing as he did apart from the nation, could justly claim the respect due to the supremacy of a political government. What was still worse is that he advised that a false rumour should be given out as to the opinion of the judges, lest others should be encouraged to publish attacks on the crown.

This reliance on management at the expense of truthfulness was Bacon's worst fault. It cannot, however, be said of him that if he defended James overmuch, he did not try his best to make James's policy other than it was. In a paper written at the end of September or the beginning of October 1615, at the time when the council recommended the calling of another parliament, Bacon gave his opinion strongly, not only in the same direction, but in favour of the course, which he had always advised, of abandoning all attempts at bargaining. 'Let there be an utter silence,' he wrote, 'as of the king's part, of money or supply, or of the king's debts or wants; they are things too well known. And let not the king doubt but some honest man will, after they have sat awhile, fall upon them, though it proceed not from the king. Nay, I will presume further to say (as putting a case speculative, which in act and event I hold an impossibility), if subsidies should never be given nor spoken of in the next parliament, yet the meeting and parting of the king and his parliament with due conservation of the majesty and authority of the king, which heretofore hath suffered, and will

suffer as long as money is made the mere object of the parliament, and without heats or contestations, or oppositions between him and his parliament, I hold to be a thing of invaluable consequence, both in reputation and towards the substance of future affairs.' If Bacon wished to see the king formally absolute, he wished him to be surrounded by the impalpable atmosphere of a sympathetic union with his people.

It was not entirely to James's discredit that he could not realise Bacon's ideal. One of the modes of winning favour recommended by Bacon in this paper is that of taking advantage of the good understanding between France and Spain, to 'give fire to our nation, and make them aspire to be again umpires in those wars; or, at least, to retrench and amuse the greatness of Spain for their own preservation.' Bacon could give this advice honestly because he had always advocated a stirring foreign policy, pushed even to warlike action, as a means of bringing king and people together. With all his powers he was an English politician; James, on the other hand, with all his faults, was an international politician. To make war to advance his own greatness or the greatness of England was hateful to him. Unfortunately he was already deep in a negotiation for a marriage between his son and a Spanish infanta. Bacon's allusion to this is characteristic of the tenderness with which he handles the king's actions, and of the way in which he manages to spoil even the best advice by overmuch cleverness. James, he says, might frighten the commons into a grant of supply upon the opinion of some great offer for a marriage of the prince with Spain. 'Not,' he proceeds, 'that I shall easily advise that that should be really effected; but I say the opinion of it may have singular use, both because it will easily be believed that the offer may be so great from that hand as may at once free the king's estate; and chiefly because it will be a notable attractive to the parliament, that hates the Spaniard, so to do for the king as his state may not force him to fall upon that condition.' How much higher would Bacon have stood with posterity if he had boldly spoken out the opinion which he indicated, instead of advocating such a poor trick as this!

No parliament was summoned at this time. The court was for some months fully occupied in the questions arising out of the detection of the murder of Sir Thomas Overbury. When on 25 May 1616 Somerset was tried, Bacon appeared as chief prosecutor, doing his part with decorum, being anxious to secure a conviction, though he was aware that

James intended to pardon both the earl and the countess.

Some time before Somerset's disgrace Bacon had welcomed the rise of Villiers. If there was to be a favourite at all, the change may well have seemed to be a good one, for Villiers was supported by the men of the anti-Spanish party. Villiers, too, was affable whilst Somerset had been morose, and Bacon once more hopefully believed that he had discovered that for which he had so long been seeking in vain, an influential personage who would support him in his great undertakings. Once more that yearning for political and scientific achievement which in Bacon was so inseparably mingled with desire for the good things of life, blinded his eyes to the instability of the foundations on which he was building, and he threw himself with unabated ardour into the service of Villiers, advised him as to his conduct, and assisted him in the management of his estate. His own hope of advancement was now greater than it had ever been before. When, in January 1616, lord chancellor Ellesmere was apparently dying, Bacon proposed himself as his successor. James gave him the promise for which he asked. Ellesmere, however, recovered, and Bacon had to wait about a year longer. His language to Villiers was, as it remained to the end, that of devotion too warm to be altogether real. 'I am yours,' he wrote, 'surer to you than my own life. For, as they speak of the turquois stone in a ring, I will break into twenty pieces before you have the least fall.'

In asking to succeed Ellesmere as chancellor, Bacon was not asking merely for his own personal advancement. It was the system of Ellesmere that he wished to continue. 'Let me tell your majesty,' he explained himself to James, 'that that part of the chancellor's place which is to judge in equity between party and party . . . concerneth your majesty least. . . . But it is the other parts, of a moderator amongst your council, of an overseer over your judges, of a planter of fit justices and governors in the country, that importeth your affairs and these times most.'

The part of an overseer over the judges was that which had the greatest immediate interest for Bacon. The struggle with Coke, of which the separate consultation with the judges on Peacham's case had been the preliminary skirmish, was by this time at its height. An action had been brought in the King's Bench in which the king's right of appointing to office was involved, and in 1615 Bacon, as attorney-general, produced a writ, 'De non procedendo Rege inconsulto,' prohibiting the

court from proceeding till the question had been referred to chancery, and its permission obtained for the parties to proceed at common law. Bacon's object was to secure for the king the support of the chancellor who, as a great political officer, was likely to decide in his favour. On 25 Jan. 1616 he pleaded on the king's behalf in what Coke himself acknowledged to be 'a famous argument.' The dispute ended in a compromise, and Bacon failed to obtain from the judges any recognition of the position which he had claimed for chancery.

Before long Coke's arrogant temper gave Bacon the advantage. Coke was indignant at the attempt to place his own court under the orders of chancery, and he replied to it by an attempt to place chancery under the orders of his own court. He instigated two rascals, who had obtained judgments in their favour in a common law court, and whose victims had subsequently obtained the protection of chancery, to prefer indictments of *præmunire* in the King's Bench, not only against the suitors, but against all who had taken part in the proceedings in chancery.

On the immediate point at issue Coke was baffled by the refusal of the grand jury to bring in a true bill. Bacon, however, recommended James to settle the question whether the King's Bench had a right to interfere with the equitable jurisdiction of chancery, and the law officers being consulted gave it as their opinion that it had not.

Before anything could be done to give effect to this opinion, a new dispute arose. In a case before the twelve judges in the exchequer chamber, relating to a commendam, one of the counsel argued against the king's real or supposed prerogative, after which, by James's orders, Bacon wrote to Coke on 25 April requiring him to inform the other judges that they were not to proceed till the king had spoken to them. The judges, however, went on with the case, and on the 27th they signed a letter drawn up by Coke, in which they gave reasons for refusing obedience. On 6 June they were all summoned before the king, when Coke was alone in protesting that to put off the argument would have been a delay of justice. After some further dispute the judges were asked 'whether, if, at any time, in a case depending before the judges, his majesty conceived it to concern him either in power or profit, and therefore required to consult with them, and that they should stay proceedings in the meantime, they ought not to stay accordingly.' Eleven of the judges answered in the affirmative; Coke alone held out. On 20 June the king came into the Star Chamber

and laid down the principle that it was the office of the crown to settle all questions of jurisdiction between courts. On the 26th Coke was summoned before the council, on the 30th he was suspended from his office, and on 15 Nov. he was dismissed. Bacon's rise kept pace with Coke's decline. On 9 June he had become a privy councillor, on 7 March 1617 he succeeded Ellesmere with the title of lord keeper.

Bacon's mounting fortunes were thus raised by his successful struggle with Coke. As in all great political questions, the point at issue was by no means so simple as it looked. To Bacon the question was one of the relation between law and politics. The judges, as he expressed himself in one of his essays, should be 'lions, but yet lions under the throne, being circumspect that they do not check or oppose any points of sovereignty.' Coke's attempt to erect the bench into the position of an arbiter of the constitution was rightly distasteful to him, and so far as Bacon succeeded in thwarting this his success was well deserved. It was the last real success that he was ever to have. The greater the political power acquired by the king, the sooner would the question be asked whether he deserved to exercise it. Bacon's constitutional view presupposed a king standing above all parties and all interests, and thoroughly sensitive to the deeper currents of public opinion. His character rendered him over-trustful of persons in authority, and he was now to pay the penalty. James took so much of his policy as made for the enhancement of the royal dignity, and rejected all that made for the subordination of his own ideas to those of the nation. Thus it came about that the appointment of Bacon as lord keeper was but the signal of his disastrous failure in all the higher purposes of his political life, a fact which has been too easily forgotten in the more dramatic spectacle of his fall from the appearance of political power.

The unity of Bacon's thought in science and politics may be gathered from his incomplete work entitled 'The New Atlantis,' which has hitherto been ascribed to a later period in his life, but which is twice mentioned by him in an unpublished paper (*Harleian Charters*, iii. D. 14), the date of which lies between the dissolution of the parliament in 1614 and Bacon's appointment as lord keeper in 1617. In the 'New Atlantis' there are two conspicuous points. On the one hand is the desire to benefit mankind by a science founded on observation and experiment; on the other hand is the tendency to under-estimate the difficulty of the task, which leads to the belief that it

can be entrusted to an official body organised for the purpose. If Bacon had been allowed to carry out his scheme, it would probably have been found that officialism would have smothered scientific inquiry. At all events, he reached a somewhat similar result in politics. He had improved the official organisation of the state only to find it useless for all good purposes in his hands.

Even before his elevation Bacon learned how little his advice was likely to be followed on the great question of the day. On 2 March 1617 James announced to a body of commissioners, of whom Bacon was one, that he had practically accepted the terms offered by Spain for a marriage between Prince Charles and the Infanta Maria. To this declaration the commissioners replied on the 7th, giving a somewhat hesitating assent, and on the 23rd Bacon proposed certain additional instructions for Sir John Digby, who was going as ambassador to Spain, suggesting that the alliance between Spain and England might be used to establish a court of arbitration between christian princes, and to head a general defensive war against the Turks. Among all Bacon's state papers there is none more characteristic of his habit of making the best of a disagreeable situation. Regarding, as he did, the Spanish alliance as not only bad in itself, but as fatal to the good understanding which he wished to see established between king and parliament, he was yet able to sit down coolly to ask whether any advantage could be reaped even from what appeared to him to be a policy fraught with disaster.

It is only the extraordinarily unemotional character of Bacon's mind which made it possible for him to act as he did during the next four years. He had not long been lord keeper before he learned how far Buckingham—for by that name Villiers was now known—fell short of the ideal of a favourite. While the court was absent in Scotland a marriage was agreed on between Buckingham's brother, Sir John Villiers, and Frances Coke, the daughter of the late chief justice. Bacon saw in the project, what it no doubt really was, an attempt once more to ingratiate Coke with the king. He accordingly took part with the young lady's mother, who opposed the match, and wrote to James to protest against it. He found that Buckingham was warmly interested in the project, and was not only angry himself, but made James angry with the lord keeper's interference. Buckingham talked of Bacon as showing the same ingratitude to himself which he had formerly shown to Essex and Somerset. It was only by the most profuse apologies that

Bacon made good his imperilled position. The political danger which he feared was indeed averted, and Coke was no nearer to restoration to the bench than he was before, but Bacon learned a lesson regarding the manner in which Buckingham was to be approached. That Buckingham demanded obsequiousness and flattery was as much a fact as that James wished to ally himself with Spain, and Bacon was as ready to take account of one of these facts as he was of the other.

For the time he had his reward. On 7 Jan. 1618 he became lord chancellor, and on 12 July he was raised to the peerage as Baron Verulam. During the whole of Elizabeth's reign no one had borne the title of lord chancellor, and no lord keeper had been made a peer.

Bacon was obliged mainly to content himself with judicial work. On 8 June 1617, three months after he had taken his seat in chancery, he had cleared off all the arrears of business in that court. As far as we know, his justice was, on the whole, as exemplary as his energy. Not only were no complaints heard at the time, which may easily be accounted for, but in later years, when every man's mouth was opened against him, no successful attempt was made to reverse his decisions. Yet even in his court he was made to feel the weight of the favourite's patronage, and was exposed to a constant flow of letters from Buckingham asking him to show favour to this person or to that, of course under the reservation that he would do so only so far as was consonant with justice. One of the cases in which Buckingham's favour was invoked has recently been subjected to a searching criticism by Mr. D. D. Heath (*SPEDDING*, vii. app. i.). A certain Dr. Steward appealed to Buckingham against a decision pronounced by Bacon in favour of Steward's nephew, and Bacon, instead of openly maintaining the justice of his own decision or openly acknowledging his mistake, allowed the affair to be settled by arbitration. As there is no record of the decision of the arbitrators, it has been presumed that the young man abandoned his case, as knowing that the decision was likely to go against him on other grounds than those which would have availed him before a just and competent tribunal. If this is a correct representation of the matter—and it seems probable, though far from absolutely certain, that it was so—Bacon's conduct was distinctly blameworthy, though the appointment of arbitrators may have veiled for him the real nature of the offence, which consisted in transferring to others the responsibility which should have been borne by himself alone.

Of judicial matters outside the court of Chancery the most notable with which Bacon was concerned were the prosecution of Raleigh [see RALEIGH, SIR WALTER] in 1618, of Suffolk in 1619, and of Yelverton [see YELVERTON, SIR HENRY] in 1620. In the first two of these cases Bacon's feelings, as well as his official duty, were enlisted on the side of the court. Raleigh was to him an unscrupulous pirate, and Suffolk [see HOWARD, THOMAS] an unscrupulous speculator. Yelverton's case was somewhat different. He had, through inadvertence, given his assent to a charter for the city of London which contained larger powers than he was warranted to allow. Bacon urged strongly that carelessness was an offence of presumption, and contributed to the passing of a heavy sentence.

Looked at from the point of view of a guardian of official duty, the sentence on Yelverton might easily be justified. What did not appear in court was that Buckingham was hostile to Yelverton. That hostility arose out of a series of transactions in which Bacon also was involved. Though Elizabeth at the end of her reign, and James at the beginning of his, abolished the greater number of the existing monopolies, the future issue of similar grants was not regulated by statute law. By degrees many new patents were issued, conveying to certain persons the sole right of manufacturing various articles, sometimes in cases where the patentees were the actual inventors of some new process of manufacture, but frequently where public policy, as then understood, demanded that the manufacture should be placed in the hands of persons who might be accountable for the production of the various articles in accordance with the ideas of the government. In this way a patent was issued for the manufacture of glass, because the patentees offered to use coal instead of wood, so as to spare the timber of the realm; whilst another patent protected the manufacture of gold and silver lace, because the patentees offered to use bullion imported from abroad instead of bullion within the realm, which, according to the economical ideas of the day, constituted the wealth of the country. Besides these patents of monopoly there were also commissions issued for the regulating of inns and alehouses. There is every reason to suppose that Bacon was in favour of these patents, and there was nothing in them which might not have been expected to commend itself to the ideas of the age.

Various circumstances, however, concurred to render these patents unpopular. In the first place the government was itself unpopular at the time, and when it was known that

some payments out of the proceeds were reserved for Buckingham's kinsmen and followers it was suspected that the whole affair had been arranged for the purpose of bringing money to Buckingham. In the second place, some of the grants had been supported against competitors in violation of the law, and there was a growing feeling that the prerogative of the sovereign had lately been made to override the law more than had been the case before. Bacon, therefore, when the summoning of a new parliament was announced, knowing as he did what was the state of public opinion on the subject, recommended the withdrawal of the most obnoxious patents. In his most characteristic style he announced to Buckingham what he had done. 'The king,' he wrote, 'did wisely put it upon a consult, whether the patents which we mentioned in our joint letter were at this time to be removed by act of council before parliament. I opined (but yet somewhat like Ovid's mistress, that strove, but yet as one that would be overcomen) that yes.' Bacon's habit of suiting at least the mode in which he expressed his thoughts to the pleasure of those in power, never found a stronger expression.

The summoning of parliament itself was all that Bacon wished. The king was at last appealing to the nation for assistance in the defence of the Palatinate; and whether that policy were right or wrong, there can be no doubt that Bacon believed it to be thoroughly right, not only in itself, but as bringing forward a question on which the king could sympathise with his people. Once more, however, Bacon was disappointed. James hesitated, asked for money to prepare for war, and announced his intention of making a fresh diplomatic effort, which would enable him to avoid war. The commons were puzzled, offered him two subsidies in token of their goodwill, and waited to see in what his diplomacy might end.

It looked very much as if the slight gleam of hope which had shone upon that foreign policy which, in Bacon's mind, was so closely connected with his home policy, would die away. Of his personal position he never felt more assured than when parliament was opened. On 12 Oct. 1620 he published the 'Novum Organum.' On 22 Jan. 1621 he had kept his sixtieth birthday at York House, and received the homage of Ben Jonson as one

Whose even thread the fates spin round and full  
Out of their choicest and their whitest wool.

On 27 Jan. he was raised a step in the peerage, and became Viscount St. Albans. Nor had he reason to suspect that the new House of Commons, which met on 30 Jan., would be

otherwise than friendly to him. He had long advocated the policy of which the commons approved; and he had always given his voice in favour of a good understanding between them and the king. Yet, for all that, a storm was gathering against him.

Naturally Bacon had made enemies. Coke, who was a member of this parliament, and was soon to appear as a very influential one, both hated and despised him. Cranfield, the master of the wards, who was also a member, must have discovered that Bacon looked down on him as a mere accountant, and consequently was as bitterly disposed towards him as Coke had always been. Taken alone the opposition of the practical commonplace official might not have led to much, but it had at its back a sentiment which was all the more dangerous, because it did not imply any personal dislike of Bacon himself amongst the members of the house. That sentiment was one of dissatisfaction with the government of which Bacon had made himself the instrument, not sufficiently pronounced to make the house wish to place itself in direct opposition to the king, but sufficiently strong to make it ill-disposed to one who, like Bacon, had allowed his devotion to monarchical principles to be publicly known, whilst he had thrown a veil of secrecy over his disapproval of the policy of the actual monarch.

To this sentiment the strong feeling against the monopolies was certain to minister. The natural desire of finding some one to punish when things had gone wrong led men to search for victims. Mompesson and Michell were not of sufficient importance to satisfy this desire. Buckingham could not be touched without touching the king, and, besides, he expressed an ardent wish to join the commons in hunting down abuses. There remained the referees, who had certified that the monopolies were either good in law or beneficial in practice, and of these referees Bacon was the most conspicuous. For a time there was a call, strongly supported by Coke and Cranfield, for bringing the referees to account; but James stood firm, and the question of ministerial responsibility was shelved for the time.

If Bacon's conduct as a referee escaped inquiry, he was more exposed to attack than before. Those who wished to bring charges of any kind against him would know that they would have a favourable audience in the House of Commons, and probably also in the House of Lords. On 14 March Cranfield, who had led the attack upon the referees, complained of the court of chancery for the protection which it offered to insolvents, and Coke followed in the same

strain. Before anything could be done to put the charge into shape, a certain Christopher Aubrey presented a petition to the commons in which the chancellor was directly charged with bribery. He was followed by Edward Egerton, who made much the same complaint. The peculiarity of these cases was that Bacon had decided against the persons who had given him money.

On 17 March the commons resolved to send the complaints before the lords for inquiry, without committing themselves on one side or the other. Bacon's own feeling during these days was one of assurance that the charges against him had been concocted by those who had failed to punish him as a referee. 'Your lordship,' he wrote to Buckingham, 'spoke of purgatory; I am now in it, but my mind is calm, for my fortune is not my felicity. I know I have clean hands and a clean heart, and I hope a clean house for friends or servants; but Job himself, or whoever was the justest judge, by such hunting for matters against him as hath been used against me, may for a time seem foul, especially in a time when greatness is the mark and accusation is the game. And if this be to be a chancellor, I think if the great seal lay upon Hounslow Heath nobody would take it up.'

Under the trial his health broke down. On the 18th he was unable to leave his house, and on the following day begged for time to reply to the accusations against him. Fresh charges were soon brought, amongst them that of Lady Wharton, who had given money directly into Bacon's hands and had received a crushing sentence almost immediately afterwards. That Bacon had taken the money as a bribe is most improbable, but he had certainly sinned against the rule which he laid down for himself, that though, according to the custom of the day, presents might be taken from suitors, they should never be accepted while the suit was pending. The best explanation of his conduct is that, according to his usual habit of caring to do the right thing without regarding how it was done, he had satisfied himself with judging justly, and had been almost incredibly careless of the appearance of his conduct in the eyes of others. On 16 April Bacon, who was sufficiently recovered to leave his house, had an interview with the king. The memoranda of what he intended to say to James have been preserved. 'There be three causes of bribery,' he wrote, 'charged or supposed in a judge: the first, of bargain or contract for reward to pervert justice; the second, where the judge conceives the cause to be at an end by the information of the party or otherwise,

and useth not such diligence as he ought to inquire of it; and the third, when the cause is really ended, and it is *sine fraude*, without relation to any precedent promise.

When he wrote these words he had not yet seen the charges against him in detail. He acknowledged that he might have done things falling under the second head. What he asked for was a fair trial. On the 20th he knew enough of the particulars of the charges to be aware that the case against him would be difficult to answer. Within a few hours a copy of the examinations taken in the House of Lords reached him, and he then knew that defence was impossible. Though he might be certain that he had never taken a bribe from corrupt motives, he knew that he had done the very things which corrupt men do. He had taken money whilst cases were pending. On the 27th he made his formal submission to the lords, hoping that they would be content with depriving him of office. The lords, however, pressed for an answer to the charges. Bacon was again ill, and the answer brought by the lords' messengers was that he would make no defence, but wished to explain some points. On the 30th the explanation was given. 'I do again confess,' Bacon wrote at the end of his statement, 'that in the points charged upon me, although they should be taken as myself have declared them, there is a great deal of corruption and neglect, for which I am heartily and penitently sorry.' On 1 May the great seal was taken from him. As he was still too ill to attend in person, the sentence was passed on 3 May in his absence. He was to be fined 40,000*l.*, imprisoned during the king's pleasure, and disabled from sitting in parliament and from coming within the verge of the court.

Bacon only remained for a few days in the Tower. On 20 Sept. the king signed a warrant assigning his fine to trustees for his own use, and directing a pardon to be drawn which would protect him from all demands other than those arising out of his parliamentary sentence.

Bacon had more difficulty in procuring a relaxation of that part of the sentence which prohibited him from coming within twelve miles of the court. Buckingham wished to become the owner of York House, and it was not till, in the spring of 1622, Bacon consented to sell it to him, that the required permission was obtained.

Bacon was not a man who could allow himself to remain idle. As early as October 1621 he completed his 'History of Henry VII,' which was published in the following year. Then he busied himself with the comple-

tion and translation into Latin of the 'Advancement of Learning,' which appeared in October 1623 as 'De Augmentis Scientiarum.' To his former feelings towards the king was now added gratitude for having tempered the blow which had fallen on him, and his language was as flattering after his fall as it had been before. In March 1622 he offered to do what had long been on his heart, to draw up a digest of the law. If he wrote of the 'Instauratio' as his 'great work,' it does not follow that he regarded political work as much inferior in importance. His correspondence shows how eagerly he desired to be employed in political matters again, and it is one of the most curious features of that correspondence that he never seems to have understood that the sentence passed on him was an insuperable bar to employment in the service of the state.

The return of Buckingham and the prince from Spain gave Bacon an opportunity of appearing on the side which was at the same time popular and courtly, and the support of which was also in harmony with his own lifelong convictions. In a speech which he drew up for the use of some member of the House of Commons in 1624, and in the 'Considerations touching a War with Spain,' which he addressed to the prince, he took the course which satisfied his conscience, if it seemed also calculated to gain satisfaction for what ambition was left to him. In spite of all, however, he remained a disappointed man. Even the provostship of Eton was refused him in 1623, and in 1625 he pressed the new king in vain for the grant of the full pardon which would enable him to take his seat in parliament. Charles and Buckingham no doubt regarded him as an importunate old man, whose advice they were even less likely to regard than James had been.

Nothing remained to Bacon but to devote himself to further work upon the 'Instauratio Magna.' Increasing weakness of health, however, made every task difficult. At the end of March 1626, being near Highgate on a snowy day, he left his coach to collect snow with which he meant to stuff a fowl in order to observe the effect of cold on the preservation of its flesh. In so doing he caught a chill, and took refuge in Lord Arundel's house, where, on 9 April, he died of the disease which is now known as bronchitis. He was buried at St. Michael's Church, St. Albans.

'For my name and memory,' wrote Bacon in the will which he drew up on 19 Dec. 1625, 'I leave it to men's charitable speeches and to foreign nations and the next ages.' He surely never contemplated that his devo-

tion to science would be held to be indirectly damaging to his character, and that writer after writer would regard his claim to be a prophet of scientific knowledge so super-eminent as to consign to oblivion his equally great claim as a prophet of political knowledge. As his contribution to science rests on his perception of the greatness and variety of nature, so his contribution to politics rests upon his perception of the complexity of human society. In politics, as well as in science, he found himself too much in advance of the times to secure a following. Some men would have grown misanthropical, and would have abandoned the thankless task in despair. It was alike the strength and weakness of Bacon's character which prevented him from doing this. He must strive against such a disaster, must seek help wherever it could be found, must speak fair words to those who had it in their power to assist him, must be patient beyond all ordinary patience, content if he could get but a little done of the great things which he designed, sometimes content if he could have the vaguest hope of being some day able to accomplish a little. As far as science was concerned, all this brought nothing dishonourable. In politics it was otherwise. Power to do good in politics was, according to the possibility of his day, inseparably connected with high place and the good things of the world, to the advantages of which Bacon was by no means insensible. If Bacon never lost sight of the higher object in the pursuit of the lower, if James was to him the only possible reconciler of sectional ambitions, as well as the dispenser of coronets and offices, it was not to be expected that those who watched his progress should be charitable enough to acknowledge these points in his favour. Bacon was too great a man to play other than a second-rate part in the age in which he lived, and he struggled hard, to the detriment of his own character as well as of his fame, to avoid the inevitable consequence.

[In all things relating to Bacon Mr. Spedding's *Lectures and Life* is so universally acknowledged as the one authority on matters of fact, that it has been unnecessary to encumber these pages with references to a book to which every reader who wishes for further information will turn. Those who wish to find the view of Bacon's character which is here treated as insufficient, set forth with that knowledge and thoughtfulness which is singularly wanting in Macaulay's well-known essay on Bacon, may be referred to Dean Church's '*Life of Bacon*' in the *Men of Letters Series*.]

S. R. G.

BACON'S WORKS may be divided into three classes, the philosophical, which form far the

largest portion, the literary, and the professional works. Many of these are mere fragments or short essays, afterwards thrown aside and replaced by other essays, also unfinished, or by the larger and more complete works as known to the general reader. All that remains of Bacon's writings, however brief or fragmentary, has been collected in the edition by J. Spedding, R. L. Ellis, and D. D. Heath (7 vols., London, 1854-59). The principal and best known of the philosophical works are (1) the '*Advancement of Learning*,' which was published in English in 1605, as '*The Two Bookes of Francis Bacon of the Proficience and Advancement of Learning Divine and Humane*;' (2) the '*Novum Organum*,' published in Latin in 1620 under the general title, '*Francisci de Verulamio . . . Instaurationis Magnæ*,' with a second title (after the preface) '*Pars secunda operis, quæ dicitur Novum Organum sive indicia vera de interpretatione naturæ*;' and (3) the '*De Augmentis*,' published in Latin in 1623 with the title, '*Opera F. Baconis de Verulamio . . . Tomus primus, qui continet de Dignitate et Augmentis Scientiarum libros ix.*' The last of these works may be regarded as a much enlarged edition of the first, though the first has a certain advantage over its larger and more pretentious rival from being presented in a more compendious form and in the noble and flowing periods of the author's English instead of in a foreign tongue or a translation.

When Bacon wrote the '*Advancement of Learning*,' he does not seem to have had any idea of constituting it a part of the '*Great Instauration*,' but, as time went on, he appears to have thought that the attempt to build up a new philosophy might fittingly be preceded by a review of the present state of knowledge. Hence, in the '*Distributio Operis*,' which is prefixed to the '*Novum Organum*,' the first place in the '*Great Instauration*' is assigned to what he calls '*partitiones scientiarum*,' or 'a summary or general description of the knowledge which the human race at present possesses,' including, however, 'not only things already invented and known, but likewise things omitted which ought to be there.'

The remaining parts of the '*Great Instauration*,' as enumerated in the '*Distributio Operis*, or *Plan of the Work*,' are: (2) the '*Novum Organum*, or *Indications concerning the Interpretation of Nature*;' (3) '*Phænomena Universi*, or a *Natural and Experimental History for the Construction of Philosophy*;' (4) '*Scala Intellectus*, the *Ladder of the Intellect*;' (5) '*Prodromi*, the *Forerunners*, or *Anticipations of the New Philo-*

sophy;' (6) 'Philosophia Secunda, or Active Science.'

The second part, or the proper method of interpreting nature, was evidently the one (if we except the sixth, which was to be the crown of the whole design and the gradual work of posterity) to which Bacon attached the greatest importance. It is mainly represented in the 'Novum Organum,' though preliminary drafts of portions of this work, often curiously differing from it in detail, are to be found in parts of the 'Valerius Terminus,' and in the 'Partis Secundæ Delineatio,' the 'Cogitata et Visa,' the 'Temporis Partus Masculus,' and the 'Filum Labyrinthi sive Inquisitio Legitima de Motu,' to say nothing of smaller pieces. The composition of the 'Novum Organum' appears to have been begun about 1608. For the first edition appeared in 1620, and Dr. Rawley (in the life of Bacon prefixed to the 'Resuscitatio') tells us that he had himself seen at least twelve copies of the work 'revised year by year, one after another; and every year altered and amended in the frame thereof.'

The 'Novum Organum,' in the shape in which its author left it, is only a fragment of the larger work which Bacon contemplated under that title, as adequately representing the second part of the 'Great Instauration.' Nevertheless, though only a fragment, the 'Novum Organum,' and especially the first book, is the most carefully written of all Bacon's philosophical works. Moreover, as describing the new method of which the renovation of knowledge was to be the result, it is the keystone of the entire system.

The third part of the 'Great Instauration,' the 'Phænomena Universi,' was to contain a collection of arranged and sifted materials on which the method of induction was to work. Of this part, even according to Bacon's limited conception of the extent and variety of nature, we have only a very small portion, and, according to a juster estimate of the boundless extent of the 'Phænomena Universi,' that portion might almost be described as infinitesimal. Such as it is, however, it is contained mainly in the 'Historia Ventorum,' the 'Historia Vitæ et Mortis,' the 'Historia Densi et Rari,' and the 'Sylva Sylvarum.' The first of these works, an attempt to collect and digest various facts in connection with the winds, was published in November 1622, in a volume entitled 'Historia Naturalis et Experimentalis ad condendam Philosophiam; sive Phænomena Universi; quæ est Instaurationis Magnæ Pars tertia (Historia Ventorum).' The 'Historia Vitæ et Mortis' was published about the end of January 1622-3. The 'Historia

Densi et Rari' did not appear during Bacon's lifetime, and was first published in Dr. Rawley's 'Opuscula Varia Posthuma,' in 1658.

The last work on which Bacon was engaged was the 'Sylva Sylvarum' (meaning probably a collection of collections), a miscellaneous collection of observations and experiments in natural history. It was published by Dr. Rawley in 1627, the year after Bacon's death, but the preface was written by Rawley during his lifetime. It was repeatedly reissued, reaching a tenth edition in 1676. This book has furnished Bacon's critics, especially Lasson and Liebig, with some of their most telling shafts. It treats seriously of such conceits as that 'the blood-stone is good for them that bleed at the nose;' as the 'report' of 'the writers of natural magic' that 'the heart of an ape worn near the heart, comforteth the heart and increaseth audacity;' as the notion that water is congealed into crystals, and so forth. But, defective and often ridiculous as this book is from our point of view, it is, if we refer it to its place in the history of science, far from being contemptible. It is probably the best and most complete single collection of the kind that, up to that time, had been published.

Appended to the 'Sylva Sylvarum' in Rawley's edition is the 'New Atlantis.' This, as observed in the above life (p. 344), was written before 1617. It is deservedly one of the most popular of Bacon's works; it bears the stamp of his genius as much, perhaps, as anything which he wrote; and, lastly, it is credited with having, to a large extent, suggested the foundation and programme of our own Royal Society, as well as of several scientific associations abroad.

To the fourth and fifth parts of the 'Instauration' we possess the prefaces. Whether anything more relating to those parts is extant seems doubtful. Though Bacon hoped himself fittingly to inaugurate the work of setting forth his 'second philosophy,' we search in vain amongst his writings for any special treatise which can be referred to the sixth part.

Of Bacon's literary, as distinct from his philosophical and professional, works, far the most popular and important are the 'Essays.' These, in their earliest shape, formed part of a very small octavo volume, published in 1597, and were only ten in number. They were reprinted in 1598, 1604, and 1606. In 1612 a new edition was brought out, with many alterations and additions. The editions of 1597 and 1612 are reprinted in Spedding's edition of the works (vol. vi.). This edition contained thirty-eight essays. Finally, the book in its present form, and containing

fifty-eight essays, was published in 1625, the year before Bacon's death. This greatly enlarged edition, which is entitled 'The Essayes or Counsells, Civill and Morall, of Francis Lo. Verulam, Viscount St. Alban, newly enlarged,' may be regarded as a storehouse of the practical wisdom gathered during its author's lifetime, a life singularly rich in opportunities for such accumulations. A Latin translation published by Rawley in 1638 as 'Sermones Fideles sive Interiora Rerum,' was executed or superintended by Bacon.

The title of 'Essays' is probably taken from the 'Essais' of Montaigne (who is quoted by name in the first essay), which first appeared at Bordeaux in 1580. Hallam says of these that they are the first writings in the French language 'which a gentleman is ashamed not to have read.' A similar remark, if we confine ourselves to prose works, might be made of Bacon's 'Essays.' To attempt to describe the characteristics of a book so familiar to the reader, would, in a work like this, be to occupy space unnecessarily. But it may not be superfluous to remark that the 'Essays' are the most original of all Bacon's works, those which, in detail, he seems to have thought out most completely for himself, apart from books and collections of commonplace. The last edition teems indeed with quotations and illustrations, but they are suggested by his own matter and do not suggest it. Though the 'Essays' have the same title as the larger collection of Montaigne, the two works have little in common, except their rare power of exciting interest and the unmistakable mark of genius which is impressed on them both.

The literary production which, during Bacon's lifetime and for many years afterwards, ranked next in popularity and was regarded as next in importance to the 'Essays,' was undoubtedly the 'De Sapientia Veterum,' the treatise on the wisdom of the ancients. This work was first published, in a small duodecimo volume, in 1609. A second edition appeared in London in 1617; a third at Leyden in 1633; and a fourth at London in 1634. A translation by Sir A. Gorges, Knight, was published in 1619. Its plan is to recite certain classical fables, or, as we should now call them, myths, disclosing, as it proceeds, the moral and physical lessons which are supposed to lie latent in them. The hypothesis on which the interpretations rest, of a primeval wisdom expressing itself in allegorical symbols, fell in with the usual mode of thinking in the seventeenth century, and then, and even later, doubtless found many adherents amongst the most learned and judicious men of the time.

Appended to the first edition of the 'Essays' was a fragment entitled 'Of the Colours of Good and Evil.' Like the 'Essays' and the 'De Sapientia Veterum,' it is full of shrewd remarks suggested by Bacon's knowledge of life and observations of human nature. These 'Colours of Good and Evil,' with additions, were afterwards embodied in the sixth book of the 'De Augmentis.' Bacon there states that, when a young man, he had collected many other 'colours' or 'popular signs' of good and evil, but, as he had not yet found time to illustrate or examine them, he refrained from setting them out. These are contained in a manuscript in the British Museum, published in 1882 by Mrs. Henry Pott under the title of 'Promus of Formularies and Elegancies;' a few specimens of them are given by Mr. Spedding (*Bacon's Works*, vii. 67, 68).

The 'Apophthegms New and Old' were first published in December 1624, but the volume containing them is dated 1625. The subsequent history of the various collections which went under the name of 'Bacon's Apophthegms' will be found in Mr. Spedding's preface to the 'Apophthegms' (*Bacon's Works*, vii. 113-20).

Of the historical works, the only one of any size is the 'History of Henry the Seventh.' This book, though the subject had long been familiar to Bacon, and a fragment on this and the four following reigns dates back as far as the time of Elizabeth, seems to have been wholly composed during the long vacation succeeding his fall. On 8 Oct. 1621 he was ready to send a fair manuscript to the king. This was returned shortly after 7 Jan., and on 20 March 1621-2 the book was printed and ready for publication. Sir James Mackintosh, in his 'History of England,' appears to regard Bacon as having simply set to work, in order to gratify James I, to produce a flattering portraiture of his royal ancestor. Spedding, who has a better title to be heard on this subject than any other authority, delivers this weighty judgment: 'Though not one of his works which stand highest, either in reputation or popularity, with later times, the "History of Henry the Seventh" has done its work more effectually perhaps than any of them. None of the histories which had been written before conveyed any idea either of the distinctive character of the man or the real business of his reign. Every history which has been written since has derived all its light from this, and followed its guidance in every question of importance; and the additional materials which come to light from time to time, and enable us to make

many corrections in the history of the events, only serve to confirm and illustrate the truth of its interpretation of them.'

Amongst the smaller historical remains of Bacon are the opening paragraph of a projected 'History of Henry the Eighth,' a piece entitled 'In felicem Memoriam Elizabethæ,' a memorial of Henry Prince of Wales, the eldest son of James, who died prematurely in 1612, and a small fragment in English, entitled 'The Beginning of the History of Great Britain,' giving an account of the accession of James I to the crown of England. Mr. Spedding says of the last: 'As an account of the temper of men's minds at James's entrance, it is complete; and in my judgment one of the best things in its kind that Bacon ever wrote.'

Bacon's religious works, though they contain some of his finest sentiments and are mostly written in his best style, might be contained in a very thin volume. The largest of them is the 'Meditationes Sacræ,' first published, in the same volume with the 'Essays' and the 'Colours of Good and Evil,' in 1597. The other genuine works of this class are 'A Confession of Faith,' first published in the 'Remains' in 1648, but written before (how long before we cannot determine) the summer of 1603; a 'Translation of certain Psalms into English Verse,' composed during his fit of sickness in 1624, which were dedicated to 'his very good friend Mr. George Herbert,' and published in 1625; and three prayers, 'The Student's Prayer,' 'The Writer's Prayer,' and a third composed, in the midst of his troubles, in the spring of 1621. Of this last prayer Addison (in the *Tatler*, No. 267) says that 'for the elevation of thought and greatness of expression, it seems rather the devotion of an angel than of a man.' A fourth prayer, described in the 'Remains' as 'made and used by the late lord chancellor,' but not mentioned by either Rawley or Tenison, is of doubtful authenticity. Lastly, a piece entitled 'The Characters of a Believing Christian in Paradoxes and Seeming Contradictions,' which was also published in the 'Remains,' and has frequently been quoted as Bacon's under the short title of 'Christian Paradoxes,' has been shown by Dr. Grosart to have been written by another hand.

A collection of all the professional works which still possess any importance has been brought together and annotated by Mr. D. D. Heath in the seventh volume of the last edition of Bacon's works. The largest and most important of these are the treatises entitled 'Maxims of the Law,' and the 'Reading on the Statute of Uses.' The 'Maxims of the Law' were Bacon's con-

tribution, 'a sheaf and cluster of fruit,' towards that digest of the laws of England which became at an early period of his life a favourite idea with him, and of which he never wholly lost sight.

It may be convenient to notice here the various collections of Bacon's posthumous works, which appeared from time to time during the seventeenth and eighteenth centuries. In 1627, the year after his death, his chaplain, Dr. Rawley, brought out the 'Sylva Sylvarum,' with the 'New Atlantis' appended. All Bacon's more important works had thus been published in 1627. But amongst his papers were found a number of speeches, letters, beginnings or first drafts of treatises, heads of advice, memoranda, &c., which served several successive editors for collections of miscellanies. The first of these collections was that contained in the small volume, published by Dr. Rawley in 1629, under the title of 'Certain Miscellany Works.' In 1638 Dr. Rawley published the Latin volume entitled 'Opera Moralia et Civilia.' The next volume of collections was published anonymously in 1648, and was entitled 'The Remains of Francis, Lord Verulam, &c., being essays and several letters to several great personages, and other pieces of various and high concernment not heretofore published.' The authenticity of any document contained in this collection requires to be supported by independent testimony.

In 1653 appeared a far more important volume, that published in an elegant duodecimo at Amsterdam by Isaac Gruter, and entitled 'Francisci Baconi de Verulamio Scripta in Naturali et Universali Philosophia.' Another important collection of pieces was issued in 1657. This was a miscellaneous collection, edited by Rawley, under the title of 'Resuscitatio, or Bringing into publick Light several Pieces of the Works, Civil, Historical, Philosophical, and Theological, hitherto sleeping, of the Right Honourable Francis Bacon, &c. To it is prefixed a 'Life of the Honourable Author,' since frequently reprinted. New editions of the 'Resuscitatio' were brought out in 1661 and 1671 respectively, both containing new matter, but Dr. Rawley, who died in 1667, is only responsible for the second edition. The 'Resuscitatio' is a collection of English pieces or translations only, but in 1658 Rawley redeemed his promise of bringing out a small collection of Latin works, so as not 'to leave to a future hand anything of moment and communicable to the public.' This collection is entitled 'Opuscula Varia Posthuma, Philosophica, Civilia, et Theologica, Francisci Baconi,' &c.

Thomas Tenison, afterwards archbishop of Canterbury, who had access to Rawley's papers after his death, published in 1679 a small volume entitled '*Baconiana*, or certain genuine Remains of Sir Francis Bacon,' &c. This volume contains, by way of introduction, an 'account of all the Lord Bacon's works' of considerable interest to the biographer.

A collection of Bacon's unpublished letters, written during the reign of James I, was published by Robert Stephens in 1702. A second volume, also collected by him, was published in 1734. In addition to letters, this latter volume contains several tracts and fragments, the most important, perhaps, of which is the '*Redargutio Philosophiarum*,' only a small portion of which had been published by Gruter in 1653. Finally, another collection of unpublished letters, speeches, &c., was issued by Dr. Thomas Birch in 1768.

None of Bacon's legal works were published during his lifetime. In 1630 appeared the '*Maxims of the Law*,' together with a second edition of the '*Use of the Law*,' under the common title '*The Elements of the Common Law*.' Mr. Heath thinks that the attribution of the second tract (the first edition of which appeared in 1629) to Bacon is erroneous. The '*Reading on the Statute of Uses*' was first published, in a very incorrect form, in 1642. Three speeches concerning the Post-Nati of Scotland, the Naturalisation of the Scotch in England, and the Union of the Laws of the kingdoms of England and Scotland, were first published in 1641. The Four Arguments on Impeachment of Waste, Lowe's case of Tenures, the case of Revocation of Uses, and the Jurisdiction of the Council of the Marches, first appeared in Blackbourne's edition of Bacon's entire works, published in 1730. The argument in Chudleigh's case was recovered by Mr. Spedding.

The first edition, professing to be complete, of Bacon's works, issued in England, was that of Blackbourne, in 1730. An edition, with life, by Mallet, appeared in 1740, in 4 vols. folio; another by the same in 1753, in 3 vols. folio. What long served as the trade edition was a reprint of the edition put out by Birch in 1765. A handsome but ill-arranged edition, under the superintendence of Mr. Basil Montagu, was issued by Pickering (in 17 vols. 8vo.) between 1825 and 1836. The appearance of this edition was the occasion of Macaulay's Essay. The splendid and carefully annotated edition of Ellis, Spedding, and Heath, in seven volumes, was brought out by Longmans in 1857 and following years. Mr. Spedding has incorporated the letters and occasional works of

Bacon in another work, occupying seven volumes, entitled '*Letters and Life of Bacon*,' Longmans, 1861 and following years. The substance of this work, omitting most of the letters, but retaining the greater part of the biography, has recently appeared under the title of '*The Life and Times of Francis Bacon*,' 2 vols., Trübner and Co., 1878.

Of Bacon's separate works, the most recent edition of the '*Advancement of Learning*' is that by Aldis Wright (1869), and of the '*Novum Organum*' that by T. Fowler (1878), both issued by the Clarendon Press at Oxford. Amongst recent editions of the '*Essays*' are those of Archbishop Whately (1856, 6th ed. 1864), Mr. Aldis Wright (1862), and Dr. Abbott (1879). '*A Harmony of the Essays*'—the texts of the first four editions printed in parallel columns—was issued by Professor Edward Arber in 1869.

In the history of literature Bacon is mainly known as the writer of the '*Essays*.' But in the history of science, logic, and philosophy, the chief interest which attaches to his name is that of a reformer of scientific method.

The method which obtained almost exclusively in scientific inquiries during the middle ages is what is commonly called the deductive method. It is absurd to speak as if Bacon were the inventor of induction. What Bacon complained of, and rightly complained of, was not that the writers and teachers of his time had no recourse to the observation of facts at all, but that they only looked out for facts in support of preconceived theories, or constructed their theories on a hasty and unmethodical examination of a few facts collected at random. In either case they neglected to test or verify their generalisations, while they wasted their efforts in drawing out syllogistically long trains of elaborate conclusions, which, for aught they knew, might be vitiated by the unsoundness of the original premisses.

It was to remedy these defects that Bacon designed the second part of his '*Great Instauration*,' the '*Novum Organum*.' The first book consists of a number of brilliant and pregnant aphorisms. In the second book Bacon sets to work to construct his own method, and, though the book ends abruptly before he has completed one quarter of his scheme, he succeeds in laying the foundations of a science for the interpretation of nature, which, rough and cumbrous as are some of the materials of which they are composed, furnish the ground-plan on which almost all subsequent workers in this department of knowledge have built. Inductive logic, that is, the systematic analysis and arrangement of inductive evidence, as

distinct from the natural induction which all men practise, is almost as much the creation of Bacon as deductive logic is that of Aristotle. It must, however, be acknowledged that the one left far more to be added and remodelled by his successors than did the other.

'Man,' says Bacon, 'is the servant and interpreter of nature.' But as the bare hand is of little use in mechanical work, so the unassisted intellect can effect little in the work of reasoning. The one requires instruments, the other rules. The rules supplied by the logic in vogue lend no aid in the examination of principles. He who takes the wrong road wanders the further from his goal, the further he goes. The syllogism is, from the very nature of the case, incompetent to prove the ultimate premisses from which it proceeds. The only hope, therefore, of those who wish to establish knowledge on a firm basis is in a logic which shall be competent to examine these higher generalisations or first principles from which the various sciences start, that is to say, in a true induction. Before, however, attempting to supply this want, Bacon lingers for a while over the existing condition of knowledge, points out the phantoms which obscure the vision of truth, enumerates the causes of past errors, and suggests grounds of hope for the future.

Perhaps the best known part of the 'Novum Organum,' certainly one of the most valuable parts, is the account of the 'Idola Mentis Humane,' or 'phantoms of the human mind,' which occupies Aphorisms 38-70 of Book I. These 'idols' (εἰδωλα, phantoms or spectres, and not, as they have sometimes been erroneously interpreted, false gods) are four in number, and are enumerated as 'idols of the tribe' (idola tribus), 'idols of the den' (idola specus), 'idols of the market-place' (idola fori), and 'idols of the theatre' (idola theatri). In number they happen to correspond with the 'offendicula' of Roger Bacon; namely, unworthy authority, custom, vulgar opinion, and concealment of ignorance combined with the ostentation of apparent wisdom. There is, however, little other resemblance between the 'idola' and the 'offendicula,' and Francis Bacon is probably in no way indebted to his elder namesake for this part of his doctrine.

'The idols of the tribe have their foundation in human nature itself, and in the very tribe or race of men.' . . . 'The idols of the den have their origin in the peculiar constitution, mental or bodily, of each individual; and also in education, habit, and accident.' The idols of the market-place ('idola fori'),

which have insinuated themselves into the mind through the association of words and names with things, are, Bacon says, the most troublesome of all. They are of two kinds, being either names of supposed entities which have no real existence, or words inadequately or erroneously representing things or qualities actually existing. The idols of the theatre, so called because they succeed one another like the plays on a stage, arise either from false systems of philosophy or from perverse laws of demonstration.

The enumeration of the grounds of hope naturally includes many criticisms on the methods then in vogue, favourable auguries being drawn from the likelihood of their amelioration. Thus, in Aph. 104, where he protests against the prevalent habit of flying off at once from particular facts to first principles or the most general axioms of all, he insists on the importance of establishing by a careful induction a sufficient number of intermediate axioms ('axiomata media'), which are 'the true and solid and living axioms, on which depend the affairs and fortunes of men.' Again, in Aph. 105, he emphatically condemns the method of induction by simple enumeration, or mere addition of instances. Then, after contrasting with this unscientific and faulty form the induction which he himself contemplates, he adds with a true appreciation of the difficulties of his task: 'But in order to furnish this induction or demonstration well and duly for its work, very many things are to be provided which have never yet entered the thoughts of any mortal man; inasmuch that greater labour will have to be spent on it than has hitherto been spent on the syllogism.' It is in this new kind of induction that his chief hope lies.

In the concluding aphorisms of the first book, Bacon answers, by anticipation, the important question whether he intends his new method to be confined to the problems of natural philosophy, or contemplates its application to the other sciences as well, 'logic, ethics, and politics.' To this question he replies (Aph. 127): 'Now I certainly mean what I have said to be understood of them all; and as the common logic, which governs by the syllogism, extends not only to natural but to all sciences; so does mine also, which proceeds by induction, embrace everything. For I form a history and tables of discovery for anger, fear, shame, and the like; for matters political, and again for the mental operations of memory, affirmation and negation, judgment and the rest: not less than for heat and cold, or light, or vegetation, or the like.' This statement should

carefully be noted; for, on a hasty reading of the 'Novum Organum,' it might easily be supposed that Bacon's object was confined to an instauration of what we now call the natural sciences. He here, however, explicitly tells us that his method is applicable, and intended to be applied, to the whole realm of knowledge.

From the prefatory remarks of Book i., Bacon passes in Book ii. to a more formal and systematic exposition of his method. In the 11th Aphorism the real business of the book begins, and this and the next two aphorisms contain the celebrated inductive tables which, together with the 'exclusion or rejection of natures' of which an example is given in Aph. 18, constitute Bacon's principal apparatus for arriving at a knowledge of the 'form,' a word which in modern scientific terminology may usually be best replaced by the word 'cause.'

His own method is simply contrasted with the *inductio per enumerationem simplicem*, or method of induction then in vogue. This method consisted in merely accumulating instances presenting the phenomenon in question, without following any rule of selection. Instead of this hasty and haphazard kind of induction, it is the peculiar merit of Bacon to have conceived; and to a certain extent to have elaborated, a regular and scientific method, proceeding by way of elimination, and thus carrying up an effect to its cause or following a cause into its effects by a chain of demonstrative reasoning. This method he calls the method of exclusions or rejections, and it is in this device that he conceives the peculiar value and originality of his logical system to consist.

The path to be followed by the method of exclusions is, Bacon confesses, a long and intricate one (Aph. 16), and hence he proposes, for the present at least, to employ, as auxiliary and preparatory to it, other aids for the understanding (Aphs. 19, 21).

Before, however, describing these other aids, he hazards an hypothesis (Aph. 20) on the form of heat, based on the materials collected in the tables. This 'giving reins to the understanding, or first vintage' (*permissio intellectus* or *vindemiatio prima*), must be regarded as a sort of parenthesis, inserted, by way of encouragement and relief, during the conduct of the more stringent method of exclusions with its various aids. It seems to afford an example of that very process of 'flying off from sense and particulars to the widest generalisations,' which Bacon himself condemns in the First Book (see *Nov. Org.* book i. aph. 19). The result, however, is remarkable in the history of

science. Anticipating the theory of heat now generally accepted, he defines it as 'a motion, expansive, restrained, and striving amongst the smaller particles of bodies.' Even the modern theory as to the undulatory character of this motion seems to be anticipated in the following passage, which is quoted with approbation by Professor Tyn-dall: 'The third specific difference is this, that heat is a motion of expansion, not uniformly of the whole body together, but in its ultimate particles; and at the same time checked, repelled, and beaten back, so that the particles acquire a motion alternative, perpetually quivering, striving and struggling, and irritated by repercussion, whence springs the fury of fire and heat.'

In the 21st Aphorism he proceeds to enumerate 'the remaining helps of the understanding, as they promote the interpretation of nature and a true and perfect induction.' The only 'help' which Bacon describes is the 'Prerogatives of Instances' (*Prærogativæ Instantiarum*). These are so called from the 'tribus prærogativa,' which, being selected by lot, voted first in the 'comitia tributa' of the Romans, and thus not only afforded an indication of the mode in which the other tribes were likely to vote, but also frequently exercised a considerable influence on their decision. They are, as Sir John Herschel says, 'characteristic phenomena, selected from the great miscellaneous mass of facts which occur in nature, and which, by their number, indistinctness, and complication, tend rather to confuse than to direct the mind in its search for causes and general heads of induction. Phenomena so selected on account of some peculiarly forcible way in which they strike the reason, and impress us with a kind of sense of causation or a particular aptitude for generalisation, Bacon considers, and justly, as holding a kind of prerogative dignity, and claiming our first and especial attention in physical inquiries.' Far the most famous of all these instances are the crucial instances (*instantiæ crucis*), a term which is, perhaps, more widely used than any other technical term of inductive logic. According to the metaphor there are two or more ways before us, and the observation or experiment in question acts as a 'guide-post' (*crux*) in determining us which to take. A celebrated historical example is that by which Pascal demonstrated the weight of the atmosphere. After the description of the Prerogative Instances the 'Novum Organum' comes to an abrupt termination.

What, we may now ask, are the principal merits of this magnificent fragment? Perhaps the main interest now attaching to the

'*Novum Organum*' is the historical one of its subsequent influence on logic, philosophy, and science. As Macaulay finely says, Bacon 'moved the intellects which have moved the world.' But the intrinsic value of this work is still considerable. There is probably no work of the same kind so stimulating to a young reader, or so likely to foster habits of cautious and independent investigation, as the first book of the '*Novum Organum*.' What Bacon says of Plato is pre-eminently true of himself. He was 'a man of a sublime genius, who took a view of everything as from a high rock.' Maxims such as these, 'Man is the servant and interpreter of nature,' 'Human knowledge and human power meet in one,' 'It is not fruit-bringing but light-bringing experiments that should be sought,' 'Truth is rightly called the daughter of time, not of authority,' 'The worst thing of all is the apotheosis of error,' which sparkle on almost every page of the '*Novum Organum*,' live long in the memory, and insensibly influence the whole habit of thought. There is something about Bacon's diction, his quaintness of expression, and his power of illustration, which lays hold of the mind, and lodges itself in the memory, in a way which we hardly find paralleled in any other author, except it be Shakespeare.

As regards the amount of definite logical teaching in the '*Novum Organum*' which retains a permanent value, we may notice the constant emphasis with which it dwells on the necessity of a thorough acquaintance with the facts of nature, as the only sure preservative against the delusions of fancy or prejudice and the misleading influence of authority; and upon the importance of not contenting ourselves with mere observation, but of also instituting, where possible, artificial experiments for the purpose of obtaining more precise answers to our questions.

On a wide and varied collection of facts Bacon proposed to raise scientific inductions, as opposed to inductions based on mere enumeration. This conception of a scientific process of induction, proceeding by way of selection and elimination, and possessing, if all the conditions are satisfied, the force of demonstration, was a perfectly sound and very fertile idea, though it has been slow to make its way, and is not even yet universally accepted by professed logicians. Nor does Bacon neglect to point out the proper relation between the inductive and deductive processes of reasoning: From the often reiterated emphasis with which he insists on the necessity of employing and reforming induction, it has frequently been supposed that he slighted deduction as an instrument

of thought. But this was by no means the case. The syllogism, he conceived, was indeed incompetent to establish the first principles from which it reasons, but, when these were once firmly established by induction on the basis of experience, it was perfectly competent to reason correctly from them. Even the mathematical form which the deductive branch assumes in the more advanced sciences is fully recognised by Bacon, and its proper position assigned to it. 'Mathematics ought to terminate natural philosophy, not to generate it.' 'Natural inquiries have the best issue when physics are terminated in mathematics.'

Bacon distinctly sees that the real object of science is the ascertainment of causes or facts of causation. 'It is rightly laid down that to know truly, is to know by means of causes.' He reads a valuable lesson also, when he insists on the unity of nature and the unity of science. Nature, he conceives, is a continuous and orderly whole, admitting of no breaks and no exceptions. Objects and qualities apparently the most heterogeneous are often united under the same form, or, as we might say, are manifestations of the same law (Book ii. aph. 17); and he who best knows the ways of nature, also best knows her deviations (Book ii. aph. 29). Similarly, to know any one science really well, a man must know at least the general aspects and fundamental principles of all sciences. For the individual sciences are like the branches of a tree which meet in one trunk, and each science must suffer if rudely dis severed from the rest.

The principal objections which have been directed against Bacon's method of scientific investigation are: (1) that Bacon's theory of induction is too mechanical; (2) that he unduly neglects the proper use of hypothesis; (3) that his conception of a gradual ascent from axioms of the lowest to axioms of the highest degree of generality does not correspond with the actual conduct of scientific investigation. There is a considerable amount of force in these objections. The office of the imagination (a faculty in which he was himself so marvellously rich) is undoubtedly too much ignored throughout the '*Novum Organum*.' And hence it is that he says so little of hypothesis. Except in Book i. aph. 106 and Book ii. aph. 20, this indispensable aid of the greater part of our inductive reasoning is hardly ever referred to. The wild license of imagination exemplified in so many of the scientific writers of his time naturally caused an extreme recoil against hasty generalisation and theories which seemed to be in advance of the facts. It

was this same feeling, doubtless, which suggested to Bacon the oft-repeated maxim that induction should proceed from particulars to axioms of a very low degree of generalisation (*axiomata infima*), and thence slowly and gradually, through successive stages of intermediate axioms (*axiomata media*), up to the highest axioms of all (*axiomata maxime generalia*), and that we should never arrive at these last, or indeed at any axioms of any high degree of generality, by sudden leaps. But this method of gradual and continuous ascent is not the method which, for the most part, has been actually pursued by the most successful interrogators of nature. Though a more ambitious process is a common and a perfectly legitimate method of *discovery*, the *proof* of the higher axioms, when established, will generally be found to rest on intermediate axioms, and of these on still lower axioms, and so on, after the manner which Bacon describes. Moreover, when a science has attained anything like completeness, this will always be found to be the most convenient method of exhibiting the relation of its various laws. Though stated too exclusively, therefore, this part of Bacon's doctrine is by no means so untrue to facts or to the reason of the thing as it has sometimes been represented to be.

One of the main peculiarities of Bacon's system was his rejection of the inquiry into final causes, a characteristic of his philosophy for which he has often been severely censured. But it should be noted in the first place that he did not propose to banish this inquiry altogether, but to relegate it from physic, which he supposed to be concerned solely with material and efficient causes, to what he called metaphysic, which was to inquire into formal and final causes, and which would include what we now call natural theology.

It must be admitted that Bacon was not fully abreast of the scientific knowledge of his own day. Much is doubtless to be said in extenuation, but an impartial judge can only advise a plea of 'guilty' on many of the counts in the indictment. He makes no mention, for instance, of Harvey's great discovery of the circulation of the blood, though Harvey had already begun to teach it in 1619, the year before the appearance of the '*Novum Organum*.' Bacon appears never to have heard of the astronomical discoveries recently made by means of Kepler's calculations, and he was singularly ignorant of many facts both in the theory and the history of mathematics and mechanics. But far the most important and perhaps, at first sight, the least excusable of his scientific errors

was his persistent rejection of the Copernican theory. It seems indeed strange that one who laid claim to be the great reformer of science should have steadily refused to admit the greatest reform in scientific conceptions which had been proposed for many generations, and which had already been before the world for eighty years. And, undoubtedly, the discovery by Galileo of the satellites of Jupiter in 1609, as well as the calculations of Kepler announced about the same time (with which last, however, Bacon does not seem to have been acquainted), had considerably added to the evidence in favour of the heliocentric system, even while the '*Novum Organum*' was being written. Still, it cannot be said that, till the laws of formal astronomy were connected by Newton with the physical laws of matter and motion, the motions of the earth or its relation to the rest of the solar system could in any way be regarded as placed beyond the range of dispute. And Bacon certainly did not stand alone in his opposition among the eminent men of that age. Among those of his contemporaries who rejected the Copernican theory were Tycho Brahé (who, however, died in 1601), Vieta, the greatest mathematician of the sixteenth century (who also died as early as 1603), Clavius, who was employed by Gregory XIII to reform the Calendar and was called the Euclid of his age, and possibly, from his silence, the famous mechanician Stevinus.

It would be an injustice to Bacon not to notice that, even in the particular sciences, he threw out many suggestions of rare sagacity, and, in a certain sense, anticipated more recent discoveries. Such were his speculations on colour, his anticipation of the recent theory of heat, his experiment on the compressibility of water, and his wonderful appreciation of the combined unity and variety in nature. To these instances may be added his sagacious and possibly fertile suggestion of a closer union between formal and physical astronomy, as well as of the necessity of combining the explanations of celestial and terrestrial phenomena; the remarkable passage on Attraction, and the ingenious experiment proposed in connection with it, in '*Novum Organum*' (ii. 36, 3); the brilliant conjecture, in '*Novum Organum*' (ii. 46), that the actual state of the starry sky precedes by an interval of time that which is apparent to us, or, in other words, that light requires time for its transmission; the implied criticism of the ordinary doctrine of species contained in a passage on Realism in '*Novum Organum*' (i. 66); and lastly (though this list is by no means exhaustive) the attempt made in the

'Historia Ventorum' to consider the direction of the winds in connection with temperature and aqueous phenomena, on which Humboldt highly compliments him as having thereby laid the foundations of a theory of the currents of the atmosphere.

The philosophical opinions of Bacon, as distinguished from his teaching on logic and the method of science, are mainly to be found in the 'De Augmentis Scientiarum.' It is the object of this book, which was an expansion of two earlier works, the 'Advancement of Learning,' already mentioned, and the 'Descriptio Globi Intellectualis' (a fragment written about 1612, but first published by Gruter in 1653), to note the divisions, the existing condition, and the deficiencies of the various sciences. The 'De Augmentis' abounds in fine thoughts and felicitous suggestions, and the classification of the sciences, which, with comparatively slight alterations, was adopted by D'Alembert in his preliminary discourse to the French 'Encyclopédie,' was the first considerable attempt of the kind, and still remains, notwithstanding all its faults, a remarkable production. 'The object of philosophy,' he there says, 'is threefold—God, Nature, and Man; as there are likewise three kinds of rays—direct, refracted, and reflected. For nature strikes the understanding with a ray direct; God, by reason of the unequal medium (namely, his creatures), with a ray refracted; man, as shown and exhibited to himself, with a ray reflected.' These three branches of philosophy, however, all meet in one trunk, the *Philosophia Prima*, which is, as it were, the common parent of the particular sciences, embodying those axioms and discussing those problems which are not peculiar to any one science, but find their place in all knowledge alike.

On what, for want of a better name, may be called ontological or metaphysical questions, his ordinary attitude is that of a disinterested if not a contemptuous silence. Bacon lived too early or too late to take any serious part in these metaphysical discussions. In their scholastic form they had become discredited, and their new form, under which they were to exercise so much of the best thought of the two succeeding centuries, had not yet been impressed on them by the genius of Descartes. Bacon assumes the ordinary distinction of mind and matter, a universe of objects to be known and a thinking subject capable, with due care and discipline, of attaining to a knowledge of them, without apparently troubling himself as to the ulterior questions, what is knowledge, how can I become conscious of that which is not myself,

and what are the ultimate meaning and relation of the two terms in this comparison.

On questions of psychology, as distinct from metaphysics, we find a fair number of passages in Bacon's writings. The most important perhaps are those in which, following Telesius, the celebrated philosopher of Cosenza (1509–1588), whose works seem greatly to have interested him, he asserts the duality of the human soul. Man, according to this doctrine (which is stated most fully in *De Augmentis*, iv. 3), has two souls, one peculiar to himself, the rational soul which he derives from the breath of God, the other, shared by him in common with the brutes, the irrational soul, which comes from 'the wombs of the elements.' It is, in this connection, worth noting that Bacon makes the profound remark that the origins of the mental faculties should be handled, and that psychologically or physiologically ('idque physice'), a work towards which, as he says, nothing of importance has yet been done.

Bacon's moral philosophy, which is mainly contained in the seventh book of the 'De Augmentis,' has, perhaps, hardly received the attention which it deserves. As logic treats of the intellect, ethics treat of the will. 'The will is governed by right reason, seduced by apparent good; having for its spurs the passions, for its ministers the organs and voluntary motions.' Ethics may be divided into two principal doctrines, one theoretical, treating of the exemplar or image of good, the other (to which he gives the fanciful title of the *Georgics of the mind*) practical, laying down rules for the regulation and culture of the various parts of our nature, so as to bring them into conformity with the image of good, when found. Of this practical side of ethics he complains that, for the most part, it has been passed over, as not enabling men to display the point of their wit or the power of their eloquence. On the theoretical side, he finds fault with previous philosophers for not having carried their inquiries deeper, by searching for the roots of good and evil. He then endeavours to 'open and cleanse the fountains of morality' by examining its fundamental conception of good. Good, he finds, is either public or private, and the appetite to both these kinds of good is native to the human mind, and, indeed, to everything which exists. 'There is formed and imprinted in everything an appetite towards two natures of good: to one nature, inasmuch as everything is a whole in itself; to the other, inasmuch as it is a part of a greater whole. And this latter nature is more worthy and powerful than the former, as it tends to the con-

servation of a more general form. Let the former be named 'individual or self good,' the latter 'good of communion.' Those who are acquainted with the subsequent development of moral philosophy in England will not fail to find in this sentence the germ of one of the leading ideas in the systems of Shaftesbury, Hutcheson, and many other English moralists.

To the fundamental questions of morals, What makes an action right, How do I know that it is right, and Why should I do a right action rather than a wrong one, Bacon supplies no direct answers. Nor did he probably put these questions to himself in this direct manner. But if I may venture, from the fragments of a system which he has left us, to construct answers such as I think he would have given, had the questions been put to him, I would suggest that he might have expressed his views much as follows. An action is right which is good—good, that is to say, either for ourselves or for others, and, wherever the good of self or of a smaller aggregate conflicts with that of a larger one, that action will, generally speaking, be right which promotes the good of the community or of the larger community of the two. I know an action to be right, partly by my reason exercised on its effects and on the effects of actions similar to it, partly also by that 'inward instinct, according to the law of conscience, which is a relic of man's ancient purity,' and partly too by the words of God's Revelation. What impels me to do an action when I know it to be right, is partly obedience to the will of God, hope of His rewards, and fear of His punishments; partly a natural appetite, impressed on me as on all other objects, to seek good, and to seek the greater good rather than the lesser. That two or more inconsistent modes of thought are implied in these answers I am aware. But Bacon and his generation had not yet reached that stage in the history of ethical speculation when thought on these subjects was clear and consistent. Bacon still regarded ethics as the 'handmaid' of theology. Hobbes was the first English writer who treated ethics as an independent science. But he had been anticipated in this respect by Grotius, whose '*De Jure Belli et Pacis*' was published as early as 1625.

The title of founder or father of experimental philosophy, so often ascribed to him by his admirers and so often criticised by his detractors, expresses the nature of Bacon's influence in a rough and perhaps a somewhat exaggerated as well as a somewhat inadequate form, but one which is in the main true.

Bacon called men as with the voice of a herald to lay themselves alongside of nature, to study her ways, and imitate her processes. To use his own homely simile, he rang the bell which called the other wits together. He insisted, both by example and precept, on the importance of experiment as well as observation. Nature, like a witness, when put to the torture, would reveal her secrets. In both these ways Bacon recalled men to the study of facts, and though, in the first instance, he had mainly in view the facts of external nature, the influence of his teaching soon extended itself, as he undoubtedly purposed that it should do, to the facts of mind, conduct, and society.

In order to set men free to study facts, it was necessary to deliver them from the pernicious subjection to authority to which they had so long been enslaved. Here and there throughout the middle ages a solitary thinker like Roger Bacon may have asserted his independence, and, during the century preceding Bacon's time, the murmurs of discontent had been becoming loud and frequent, but it required a voice, like that of the author of the 'Great Instauration,' effectually to awaken men from their slumber. Hardly less important than deliverance from the bondage of authority was the emancipation of reason from the bewitching enchantments of imagination. '*Hypotheses non fingo*' was a maxim which Newton inherited directly from the teaching of Bacon. And, though the reaction against hypothesis was carried much too far, the warning was one which, in his own time, was sorely needed.

Bacon insisted on the necessity of a logic of induction, effecting for the premisses what the old logic, the logic of deduction, effected for the conclusion. And to this logic of induction he himself made no contemptible contributions. That our instances require to be selected and not merely accumulated, was a very true and a very needful lesson which he was never weary of repeating. And, surely, in this maxim consists the whole gist of the inductive logic. On what principles we shall select our instances, and by what means we shall satisfy ourselves of their sufficiency, are other and further questions, confessedly most difficult to answer, on which we could hardly expect much detailed or permanently useful information from a pioneer in this method of inquiry. And yet Bacon is very full on at least the first of these questions, and much of what he says has even still a value for the student.

Nor must we forget the helpfulness of Bacon as an important element in his influence. He stood, like a prophet, on the

verge of the promised land, bidding men leave, without regret, the desert which lay behind them, and enter with joyfulness and hopefulness on the rich inheritance that was spread out before them. The sixth part of the 'Great Instauration,' to which all the rest was subservient, the philosophy itself which was to be the result of the right employment of the method, he hoped only to begin. 'The fortune of the human race,' he says, 'will give the issue; such an issue, it may be, as in the present condition of things, and of the minds of men cannot easily be conceived or imagined. For the object in view is not only the contemplative happiness, but the whole fortunes, and affairs, and powers, and works of men.'

To all these sources of influence we must add the marvellous language in which Bacon often clothes his thoughts. His utterances are not infrequently marked with a grandeur and solemnity of tone, a majesty of diction, which renders it impossible to forget and difficult even to criticise them. He speaks as one having authority, and it is impossible to resist the magic of his voice. Whenever he wishes to be emphatic, there is the true ring of genius about all that he says. Hence, perhaps, it is that there is no author, unless it be Shakespeare, who is so easily remembered or so frequently quoted. Hence, too, perhaps, it is that there is no author so stimulating. Bacon might well be called the British Socrates. Even had his individual precepts been utterly worthless, many men must have owed their first impulse to the study of nature, or to independent investigation in general, to the terse and burning words, issuing, as it were, from the lips of an irresistible commander, with which he urges them to the work.

[In this article free use has been made of the author's 'Francis Bacon,' in the series of English Philosophers, published by Messrs. Sampson Low & Co., as well as of the introduction to his edition of the 'Novum Organum,' published by the Clarendon Press at Oxford. The article Bacon in the British Museum Catalogue is printed separately, and will be found useful for the bibliography.] T. F.

BACON, SIR FRANCIS (1587-1657), judge, was son of 'John Bacon, of King's Lynn, Norfolk, gentleman' (FRANCIS, *Admission to Gray's Inn*), and grandson of Thomas Bacon, of Hessel, in Suffolk. As Hessel belonged to the immediate ancestors of the lord-keeper, Sir Nicholas Bacon, it seems probable that Francis was sprung from the same stock as his illustrious namesakes, being therefore the fifth of that family who attained judicial rank. Born about 1587, he

commenced his legal studies at Barnard's Inn, and was admitted a member of Gray's Inn in Feb. 1607. He was not called to the bar until eight years later in 1615. His name as counsel not being found in any contemporary reports, it has been inferred that his practice must have been either in chancery or in the provinces. In 1624 and 1626 he is mentioned as having contributed considerable sums towards the repair of the font and east window of St. Gregory's Church, Norwich (BLOMEFIELD, *Norwich*, ii. 274). In 1634 he was autumn reader at Gray's Inn (*Gray's Inn Books*); two years later the king granted him the office of drawing licenses and pardons of alienations to the great seal during his life in reversion (RYMER, xx. 123); and in 1640 he was admitted to the degree of serjeant-at-law. In October 1642, the king, being then at Bridgnorth on his way to London, appointed Bacon to a seat in the King's Bench (DUGDALE, *Chron. Ser.* 110), and at the same time knighted him. This appointment seems to have given satisfaction to the parliament, as we find among the propositions tendered by parliament to the king in Feb. 1643, demands for the dismissal of several of the judges, but 'that Mr. Justice Bacon may be continued' (CLARENDON, vi. 231). While Charles was at Oxford, Bacon was one of 'the sworn judges still at Westminster, of which there were three in number,' and presided alone in the King's Bench, as his 'brothers' Reeve and Trevor did in the Common Pleas and Exchequer (*ibid.* vii. 317).

At the important trial of Lord Macguire, in Hilary term 1645, on the charge of high treason for his share in the Irish rebellion and massacre of 1641, Bacon was the only judge, and he appears to have conducted the trial with great patience and fairness. Lord Macguire had demanded to be tried by a jury of Irish peers. 'On this plea at the beginning of Hilary term Judge Bacon delivered his judgment that a baron of Ireland was triable by a jury in this kingdom' (*State Trials*, iv. 665); and this judgment was formally approved of by both houses. One of the counsel for the prosecution desiring 'speedy progress, this being a public case,' was reminded from the bench that 'a public case must have public justice on both sides. . . . We must do that which the law doth allow' (*ibid.* 668). Bacon's determination to discharge his duties impartially is further shown by his committing to prison James Symbal and others 'for speaking of words against the king in time of war' (WHITLOCKE, 269). He continued to sit on the bench until the execution of Charles, but after that event new commis-

sions were issued to the judges, and they were required to take the oath in the name of the people instead of in the king's name. Bacon and five of his brethren 'were not satisfied to hold' on these terms, and had the courage to resign their seats. The other six judges, after some hesitation, agreed to hold office, 'provided that by act of the commons the fundamental laws be not abolished' (*ibid.* 378). After his resignation Bacon lived in retirement until his death on 22 Aug. 1657. Over his grave in St. Gregory's Church, Norwich, a handsome monument was raised by his eldest son Francis, who became reader in Gray's Inn in 1662. By his wife Elizabeth, daughter of William Robinson, he had several children, but the family has long been extinct (WOTTON, *Baronetage*, i. 2).

#### BACON, JOHN. [See BACONTHORPE.]

BACON, JOHN (*d.* 1321), judge, is first mentioned as acting in the capacity of attorney to Queen Eleanor in 1278-9, and is described in certain indentures of the exchequer, dated 1288, as 'clericus Regis' and 'custos rotulorum et brevium de Banco' and 'Regis thesaurarius et camerarius,' his business being to keep a list of the cases argued in the common pleas, and to transmit records thereof, and also 'pedes chirographorum,' i.e. memoranda of fines levied throughout the country, to the treasurers and chamberlains of the exchequer, of the receipt of which the indentures already mentioned were acknowledgments. The 'chirographa,' or fines in question, were fictitious suits, by means of which it was the custom to bar entails and convey the landed property of married women. Bacon seems to have held this post as late as 1309. In 1291 he was entrusted with the charge of Leds Castle in Kent (a royal residence). In 1313 he was appointed to a justiceship of the common pleas, and in the same year we read of his being retained in London to advise the king upon some important matters. In 1314 he was made one of the commissioners of oyer and terminer for the counties of Norfolk and Suffolk, to try certain assessors and collectors of the revenue charged with breach of trust. In 1315 William de Beresford, the chief justice of the common pleas, being suddenly summoned to the king, the business of the court devolved upon Thrikingham and Bacon exclusively. We may conjecture that it was not very promptly or efficiently despatched, for it was but a short time since he had been enjoined to pay a more diligent attention to duty. In 1317

he was summoned with the rest of the judges to parliament at Lincoln, but the invasion of the Scots in that year caused the postponement of the parliament *sine die*. In 1320 he was placed on a commission to try certain persons charged with debasing and counterfeiting the coinage in the counties of Essex, Norfolk, and Suffolk, and in 1321 upon another directed to inquire into offences committed by sheriffs and other legal functionaries under colour of their official duties in the counties of Norfolk, Suffolk, Cambridge, and Huntingdon. He appears to have died in this year, Stonore being appointed justice of the common pleas in his place. He had landed property in Reston, Hemington, Cleydon, and Akenham, places all of them in the county of Suffolk, and also in Essex, and at Shouldham in Norfolk.

BACON, JOHN, R.A. (1740-1799), sculptor, was born in Southwark, 24 Nov. 1740. He was the son of a clothworker of that place, and the descendant of an old Somersetshire family. At the age of fourteen Bacon was apprenticed to a Mr. Crispe, of whom there is but little known except the fact that the young artist modelled groups of figures for him, and was employed in painting upon his plates and dishes. After two years of this service Bacon was able to make all the models required for Crispe's factory. His term of apprenticeship expired in 1762. The accounts of his later connection with Coades's artificial stone works are vague. 'By his art,' says Redgrave, 'he was the means of restoring Coades's manufacture, then falling into disuse.' Anyhow, in 1762 and afterwards, we find him at work in this 'lithodipra' factory, and may believe the repeated assurances that he did much to improve the invention, and stood high in favour with his employers. 'Groups and statues as large as life, coats of arms, sculptured key-stones, wreaths of flowers, and all that species of work known by the general name of ornamental, were here modelled and burnt.' Whilst still an apprentice Bacon gained (1758) a premium from the Society of Arts for a small figure of Peace. Nine times altogether he secured the award of this society, obtaining on one occasion fifty guineas for an emblematic figure of 'Ocean.' On the foundation of the Royal Academy in 1768 Bacon entered

as a student, and removed at the same time from the city to a lodging in Wardour Street. A colossal head of Ossian was the first of his works to attract attention. In 1769 he received from the hand of Reynolds the first gold medal for sculpture awarded by the Royal Academy. His subject was a bas-relief representing 'Æneas escaping from Troy.' He further increased his reputation by a statue of Mars. This work obtained for its artist the gold medal of the Society of Arts, and his election (in 1770) as an associate of the Royal Academy. It attracted the attention also of the Archbishop of York, and so led to a commission for a bust of the king for the hall of Christ Church, Oxford. From that time Bacon's career was one of unbroken prosperity. He was successful in fifteen out of the sixteen public competitions in which he took a part. Amongst his works may be mentioned the monuments to Pitt in the Guildhall and in Westminster Abbey; to Dr. Johnson, and to Howard, the philanthropist, in St. Paul's; to Blackstone at All Souls College, Oxford; the bronze statue of George III, and the two groups and colossal figure of the 'Thames' in Somerset House; and the monument to Mrs. Draper (Sterne's Eliza) in Bristol Cathedral. Bacon wrote the article 'Sculpture' for Rees's 'Cyclopædia.'

Bacon was, to a great extent, a self-taught man. It was said that he had no knowledge of the antique, or power of producing work of a classic character. But this charge he was able to refute by a sculpture which his brother artists mistook for a genuine fragment of antique skill. It was true, however, that his natural bent was not towards classic art. He had no imagination, and little fire of genius; but he had good sense and a quickened commercial instinct, which led to a just apprehension of what was wanted to be done. These qualities, with a delicacy of handling which he owed perhaps to his early employment in the potteries, gave to his works, according to the ideas of his time, a certain quality of simplicity and good taste.

Bacon died in the prime of life from inflammation of the bowels, at his house in Newman Street, on 4 Aug. 1799. He was buried in Whitefield's Tabernacle. His grave bore the following epitaph, written by himself:—'What I was as an artist seemed of some importance while I lived; but what I really was as a believer in Jesus Christ is the only thing of importance to me now.' He was twice married: (1) to a Miss Wade in 1773, who died in 1776; and (2) with undue haste, as his enemies represented it, to Martha Holland, immediately on the death

of his first wife. He left 60,000*l.* to be divided among his five children.

Bacon was agreeable in person, suave in manner, and a methodist of high doctrine and blameless life. His biographer, Cecil, a humble admirer, considers him to have exhibited in all essentials a pattern of excellence. Allan Cunningham's more disparaging view was considered by Bacon's relations to have been coloured by personal prejudice.

[Cunningham's *Lives of the Painters*; Memoir by Robert Cecil, M.A.; Jewitt's *History of the Ceramic Art in Great Britain*; Chaffers's *Marks and Monograms on Pottery and Porcelain*; Redgrave's *Dictionary of English Artists*; Nollekens's *Life and Times*.] E. R.

BACON, JOHN, F.S.A. (1738-1816), spent nearly the whole of his working life in the first-fruits department of the office of Queen Anne's Bounty, and is now remembered by church antiquaries for his improved edition of Ecton's 'Thesaurus,' a detailed account of the valuations of all ecclesiastical benefices which were charged with first fruits and tenths. His first appointment in that branch of the office was as junior clerk to the deputy remembrancer, and he rose to become the senior clerk in 1778 and the receiver in 1782. With these offices he combined the duties of treasurer to the Corporation of the Sons of the Clergy. He obtained the leasehold interest, under the dean and chapter of St. Paul's, of the manor of Whetstone, or Friern Barnet, and when the Land Tax Redemption Act authorised them to effect a sale of their landed property, he purchased the reversion of the manor-house and the whole of their estate in the parish of Friern Barnet. A description of the house and the curiosities which it contained may be found in Lysons's 'Environ of London,' ii. 22. He died in the manor-house 26 Feb. 1816, and was buried in a small vault on the outside of the church. His tombstone in the churchyard records his second son and his son's wife; his only daughter, Maria, was married to Sir William Johnston, of that ilk, Aberdeenshire. His edition of the 'Liber regis, vel thesaurus rerum ecclesiasticarum' was published in 1786, and some severe, but not unjustifiable, comments were made at that time in the 'Gentleman's Magazine' on the omission of any mention in the title-page or the preface of the previous compilation of John Ecton.

BACON, JOHN (1777-1859), sculptor, was the second son of John Bacon, R.A.

At twelve years old he entered the Academy schools, at fifteen he exhibited his first work, at sixteen he gained a silver medal, and at seventeen the gold medal of the Royal Academy. His prize work was a statue of Cassandra. The elder Bacon died in 1799, and John Bacon, junior, succeeded to his business. He finished such works as he found in progress, including the well-known statue of Lord Cornwallis, and was able, besides, to secure ample patronage for himself. He ceased to exhibit at the Academy in 1824. There are six of his monuments in St. Paul's Cathedral, and some in Westminster Abbey. He died in 1859. A brother, THOMAS BACON, also obtained some reputation as a sculptor. He exhibited at the Royal Academy in 1793, 1794, and 1795. The statue of William III in St. James's Square, erected in 1808, was his work.

[Allan Cunningham's *Lives of the Painters*, ii.; Redgrave's *Dict. of Painters of the English School*. E. R.]

BACON, MONTAGU (1688-1749), scholar and critic, was the second of the three sons of Nicholas Bacon, Esq., son and heir of Sir Nicholas Bacon, of Shirubland Hall, Coddtenham, Suffolk, who was one of the sixty-eight knights of the Bath created, 19 April 1661, by Charles II, 'to attend his majesty's coronation' four days later (SALMON, *Chronological Historian*, 1747). Paternally he was descended from the lord keeper Bacon; and maternally from 'the Earl of Sandwich, who, next to Monk, had, I believe, the chief hand in the Restoration; for King Charles, on his first landing, gave him an earldom, a garter, and 4,000*l.* a year in land, besides places to the value of 10,000*l.* a year more' (BACON, *Letter to the Rev. Philip Williams*, 1734). Bacon's mother was the Lady Catherine Montagu, youngest daughter of Edward, first earl of Sandwich, who survived two husbands, and died 19 Jan. 1757 (*Gent. Mag.*), at the advanced age of 98, being at that time the widow of the Rev. Balthazar Gardeman, vicar of Coddtenham. Her son Montagu was born in December 1688 at Coddtenham, and baptised on the 13th of that month (NICHOLS, *Illustrations*, iv. 243). He was admitted a fellow-commoner of Trinity College, Cambridge, in 1704-5, but seems to have taken no degree until the year 1734, when he proceeded M.A. *per litteras regias*, in which he is styled 'Edvardi primi comitis de Sandwich ex filiâ nepos.' It seems that, on the day before his admission to this degree, he wrote to Mr. Williams, as public orator of the university, the letter already cited, in which,

on the ground that the restoration of the royal family was also the restoring of the church, he begs Mr. Williams officially to 'insist chiefly on the services of his family to the church as their greatest honour,' and, if one more word must be said of himself personally, entreats that it might be 'barely this—that he had always been a lover of learning and learned men.' Previous to his graduation, Bacon had resided in Leicestershire, where, as Mr. Nichols surmises, he may have been curate of Newbold Verdun (*Illustrations*, iv. 243), 'the ancient inheritance and seat of the Crewes and Montagues' (*Bibliotheca Topographica Britannica*, viii. 886); to his residence there Bacon refers in the first of three letters to George Jeffreys, Esq., dated from 'Cambridge, 6 Oct. 1732, at Quarles's coffee-house,' in which the writer complains of the university as 'a very dull place,' and professes himself 'mortally sick of all college news.' In the last of these letters, 10 Dec. 1732, Bacon vindicates the genius and character of Malebranche against his detractors, and chiefly those who would charge that philosopher with atheism (DUNCOMBE, *Letters, &c.*, ii. 17-33). In 1743 Bacon was presented by the university of Cambridge, in whose gift it then was, in consequence of the disability of the proper patron, the Duke of Norfolk, to the rectory of Newbold Verdun. 'But he did not long enjoy the rectory, being soon after afflicted with contemporary derangement of intellect, which occasioned his removal to lodgings in Chelsea for the convenience of proper medical assistance; and he relinquished his clerical garb, though he was permitted to retain the rectory till his death, which happened at Chelsea, 7 April 1749' (NICHOLS, *Illustrations*, iv. 243). He was buried at Coddtenham on the 19th of the same month. A 'note' by the Rev. Thomas Martyn, botany professor at Cambridge, records the circumstance that Montagu Bacon's last lodgings were in Manor Street, Chelsea, 'before which he had been in Duffield's madhouse at Little Chelsea, where he was attended by his [Martyn's] father. . . . Mr. Bacon always appeared as a layman. . . . I never apprehended that he was in orders' (NICHOLS's *Literary Anecdotes*, viii. 417). The wide range of Mr. Bacon's studies in poetical literature may be estimated from his statement to Dr. Zachary Grey, that 'not many English or foreign poets had escaped him' (Letter dated 3 April 1746, in NICHOLS's *Illustrations*, iv. 244). His literary work was small in quantity, and may be found in a volume published after his death, entitled 'Critical, Historical, and Explanatory Notes upon

Hudibras, by way of Supplement to the two Editions published in the years 1744 and 1745, by Zachary Grey, LL.D. To which is prefixed a Dissertation upon Burlesque Poetry by the late learned and ingenious Montagu Bacon, Esq. And an Appendix, in which is a Translation of Part of the first Canto into Latin Doggrel,' 8vo, London, 1752.

[Davy's MS. additions to *Graduati Cantabrigienses*; Bacon's Letter to the Public Orator, 1734, in *Gent. Mag.* Jan. 1781, and in Nichols's *Illustrations*, iv. 242; Duncombe's Letters of several Eminent Persons deceased, 1773; Nichols's *Literary Anecdotes*, viii. 417; Collins's *Peerage of England*, 1812, iii. 467-8.]

A. H. G.

BACON, SIR NATHANIEL (A. 1640), painter, was the seventh son of Sir Nicholas Bacon, the first baronet created by James I; who, again, was eldest son of Sir Nicholas, the lord keeper. Walpole confounds the painter with his uncle, Sir Nathaniel of Stiffkey [see BACON, SIR NICHOLAS, *ad fin.*], half-brother of Sir Francis, afterwards lord chancellor, who was sheriff of Norfolk in 1599, and knighted in 1604. The nephew entered Corpus Christi College, Cambridge, in 1621, and graduated M.A. in 1628. He lived at Culford, in Suffolk, on an estate given to him by his father. There is a monument to him in the church there, and one to his wife, Jane Meautys, the widow of Sir William Cornwallis. He is there described as 'well skilled in the history of plants, and in delineating them with his pencil.' Walpole speaks of him as having 'really attained the perfection of a master. He studied painting in Italy, but his style was rather Flemish than Italian. In Walpole's time there were works of his to be seen at Culford, where he lived, and at Gorhambury. At the latter place is a 'Cook-maid with dead fowls,' painted 'with great nature,' and a much-admired portrait of himself. The latter is engraved in the 'Anecdotes' of Walpole. He painted a 'Ceres' and a 'Hercules,' and left some paintings at Redgrave Hall, Suffolk, his father's seat. In a note to Walpole is a recipe for the preparation of a particular 'brown-pinke' colour used by the said Nathaniel, which was 'so very good' that a certain painter, 'P. Oliver, did highly commend it, and used none other to his dying day, wherewith, and with Indian lake, he made sure expressions of those deep and glowing shadows in those histories he copied after Titian, that no painting should appear more warm and fleshy than those of his hand!' He was created a knight of the Bath at the coronation of Charles I, and was

living in 1648 (*Wills at Bury St. Edmunds*, ed. S. Tymms, Camden Soc. p. 216). He had three children, of whom Nicholas and Jane died unmarried, and Anne, his heiress, married, firstly, her cousin, Sir Thomas Meautys, and secondly, Sir Harbottle Grimston. From this second marriage are descended the earls of Verulam, the owners of the famous Gorhambury estate.

E. R.

BACON, NATHANIEL (1593-1660), puritan, was the third son of Edward Bacon of Shrubland Hall, Suffolk, son of lord keeper Bacon by his first wife, and half-brother of the great Francis Bacon [see BACON, SIR NICHOLAS, *ad fin.*]. Nathaniel Bacon was bred to the bar and admitted of Gray's Inn 16 Aug. 1611, of which he became ultimately a bench. He was called to the bar 2 Aug. 1617, and for some time after resided in Essex, and was one of the commission of the peace for that county. Removing to Ipswich he was elected in 1643 recorder of that town, and is said to have been at one time recorder of Bury St. Edmunds also. From the commencement of the struggle between Charles I and the Long parliament he was a zealous adherent of the parliament. He is said to have acted as chairman of the central committee, sitting at Cambridge, of the seven associated counties known as the Eastern Association, formed for common defence against the royalist forces. Certainly he was one of the most active members of the committee for Suffolk. Cromwell began his military career by co-operating with this Eastern Association, and Bacon may have thus early attracted his notice and gained his regard. In November 1645 Bacon was sent to the Long parliament as one of the members for Cambridge University on the occurrence of a vacancy in its representation. In 1647 appeared the work to which he owes his reputation, 'An Historical Discovery of the Uniformity of the Government of England; the first part from the first times till the reign of Edward III.' A 'Continuation . . . until the end of the reign of Queen Elizabeth, with a preface, being a vindication of the ancient way of parliaments in England,' was not published until 1651. With his brother Francis he represented Ipswich in the two protectorate parliaments of Oliver Cromwell, in Richard

Cromwell's solitary parliament, and he sat in the revived Long parliament of 1660. After the establishment of the commonwealth he had been appointed one of the admiralty judges, an office which he exchanged for that of master of requests to the Protector. One of his chief functions appears to have been to act as a medium of communication between Cromwell and his council of state; and this body often commissioned him to inquire into and report on claims, grievances, and other matters brought before them and requiring careful investigation. He remained master of requests during the brief protectorate of Richard Cromwell, and died in 1660. He was buried at Coddensham. It has been said that he received 3,000*l.* for his anti-royalist services, and a salary of 500*l.* a year as master of requests ('The Mystery of the Good Old Cause' in *Parliamentary History*, iii. 1591).

Bacon's 'Historical Discourse' is a sort of constitutional history of England, showing much knowledge of the development of its institutions, civil and ecclesiastical, and pervaded by a strong spirit of hostility to the claims of the royal prerogative and to hierarchical pretensions. For this reason the edition of it, published after the Restoration in 1665, was suppressed by the government, and for the publication of one in 1676 its printer was prosecuted, and had to take refuge abroad. After the revolution of 1688 the edition of 1665 was reissued (in 1689), with the addition of a new title-page, on which the work was represented as having been 'collected' by Bacon 'from some manuscript notes of John Selden, Esq.' The statement seems to have no better foundation than a vague assertion of Chief Justice Vaughan, one of Selden's executors, that the 'groundwork' of the book was Selden's. A fifth edition was issued so late as 1760. The spirit of liberty which it breathed commended it to Lord Chatham, who, in his letters to his nephew, speaks of it as 'the best and most instructive book we have on matters of the kind,' adding that though its 'style' be 'uncouth,' 'the expression is striking and forcible.' Carlyle has surmised (*Oliver Cromwell's Letters and Speeches*, popular edition, iv. 240, note) that 'one of the two Suffolk Bacons, most probably Nathaniel Bacon,' was the writer of the 'Diary' published in 1828 as that of 'Thomas Burton, member in the parliaments of Oliver and Richard Cromwell from 1656 to 1659.' But as the diarist speaks of himself in the first person and of the two Bacons in the third, besides making disparaging mention of at least one speech of Francis Bacon, Carlyle was in all likelihood mistaken in his surmise. Nathaniel Bacon has also been credited with

the authorship of the curious piece (probably a translation), 'A Relation of the fearful Estate of Francis Spira in the year 1548,' an account of an Italian lawyer who, after quitting Romanism for protestantism, reverted to his first creed, suffering in consequence agonies of remorse and coming to an unhappy end. The first edition of it was published anonymously in 1638, and it was not, apparently, until the publication of that of 1665, some years after his death, that it was said on the title-page to have been 'compiled' by Nathaniel Bacon. Many editions of it have been issued, one in 1845 as 'An Everlasting Proof of the Falsehood of Popery.' A translation of it into Welsh appeared in 1820. In the catalogue of the library of the British Museum there are various entries under this Nathaniel Bacon, which properly belong to another Nathaniel Bacon, the Virginian rebel.

[Gent. Mag. lxxiv. pt. ii. p. 807, and xcv. 22; Parliaments of England, 1213-1700, printed as a return to the House of Commons in 1878; Calendars of State Papers, Domestic Series, 1655, &c., 1881-2; Foster's Register of Admissions to Gray's Inn, p. 31; Carlyle's Cromwell; Catalogue of the Library of the British Museum.] F. E.

BACON, NATHANIEL (1642?-1676), Virginian patriot, is vaguely stated in American books to have been a native of London, and to have kept terms at one of the inns of court. From a contemporary pamphlet (*Strange News from Virginia, being a full and true Account of the Life and Death of Nathaniel Bacon, Esq.*, London, printed for Wm. Harris, 1677), we learn that he was the son of Thomas Bacon, of Friston Hall, Suffolk, and thus descended from a younger branch of the great house of Bacon. He entered Gray's Inn 22 Nov. 1664 (FOSTER, *Register of Admissions to Gray's Inn*, 1882, p. 31). About 1673 he married Elizabeth, daughter of Sir Edward Duke, a Suffolk baronet. There appears to be no ground for a statement in the 'Gentleman's Magazine' (lxxxvi. 297) that he did so against his father's wish, 'who violently marked his disapprobation.' On the contrary, the writer of the pamphlet above quoted mentions that he was allowed a 'gentle competency' from his father, which, however, his 'expensive habits' rendered insufficient. Possibly with a view of breaking these off, and also from a spirit of adventure, he emigrated to Virginia, his father supplying him with stock to the value of 1,800*l.* He settled on the plantation of Curles, in the upper part of the James river, on the Indian frontier. Both friends and foes are agreed as to his remarkable abilities, and the grace and charm of his manner. His acquirements as a lawyer

also rendered his advice of great value to the colonists in their disputes with the governor; and the prestige of his descent secured him a large amount of deference. Shortly after his arrival he became a member of the governor's council. His estates being specially exposed to Indian raids, he was one of the foremost in concerting measures of resistance; and he was chosen general by the volunteer colonists. An application was made to the governor for a commission, but as he deferred granting the request, Bacon set out against the Indians without obtaining his sanction. Thereupon he was declared a rebel, but an insurrection in the middle counties compelled the governor to yield to the popular demands. Writs were issued for the election of a new council on a system of wider suffrage. Bacon was elected for his county, and though arrested on his return, he was soon set at liberty, and sat in the assembly which passed the code known as 'Bacon's Laws.' In another expedition against the Indians, he defeated them with great slaughter. The governor, having meanwhile received reinforcements, again declared him a rebel, but, after a stubborn contest, was compelled to take refuge in the English vessels. Jamestown thereupon fell into the hands of Bacon, who, being unable to garrison it, burned it to the ground. While organising further and more comprehensive measures on behalf of the colonists, he died somewhat suddenly in October 1676. He left an only daughter, Mary, who was married to Hugh Chamberlain, M.D., of Alderton Hall, Suffolk, physician to Queen Anne. Oldys in a manuscript note to the article on Mrs. Behn, authoress of 'Widow Ranter, or the History of Bacon in Virginia,' 1690, in Langbaine's 'Dramatic Authors' (letter of Samuel Egerton Brydges, in *Gent. Mag.* lxxiv. 808), attributes to the Virginian the 'Historical Discourse of the Government of England,' 1647, but the date of the publication of the work is sufficient to disprove that he was the author of it.

T. F. H.

BACON, *alias* SOUTHWELL, NATHANIEL (1598-1676), Jesuit. [See SOUTHWELL.]

BACON, SIR NICHOLAS (1509-1579), lord keeper, born in 1509, probably in a house belonging to the parents of Sir Francis Walsingham at Chislehurst, Kent, was the second son of Robert Bacon, of Drinkstone, Suffolk, sheepreeve to the abbey of Bury St. Edmunds. His mother was Isabella, daughter of John Cage, of Pakenham. A younger brother, James, engaged in trade in London; was elected an alderman 24 April 1567; was sheriff in 1568; died 5 June 1573; and was buried in the church of St. Dunstan's in the East (Stow's *London*, 1633, p. 139; *OVERALL'S Remembrancia*, p. 21 n.). There is reason to believe that Nicholas was at first educated at the abbey school of Bury. In 1523 he proceeded to Corpus Christi College, Cambridge, where he obtained a bible-clerkship, and graduated B.A. in 1527. At the university he made friends with two fellow-students, William Cecil, afterwards Lord Burghley, and Matthew Parker, afterwards Archbishop of Canterbury, with both of whom he remained on intimate terms in after life (STRYPE, *Life of Parker*, 8vo, i. 9). Shortly after taking his degree he made a journey to France, and stayed at Paris. On his return he studied common law at Gray's Inn, being called to the bar in 1533, and becoming an 'ancient' of the society in 1536. A little later Archbishop Crammer recommended Bacon to the minister Cromwell for the appointment of town-clerk of Calais. Crammer describes the young man as being of such towardness in the law, and of so good judgment touching Christ's religion, that in that stead he should be able to do God and the king right acceptable service (CRANMER, *Works*, Parker Soc., ii. 384). But the recommendation does not seem to have had any effect. In 1537 he was nominated solicitor of the Court of Augmentations, at an annual salary of about 70*l*. In 1540 he was one of the commissioners appointed to arrange for the dissolution of the chapter of the collegiate church of Southwell. At the time he was described as the solicitor of Cambridge university.

Bacon was desirous that the confiscated revenues of the dissolved monasteries should be applied to useful purposes, and with two friends, Thomas Denton and Robert Cary, drafted a scheme for their employment in the establishment of a college for the education of statesmen. It was proposed to erect a house in London where young men of good family and attainments should be

taught civil law, Latin, and French. Some of the students were to be attached to foreign embassies, and others were to compile histories of official transactions. But the proposal met with little favour, and the monastic estates were distributed among the king's friends. Bacon himself secured a share of the spoils. Lands in Hertfordshire, Norfolk, Wilts, and Hampshire, belonging to the monasteries of St. Albans, Walsingham, and Thetford, and to the unfortunate Countess of Salisbury, who had been executed in 1541, were bestowed upon him in 1543 and 1544. Redgrave Park, Suffolk, one of these estates, he exchanged in the latter year with the king for the manors and woods of Great Holland, Essex, and of Redgrave, Botesdale, and Gillingham, Suffolk, all of which had been the property of the abbey of Bury St. Edmunds. Other lands in Suffolk, Bedfordshire, and London and Westminster soon afterwards fell to him. In December 1544 he obtained a thirty years' lease of the rectory of Burwell St. Mary, Cambridgeshire, and next year he was elected M.P. for Dartmouth. In 1546 he was made attorney of the court of wards and liveries, an office in which he was continued by Edward VI in the following year. In February 1547-8 he was one of the commissioners to survey the suppressed colleges in Norfolk and Suffolk. In 1550 he became a bench of Gray's Inn; and in the same year he was granted by the king a pension of 5*l.* as a 'student at the law' (*Trevelyan Papers*, Camden Soc., *passim*). He purchased the famous estate of Gorhambury, near St. Albans, in 1550. On 24 Oct. 1552 he was chosen treasurer of his inn, and a few months later he obtained from Edward VI a charter of incorporation for the town of St. Albans, of which he was afterwards nominated high steward (*NEWCOMBE'S St. Albans*, p. 481).

Under Mary, Bacon retained his office in the court of wards, and, in spite of his protestantism, escaped persecution. The only restriction placed upon Bacon by the queen's advisers was a prohibition against his leaving England; it was feared that he might enter into dangerous relations with protestant exiles. He was at the time in continual intercourse with his old friend Sir William Cecil, afterwards Lord Burghley, who had married a sister of Bacon's second wife, and in 1557 the friends interchanged visits at their country houses at Redgrave and Burghley respectively.

The accession of Elizabeth brought Bacon into active political life. Cecil was at once created secretary of state, and Bacon, possibly through Cecil's influence, received at

Somerset House on 22 Dec. 1558 the post of lord keeper of the great seal (in the place of lord chancellor Heath). He was afterwards admitted to the privy council and knighted. One of the first duties of his new office was to communicate to his friend Parker the news of his appointment—chiefly at his own recommendation—to the archbishopric of Canterbury, and the queen was content for many years following to leave 'the ordering of church matters for the most part' in the hands of Bacon and Cecil. The reformed religion largely benefited by this arrangement. On 25 Jan. 1558-9, Elizabeth opened her first parliament. Bacon, who by virtue of his office presided in the House of Lords, explained in her presence to the two houses the causes of their assembling, and procured an act for the recognition of the queen's title (*D'Ewes's Journals*, ii.). On 31 March, Bacon, with Heath, archbishop of York, presided over a public disputation at Westminster between champions of protestantism and catholicism. The meeting continued till 3 April, when Sir Nicholas was compelled to dissolve the assembly by the refusal of the catholics to begin the discussion. At first the lord keeper sought to conciliate the disputants by 'words of amity and office,' but he was ultimately roused to anger by the obstinacy of the catholics, and 'at his departure said, "Seeing you are not willing that we should heare you, it is likely that shortly you shall heare of us"' (*HAYWARD'S Annals* (Camden Soc.), pp. 22-3). Two of the disputants, White, bishop of Winchester, and Watson, bishop of Lincoln, were sent to prison, and the rest had to enter into their recognisances to remain in London, and to appear again when summoned. On 14 April 1559 letters patent were issued authorising Bacon, as keeper of the great seal, to hear causes in chancery, and to exercise the full jurisdiction of lord chancellor (*Egerton Papers* (Camd. Soc.), p. 29).

Before 1559 closed, Bacon had shown himself a statesman of no ordinary ability. Cecil was anxious that the queen should aid the Scotch protestants, who were in rebellion against their catholic sovereign, Mary Stuart, and her French friends. The failure of this warlike proposal was mainly due to Bacon's opposition. On 15 Dec. 1559, while addressing the House of Lords on the subject, he forcibly described the impoverished condition of the country, the doubtful wisdom of a policy which should aid subjects to oppose their sovereign, and the criminality of breaking the public peace, especially with so powerful an enemy as France, without adequate provoca-

tion. He acknowledged the danger to England of the establishment of a strong French catholic power in Scotland, but urged delay, at any rate until it was clearly seen how likely it was that this danger would be realised (*Harl. MS.* 398, p. 8). But Bacon was not desirous that England should appear to temporise with catholicism, or should remain a passive spectator of catholic hostilities in Europe whenever action had good chances of success. In 1561 he strongly urged an English alliance with the King of Navarre and the French Calvinists, and in 1562 he opposed in a forcible speech delivered before the privy council in the queen's presence the suggestion that she and Mary Stuart should meet in England to discuss the questions at issue in Scotland, although he was well aware of Elizabeth's desire for the interview (*Harl. MS.* 398, p. 17). At the opening of the parliament of 1563, the lord keeper made another lucid speech describing the internal disorders of the country, the laxity of religious observances, and the dangers to be apprehended from the fanatical Guises in Scotland and France. In 1566 Bacon had to read to the queen at Westminster an address, framed by a joint committee of the two houses of parliament entreating her to marry, or, in case of her refusal to accede to that request, to make arrangements for the succession. When the parliament of 1567 sent a deputation to address her again on the subject, and the speakers added menacing words as to the queen's practice of taking 'money or other things . . . at her own pleasure,' Bacon was ordered by the queen to express her displeasure, and to summarily declare parliament dissolved. He obeyed the command, but Elizabeth supplemented his speech with one of her own.

Bacon was never anxious to pose as the mere spokesman of Elizabeth. In 1564 he fell under her displeasure on suspicion of having prompted the publication of a work entitled 'A Declaration of the Succession of the Crowne Imperiall of England.' The pamphlet was attributed to John Hales, clerk of the hanaper, and in it the claims of the Stuart line were passed over in favour of those of Lady Catherine Grey, granddaughter of Mary, Henry VIII's younger sister, and Charles Brandon, duke of Suffolk. Lady Catherine was out of favour with Elizabeth, and the queen, listening to the suggestions of Dudley, who had no liking for the lord keeper, hurriedly assumed that Bacon was compromised in the matter. She therefore ordered him 'from the court, and from intermeddling with any other thing but Chancery,' and threatened to dismiss him from her service

(STRYPE, *Annals*, 8vo, i. ii. 121; cf. Wood's *Athenæ*, ed. Bliss, i. 405). Elizabeth was right in ascribing to Bacon an increasing distrust of Mary Stuart, but she was wrong in identifying his views on the succession with those of the author of the 'Declaration,' and he was ultimately restored to favour. Bacon afterwards drew up an answer to another vindication of the rights of the house of Suffolk from the pen of Sir Anthony Browne [q.v.], and there he distinctly seconded the claims of the house of Stuart, 'exclusive of Mary Queen of Scots, who had forfeited her rights.' Browne's argument and Bacon's refutation were published together in 1728 under the title of 'The Right of Succession to the Crown of England in the Family of the Stuarts exclusive of Mary Queen of Scots, learnedly asserted by Sir Nicholas Bacon, Lord Keeper of the Great Seal, against Sir Anthony Brown, Lord Chief Justice of the Common Pleas. Faithfully published from the original MS. by Nathaniel Booth, Esq., of Gray's Inn.'

In all the discussions in the English council and parliament as to Mary Stuart, both before and after her imprisonment in England in 1568, he took up a very independent attitude. He became honestly convinced that whatever influence she could command would be used to the injury of protestantism in England, and advocated stringent measures against her. But he was credited with sufficient impartiality as a judge to admit of his appointment to the presidency of two conferences held in London in 1568 and 1570 respectively to consider the fortunes of Mary Stuart and the English relations with Scotland, and in that capacity he is reported to have acted with dignity and propriety. In 1569 he showed himself averse to the proposal to marry her to the Duke of Norfolk, and when in 1570 Elizabeth seemed to incline to her restoration, he spoke so directly against the plan—implying in the course of his speech that her execution might possibly be necessary in the interests of protestantism—as to call forth the rebuke from the queen's lips that 'his counsels were like himself, rash and dangerous.' On 13 Aug. 1570, Bacon in a letter to Cecil pointed out the risks to which Elizabeth exposed herself by allowing a momentary cessation of hostilities between foreign protestants and catholics to lead her to adopt a conciliatory policy towards Mary Stuart and her friends. Early in the next year he declared that, 'if,' as was still contemplated, 'the Queen of Scots was restored, in three months she would kindle a fire which would wrap the island in flames, and which the power of man would fail to

extinguish.' In Bacon's speech at the opening of the parliament of 1571, he confined himself to a vigorously worded appeal for liberal grants of money to put the country in an efficient state of defence against its numerous enemies.

A difficulty has been raised as to Bacon's views on the queen's marriage during the last years of his life. An elaborately argumentative paper printed among the 'Egerton Papers' (pp. 50-7), under date 1570, and doubtfully attributed to the lord keeper, discusses fully 'the discommodities' and 'the commodities that might ensue from' Elizabeth's proposed marriage with the Duke of Anjou; and although the religious consequences of the match are not dwelt on, as Sir Walter Mildmay, to whom it was addressed, rightly remarked, its general conclusion is in favour of the French alliance. Mr. Froude (x. 488-9), quoting a Spanish despatch, asserts that after Bacon's death a letter was found in his desk written in 1577, in which a French marriage was denounced as having for its object the death of the queen and the liberation of Mary Stuart. This opinion is certainly more in accordance with the tenor of Bacon's general policy than the former. But Sir Nicholas was well able to look at a question judicially; and the first paper, if we admit him to have been the author of it, may be regarded as a tentative examination of the subject in all its bearings, and no final expression of opinion. It was clearly not intended for publication. In 1572 Bacon, confirmed in his habitual distrust of the French catholics by the St. Bartholomew massacre, supported a bill for the expulsion of all French denizens from this country. Such conduct as this made Bacon the butt of all catholic libellers concealed in England or living openly abroad. In 1573 a royal proclamation against the publication of catholic libels was issued, in which the services of Bacon to the state and to religion were highly commended.

Meanwhile Bacon was endeavouring to strengthen the position of the church in England. In the parliament of 1570 he had suggested sensible means for the better observance of doctrine and discipline in the church. On the latter question he always offered judicious counsel, and the only recorded quarrel which he had with his friend Parker concerned the archbishop's occasional laxity in this matter. Parker at the time charged Bacon with being 'a passionate man,' but the friends were reconciled before Parker's death in 1575, when he affectionately remembered Bacon in his will.

Sir Nicholas died in London at his resi-

dence, York House by Charing Cross, on 20 Feb. 1578-9, 'about eight in the morning' (*Hist. MSS. Com. Rep.* iv. 336). According to an old story, reported by Dr. Rawley, Francis Bacon's biographer, he owed his fatal illness to the carelessness of his barber, who allowed him to fall asleep with a draught blowing full upon him (F. BACON'S *Works*, ed. Spedding, vii. 183). Bacon had arranged in 1574 for his burial in St. Paul's Cathedral, and a letter, dated 4 Aug. 1574, among the manuscripts belonging to the chapter (from Alexander Nowell, dean of St. Paul's), directs the lord keeper's workmen to have access 'at all tymes convenient into the south syde of the queare at Powles . . . to make roome for his lordships toombe there to be sett upp' (*Hist. MSS. Comm. Rep.* ix. 71). In this tomb Sir Nicholas was buried on 9 March, and upon it was engraved a laudatory epitaph (see WEEVER'S *Funerall Monuments*, 812). 'The whole charges of the funerall'es' reached the large sum of 919*l.* 12*s.* 1*d.* (BLACK'S *Ashmole MSS. Cat.* No. 886, ff. 21, 23-36, 73-4).

Sir Nicholas began his famous house at Gorbambury in 1563. It was completed in 1568, and in these five years he spent upon it, exclusive of the timber and stone which came from his estates, 1,894*l.* 11*s.* 9*d.* (*Bacon MSS.* in Lambeth Library, 647, ff. 5 and 9). Over the entrance were inscribed the verses:

Hæc cum perfecit Nicholaus tecta Baconus,  
Elizabeth regni lustra fuere duo;  
Factus eques, magni custos fuit ipse sigilli.  
Gloria sit soli tota tributa Deo.

Beneath the lines was Bacon's motto, 'Mediocria firma.' On the walls of the chief banqueting room were Latin verses by Bacon on grammar, arithmetic, logic, music, rhetoric, geometry, and astrology (WEEVER'S *Fun. Mon.* 584). He added a gallery to the house before 1576 in honour of an approaching visit of the queen. Elizabeth frequently stayed at Gorbambury, and before its erection she had visited Bacon at Redgrave. She was at Gorbambury in 1572 and in 1573, and presented to the lord keeper a portrait of herself, painted by Hilliard, on her first visit. In May 1577 she stayed there for six days and received a very sumptuous entertainment, on which Bacon spent 600*l.* On that occasion Sir Nicholas caused the door by which the queen had entered to be nailed up, so that no one might ever pass over the same threshold. In London Bacon lived before he held office in Noble Street, Foster Lane, in a house built by himself. After 1558, York House, near Charing Cross, became his official residence.

Sir Nicholas enjoyed a wide popularity in his lifetime, and his death was celebrated in

many poetical effusions. George Whetstone was the author of a long poem entitled 'A Remembrance of the woorthie and well imployed life of the Right Honourable Sir Nicholas Bacon, Knight . . . who deceased the 20th daye of Februarie 1578 [-9].' This interesting encomium was reprinted in 1816 in the 'Frondes Caducæ.' Another panegyric in verse, by L. Ramsey, was called 'A short discourse of Man's fatal end, with an unfained commendation of the worthiness of Sir Nicholas Bacon.' It was printed as a broadside in 1578, and was republished in Farr's 'Select Poetry' (Parker Society) in 1845.

Bacon's political opinions bore the stamp of honest conviction, and he could express them with a fluency and directness which nearly made him a great orator. Puttenham in his 'Arte of Poesie,' 1589 (ed. Arber, p. 152), praises 'his grave and naturall eloquence,' and asserts that 'in deede he was a most eloquent man' (*ibid.*). Nash in 'Pierie Penilisse,' 1592 (ed. J. P. Collier, p. 46), writes: 'What age will not prayse immortal Sir Philip Sidney . . . together with Sir Nicholas Bacon, lord keeper, and merry Sir Thomas More, for the chiefe pillars of our English speech?' His 'rare learning and wisdom' were also generally commended. 'I have come to the lord keeper, Sir *Nicholas Bacon*,' says Puttenham, 'and found him sitting in his gallery alone with the works of *Quintillian* before him.' Naunton calls him 'an archpiece of wit and wisdom' (*Fragmenta Regalia*, ed. Arber, p. 38), and Parker attests his readiness to aid him in his antiquarian pursuits (STRYKE's *Parker*, i. 522-3). His interest in education was far in advance of his age. We have seen that the subject interested him at the time of the dissolution of the monasteries. Later in life—in 1561—he sent to Sir William Cecil an admirable memorandum on the desirability of reforming the court of wards, and of reorganising the education of the minors under its control. There he sketched out a very wise system for the training of young men and women, not only in literature and the arts, but in morals and athletic exercises (J. P. COLLIER in *Archæologia*, xxxvi. 339). In the same year he founded a free grammar school at Redgrave. Just before his death he gave 200*l.* towards the erection of a chapel for his old college of Corpus Christi, and by his will created six scholarships to enable poor scholars from his school at Redgrave to study at Cambridge. He made frequent contributions of books to the university library.

His knowledge of law was remarkably full and sound. The rights of the court of

Chancery he justly upheld in his little pamphlet called 'Arguments exhibited in Parliament whereby it is proved that the Persons of Noblemen were attachable by Law for Contempts in the High Court of Chancery,' which was printed from his manuscript in 1641. He was anxious to simplify the arrangement of the statutes, and to print them so as to make them generally accessible (*Harl. MS.* 249, p. 117*b*). The cursitor's office in Chancery Lane was erected by him. The advantage he derived from his legal training in his general administrative work is well indicated in an extant paper on the royal revenue addressed to Sir Walter Mildmay, the chancellor of the exchequer, about 1564. His patience, courtesy, and straightforwardness on the bench made him popular with suitors (cf. CAMPBELL, *Chancellors*, ii. 213). As to his general character, Hayward, a contemporary, describes him as 'a man of greate diligence and ability in his place, whose goodnesse preserved his greatnesse from suspicion, envye, and hate' (*Annals* (Camden Soc.), p. 13; cf. CAMDEN's *Annales*, sub 1579). Lloyd in his 'State Worthies' (p. 471), attributes to him the maxim, 'Let us stay a little that we may have done the sooner,' and thus sums up his administrative capacity: 'His account of England and all affaires was punctual; his use of learned artists continual; his correspondence with his fellow-statesmen exact; his apprehension of our laws and government clear; his model of both methodical; his faithfulness to the church eminent; his industrious invention for the state indefatigable.' But his cheery humour was doubtless his most attractive characteristic. His good-natured repartees were far famed, although most of their wit has now evaporated. Many of them are preserved in Francis Bacon's collections of 'Apophthegms.' On one occasion when the queen visited him at Gorhambury, she remarked, 'My lord, what a little house you have gotten!' and Bacon replied, 'Madam, my house is well, but it is you who have made me too great for my house' (BACON's *Apophthegms*, in Spedding's edition of the *Works*, vii. 144). He conscientiously avoided the danger of jesting at his friends' expense. 'He had a very quaint saying, and he used it often to good purpose—that he loved the jest well, but not the losse of his friend' (NAUNTON, p. 38).

In person Bacon was (in Camden's phrase) 'exceeding gross-bodied.' As Elizabeth said of him, 'his soul lodged well' (NAUNTON, p. 38). The unwieldiness of his body is frequently the subject of amusing comment in his own letters. A portrait of Sir Nicholas by Zuccherro has been often engraved, and a

coloured terra cotta bust besides two portraits are at the modern Gorhambury house.

Bacon was twice married, first to Jane, daughter of William Fernley of West Creting, Suffolk, by whom he had three sons, Nicholas, Nathaniel, and Edward, and three daughters, Anne, Jane, and Elizabeth. His second wife was Ann [q.v.], daughter of Sir Anthony Cooke, by whom he had two sons, Anthony [q.v.] and the illustrious Francis [q.v.].

Of the lord keeper's first family, NICHOLAS, of Redgrave, Suffolk, a student of Gray's Inn, was admitted 15 Dec. 1562 (in which year he was elected M.P. for Beverley), becoming an 'ancient' 21 Nov. 1576; was knighted by Elizabeth at Norwich on 22 Aug. 1578; was high sheriff of Suffolk in 1581; was M.P. for the same county from 1572 to 1583; was created the premier baronet of England by James I on 22 May 1611, died 22 Nov. 1624, and was buried at Redgrave. Seven sons survived him, and he was succeeded in the baronetcy by Edmund, the eldest of them, a friend and correspondent of Sir Henry Wotton, whose niece, Philippa, he married. His will is printed in 'Bury Wills' (*Camden Soc.* p. 211). On Sir Edmund's death without issue, in 1649, his brother Robert became third baronet. A third brother, Butts, of Mildenhall, Suffolk, was himself created a baronet in 1627. Nicholas of Gillingham, fourth son of the lord keeper's son Nicholas, was also created a baronet in 1616, but this baronetcy became extinct in 1685. In 1755 Richard, eighth baronet of Mildenhall, became seventh baronet of Redgrave, and thus united the honours of both branches of the family (*Bury Wills*, p. 266). The title is still held by lineal descendants of the lord keeper.

NATHANIEL, the lord keeper's second son, usually described as of Stiffkey, Norfolk, was admitted to Gray's Inn on 15 Dec. 1562; became an 'ancient' of the society on 21 Nov. 1576; was M.P. for Tavistock in 1571 and 1572, for Norfolk in 1584 and 1593, and for Lynn in 1597; was sheriff of Norfolk in 1599; was knighted at Whitehall on 21 July 1604; was M.P. for Norfolk the same year; and died 7 Nov. 1622, at the age of seventy-five. He erected a monument to his two wives in 1615, in Stiffkey Church, where he is also buried. A will drawn up by him in 1614, when he believed himself to be dying, is printed in the 'State Papers Calendars.' He left no male issue, and his eldest daughter, Anne, married Sir John Townshend, the ancestor of the marquises of Townshend. A number of manuscripts in his handwriting, chiefly dealing with his estates, are among the Townshend papers.

EDWARD, the lord keeper's third son, usually

described as of Shrubland Hall, Suffolk, became 'ancient' of Gray's Inn on 21 Nov. 1576; was M.P. for Yarmouth (1576-83), for Tavistock (1584), for Weymouth (1586), for Suffolk (1592-3); was sheriff of Suffolk in 1601; was knighted on 11 May 1603; died 8 Sept. 1618, and was buried at Banham.

Lamb; *Strype's Annals and Life of Parker*; *Foss's Judges of England*, v. 447; *Foster's Register of Admissions to Gray's Inn*; *Burke's Peerage and Baronetage*. Mr. J. P. Collier, in *Archæologia*, xxxvi. 339 et seq., described a number of manuscript speeches and memoranda by Sir Nicholas in his possession. Other manuscripts of speeches and letters are to be found among the Harleian, Lansdowne, and Cottonian MSS. at the British Museum, in the Cambridge University Library, and among the papers at Hatfield. Sir Nicholas's name appears frequently in the archives of Ipswich, where the burgesses often entertained him (cf. *Hist. MSS. Com. Rep.* ix. 250-1). A ludicrous attempt to identify Bacon with the original of two of Shakespeare's characters—Hamlet's uncle Claudius and Sir John Falstaff—was made in *Notes and Queries*, 3rd ser. iii. 83, 105. Other references are given in the text.] S. L.

BACON, PHANUEL (1700-1783), divine and dramatist, the son of Phanuel Bacon, fellow of St. John's College, Oxford, vicar of St. Lawrence's, Reading, and author of 'A Pastor's Admonition to his Parishioners' (Reading, 1727-8), was born on 13 Oct. 1700, at Reading, was a demy of Magdalen College, Oxford, and proceeded B.A. 12 June 1719, M.A. 17 April 1722, B.D. 29 April 1731, and D.D. 9 Dec. 1735. He became vicar of Bramber, in Sussex, and rector of Balden, in Oxfordshire, at which place he died 10 Jan. 1783. His literary efforts won for him a reputation which, small as it is, is now difficult to understand. The 'Kite,' a poem, first published in 1719, appears in the 'Gentleman's Magazine' for 1756, not in 1758, as Watt, in the 'Bibliotheca Britannica,' states, and all subsequent writers repeat. It is an ingenious mock-heroical poem, in the style of the 'Rape of the Lock.' A humorous ballad, called the 'Snipe,' is printed in the 'Oxford Sausage.' In this, which is said to be founded on fact, the author depicts himself in the character of the friar, and his fellow-collegian, Peter Zinzan, M.D., in that of Peter. A 'Song of Similes,' also by him, is found in the same compilation. His most considerable effort consists of five plays: 1. 'The Taxes,' a dramatic entertainment; 2. 'The Insignificants,' a comedy; 3. 'The Tryal of the Time-Killers,' a comedy; 4. 'The Moral Quack,' a dramatic

satire; 5. 'The Oculist,' a dramatic entertainment. These all bear the date of 1757. They were collected in a volume, entitled 'Humourous Ethics.' Some praise has been accorded these works. They are, however, sufficiently feeble productions, without a pretence to dramatic value or significance. In the 'Insignificants' characters named Sir Tunbely Epicure, Hazard, Butterfly, Rattle, Lady Racket, &c., bearing names indicative of worldly pursuits, are convicted, on account of the triviality of their occupations, of being dead, and are buried in the Repository of Insignificants. In the 'Tryal of the Time-Killers,' Methusalem Rust, Esq., Sir Barnaby Bumper, Seigneur Violoncello, &c., are tried for injuring Timothy Time, watch and clock maker. The other plays are similar in character.

**BACON, PHILEMON** (d. 1666), captain in the royal navy, was made a lieutenant in 1661, and in 1664 was advanced to be captain of the *Nonsuch*. In 1665 he commanded the *Oxford*, a ship of the fifth rate, in the action of 3 June with the Dutch off Lowestoft; the following year he was in the *Bristol*, and led the van when the English and Dutch fleets engaged off the North Foreland on 1 June. Of the many brave men who were slain in that bloody and protracted battle, Captain Bacon was one of the first.

[Charnock's *Biog. Nav.* i. 93.] J. K. L.

**BACON, RICHARD MACKENZIE** (1775-1844), journalist, musician, and miscellaneous writer, was born at Norwich in or about 1775, and laid the foundation of a classical education at the free school of his native city. Turning his attention to literature, he became connected with the 'Norwich Mercury,' one of the leading provincial organs of liberal opinion, in his eighteenth year, and from 1816 until his death was unremittingly engaged in editing that journal, of which he was principal proprietor. In 1813 he and Bryan Donkin obtained a patent for certain improvements in the implements or apparatus employed in printing, whether from types, from blocks, or from plates. In the 'Norwich Mercury' of 30 Nov. 1814 is a prospectus of Bacon's printing machine, with an account of the progress it had then made. The invention is highly praised by the author of the article 'Printing' in Rees's 'Cyclopædia' (1819), who says: 'A patent has recently been obtained by Messrs. Bacon and

Donkin for a machine which they publicly exhibited before the university of Cambridge, and they are now making one for printing bibles and prayer-books at the university. We have examined their machine at work, and found it to display so much mechanical ingenuity, and to produce such beautiful specimens of printing, with a rapidity unequalled by any other means, that we have made a drawing of it.'

He was also the proprietor and projector of the 'Quarterly Musical Magazine and Review,' which he began to publish in London in 1818, and continued to edit for ten years. It was principally owing to his exertions that the Norwich Musical Festival was established. Mr. Chappell remarks (*Popular Music of the Olden Time*, 142 n.) that Bacon's 'memory was so stored with traditional songs, learnt in boyhood, that, having accepted a challenge at the tea-table to sing a song upon any subject a lady would mention, I have heard him sing verse after verse upon teaspoons and other such themes, proposed as the most unlikely for songs to have been written upon. He had learnt a number of sea songs, principally from one old sailor, and some were so descriptive that it was almost thrilling to hear them sung by him. Seventeen years ago these appeared to me too irregular and declamatory to be reduced to rhythm; but I have since greatly regretted the loss of an opportunity that can never recur.'

Bacon died at Cossey, near Norwich, 27 Nov. 1844.

His principal works are: 1. 'Life of Pitt,' Norwich, 1806. 2. 'Pamphlet relative to the Regular, the Militia, and the Volunteer Forces, in reply to the Right Hon. William Windham, Ipswich, 1806. 3. 'Independent Remarks on the Queen's Case,' Norwich, 1820. 4. 'Reply to Mr. Cobbett,' Norwich, 1822. 5. 'Address to the People on Stack-burning,' 1822. 6. 'Elements of Vocal Science, being a philosophical inquiry into some of the principles of singing,' London, 1824, 8vo. 7. 'Letter to Edward, Lord Suffield, upon the Distress of the Labourers and its Remedy,' London and Norwich, 1831. 8. 'Letters to the Viscount Stormont and Sir James Scarlett, Knt.,' on the bribery and corruption practised at the Norwich election, London and Norwich, 1831. 9. 'A Memoir of the Life of Edward, third Baron Suffield,' Norwich, 1838, 4to (privately printed). 10. 'A Musical Dictionary,' completed but never published.

[Norwich Mercury, 7 Dec. 1844; Norfolk Chronicle, 30 Nov. 1844; Timperley's Dict. of Printers, 852, 857; Chappell's Popular Music of the Olden Time, 141; Rees's Cyclopædia, art.

**BACON, ROBERT** (*d.* 1248), first Dominican writer in England, was, according to some accounts the brother, according to others the uncle, of his more famous namesake Roger, with whom he has by our earlier biographers been very commonly confounded. To quote Fuller's words, we may in 'this Robert Bacon behold the senior of all the Bacons which, like tributary streams, have disembugued themselves with all the credit of their actions into Roger Bacon, who in process of time hath monopolised the honour of all his sirname-sakes,' and the chief task of his biographer is to assign to him those actions which seem to be his due. Of the date of Robert's birth we have no certain indication, but as he is described as already an old man in 1233, we shall probably not be far wrong if we assign it to the middle of Henry II's reign (1160-70). He was educated at Oxford, where he was first the pupil and afterwards the friend and fellow-lecturer of Edmund Rich, of whose life he afterwards wrote at least one account. Like Rich and so many other of his contemporaries he passed with his bosom friend, Richard Fishaker, to study at Paris, and is said always—even when in later life once more resident at Oxford—to have kept up a constant communication with the confraternity of learning there. According to the 'Biographia Britannica,' in 1233 he succeeded Edmund Rich as treasurer of Salisbury Cathedral. But, be this as it may, he had certainly by this time joined the order of the Dominicans (which had already been some twelve years settled near Oxford), and was lecturing in the new schools they had founded in St. Edward's parish. It was in this year that the most important of his recorded acts took place.

Henry III had sent a second and a third summons to his baronage to meet him at Oxford, but they, justly incensed at his notorious fondness for foreigners and subservience to his two stranger favourites, Peter des Roches, bishop of Winchester, and Peter de Rivaux, refused to appear. It was in this time of waiting and suspense that Robert Bacon, one of the new order of friar preachers or Dominicans who had been chosen to preach before the king and his assembled bishops, had the boldness to tell Henry to his face that he would never enjoy lasting peace until he had banished Peter des Roches (*Petrus de Rupibus*) and his fellows from his councils. To this advice

many of those present assented, and, after a while, the king himself acknowledged the wisdom of the course recommended; whereupon, seeing the king in so gracious a mood, a certain clerk attached to the royal court, called by the old authorities Roger Bacon, asked a sarcastic riddle: 'Lord king, what is the greatest danger to those who are crossing the straits?' Henry made answer in the words of Scripture that they could tell whose business was on the great deep. 'Nay, my lord,' answered the clerk, 'I will tell thee—*Petræ et Rupes*'—a bitter allusion to Peter des Roches. It seems almost certain that the Roger here must be a mistake. Roger Bacon cannot at this time have been old enough to play such a part, and was then a young student at Oxford or elsewhere. Moreover, as there is clear evidence that the first half of this story (which on the best manuscript authority belongs to Robert) has been attributed to Roger Bacon by later mediæval writers, we can hardly be wrong if we bear Fuller's words in mind, and with him read Robert in the second instance as well as in the first.

Robert Bacon, then, was a Dominican friar in 1233, and to this fact we may add that although an old man upon entering that order he did not desist from his public lectures. His friend Richard Fishaker was associated with him in this work—a pair of friends so devoted to one another that Leland says writers of that age never disassociated their names, and that even death could not divide them. Both died in the same year, 1248, and were buried in the church of their order at Oxford. Matthew Paris considers their decease worthy of a place in his history, adding that it was the common opinion of that age that no contemporary writers surpassed or even equalled these two, whether in theology or other branches of learning, and paying a final tribute to their great zeal in the work of public preaching.

In addition to the above facts a few others may be gleaned from stray letters of the period. It is probable that it is to Robert Bacon and not to Roger that Thomas de Eccleston alludes (*Brewer, Mon. Franc.* 56) as having entered the order of friar preachers on the first day without a year's novitiate. The manuscript has R. Bacon, but the context seems to show that the date of the occurrence was under Gregory IX, at which time Roger would be too young; the person alluded to is spoken of as '*bonæ memoriæ*,' a phrase which could hardly be applied to one still living, as Roger would be at that time; and, lastly, the whole preceding passage has reference to the '*Frates Prædica-*

tores,' of which body Robert was a member, whereas Roger Bacon was a Franciscan. Again, Grosseteste, in a letter to William de Raleger, refusing to appoint the latter's nephew—a boy not yet out of his Ovid—to a cure of souls, calls Robert Bacon to witness that he is willing to allow the lad ten marks a year out of his private purse. Here, again, we have Roger in the manuscript, but the date (1235?) clearly puts him out of court, and in Luard's edition of the bishop's letters the story is indexed to Robert. In any case Robert Bacon, the first Dominican writer in England (Wood, *Annals*, i. 192), can hardly fail to have been a friend of Robert Grosseteste, the great patron of the new orders; nor this last to have been acquainted with one who was, as Trivet tells us, the ruling theological power at Oxford.

The list of Robert Bacon's works, as given by Bale, includes a 'Liber in sententiis Petri Lombardi,' 'Lectiones Ordinariae,' 'Liber super Psalterium.' To this list Anthony à Wood adds a work called 'Syncategorem,' on the manuscript of which the words 'Roberti Baconis' are said to appear. Robert Bacon was the author of at least one life of his friend and master, Edmund Rich, which has been identified with the MS. c. 12, 9 at St. John's College, Cambridge. A fragment, or fragment of an abridgment, of it is at the end of Lambeth MS. 135 (see WILFRID WALLACE, *St. Edmund*, 1893, pp. 5-6). Portions of the life are probably worked up—with, however, an entire alteration of style—into Surin's 'Life of St. Edmund' (iv. 368, 16 Nov.).

[Leland, Bale, and Pits, under Robert and Roger Bacon and Richard Fitzacrius; Matthew Paris, iii. 244, v. 16, 369; Trivet's *Annales* 229; Brewer's *Mon. Franc.* 66; Luard's *Epistolæ Grosseteste*; Hardy's *Cat.* 87, 93, 108; *Biographia Britannica*; Moreri, i., under Robert Bacon. For a list of the various Bacons flourishing about the same time see Wake's *Rex Platonius*, 208-10; Wood's *Annales*, i. 192, &c.; and authorities cited above.] T. A. A.

BACON, ROGER (1214?-1294), philosopher, was born at or near Ilchester, Somersetshire, about 1214. The materials for his life consist, in the first place, of the traditional records, partly drawn from early writers on the history of his time, but to a large extent without any satisfactory foundation; and, in the second place, of the somewhat numerous references, autobiographical in character, contained in his published or unpublished writings. The more important of these writings have only in recent times become the object of study, and the task of the biographer is largely the correction of the earlier tradition by means of the indications so af-

forded. An interesting but incomplete summary of the older material is furnished by Anthony à Wood; a more enlightened survey by Jebb in the preface to his edition of the 'Opus Majus' (1733); the latest researches have borne good fruit in the works of Brewer and Charles (cited under). Doubtless some obscure points may yet be cleared up by more thorough study of the manuscripts than has yet been undertaken, but it is not probable that there can ever be given more than a scanty outline of the life and labours of a very eminent English thinker.

Bacon's family seems to have been in good circumstances, but to have suffered severe reverses during the stormy reign of Henry III (*Op. Ined.* p. 16). He speaks of one brother as wealthy, and of another as a scholar (*Op. Ined.* 13), but there is no means of establishing any relation between these and certain others of the same name commemorated in the history of the time. Robert Bacon, the Dominican, who lectured at Oxford, may have been an uncle of Roger, but could hardly have been his brother. There is no reason to doubt the tradition that he began his university studies at Oxford, and if the report by Matthew Paris (*Hist. Maj.* 1644, p. 265) of the ironical riddle proposed by him to Henry III be accepted, he must have been at Oxford and in orders in 1233. How long he remained at Oxford there is no record to determine; sufficiently long, however, to have known and appreciated some of the able teachers who then gave the university its renown—Robert Grosseteste, Adam de Marisco, Richard Fitzacre, and Edmond Rich—and to have been influenced by them in the direction of positive science, natural and linguistic. As the length of his stay at Oxford is uncertain, so the date of the next event in his life, transference to the university of Paris, cannot be definitely fixed. From his own references to his study at Paris, his first residence there must have terminated about 1250 (CHARLES, p. 10). Tradition has assigned to him the usual brilliant career of an eminent teacher in a mediæval university. He is said to have graduated with distinction as doctor, to have attracted students by his lecturing, and to have been known by the significant cognomen of 'doctor admirabilis' (Wood, as in BREWER, *Op. Ined.* pref. p. lxxxvi). But the historians of the university of Paris know or say little of him, and from the way in which he himself refers to his Paris studies it may be inferred that, though he certainly gained high reputation, his withdrawal from the ordinary current of thought was so complete as to render him in no special sense a brilliant light in the scholastic firmament.

His contempt for the kind of work by which honour was there gained is unmeasured, and for his own part, with such aid as was afforded by the increasing knowledge of the Arab writers, he devoted himself to acquiring a knowledge of languages, and to experimental researches, partly in alchemy, partly in optics.

About the year 1250 Bacon seems to have returned to England, and though no details are known of the next definable period of his life extending up to 1257, the tradition may be accepted that he spent the time mainly at Oxford. The legendary connection between his name and the university of Oxford doubtless dates from this residence. That he had left Oxford in 1257 is attested by Bacon himself (*Op. Ined.* p. 7), but of the surrounding circumstances extremely little is known. The immediate occasion was the suspicion of his superiors in the Franciscan order, who, perhaps even before the date given, had put him under surveillance, and in 1257 sent him to Paris. At what time or for what reasons he had joined the Franciscan order, there are no means of determining. As he refers pointedly to the fact that he had not written anything 'in alio statu,' we may conjecture that he did not enter at a very early age. It was under the generalship of John of Fidanza, better known as Bonaventura, that Bacon was placed under restraint, and for ten years he was kept in close confinement in Paris. During that time he was denied all opportunity of writing; books and instruments were taken from him, and the most jealous care was taken that he should have no communication with the outer world.

Partial relief came from an unexpected quarter. In 1265 Guy de Foulques, who had in the previous year acted as papal legate in England, was raised to the papal chair as Clement IV. During his residence in England he had made various attempts to communicate with Bacon, and had solicited from him a general treatise on the sciences which rumour spoke of as completed. Bacon, who had no such general treatise ready, had been unable to reply to the friendly request, but, after the elevation of Guy de Foulques, was successful in privately laying before him a statement of the circumstances which had prevented his earlier reply. In answer the pope sent a letter enjoining Bacon to forward to him secretly and privately any writing he could prepare, notwithstanding all injunctions to the contrary of his superiors (the letter is given in BREWER's *Op. Ined.* p. 1).

The opening chapters of the writing called 'Opus Tertium' give a very vivid picture

of Bacon's circumstances when he received this mandate, of the joy with which he hailed the opportunity afforded to him, of the manifold difficulties in the way of completing the work on which he forthwith entered, and of the plan he adopted for laying the substance of his reflections before his friendly auditor. Deeply impressed with a sense of the unity of the sciences, he thought it well first to treat in a general way of the various parts of human knowledge, giving a conspectus or compendious view of the whole before approaching the detailed treatment of the parts. This general view forms the 'Opus Majus,' and apparently the composition and copying must have been accomplished within a wonderfully brief space of time. For within almost two years from the time of receiving Clement's mandate, Bacon, in the 'Opus Tertium,' refers to the 'Opus Majus' as already sent off, and also to a subsequent writing, the 'Opus Secundum,' or 'Opus Minus,' in which an abridgment of the larger work had been given, with a special treatment of some essential subjects omitted either by design or by pressure of circumstances. Still desirous of conveying his thought in such a way as to win the ear of his powerful patron, Bacon forthwith began a new treatment of the whole, and in these seventy-five chapters printed under the title of the 'Opus Tertium' we have at least a portion of his new treatment. The 'Opus Tertium' in its printed form contains an expanded summary of the main portions of the 'Opus Majus,' but as it makes frequent reference to other writings which were intended to be laid before Clement, it is probable that we have in it only a fragment of a larger work. Evidently during the composition of the 'Opus Tertium' Bacon was relieved from much of the restraint under which he had been suffering, and in 1268 he was again in England. Whether the other writings referred to in the extant chapters of the 'Opus Tertium' were composed in time to be sent to Clement (who died in November 1268) we cannot determine. In all probability they were not, and this circumstance may to some extent account for certain difficulties presented by the manuscripts to be afterwards referred to.

That Clement exerted himself on behalf of Bacon is a mere conjecture; it is certain that after 1267 he was in comparative freedom, and we may suppose devoted himself to working out, in special writings, the particular sciences forming in his conception the body of knowledge. There remain fragments of a work, part of which undoubtedly was written in 1271 or 1273 (BREWER, *Op. Ined.* pref. p. 55), a compendium of philosophy, the projected

outlines of which can be drawn with some accuracy. It is in the preliminary portion of this work, printed in the '*Opera Inedita*' (pp. 393-511), that Bacon makes his most vehement onslaught on the clergy and the orders as withstanding the progress of true knowledge. In 1278 the general of the Franciscan order, Jerome of Ascoli, afterwards Nicholas IV, held a chapter at Paris for the consideration of the heretical propositions that were troubling the peace of the church. Amongst others who appeared was Roger Bacon, who, condemned '*propter quasdam novitates suspectas*,' and prevented from writing to the pope (Gregory X) for defence and aid, passed into a prolonged confinement. Tradition at this point of his career becomes most confused; there exists, however, the manuscript of part of a work in which a date is explicitly recorded. The work is entitled '*Compendium Studii Theologiæ*,' the date is 1292. In 1292, then, Bacon was alive, and moreover in freedom. Perhaps he owed his release to the liberality of Raymond Gaufredi, general of the order from 1289 to 1294, with whom tradition has certainly associated his name, and to the fortunate death of Nicholas IV in 1292 (see CHARLES, pp. 40-1). How long he survived is unknown; the old biographers mention 1294 among other dates, as 1284, 1290, 1292; and as the latter must all be rejected, 1294 remains in possession of the field. He is said to have died and to have been buried at Oxford.

Bacon's writings fall into the two groups of printed and manuscript. Of the printed works an extremely accurate list is given by M. Le Clerc in the '*Histoire Litt. de la France*,' with some supplement and correction it is here followed: 1. '*Opera Chemica Rogeri Baconis*,' 1485, fo.; the same under the titles '*Sanioris medicinæ magistri D. Rogeri Baconis Angli de Arte Chymia scripta*,' Frankfurt, 1603, 12mo; and '*R. B. Thesaurus Chemicus*,' ib. 1620. 2. '*Speculum Alchymia*,' Nürnberg, 1541, 4to, repeated in many collections of writings on alchemy published from the sixteenth to the eighteenth century. A French translation appeared in 1557, and has been twice reprinted, in 1612 and in 1627, under the false title '*Le Miroir de Maistre Jean Mehun*.' English translation, '*The Mirror of Alchymy*,' composed by the thrice famous and learned fryer Bacon, in 1697, 4to, London; in the same volume is translated part of the '*De mirabili potestate Artis et Naturæ*.' 3. '*De mirabili potestate Artis et Naturæ et de nullitate Magiæ*,' Paris, 1542, 4to; and frequently either apart or in collections of alchemist writings. French translation, 1557, in the '*Miroir*' above noted,

and later in 1612 and 1629; English translations, 1597 and 1659, entitled '*Discovery of the Miracles of Art, Nature, and Magick*.' The tract is reprinted in Brewer's '*Opera Inedita*,' pp. 523-51. 4. '*Libellus Rogerii Baconi Angli, doctissimi mathematici et medici, de retardandis senectutis accidentibus et de sensibus conservandis*,' Oxford, 1590. English translation, '*The Cure of Old Age and Preservation of Youth*, by the great mathematician and physician, Roger Bacon, a Franciscan Friar. By Richard Browne,' London, 1683, 12mo. 5. '*Rogerii Baconis Angli viri eminentissimi Perspectiva, opera et studio Johannis Combachii, phil. prof. in acad. Marburgensi*,' Frankfurt, 1614, 4to (= Pt. V. of '*Opus Majus*'). 6. '*Specula Mathematica in quibus de specierum multiplicatione earundemque in inferioribus virtute agitur*, Combachii st. et op.,' ibid. 1614 (= Pt. IV. of '*Opus Majus*'). 7. '*Opus Majus ad Clementem Papam*,' ed. S. Jebb, London, fo., 1733; reprint, Venice, 1750. 8. '*Fr. Rogeri Bacon Opera quædam hactenus inedita*, Vol. I. containing: 1. *Opus Tertium*; 2. *Opus Minus*; 3. *Compendium Philosophiæ*,' ed. J. S. Brewer, London, Rolls Series, 1859. 9. '*R. B. de Morali Philosophia*,' Dublin, 1860 (= Pt. VII. of the '*Opus Majus*,' not contained in Jebb's edition).

A glance at the number and dates of these published works suffices to explain how it has come about that the historical reputation of Roger Bacon inadequately represents, and in many ways misrepresents, his real work and merit. Not till the eighteenth century was it known, nor from the scanty references in the older authorities could it have been gathered, that Bacon was more than an ingenious alchemist, a skilled mechanician, and perhaps a dabbler in the black arts. In this light tradition viewed him, and it is his legendary history only that has established itself in English literature. The famous necromancer, Friar Bacon, with his brazen head, is no unfamiliar figure in popular English writing (see Professor WARD's book below cited). The publication of the '*Opus Majus*,' however, rendered possible a more accurate conception of his aims and labours, and made it evident that the main interest of his life had been a struggle towards reform in the existing methods of philosophical or scientific thinking—a reform which in spirit and aim strikingly resembled that more successfully attempted by his more famous namesake in the seventeenth century. The '*Opus Majus*,' in vigorous style and with great freedom of expression, discussed the obstacles in the way of true science, rejected authority and verbal subtleties, and sketched in broad outlines the

essentials of the great branches of true knowledge. The work has well been designated 'at once the *Encyclopædia* and the *Organon* of the thirteenth century.' It is animated by the fresh breath of original study of nature; and though, as was inevitable, the fundamental ideas are in many respects those of the time, the mode of handling and applying them is wonderfully free from the baffling restraints that meet one in scholastic speculations. The '*Opus Majus*' itself professed to be no more than an encyclopædic outline, and only touched the main features of the great sciences, grammar and logic, mathematics, physics (of which perspective, i.e. optics, was for Bacon the type), experimental research, moral philosophy; it was left to other works to give a more detailed treatment of the various branches.

Later investigations have succeeded in disclosing various interesting and important fragments of the detailed work to which Bacon seems to have applied himself on the completion of the '*Opus Majus*.' It is not possible to give an exhaustive enumeration of the extant manuscripts. Those known to exist, and partially examined, are very numerous and in every variety of condition; there are doubtless others not yet brought to light. It is hardly possible, moreover, so to connect the known manuscripts with the indications which can be gathered of Bacon's projected or accomplished writings as to effect some partial classification of them. Either Bacon himself or the transcribers of the manuscripts must have been in the habit of incorporating an accomplished writing in a new work, with such changes of beginning and ending as to bring about the junction; and as the titles of the existing manuscripts generally follow some of the introductory sentences, it is not uncommon to find that writings cited under various titles and assigned to various works are in substance identical. It will be best here to state what has been determined regarding Bacon's activity as a writer after the composition of the '*Opus Majus*,' and to point out what manuscripts exist of the products of his activity.

The older authorities agreed in asserting that the '*Opus Majus*' was not the only writing prepared by Bacon at the request of Clement, but their accounts of the other treatises were confused and imperfect. Wood quotes from the writing now called '*Opus Tertium*,' but regards it as part of a writing called '*Opus Minus*' (BREWER, *pref.* p. 98, says of the passage quoted: 'This passage does not occur in the Digby MS., therefore Wood must have seen some other copy of the "*Opus Minus*" not now discoverable.'

But this is an error. The passage is given in Brewer's own reprint of the '*Opus Tertium*,' pp. 272-3, and the title of the manuscript is not '*In Opere Minore*,' but merely '*In Opere suo*'). Jebb, who had carefully consulted the manuscripts in the British Museum, came upon traces of two writings, called '*Opus Minus*' and '*Opus Tertium*,' but did not succeed in obtaining clear insight into their nature and scope. In 1848, however, Cousin discovered in the public library at Douai an important manuscript, of which he gave a full abstract in the '*Journal des Savants*' of the same year. Other manuscripts of this work exist, and it has since been printed by Brewer under the undoubtedly correct title of '*Opus Tertium*.' The biographical details given in the seventy-five chapters of printed text are of the utmost value, and the references to other writings enable a clear idea to be formed of the '*Opus Minus*,' and a partial idea to be formed of certain projected treatises. From what Bacon himself says it becomes clear (1) that Jebb's edition of the '*Opus Majus*' is imperfect as regards pt. ii., on grammar; is wanting in pt. vii., on moral philosophy; and is redundant by inclusion of a long treatise '*de multiplicatione specierum*,' which is either part of a later work or an independent tract; (2) that the work called '*Opus Minus*,' sent to Clement soon after the '*Opus Majus*,' contained (a) a brief view of the contents of the larger treatise, (b) a criticism of the errors of theological study, and (c) a detailed treatment of speculative and practical alchemy. Only one manuscript (that in the Bodleian, Digby, 218) has been discovered which corresponds to the description of the '*Opus Minus*.' It is in very imperfect condition, but the fragments, printed in Brewer's valuable edition, seem to represent all that we are likely to find of the work. Jebb, misinterpreting some references in the manuscripts before him, had conjectured that the '*Opus Minus*' was intended to contain a body of separate treatments of the various sciences. This is incorrect, but it is certain that Bacon projected such separate treatments, and intended to send them to Clement. The chapters printed as the '*Opus Tertium*' contain many forward references, and by comparing these with link-words found in the recently disclosed manuscripts M. Charles has endeavoured to reconstruct the plan of Bacon's work and to determine the manuscript fragments of it. From the circumstance above mentioned, however, it is very difficult to effect this satisfactorily, and it seems highly improbable that Bacon was able to prepare detailed treatises, following up the introduction called

now 'Opus Tertium,' and to forward them to Clement. Rather we may conjecture that he began and carried out his plan of detailed treatment, so as to form a complete body of scientific exposition, and that the several portions were indifferently connected with the 'Opus Tertium' and with the later work, the 'Compendium Philosophiæ,' of which the introduction dates from 1271. For the indications point to a substantial identity of content in the two supposed systematic works. Under the one, the so-called 'Opus Tertium,' there appear to fall (1) grammar and logic, (2) mathematics, (3) physics, (4) metaphysics and moral philosophy; under the other, the 'Compendium Philosophiæ,' (1) grammar, (2) logic, (3) mathematics, (4) physics, (5) alchemy, (6) experimental science. The identity of contents explains the difficulty of assigning the extant fragments to the one or to the other, and probably the definite designations we adopt for the two works do not fairly represent anything in Bacon's plan. Of the treatment of grammar, some part remains in the manuscript on Greek grammar in University College, Oxford. Of mathematics, the discussion of the general ideas, 'Communia Mathematica,' is contained in the manuscripts, Brit. Mus. Sloane Coll. 2156, and Bodl. 1677. Of physics, a very important fragment, treating of the fundamental ideas, 'Communia Naturalium,' exists in no fewer than four forms, in the Mazarine Library, Paris, 1271, in the Brit. Mus. Royal Lib. 7 F. vii., in the Bodleian, 1671, and in the library of Univ. Coll. Oxford; the publication of this manuscript, which contains Bacon's treatment of the most important notions of scholastic thinking, is a desideratum. Of the metaphysics, a small portion is found in the Bodleian, 1791, and more in the Biblioth. Imp. at Paris, No. 7440. A more detailed treatment of physics, by its link-expressions designed to form part of the 'Compendium Philosophiæ,' is contained in the Brit. Mus. Addit. MSS. 8786. Of the latest work of Bacon, the 'Compendium Studii Theologiæ,' date 1292, some few fragments, from which the plan of the whole may be gathered, are contained in the British Mus. 7 F. vii. fo. 153, and 7 F. viii. fo. 2, and in the library of Univ. Coll. Oxford (see CHARLES, pp. 409-16). The British Museum (Royal Lib. 7 F. viii. fo. 99-191) has also a complete manuscript of an early writing, the 'Computus,' on astronomy and the reformation of the calendar, the date of which, as given in the manuscript itself, is 1263.

It is much to be desired that a more thorough and detailed study of the known manuscripts and a more extensive search for others which

doubtless exist should be undertaken. Some portions are in a condition suitable for publication, and it is wellnigh an obligation resting on English scholars to continue the good work begun by the late Professor Brewer. Bacon's works possess much historical value, for his vigorous thinking and pronounced scientific inclinations are not to be regarded as abnormal and isolated phenomena. He represents one current of thought and work in the middle ages which must have run strongly though obscurely, and without a thorough comprehension of his position our conceptions of an important century are incomplete and erroneous.

[Of the earlier works in which Bacon was dealt with at large or incidentally, of Wadding, Cave, Oudin, Leland, Bale, Pits, Tanner, and others, a copious list will be found in the *Histoire Littéraire de la France* (xx. 227-52); the most valuable recent studies are those of Brewer (preface to *R. B. Opera Inedita*, London, 1859) and E. Charles (*Roger Bacon, sa Vie, ses Ouvrages, ses Doctrines, d'après des textes inédits*, Paris, 1861), whose work is a model of industry, skill, and intelligence; summaries, mainly of these two authorities, are to be found in Siebert, *Roger Bacon*, Marburg, 1861; Saisset, *Revue des deux Mondes*, 1861; Westminster Review, January and April 1864; Held, *R. B.'s praktische Philosophie*, Jena, 1881. Laying greater stress on the scholastic elements in Bacon's work, and somewhat depreciatory in tone, are L. Schneider, *Roger Bacon*, Augsburg, 1873, and K. Werner, *Die Psychologie, Erkenntnis- und Wissenschaftstheorie des R. B.*, and *Die Kosmologie und allgemeine Naturlehre des R. B.*, Wien, 1879. The popular legend, represented by the Famous Historie of Fryer Bacon, London, 1615 (reprinted in Thoms's *Early Prose Romances*, iii.), has been turned to good account in English literature; see Terilo's *A Piece of Friar Bacon's Brazen Heade's Prophecie*, 1604, reprinted in Percy Society Publications, vol. xv., 1844, and Greene's *Friar Bacon and Friar Bungay*, 1587 or 1588. On Greene and on the references in other literary pieces to Roger Bacon, see the Introduction and Notes to Ward's *Old English Drama*, 1873.]

R. A.

BACON, THOMAS (Æ. 1336), judge, was most probably a member of the same family that produced Sir Nicholas and the great Francis Bacon; for he was possessed of property at Baconsthorpe and other places in Norfolk, which later belonged to the lord chancellor. He was a justice of the Common Pleas in the early years of Edward III's reign, and in this capacity was knighted by that king (DUGDALE, *Origines*, 102). According to Foss, he was raised to the King's Bench in 1332, and certainly appears in this year as one of those appointed to try and

terminate petitions from Gascony, Ireland, Wales, and the foreign isles in the parliament held at York. The same year, in conjunction with two others, he was deputed to assess the tallages for Norfolk and Suffolk. He seems to have continued a judge till 1336, and was possibly still living in the year 1389.

[Foss's Judges of England, iii. 393; Rot. Parl. ii. 68, 447.] T. A. A.

BACON, *alias* SOUTHWELL, THOMAS (1592-1637), Jesuit. [See SOUTHWELL.]

BACONTHORPE, BACON, or BACHO, JOHN (*d.* 1346), the 'Resolute Doctor,' took his name from Baconthorpe, a small Norfolk village in the hundred of South Erpingham. According to the elaborate genealogy of the Bacon family among the British Museum manuscripts (*Add. MS.* 19116) he was the third son of Sir Thomas Bacon of Baconthorpe, and grandnephew of the famous Roger Bacon. In the early years of his life he was brought up at the newly founded Carmelite monastery of Blakeney or Snitterley, not far from Walsingham, an establishment which reckoned a Sir Robert Bacon amongst its earliest patrons. In process of time John Baconthorpe removed to Oxford, where the Carmelite order had possessed its own schools since 1253. According to Pits, he remained here only long enough to complete his philosophical training, and to pass through the initiatory stages of the theological course; while, to perfect himself in this crowning branch of mediæval study, he repaired to Paris. At this university he took his degree in both civil and ecclesiastical law, and applied himself to master every field of learning. The wide range of his inquiries is proved by the titles of his works, which, besides the ordinary theological and logical topics of the age, embrace treatises on astronomy or astrology, on the pontifical canons, on generation, the movement of animals, and innumerable other subjects. At Paris he seems to have first displayed that marked adherence to the doctrines of Averroes which gained him the title of 'Princeps Averroistarum.' But M. Renan is explicit in his statement that Baconthorpe does not so much maintain all the tenets of Averroes as strive to palliate their heterodoxy. His position was that the arguments of Thomas Aquinas and others had little that was contradictory to the real sentiments of the Arab philosopher. Averroes, according to his fourteenth-century champion, only started questions from a purely intellectual point of view, as a field in which to exercise men's reasoning faculties, without

committing himself to a full acceptance of the theories he discussed. At the same time M. Renan adds that Baconthorpe was careful to soften down the more dangerous of his master's doctrines.

On his return from Paris, Baconthorpe was most probably once more a resident at Oxford, and it may be to this period of his life that Wood refers when he speaks of him as a strong opponent of the mendicant orders in that university. It would be about the same time that Baconthorpe was the Oxford instructor and friend of Richard Fitzralph, afterwards archbishop of Armagh (*ob.* 1360). According to Bale the two friends began about the year 1321 to preach the doctrines which Wycliffe inculcated so strongly half a century later, that the priestly power should be subordinate to the king—a statement which well agrees with the words of Walden when writing against the Lollards on the same subject: 'The great defender of this opinion is Richard of Armagh, and he follows John "Bacon-town" (Joannem Baconis oppidi) the Carmelite.' But Baconthorpe does not seem to have remained entirely in England, as his name is said to occur in the accounts of the general meeting of the Carmelites held at Alby in 1327; and again, in the general chapter of the order at Valence (1330), he once more appears as 'John de Baconstop, provincial of England' (*Biblioth. Carmel.* i. 743). The appellation of 'provincial' is due to the fact that in the preceding year he had, at a meeting of the Carmelite brotherhood in London, been unanimously elected head of the order in England (1329), an office which he retained till 1333, when he was hurriedly summoned to Rome. He seems to have given some offence to the heads of his own body by assigning too much authority to the pope in the matter of annulling marriages. We are told that at Rome he was even hissed during one of his discourses; but not, Leland assures us, for any lack of argumentative power or eloquence. Fuller, however, though apparently without authority, says that it was the badness of his Latin and of his pronunciation that formed the pretext for this treatment. Baconthorpe seems soon to have seen the error of his ways, and made a recantation, proving most conclusively that the pope had no power of dispensation within the prohibited degrees. Two centuries later, we are told by Bale, James Calvus Papiensis made use of Baconthorpe's authority in his work on Henry VIII's divorce. From this time Baconthorpe's fame seems to have been established. Even after the lapse of 150 years the general of his order, Spagnuoli, could sing of him as the great

glory of the Carmelites, adding that no one has ever known the mind of Averroes better than he; and that by following his footsteps a man would become a second Aristotle. The same verses represent him as demolishing the 'footprints of the cloudy Scot,' Duns Scotus, the almost contemporary pride of the Franciscans. When summoned to Rome, Baconthorpe ceased to be the English provincial, in order that he might have more leisure for preaching and the study of the Scriptures (BALE, *Hebiad.* i. 28). It was probably on his return from Rome that Baconthorpe took part in the general chapter held at Nîmes or Narbonne in 1333. The 'Bibliotheca Carmelitana,' basing the statement apparently upon John Baptist de Lezana's 'Annales Sacri' (iv. 555), asserts that he was the leader of the Parisian Carmelites in their opposition to the heretical views of John XXII concerning the state of the dead; and, indeed, Baconthorpe does seem to have written two of his works, the 'De Beatorum Visione' and the 'Quod sit laus vocalis,' directly against the peculiar tenets held by this pope (*Bibl. Carm.* i. 748; FABRIC. *Bibl. Lat.* 162). If Lezana is to be depended on, this incident would fit in very well with the last days of John XXII (*ob.* 1334), when the question was most exercising men's minds, and with Baconthorpe's return journey from Rome and Nîmes. He is said to have returned to England, where he died in 1346, and was buried in the Carmelite church at London. Leland, however, assures us that he had searched for his tomb there vainly. Other accounts give Blakeney and Norwich as his place of sepulture.

Baconthorpe was a man of extremely small stature, a very Zacchæus, as Pits phrases it, whose body could never have supported the weight of the huge volumes his intellect produced without being crushed to death. Fuller adds that his pen, penknife, inkhorn, one sheet of paper, and one of his works, would together have made up his height. He was also a most voluminous writer. Zedler reckons the number of his books at over 120, and Alegre de Casanate has preserved a legend that on one occasion Baconthorpe's pupils buried their master twice over while standing upright in his own works, and even then had had a large number to spare (ALEGRE DE CAS. *Paradisus Carm.* dec. 294).

Besides dealing with the subjects mentioned earlier in this article, Baconthorpe wrote commentaries on the Old and New Testament, on the Apocrypha, on Aristotle's 'Ethics,' 'Metaphysics,' and 'Politics,' treatises upon Anselm's 'Our Verbum sit homo,' and Augustine's 'City of God;' diatribes against the

Jews, idolaters (by this meaning in all probability Mahometans), and magicians; and a work dealing with a topic thoroughly typical of the scholastic mind, 'Quod in celo sit laus vocalis.' Bale, who was himself originally an East-Anglian and a Carmelite, speaks of him in the highest terms: 'I have found in his writings weightier thoughts than in those of any other author of his time.' In fact, Bale made a collection of these gems, which, however, he tells us, perished when he was in Ireland.

Nearly three centuries after his death Baconthorpe was still read in the university of Padua, where the Averroist doctrines lingered on long after they had died out in the rest of Europe. He was, according to M. Renan, the classic author of this school of thought; and also as pre-eminently the *doctor* of the Carmelite order, as Aquinas was of the Dominicans, or Duns Scotus of the Franciscans. Zabarelli, who was a professor at Padua only a few years before Galileo was appointed to the chair of mathematics at the same university, was an eager student of Baconthorpe, and his name reappears at the beginning of the seventeenth century in connection with the memorable name of Lucilius Julius Cæsar Vaninus. Though Baconthorpe had been dead nearly two hundred and fifty years before Vaninus's birth, yet this unfortunate philosopher claimed to have had the great Averroist for his teacher, and professed to be following the example of his master in putting no other works than those of Averroes into his pupils' hands (RENAN, *Averroes*, 421; but compare Vaninus' own works in the references at the end of the article). With regard to the great battle-field of scholastic champions M. Hauréau sums up Baconthorpe's position in the words: 'He is a capitulating realist, who entangles himself in nominalism as little as possible.'

There are many theories advanced to account for Baconthorpe's epithet of the 'resolute doctor.' Pits seems very plausibly to imply that he owes it to the tenacity with which he maintained his Averroist principles. Others have explained it by his readiness in deciding all cases brought before him; but for this his conduct at Rome does not seem to prove him to have been remarkable. He then appears to have retracted his opinions before leaving the city.

No complete edition of Baconthorpe's writings has been published, though his works began to issue from the press several years before the close of the fifteenth century, with his 'Commentaries on the Master of the Sentences,' printed at Paris in the year 1484. Continental students have, however, been

laborious interpreters of his teachings, and amongst the numerous treatises devoted to his philosophy special mention may be made of the seven bulky folios of Joseph Zagalia (Ferrara and Parma, 1696-1706), and the three smaller volumes of H. Aymers (Turin, 1667-9).

[Leland, Bale, and Pits's Catalogue; Tanner; Harleian MSS. 3838, i. 27, 28, ii. 51-53; Alegre de Casanate's *Paradisus Carmelitici decoris*, 294-5; Zabarella's *De Rebus Naturalibus*, edit. Frankfurt, 1617, p. 466; St. Etienne's *Biblioth. Carmel.* 745-53; Zagalia's *Liber Præmialis*; Vaninus's *Amphitheatrum*, 17, and *De Naturis Admirandis*, 350; Vossius *De Quat. Scient.* 363; Wharton's *Cave*, App. 27; Renan's *Averroës et l'Averroïsme*, 318, 420, 421; Hauréau's *Philosophie Scolastique*, 441-3; Fuller (*Church History*, iii.) seems to have gone beyond his authorities; Lezana's *Annales Sacri*, vol. iv., apparently contains much information concerning Baconthorpe's life which is not to be found elsewhere.]

T. A. A.

BADBY, JOHN (d. 1410), Lollard, was a blacksmith, or, according to other accounts, a tailor in Worcestershire, whose Lollard opinions involved him in the persecution of heresy which marked the clerical reaction on the accession of Henry IV., and the passing of the statute 'de hæretico comburendo.' Badby seems to have been a man of parts, of unflinching courage and resolution, and possessed of both ingenuity and dialectical power. He carried out to extreme rationalistic consequences that denial of transubstantiation which had become characteristic of the more hardy Wycliffites. The host, he maintained, was in no sense the body of Christ, but something inanimate, and less worthy therefore of honour than a toad or a spider, which at least had the gift of life. Such outspoken heresy insured his condemnation before the diocesan court at Worcester; but the case came for final decision, probably by way of appeal, before Archbishop Arundel, in the spring of 1410. Arundel strengthened his court by the addition of numerous ecclesiastical and lay assessors; but Badby's heresy admitted of no doubt. He was condemned and delivered to the secular arm for execution, and met his fate on 1 March at Smithfield. Henry, Prince of Wales, already conspicuous for the fervour of his orthodoxy, was among the spectators, and offered Badby a free pardon if he recanted. The Lollard refused, but his piteous groans after the fire was lighted again excited Henry's hopes of his conversion. He ordered the extinction of the fire, and offered the half-burnt wretch life, liberty, and a pension as the price of conformity. But with unflinching constancy

Badby refused. The fire was rekindled, and death soon ended his sufferings. His was the second martyrdom to Lollardy.

[Walsingham's *Historia Anglicana*, p. 282 (Rolls edition); Foxe's *Book of Martyrs*, i. 593-5, is very circumstantial if not very trustworthy; Hook's *Lives of the Archbishops of Canterbury* iv. 507-10, gives a good modern account.]

T. F. T.

BADBY, WILLIAM (d. 1380), Carmelite and theological writer, was a native of East Anglia, and educated at one of the Carmelite monasteries (probably Norwich) of that district. Later in life he proceeded to the Carmelite schools at Oxford. These were situated in the northern suburbs of that town, and as they were open not only to the brotherhood but to all comers, his career as a doctor of theology here was so pleasing to the people that they are said to have flocked, as to a show, to hear his discourses (BALE, *Heliades*, Harley MSS. 3838, 2, 67). His popularity in this position seems to have recommended him to John of Gaunt, always a great supporter of the Carmelite order, and we are told that Badby was accustomed to hold forth in the presence of this prince and the nobility of England. According to Bale (*Harl. MSS.* i. 31) he was, next to Ralph Kelly, archbishop of Cashal, one of the glories of his age. Bale hints yet further that it was in some degree due to his influence, as one out of a long list of Carmelite monks whose names are given as confessors to John of Gaunt, that this prince interested himself in attempting to counteract the slanders that were about that time beginning to be levelled against this order, then in the height of its reputation, and possessing over a thousand brothers in England alone. With Badby the appointment of confessor to John of Gaunt was but the stepping-stone to the bishopric of Worcester, which, however, he held for so short a time that his name does not appear, according to Tanner, in any list of the occupants of that see. He died on 14 April 1380. Badby's writings consisted of a '*Liber Sacrarum Contionum*,' '*Liber Determinationum Scripturæ*,' Tanner adds certain '*Conciones Celebres*,' which, however, are probably the same as the '*Liber Sacrarum Contionum*.' Bale adds another work, entitled '*De Penitentia*.'

[Tanner; Bale; Pits; *Heliades Balsei*, MSS. Harley, 3838, i. 31, ii. 67; Stubbs's *Reg. Sac.*]

T. A. A.

BADCOCK, JOHN (fl. 1816-1830), a sporting-writer, whose birth and death are alike unknown, published between 1816 and

1830, under the pseudonyms of 'Jon Bee' and 'John Hinds,' a variety of works on pugilism and the turf. When he issued in 1823 his 'Slang, a Dictionary of the Turf, the Ring, the Chase,' and other similar amusements, the preface to which contains much information on previous compilations in the same field, he described himself as editor of the 'Fancy,' 'Fancy Gazette,' and the 'Living Picture of London.' 'The Fancy, or True Sportsman's Guide; authentic Memoirs of Pugilists,' came out in monthly parts, beginning April 1821, and was sold in two volumes in 1826. The 'Fancy Gazette' was a part of 'The Annals of Sporting and Fancy Gazette,' thirteen volumes of which were published between 1822 and 1828. The 'Living Picture of London' was compiled by Badcock as a guide to its condition in the year 1818, and a similar volume was produced by him in 1828. From a note in the 'Fancy,' i. 330, it appears that the volume entitled 'Letters from London: Observations of a Russian during a residence in England of ten months,' which purported to be a translation from the original manuscript of 'Oloff Napea, ex-officer of cavalry' (1816), was the production of Badcock. His last work under the signature of 'Jon Bee' was an edition of the 'Works of Samuel Foote, with remarks on each play, and an essay on the life, genius, and writings of the author' (1830), 3 vols.; and from some passages in the essay it would seem that Mr. Badcock was connected with Devon or Cornwall, in both of which counties the name is still common. This supposition is corroborated by the fact that in the 'Gentleman's Magazine,' 1819, pt. i. 618-20, pt. ii. 326, there appeared two letters from him announcing his intention of printing the lives of the celebrated natives of Devon since the time of Prince. The volumes which bear the name of 'John Hinds' relate to the stable. The earliest, 'The Veterinary Surgeon, or Farriery taught on a new and easy plan,' was issued in 1827 and 1829, and reissued at Philadelphia in 1848. It was followed by 'Conversations on Conditioning: the Groom's Oracle,' 1829 and 1830. 'Mr. Hinds' was also credited with editing new editions of W. Osmer's 'Treatise on the Horse,' and C. Thompson's 'Rules for Bad Horsemen,' both of which appeared in 1830. This was the last year in which any work that can be attributed to Badcock was published, and he probably died during its course.

[Thompson Cooper's Biog. Dict.; Works of Badcock.] W. P. C.

**BADCOCK, SAMUEL** (1747-1788), theological and literary critic, was born at

South Molton, Devon, 23 Feb. 1747. His parents were dissenters, and he was educated in a school at Ottery St. Mary, which was reserved for the sons of those opposed to the English church. He was trained for the dissenting ministry, and in 1766 became the pastor of a congregation at Wimborne in Dorset. After three years of residence in that county he was appointed to a similar post at the more important town of Barnstaple in Devon, and remained there until 1778. During this period he became known, through his contributions to the 'Theological Repository,' to Dr. Priestley, and sought his acquaintance in correspondence, and personally by a journey to Bowood, where Priestley was living with Lord Shelburne. This intercourse, and the adoption of some of the doctor's theological views, led to an estrangement with the congregation at Barnstaple, and Badcock returned to his native town, where he ministered from 1778 to 1786, when he became dissatisfied with the doctrines of dissent and with the position assigned to its ministers. He sought for ordination in the established church, and, having obtained a title for the curacy of Broad Clyst, was ordained by Bishop Ross, of Exeter, deacon and priest within a week in June 1787. Harassed by failing health and pecuniary anxiety, he assisted for the last six months of his life at the Octagon Chapel, Bath; and whilst on a visit to Sir John Chichester, one of his Devonshire patrons, at his town house, Queen Street, Mayfair, London, died 19 May, 1788.

Most of Badcock's contributions to literature appeared in the magazines of the day. From 1774, when he sent to the 'Westminster Magazine' a series of articles, the names of which are printed in the 'Gentleman's Magazine,' lvi. pt. ii. 595 (1788), until his death, his services were in constant demand by the conductors of the critical papers. He wrote in the 'Gentleman's Magazine,' the 'London Magazine,' 'General Evening Post,' and 'St. James's Chronicle,' but the most famous of his contributions appeared in the 'Monthly Review.' Although he had been friendly with Priestley, and had published in 1780 'A slight Sketch of the Controversy between Dr. Priestley and his Opponents,' a severe notice from his pen of the doctor's 'History of the Corruptions of Christianity' appeared in the pages of that review for June 1783. This, and an article by him in the next year on 'Priestley's Letters to Dr. Horsley,' produced two answers from Dr. Priestley and pamphlets from J. E. Hamilton and Edward Harwood, D.D. Whilst resident at Barnstaple, Badcock became

acquainted with the daughter of Samuel Wesley, the master of the Tiverton school and elder brother of John Wesley. The letters and anecdotes which he obtained from her were transmitted by him to the 'Westminster Magazine' in 1774. A subsequent account, based on her statements, of the Wesley family, provoked a correspondence with John Wesley; this biography was printed in the 'Bibl. Topog. Britt.' iii. pp. xli-xlviii, and reprinted, with the letters which it occasioned, in Nichols's 'Lit. Anecdotes,' v. 217-42. Several letters from Wesley which Badcock gave to Priestley were published by the latter in 1791 under the title of 'Original Letters by Rev. John Wesley and his Friends.' A sermon which Badcock preached at the Octagon Chapel, Bath, for the benefit of the General Infirmary, 23 Dec. 1787, was printed for private distribution. Rose, in his 'Biographical Dictionary,' says that he wrote in 1781 a poem called the 'Hermitage,' and Watt states that an assize sermon preached by him at St. Peter's, Exeter, in 1788, was published in 1795; but neither of these works can be found at the British Museum. After Badcock's death, his friend, Rev. R. B. Gabriel, D.D., alleged that he was the virtual author of Dr. Joseph White's Bampton lectures on the effects of Christianity and Mahometanism. A fierce war of words raged in the papers. Dr. Gabriel published 'Facts relating to the Rev. Dr. White's Bampton Lectures,' and the lecturer rejoined with 'A Statement of Dr. White's Literary Obligations to the late Rev. Mr. Samuel Badcock and the Rev. Samuel Parr, LL.D.' (1790). From this acrimonious controversy it appeared beyond doubt that Dr. White had received considerable assistance, though not to the extent which his assailants asserted, from Badcock. The papers which William Chapple had collected for an improved edition of Risdon's 'Survey of Devon,' were entrusted to Badcock's care for arrangement and revision, and from this he was induced to contemplate the preparation of a complete history of that county. Several letters on this matter are printed in Rev. R. Polwhele's 'Reminiscences,' i. 44-77, but the prosecution of the work was stopped by Badcock's death. As a reviewer, Badcock ranks among the best known names of the last century.

[Chalmers; Gent. Mag. 1788 and 1789; Priestley's Life and Correspondence (1831); Polwhele's Traditions and Recollections, i. 184, 240-2.] W. P. C.

**BADDELEY, ROBERT (1733-1794),** comedian, is said to have been born in 1733. When first heard of he is cook in the esta-

blishment of Foote, where he is supposed to have contracted a taste for the stage. Subsequently, as valet to a gentleman whose name has not been preserved, he travelled for three years on what was then called 'the grand tour,' acquiring in so doing a smattering of foreign languages which stood him subsequently in good stead. In 1761 he appeared at the Smock Alley Theatre, Dublin, the first part he played being Gomez, a not unimportant rôle 'created' by Nokes in Dryden's 'Spanish Friar.' He must have acted previously, as he was announced as of Drury Lane theatre. Two years later he was an established member of Drury Lane company, playing low comedy parts, and winning some reputation as an exponent of foreign footmen. His chief claim to distinction consists in having been the original Moses in the 'School for Scandal.' While dressing for this character on 19 Nov. 1794 he fell back ill. The next day he expired. His life with Mrs. Baddeley was unhappy [see BADDELEY, SOPHIA, 1745-1786], her loose conduct involving him in many difficulties, among which must be counted a bloodless duel with George Garrick, a brother of David. Baddeley is best remembered by his will, in which he left the reversion of his house at Moulsey, in Surrey, to found an asylum for decayed actors, adding a provision that when the value of the property reached 350*l.* per annum, pensions were to be granted to the inmates. He also bequeathed the interest of 100*l.* to provide the actors at Drury Lane Theatre with wine and cake in the green room on Twelfth Night. This custom is still observed. Baddeley was the subject, during his life, of many gross charges. Michael Kelly speaks of him as a worthy man, and in Jews and Frenchmen a very good actor. Baddeley is buried in St. Paul's Church, Covent Garden.

[Genest's Account of the English Stage; Reminiscences of Michael Kelly; Hitchcock's Historical View of the Irish Stage; Theatrical Biography, 1772; Gilliland's Dramatic Mirror; Thespian Dictionary.] J. K.

**BADDELEY, SOPHIA (1745-1786),** actress and vocalist, was the subject of a biography by a woman who was her companion, and claims to have been her friend. This so-called life has the air of having been written for the purpose of extorting money from the men of rank implicated in the adventures it describes. The name of Mrs. Elizabeth Steele is advanced as that of the author; but the discredit of the publication has been assigned to Alexander Bicknell, the writer of a life of Alfred the Great. According to this work Sophia Snow was born in 1745 in

the parish of St. Margaret's, Westminster. She was the daughter of Valentine Snow, serjeant-trumpeter to George II. From her father she received an education in music sufficient to enable her to turn to account a voice of much sweetness. When eighteen years of age she eloped with Robert Baddeley, an actor of Drury Lane Theatre, whom shortly afterwards she married. To the influence of her husband she owed her introduction to Drury Lane, at which house she appeared on 27 April 1765, when she played Ophelia. This is announced on the playbills as her third appearance on any stage. Genest supposes that her début took place on the 27th of the previous September, when the same character, Ophelia, was assigned in the playbills to a 'young gentlewoman.' Her biographer gives Cordelia as her first rôle, and supports the statement by an assertion that when she saw Edgar as Mad Tom she screamed with real terror, and so obtained the sympathies of the audience. The line of Mrs. Baddeley scarcely extended beyond genteel comedy, her most ambitious effort, consisting in appearing once or twice during an illness of Mrs. Barry as Mrs. Beverley in the 'Gamester.' As a singer she obtained high terms at Ranelagh and Vauxhall. Separated from her husband by her irregularities of life, she played during some years at the same theatre with him, never addressing him or being addressed by him, except when the utterance was dramatic. After a scene in the 'Clandestine Marriage,' in which Baddeley, as Canton, urged King, as Lord Ogleby, to make love to Mrs. Baddeley as Fanny, George III and Queen Charlotte were so delighted with the archness of the actress that they sent an order to her to go to Zoffany and be painted in the character. This order was of course obeyed. Mrs. Baddeley's exceptional beauty, her vanity, and reckless extravagance, made her the fashion. When it was known that admission would be refused her as an actress to a public entertainment, fifty gentlemen of highest station are said to have waited for her in the lobby, drawn their swords on the constables on her appearance, escorted her in triumph to the rooms, and obtained an apology from the directors of the entertainment, and a personally accorded welcome from the aristocratic patronesses. The large sums paid her were recklessly squandered, and she was compelled to take refuge from her creditors in Edinburgh. Here she played during the seasons of 1783-5. Her health appears to have been wretched. According to Tate Wilkinson (*Wandering Patentee*, ii. 151), she took in her later years to laudanum, and was on

one occasion, about three years before her death, so stupidly intoxicated with it as to be unable to act. Wilkinson says concerning her: 'The quantity of laudanum she indulged herself with was incredible.' Galt, in his 'Lives of the Players,' asserts that she died in Edinburgh 1 July 1801, an impossible date, since in the 'Children of Thespis,' first printed in 1787, Anthony Pasquin (John Williams) speaks of Scotland and says (p. 121, ed. 1792):—

There Baddeley sleeps on Mortality's bier.

Emaciate and squalid her body is laid,  
Her limbs lacking shelter, her muscles decayed,  
Cadaverous, fetid, despised, and deformed.

There seems no reason indeed to dispute the statement in her 'Memoirs' that she died in Edinburgh in July 1786, having, during her last days, been supported by her fellows, with whom she was always a favourite. She is said to be buried in Edinburgh.

**BADDELEY, THOMAS** (Æ. 1822), a Roman catholic priest at Manchester, was the author of the 'Sure Way to find out the True Religion,' a colloquial defence of Roman catholic principles, largely mingled with invective against protestantism. The author was stated to be dead in 1825. The tract reached a seventh edition in 1847, and provoked several replies.

A. R. B.

**BADDELEY, EDWARD LOWTH** (Æ. 1868), ecclesiastical lawyer, was the younger son of John Badeley, M.D., near Chelmsford, by Charlotte Brackenbury. He graduated at Brasenose College, Oxford, as B.A. in 1823, being in the second class in classics, and he took his M.A. degree in 1828. In 1841 he was called to the bar as a member of the Inner Temple, and for a short time went the home circuit, but his tastes were for the study of ecclesiastical law, and he was soon employed in solving its intricacies by those who, like himself, were zealous for the spread of tractarian principles. A speech by him in proof of the prohibition of marriage with a deceased wife's sister by Holy Scripture was printed, with Dr. Pusey's evidence before the commission then sitting on the law of marriage, in 1849. When Dr. Phillpotts,

the Bishop of Exeter, refused to admit the Rev. G. C. Gorham to the vicarage of Bramford Speke on the ground of his unsound doctrine on the sacrament of baptism, Badeley argued the bishop's case before the judicial committee of the privy council, 17 and 18 Dec. 1849; and his speech on this occasion was published as a pamphlet. He gave an opinion in 1851 in favour of the legality of altar lights, which was printed in the 'Morning Chronicle,' April 1851, and was republished in 1866 in connection with their use in the parish church of Falmouth. This opinion was attacked in 1851 in a pamphlet issued 'by a layman, late fellow of Trinity Coll. Camb.' His last tract was in support of 'The Privilege of Religious Confessions in English Courts of Justice,' 1865. In the summer of 1850 Badeley and thirteen other members of the English church, including Cardinal Manning, signed a series of nine resolutions to the effect that the views of the privy council on baptism should be solemnly disowned by the national church; and when no such action was taken Badeley and several of his colleagues withdrew to the Roman communion. In this new association he was much engaged in settling the legal points connected with their trusts and charities. Dr. Newman's collection of 'Verses on various Occasions' (1868) was dedicated to Badeley, with very warm expressions of friendship. Many letters to and from Badeley are printed in Mr. Robert Ornsby's 'Memoirs of Mr. J. R. Hope-Scott,' 1884. Badeley died 29 March 1868.

**BADENOCH, LORD OF.** [See STEWART.]

**BADEW, RICHARD** (A. 1320-1330), founder of University Hall, Cambridge, was descended from an ancient and knightly family which appears to have given its name to the manor of Badew or Badow, near Chelmsford, Essex, and whose representatives were owners of the manor in the reigns of the first three Edwards. Richard de Badew married Isabel, daughter of Peter Marshall, by whom he had three sons, William, Edward, and Richard. The last-named was chancellor of the university of Cambridge in 1326 and in 1338, and was noted for his zeal in the promotion of learning. It was during his tenure of office that he purchased, most probably on behalf of the university, two tenements in Milne Street, the property of a Cambridge physician named Nigellus de Thornton. And here, according to the tra-

dition preserved by Fuller, 'he built a small college, by the name of University Hall, placing a principal therein, under whom scholars lived on their own expenses.' Scot, however, in his 'Tables of the University,' states that they were maintained at the charges of the university. Sixteen years afterwards the hall was accidentally burnt down, when it was rebuilt and endowed by Elizabeth de Clare, afterwards the wife of John de Burgh, earl of Ulster, its name being changed to Clare Hall.

**BADHAM, CHARLES, M.D.** (1780-1845), medical and poetical writer, was born in London on 17 April 1780. After receiving a sound classical education he applied himself to the study of medicine, and proceeded to Edinburgh, where he graduated M.D. in 1802, on which occasion he published his inaugural dissertation, 'De Calculis.' He was admitted a licentiate of the Royal College of Physicians of London in 1803, and about that time entered Pembroke College, Oxford, as a gentleman commoner. As a member of that house he graduated B.A. in 1811, M.A. in 1812, M.B. and M.D. in 1817. In March 1818 he was elected a fellow of the Royal Society, and in September the same year admitted a fellow of the Royal College of Physicians. He was censor of the college in 1821, and wrote the Harveian oration which was delivered in 1840.

Badham began to practise his profession in London in 1803, and before long he was appointed physician to the Duke of Sussex. He also became physician to the Westminster General Dispensary, and in conjunction with Dr. Crichton of Clifford Street, he delivered lectures in London on physic, chemistry, and the *materia medica*. After the conclusion of peace in 1815 he determined to enlarge his stores of scientific information and of general knowledge by a visit to the continent. Accordingly he spent two years in travelling through Europe. Traversing the less-known parts of the kingdom of Naples, he passed to the Ionian Islands and thence to Albania, where he was consulted by Ali Pasha. He then pursued his course over Mount Pindus, through Thessaly, and by Thermopylæ to Athens, and thence by the isthmus and gulf of Corinth to the Neapolitan coast. Badham's fondness for travel, in which he spent nearly the half of his days, and his taste for classical literature, were unfavourable to his attaining that celebrity.

and extent of practice which, had he remained in the metropolis, would, with ordinary diligence, assuredly have been his portion; but he preferred the easier, though less lucrative, occupation of travelling physician to persons of high degree.

In 1808 he gave proof of his attainments as an observant practical physician by the publication of 'Observations on the Inflammatory Affections of the Mucous Membrane of the Bronchiæ' (Lond., 12mo), a second edition of which, corrected and enlarged, appeared in 1814 under the title of 'An Essay on Bronchitis, with a Supplement containing Remarks on Simple Pulmonary Abscess.' In this treatise bronchitis, acute and chronic, was for the first time separated from peripneumony and pleurisy and the other conditions with which it had previously been confounded, and its history, differential diagnosis, and treatment established.

In 1812 he published at Oxford 'Specimens of a New Translation of Juvenal,' which was followed by a forcible and elegant version of 'The Satires of Juvenal, translated into English verse' (Lond. 1814, 8vo; reprinted 1831). These works were very severely criticised in the 'Quarterly Review' by Dr. Gifford, himself the author of a translation of the same satirist. Dr. Gifford was, however, constrained to admit that Badham's performance was not without merit, and that in some passages, in which he had had to contend with Dryden, he had 'well sustained the contest.'

When, in 1827, the chair of the practice of physic at Glasgow became vacant, Badham was recommended by his friend Sir Henry Hallford to the Duke of Montrose as one whose talents and accomplishments would tend to increase the fame of a rising university; and although Scotchmen were not pleased at seeing an Englishman preferred before them, his lectures displayed so much ability that they soon found they had reason to be proud of the services of so brilliant and remarkable a professor. At Glasgow Badham was but little solicitous of medical practice, and devoted himself almost exclusively to the duties of his chair. The vacations he spent in travel, mostly in the south of Europe. He died in London 10 Nov. 1845.

He was a contributor to 'Blackwood's Magazine.' There appeared in April 1829 his 'Lines written at Warwick Castle,' which had been printed with notes, for private circulation, in 1827, 4to. He prepared for the press an 'Itinerary from Rome to Athens,' but it was never published.

Badham was twice married; in early life to the beautiful Miss Margaret Campbell, first

cousin of Thomas Campbell the poet, and for whose hand the poet is understood to have been an unsuccessful suitor. About 1833 Badham married, secondly, Caroline, eldest daughter of Admiral Sir Edward Foote, K.C.B. Two of his sons are noticed in separate articles.

[Private information; St. James's Chronicle, 15 Nov. 1845; Quarterly Review, viii. 60, xi. 377; Biog. Dict. of Living Authors (1816), 11; Gent. Mag. N.S. xxv. 99; Munk's College of Physicians, 2nd edit., iii. 190; Times, 26 June 1840.] T. C.

**BADHAM, CHARLES, D.D.** (1813–1884), classical scholar, born at Ludlow, Shropshire, on 18 July 1813, was the son of Charles Badham, M.D., F.R.S., regius professor of physic in the university of Glasgow, and of Margaret (daughter of Mr. John Campbell), a cousin of Thomas Campbell the poet. He was educated first under the celebrated Pestalozzi, whose favourite pupil he became, and afterwards at Eton; and in 1830 he obtained a scholarship at Wadham College, Oxford, where he graduated B.A. in 1837, and M.A. in 1839. After seven years' study in Germany and Italy he was incorporated M.A. at Cambridge as a member of St. Peter's College; was ordained priest in 1843; appointed head master of King Edward VI's Grammar School at Louth in 1851; took the degree of D.D. at Cambridge in 1852; was appointed in 1854 head master of the proprietary school at Edgbaston, near Birmingham; and in 1860 received from the university of Leyden the honorary degree of doctor literarum at the suggestion of Professor Cobet, who could discern the merits which England ignored. In 1863 he was appointed examiner in classics to the university of London.

Early in life Dr. Badham had become the constant companion and voluntary disciple of Frederick Denison Maurice. Indeed he was debarred from promotion in the church of England by the circumstance of his holding opinions which were a very serious hindrance to preferment. Moreover, in considering his comparative want of success in this country, it must be admitted that he lacked the methodical, businesslike habits which the proper management of a large school requires; and although the most warm-hearted and placable of men he suffered from infirmities of temper which could not fail to some extent to impair his influence. Many years before he quitted his native land, such men as Dr. (afterwards Cardinal) Newman, Mr. Robert Lowe (afterwards Lord Sherbrooke), and Grote, had pronounced him to be the greatest of living scholars; and the 'Quarterly Review' said of him that 'he

could impart instruction to the ripest scholars of the age, and that he was universally regarded on the continent as the first living scholar in England.'

When Badham resolved to leave the country which had failed to reward his great merits as a scholar and to become a candidate for a professorial chair at the Antipodes, the testimonials he obtained as to his attainments were of a most remarkable character. For instance, Cardinal Newman wrote: 'As to his classical attainments, others will tell you, who have a better claim to speak than I have, that he is the first Greek scholar of the day in this country.' Dr. William Smith, after testifying to his geniality, his winning manners, his extensive knowledge on all subjects, remarked: 'As to his scholarship I say nothing; he is pre-eminently the best verbal critic in England, and, taken altogether, may be pronounced our greatest scholar. It is a great shame and a reproach to us that such a singularly gifted man should be willing to go to the Antipodes.' Hawtrey, master and afterwards provost of Eton, testified: 'I have known him for nearer forty than thirty years, and I can sincerely say that among all I have had to deal with in my Eton experience, I have never known a more remarkable scholar. His published editions of portions of Plato and Euripides recall the skill of Porson more than the criticisms of any living scholar;' and Dr. Thompson, regius professor of Greek at Cambridge, afterwards master of Trinity College, wrote: 'I am therefore able, conscientiously, to state that as a scholar Dr. Badham has few equals, and no superior in England; and that there is no person in England or elsewhere to whose judgment I should be more inclined to defer in the higher departments of Greek criticism. That this opinion is shared by the best continental scholars I could produce abundant evidence.'

In 1867 Badham, to the great regret of his numerous friends here, proceeded to Australia on being appointed professor of classics and logic in the university of Sydney, where he passed the remainder of his life. His influence was wide and strong in favour of intellectual culture. One of his earliest enterprises after his arrival in New South Wales was the establishment of a system of teaching by correspondence in order to meet the desire for knowledge of persons living in the outlying parts of the colony. He likewise succeeded in raising 10,000*l.* in the colony, to be devoted to founding exhibitions at the university, and at the time of his decease he was engaged in perfecting a scheme which, by means of evening classes, would practically

bring university education within the reach of even the labouring classes. He died at Sydney on 26 Feb. 1884, and was buried in the church of England cemetery in West Street.

Badham's memory was marvellous. It is hardly an exaggeration to say that he knew all Greek poetry by heart. He constantly taught his pupils with no book before him, and if they misread a single word he would correct them. He had an almost equal mastery over Latin, English, French, and Italian literature, and was well read in German; and through his habit of constantly illustrating one author by another and one literature by another, he taught his pupils to look on letters as a whole.

He published editions with notes of the 'Iphigenia' and 'Helena' of Euripides (1851), of the 'Ion' of Euripides (1851, 1853, and 1861), of Plato's 'Philebus' (1855 and 1878), of Plato's 'Euthydemus' and 'Laches' (1865); also 'Criticism applied to Shakspeare', Lond. 1846, 8vo, being a partial reprint of a series of essays published originally in the 'Surplice' newspaper; 'The Text of Shakspeare' in 'Cambridge Essays, contributed by members of the University', Lond. 1856, pp. 261-290; and 'Adhortatio ad Juventutem Academicam Sydneensem,' 1869.

[Private information; Sydney Morning Herald, 28 Feb. 1884, also mail edition 6 March 1884; Times, 10 and 14 April, 1884; Crockford's Clerical Directory (1882); Saturday Review, 26 April 1884, p. 541; Athenæum, 19 April 1884, p. 506; Illustrated Sydney News, 15 March 1884, p. 2; Heaton's Australian Dict. of Dates and Men of the Time (1879), 7; Cat. of Printed Books in Brit. Mus.] T. C.

**BADHAM, CHARLES DAVID, M.D.** (1806-1857), naturalist, son of Dr. Charles, and brother of Professor Badham of Sydney, was born in London in 1806, and educated at Eton and Oxford. After taking his degree he was appointed a travelling fellow of the university, and resided for a long time on the continent, especially at Rome and Paris. He became a fellow of the College of Physicians, but, the delicacy of his health proving an obstacle to his obtaining medical practice, he entered the church, and successively held curacies in Norfolk and Suffolk. He died on 14 July 1857. He contributed extensively to Blackwood's and Fraser's Magazines, and wrote three valuable works: 1. 'Insect Life,' 1845. 2. 'The Esculent Funguses of England,' 1847, a book which embodied the results of much research on the continent, and introduced many varieties of wholesome mushrooms, previously neglected, to English tables. 3. 'Prose Haliæutics, or

Ancient and Modern Fish Tattle,' 1854, a delightful miscellany of zoological anecdotes and classical lore, especially valuable for its lively illustrations of Oppian and Athenæus, derived from the author's personal experience of the Mediterranean coasts.

[Fraser's Magazine, lvi. 152, 153.] R. G.

**BADILEY, RICHARD** (d. 1657), admiral, was apparently a merchant, ship-owner, and ship-captain, whom the course of the civil war called to a more stirring life. Of his early service under the parliament, and whether on shore or afloat, nothing is known. His name does not appear in any published list of the parliamentary fleet down to May 1648 (PENN'S *Life of Penn.*, i. 255), but we find him in April 1649 captain of the Happy Entrance and commander-in-chief of the fleet in the Downs, specially charged with appointing and regulating the convoys of merchant ships and proposing measures to the council of state for capturing or destroying the Antelope, one of the ships which had gone over to the Prince of Wales [see BATTEN, SIR WILLIAM], and was lying at Helvoetsluys. The attempt was made with perfect success, and the Antelope destroyed by a party of seamen from the Happy Entrance, commanded by her lieutenant, Stephen Rose, to whom a gold medal and a gratuity of 48*l.* was awarded as encouragement. Through the years 1650 and 1651 Badiley seems to have continued in the Downs and the North Sea, and in December 1651 sailed in the Paragon, a ship of the second rate, together with a small squadron, in convoy of the Levant trade. On 14 Feb. 1651-2 he overhauled an Algerine corsair, and having the greater force took out of her all the English captives. He then passed on to Zante, to Smyrna, and so back towards Leghorn, where, having had news of the war with Holland, he hoped to effect a junction with Commodore Appleton [see APPLETON, HENRY]. Unfortunately Appleton could not or would not stir to meet him, and the Dutch, leaving two ships, which proved sufficient to hold Appleton in check, turned to attack Badiley, who had only four ships with which to oppose the ten or eleven now brought against him. Off the island of Elba the fight began about four o'clock in the afternoon of 27 Aug. 1652, and continued till nightfall. The English ships, and the Paragon more especially, were singly superior to any of the Dutch who swarmed round them and endeavoured to carry them by force of numbers. The fighting was mostly hand to hand or at very short range. 'We discharged,' wrote Badiley, 'that day from this ship (the Paragon) 800

pieces of great ordnance, which must have done no small execution, having sometimes two of the enemy's best men-of-war aboard, and all the rest within pistol and musket shot of us' (31 Aug.) The Paragon had 26 killed and 57 wounded, out of a complement of 250; had fifty shot in the hull, many of them between wind and water, and her masts and rigging cut to pieces. Badiley thought and said that the other ships might and should have taken some of the pressure off the Paragon; but in fact they were severally as hard pressed as the Paragon, and had not her size and strength. They fired away almost all their ammunition, and towards evening the Dutch succeeded in making themselves masters of the Phoenix. And so the fight ended; the English going the next day into Porto Longone in Elba. The Dutch contemplated attacking them there, and offered the governor a large sum of money to permit them. He, however, refused it, and allowed Badiley to strengthen his position by throwing up some batteries and landing some of his ship's guns. Towards the end of October Badiley received orders from home to take command of the squadron at Leghorn, and, crossing over, he concerted measures with Appleton for the recapture of the Phoenix, the success of which led to the Grand Duke's ordering the English to quit the port. This they did, and were, with one exception, all captured by the Dutch, before Badiley, who was in the offing, but to leeward, could offer any assistance. After this there was nothing further to be done but to provide for the safety of the remaining ships, and Badiley accordingly went down the Mediterranean, and so home, arriving in the Downs in the early days of May 1653. His men, he wrote, were very turbulent and mutinous, refused all compromise, and were determined to go into the river to be paid off. They obtained their demands. 'We are, paying off the Straits fleet,' wrote Commissioner Pett from Chatham on 1 June; 'they are the rudest people I ever saw. I hope the ring-leaders will be called to account.' About 120 of them were, however, immediately shipped off to join the main fleet with Blake. 'I have had no small trouble to quiet them,' wrote Major Bourne on 4 June; 'they are so enraged that they are sent away. I have promised them that as soon as the exigency of affairs permits they shall enjoy the liberty granted them.' The campaign in the Mediterranean had ended so disastrously, and Appleton was so vehement in his accusations, that Badiley's conduct was formally inquired into. The charges recoiled on Appleton, and Badiley was not only cleared of

all blame but was (7 Dec.) promoted to be rear-admiral of the fleet, a rank equivalent then to what was afterwards known as admiral of the blue squadron. He served for a few months in the Vanguard, and was then transferred to the Andrew, in which, as second to Blake, he went to the Mediterranean, and was engaged in the reduction of Tunis and the liberation of English captives along the northern coast of Africa [see BLAKE, ROBERT]. The Andrew came home and was paid off in the autumn of 1655. On 14 Feb. 1655-6 Badiley superseded Lawson as vice-admiral in command of the fleet in the Downs (*Public Intelligence*, Feb. 11-18, 1655-6). This ended his service. In April 1657 he was living at Wapping, in feeble health; he died in August 1657, according to the announcement in '*Mercurius Politicus*' 11 Aug. 1657. William Badiley, presumably his brother, was for many years master attendant at Woolwich.

BÆDA. [See BEDE.]

BAFFIN, WILLIAM (d. 1622), navigator and discoverer, was most probably a native of London, but nothing is known of his early life. The earliest mention of him is in 1612, as pilot of the *Patience*, fitted out at Hull by James Hall, for a voyage of discovery to Greenland. Hall was a Yorkshireman, as was Andrew Barker, master of the *Patience's* consort, the *Heartsease*; but four merchants of London—Sir Thomas Smythe (the most commonly misspelt Smith), Sir James Lancaster, Sir William Cockayne, and Mr. Ball—had a large and principal share in the adventure; and it is conjectured that Baffin may have been appointed at their instance. The expedition left the Humber on 22 April, and examined the west coast of Greenland, as far as 67° N.; but, Hall having been killed in an affray with the natives, the ships returned to England under the command of Barker. The account of the voyage was written by Baffin, part of which only, as published by Purchas, has been preserved; another account, written by John Gatonby, one of the quartermasters, is in Churchill's '*Collection of Voyages*,' vi. 241. On his return from Greenland, Baffin entered the service of the Muscovy Company, which had for some years past sent their ships to catch whales near Spitzbergen. They had just obtained a charter, pretending to give them the exclusive right of this fishery; and authorised by it had, in 1612, been sufficiently strong to drive away all

foreigners. In 1613 they again sent out a fleet of seven ships, under the command of Captain Benjamin Joseph, in the *Tiger*, with William Baffin as chief pilot. They found seventeen foreign ships, Dutchmen, Dunkirkers, and Biscayans, already on the Spitzbergen coast; these all submitted to the English claim without resistance; most of them were ordered away, a few only being allowed to fish on payment of half their take to the English ships, which returned safely in September with full cargoes. The narrative of this voyage, written by Baffin, has been preserved in Purchas; another account, by Robert Fotherby, one of the party, is printed from the original manuscript in '*Transactions and Collections of the American Antiquarian Society*' (1860), iv. 285. The following year, 1614, Baffin served again in the Spitzbergen fishery with Captain Joseph, and in company with Fotherby, whose narrative of the voyage is given, by Purchas. The two, leaving their ship, provisioned two boats and persistently pushed along the north coast to the eastward, as far as Hinlopen Strait; but the year was very unfavourable, the ice coming close down to the coast during the greater part of the season. Baffin returned to London on 4 Oct., and the next year took service with the company for the discovery of a north-west passage, the directors of which were Sir Thomas Smythe, Sir Dudley Digges, and John Wolstenholme; he was appointed pilot of the *Discovery*, commanded by Captain Robert Bylot. The account of this voyage, written by Baffin, was printed very incorrectly by Purchas; the original manuscript, with map, is in the British Museum (*Add. MSS.* 12, 206), and was edited for the Hakluyt Society in 1849 (RUNDALL, *Narratives of Voyages towards the North-west*). As pilot of the *Discovery* in 1615, Baffin carefully examined Hudson Strait and the eastern coast of Southampton Island, with such accuracy that his latitudes and his notes on the tides are in remarkable agreement with the more rigid observations of the present century. They passed up Fox Channel, beyond Cape Comfort; but finding the land heading them, and, he says, 'very thick pestered with ice, and the further we proceeded the more ice and shoaler water, with small show of any tide, we soon resolved there could be no passage in this place, and presently we bore up the helm and turned the ship's head to the southward (13 July). The land which we saw bear north and north-east was about nine or ten leagues from us; and, surely, without any question, this is the bottom of the bay on the west

side; but how far it runneth more eastward is yet uncertain.' In August 1821, Captain Parry, with better fortune, repeated Baffin's observations; he confirmed the remark as to the 'small show of any tide,' and he saw also the land to the north-east; but he found this to be an island, to which he gave the appropriate name of Baffin's Island, and succeeded in passing away beyond (*Voyage of Fury and Hecla*, 1824, p. 33). The Discovery anchored in Plymouth Sound on 8 Sept.; and Baffin, summing up the results of the voyage, says that 'doubtless there is a passage; but within this strait, which is called Hudson's Strait, I am doubtful, supposing the contrary . . . and my judgment is if any passage within Resolution Island, it is but some creek or inlet, but the main will be up Fretum Davis.' Acting on this opinion, in the next year, 1616, also in the Discovery, with Captain Bylot, he passed up Davis Strait, and pushing to the north as far as 78° N., discovered and named Smith's Sound (in which the false spelling has become a geographical fact), Lancaster Sound, Jones Sound, Wolstenholme Sound, Sir Dudley Digges Cape, with many others, and charted the whole in a manner which we have warrant to suppose was fairly accurate according to the nautical science of the day. Unfortunately, the map and the journal, as well as the narrative, were handed over to Purchas, who published the narrative alone, and that probably in a garbled and imperfect form, considering the reproduction of the chart and of the journal too costly an undertaking. And, so far as is known, neither the one nor the other has ever been seen since, though Mr. Markham offers the very plausible conjecture that the map published by Luke Foxe in 1635 (*North-West Fox, &c.*) may have been, in this part, copied from the lost map of Baffin. It does not mark all Baffin's names, but it does represent the bay as something like the reality, and closed, as it is described by Baffin. Baffin's conclusion, stated in his report to Sir John Wolstenholme, is briefly: 'There is no passage, nor hope of passage, in the north of Davis Strait, we having coasted all or nearly all the circumference thereof, and find it to be no other than a great bay.' The want of the original map, however, permitted very wild statements as to the shape and size of Baffin's Bay to grow up, so that in course of time it came to be doubted whether the whole story was not a fable; and in later maps the distorted representation of Baffin's most important discoveries was omitted altogether as a mere fancy, till, in 1818, Captain Ross rediscovered them, and without difficulty

identified the localities which Baffin had described and named (*Voyage in H.M. ships Isabella and Alexander* (4to, 1819), 140, 146).

Baffin had expressed an opinion against the existence of a north-west passage; but his imagination would not be convinced, and suggested that better fortune might attend an expedition on the other side, starting from the neighbourhood of Japan. In some such hope, though quite indefinite, he obtained an appointment as master's mate in the Anne Royal, a large ship belonging to the East India Company, and commanded by Captain Andrew Shilling. This was one of the fleet which sailed from the Downs on 5 March 1616-7, and arrived at Surat in the following September. Captain Shilling was then directed to proceed into the Red Sea for settling an English trade in those parts; and arrived off Mocha on 13 April 1618. The Anne Royal remained in the Red Sea for about four months, during which time Baffin was busily employed in surveying and in charting his observations; and so also, when, later in the year, the ship went into the Persian Gulf. In February the Anne Royal left India homeward bound, and arrived in the Thames in September 1619. A minute of the court of directors, dated 1 Oct., orders 'William Baffin, a master's mate in the Anne, to have a gratuity for his pains and good art in drawing out certain plots of the coast of Persia and the Red Sea, which are judged to have been very well and artificially performed; some to be drawn out by Adam Bowen, for the benefit of such as shall be employed in those parts' (*Calendar of State Papers, Colonial, East Indies*, 1617-21, 257).

Early the next year, Captain Shilling, in the London, a new ship, again sailed for the East Indies, in command of a company's fleet of four ships, and Baffin accompanied him as master. They arrived at Surat on 9 Nov. 1620, and having learned that a combined force of two Portuguese and two Dutch ships, making common cause against the English, were waiting at the entrance of the Persian Gulf, to attack such of their ships as came that way, they sailed at once to look for and anticipate them. On 16 Dec. the two fleets, equal in point of numbers, met and engaged. They fought for nine hours, and separated to repair damages. Twelve days later they met again. Captain Swan, of the English ship Roebuck, whose journal is given by Purchas (the original manuscript of which is in the India Office) says: 'Our broadsides were brought up, and the good ordnance from our whole fleet played so fast upon them that, doubtless, if the know-

ledge in our people had been answerable to their willing minds and ready resolutions not one of the galleons, unless their sides were impenetrable, had escaped us.' It was, perhaps, not only the want of knowledge but the imperfections of the guns, of the powder and of the shot, that rendered it possible for ships to fire at each other all day without any decided result. On this occasion, however, some damage was done, and towards evening the enemy towed their ships off, and were not pursued. Captain Shilling was mortally wounded, and died on 6 Jan. 1620-1; Captain Blyth succeeded to the command, but the change made no difference to Baffin, who continued master of the London, and the fleet presently returned to Surat. In the following year the English in India agreed to assist the Shah of Persia in driving the Portuguese out of Ormuz, a place which, in former ages, had been the emporium of the East, the wonder and admiration of the world; and though in the hands of the Portuguese, and since the opening of the route round the Cape of Good Hope, its wealth and importance had declined, it was still extremely rich. The Shah had long regarded the Portuguese possession with jealousy, and had coveted the accumulated treasures, greater in repute than in fact, and now hoped, with the help of the English, to achieve his desire. The attack began with the reduction of Kishm, an adjacent island, on which Ormuz was largely dependent for water; and here, on 23 Jan. 1621-2, Baffin, whilst taking the angles of the castle wall, in order to measure its height and distance, received his death-wound. According to the account given by Purchas, 'he received a shot from the castle into his belly, wherewith he gave three leaps, and died immediately.' His death made little difference to the result of the siege; Kishm surrendered on 1 Feb., and Ormuz also, after a stout defence, on 23 April 1622. Baffin appears to have left no surviving children; but his widow preferred a claim for some money which she asserted belonged to her husband, in compensation for which she eventually received 500*l*. She is described as then, in 1628, a woman advanced in years and deaf, and as having married again.

Amongst early navigators Baffin takes a high place as one of the first who endeavoured to determine longitude at sea by astronomical observations. In his first recorded voyage to Greenland (8 July 1612) he describes his attempt to determine the longitude by observing the time of the moon's culmination; and in his voyage to Hudson's Bay (21 June 1615) he has re-

corded another attempt by the lunar distance of the sun. The measurements were of necessity too rude to give results even approximately correct, but that was the fault of the instruments; and though the observation led to no immediate improvement, the date is noteworthy as that of the first lunar observation taken at sea.

[The Voyagés of William Baffin, 1612-22 edited, with notes and an introduction, by Clements R. Markham, C.B., F.R.S. (1881), for the Hakluyt Society. Mr. Markham's Introduction embodies the result of much laborious research, and it is scarcely to be hoped that any further evidence as to Baffin's origin and early life can now be discovered.] J. K. L.

**BAGARD, or BAGGARD, THOMAS** (*d.* 1544), civilian, was nominated in 1525 by Cardinal Wolsey one of the first eighteen canons of his college at Oxford, which afterwards became Christ Church. On 7 Oct. 1528 he was admitted to the college of advocates in London. Early in 1532 he became chancellor of the diocese of Worcester through the intercession of Edmund Bonner with Thomas Cromwell. Under date 24 Jan. 1531-2, Bonner asked Cromwell to 'continue good master to Dr. Bagard,' and two letters from Bagard to Cromwell, thanking him for granting him the appointment at Worcester, are extant at the Record Office. Bagard appears to have at first moderately supported Cromwell's ecclesiastical reforms, and, although he disagreed with him in many points of doctrine, to have been on good terms with Hugh Latimer, both before and after he became bishop of Worcester in 1535. In 1534 Cromwell suspected Bagard of disloyalty to the cause of the Reformation, and Bagard replied to the accusation in a long letter asserting his anxiety 'to tender the king's pleasure.' In 1541 he became one of the first canons of Worcester endowed from the confiscated property of the disestablished Worcester priory. Bagard died in 1544.

**BAGE, ROBERT** (1728-1801), novelist, was born at Darley, in the parish of St. Almonds, Derby, on 29 Feb. 1728. He was educated at a common school at Derby. At the age of seven he was a proficient in Latin, and his talents were generally admired. On leaving school he was trained to his father's business of paper-making, but did not cease to study. At the age of twenty-three Bage contracted a happy marriage, and with the aid of his wife's dowry he was enabled to establish a paper manufactory at Elford,

near Tamworth, which he carried on until his death. After marriage Bage taught himself the modern languages, becoming especially proficient in French and Italian; and being inclined (says Mrs. Barbauld) when about thirty to learn the more abstruse branches of mathematics, he engaged a teacher at Birmingham, where he spent an evening every week for the purpose of instruction. The reference to the science of mathematics put into the mouth of one of his characters probably refers to its influence over himself. 'He was obliged to this science for a correct imagination, and a taste for uniformity in the common actions of his life.'

Bage did not begin to write until late in life. Sir Walter Scott states, in the 'Novelists' Library,' that in the year 1765 Bage entered into partnership in an extensive iron manufactory, one of his partners being the celebrated Dr. Darwin. The firm was dissolved in 1779, and Bage found himself a loser to the extent of 1,500*l*. In order to divert his mind from his losses he turned to literature. His first venture in authorship was made at the age of fifty-three. 'Mount Henneth,' a novel in two volumes, was purchased by Lowndes for 30*l*., and published in 1781. It is written in the form of a series of letters, and in a humorous preface the author anticipates the critics by reviewing the work himself. 'It puts us in mind of Dr. Johnson's sarcasm on Macklin's conversation—a perpetual renovation of hope, with perpetual disappointment. To say the least we can of it, it is bad in the beginning, worse and worse in its progress, but the end is heaven.' There were sins against decorum in this novel, but 'the strong mind, playful fancy, liberal sentiments, and extensive knowledge of the author are everywhere apparent' (Scott).

Novels quickly succeeded each other, 'Barham Downs,' 'The Fair Syrian,' and 'James Wallace,' appearing at very brief intervals. After the publication of the last-named work the author took a short respite of four years, and then issued, in 1792, 'Man as he is'; this was followed in 1796 by Bage's last and finest novel, 'Hermesprong, or Man as he is not.' All his works were produced within fifteen years, or between his fifty-third and sixty-eighth year. Their freshness and vigour greatly charmed his contemporaries, and the reputation of the author extended beyond the Channel, several of Bage's novels being translated into German and published at Frankfort.

From a correspondence with his friend William Hutton of Birmingham, Bage appears to have got into difficulties with the excise respecting the duty on his paper. But

the fault lay with the officials, who seized large quantities of paper after it had left the maker's possession, and after it had been marked, stamped, signed with the officer's name, and the excise duty paid. In 1793 Bage left Elford and went to live at Tamworth, dying in the latter town on 1 Sept. 1801. We have the testimony of Mr. Hutton, his most intimate friend, that in private life Bage was most amiable, but he adds with regret that 'he laid no stress upon revelation,' and was 'barely a christian.' His friends were deeply attached to him, and they described his temper as open, mild, and sociable. He was very kind to his domestics, who lived with him till they were old, and even to his horses when they were past work. He had three sons, who manifested no small portion of his ability, but one of these died in early life.

Notwithstanding his friend's assurance that he was 'barely a christian,' there are signs in Bage's works that he retained a strong affection for the quaker religion, in which he was brought up. He was deeply impressed by the French revolution, and the effects of the new principles are clearly traceable in his later works. In 'Man as he is' the philosophy is that of the French revolution. The work has been described as that of 'a man whose mind has more strength than elegance, and whose opinions, often just, sometimes striking, are marked with traits of singularity, and not unfrequently run counter to received notions and established usages.' In reality, it was the keenness of his satire which was distasteful to the orthodox, and caused them to brand as dangerous works whose sparkling humour, genuine ability, and in the main generous and elevating sentiments, were not sufficiently recognised.

The writer in Chambers's 'Cyclopædia of English Literature' describes Bage's novels as decidedly inferior to those of Holcroft, with whom Bage had no little in common; and he expresses surprise that Sir Walter Scott should have admitted them into his 'Novelists' Library.' But the reader will feel inclined to applaud Sir Walter for granting them this distinction. As novels they may not interest strongly by their plot, but there is a distinct originality about them. They were chiefly intended to inculcate certain political and philosophical opinions. Not unfrequently, perhaps, the author's strong convictions betray him into exaggeration. But touching the literary power of his works there can scarcely be two opinions. Considered altogether apart from their moral and social bearings, the novels of Bage display

an unquestionable power in drawing and developing character, while their style is always entertaining and frequently incisive.

Bage's novels are comparatively unknown, and have not been reproduced in a collective edition. Scott reprinted three of them in the 'Novelists' Library,' and Mrs. Barbauld a fourth in the 'British Novelists.' The full list, with the respective dates of publication, is as follows: 1. 'Mount Henneth,' 1781. 2. 'Barham Downs,' 1784. 3. 'The Fair Syrian,' 1787. 4. 'James Wallace,' 1788. 5. 'Man as he is,' 1792. 6. 'Hermesprong, or Man as he is not,' 1796.

[Ballantyne's Novelists' Library, edited by Sir Walter Scott; Chalmers's Biographical Dictionary; British Novelists, edited by Mrs. Barbauld; and the various works of Bage.] G. B. S.

**BAGEHOT, WALTER (1826-1877)**, an English economist and journalist, was born at Langport, in Somersetshire, on 3 Feb. 1826; he died at the same place on 24 March 1877. For the last seventeen years of his life he edited the 'Economist' newspaper, which was established by the Right Hon. James Wilson [q. v.] during the anti-corn law agitation to represent free-trade principles. Bagehot married in 1858 Mr. Wilson's eldest daughter, and became in 1860, on the departure of his father-in-law to India as financial member of the supreme council, the editor and manager of that journal, and continued in that position till his death. He was a considerable authority in all questions of banking and finance, and consulted by chancellors of the exchequer of both parties on such matters at critical moments; but in the literary world he was even better known for his vivid and humorous criticisms. He vainly contested Bridgewater as a liberal against George Patton [q. v.] in 1866. Bagehot published: 1. 'The English Constitution,' a book used at Oxford and in several North American universities as a text-book; it was translated into German, French, and Italian. 2. 'Physics and Politics,' an attempt to apply the principles of 'natural selection,' as explained by Mr. Darwin, to the explanation of the competitions and struggles of states; this volume, which is one of the International Scientific Series, has gone through four editions, and has been translated into six or seven different languages. 3. 'Lombard Street,' now in its seventh edition; a study of the money market. He also published during his lifetime a volume of essays, 'Estimates of some Englishmen and Scotchmen,' now out of print, the whole of which, however, is included in either the two volumes of 'Literary Studies,' or the single volume of 'Biographical Studies,' pub-

lished after his death. Besides these works a volume on the 'Depreciation of Silver,' which discusses the causes of the fall in silver between 1865 and 1875, and which was corrected for the press by himself, appeared immediately after his death in 1877; and a volume of essays on political economy, called 'Economic Studies,' part of which had been published during his lifetime, while part was found among his papers, was published in 1880; Bagehot also published some essays on parliamentary reform, which were republished in 1883.

Langport, where Walter Bagehot was born and died, and with which he was connected both personally and by business ties during the whole of his life, is a little Somersetshire town with a 'portreeve' of its own, and a characteristically sober constitutional history. So long ago as in the reign of Edward I, Langport begged to be relieved of the onerous duty of sending burgesses to the House of Commons, for at that time sending representatives to parliament also involved remunerating them for their responsibilities, dangers, and expenses. This frugality and this rather ostentatious indifference to patriotic pretensions pleased Bagehot, who often boasted of it to his friends as a note of true political sobriety. It was at Langport that the Somersetshire bank was founded by Mr. Samuel Stuckey in the eighteenth century, and with this bank Bagehot, whose father, Mr. Thomas Watson Bagehot, had married Mrs. Estlin, a niece of Mr. Stuckey's, became early connected, and he succeeded his father as vice-chairman of the bank on the latter's retirement. Bagehot was sent to school in Bristol, where his mother's brother-in-law, Dr. Prichard, lived; and the influence of this relative, who wrote a book of great note on the 'Races of Man,' is visible enough in Bagehot's own subsequent writings. In 1842 he entered University College, London, where he became a good mathematician under the late Professor De Morgan, and read very widely in all branches of general literature. Poetry, metaphysics, and history—of which last study he never shirked what are usually thought the dry parts—were his favourite studies. The late Professor Long, who was a learned and accurate student of Roman law, as well as of Roman history, had almost as much influence over his course of studies as Professor De Morgan himself. Bagehot took his B.A. degree in the university of London, with the mathematical scholarship, in 1846, and his M.A. degree in the same university, with the gold medal in intellectual and moral philosophy and political economy, in 1848. Then he began to read law,

in the chambers, first, of Mr. Charles Hall (afterwards Vice-Chancellor Sir Charles Hall), and then of his friend, Mr. Quain (afterwards the late Mr. Justice Quain), where he took a great liking for the art of special pleading, an art of which lawyers have now abandoned at least the technical and scientific use. Bagehot always professed to regret greatly the abolition of special pleas. 'The only thing I ever really knew,' he once wrote, 'was special pleading, and the moment I had learnt that, the law reformers botched and abolished it.' Nevertheless, though called to the bar in the autumn of 1852, he had already made up his mind not to pursue the law as his profession, but to join his father in his shipowning and banking business in Langport.

Before doing this, however, Bagehot spent some months in Paris, and happened to be living there at the time of the *coup d'état* in December 1851. He adopted keenly at the time the side of the prince-president, and horrified some of his liberal friends in London by addressing seven letters on the subject of the *coup d'état* to a little weekly paper, called the 'Inquirer.' These letters have since been republished in an appendix to the first volume of his 'Literary Studies,' which appeared after his death. They are letters of singular force and vivacity, though marked by more of that cynicism not uncommon in young men than any of his later writings. His great thesis was that 'stupidity' is the essential condition of political freedom, and that the French were a great deal too clever to be free. He held that the only security for people's doing their duty was 'that they should not know anything else to do,' and that the only guarantee for political stability was that they should be incapable of comprehending any other condition of political life than that to which they had been accustomed. 'It is easy to see that this notion, less paradoxically expressed, pervaded the essay on 'Physics' and Politics' conceived and written some twenty years later.

In 1852 Bagehot plunged into business; but he had always spare energy for literature, and contributed first to the 'Prospective Review,' and from 1855 onwards to the 'National Review' (of which he was, throughout the existence of that quarterly, one of the editors), a series of essays which attracted very general attention by their brilliancy of style and lucidity of thought. Bagehot's great characteristic as a writer, whether on economic or literary subjects, was a very curious combination of dash and doubt, great vivacity in describing the superficial impressions produced on him by every subject-matter with

which he was dealing, and great caution in yielding his mind to that superficial impression—one might almost say great distrust of it, if only because he was always disposed to believe in the illusiveness of a first impression. His face reflected both phases of his mind. He had heavy black hair, flashing black eyes, a florid complexion, a lissome figure, and the look of high animal spirits; but he had also something of good-natured mockery in his glance, and his face reflected that habitual reserve of judgment which has been called 'detachment' of mind—in other words, a power of holding himself aloof from the influence of his own first impressions till he had checked and criticised them. Perhaps the essays which would best represent his peculiar genius are those on the 'First Edinburgh Reviewers,' on 'Hartley Coleridge,' and on 'Bishop Butler.' In those essays you get a glimpse of Bagehot's ultimate creed, such as you hardly reach in any of his more elaborate works.

Of these more elaborate works, probably the most adequate to his own conception was that on the 'English Constitution,' in which he tries to get rid of all the formal theory of 'checks and balances,' and to show where the centre of power in the United Kingdom really is, and why the House of Commons is so much more powerful than other representative assemblies of the same class. His view was that the throne and the House of Lords are of the highest use, *not* in directly checking the House of Commons, but in affecting the wishes of the people as to what the commons should do and what they should not do. He regarded 'the dignified parts,' or, as he also calls them, 'the theatrical parts,' of the constitution, as useful chiefly to inspire in the people political confidence, to give a fuller significance to the sense of national unity, and to incline the people to look above themselves in education and social rank for the leaders by whom they would be guided. But the effective part of our constitution is, in Bagehot's view, the very close unity between the executive government and the legislature, produced by the machinery of the cabinet, which is at once responsible for every administrative act and for the legislation which enlarges, or contracts, or alters the scope of, both the administration and the legislature. He contrasts, at great length, the fusion of the administrative and legislative functions in the English cabinet with their formal and careful separation in the American constitution, and he maintains that the House of Commons gains enormously in efficiency by its power of dismissing and virtually nominating the cabinet; for that is the power,

according to Bagehot, which gives so much importance to its debates, and which brings home to the electors their responsibility for sending to parliament the right kind of men, and for making their dissatisfaction felt when their representatives do not speak and vote in the manner best calculated to lend weight to the party which they are pledged to support. Bagehot held that a representative assembly which, like the House of Representatives in the United States, cannot effect any great and notable change by its resolutions, is bound to be something of a cipher, and that the people will never care enough about what such an assembly does, to take the pains requisite for selecting the best men. Nay, more, the best men themselves will not fix their ambition on becoming members of an assembly which exerts so little conspicuous influence on the course of national events. Bagehot was the first to bring out powerfully the paradox in 'government by public meeting,' as he called it, though he did not live to see all the practical illustrations of that paradox which we have witnessed of late years since the rise of Mr. Parnell's Irish party into its present importance. But he had fully grasped the absolute impossibility of conducting such a government as ours unless the House of Commons, in whom all power is centred, is really docile to its leaders on both sides. And Bagehot held that nothing could make it docile to its leaders on both sides except a profound popular conviction that deference to leaders is of the very essence of parliamentary government.

Bagehot, though no admirer of the House of Lords, is, on the whole, a decided partisan of the House of Lords as a revising assembly; but he earnestly desired its reconstitution by the help of a considerable number of distinguished life-peers. 'Most lords,' he said pithily, 'are feeble and forlorn.' The young peers are seldom aware that 'business is really more agreeable than pleasure.' Moreover, they are timorous creatures, who do not know when it is safe to resist an apparent current of popular opinion any more than they know when it is fatal to attempt to resist it. But with all this depreciation of the peers, Bagehot thought that the existence of the House of Lords tended to maintain the respect of the English people at large for the influence of wealth and culture in the community, and to prevent hungry and ignorant men from dictating foolish revolutionary measures to hungry and ignorant crowds of followers. While the House of Lords remains, the people will be insensibly influenced by their liking for the wealth and splendour of the aristocracy, and this liking

will act as a sedative to keep them from rash and violent measures, and to confine reform to the removal of clear and visible grievances.

'Physics and Politics' was described by Bagehot as 'an attempt to apply the principles of natural selection and inheritance to political society.' His general view was that in early times the value of government chiefly consisted in the drill of a society into fixed habits, customs, preferences, and rules of its own, so as to subdue arbitrary personal caprice, and to create a common mind and character, a common groove of thought and feeling. He held that for this purpose a good habit or rule was better than a bad habit or rule; but that even a bad habit or rule thoroughly impressed on the whole people, and inducing a common life, was better than a good habit or rule which had not bitten deeply into the life of the people and effectually moulded them in a single mould. The race of men who cannot help acting together if they would, are sure to get the better over any race whose combination for co-operative actions is loose and imperfect; hence his preference for what he called political stupidity—the dull fixed habit of acting all in one way as the English do—to the sprightly divergences and differences of opinion which make it so difficult for the French to know what they really wish, or whether they have any wish in common by which the masses are profoundly affected. In the same way Bagehot explained, of course, the triumph of Rome over Greece and other indifferently welded, though cleverer and more reflective communities. He maintained, however, that this drill may be too effective, may go too far, and that, when it does so, we have cases of what he called 'arrested civilisations.' Such an arrested civilisation we have in China, where the common drill completely trampled out that disposition for cautious criticism and review of national prejudices, which ought to come sooner or later if there is ever to be an age of progress and discussion. Bagehot held that in our own day that respect for action which was characteristic of the times when action was needed to form and mould the national character, is excessive. He thought that reserve of judgment, and especially reserve of resolve, is not half common enough. Men are over-eager to be doing what they are not sure of approving even when they have done it. The military instincts inherited from the age of drill precipitate us into all sorts of premature action, where we really want discussion and suspense of judgment till discussion has done its perfect work. 'Physics and Politics' is a very remarkable illustration of the dread

of eagerness inspired by the doubts of a reflective mind. The eager nations, he held, had had their day. The time for deliberating, hesitating and slowly resolving nations, had arrived.

As an economist Bagehot belonged decidedly to the Ricardo school; but he held that the Ricardo political economy does not apply to any country in which the larger commerce and the system of open competition have not been more or less introduced. He denied altogether, for instance, that in such a country as India it is true that capital flows towards any occupation in which a high rate of profit is to be made, or that the Ricardo theory of rent is true in India. He regarded political economy as a science of *tendencies* only, these tendencies being approximately true in countries like England, though not more than approximately true even there, while in the older world they are absolutely invisible.

Bagehot was one of the best conversers of his day. He was not only vivid, witty, and always apt to strike a light in conversation, but he helped in every real effort to get at the truth, with a unique and rare power of lucid statement. One of his friends said of him: 'I never knew a power of discussion, of co-operative investigation of truth,' to approach to his. 'It was all stimulus, and yet no contest.'

[The books mentioned above, and the memoir prefixed to the two volumes of *Literary Studies*.]  
R. H. H.

**BAGFORD, JOHN** (1650-1716), 'shoemaker and biblioclast,' was born in St. Anne's parish, Blackfriars, and brought up as a shoemaker. Like many of his craft, he had a turn for literature and general information, and in process of time became a collector of books on commission for booksellers and amateurs. In the exercise of his vocation he formed the two collections for which he is chiefly remembered, the 'Bagford Ballads,' which, by rescuing so many curious broadside ditties from destruction, has entitled him to the gratitude of all antiquaries and lovers of old English verse, and the enormous collection of title-pages and other fragments in sixty-four volumes folio, which has procured him the no less emphatic maledictions of all who object to the mutilation of books. 'He was,' says Dibdin, 'the most hungry and rapacious of all book and print collectors, and in his rage he spared neither the most delicate nor the most costly specimens.' His ravages were perpetrated under the idea that he was amassing materials for the history of printing, proposals for which were published

in 1707, but which he would have been quite incompetent to write. He was, however, diligent and honest, and, according to Hearne, possessed a great knowledge of paper and binding. He was one of the revivers of the Society of Antiquaries, and a valuable letter from him on the antiquities of London is printed in the first volume of Leland's *Collectanea*. He himself exercised printing on a small scale. In his latter days he was admitted into the Charterhouse, and died on 15 May 1716. His collections were purchased after his death by Lord Oxford, and came eventually into the British Museum. 'The Bagford Ballads, illustrating the last years of the Stuarts,' were edited for the Ballad Society by the Rev. J. W. Ebsworth, 2 vols., Hertford, 1878; and other pieces referring to the periods of the Civil War, Commonwealth, and Restoration have appeared in others of Mr. Ebsworth's reprints. Some have been included in Mr. Chappell's editions of the *Roxburghe Ballads*.

[Dibdin's *Bibliomania*, pp. 430-37; Blades's *Enemies of Books*.]  
R. G.

**BAGGERLEY, HUMPHREY** (fl. 1654), royalist captain, was in the service of James, the seventh earl of Derby. He was employed in the embarkation of that nobleman in the *Isle of Man* on 12 Aug. 1651. On 13 Oct. in that year the earl applied that Captain Baggerley, who was then a prisoner at Chester, might be allowed to attend him during the few hours he had to live. The request was granted, and it is to Baggerley's pen that we are indebted for a minute and touching narrative of the earl's final hours and execution. This narrative has been printed by Draper in his account of the 'House of Stanley,' 1864. In 1654 Captain Baggerley was imprisoned in London for taking part in what was called Gerard's conspiracy. He subsequently acted as steward to William, ninth earl of Derby.

[Draper's *House of Stanley*, 99, 217, 218, 231.]  
T. C.

**BAGGS, CHARLES MICHAEL, D.D.** (1806-1845), catholic bishop, controversialist, scholar and antiquary, was born at Belville, in county Meath, Ireland, on 21 May 1806. He was the eldest son of a protestant barrister of Dublin, Charles Baggs, Esq., afterwards judge of the court of vice-admiralty in Demerara, by his wife Eleanor, fourth daughter of John Howard Kyan, Esq., of Mount Howard and Ballymurtagh in the county of Wicklow. Through his mother's family (see *BURKE's Landed Gentry*, 4th edition, p. 825) he was directly descended from the O'Cahans, princes

of Derry, a younger branch of the illustrious house of O'Neil of Tyrone.

His father being a member of the established church, he was sent first of all to a protestant academy kept by a Mr. King at Englefield Green in Berkshire. Early in 1820 his father died suddenly at Demerara, three days after hearing of the death of a friend for whom he had become security for 60,000*l*. Upon the news of this double calamity Charles Baggs was removed by his mother from Englefield Green to the then well-known catholic seminary of Sedgely Park. There he remained for exactly a year, namely, until the June of 1821, when, at the instance of Bishop Poynter, vicar-apostolic of the London district, he was transferred as an ecclesiastical student to St. Edmund's College in Hertfordshire. For three years he continued his studies there with intense application. Having won greatly upon his superiors by his docility and intelligence, he was in the summer of 1824 sent to the English College at Rome, in the Via di Monserrato, which thenceforth, from the date of his arrival there on 9 June, became his home for sixteen years. The academic honours won by him were numerous. In 1825, besides contending for the second prize in logic, he won the first prize in mathematics. In 1826, again, he secured not only the first prize in Hebrew, but the first also in physics and mathematics. In 1827 he was pronounced 'laudatus' in theology, and was awarded the first prize in sacred scripture.

His remarkable ability was shown in a signal manner on 25 Sept. 1830, when, in the presence of a distinguished audience presided over by Cardinal Zurla, he held his ground as a Latin disputant against all comers in the maintenance of his unusually ample theses as a theologian. They embraced fifty in regard to Holy Writ, forty-one in regard to dogmatic theology, and sixty in regard to ecclesiastical history. This display, which won for him his doctor's cap at the early age of twenty-four, is still commemorated in the volume entitled '*Theses ex Theologia Universa et Historia Ecclesiastica quas sub tutela et auspiciis eminentissimi principis Placidi Zurla S.R.E. Cardinalis Tituli S. Crucis in Jerusalem SS. D. N. Pii Papæ VIII in Urbe Vicarii, etc. et Collegii Anglorum Patroni propugnandas suscipit Carolus Michael Baggs eiusdem collegii alumnus septimo Kal. Septembris facta cuilibet mane indiscriminatum vespere autem post tertium singulas oppugnandi facultate. Romæ, MDCCCXXX. Apud Leopoldum Bourlieum*,' 4to, pp. 48.

He was ordained in his twenty-fifth year (Dec. 1830) to the priesthood, having in the

previous month been ordained subdeacon and deacon. He took high rank in the English college as a teacher. For several years he occupied the chair of professor of Hebrew. His knowledge of French and Italian in particular, as well as of Spanish and German, was remarkable. As a pulpit orator he was not long in becoming known outside the walls of San Tommaso degli Inglesi. His earliest published discourse was one on the supremacy of the Roman pontiffs, delivered on 7 Feb. 1836, in the church of Gesù e Maria in the Corso, and was issued from the press immediately afterwards, with an appendix (in 8vo, pp. 79), dedicated to Cardinal Weld. In the following month, 8 March 1836, appeared his 'Letter addressed to the Rev. R. Burgess, Protestant Chaplain at Rome' (8vo, pp. 58); a controversial argument, which in the same year was translated into Italian by Dr. Baggs himself and by Augusto Garofolini, both versions being printed separately at the Tipografia delle Belle Arti.

During the rectorship at the English College in Rome of Dr. (afterwards Cardinal) Wiseman, Dr. Baggs was appointed, as early as in 1834, to the post of vice-rector. By his holiness Pope Gregory XVI, with whom he was always an especial favourite, he was nominated a 'cameriere d'onore,' and in the same pontificate was created a monsignore. A monograph from his hand, entitled 'The Papal Chapel described and illustrated from History and Antiquities, by C. M. Baggs, D.D., of the English College at Rome, Cameriere d'Onore to his Holiness,' appeared at Rome in 1839 (8vo, pp. 44), inscribed to Monsignore Charles Acton. It is still widely popular as a handbook for English-speaking visitors. The same may be said also of another larger work by Dr. Baggs, which was published almost simultaneously. This was 'The Ceremonies of Holy Week at the Vatican and S. John Lateran's. Described and Illustrated from History and Antiquities. With an Account of the Armenian Mass at Rome on Holy Saturday, and the Ceremonies of Holy Week at Jerusalem. By C. M. Baggs, Cameriere d'Onore, &c.' 8vo, pp. 132. The dedication of the book last named to Hugh Charles Lord Clifford of Chudleigh is dated English College, Rome, 16 March 1839.

During the following year Baggs published at Rome another ecclesiastico-archæological work of curious elaboration, entitled 'The Pontifical Mass sung at St. Peter's Church on Easter Sunday, on the Festival of SS. Peter and Paul, and Christmas Day, with a Dissertation on Ecclesiastical Vestments,' 8vo, 1840. This work he formally dedicated

to Cardinal James Giustiniani, bishop of Albano and protector of the English College. Baggs preached the funeral oration of his cousin, Lady Gwendoline Talbot, Princess of Borghese, on 23 Dec. 1840, at the church of San Carlo in the Corso. In its printed form he inscribed it to the father of the young princess, John, the sixteenth Earl of Shrewsbury.

Four months prior to this Baggs was advanced to the rectorship of the English College, upon the consecration of his predecessor, the future Cardinal Wiseman, on 8 June 1840, as bishop of Melipotamus. During the last ten years of his sojourn in Rome, Baggs, both orally and in writing, held high rank there as a controversialist. Before the *Accademia di Religione Cattolica*, he read, on 30 June 1842, his 'Dissertazione sul Sistema Teologico degli Anglicani detti Puseyisti,' afterwards published in 8vo, pp. 35, in the 'Annali delle Scienze Religiose,' vol. xv. No. 43. In a subsequent number of the same record, vol. xvii. No. 49, appeared, in 8vo, pp. 28, his 'Dissertazione sullo Stato Odierno della Chiesa Anglicana.'

Throughout the pontificate of Gregory XVI, Baggs was the 'cameriere d'onore' upon whom was devolved the duty of presenting all the English visitors, both catholic and protestant, who were admitted to the privilege of a private audience with his holiness. In this capacity he enjoyed a high degree of popularity, not merely among his co-religionists, but among his compatriots generally. His career at Rome was fittingly closed by his elevation to the episcopate. This occurred on 28 Jan. 1844, when, in the church of St. Gregory on the Caelian Hill, he was consecrated Bishop of Pella in partibus infidelium by Cardinal Fransoni, assisted by Dr. Brown, then Bishop of Tloa and afterwards of Liverpool, and by Dr. Collier, the Bishop of Port Louis in the Mauritius. It was in consequence of the death of Bishop Baines that Gregory XVI selected him thus to fill the suddenly vacated office of vicar apostolic of the western district in England. On his departure from Rome the pope made him a present of books, while the students of the English College gave him a costly pectoral cross, and the protestants then residing in the Eternal City purchased for him by subscription a superb crucifix. He formally took possession of his diocese on 30 May 1844, when his arrival at his future home in England was welcomed by a large gathering of the clergy and laity at Prior Park near Bath. There, two days afterwards, he held his first ordination. Visiting his extensive diocese during the course of that summer,

he newly organised it in the autumn, by portioning it out, on 2 Oct., into four deaneries. Shortly after taking up his residence at Prior Park, Bishop Baggs delivered a remarkable course of lectures on the supremacy of the pope, in the church, at Bath, of St. John the Evangelist. At the beginning of the second year of his episcopate, Bishop Baggs died at the early age of thirty-nine, on 16 Oct. 1845, at Prior Park. There his remains were solemnly interred in the partially completed new church of the college on the 23rd of that month, being a few years afterwards removed thence to their present place of sepulture in the church of Midford Castle.

[For the authentication of facts in this memoir careful research has been made in the archives of the English college at Rome, the portions of which relating to Bishop Baggs are mostly in the handwriting of his vice-rector and successor as rector, the late Dr. Thomas Grant, afterwards first bishop of Southwark. Reference may also be made to the following authorities: *Memorial Notice in the Morning Post*, 3 Nov. 1845; another in the *Weekly and Monthly Orthodox Journal* of June 1849; *Memoir with Portrait in the Catholic Directory* for 1851, 12mo, pp. 152-155; *Oliver's Collections illustrating the History of the Catholic Religion in the counties of Cornwall, Devon, Dorset, Somerset, Wilts, and Gloucester*, 8vo, pp. 230-3; *Brady's Episcopal Succession in England, Scotland, and Ireland, A.D. 1400 to 1875*, 8vo, Rome, 1877, pp. 330-3.]  
C. K.

**BAGNALL, GIBBONS** (1719-1800), poetical writer, the son of Gibbons Bagnall of Windsor, was admitted to Balliol College, Oxford, 12 July 1735, where he proceeded B.A. 30 April 1741 (*Rawl. MS.* in the Bodl. Libr.). He afterwards went to King's College, Cambridge, where he took the degree of M.A. in 1760. Taking orders, he became vicar of Holm Lacy in Herefordshire, and head-master of the free school at Hereford. He was collated on 27 May 1760 to the prebend of Piona Parva in the church of Hereford, and on 1 Aug. 1767 to the prebend of Barsham in the same cathedral establishment. He also held for some time the rectory of Upton Bishop; and in 1783 he was presented to the vicarage of Sellack. He died on 31 Dec. 1800, in his 82nd year.

His works are: 1. 'A Sermon on Exodus xv. 20,' 1762, 8vo. 2. 'Education: an Essay,' in verse, London, 1765, 4to. 3. 'A New Translation of Telemachus, in English verse,' 2 vols., Hereford, 1790, 8vo; 2 vols., Dublin, 1792, 12mo.

T. C.

**BAGOT, LEWIS** (1740–1802), bishop, was seventh son of Sir Walter Bagot, bart., and brother of the first Lord Bagot. Born 1 Jan. 1741, he was educated at Westminster, although not on the foundation, was with his brother a schoolfellow of Cowper, was sent to the university of Oxford, and was appointed a canoneer student of Christ Church. He wrote verses in 1761—printed among the Oxford poems—on the death of George II and accession of George III. There is loyalty, but no inspiration, in them. Being very fragile in health, he removed to Lisbon. On his return, considerably invigorated, he proceeded M.A. 23 May 1764. Having been admitted to holy orders, he was presented to the rectory of Jevington, and also of Rye, Sussex. Prior to this he had been made canon of Christ Church in the place of Moore, archbishop of Canterbury, in 1771. In this year he married a Miss Hay, niece of the Earl of Kinnoul, and sister of Dr. Hay, of Christ Church. He proceeded D.C.L. in 1772, and was installed in the deanery of Christ Church 25 Jan. 1777, on which he resigned his two livings. Dr. Bagot was consecrated bishop of Bristol 23 Feb. 1782, and held his deanery *in commendam* with the see, until his translation to Norwich in 1783. In March 1790 the good bishop was further translated to St. Asaph. He rebuilt the palace. Amiable, gentle, benevolent, humble, and laborious, he lived on intimate terms with his clergy and ‘the common people.’

His ‘Warburtonian Lecture’ of 1780 on the ‘Prophecies’ is his only book. In 1781 he received the thanks of the Society for Promoting Christian Knowledge for a gift of fifty copies of Dr. Barrow’s ‘Doctrine of the Sacraments,’ which he had reprinted. The tract still remains on the society’s lists. Through the same society he published a tractate on the ‘Errors of the Anabaptists’ (first printed at Reading 1776). He died in London 4 June 1802, but was buried at St. Asaph. His portrait, by Hoppner, is in Christ Church hall.

**BAGOT, RICHARD, D.D.** (1782–1854), bishop successively of Oxford and of Bath and Wells, was the sixth son of William, first Lord Bagot, by Louisa St. John, daughter of the second Viscount Bolingbroke. Educated at Rugby, he entered Christ Church,

Oxford, in 1800, and proceeded B.A. in 1803, M.A. in 1806 and D.D. in 1829. In 1804 he was elected to an All Souls’ fellowship, which he resigned two years later, on his marriage with Lady Harriet Villiers, daughter of the Earl of Jersey. After taking holy orders in 1806, he was presented by his father to the rectory of Leigh, Staffordshire, and in 1807 to that of Blithfield. In 1812 he became prebendary of Lichfield, in 1817 canon of Worcester, in 1822 canon of Windsor, in 1827 dean of Canterbury, and in 1829 bishop of Oxford, holding the deanery in commendam.

Bagot was bishop of Oxford at the date of the Oxford movement, and was reluctantly forced to play a part in its history. In the charge that he delivered to his clergy in 1838 he spoke of the frequency with which appeals had been made to him of late years to check breaches both of doctrine and discipline. But he declared that, so far as the authors of ‘Tracts for the Times’ had recalled forgotten truths, and drawn attention to the union, discipline, and authority of the church, they had done good service. He warned them, however, against creating schisms, or reverting to practices ‘which heretofore have ended in superstition.’ This mild warning was at first construed into a general censure of the ‘Tracts’ by their opponents; but Dr. Pusey, in a published letter to the bishop, interpreted it otherwise, and created the impression that Bagot sanctioned his views. In 1840 the bishop was implored by a clergyman of his diocese, in a long anonymous pamphlet, to condemn Dr. Pusey’s opinions, and in the following year, on the publication of Tract XC, Bagot requested the author, Newman, to bring the series to an immediate close. His request was at once complied with, and the bishop continued to treat the Tractarians with marked courtesy. Late in 1841 he defended Newman in a letter to Pusey from the charge of having broken word with himself by republishing Tract XC (BROWNE, *Annals of the Tractarian Movement*, 1861, p. 83). In 1842 Bagot rediscovered the movement at length in another charge to his clergy. He condemned the violent attacks made on the Tractarians, and spoke with respect of their leaders, although he felt no sympathy with their disciples; but he proceeded to expose, in decisive language, ‘the lamentable want of judgment’ exhibited in the writings of ‘the advocates of catholic principles.’ William Palmer dedicated to Bagot in admiring terms his account of the ‘Tracts for the Times,’ first published in 1845.

When the see of Bath and Wells fell vacant, in 1845, Bagot, at his own desire,

was translated to that diocese. The excitement of previous years had ruined his health; soon after leaving Oxford he suffered from a temporary mental derangement, and his see was for a time administered, in accordance with a special act of parliament, by the Bishop of Gloucester and Bristol. He had, however, recovered sufficiently before 1854 to engage in a controversy in that year with Archdeacon Denison, who, according to Bagot, had taught the real presence in the Eucharist in a sense not sanctioned by the church of England. The correspondence, which began in a conciliatory spirit, concluded, without any agreement between the writers having been reached, with a letter from the bishop dated 11 May, four days before his death. He died at Brighton from a complication of disorders on 15 May 1854. His wife, by whom he had eight sons and four daughters, survived him. He published his charges to the clergy for 1834, 1838, 1842, and 1847, and two sermons, one in 1835 and the other in 1840. The charge of 1842 passed through four editions. Archdeacon Denison published his correspondence with the bishop in 1854, shortly after Bagot's death.

[Gent. Mag. for 1854; E. G. K. Browne's *Annals of the Tractarian Movement*, 1861; F. Oakeley's *Tractarian Movement* (1865), pp. 51-2; W. Palmer's *Tracts for the Times* (1883), pp. 80-6; Mozley's *Reminiscences*, i. 442; Bagot's Charges; Brit. Mus. Cat.] S. L.

**BAGOT, SIR WILLIAM** (*N.* 1397), minister of Richard II, appears early in his reign with Sir John Bussy and Sir Thomas Green as a member of his council (*Proceedings of Council*, i. pp. xxi, 77-8); and, having been appointed a proxy for the Earl of Nottingham, 3 Oct. 1396 (*Fœdera*, vii. 844), sat in the obsequious parliament of September 1397, acted with Bussy and Green on behalf of Richard, and headed with them the demand for the repeal of the pardons to the appellants (*WALS.* ii. 224). At this crisis he was among the 'præcipui de consilio' (TROKELowe, 209, 223), and it was at his house, near Coventry, that Richard took up his abode for the great combat of Hereford and Norfolk in September 1398 (*Chronique*, p. 17). On Richard's departure for Ireland (29 May 1399), Bagot, Bussy, Green, and Scrope were left in charge of the kingdom as 'souverains conseillers' (*ib.* p. 24), and the subsidies given them to farm (*FABYAN*). On the landing of Henry (4 July) he attended, with his fellows, the council at St. Albans, and accompanied the Duke of York's forces to Bristol, which he aided in seizing (*WALS.* ii. 232). On the capture of the council there, he alone escaped,

and fled by Chester to Ireland (*ib.* ii. 233), securing for himself, meanwhile, grants from the crown—3 July and 20 Sept. Richard resigned 29 Sept. 1399, and on 16 Oct. Bagot, who had been lodged in Newgate (ICKHAM), was brought up, at the request of the commons, for trial, and at once charged by the Duke of Aumâle with instigating Richard's crimes. He was instantly challenged to combat by Aumâle, Surrey, and Exeter (TROKELowe, 304-5), and after subsequent examinations was finally committed to the Tower (*ib.* 308), where he last appears, 5 April 1400 (*Claus.* i. H. IV). He was M.P. for Warwickshire in eleven parliaments.

[*Chronique de la Traison* (Eng. Hist. Soc.), 1846; Trokelowe and Thomas of Walsingham (Rolls Series); Stubbs's *Const. History* (1878), iii. 19.] J. H. R.

**BAGOT, WILLIAM**, second BARON BAGOT (1773-1856), was descended from a family which, at the time of the Conquest, were possessors of lands in Staffordshire. He was the third son of the first Lord Bagot, by a daughter of the second Lord Bolingbroke, and was born in Bruton Street, London, 11 Sept. 1773. He was educated at Westminster School, and at Magdalen College, Oxford. As the eldest surviving son, he succeeded to his father's title in 1798. Lord Bagot took an active interest in agricultural pursuits, being interested in natural history and archaeology. He was a fellow of the Society of Antiquaries, and of the Linnean, Horticultural, and Zoological Societies. In 1824 he published 'Memorials of the Bagot Family,' containing a sketch of his ancestors from the time of the Conquest. From the university of Oxford he received, in 1834, the degree of D.C.L. He did not take an active part in politics, but, by his votes, gave a consistent support to the Tories. He died at Blithfield, Staffordshire, 12 Feb. 1856. By his first wife, Emily, fourth daughter of the first Lord Southampton, he had no issue; but by his second wife, Louisa, eldest daughter of the third earl of Dartmouth, he had three sons and three daughters.

[Gent. Mag., new series, xlv. 422; Ann. Reg. xcvi. 239.] T. F. H.

**BAGSHAW, CHRISTOPHER** (*d.* 1625?), priest, came of a Derbyshire family. He graduated B.A. on 12 July 1572, of Balliol College, Oxford, and in the same year was elected probationer fellow of his college. Before going to Oxford he appears to have studied for a short time at Cambridge. Baker records that he matriculated at St. John's College, Cambridge, on 22 Nov. 1566. Ac-

cording to Anthony à Wood he owed his fellowship to the influence of Robert Parsons; but Wood's editor, Bliss, prints in the footnotes to the life of Parsons (*Athen. Oxon.* ii. 657) a letter of Archbishop Abbot to Dr. Hussye, from which it appears that Bagshaw 'coming to be fellow was most hot in prosecution against Parson,' whose expulsion from the college he was instrumental in procuring. On 21 June 1575, Bagshaw took the degree of M.A. At this time he was zealous in his devotion to protestant principles, 'yet proved troublesome in his public disputes and in his behaviour towards persons.' In 1578 he was made prebendary of Lichfield. About 1579 he became principal of Gloucester Hall, where he made himself very unpopular. He soon resigned this office, and in 1582 went into France. Here he became a convert to Romanism, and was made a priest. Then, with the permission of Cardinal Allen, he went to Rome, and was admitted to the English college, where his quarrelsome temper made him so unpopular that he was expelled by Cardinal Boncompagno. On leaving Rome he returned to Paris, where he became a doctor of divinity and one of the Sorbonne. The Jesuit writers used to style him derisively 'doctor erraticus' and 'doctor per saltum.' Afterwards he went to England to make converts, and in 1587 we find him imprisoned in the Tower (FOLEY, *Records of the Society of Jesus*, i. 481). In 1593 he was confined with other priests and gentlemen in Wisbeach Castle. His fellow prisoners held him at first in great esteem, but he was soon exposed by Father Edmonds, alias Weston, as 'a man of no worth, unruly, disordered, and a disobedient person, not to be favoured or respected by any' (*Relation of the Faction begun at Wisbech*, 1595 (1601), 4to, p. 38). When examined at the Tower for treasonable practices, Squier, an emissary from some English priests in Spain, affirmed that he had come with a letter (which he threw into the sea off Plymouth) from Father Walpole to Bagshaw at Wisbeach (FOLEY, *Records*, ii. 244). After his liberation, Bagshaw continued to reside abroad. In 1612 he held a disputation with Dr. Daniel Featley concerning transubstantiation. Notes of this disputation were printed many years afterwards in 'Transubstantiation exploded, or an Encounter with Richard, the titular Bishop of Chalcedon. . . . By Daniel Featley, D.D. Whereunto is annexed a publique and solemne disputation held at Paris with Christopher Bagshawe, D. in Theologie and Rector of Avie Marie College,' 1638. Wood says that Bagshaw 'died and was buried at

Paris after the year sixteen hundred and twenty-five, as I have been informed by Franc. à Santa Clara, who remembered and knew the doctor well, but had forgotten the exact date of his death.'

Bagshaw published at Paris in 1603 'An Answer to certain points of a Libel called An Apology of the Subordination in England,' 8vo. He is also thought to have been concerned in (1) 'Relatio compendiosa Turbarum quas Jesuitæ Angli una cum D. Georgio Blackwello, Archipresbytero, Sacerdotibus Seminariorum Populoque Catholico concivere,' &c., Rothomagi, 1601, 4to (published under the name of John Mush); (2) 'A true Relation of the Faction begun at Wisbech by Father Emonds, alias Weston, a Jesuit, 1595, and continued since by Father Walley, alias Garnet, the Provincial of the Jesuits in England, and by Father Parsons in Rome,' 1601, 4to.

[Wood's *Athenæ*, ed. Bliss, ii. 389-90, *Fasti*, i. 188, 199; *Dodd's Church History*, ii. 67; *Foley's Records of the English Province of the Society of Jesus*, i. 42, 481, ii. 239, 244.] A. H. B.

BAGSHAW, EDWARD, the elder (*d.* 1662), royalist, politician, and author, was of a Derbyshire family. In 1604 he entered at Brasenose College, Oxford, where his tutor was Robert Bolton, a puritan writer of some note, whose life was subsequently written by Bagshaw. He proceeded B.A. in 1608, and was entered of the Middle Temple, of which society he became in due course one of the benchers. At this time his leanings were entirely upon the side of the puritans, and when, in 1639, he was in his turn elected Lent reader, he took the opportunity of delivering two discourses to the effect that 'a parliament may be held without bishops,' and that 'bishops may not meddle in civil affairs.' The lectures attracted the notice of Laud, and Bagshaw was prohibited from continuing them. Through the popularity which these proceedings gained for him, he obtained in the following year his election to the Long parliament as a burgess for the borough of Southwark.

Bagshaw did not long continue to act with the party which he had adopted, and when the king retired to Oxford Bagshaw joined him there and sat in the so-called parliament which Charles convoked in that city. In 1644 he was taken prisoner by the parliamentary army, and consigned to the King's Bench prison in Southwark; and while in this confinement he composed the greater number of his works. He was set at liberty in 1646, died in 1662, and was buried at Morton Pinckney, in Northamptonshire, near

which place his property lay. The following is a list of his writings: 1. 'Life and Death of Mr. Robert Bolton,' London, 1633. 2. Editions of three of Bolton's works, 1633-35-37. 3. Several speeches in parliament, viz. (1) on 9 Nov. 1640, (2) on 9 Feb. 1640 (1641); 'Concerning Episcopacy,' 18 Feb. 1640 (1641); 12 Jan. 1641 (1642), 'The Trial of the Twelve Bishops.' 4. Two arguments in parliament, viz. (1) 'Concerning the Canons,' (2) 'Concerning the Præmunire on these Canons.' 5. 'Treatise defending the Revenues of the Church,' London, 1646. 6. 'Treatise maintaining the Doctrine, Liturgy, and Discipline of the Church of England,' 1646. 7. 'Short Answer to the Book of W. Pryne entitled University of Oxford's Plea refuted' (1848, printed). 8. 'De Monarchia Absoluta,' 1659. 9. 'Just Vindication of the questioned part of the reading in Middle Temple Hall, 20 Feb. 1639,' London, 1660; with 'A Narrative of the Cause of their Silencing by the Archbishop of Canterbury' (printed together apud Rushworth). 10. 'Short Defence of the Reformation of the Church by K. Edward and Q. Elizabeth' (not printed).

[Wood's *Athenæ Oxonienses* (Bliss), iii. 618.]

C. F. K.

**BAGSHAW, EDWARD**, the younger (1629-1871), divine and controversialist, the son of Edward Bagshaw [see **BAGSHAW, EDWARD**, *d.* 1662], was born at Broughton, Northamptonshire. He was sent to Oxford from Westminster School, having been elected thence a student of Christ Church 1 May 1646. The testimony is unvarying that from his earliest residence in the university he was refractory and self-conceited. He became B.A. in 1649, and M.A. and Senior of the Act in 1651. During this period he made himself conspicuous for his insolent bearing towards the vice-chancellor. He also played a very prominent part in an ill-conducted agitation for the abolition of hoods and caps. He was incorporated in the degree of M.A. at Cambridge in 1654. He was appointed second master of his own formers school, Westminster, in 1656, and was confirmed in December 1657. At the time the first master of Westminster was the 'terrible' Dr. Busby. There was swift quarrelling between the two high-tempered masters. Of the curiosities of literature is Bagshaw's now extremely rare vindication of himself, entitled 'A True and Perfect Narrative of the Differences between Mr. Busby and Mr. Bagshaw, the First and Second Masters of Westminster School,' 1659, 4to.

In 1659 he was ordained by the eminent Bishop Brownrigg. He became vicar of

Ambrosden, in Oxfordshire; but he elected to be one of the two thousand clergymen ejected in 1662 by the Bartholomew Act of 1661. He was appointed chaplain to the Earl of Anglesey; but again his intractable temper marred his prospects. He crossed over to Ireland to join his patron, and was soon, as Wood acrimoniously puts it, 'gaping after great matters, but without success, and therefore enraged.' On his return to England in December 1662, having fallen to abusing the king and government, church and state, he was put prisoner into the Gatehouse; thence, in January 1663, removed to the Tower, and thence, in January 1664, to Southsea Castle, Hampshire. On his release, in 1664-5, he is found again in London. Dr. Walter Pope, in his 'Life of Bishop Ward,' tells us of this period of his life: 'He was advised by some considerable friends to live peaceable and conformable for the space of a year; who assured him that at the end of it they would provide him some considerable preferment in the church. Accordingly he went and tried, but not being able to hold, he soon repaired to London, much more embittered against ecclesiastical and kingly government than when he went into the country.' He adds: 'He sided tooth and nail with the fanatics, and made a great figure amongst them;' and concludes: 'He exceeded most, if not all of them, in natural and acquired parts.' Palmer on this quaintly remarks (*Nonconf. Mem.* iii. 111): 'But this writer was too little acquainted with that sort of people he calls Fanatics to be able to pass a judgment.' He was speedily involved in 'conventicling' and the inevitable 'sedition.' He was again flung into prison—this time Newgate—for refusing to take the oath of supremacy and allegiance.' He completed his singular career by marrying, in his old age, a blind gentlewoman, who had fallen in love with him for his preaching. His unreasonableness is proved by the insolent attacks he made upon the venerable Richard Baxter. The title (abbreviated) of the great nonconformist's last answer to these unmeasured attacks will speak for itself: 'The Church told of Mr. Edward Bagshaw's Scandal, and warned of the Dangerous Snares of Satan he has laid for them in his Soul-killing Principles' (1671). Nearly all his title-pages are accusations, if not libels, save when he writes of personal religion. His 'Practical Discourse concerning God's Decrees' (1659), which was dedicated to President Bradshaw, is a very able book; while his 'Sainthood no Ground of Sovereignty' (1660) shows plainly he was no fanatic.

It was long believed that Bagshaw died in

Newgate; but it appears that he was allowed out on parole, and really died in Tothill Street, Westminster, on 28 Dec. 1671. A reference to his death by Richard Baxter, that has become classic, must find place here. 'About the day it [*'The Church told'*] came out, Mr. Bagshaw died, a prisoner, tho' not in prison; which made it grievous to me to think that I must seem to write against the dead. While we wrangle here in the dark, we are dying, and passing to the world that will decide all controversies; and the safest passage thither is by peaceable holiness.' He was buried in Bunhill Fields, and Dr. John Owen wrote the following inscription for his altar-tomb:—

'Here lies interred, the Body of Mr. Edward Bagshaw, minister of the Gospel, who received faith from God to embrace it, courage to defend it, and patience to suffer for it, which is by most despised and by many persecuted; esteeming the advantage of birth, education, and learning as things of worth to be accounted loss for the knowledge of Christ. From the reproaches of pretended friends, and persecutions of professed adversaries, he took sanctuary, by the will of God, in eternal rest, the 28th December 1671.'

**BAGSHAW, HENRY, D.D.** (1632-1709), divine, the younger son of Edward Bagshaw, treasurer of the Middle Temple, was born at Broughton, Northamptonshire, in 1632. After attending Westminster School, he was, in 1651, elected student of Christ Church, Oxford, of which he became M.A. in 1657. In 1663 he was appointed chaplain to Sir Richard Fanshaw, ambassador to Spain and Portugal. After the death of Sir Richard Fanshaw in 1666, he returned to England in the retinue of Sir Richard's widow and became chaplain to the Archbishop of York, who made him prebendary of Southwell in 1668 and rector of Castleton in Synderick. In August 1667, he was collated to the prebend of Barmby in York Cathedral, and in 1668 to that of Fridaythorp. He became B.D. in the same year, and D.D. in 1671. In 1672 he was made rector of St. Botolph's Church, Bishopsgate, London, which he exchanged for Houghton-le-Spring, Durham. In 1680 he was appointed prebendary of Durham. He

died at Houghton 30 Dec. 1709. Bagshaw enjoyed a high reputation as a pulpit orator, and he also published 'Sermon preached in Madrid on the occasion of the Death of Sir R. Fanshaw,' 1667; 'The Excellency of Primitive Government, in a Sermon,' 1673; 'A Sermon preached before the King at Whitehall,' 1676; and 'Diatribæ, or Discourses upon Select Texts against Papists and Socinians,' 1680.

[Wood's *Athenæ Oxon.* (Bliss), iv. 631; Hutchinson's *History of Durham*, ii. 206.] T. F. H.

**BAGSHAW, WILLIAM** (1628-1702), divine, was known as the 'Apostle of the Peak.' One of the most enduring religious chapbooks, though it is rarely to be met with now, was his 'Life and Funeral Sermon' by J. Ashe (1704, 12mo). It is the main source of information concerning him, though even to-day, in the dales and mountain-sides of Derbyshire, his name is known and honoured. He was born at Litton, in the parish of Tideswell, 17 Jan. 1627-8. He received his early education at 'several country schools,' and made 'greater proficiency in learning than most of his equals.' He received profound religious impressions under the old puritan ministers, Rowlandson of Bakewell and Bourn of Ashover. He was of the university of Cambridge, entering Corpus Christi College. He received holy orders, and preached his first sermon in the chapel of Warmhill, in his native parish. There he remained about three months. Though later he lamented that in his youth he had entered 'too rashly on the awful work,' his labours in and out of the pulpit proved singularly acceptable. From Tideswell he removed to Attercliffe, in Yorkshire. Here he occupied a twofold post, viz. assistant to the Rev. James Fisher of Sheffield, and chaplain in the family of Colonel (afterwards Sir) John Bright. He was ordained at Chesterfield, Derbyshire, on 1 Jan. 1650. Some time after he was presented to the living of Glossop. After the Restoration the Act of Uniformity left him no choice but to withdraw from his beloved church and congregation. He was one of the two thousand ejected in 1662.

Upon the ejection he retired to Ford, in an adjacent parish. He was well-born and possessed of a 'good estate,' and lived as a country gentleman. He stood fast to his nonconformity; but his 'moderation was known to all men.' He attended the parish church. But holding his 'orders' to be 'divine and indefeasible,' he did not hesitate to 'preach the Gospel' as opportunity offered, in his own private house and those of friends, and regularly conducted service on Thursday evenings.

He held special 'conferences' for devotion and discussion. On the Indulgence of 1672 being promulgated, he felt free to preach regularly in his former parish and in the neighbourhood. He lectured at Ashford, Malcoffe, Middleton, Bradwell, Chelmsorton, and Hucklow. When the 'Declaration' was recalled by Charles II, he continued to preach secretly. 'Popish plots' were in the air, and nonconformists were always 'suspect.' Two informers who once disturbed him in a private religious service acknowledged that his 'reverend countenance' struck them with terror. There were several warrants issued against him, but he either escaped elsewhere or the magistrates themselves quashed them. While James II's 'Declaration for Liberty of Conscience' was in force, and through the beginning of William and Mary's reign, he was an incessant preacher and toiler. He died on 1 April 1702, and was buried at Chapel-en-le-Frith. He left an enormous mass of manuscripts behind him (fifty volumes, folio, quarto, and duodecimo), which, it is to be feared, have nearly all perished. His own published books are all short, but now fetch high prices. Their (abbreviated) titles are: 1. 'Waters for a Thirsty Soul, in several sermons on Rev. xxi. 6,' London, 1653. 2. 'Of Christ's Purchase,' to which is prefixed his 'Confession of Faith.' 3. 'Rules for our Behaviour every Day and for sanctifying the Sabbath, with Hints for Communicants.' 4. 'The Ready Way to prevent Sin,' on Prov. xxx. 22, with 'A Bridle for the Tongue,' on St. Matt. x. 36. 5. The 'Miner's Monitor.' 6. The 'Sinner in Sorrow and the Humble Sinner's Modest Request.' 7. 'Brief Directions for the Improvement of Infant Baptism.' 8. The 'Riches of Grace,' three parts. 9. 'Trading Spiritualized,' three parts. 10. 'De Spiritualibus Peccis: Notes concerning the Work of God, and some that have been walkers together with God in the High Peak of Derbyshire,' a peculiarly interesting biographic work (London, 1702). 11. 'Principiis Obsta,' 1671. 12. 'Sheet for Sufferers.' 13. 'Matters for Mourning'—posthumous. 14. 'Essays on Union to Christ,' which appeared after his death.

A. B. G.

**BAGSTER, SAMUEL**, the younger (1800-1835), printer and author, eldest son of Samuel Bagster, 1772-1851 [q. v.], was born on 19 Oct. 1800, and, after having been educated at a school at Oxford, conducted by the Rev. James Hinton, was articled to his father in 1815. From an early

age he showed a serious tendency, and in October 1822 joined the baptist church in Blackfriars. Having acquired the necessary technical training in his father's establishment, young Bagster commenced business for himself in 1824 as a printer in Bartholmew Close. He married Miss Elizabeth Hunt in June 1825. During the summer of 1834 he brought out a little work on 'The Management of Bees,' printed by himself, published jointly by his father and William Pickering, and which has passed through three editions. It is full of useful and practical information, and, although now superseded by more recent treatises, has been in considerable repute. Samuel Purchas, the son of the author of the 'Pilgrimes,' issued in 1657 a quaint quarto, now extremely rare, styled 'A Theatre of Political Flying Insects,' in two parts, the first being devoted to the history and management of bees and the second to 'meditations and observations, theological and moral,' upon the subject. The greater part of these reflections were reprinted by Bagster in a volume produced in the same style and at the same time as his own practical handbook. He contributed 'The Treasury of Scripture Knowledge' to his father's polyglot series, and projected a series of questions on the gospels for Sunday-school children, but the manuscript of the latter remained unfinished and unpublished. Although at first the progress of his business gave him cause for anxiety, it steadily increased in extent. Many of the polyglot bibles and other learned publications of Messrs. Bagster & Sons came from his press. His amiable and devout disposition is dwelt upon by his biographer, the Rev. John Broad, a baptist minister, from whom we learn that the subject of this memoir took an active part in the anti-slavery and temperance movements. For the latter cause he wrote several pamphlets. Shepherd's Bush, where he spent the last part of his life, was then a rural neighbourhood, and Bagster occupied some of his leisure in poultry-breeding and bee-keeping. There he died at his residence, Aldine Cottage, on 1 July 1835, aged 35 years, leaving no children. He was buried at Tottenham Court Chapel, and his remains were removed in 1845 to the family vault in Abney Park Cemetery. His widow survived until 1879.

His works consist of: 1. 'The Treasury of Scripture Knowledge; consisting of a rich and copious assemblage of more than 500,000 scripture references and parallel passages from Canne, Brown, Blayney, Scott, and others, with numerous illustrative notes; adapted to be the companion of every biblical reader,' London, S. Bagster [1834], foolscap

8vo and 4to, forming the second part of the 'Treasury Bible.' 2. 'The Management of Bees, with a description of the "Ladies Safety-hive," with 40 illustrative wood engravings,' London, S. Bagster, 1834, small 8vo. A second edition was published in 1838, and a third (also unaltered) in 1865. 3. 'Spiritual Honey from Natural Hives, or Meditations and Observations on the Natural History and Habits of Bees, first introduced to public notice in 1657 by S. Purchas, M.A.,' London, S. Bagster, 1834, small 8vo.

[Information from Mr. B. Bagster; Broad's Memoir of the Life and Christian Experience of S. Bagster, jun., 1837; Literary Gazette, 1834, p. 753.] H. R. T.

BAGSTER, SAMUEL, the elder (1772-1851), founder of the publishing firm of Bagster & Sons, born 26 Dec. 1772, was the second son of George and Mary Bagster, of Beaufort Buildings and St. Pancras. He was educated at Northampton under the Rev. John Ryland, and, after serving an apprenticeship with William Otridge, commenced business as a general bookseller on 19 April 1794 in the Strand, where he remained until 1816. A few years before his removal, the rarity and consequent costliness of all polyglot bibles gave him the idea of supplying the want of a handy and inexpensive edition. He first brought out a Hebrew Bible, which was followed by the Septuagint, both in foolscap octavo. The production of English bibles was a monopoly in the United Kingdom, confined in England to the king's printer and the two great universities, in Scotland to Sir D. H. Blair and John Bruce, and in Ireland to Mr. Grierson. It had been decided, however, that the patent did not apply to bibles printed with notes, and Bagster brought out in 1816 'The English version of the polyglot bible' (with a preface by T. Chevalier), in foolscap octavo size, containing a selection of over 60,000 parallel references, mainly selected and all verified by himself. The book was extremely successful. Every detail in its production was superintended by the publisher, who introduced a new style of binding in the best Turkey morocco, with flexible tight backs, the sheets being sewed with thin thread or silk. He also used prepared sealskins, which, with their 'pin-head grain,' were much admired. In 1816 he removed to 15 Paternoster Row. The first issue of the 'Biblia Sacra Polyglotta Bagsteriana' appeared between 1817 and 1828, four volumes in foolscap octavo and quarto form, containing, besides the prolegomena of Dr. Samuel Lee, the Hebrew Old Testament with points, the Samaritan Pentateuch, the Septuagint Greek

version of the Old Testament, the Latin Vulgate, the authorised English version, the Greek Textus Receptus of the New Testament, and the Peshito or ancient Syriac version. An edition was printed of a quarto French, Italian, Spanish, and German Bible, which Lowndes states was entirely destroyed by fire on the premises in March 1822, when only twenty-three copies of the New Testament portion were preserved. A folio edition of the polyglot was published in 1828, repeated in 1831, and subsequently, presenting eight languages at the opening of the volume, and including all the ancient and modern versions above mentioned. Copies of the different texts and translations were brought out separately, and in various combinations. The well-known motto of the firm, *πολλὰ μὲν ὁμηροῖς γλῶτται, μία δ' ἀθανάτοισιν*, is said to have been due to the Rev. H. F. Cary (*Notes and Queries*, ser. i. v. 587). We are informed by a member of the family that the Latin version, *multæ terricolis linguæ, celestibus una*, was by William Greenfield. As the two versions appear on Greenfield's tomb, it is very probable that they were both by him. In consequence of the arbitrary regulations of the excise authorities, paper could only be had of certain sizes. It was partially owing to Bagster's exertions that the rules were modified. Two other forms of the English bible were issued, and, all of them harmonising page for page, began what is known as the 'Facsimile Series.' The publication of the first volume of the polyglot was followed in 1821 by an octoglot edition of the liturgy of the Church of England in a handsome quarto. The eight languages were English, French, German, Italian, Spanish, ancient Greek, modern Greek, and Latin. In 1822 Bagster made the acquaintance of the self-taught Orientalist, William Greenfield, of whose life he wrote an interesting account in the 'Imperial Magazine' (1834, pp. 9, 63). Greenfield had suggested a lexicon to the polyglot edition of the Hebrew Bible, which caused him to be engaged as a proof-reader to the various learned publications Bagster was then bringing out. In 1824 Bagster circulated the prospectus of a polyglot grammar in twenty or thirty languages upon the principles of comparative philology, also the suggestion of Greenfield, who in 1827 edited for the publisher his 'Comprehensive Bible,' with 4,000 illustrative notes, 500,000 marginal references, a general introduction, and a variety of other useful information. Bagster's Syriac New Testament (1828-29) Hebrew New Testament (1830), Polymicrian Greek Lexicon (1829), Schmidt's Greek Concordance (1829), and, in fact, all the small and

beautifully printed Polymicrian series, were also edited by Greenfield. Many books were subsequently printed by Bagster. A fine quarto issued in 1841 is specially deserving of mention. It is 'The English Hexapla,' giving the six most important versions in our tongue of the New Testament, being those of Wiclif (1380), Tyndale (1534), Cranmer (1539), the Genevan (1557), the Anglo-Rhemish (1582), and the authorised (1611), together with the Greek text after Scholz, and a valuable historical account of the English translations. Another noteworthy publication was the 'Bible of every land,' 4to, supplying specimens of over 270 different languages and versions.

Bagster's long and honourable career as a publisher of aids to the study of the Scriptures has earned for him the esteem of all biblical scholars. His own attainments in this direction were considerable, and his taste and enterprise are well displayed in the handsome typographical appearance of the numerous volumes which bear his imprint. He died at his residence in Old Windsor on 28 March 1851, aged 78. He married on 19 Dec. 1797 Miss Eunice Birch, who survived him twenty-six years, attaining the venerable age of 100. His son Jonathan (1813-1872) followed him as senior member of the firm.

Bohn; *The Bookseller*, February 1880; *Gent. Mag.* May 1851; *Kitto's Journal of Sacred Lit.* 1856, 3rd series, iii. 327.] H. R. T.

**BAGWELL, WILLIAM** (*n.* 1655), a London merchant and writer on astronomy, is stated by Burke, in his pedigree of the Bagwells of Ireland, to have been a brother of Alderman Backwell, but his name is not mentioned in the Backwell pedigree, and the different spelling of the name would seem to militate against the supposition. As the inscription on his portrait in 1659 gives his age as sixty-six, he was probably born in 1593 (*GRANGER, Biog. Hist. of England*, iii. 121). According to his own account in 'The Mystery of Astronomy made Plain,' he was bred a merchant of good quality, and skilfully furnished with 'knowledge. He had 'seen the world abroad,' and for several years had carried on 'an extensive trade, when losses beyond the seas led to his being sent to prison for debt. In 1654 he had been in and out of prison for twenty years. The tedium of confinement he relieved by writing an 'Arithmetical Description of the Celestial and Terrestrial Globes,' a treatise which he deemed

too abstruse for popular use, but yet worthy to be placed in some university to be consulted by the learned. The manuscript is in the British Museum (MS. Sloane 652). After being set at liberty in 1654 Bagwell was put by some friends in good employment, and in 1655 published 'The Mystery of Astronomy made Plain,' a simplification of his more elaborate treatise. Bliss, in a note to Wood (*Fasti*, ii. 221), states that he dedicated his 'Sphinx Thebanus, or Ingenious Riddle,' 1664, to the worshipful Humphry Brook, doctor of physick, his approved good friend and patron. So strongly was Bagwell impressed with the value of the discipline he obtained from his hard experiences, that in 1645 he published 'The Distressed Merchant, and Prisoner's Comfort in Distress,' a lugubrious piece of doggerel, which is caricatured in 'Wil Bagnal's Ghost, or the Merry Devil of Gadmunton in his Perambulations of the Prisons of London,' by E. Gayton, Esq., 1655, and in 'Will Bagnalls Ballet,' in 'Wit Restored,' 1658. Bagwell also published another short poem, entitled 'An Affectionate Expostulation for the Pious Employment both of Wit and Wealth.' In 1652 there was published, by order of Cromwell, 'A Full Discovery of a Foul Concealment, or a True Narrative of the Proceedings and Transactions of the Committee for the Accompts of the Commonwealth of England with William Bagwell and John Brockedon, accountants, Discoverers and Plaintiffs against the Committee of Hartford, the Treasurer and Paymaster there in the year 1643;' but possibly the William Bagwell of this title-page may be another person.

[Preface to *Mystery of Astronomy made Plain*, in the frontispiece to which is his portrait by Gaywood; various allusions in the *Distressed Merchant*; *Granger's Biog. Hist. of England*, iii. 121-2; MS. Sloane 652.] T. F. H.

**BAIKIE, WILLIAM BALFOUR, M.D.** (1825-1864), naturalist, traveller, and philologist, eldest son of Captain John Baikie, R.N., was born at Kirkwall, Orkney, on 27 Aug. 1825, and educated privately and at the grammar school there. After taking his degree in medicine at Edinburgh, he entered the royal navy in 1848 as assistant surgeon. He served on her majesty's ships *Volage*, *Vanguard*, *Ceylon*, *Medusa*, and *Hibernia* in the Mediterranean, and then became assistant surgeon at the Haslar Hospital from 1851 to 1854, when the influence of Sir Roderick Murchison procured him the post of surgeon and naturalist to the Niger expedition of 1854, and on the death of the captain at Fernando Po, Baikie succeeded to the command of the *Pleiad*, the exploring vessel.

This first successful voyage, penetrating 250 miles higher up the Niger than had before been reached, is described by Baikie in his 'Narrative of an Exploring Voyage up the . . . Niger and Isadda,' London, 1856. After spending some months in arranging his African collections, and again serving at the Haslar Hospital, Baikie left England in 1857 on a second expedition, in which the *Pleiad* was wrecked, and the other explorers returned to England, and left him to carry on the exploration alone. He bought a site—Lukoja—at the confluence of the Quorra and Benue, and soon collected a considerable native settlement, over which he held sway and where he officiated in every capacity. He explored the country around, entered into relations with the King of Nupé, the next powerful sovereign to the Sultan of Sokoto, and induced him to 'open out roads for the passage of caravans, traders, and canoes' to Lukoja. Before five years were over he had opened up the navigation of the Niger, made roads, established a regular market for native produce, collected vocabularies of numerous African dialects, and translated parts of the Bible and Book of Common Prayer into Hausa. He died on his way home, on a well-earned leave of absence, at Sierra Leone on 12 Dec. 1864, aged 39. A monument to his memory was erected in the cathedral of St. Magnus, Kirkwall. His earliest works related to Orkney: 'Historia Naturalis Orcadensis: Zoology, Part I. Mammalia and Birds observed in the Orkney Islands,' by W. B. Baikie, M.D., and R. Heddlie, Edinburgh, 1848; and 'List of Books and Manuscripts relating to Orkney and Zetland,' &c., by W. B. Baikie, Kirkwall, 1847. His 'Observations on the Hausa and Fulfulde Languages' were privately printed in 1861; his translation of the Psalms into Hausa ('Letâfi ta Zabîra') was posthumously published by the Bible Society in 1881; and other translations were incorporated in Reichardt's 'Grammar of the Fulde Language' (1876). Dr. Baikie was also a contributor to the transactions of various learned societies.

[Information received (September 1883) from Miss Eleanor Baikie, of Kirkwall, sister of Dr. Baikie; Gent. Mag., March 1865.] S. L.-P.

**BAILEY.** [See also **BAILLIE**, **BAILY**, **BAILEY**, and **BAYLY**.]

**BAILEY, JAMES** (d. 1864), classical scholar, was educated at Trinity College, Cambridge. He graduated B.A. 1814, M.A. 1823, and obtained the Browne medals for Greek ode and epigrams, and the members' prizes in 1815 and 1816. He was for many

years master of the Perse grammar school, Cambridge, from which he retired on a pension. In 1850 he received a further pension of 100*l.* per annum from the queen, on the recommendation of Bishops Maltby and Kaye. Besides his numerous contributions to the 'Classical Journal,' Bailey published 'An Annotated Edition of Dalzel's *Analecta Græca Minora*' (1835); 'Passages from the Greek Comic Poets,' which had been translated into English by R. Cumberland, Fawkes, and Wrangham, with notes (1840); proof-sheets of this work, with autograph letter to Archdeacon Wrangham, are in the British Museum; a work on the 'Origin and Nature of Hieroglyphics and the Greek inscription on the Rosetta Stone' (1816). He is best known for his edition of 'Forcellini's Latin Dictionary,' 2 vols. (1826), in which he translated the Italian explanations into English, incorporated the appendices of Forcellini with the main work, and added an extensive Auctarium of his own. Bailey died in London, 13 Feb. 1864.

**BAILEY, or BAILY, JOHN** (1643-1697), protestant dissenting minister, was, according to Cotton Mather, who preached his funeral sermon, born 'near Blackburn on 24 Feb. 1643-4.' He was son of Thomas Bailey, member of the congregation of the Rev. Thomas Jolly at Altham, and later at Wymond House. Probably the former was the birth-place. Both are near Blackburn (Lancashire). His father was for long a 'notorious evil liver,' but his wife was a woman of remarkable piety as well as strength of character. So early as his twelfth year John conducted family worship; and Mather tells that when the drunken and profligate father heard of this he was greatly impressed, and became a wholly changed man. Curiously enough, an entry which the preacher could not have known of in the church-book of Mr. Jolly, not only records that John at the age of twelve was a 'wonderful child' for religion, but had been 'the occasion of good to his father and a schoolfellow.' He attended at first the Queen Elizabeth grammar school of Blackburn. The master was then Charles Sagar. Later he was placed under the theological tuition of the Rev. Dr. Thomas Harrison, nonconformist minister at Chester. He began to preach in his twenty-second year, but was not ordained until 1670. Being an independent or congregationalist, he was soon exposed to the malicious reports that long after the ejection of 1660-2 of the 'two thousand' pursued nonconformists. He was

arrested and imprisoned in Lancaster gaol for nonconformity alone. By some influence he was released 'after a while.' He removed to Ireland, remaining in Dublin temporarily, and proceeding later to Limerick. His earnest ministry and pastorate proved a great success in this great town, where he had as a regular hearer a member of the ducal family of Ormond. This coming to the ears of the protestant Bishop of Limerick, he lodged a complaint with the Duke of Ormond, lord-lieutenant. The duke's friend did not abandon Bailey, but so represented his case and worth that Ormond made offer first of a deanery, and then of the first bishopric that fell vacant, if Mr. Bailey would conform. But the bribe was declined without a moment's hesitation. He was again imprisoned in the public gaol. Petitions were presented to the judges at the court of assize in his behalf, but in vain. When arraigned, he dared to address the bench thus: 'If I had been drinking, gaming and carousing at a tavern, with company, my lords, I presume that I would not have procured my being thus treated as an offender. Must prayers to God and preaching Christ with a company of christians who are peaceable, inoffensive, and serviceable to his majesty and the government, as any of his subjects—must this be considered a greater crime?' The recorder answered, 'We will have you know that it is a greater crime.' At length intimation was secretly sent him that he would be allowed out on condition that within a limited specified time he left the country. To this he reluctantly and sorrowfully agreed. He was not allowed to meet his flock or preach a farewell sermon. In the place of the sermon Bailey printed a letter-address.

He emigrated to New England in 1683; and his name occurs in church matters there in 1684. He arrived first of all in Boston, and in 1684 was appointed assistant to the celebrated Rev. Samuel Willard, M.A., of the old South church. Early in 1685 correspondence was entered into with the independent congregation at Watertown, Connecticut, with the result that on 6 Oct. 1686 he succeeded the Rev. John Sherman at Watertown. It is chronicled in Judge Sewall's 'Diary' and elsewhere, that Mr. Bailey, holding to the validity of his original ordination, refused to be inducted with the laying on of hands—an innovation in Independent church ways that was somewhat of a scandal for the moment. Letters to his former pastor and friend, Mr. Jolly, communicated tidings of how things ecclesiastical moved in New England. When he

was translated from Boston to Watertown, his health must have been failing; for within a month or so a younger brother, Thomas, was appointed his assistant. Unfortunately the assistant died 21 Jan. 1689. In the same year another 'assistant' was appointed. In 1692, he resigned his charge at Watertown, and, after a quaintly recorded farewell to persons and places, returned once more to Boston. He must in some measure have recovered his health; for in 1693 he accepted the post of assistant-pastor to the Rev. Mr. Allen, of the First Church, Boston.

He had married in England a lady whose christian name was Lydia. She died at Watertown, 12 April 1690. She bore him no children. His second wife was named Susannah, by whom he had female issue—still represented in New England. His widow married after his death the Rev. Peter Thatcher. He died on Sunday, 12 Dec. 1697, and Cotton Mather preached his funeral sermon, which was published. He chose for its text the words 'Into Thy hands I commit my spirit,' on which Mr. Bailey had prepared a sermon—never delivered—under a presentiment that it would be his last.

Bailey was markedly modest, and could not be persuaded to print any of his sermons. One extremely rare little book by him is extant, however, which was published by his friends. The volume is entitled 'Man's Chief End to Glorify God, or Some Brief Sermon-notes on 1 Corinthians x. 31,' to which is added his letter-address to his 'dearly beloved christian friends in and about Limerick,' 1689 (12mo). A lifelike portrait of him (in oils), which represents him with 'a pensive and somewhat feminine face and long flowing hair,' is in the possession of the Massachusetts Historical Society, in whose archives are also some manuscripts of his brother Thomas. He had another brother named Henry living at Manchester in 1688, where his mother was also still living.

A. B. G.

BAILEY, JOHN (1750-1819), agriculturist and engraver, was the son of William Bailey, of Blades Field, near Bowes, Yorkshire, where he was born in 1750. At an early age he manifested strong artistic tendencies, and while employed as tutor to his uncle's children devoted his leisure hours to engraving various pieces, which he afterwards

published. Both in his artistic and mathematical studies he received valuable assistance from his uncle. After completing the education of his uncle's children he became mathematical teacher at Witton-le-Wear, and began also the business of a land surveyor. Shortly after his marriage he was appointed land agent to Lord Tankerville at Chillingham, a situation he retained till his death, 4 June 1819, in his sixty-ninth year. Bailey engraved several of the plates for the works of William Hutchinson, the topographer of Cumberland, Durham, and Northumberland. He devoted also much of his attention to the natural sciences, especially mineralogy, chemistry, hydraulics, and pneumatics, and his scientific acquirements were turned by him to excellent practical account in promoting improvements in rural economy. In 1795 he published an 'Essay on the Construction of the Plough,' in which he employed mathematical calculations to demonstrate the advantages of the alterations he proposed. He was also the joint author of the reports on the counties of Cumberland, Durham, and Northumberland, drawn up for the Board of Agriculture.

**BAILEY, NATHAN** or **NATHANIEL** (d. 1742), lexicographer, published in 1721 'An Universal Etymological English Dictionary,' which was greatly esteemed in its day. The library of the British Museum contains copies of no fewer than twenty-five separate editions of this work. Of the compiler nothing is known beyond the fact that he belonged to the seventh-day baptists, being admitted to membership 6 Nov. 1691, and kept a boarding school at Stepney, where he died on 27 June 1742. A supplementary volume of his dictionary appeared in 1727, and in 1730 a folio, entitled 'Dictionarium Britannicum, collected by several hands. The Mathematical part by G. Gordon, the Botanical by P. Miller. The whole revis'd and improv'd with many thousand additions by N. Bailey.' This contains many technical terms. Thirty editions of the dictionary appeared, the latest at Glasgow in 1802, and it was reprinted by various booksellers. It is the basis of the English-German dictionaries of Arnold (3rd edition, 1761), A. E. Klausning (8th edition, 1792), and J. A. F. Krüger (11th edition, 1810). Lord Chatham is said to have read it through twice, and Chatterton obtained many sham-antique words from Bailey and Kersey. Johnson made an interleaved copy

the foundation of his own. Bailey also published a spelling-book in 1726; 'All the Familiar Colloquies of Erasmus Translated,' 1733, of which a new edition appeared in 1878; 'The Antiquities of London and Westminster,' 1726; 'Dictionarium Domesticum,' 1736; Selections from Ovid and Phædrus; and 'English and Latin Exercises.' In 1883 appeared 'English Dialect Words of the Eighteenth Century as shown in the . . . Dictionary of N. Bailey, with an introduction by W. E. A. Axon (English Dialect Society),' giving biographical and bibliographical details.

**BAILEY, SAMUEL** (1791-1870), philosophical writer, was the second son and fifth child of Joseph Bailey, of Burngreave, by Mary, daughter of Mr. Eaden, master of the free writing school at Sheffield. Samuel was educated by his maternal grandfather and at the Moravian school of Fulneck. He was a reserved boy, and his only recreation was riding upon a schoolfellow's back. On leaving school, Samuel entered the office of his father, who had risen from the position of artisan to be a general merchant at Sheffield, and who was master-cutter in 1801. The son was one of the first Sheffield merchants who visited America in order to establish business connections with that country. Bailey's attention, however, was gradually diverted from business to literary and political pursuits. He became known as an able author by various essays published in 1821 and the following years. In 1828 he was elected one of the town trustees. He became a candidate for the representation of Sheffield on the election which followed the Reform Bill in 1832. Having retired from his business, he was prepared to devote himself to political life. His principles resembled those of the 'philosophical radical;' he advocated triennial parliaments, vote by ballot, and the abolition of tithes and taxes on knowledge. The anti-corn law rhymist called him the 'Hallamshire Bentham.' Messrs. Parker and Silk Buckingham, however, were elected, and at the close of the poll Bailey, with 812 votes, was the last of four candidates. The prejudice of practical men against 'theoretical' politicians told against him; but the defeat of a distinguished writer was felt to be discredit to his native place, and enthusiastic supporters founded a 'Bailey Club,' intended to secure his election at the next opportunity. He was put forward as

a candidate, without his own consent, in 1834, but the two sitting members were re-elected by 1,607 and 1,554 votes, Bailey receiving 1,434. After this he declined to allow any further use of his name in politics, and his life became one of quiet seclusion. He was several times president of the Sheffield Literary and Philosophical Society; and he became chairman of the Sheffield Banking Company, an institution which he had helped to found in 1831. He attended the board meetings with absolute punctuality up to the last. His life was one of 'clock-work regularity.' He had no intimates and few acquaintances. An annual visit to a sister-in-law at Cheltenham for change of air was his only relaxation. He died suddenly as he left his bath on 18 Jan. 1870, and left a sum of over 80,000*l.* to the town trust. The bequest was realised after a lawsuit, and more than doubled the income of the trust. Bailey's portrait by Sir W. Gordon is in the bank over which he presided.

Bailey's first publication was a volume of 'Essays on the Formation and Publication of Opinions and other subjects,' 1821. A second edition appeared in 1826, and a third in 1831. The chief essay is a vigorous defence of the thesis, that a man is not responsible for his opinions, because they are independent of his will; and that opinions should therefore not be the objects of disapproval or of punishment. In 1825 Bailey published a 'Critical Dissertation on the Nature, Measure, and Causes of Value.' It is chiefly directed against Ricardo, James Mill, and De Quincey's exposition of Ricardo in the 'Templar's Dialogues.' Bailey's main contention is, that these writers confound exchange value with real or intrinsic value; the former meaning of the word being, as he holds, the only one relevant in political economy. He was attacked with considerable asperity in the 'Westminster Review' for January 1826, where it is maintained that Ricardo intentionally and judiciously used the word 'value' in both senses. Bailey replied in November of the same year in a 'Letter to a Political Economist.' Bailey had the best of the argument in temper and style, though he points out rather ambiguities of language than substantial errors of logic. In the 'Westminster' for July 1826, there had already been a complimentary notice of his essays on the formation of opinion by James Mill (see BAIN'S *Life of Mill*, p. 304), who fully sympathised with his opinions. In 1829 Bailey published his 'Essays on the Pursuit of Truth and on the Progress of Knowledge,' and a criticism (by James Mill?) in the 'Westminster Review' for July 1829

begins by declaring that if a man were allowed to claim the paternity of any modern book, he would not hazard much by choosing, after the 'Wealth of Nations,' the essay on the formation of opinions, of which the later volume is virtually a continuation.

In 1835 Bailey published a treatise on the 'Rationale of Political Representation,' and in 1837 a pamphlet, intended to form part of the larger book, upon 'Money, its Vicissitudes in Value.' The politics are those of a moderate utilitarian radical, with a strong objection to state interference.

In 1842 Bailey published a 'Review of Berkeley's Theory of Vision,' which again brought him into collision with the 'Westminster Review.' It was answered by J. S. Mill in the number for October 1842, in an article reprinted in Mill's 'Dissertations' (ii. 80). A reply was also made by Professor Ferrier in 'Blackwood's Magazine,' which is republished in Ferrier's 'Philosophical Remains.' Bailey's chief point is that Berkeley begged the question by assuming that space in a direct line from the eye was not directly visible. Mill seems to prove that he had not really understood Berkeley's argument. Bailey replied in a 'Letter to a Philosopher.' He maintains that we have a direct perception of external objects which cannot be analysed into a complex operation. This theory (which resembles Reid's perception theory, though he is opposed to Reid on the theory of vision) appears in his latest philosophical writings. After publishing, in 1851, a 'Theory of Reasoning' (2nd edition 1852), which is more logical than metaphysical, and hardly touches the ultimate questions, he published three series of 'Letters on the Philosophy of the Human Mind' (1855, 1858, and 1863). These are rather fragmentary and discursive, but contain his most interesting speculations. He maintains his old argument against Berkeley, but agrees with Berkeley's nominalism in a vigorous attack upon the theory of 'abstract ideas.' He criticises German metaphysicians, chiefly Kant, with much shrewdness, though with insufficient knowledge; and the third volume contains an interesting defence of utilitarianism. Bailey is also a thorough 'determinist,' a doctrine which he had advocated with marked power in an essay upon 'uniformity of causation,' in the volume containing the essay on the pursuit of truth.

Bailey had the faults and merits of a self-taught and reclusive thinker. His knowledge of other schools of thought is limited, and he does not seem fully to appreciate the bearings of his speculations. But he is shrewd and independent, terse in his exposition, and

frequently pointed in style. A short criticism may be found in Ribot's 'Psychologie Anglaise contemporaine.' Besides the above, Bailey published 'Questions on Political Economy,' &c., 1828, a collection of subjects for discussion in literary societies, with brief indications of appropriate arguments and references; discourses on various subjects (read before various societies), 1852; pamphlets on parliamentary reform and on the right of primogeniture, and a 'glance at some points in education' (privately printed).

In 1861 and 1862 he published two volumes upon 'the received text of Shakespeare's dramatic writings,' containing a number of hazardous conjectures; and he seems clearly to have been the author of 'Letters from an Egyptian Kafir on a visit to England in search of religion,' 1837, a defence of liberty of inquiry; and of a poem called 'Maro or Poetic Sensibility' (1846). He left many manuscripts, which have disappeared.

[Sheffield Independent, 19 Jan. 1870; Gatty's Sheffield Past and Present; Chambers's Encyclopædia (Supplement), x. 413; information kindly procured by Mr. P. A. Barnett, of Firth College, Sheffield.] L. S.

**BAILEY, THOMAS** (1785-1856), topographer and miscellaneous writer, was born at Nottingham 31 July 1785. His education was received partly in a day-school in his native town, and partly in a boarding school at Gilling, Yorkshire. Afterwards he was for some time engaged in business as a silk-hosier at Nottingham. A liberal in politics, though not a radical, he came forward unsuccessfully, in 1830, as a candidate for the representation of the borough. In 1836 he was elected to the town council, and he continued to be a member of that body for seven years. In 1845-6 he became proprietor and editor of the 'Nottingham Mercury,' but his opinions were too temperate to suit the taste of his readers. The circulation of the paper declined, and at last, in 1851, the mass of the subscribers withdrew in wrath, on account of the editor's views respecting the original error of the Ecclesiastical Titles Bill, and his prophecies of its inevitable failure. In the following year the journal became extinct. Previously to this, in 1830, he had purchased a mansion at Basford, near Nottingham, where he spent the later years of his life, engaged in literary pursuits and in the formation of a choice collection of books and engravings. He died at Basford 23 Oct. 1856. His son, Mr. Philip James Bailey, is the well-known author of 'Festus,' and of other poems.

Thomas Bailey's works are: 1. 'What is

Life? and other Poems,' Lond., 1820, 12mo. 2. 'The Carnival of Death,' a poem, Lond., 1822, 16mo. 3. 'A Sermon on the Death of Byron,' 1824. 4. 'Iretton,' a poem, Lond. 1827, 8vo. 5. 'Discourse on Political Revolutions,' 1830. 6. 'Recreations in Retirement,' a miscellany of poetry and prose, 1836. 7. 'The Rights of Labour,' a pamphlet, 1844. 8. 'The Advent of Charity and other Poems,' Lond. 1851, 16mo. 9. 'Annals of Nottinghamshire; a new and popular history of the county of Nottingham, including the borough,' 4 vols., Lond. 1852-55, 8vo, his most important publication. 10. 'Village Reform: the great social necessity of Britain,' being a letter to Lord Palmerston, Lond. 1854, 12mo. 11. 'Handbook to Nottingham Castle,' Lond. 1854, 8vo. 12. 'Handbook to Newstead Abbey,' Lond. 1855, 12mo. 13. 'Records of Longevity; with an introductory discourse on Vital Statistics,' Lond. 1857, 8vo.

[Private information; Memoir by Mr. Philip James Bailey in Cornelius Brown's Lives of Nottinghamshire Worthies (1882), 341; Gent. Mag. cci. 776; Men of the Time, 11th edition, 61; Cat. of Printed Books in Brit. Mus.]

T. C.

**BAILLIE, or BAILLY, CHARLES** (1542-1625), a member of the household of Queen Mary, was by birth a Fleming, though by descent a Scot. A letter in the State Papers (*Calendar*, Scottish series, p. 574) mentions him as a 'great papist, who lived with the queen of Scots after her husband was murdered.' In all probability he was from the beginning a papal agent, and having the mastery of several European languages he was, after the imprisonment of Mary, employed in fomenting foreign plots on her behalf. In the spring of 1571 he was about to leave Flanders with copies, which he had got printed at the Liège press, of a book by the bishop of Ross in defence of Queen Mary, when Ridolfi, the agent of Pius V, entrusted him with letters in cipher for the queen, and also for the Spanish ambassador, the duke of Norfolk, the bishop of Ross, and Lord Lumley. They described a plan for a Spanish landing on behalf of Mary in the eastern counties of England. As soon as Baillie set foot on shore at Dover, he was arrested and taken to the Marshalsea. The letters were, however, conveyed in secret by Lord Cobham to the bishop of Ross, who, with the help of the Spanish ambassador, composed others of a less incriminating character to be laid before Lord Burghley. The scheme might have been successful had not Burghley made use of a traitor, named

Thomas Herle, to gain the confidence of Baillie, whom Herle describes as 'fearful, full of words, glorious, and given to the cup, a man easily read.' Herle had also gained the confidence of the bishop, and a complete exposure of the whole plot was imminent when an indiscretion on the part of Herle convinced Baillie that he was betrayed. He endeavoured to warn the bishop by a letter, but it was intercepted, and Baillie was conveyed to the Tower, where, on his declining to read the cipher of the letters, he was put on the rack. The following inscription, still visible on the walls, records his reflections inspired by the situation: 'I. H. S. 1571 die 10 Aprilis. Wise men ought to se what they do, to examine before they speake; to prove before they take in hand; to beware whose company they use; and, above all things, to whom they truste.—Charles Bailly.' These sound maxims he seems to have forgotten as soon as he had written them. One night there appeared at his bedside the figure of a man who said that he was Dr. Story, whom Baillie knew to be in the Tower awaiting execution. In reality the figure was that of a traitor of the name of Parker; but Baillie fell into the trap with the same facility as before. On the advice of Parker he endeavoured to gain credit with Burghley by deciphering the substituted letters of the bishop of Ross. He revealed also the story of the abstracted packet, and sought to persuade Burghley to grant him his liberty by offering to watch the correspondence of the bishop of Ross. That he gained nothing by following the advice of his second friendly counsellor is attested by an inscription in the Beauchamp tower as follows: 'Principium sapientie timor Domini, I. H. S. X. P. S. Be friend to no one. Be enemye to none. Anno D. 1571, 10 Sept. The most unhappy man in the world is he that is not patient in adversities; for men are not killed with the adversities they have, but with ye impacience which they suffer. Tout vient apoint, qu'y pault attendre. Gli sospiri ne son testimoni veri dell' angolcia mia, act. 29. Charles Bailly.' In all probability Baillie received his liberty about the same time as the bishop of Ross, in 1573. At any rate it appears, from a letter in the State Papers (foreign series, 1572-74, entry 1615), that in 1574 he was in Antwerp. He died 27 Dec. 1625 in his 85th year, and was interred in the churchyard of Hulpe, a village near Brussels, where, in the inscription on his tombstone, he is designated as 'Sir Charles Bailly, secretaire de la Roynne d'Ecosse decapitée pour la foy catholique.'

pers, Foreign series (1572-74), entry 1615; State Papers, Scotch series, pp. 574, 897, 898, 899; Notes and Queries, 2nd series, viii. 267, 316; 3rd series, v. 284; Guardian Newspaper, 21 Sept. 1859; Bayley's History of the Tower, pp. 145-9, 176; Britton's Memoirs of the Tower, pp. 320-22; Hepworth Dixon's Her Majesty's Tower; Inscriptions in the Beauchamp Tower, 1853 (with facsimile illustrations); Froude's History of England, Library ed. x. 209-20.]

T. F. H.

**BAILLIE, CHARLES, LORD JERVIS-woode** (1804-1879), a lord justiciary of the Scotch court of session, the second son of Mr. George Baillie, of Mellerstain, Berwickshire, and of Jerviswoode, Lanarkshire, was born at Mellerstain on 3 Nov. 1804. Paternally he was descended from the memorable Baillie of Jerviswoode [q.v.], who died on the scaffold in 1684 for real or supposed treason in the interests of the Duke of Monmouth. His mother was Mary, the youngest daughter of Sir James Pringle, baronet, of Stitchill, Roxburghshire. He was admitted as an advocate at the Scottish bar in 1830, and married, 27 Dec. 1831, the Hon. Anne Scott, third daughter of the fourth Lord Polwarth. The influence of his family connections combined with his high character and attainments to secure his rapid rise at the bar. He filled the office of advocate-depute from 1844 to 1846 under the ministry of Sir Robert Peel, and again in 1852 under that of the late Earl of Derby. He was appointed sheriff of Stirlingshire, 2 March 1853, and acted in that capacity till, on the re-accession of Lord Derby to power, 26 Feb. 1858, he was made solicitor-general for Scotland, his appointment being gazetted 17 March. Later in the same year, 10 July 1858, he was gazetted her majesty's advocate, or lord-advocate, for Scotland—an office for which a seat in the House of Commons is a necessary qualification, and Baillie was returned without opposition for the county of Linlithgow, 7 Feb. 1859. He had represented this constituency little more than two months, however, when he was elevated, 15 April, to the Scottish bench as a judge of the court of session, where he sat, under the courtesy title of Lord Jerviswoode, during a period of fifteen years, for twelve of which he also sat in the supreme criminal court, having been appointed, 17 June 1862, a lord of justiciary in succession to Lord Ivory, resigned. Previous to this latter date, Lord Jerviswoode had been raised, in 1859, together with his two younger brothers, by royal warrant to the rank and precedence of an earl's son. As counsel, Mr. Baillie was distinguished for his deliberation rather than for his forensic

ability; and he discouraged lengthy litigation. As judge, Lord Jerviswoode had a high character for courtesy, sagacity, patient and painstaking investigation, competent learning, and uprightness; he lacked originality, but was habitually laconic in his utterances. In 1874, Lord Jerviswoode retired on a pension from his judicial functions and from public life to his country residence, Dryburgh House, near St. Boswell's, Roxburghshire, in the quiet and seclusion of which he chiefly spent his time until his death, which took place at Dryburgh, 23 July 1879.

Lord Jerviswoode patriotically officiated as convener of the acting committee of the Wallace monument, erected on the Abbey Craig, Stirling, and he formally handed over the keeping of the edifice, which was completed in 1869, to the provost, magistrates, and town council of the burgh, and the patrons of Cowan's hospital, the owners of the Craig. In 1861 he was elected assessor of the university of St. Andrew's, and was a trustee of the board of manufactures of Scotland. For a number of years he was the president of the Edinburgh Border Counties Association, and in that capacity took an active part in the movement for the celebration of the centenary of Sir Walter Scott. Lord Jerviswoode was a conservative, and a warm supporter of the church of Scotland.

[Scots Magazine, November 1804; London Gazette and Gent. Mag., *passim*; Scotsman, and Edinburgh Courant, 24 July; Times, 26 July, and Law Times, 2 Aug. 1879; Foster's Peerage, Baronetage, and Knightage of the British Empire, 1882.] A. H. G.

**BAILLIE, CUTHBERT** (d. 1514), lord high treasurer of Scotland, was, according to one authority, a natural son of Sir William Baillie of Lamington, one of the favourites of James III; and there are some other reasons for doubting the contradictory statement that he was a descendant of the house of Carphin. His first incumbency was that of Thankerton. In the charter granted him of the five merk lands of Lockhart Hill, Lanarkshire, his name occurs as Cuthbert Baillie, *clericus*. He became commendator of Glenluce, but the hitherto current statement that he was rector of Cumnock is an error which seems to have arisen from confounding his name with Cuthbert of Dunbar, who received a grant of lands in Cumnock. In the 'Register of the Great Seal' Thomas Campbell is mentioned as rector of Cumnock in 1481, and in the 'Protocola Diocesis Glasguensis' his name occurs as prebendary of Cumnock under date 11 June 1511. Cuthbert Baillie under the same date is mentioned

as prebendary of Sanquhar, and the same title is given to him in 1508 and 1511 in the 'Register of the Great Seal.' He entered upon the duties of lord high treasurer on 29 Oct. 1512, and died in 1514.

[James W. Baillie's *Lives of the Baillies* (privately printed 1872), p. 26; Crawford's *Lives of the Officers of State in Scotland*, i. 369; *Register of the Great Seal of Scotland*.] T. F. H.

**BAILLIE, LADY GRIZEL** (1665-1746), poetess, was the eldest daughter of Sir Patrick Hume (or Home), afterwards first earl of Marchmont, and was born at Redbraes Castle, Berwickshire, on 25 Dec. 1665. So early as her twelfth year she gave proof of a singularly mature character; for when she had not yet entered her teens, she was entrusted by her father with a perilous duty. Her father was the bosom friend of the illustrious patriot, Robert Baillie of Jerviswood [see BAILLIE, ROBERT, d. 1684]; and the latter being imprisoned, Sir Patrick Hume was specially anxious to communicate with him by letter. He dared not himself attempt to gain admission; but he employed the services of his daughter, 'little Grizel.' To her the all-important letter was handed over with the charge to deliver it personally, and to bring back as much intelligence from the state prisoner as possible. She contrived to deliver the letter and carry back grateful and useful messages from her father's friend. In the performance of this task she had to consult with the prisoner's own son, George Baillie of Jerviswood, who fell in love with her, and married her some years later, on 17 Sept. 1692.

The same womanly heroism and self-possession were shown by young Grizel on behalf of her own father. As the trial of Robert Baillie of Jerviswood—described in the contemporary broad-sheets and elsewhere—at-tests, Sir Patrick Hume boldly went to the court and, wherever he could, interfered in defence of his great friend, sometimes blunting with rare skill the edge of manufactured 'false witness,' to the rage of the prosecutors. He was equally with Baillie a suspected man; and, the troopers having taken possession of his house, Redbraes Castle, he had to hide in the vaults of neighbouring Polwarth parish kirk. Thither at midnight, his brave little daughter was wont to carry her father food, contriving at the dinner-table to drop into her lap as much of victuals as she well could.

On the death, by hanging, of Baillie of Jerviswood, the Hume family fled to Holland. They settled at Utrecht, Sir Patrick passing as a Dr. Wallace. In the 'Memoirs' of Lady

Murray of Stanhope, Lady Grizel's daughter, delightful glimpses are obtained of the bright though straitened life in Holland. Grizel was the manager of the humble establishment, and she used to tell in her old age that those years in Holland were about the happiest of all their lives.

At the Restoration, Lady Grizel was offered the post of maid of honour to the Princess of Orange. She preferred returning to Scotland, where, as already stated, she was married to her girlhood's love. George Baillie died at Oxford 6 Aug. 1738, after forty-six years of an incomparable married life. They had issue one son, who died in childhood, and two daughters: Grizel, who married Sir Alexander Murray of Stanhope; and Rachel, who married Charles, Lord Binning. From the latter are descended the earls of Haddington who represent to-day the great historic house of Baillie of Jerviswood and Mellerstain. There are few more charming 'Memoirs' than that named of our Lady Grizel by her daughter. It was originally appended to Rose's Observations on Fox's historical work on James II, and afterwards republished in a thin quarto by Thomas Thomson (1822). From earliest youth Grizel was wont to write in verse and prose. Her daughter had in her possession a manuscript volume with varied compositions, 'many of them interrupted, half writ, some broken off in the middle of a sentence.' Some of her Scottish songs appeared in Allan Ramsay's 'Tea-Table Miscellany' and other collections of Scottish songs. One has passed into the song-literature of Scotland imperishably—'And verena my heart light I wad dee.' 'Its sudden inspiration,' says Tytler, 'has fused and cast into one perfect line, the protest of thousands of stricken hearts in every generation' (TYTLER and WATSON'S *Songstresses of Scotland*). She died 6 Dec. 1746, in her eighty-first year, and was buried beside her husband at Mellerstain. Judge Burnet (Monboddo) wrote an inscription for her monument.

[Authorities cited in the article.] A. B. G.

**BAILLIE, JOANNA** (1762-1851), dramatist and poet, was descended from an ancient Scotch family. She was born at the manse of Bothwell, Lanarkshire, 11 Sept. 1762. Although her birth was premature, and in infancy she was very delicate, she lived to the great age of 88 years. Her sister, to whom Joanna addressed a memorable birthday ode, was still more remarkable for her longevity, dying in 1861 at the age of 100 years. The Baillie family claimed amongst their progenitors on the male side

the great patriot, Sir William Wallace. The mother of Joanna Baillie was the sister of William and John Hunter. The youth of Joanna was spent at Bothwell amidst scenes which deeply impressed the imagination of the future dramatist. But while, as daughter of the minister of Bothwell, she had many opportunities for studying character, unfortunately, in the manse itself, 'repression of all emotions seems to have been the constant lesson.' In 1769 Dr. Baillie was appointed to the collegiate church of Hamilton. Before she was ten years of age Joanna Baillie afforded striking proofs of courage; but she was somewhat backward in her studies, although her intellect was unusually keen. At the age of ten she was sent to a school in Glasgow, and here her faculties were rapidly developed. She excelled in vocal and instrumental music, and evinced a decided talent for drawing. She had also a great love for mathematics; her argumentative powers, too, were unusually strong. She was early distinguished for her skill in acting and composition, being especially facile in the improvisation of dialogue in character.

In 1776 her father was appointed professor of divinity in the university of Glasgow, and removed to the house provided for him at the university. But two years later Dr. Baillie died, and his widow and daughters retired to Long Calderwood, in Lanarkshire; Matthew Baillie, the only son, proceeded to Balliol College, Oxford. In 1783 Dr. William Hunter died in London, leaving to Matthew Baillie the use of his house and his fine museum and collections. The following year Mrs. Baillie and her daughters joined Matthew Baillie in London, remaining with him until he married, in 1791, Miss Denman, sister of lord chief justice Denman.

It was in London that Joanna Baillie's genius first displayed itself. She published anonymously, in 1790, a small volume of miscellaneous poems, entitled 'Fugitive Verses,' which received considerable encouragement. But her genius had not yet discovered its true channel. 'It was whilst imprisoned by the heat of a summer afternoon, and seated by her mother's side engaged in needlework, that the thought of essaying dramatic composition burst upon her.' The first play she composed, 'Arnold,' does not survive; but in 1798 she issued the first volume of her 'Plays on the Passions,' entitled 'A Series of Plays; in which it is attempted to delineate the stronger passions of the mind, each passion being the subject of a tragedy and a comedy.' The volume contained 'Basil,' a tragedy on love; the 'Trial,' a comedy on the same subject; and 'De Monfort,' a tragedy

on hatred. The work was published anonymously, but its author was immediately sought after. Samuel Rogers reviewed it as the work of a man, and Sir Walter Scott was at first suspected of being the author. By one or two critics the volume was severely attacked; but it brought the author an acquaintance with Scott himself, which ripened into a warm friendship, lasting 'uninterruptedly for more than half a century.'

In an elaborate preface to the 'Plays on the Passions,' Miss Baillie defended herself for this somewhat novel venture in dramatic writing. Having first shown that the study of human nature and its passions has always had, and ever must have, an irresistible attraction for the individual man, the writer proceeds to maintain that the sympathetic instinct is our best and most powerful instructor. It teaches us to respect ourselves and our kind, and to dwell upon the noble, rather than the mean, view of human nature. Amidst all decoration and ornament in poetry, 'let one simple trait of the human heart, one expression of passion, genuine and true to nature, be introduced, and it will stand forth alone in the boldness of reality, whilst the false and unnatural around it fade away upon every side like the rising exhalations of the morning.' But the plays gave rise to much controversy. The tone and substance of the objections of hostile critics were thus summed up by Campbell (*Life of Mrs. Siddons*): 'If Joanna Baillie had known the stage practically, she would never have attached the importance she does to the development of single passions in single tragedies; and she would have invented more stirring incidents to justify the passion of her characters, and to give them that air of fatality which, though peculiarly predominant in the Greek drama, will also be found to a certain extent in all successful tragedies. Instead of this she tries to make all the passions of her main characters proceed from the wilful natures of the beings themselves. Their feelings are not precipitated by circumstances, like a stream down a declivity that leaps from rock to rock, but, for want of incident, they seem often like water on a level, without a propelling impulse.' In acting contrary to established usage the author no doubt handicapped herself from the point of view of the successful dramatist. By setting herself to delineate one master passion she deliberately put from her the means which generally insure dramatic success.

Yet the 'Plays on the Passions' attracted the notice of John Kemble, who determined to produce 'De Monfort' at Drury Lane Theatre, with himself and Mrs. Siddons in

the chief characters. Every care was given to the representation of the tragedy, for which the Hon. F. North wrote a prologue, and the Duchess of Devonshire an epilogue. It was produced with much splendour in April 1800, but it failed to obtain a firm grasp upon the public. It ran, however, for eleven nights. It has been said that the passage in the play descriptive of Jane de Monfort formed the best portrait ever drawn of Mrs. Siddons herself; and 'it is probable that John Kemble and his sister had been present to the mind of Joanna when she composed the tragedy of "De Monfort." The opinion of Mrs. Siddons upon the play may be gathered from an expression uttered by her in conversation with the author: 'Make me some more Jane de Monforts.'

Undeterred by adverse criticism, Miss Baillie, in 1802, issued a second volume of 'Plays on the Passions.' It included a comedy on 'Hatred,' a tragedy (in two parts) on 'Ambition,' and a comedy on the same passion. The comedy on 'Hatred,' with music, was produced at the English Opera House; but the tragedy on 'Hatred,' notwithstanding its admittedly fine passages, was too unwieldy for stage production.

Shortly after the appearance of this volume Mrs. Baillie and her daughters went to live at Hampstead; but in 1806 Mrs. Baillie died. The sisters then rented a new house in the neighbourhood of Hampstead heath, and this house they continued to occupy until they died. They were visited by many friends eminent in letters, in science, in art, and in society, and they were on very intimate terms with their neighbour, Mrs. Barbauld. Scott looked forward to a visit to his friends at Hampstead as one of the greatest of his pleasures, and Lord Jeffrey wrote, under date 28 April 1840: 'I forgot to tell you that we have been twice out to Hampstead, to hunt out Joanna Baillie, and found her the other day as fresh, natural, and amiable as ever, and as little like a tragic muse.' Two years later the whig editor again saw her (she being then eighty years of age), when he described her as 'marvellous in health and spirits, and youthful freshness and simplicity of feeling, and not a bit deaf, blind, or torpid.' Geniality and hospitality were the characteristics of the two sisters during their residence at Hampstead, and even when one became an octogenarian and the other a nonagenarian they could enter keenly into the various literary and scientific controversies of the day.

In 1804 Joanna published a volume of 'Miscellaneous Plays,' containing two tragedies, 'Rayner,' and 'Constantine Paleologus.' These plays were constructed more upon the

usual lines, and the dramatist stated, in her apology for their appearance, that she wished to leave behind her a few plays, some of which might continue to be acted 'even in our canvas theatres and barns;' while she also desired to keep her name in the remembrance of lovers of the drama generally. The motive of the tragedy 'Rayner' was to exhibit a young man of an amiable temper, tempted to join in the proposed commission of a detestable deed, and afterwards bearing himself with diffidence and modesty. The play had been written many years before. The scene of the tragedy was laid in Germany, and its turning-point was the crime of murder. Between the two tragedies was placed a comedy, the 'Country Inn.' The second tragedy, 'Constantine Paleologus,' was written in the hope of being produced at Drury Lane, with Kemble and Mrs. Siddons in the principal characters; but those great actors declined to produce it. The subject of the play was taken from Gibbon's account of the siege of Constantinople by the Turks. But more than five of her plays were produced on the stage. Amongst these was 'Constantine Paleologus,' which, while declined at Drury Lane, was produced at the Surrey Theatre as a melodrama under the title of 'Constantine and Valeria;' Valeria being an imaginary conception, intended for Mrs. Siddons. The play was also produced at Liverpool, Dublin, and Edinburgh, in every case to large houses and with much success. Of the production in Edinburgh, in 1820, the writer herself, then on her last visit to her native land, was a gratified spectator.

In 1810 Miss Baillie produced her play of the 'Family Legend.' It was founded upon a Highland tradition relating to the feud between the lord of Argyle and the chieftain of Maclean. The tragedy, with a prologue by Sir Walter Scott, was brought out under Scott's auspices at the Edinburgh theatre. Henry Mackenzie, author of the 'Man of Feeling,' wrote an epilogue. The play had a genuine success. 'You have only to imagine,' wrote Scott to Miss Baillie, 'all that you could wish, to give success to a play, and your conceptions will still fall short of the complete and decided triumph of the "Family Legend." Everything that pretended to distinction, whether from rank or literature, was in the boxes; and in the pit such an aggregate mass of humanity as I have seldom, if ever, witnessed in the same place.' The tragedy was played for fourteen nights on the first representation, and it was produced on several subsequent occasions. Its success induced the managers of the Edinburgh theatre to revive the author's tragedy of 'De

Monfort,' and in describing the reception of this drama one who was present wrote that 'the effect produced was very great; there was a burst of applause when the curtain fell, and the play was announced for repetition amid the loudest applause.' In 1815 the 'Family Legend' was produced for the benefit of Mrs. Bartley at Drury Lane Theatre, and in 1821 Mr. Kean brought forward 'De Monfort' again on the same stage.

In 1812 appeared a third series of 'Plays on the Passions,' consisting of two tragedies and a comedy on the subject of 'Fear,' and a musical drama on 'Hope.' By the publication of this volume Miss Baillie showed that she had abandoned her old ideas. The first of these new plays had for its principal character a woman under the dominion of superstitious fear. In the second drama the fear of death was made the actuating principle of a hero of tragedy. The hero of the third play, a comedy on 'Fear,' is represented as timid, and endeavouring to conceal his fear by a boastful affectation of gallantry. 'Metrical Legends,' the next work by Joanna Baillie, appeared in 1821. The poems were suggested by her visit to Scotland in the previous year. The patriot Wallace is the principal personage in one poem, and Lady Griselda Baillie in another. There were also included some dramatic ballads cast in the ancient mould. 'Poetic Miscellanies,' published in 1823, contained poems by Sir Walter Scott, Miss Catherine Fanshawe, Mrs. Hemans, and others. This collection of poems, which was made with a charitable object, had a very satisfactory pecuniary result. A deep affliction overtook the sisters Baillie in 1823 by the death of their brother, Dr. Matthew Baillie, who was tended by Joanna during his last illness with the utmost solicitude. The drama of the 'Martyr,' by Joanna Baillie, was published in 1826, though it had been written some time before. The play relates to the martyrdom of Cordenius Maro, an officer of the imperial guard of Nero, who had been converted to the christian faith. Miss Baillie accepted the unitarian view of Christ; and in her seventieth year put forward a publication on this question, entitled 'A View of the general Tenor of the New Testament regarding the Nature and Dignity of Jesus Christ.' In this work she clearly expressed her assent to the views held by Milton and others.

In 1836 Miss Baillie published three volumes of 'Miscellaneous Plays,' which, at the time of their composition, she had intended for posthumous publication. Three of these dramas were in continuation of the 'Plays on the Passions,' and completed the

series. They consisted of a tragedy and a comedy illustrating the passion of jealousy, and a tragedy on the subject of remorse. An interesting circumstance is connected with two of the dramas. It appears that Sir Alexander Johnston, chief justice of Ceylon, being desirous of raising the minds of the inhabitants of that island, and of eradicating their vices by writings directed to that end, turned to the drama as being specially adapted to the purpose. Miss Baillie's 'Martyr' he had already seen and welcomed as an auxiliary, and, in response to his desire for a second drama of the same nature, the author wrote the 'Bride.' Both dramas were translated into the Cingalese language. In the second play the writer endeavoured to set forth the christian principle of the forgiveness of injuries. Of the miscellaneous dramas, two were brought out simultaneously at Covent Garden and Drury Lane respectively; the younger Kemble appearing in the 'Separation' at the former house, and Vandenhoff in the tragedy of 'Henriquez' at the latter. They had but a partial success, and it would have been strange had the result been otherwise, considering the writer's adhesion to her former principles of construction and her lack of knowledge of stage requirements.

Miss Baillie continued to write after she had reached a very advanced age, some of the poems in her new collection of 'Fugitive Verses' having been produced when she was verging upon fourscore years. As the end of life approached she was prepared to meet it. 'On Saturday, the day preceding that of her death, which occurred 23 Feb. 1851, Joanna expressed a strong desire to be released from life. She retired to bed as usual, complained of some uneasiness, and sank till the following afternoon, when, without suffering, in the full possession of her faculties, with sorrowing relations around her, in the act of devotion, she expired' (*Prefatory Memoir to Collected Works*). 'Joanna Baillie was under the middle size, but not diminutive, and her form was slender. Her countenance indicated high talent, worth, and decision. Her life was characterised by the purest morality.' The prominent features of her character, which impressed all with whom she came in contact, were her consummate integrity, her moral courage, her freedom from affectation, and a never-failing charity in all things.

The faculty of invention displayed in Joanna Baillie's writings is very great. Her blank verse also possesses a notable dignity and sonorousness which rank her works among English classical dramas, although they will never be popular on the stage. Her minor works have much beauty and delicacy.

Some of her songs, as, for example, 'Up, quit thy bower,' 'Wood, an' married, an' a,' 'It fell on a mornin' when we were thrang,' and 'Saw ye Johnnie comin'?' will doubtless always live. It has been often remarked of the tragedies of Joanna Baillie, that 'with all their deficiencies' they are probably 'the best ever written by a woman.' Miss Mitford (*Recollections*) observes of Miss Baillie's tragedies that they 'have a boldness and grasp of mind, a firmness of hand, and resonance of cadence, that scarcely seem within the reach of a female writer; whilst the tenderness and sweetness of her heroines, the grace of the love-scenes, and the trembling outpourings of sensibility, as in *Orra*, for instance, in the fine tragedy on "Fear"—would seem exclusively feminine if we did not know that a true dramatist—as Shakspeare or Fletcher—has the wonderful power of throwing himself into the character that he portrays.' Sir Walter Scott, when questioned respecting his own dramatic efforts, replied: 'The "Plays on the Passions" have put me entirely out of conceit with my germanized brat (the "House of Aspen"); and should I ever again attempt dramatic composition, I would endeavour after the genuine old English model.' Speaking on another occasion of Miss Baillie's tragedy of 'Fear,' he said that the language was distinguished by a rich variety of fancy which he knew no instance of excepting in Shakspeare, and he paid a very high tribute to its author, 'the immortal Joanna,' in his introduction to the third canto of 'Marmion.'

The various works of Joanna Baillie have been already referred to in their order of publication, with the exception of a poem entitled 'Athalya Bae,' printed originally for private circulation and published posthumously. It deals with a legend concerning the 'wise and good' Indian sovereign who furnishes the title of the poem.

[Dramatic and Poetical Works of Joanna Baillie; Annual Register, 1851; Inchbald's British Theatre; Mitford's Recollections of a Literary Life; Chambers's Biographical Dictionary of Eminent Scotsmen; Rogers's Modern Scottish Minstrel; Quarterly Review, March 1841.]

G. B. S.

**BAILLIE, JOHN** (1741-1806), divine, was born in 1741, and became in 1767 minister of the Carlisle-Street meeting-house (United Secession) at Newcastle-upon-Tyne. His convivial habits having led him into irregularities peculiarly inconsistent with his profession, his connection with this congregation ceased about 1783. He then assisted William Tinwell, the author of a treatise on

arithmetic, in conducting a school. Afterwards he lectured in a schoolroom in St. Nicholas's churchyard at Newcastle, and in 1797 his friends fitted up the old Postern Chapel for his use. He was in pecuniary difficulties for several years previous to his death, which occurred at Gateshead on 12 Dec. 1806. He published several detached sermons, including 'A Funeral Discourse on the Death of the Papacy, delivered before a crowded audience,' Newcastle, 1798, 8vo, and 'A Funeral Sermon occasioned by the death of Frances Baillie,' his daughter, who kept a school at Newcastle, and who died in 1801 at the age of twenty-three. His other works are: 1. 'A Course of Lectures upon various antient and interesting Prophecies; tending to strengthen the faith and enliven the hopes of believers in the Divine Saviour, to whom all the Prophets bare witness. Lecture I. Haggai ii. 6-10,' Newcastle, 1784, 8vo. 2. 'An Impartial History of the Town and County of Newcastle-upon-Tyne and its Vicinity' (anon.), Newcastle, 1801, 8vo. 3. 'History of the French War, from 1791 to 1802,' 8vo. He also assisted in writing a 'History of Egypt.'

[Gent. Mag. lxxvi. (ii.) 1182; Mackenzie's Newcastle, i. 394; Sykes's Local Records, 227; Richardson's Local Historian's Table Book (Historical Division), iii. 60.] T. C.

**BAILLIE, JOHN** (1772-1833), colonel, orientalist, political agent, and director of the East India Company, entered the company's service in 1790, arriving in India in 1791. He took ensign's rank in 1793 and lieutenant's in 1794, devoting his leisure to the study of oriental languages, which he prosecuted with such success that on the foundation of the new college of Fort William in 1801 he was appointed professor of the Arabic and Persian languages and of Mohammedan law. In 1803, on the outbreak of the Mahratta war, he joined in the siege of Agra with the rank of captain, and soon after was appointed to the difficult post of political agent at Bundelkhand. Disaffection was rife here, and the chiefs were forming dangerous combinations. Captain Baillie, however, succeeded in disuniting the league of the chiefs and re-establishing order and security, for which services he was publicly thanked by the governor-general in a letter to the directors, in which it was said that 'the British authority in Bundelkhand was only preserved by his fortitude, ability, and influence.' He had, in fact, transferred to the company a territory with a revenue of 225,000*l.* a year. Baillie resigned his professorship in 1807 for the position of resident

at Lucknow, which he held till 1815. Three years later he retired from the service, and on his return to England was M.P. for the borough of Hedon (now disfranchised) from 1820 to 1830, and afterwards in 1830-1 and from 1832 till his death next year for the burghs of Inverness. He was a moderate whig, supporting Catholic Emancipation but opposing the Reform Bill. He was selected a director of the East India Company in 1823, and died 20 April 1833. While professor, Colonel Baillie published his useful 'Sixty Tables elucidatory of a Course of Lectures on Arabic Grammar delivered in the College of Fort William during the first year of its institution' (1801), and the text of 'The Five Books upon Arabic Grammar,' i.e. the 'Meenut Amel,' 'Shurhu Meenut Amel,' 'Mesbâh,' 'Hedâyut oon-Nuhve,' and the 'Kâfeeh,' of which the first four were issued in two thin volumes in 1802-3, and the last was not published. He also translated from the Arabic part (relating to commercial transactions) of a digest of Mohammedan law in 1797, at the request of Sir John Shore (Lord Teignmouth) then governor-general.

[Journal of the Bengal Asiatic Society, iii. 100, 101 (1834); Annual Register, 1833, lxxv. 219.] S. L.-P.

**BAILLIE, MARIANNE** (1795?-1830), traveller and verse-writer, whose maiden name was Wathen (*Guy of Warwick*, &c., 1817, pp. 42, 43, and 64), married Mr. Alexander Baillie 'some years previous' to 1817 (*Guy of Warwick*, pp. 47, 66, and 72). Mrs. Baillie's first contribution to literature was a small volume, entitled 'Guy of Warwick, a Legend, and other Poems,' Kingsbury, 1817. A very limited edition was printed by Mr. Baillie at his private printing-press, and, in 1818, a second edition was in demand. Some of the poems in this work were afterwards reproduced in a volume privately printed in London in 1826, and 'not published,' entitled 'Trifles in Verse.' The preface is written by Mr. Baillie, who says that after the year 1817 'hard times came.' Early in 1818 the Baillies found a 'shelter' and a 'calm retreat' at Twickenham, where they received kindness from Lady Howe, whose second husband, Sir Wathen Waller, would seem to have been a relative of Mrs. Baillie. It was from Twickenham that the Baillies set out for a continental tour, crossing the Channel from Dover to Calais 9 Aug. 1818, and returning 8 Oct. following. The literary result of this journey appeared in a volume inscribed by the author to the Right Hon. John Trevor, who had been British minister at Turin from 1783 to 1798; of

whom Mrs. Baillie spoke after his death as a 'paternal friend' (*Trifles in Verse*, pp. 40 and 41). The title of the volume was 'First Impressions on a Tour upon the Continent in the Summer of 1818, through Parts of France, Italy, Switzerland, the Borders of Germany, and a Part of French Flanders,' 8vo, London, 1819. In the same year Mrs. Baillie wrote a poetical 'Farewell to Twickenham.' After spending some time in Devonshire, she entered in June 1820 upon a residence of about two years and a half in Portugal. There she wrote a series of letters to her mother, afterwards published, with an inscription to the Earl of Chichester, 'to whose kindness they owe their existence,' in two volumes, entitled 'Lisbon in the Years 1821, 1822, and 1823,' 8vo, London, 1824; second edition 1825. Several of her poems, published first in her letters, and afterwards in 'Trifles in Verse,' describe the beauties of Cintra. The Baillies returned to England in October 1823, and settled in London. Mrs. Baillie died in 1831.

[Martin's Bibliographical Catalogue of Privately Printed Books, 2nd ed. 1854.] A. H. G.

**BAILLIE, MATTHEW (1761-1823)**, morbid anatomist, was born at Shots, Lanarkshire, on 27 Oct. 1761. His father (James) was the minister of the parish, and was afterwards professor of divinity at Glasgow. His mother (Dorothea) was a sister of the great anatomists, William and John Hunter. Joanna, the poetess, was Matthew's sister. Baillie went to the grammar school of Hamilton, and thence to the university of Glasgow. On the advice of Dr. William Hunter he chose medicine as his profession. He came to London at the age of eighteen, and lived in William Hunter's house. Baillie entered at Balliol College, Oxford, and worked hard there at the studies of the place; but his more valuable education was carried on in Windmill Street in the vacations. A lecture-theatre and museum adjoined Dr. William Hunter's house, and in them Baillie attended public lectures, which his uncle supplemented by instruction whenever he and his nephew were together. He taught Matthew how to observe, communicated to him his own love of science, and set him an example of lucid exposition. In two years Dr. William Hunter died, and left theatre and house to his nephew. The museum was ultimately to go to Glasgow, where it now is, but its present use was left to Matthew, and so was a family estate in Scotland. This Baillie honourably handed over to his uncle, John Hunter, as the natural heir. No man could have had a more fortunate in-

troduction to medicine, and Baillie showed that he understood his advantages. He began to lecture, and turned his attention in particular to every kind of diseased structure. In 1787, being M.B., he was elected physician to St. George's Hospital, and in 1789 took his M.D. degree, and became a fellow of the College of Physicians. Somewhat later he was elected F.R.S. His first publication appeared in 1794, and was an edition of a treatise on the 'Anatomy of the Gravid Uterus,' which Dr. William Hunter had left in manuscript. In 1795 Baillie published 'The Morbid Anatomy of some of the most important Parts of the Human Body,' the work on which his fame rests. It was the first book on the subject in English, and excelled any of the previous Latin treatises in lucidity. Morgagni's 'De Sedibus et Causis Morborum,' the work which may be regarded as the foundation of the study of diseased structures and organs, is long, intricate, and difficult of reference. Morgagni's method, which is also that of the other predecessors of Baillie, is to state in full the history and symptoms of cases, with a minute account of all the appearances found on opening the body after death. Baillie's was the first book in which morbid anatomy was treated as a subject by itself. He followed the plan of treatises on normal anatomy, going through the morbid appearances of each organ. This system, without any loss of exactitude, enabled him to set forth a great collection of observations in a few words. What was common was confirmed by the statement of many observations, without wasting space on the details of each; and what was rare was placed near the more frequent conditions to which it was related. The great majority of the observations are Baillie's own, some made in his examinations of bodies, others in the specimens preserved by his uncles, William and John Hunter. He sometimes mentions the descriptions of Morgagni, of Lieutaud, and of a few of his own contemporaries; but he does so to fill up gaps in his own series, and does not profess to reduce into order the mass of details contained in their pages. His work is limited to the thoracic and abdominal organs and the brain. He leaves untouched the morbid changes observable in the skeleton, muscles, nerves, and spinal cord. A short paper ('Observations on Paraplegia,' 1822), published elsewhere, shows that he had begun to pay attention to diseases of the spinal cord, of which very little was then known, but that he had not advanced far into the subject. The pathology, or explanation of morbid appearances, necessarily changes with the advance of knowledge, but accurate

descriptions of them never become obsolete or useless. Baillie shows remarkable acuteness in perceiving the uncertainty of the pathology of his time. He restricts himself to precise descriptions of what he had seen, and little is to be found in his pages which is not of permanent value. He was the first to define exactly the condition of the liver now known as cirrhosis, and to distinguish the common renal cysts from the rare cysts of parasitic hydatids of the kidney. He demolished the prevalent opinion, that death was often due to a growth in the heart, and showed that the polypus, as it was called, was in reality a mass of coagulated fibrin formed after death. He described simple ulcer of the stomach and the ulcers of typhoid fever, though the full meaning of these appearances was not made out till some years after his death. The book was dedicated to his friend, Dr. David Pitcairn, whose fatal illness and autopsy a few years later gave Baillie the opportunity of describing a morbid condition before unknown. Two additions were afterwards made to the book. In 1797 a few notes were added on the anatomy found in relation to particular symptoms, and in 1799 a fine series of engravings by Mr. Clift. Baillie's practice soon began to increase, and in 1799 was so great that he resigned his post of physician at St. George's Hospital and gave up lecturing. He went to live in Grosvenor Street, and became physician extraordinary to George III. From this time forth his labours were only useful to his own generation. He was not of a robust constitution, and his health was ruined by a practice beyond his strength. For several years he saw patients or wrote letters for sixteen hours a day, and after a few years he ceased to enjoy an annual holiday. In consultation he was famed for the clearness with which he expressed his opinion in simple terms. He despised every way of obtaining professional eminence except that of superior knowledge, and while he treated the opinions of others with consideration was firm in his own. There are many proofs of his kindness to patients, but he sometimes gave sharp replies to foolish questions when suffering from the irritation of overwork.

He married Sophia, daughter of Dr. Denman and sister of Lord Denman, the lord chief-justice; by her he left two children. While in practice Baillie made a few contributions to clinical medicine. These, and some others which he left unpublished, are to be found in the collected edition of his works ('The Works of Matthew Baillie, M.D.,' to which is prefixed an Account of his Life by James Wardrop, 2 vols., London, 1825).

They are not of the same value as his morbid anatomy, for he had no time to think out the general results of his bedside observations. In a short essay on 'Pulsation of the Aorta in the Epigastrium,' he was the first to show that this symptom is often present without any internal structural change.

Baillie died of phthisis on 23 Sept. 1823. He bequeathed his collection of specimens of morbid anatomy, of books and of drawings, to the College of Physicians with a sum of money. The gold-headed cane which Baillie had received from Dr. David Pitcairn, to whom it had descended through William Pitcairn, Askew, and Mead from Radcliffe (*The Gold-headed Cane*, London, 1827, and new edition by Dr. Munk, 1884), was presented by Baillie's widow to the College of Physicians, and is there preserved, with the arms of its successive possessors engraved upon it. Baillie died at his country house, and was buried in the parish church of Duntisburne Abbots, Gloucestershire, and he is commemorated in Westminster Abbey by a bust and inscription.

[Collected Works; Lectures and Observations on Medicine by the late Matthew Baillie, M.D., privately printed, 1825.] N. M.

BAILLIE, ROBERT, D.D. (1599-1662), one of the most learned of the earlier Scottish presbyterian divines, was born at Glasgow in 1599 (*Letters and Journals*, ed. Laing, 1841-2, 3 vols.) His father is described as son of Baillie of Jerviston (Jerviswood?), and descended of the Baillies of Hoprig and Lamington—Lamington coming to them through a marriage with the daughter of Sir William Wallace. But although of high descent, Robert Baillie's father was a citizen of Glasgow and engaged there in trade.

Robert Baillie entered the university of his native city as a mere lad. He took its highest degree of M.A. Having further studied theology, he, 'about the year' 1622, received orders, not from the church of Scotland—i.e. presbyterians—but from Archbishop Law of Glasgow. He was chosen also a regent of philosophy in his university. Whilst in this office he was tutor to a son of the Earl of Eglinton. In spite of his episcopal ordination, that earl presented him to the parish of Kilwinning, Ayrshire—i.e. of the church of Scotland. Notwithstanding that he was now a clergyman of the national church of Scotland, he kept up an affectionate correspondence with the archbishop. In 1629 he delivered an oration 'In laudem Linguae Hebrææ.' In 1633 he declined a translation to Edinburgh. In 1637 his patron the archbishop requested him to preach a sermon in

the Scottish metropolis in recommendation of the Canon and Service Book then published. He did not see his way to do so, and his letter giving his reasons for refusal is still of interest. Events were thickening to disaster. In 1638 he was chosen by his own presbytery of Irvine a member of the historic general assembly at Glasgow, which heralded the civil war. He spoke out courageously and unmistakably against the obtrusion and Arminianism of Laud. In 1640 he was sent by the covenanting lords to London, to draw up an accusation against the archbishop. His 'Letters and Journals' of the period reflect the lights and shadows of events. In 1641 he published his 'Antidote against Arminianism;' 'The Unlawfulness and Danger of a Limited Prelacie and Episcopacie;' 'A Parallele or Briefe Comparison of the Liturgie with the Masse-Book, the Breviarie, the Cereemoniall, and other Romish Rituals;' 'Laudensium *Abrocaráptoris*;' and 'The Canterburian's Self-Conviction; or an Evident Demonstration of the avowed Arminianisme, Poperie, and Tyrannie of that Faction, by their owne Confessions; with a Postscript to the Personat Jesuite Lysimachus Nicanor.' These extraordinary books had been preceded by daring action. For in 1639 he accepted the chaplaincy of Lord Eglinton's regiment, and was with the army of the covenanters at Dunse Law under Leslie (*Letters and Journals*, ed. Laing, i. 174). The treaty of Berwick led to a temporary cessation of the unhappy strife. But again in 1640 he appeared in arms with the covenanters. It was from the heat of these bold acts that he proceeded to London. In 1642 he was again in Scotland, and appointed professor of divinity along with David Dickson, in Glasgow University. His reputation was great, so much so that the other three Scottish universities contended for his services. He was frequently absent in London, having formed one of the renowned Westminster Assembly. He returned to settle finally in Scotland in 1646. Other theological and ecclesiastical books had in the interval, and in this year, appeared—e.g. 'Satan the Leader in Chief to all who resist the Reparation of Sins; as it was cleared in a Sermon to the Honourable House of Commons at their late Solemn Fast, Feb. 28, 1643;' 'Errours and Induration are the great Sins and the great Judgments of the Time; preached in a Sermon before the Right Honourable the House of Peers in the Abbey Church of Westminster, July 30, 1645;' 'An Historicall Vindication of the Government of the Church of Scotland, from the manifold base Calumnies which the most malignant of the Prelates did invent of old, and

now lately have been published with great industry in two pamphlets at London: the one intituled "Issachars Burden," &c., written and published at Oxford by John Maxwell, a Scottish Prelate, &c., 1646;' 'A Dissuasive from the Errours of the Time; wherein the Tenets of the Principall Sects, especially of the Independents, are drawn together in a Map, 1645-6;' 'Anabaptism, the True Fountaine of Independency, Brownisme, Antinomy, Familisme, &c., or a Second Part of the Dissuasive from the Errours of the Time, 1647.' His larger books, published later, are: 'A Review of Dr. Bramhall, late Bishop of Londonderry, his Faire Warning against the Scotas Disciplin,' 1649; 'A Scotch Antidote against the English Infection of Arminianism,' 1652; 'The Dissuasive from the Errours of the Time, vindicated from the Exceptions of Mr. Cotton and Mr. Tombes,' 1655; 'Opus Historicum et Chronologicum,' published at Amsterdam, 1663.

When, after the beheading of Charles I, Charles II was proclaimed in Scotland, Baillie was one of the divines appointed by the general assembly to wait upon his majesty at the Hague. On 27 March 1649 he addressed Charles in a remarkable speech. He was emphatic against the execution of Charles I; but his acceptance of Charles II was limited by all the niceties of casuistry. At the Restoration he was full of ardent hope. By the influence of Lauderdale he was appointed principal of the university of Glasgow on his refusal of a bishopric. He was not destined to hold his ultimate dignity very long. In the spring of 1662 he was 'sick and weak.' In his last illness he was visited by the new-made archbishop of Glasgow, and whilst he could not address him as 'my lord,' they got on excellently. He died in July 1662, aged 63. His 'Letters and Journals,' dating from 1637 to 1662, remained for many years in manuscript in the hands of Baillie's heirs. Many transcripts were made from them in the early part of the eighteenth century, of which one is now in the British Museum, and another in the Advocates' Library, Edinburgh. They were printed for the first time at Edinburgh in two octavo volumes in 1775, at the suggestion (it has been doubtfully asserted) of Robertson and Hume. This work was very poorly edited by 'Mr. Robert Aiken, schoolmaster of Anderton,' and is disfigured by careless omissions and errors. The Bannatyne Club issued the best edition in 1841-2, in three volumes, edited by David Laing.

Baillie was twice married, firstly to Lillias Fleming, of the family of Cardarroch—by whom he had a large number of children, but only five survived him; she died in June

1653. His second wife was Mrs. Wilkie, widow, daughter of a former principal of the university (Dr. Strang); by her he had a daughter, Margaret, who became wife of Walkinshaw of Barrowfield, and grandmother of Henry Home, Lord Kames. Another descendant was Miss Walkinshaw, mistress of Prince Charles Edward.

As a scholar, Baillie was remarkable. He understood thoroughly no fewer than thirteen languages, including Hebrew, Chaldee, Syriac, Arabic, and Ethiopic. He had a keen, penetrative intellect, which never allowed his learning to overload it. He is an alert controversialist, with a swift eye to his opponents' weaknesses and admissions. He bows to what he believes to be the true interpretation of Holy Scripture. He fiercely denounces 'the sectaries,' and though personally modest, he shows towards adversaries little charity. His 'Letters and Journals' are for Scotland much what Pepys and Evelyn are for England. They are especially valuable in relation to the assembly of 1638 and the assembly of Westminster.

[Kippis's Biogr. Brit. i. 510-15; Chalmers's Biogr. Dict.; Anderson's Scottish Nation; Neal's Puritans (*passim*); a remarkable paper by Carlyle on 'Baillie the Covenanter' in Westminster Review, xxxvii. 43, and reprinted in his Miscellanies.] A. B. G.

**BAILLIE, ROBERT** (d. 1684), patriot, the 'Scottish Algernon Sydney,' as he has been named, was son of George Baillie of St. John's Kirk, Lanarkshire, of the Lamington Baillies, though he himself is known as Baillie of Jerviswood. He first appears in full manhood, as the object of suspicion and hatred to the powers then dominant in Scotland. An apparently trivial incident brought things to a crisis. In June 1676 the Rev. Mr. Kirkton, a non-episcopalian minister, who had married Baillie's sister, was illegally arrested in the High Street of Edinburgh by an informer named Carstairs, on the bidding of Archbishop Sharp, himself a renegade Presbyterian. Carstairs, not having a warrant, endeavoured to extort money from his prisoner before releasing him. Baillie having been sent for arrived on the scene. It was a mean house near the common prison ('Heart of Midlothian'). Carstairs had locked the door and refused to open it. Kirkton desired of him that he would either produce his warrant or set him free. Instead of compliance, Baillie drew a pocket-pistol, and a struggle ensued for its possession. Those without, hearing the noise and cries, burst open the door, and discovered Kirkton on the floor and Carstairs seated upon him. Baillie demanded

sight of the warrant, but none was produced. Thereupon Kirkton and his friends left the house. Upon the complaint of the informer, he procured an ante-dated warrant, bearing the signatures of some members of the privy council. Baillie—the higher victim—was called before the council, and by Sharp's influence was fined 'in six thousand marks' (= 318*l.*, or, according to Wodrow, 500*l.*), 'to be imprisoned till paid.' After being four months in prison, he was liberated on payment of half the fine to Carstairs. Needless to say he was a suspected man henceforward. None the less was he bold and outspoken for civil and religious liberty. In the year 1683, sick at heart and seeing no prospect of relief from the prevailing tyranny in his native land, he joined some fellow-countrymen in negotiations for emigration to South Carolina. The scheme was frustrated. Contemporaneously, Baillie and compatriots repaired to London, and entered into association with Monmouth, Sydney, Russell, and their friends, if possible to obtain mitigation, or perchance change, of government measures. The Rye House plot came to the front, and though Baillie had nothing whatever to do with it, he was arrested and sent north to Scotland. Hopes of a pardon for himself having been treacherously held out to him, on condition of his giving the government information, he replied: 'They who can make such a proposal to me neither know me nor my country.' The late Earl Russell observes: 'It is to the honour of Scotland that no witnesses came forward voluntarily to accuse their associates, as had been done in England.' Baillie had married, when young, a sister of Sir Archibald Johnston of Warriston (who was executed in June 1633); and during his imprisonment she offered to go into irons as an assurance against any attempt at escape, if only she might keep her husband company. But permission was denied. He was accused of complicity in the Rye House plot and conspiracy to raise a rebellion, but his prosecutors were unable to adduce one iota of evidence. Therefore he was ordered to 'free himself' by oath. This he refused to do, and was fined 6,000*l.* He was still held in prison and refused the slightest alleviation. Bishop Burnet, in his 'History of his own Times,' informs us that 'the ministers of state were most earnestly set on Baillie's destruction, though he was now in so languishing a condition, that if his death would have satisfied the malice of the court, it seemed to be very near.' He adds, that 'all the while he was in prison he seemed so composed and cheerful, that his behaviour looked like the reviving spirit of the noblest of the old Greeks or Romans, or rather of the

primitive christians and first martyrs in those best days of the church.' On 23 Dec. 1684 the dying prisoner was (afresh) arraigned before the High Court of Justiciary on the capital charge of treason. He was carried to the bar in his night-dress, attended by his sister (Mrs. Ker of Graden). He solemnly denied having been accessory to any conspiracy against the king's or his brother's life, or of being an enemy to monarchy. He was 'brought in' guilty on 24 Dec., early in the morning, and sentenced to be hanged the same afternoon at the market cross of Edinburgh, with all the usual barbarities of beheading and quartering. Upon hearing his sentence he said simply: 'My lords, the time is short, the sentence is sharp, but I thank my God, who hath made me as fit to die as you are to live.' He was attended to the scaffold by his devoted sister. He was so feeble that he required assistance to mount the ladder. When he was up he said: 'My faint zeal for the protestant religion has brought me to this;' but the beating of the drums interrupted him. An intended speech had to go undelivered. Thus, says Bishop Burnet, 'A learned and worthy gentleman, after twenty months' hard usage, was brought to such a death, in a way so foul, in all the steps of it of the spirit and practice of the courts of the Inquisition, that one is tempted to think that the methods taken in it were suggested by one well studied if not fostered in them.' The illustrious nonconformist divine Dr. John Owen, writing to a friend in Scotland before his death, said of him: 'You have truly men of great spirit among you; there is, for a gentleman, Mr. Baillie of Jarviswood, a person of the greatest abilities I ever almost met with.'

The Jarviswood family was ruined by the execution and consequent forfeiture of their head. His son George fled to Holland. He returned in 1688 with William of Orange, when he was restored to his estates. The Baillies of Jarviswood have prospered since. An exquisite miniature of our patriot, painted in 1660, is at Jarviswood. It shows a firm yet naturally gentle face, with touches of Cromwell in it.

A. B. G.

**BAILLIE, THOMAS** (d. 1802), captain in the royal navy, entered the navy about 1740, and was made lieutenant on 29 March 1745. In 1756 he was serving on board the *Deptford*, and was present at the action near

Minorca on 20 May. He was shortly afterwards promoted to the command of the *Alderney* sloop, and early in the following year, whilst acting captain of the Tartar frigate, captured a French privateer of 24 guns and 240 men, which was purchased into the service as the Tartar's prize, and the command of her, with post-rank, given to Captain Baillie, 30 March 1757. In this ship he continued, engaged for the most part in convoy service, till she was lost in 1760; and in the following year, 1761, he was appointed to Greenwich Hospital, through the interest, it is said, of the Earl of Bute; he certainly had no claim to the benefits of the hospital by either age, or service, or wounds. In 1774 he was advanced to be lieutenant-governor of the hospital, and in March 1778 published a work of 116 pages in quarto, the best account of which is its title. It runs: 'The Case of the Royal Hospital for Seamen at Greenwich, containing a comprehensive view of the internal government, in which are stated the several abuses that have been introduced into that great national establishment, wherein landsmen have been appointed to offices contrary to charter; the ample revenues wasted in useless works, and money obtained by petition to parliament to make good deficiencies; the wards torn down and converted into elegant apartments for clerks and their deputies; the pensioners fed with bull-beef and sour small-beer mixed with water, and the contractors, after having been convicted of the most enormous frauds, suffered to compound their penalties and renew their contract.' The sin of making charges such as these was aggravated by the evidence, amounting to absolute proof, which accompanied them. Baillie had not put his name on the title-page, but he made no attempt to conceal it; and Lord Sandwich, whose conduct was both directly and indirectly called in question, at once deprived him of his office, and prompted the inferior officials of the hospital to bring an action for libel against him. The trial which followed, in November 1778, is principally noticeable for the magnificent speech with which Mr. Erskine, afterwards lord chancellor, but then just called to the bar, wound up the defence, and cleared Baillie of the charge (*CAMPBELL, Lives of the Chancellors*, vi. 391-8). From the purely naval point of view, however, Baillie was ruined; he was acquitted of all legal blame; but Lord Sandwich had deprived him of his post, and refused to reinstate him, or to appoint him to a ship for active service. The question was raised in the House of Lords (*Parl. Hist.* xx. 475); but the interest of the ministry was sufficient to

decide it against Captain Baillie, who during the next three years made several fruitless applications both to the secretary of the admiralty and to Lord Sandwich himself. His lordship had publicly declared that he knew nothing against Captain Baillie's character as a sea-officer, and also that he did not feel disposed to act vindictively against him; but Baillie's claims were, nevertheless, persistently ignored, and he was left unemployed till, on the change of ministry in 1782, the Duke of Richmond, who became master-general of the ordnance, appointed him to the lucrative office of clerk of the deliveries. A legacy of 500*l.* which fell to him two years later served rather to mark the current of public feeling in the city. Mr. John Barnard, son of a former lord mayor, had left him this 'as a small token of my approbation of his worthy and disinterested, though ineffectual, endeavours to rescue that noble national charity [sc. Greenwich Hospital] from the rapacious hands of the basest and most wicked of mankind.' Captain Baillie's old age passed away in the quiet enjoyment of his office under the Ordnance, which he held till his death, 15 Dec. 1802.

[Charnock's Biog. Nav. vi. 214; Official Letters in the Public Record Office.] J. K. L.

**BAILLIE, WILLIAM, LORD PROVAND** (d. 1593), Scottish judge, of the family of Baillie of Lamington, first appears as a judge of the court of session, 15 Nov. 1550. He was appointed president of the court on the death of John Sinclair, bishop of Brechin, in 1566. On 6 Dec. 1567, he was deprived of this office, in favour of Sir James Balfour, by the regent Murray, on the pretext that the act of institution required it to be held by a person of the spiritual estate. Balfour was in turn removed in 1568, when he was accused of participation in Darnley's murder, and Baillie, being reinstated, held the office till his death, 26 May 1593.

[Brunton and Haig's College of Justice.]

Æ. M.

**BAILLIE, WILLIAM** (fl. 1648), Scottish general, was the son of Sir William Baillie of Lamington, an adherent of Queen Mary of Scotland. His mother was a daughter of Sir Alexander Hume, lord provost of Edinburgh, and he was born during the lifetime of his father's first wife, Margaret Maxwell, countess of Angus. Sir William Baillie, on the death of the countess, married his mistress, but the son was not thereby legitimated, and the estates were inherited by Margaret Baillie, the eldest daughter by the first marriage. In early life Baillie went, there-

fore, to Sweden, and served under Gustavus Adolphus. In a 'list of Scottish officers that served his majesty of Sweden' at the time of the monarch's death in 1632, he is styled 'William Bailly, colonell to a regiment of foote of Dutch.' After his return to Scotland in 1638 he was employed on many important services by the covenanters. In his commission in the army, ratified by parliament 11 June 1640, he is designated 'William Baillie of Lethem (Letham), Stirlingshire,' an estate which came into his possession through his marriage to Janet, daughter of Sir William Bruce of Glenhouse, and granddaughter of John Baillie of Letham. In 1641 he made an unsuccessful attempt to have the settlement of the Lamington estates reversed in his favour. Under Leslie, earl of Leven, he was present with the army which in 1639 encamped on Dunse Law, and he also took part in the incursion into England in the following year. As lieutenant-general of foot he also distinguished himself under Leslie in 1644, at Marston Moor, the siege of York, and the capture of Newcastle. In order to check the brilliant raids of Montrose and his Highlanders in the northern districts of Scotland, he was, in 1645, appointed to the command of a strong force, with Sir John Urry, or Hurry, as assistant general. For some time he manoeuvred against Montrose with great strategic skill, but the forces under his command having divided, Urry was routed at Auldearn, and he himself, after a stubborn contest, was worsted at Alford and compelled to retreat southwards. Attributing his defeat to the fact that his forces had been unnecessarily weakened by the drawing off of recruits, he resigned his commission; but after receiving from the authorities formal approbation of his conduct, he agreed to continue in command till an efficient substitute could be found. The result fully justified his scruples. On 15 Aug. the opposing forces again came in sight of each other at Kilsyth. The committee of estates resolved to give battle, a determination so strongly disapproved of by Baillie that he declined to undertake the disposition of the troops, and consented to be present merely that he might lessen the disastrous results of a defeat which he felt to be inevitable. So overwhelming was the victory of Montrose that Scotland for a time was at his feet. It seemed indeed to be fated that the undoubted bravery and skill of Baillie should always be thwarted by the incompetence and blunders of those whom he served. When the Scots, after the 'engagement' with Charles in the Isle of Wight, resolved on an expedition into England to deliver the 'king from

the power of sectaries,' Baillie was appointed lieutenant-general of foot in the army raised by the Duke of Hamilton. The loose order kept by the duke rendered the disaster at Preston on 11 Aug. 1648 a foregone conclusion. Baillie rallied his forces near Winnick, three miles from Warrington, 'maintaining the pass,' according to Cromwell, 'with great resolution for many hours;' but, receiving 'an order to make as good conditions as he could,' he with great reluctance sent in a capitulation to Cromwell, which was accepted. He took no further prominent part in the events of his time, and there is no record of the day or year of his death.

[Letters and Journals of Robert Baillie, edited by David Laing, especially ii. 417-25, containing Sir William Baillie's vindication of his conduct at Kilsyth and Preston, and iii. 455-7 (Appendix); Hunter's *Biggar and the House of Fleming*, 2nd ed. (1867), 596-7; Napier's *Life of Montrose*; Carlyle's *Cromwell*.] T. F. H.

**BAILLIE, WILLIAM, LORD POLKEMMET** (d. 1816), Scottish judge, was the eldest son of Thomas Baillie, writer to the signet. He was admitted advocate 1758, judge 1793, resigned 1811, and died 14 March 1816.

[Brunton and Haig's College of Justice.]

Æ. M.

**BAILLIE, WILLIAM** (1723-1810), amateur engraver and etcher, was born at Kilbride, in the county of Carlow, 5 June 1723. He was educated in Dublin under Dr. Sheridan, and at the age of eighteen came to London and entered the Middle Temple for the purpose of studying the law, but he soon accepted a commission in the army, and fought in the 13th foot at Ouloden, and in the 51st foot at Minden. He afterwards exchanged into the cavalry, but retired from the service in 1761 with the rank of captain in the 18th light dragoons, and in 1773 was appointed a commissioner of stamps, which office he held until 1795. Both before and after leaving the army Baillie devoted his leisure entirely to art, and he was considered one of the most accomplished connoisseurs of his time. He practised engraving in nearly all its branches, blending mezzotint and etching with great success, but he shone most in his imitations of Rembrandt, whose 'Hundred Guilder' print he exhibited at the Society of Artists in Spring Gardens in 1776, in two different states, before and after his reworking of the original plate which he had acquired in Holland. A few of his smaller pieces are etched after his own designs, but by far the larger number of his plates are executed in a mixed manner after the paintings or drawings of

VOL. I.

eminent masters of the Dutch and Flemish schools. He produced upwards of a hundred plates, of which he was himself the publisher, but nearly all were collected and issued in two folio volumes by Alderman Boydell in 1792, and reissued in 1803. Baillie died at Paddington, 22 Dec. 1810. His best known works are his restoration of Rembrandt's plate of 'Christ healing the Sick,' commonly called the 'Hundred Guilder' print; his completion in mezzotint of Rembrandt's own etching of 'Jesus disputing with the Doctors;' and his copies of the same master's 'Three Trees' and 'The Gold Weigher.' Besides these may be mentioned his etchings of Rembrandt's 'Christ and the Two Disciples at Emmaus' and 'Burial of Jacob' (often miscalled the 'Entombment of Christ'), Rubens's 'Christ washing the Feet of the Apostles,' Van den Eeckhout's 'Susannah and the Elders before Daniel,' Terborch's equestrian portrait of William, prince of Orange, and 'The Sacrifice of Abraham' and a very spirited whole-length figure of 'An Officer' from his own designs. His principal works in mezzotint are a whole-length portrait of James, duke of Monmouth, after Netscher and Wyck, a half-length of Frans Hals, the Dutch painter, after himself, and 'The Piping Boy,' after Nathaniel Hone. He also etched a small head of himself, and engraved in stipple another portrait of himself after Nathaniel Hone.

Graves, 1884; Redgrave's *Dictionary of Artists of the English School*, 1878; *Notes and Queries*, 1st series, xii. 186, 5th series, iii. 309; Smith's *British Mezzotint Portraits*, 1878, i. 5-7.]

R. E. G.

**BAILLIE, WILLIAM** (d. 1782), lieutenant-colonel in the East India Company's service, was one of Hyder Ali's captives. The biography of this brave but unfortunate officer presents some obscurity. His name, in common with the names of some other officers of the same standing, is omitted from Dodswell and Miles's 'Lists of the Indian Army from 1760;' but records in the India Office show that he entered the army of the East India Company on 18 Oct. 1759 as a lieutenant in the infantry at Madras, and that the dates of his subsequent commissions were as follows: brevet-captain 5 Sept. 1763, substantive captain 2 April 1764, major 12 April 1772, lieutenant-colonel 29 Dec. 1775. The historian Wilks identifies him with the Captain Baillie who did good service as commandant of one of the three 'English'

G g

battalions in the pay of the company, employed under Colonel Joseph Smith, in the operations against Hyder Ali in 1767-8 (WILKS, *Hist. Sketches*, vol. i. and index to work). He was in command at Pondicherry during the destruction of the French works there in 1779 (VIBART, vol. i.), and in 1780 was at the head of a detached force, consisting of two companies of European infantry, two batteries of artillery, and five battalions of native infantry, in the Guntoor Circars. When Hyder Ali, with an army of 100,000 fighting men, swooped down on the Carnatic by way of the Changama Pass in July of that year, Baillie was ordered to unite his force with the army collecting near Madras under command of Lord Macleod, who was immediately afterwards succeeded by Sir Hector Munro. Moving down with the gigantic camp-following then customary, and, as some writers assert, with many needless delays, Baillie drew near to Madras, defeating a division of the enemy under Hyder's son Tip-poo, which attacked him on the march near the village of Perambaukum. Thence he sent on word to Munro, who was encamped at Conjeveram, fourteen miles distant, that his losses prevented his further movement. Munro appears to have feared having his stores exposed at Conjeveram, and, instead of bringing the help which Baillie expected, merely sent a small reinforcement of Highlanders and sepoys under Colonel Fletcher. Indeed, a want of judgment and energy seems to have pervaded the measures of both commanders, the result being that Baillie, moving forward from Polilore in the direction of Conjeveram, on the morning of 10 Sept. 1780, found himself assailed by Hyder Ali's entire host. In the engagement which ensued, the blowing up of two tumbrils within the oblong into which Baillie had formed his troops, followed by a general stampede of camp-followers through his ranks, produced irretrievable confusion. Despite the heroic efforts of their officers, the sepoys, panic-stricken, could not be rallied; but the Europeans, to the number of five hundred, got together in square under Colonel Baillie, who was on foot, and, taking post on a rising bank of sand, fought with a stubborn determination never surpassed. Again and again they withstood the fierce charges of fresh bodies of Hyder's horse, supported by masses of infantry in the intervals, until all the officers lay killed or wounded, and but sixteen soldiers out of the five hundred of all ranks in the square remained unhurt. The survivors, including such of the wounded as were thought worth removal, were swept from the field as prisoners, and carried off to Seringapatam. Among the

number grievously wounded was Colonel Baillie, whose personal courage in the fight and in the subsequent captivity was admitted alike by friends and foes. In dungeons at Seringapatam, and most of the time in chains, the prisoners remained until 1784, when the survivors were returned to Madras. A few among them, like Captain Baird, 73rd (71st) Highlanders, afterwards General Sir D. Baird, witnessed the day of retribution, long deferred, when the fortress fell to British arms on 4 May 1799; but Colonel Baillie was not of the number, death having ended his sufferings in captivity on 13 Nov. 1782 (Hook's *Life of Baird*, vol. i.).

[Information supplied by India Office from (1) MS. Fort St. George (Madras) Army Lists, 1759-82; (2) MS. Army List, without date, received from Madras in October 1781. In the latter Army List Colonel William Baillie is shown as a 'prisoner,' and in the Fort St. George List for November 1782 his name is cancelled with the note 'dead.' Wilks's *Historical Sketches S. India*, vols. i. and ii. (Madras, 1869); Vibart's *History of Madras Sappers and Miners*, vol. i. (London, 1882). For details of the disaster of 10 Sept. 1782 the following works may be consulted: Wilks's *Historical Sketches*, Mill's *Hist. of India*, vol. iv., and *Notes and Queries*, 2nd ser. vol. xi.; and for particulars of the captivity and for the date of Colonel Baillie's death, which is not specified in India Office Lists, see Hook's *Life of Sir D. Baird*, vol. i. (London, 1832).]

H. M. C.

BAILY, CHARLES (1815-1878), architect and archaeologist, third son of William Baily, of 71 Gracechurch Street, London, and East Dulwich and Standon, Dorling, Surrey, was born 10 April 1815. His independent architectural work included the building of St. John's Church, East Dulwich, and the restoration of Barnard's Inn Hall, and of Leigh Church (with new tower), near Tunbridge, Kent. He was for some years principal assistant to the City architect, London, in which capacity he took a leading part in constructing the new roofing of the Guildhall and in the building of the Corporation Library. In January 1844 Baily was elected a fellow of the Society of Antiquaries, and was also a prominent member of various archaeological societies. To the fourth volume of the serial published by the Surrey Archaeological Society he contributed 'Remarks on Timber Houses,' with many admirable illustrations by himself. Baily was long associated with Mr. G. R. French in the production of the noble 'Catalogue of the Antiquities and Works of Art exhibited at Ironmongers' Hall, London, in the month of May 1861,' 2 vols, 4to, 1869, and was

master of the Ironmongers' Company in 1874-5. He died at Reigate 2 Oct. 1878.

[Information from Mr. W. Baily; City Press, 9 Oct. 1878; Builder, 12 Oct. 1878.] G. G.

**BAILY, EDWARD HODGES** (1788-1867), sculptor, was born at Bristol, where his father was known as a skilful carver of figure-heads for ships. He was sent to a grammar school, but showed the common artistic repugnance to the regular studies. Young Baily would carve strange portraits of his schoolfellows, and showed no capacity for ordinary school work. At fourteen he entered a merchant's office, and remained there for two years. During this time he obtained some instruction from a modeller in wax, and greatly improved his opportunity. Soon he forsook commerce, and began taking portraits in wax. By virtue of some studies which he made from the antique, he obtained a fortunate introduction to Flaxman, in whose studio, in 1807, he became a pupil, and there he remained for seven years. In 1809 he entered the Academy schools, gaining silver and gold medals in quick succession. He was made an associate in 1817. In 1818 he executed for the Bristol Literary Institution the beautiful statue which established his reputation, 'Eve at the Fountain.' In 1821 he was elected a full member of the Royal Academy. From this time until 1858 he was a busy man, and a constant exhibitor; the execution of portrait statues and busts occupying the greatest share of his attention. In the region of ideal art his taste led him rather towards domestic than classical subjects. Nagler gives high praise to a representation, in high relief, of 'Motherly Love.' Kindred subjects, the 'Mother and Child,' 'Group of Children,' and the like, were favourites of his, and were often repeated. Of his portrait statues, perhaps the best known are his Charles James Fox and Lord Mansfield in St. Stephen's Hall, Westminster. He had among his sitters many distinguished men, including Stothard, Fuseli, Flaxman, Byron, Haydon, and the Duke of Wellington. Of his connection with the duke an amusing account is preserved by Haydon. It shows the sculptor to have been at once a cool-headed and high-spirited man. Amongst purely fanciful subjects, besides those already referred to, 'The Graces,' 'Eve listening to the Voice,' and 'A girl preparing for the Bath' may be mentioned. In 1863 Baily, who for some years then past had done little, was made an 'honorary retired academician,' and exhibited no more. He died at Holloway on 22 May 1867. He stands high in his profession as an artist, but was not careful

enough of the money his talent procured, and the last years of his long life were much embarrassed. A writer in the 'Art Journal' (July 1867) says: 'The years of his prolonged life were actively passed in upholding the dignity and purity of his art, and in its annals his name must always be referred to as one of the most successful and accomplished British sculptors of the nineteenth century.'

[Art Journal, 1867; Athenæum, 1 June 1867; Haydon's Life and Letters, 3 vols., edited by Tom Taylor; Nagler's Künstler-Lexicon, ed. 1833; Redgrave's Dict. of Eng. School.]

E. R.

**BAILY, FRANCIS** (1774-1844), an eminent astronomer, was the third son of Mr. Richard Baily, banker, of Newbury, Berkshire, where he was born 28 April 1774. Placed in a London mercantile house at the age of fourteen, the acquaintance of Priestley developed his native taste for experimental inquiries. But though known amongst his young companions as the 'Philosopher of Newbury,' love of adventure was as yet stronger in him than love of science, and his seven years' apprenticeship had no sooner expired than he sailed for America 21 Oct. 1795. The narrative of his experiences as a traveller is contained in an extremely curious 'Journal of a Tour in Unsettled Parts of North America in 1796 and 1797,' edited by Professor De Morgan in 1856, twelve years after the death of the author. They include two narrow escapes from shipwreck, a voyage in an open boat down the Ohio and Mississippi from Pittsburg to New Orleans, and a return journey to New York across nearly 2,000 miles of 'wilderness' uninhabited except by Indians. A matrimonial project, vaguely indicated in connection with some steps towards naturalisation and permanent residence in the United States, proving abortive, he landed at Bristol 1 March 1798, and went home to Newbury. The roving tendency, none the less, was still strong upon him. In May 1799 he volunteered to travel in the service of the African Association, having formed a plan of exploration on the Niger, which, he informed Sir John Stepney, 'he would have gone through any trials' to carry out. Funds, however, were deficient; and after some futile thoughts of a commission in the engineers or militia, he accommodated himself to the prosaic destiny of a stockbroker, entering into partnership, about the end of 1799, with Mr. Whitmore, of the London Stock Exchange.

With characteristic thoroughness, Baily now engaged in commercial pursuits. He became a consummate man of business, earn-

ing, besides a considerable fortune, an unsurpassed reputation for integrity and intelligence. His complete identification with his profession was shown in a pamphlet defending its rights against the encroachments of the city of London in 1806, as well as by the active part taken by him in the exposure of the Berenger fraud in 1814. To his sagacity in preparing the evidence the success of the prosecution was considered to be in great measure, if not wholly, due; and the three reports (printed 1814-15) of the committee appointed by the Stock Exchange to investigate the subject were drawn up by him. A series of remarkable publications meanwhile attested his varied powers. The first of these was entitled 'Tables for the Purchasing and Renewing of Leases' (1802, 2nd ed. 1807, 3rd 1812). Its success encouraged him to pursue the subject in two works of standard authority, the 'Doctrine of Interest and Annuities analytically investigated and explained' (1808), and the 'Doctrine of Life-Annuities and Assurances analytically investigated and practically explained' (1810). The fourteenth chapter of the latter, separately reprinted with the title 'An Account of the several Life-Assurance Companies established in London, containing a View of their respective Merits and Advantages,' was greedily bought up in two editions (1810 and 1811), and the treatise itself was translated into French under the auspices of the 'Compagnie d'Assurances Générales sur la Vie' (1836). In this country the demand was such that copies sold for 4*l.* and 5*l.*, and the price of an appendix to the second issue (1813), containing an exposition of Barrett's mode of computing life-tables, alone rose to a guinea. This scarcity induced a fraudulent reprint, succeeded by an avowed republication in 1864 (with omission of the fourteenth chapter and appendix), under the care of Mr. Filipowski. Baily's merits as a writer on life-contingencies were undoubtedly very great. The subject was by him first presented in a symmetrical form; a uniform system of notation was introduced; and to a perspicuous and comprehensive view of the labours of his predecessors the results of much original research were added.

His divergence into a new field was marked by the publication, in 1812, of 'A New Chart of History,' accompanied by a 'Description'—of which five editions were sold in three years—exhibiting the chief revolutions of empire during the historical period. The preparation of chronological tables for an 'Epitome of Universal History' (published 1813 in 2 vols. 8vo) led to his first essay in astronomy. A paper 'On the Solar Eclipse

which is said to have been predicted by Thales,' read before the Royal Society 14 March 1811 (*Phil. Trans.* ci. 220), proved him a skilled computist; but the date assigned, 30 Sept. 610 B.C., was shown by his own appended investigation of the eclipse of Agathocles (15 Aug. 310 B.C.) to be insecure, and was corrected by Sir George Airy, with the aid of improved lunar tables, to 28 May 585 (*Phil. Trans.* cxliii. 193; *Mem. R. A. S.* xxvi. 139).

His interest in astronomical subjects henceforth grew and developed. He wrote a pamphlet in 1818 summoning attention to the annular eclipse of 7 Sept. 1820, which he himself observed at Kentish Town (*Mem. R. A. S.* i. 135), translated in 1819 Cagnoli's 'Method of ascertaining the Figure of the Earth by means of Occultations of the Fixed Stars,' and powerfully helped to quicken astronomical progress in England by his frequent notices, in the 'Philosophical Magazine,' of foreign improvements and publications. But the establishment of the Astronomical Society formed, in Sir John Herschel's words, 'a chief and deciding epoch in his life.' He was one of the fourteen who met at the Freemasons' Tavern 12 Jan. 1820, and constituted themselves a corporate body with that title. And on Baily, as its acting secretary during the first three years of its existence, devolved the chief labour of its organisation. By him its rules were framed, the routine of its business fixed, its finances set in order. He was a member of every committee, regulated every undertaking, guided every negotiation, drew up nearly every report. By his judicious action the society was, in 1834, put in possession of spacious apartments in Somerset House, and on the death of George IV raised to an equal footing with the Royal Society on the visiting board of the Royal Observatory. He was four times elected its president (for terms of two years), eleven times vice-president, and invariably sat on the council.

In 1825 Baily retired from business, purchased a house and sycamore-shaded garden at 37 Tavistock Place, and devoted himself wholly to astronomy. He was then fifty-one; but in the nineteen years remaining to him he executed labours the extent and value of which it is difficult, in a brief summary, adequately to describe. Although not himself an habitual observer, the scope of his efforts was directed to imparting a higher value to the observations of others, both by connecting them with the past and by assuring them for the future. His revision of star-catalogues alone entitled him, in Sir John Herschel's opinion, to rank amongst

the greatest benefactors to astronomy. Those of Ptolemy, Ulugh Beigh, Tycho Brahe, Halley, and Hevelius, corrected with vast expenditure of time and care, and furnished each with a valuable preface, were printed in 1843 at his cost as vol. xiii. of the 'Memoirs of the Royal Astronomical Society.' That of Tobias Mayer he revised from the original observations, the publication of which by the Board of Longitude he had procured in 1826, the result forming part of vol. iv. of the society's 'Memoirs,' and appearing also separately (1830). A comparison of most of its 968 stars with their places as given by Bradley was added, besides forty-five supplementary stars.

The perusal, in 1832, of Flamsteed's autograph letters to his ex-assistant, Abraham Sharp, lent to Baily by his neighbour, Mr. E. Giles, induced him to examine the entire mass of his manuscripts, which had lain mouldering for sixty years in the library at Greenwich. He soon came to the conclusion that Flamsteed's character, both personal and scientific, had been grievously misrepresented, and wrote to the Duke of Sussex, president of the board of visitors of the Royal Observatory, suggesting the propriety of a republication of the 'British Catalogue,' with such selections from authentic documents as might serve to rectify prevalent errors in regard to the conduct and motives of its author. The recommendation was adopted, and a massive quarto volume, entitled 'An Account of the Rev. John Flamsteed, the first Astronomer Royal,' was issued under Baily's care, at the public expense, in 1835. This remarkable production threw a flood of light on Flamsteed's relations with his contemporaries. It included several autobiographical fragments, forming a tolerably complete whole, a vast mass of previously unpublished correspondence, besides the revised and annotated catalogue, reinforced with Miss Herschel's list of 564 inedited stars from Flamsteed's autograph entries (previously arranged by Baily in order of right ascension, *Memoirs Roy. Astron. Soc.* iv. 129). Baily's historical introduction, preface to the catalogue, and appendix (issued January 1837) exhibited, in a succinct form, the results of much patient and profound research.

The reduction of the catalogues of Lalande and Lacaille, by which these great stores of celestial information were first rendered practically available, was undertaken, at the instance of Baily, by the British Association in 1837-8. In 1842 he had accomplished the arduous task of deducing the mean from the apparent places of 47,390 stars in the 'Histoire Céleste.' In that of

seeing both works through the press (the reduction of Lacaille's 9,766 southern stars having been executed by Henderson) he was overtaken by death. Their publication was, after many delays, completed in 1847, the cost of reduction being defrayed by the association, that of printing by the government.

Early in his astronomical career Baily became impressed with the urgent need of a remedy for the prevalent confusion regarding the corrections for aberration, nutation, &c., and had already in 1822, with the aid of Gompertz, devised a means of simplifying their application, when No. 4 of the 'Astronomische Nachrichten,' containing Bessel's similar but more comprehensive improvement, was put into his hands (*Phil. Mag.* ix. 281). Discarding without a murmur his private claims as an inventor, he immediately proceeded to publish and recommend the method by which they had been superseded. This he most effectually accomplished in the 'Astronomical Society's Catalogue' of 2,881 stars (epoch 1 Jan. 1830), accompanied by tables for reduction constructed on the new system, forming a boon of inestimable value to practical astronomers. It was printed as an appendix to the second volume of the society's 'Memoirs' in 1827. The merit of the compilation can best be estimated by a reference to Sir John Herschel's address in presenting Baily with the Astronomical Society's gold medal, 11 April 1827 (*Mem. R. A. S.* iii. 123).

The same principles were still further extended in the 'Catalogue of the British Association.' Not only the number of stars was increased to 8,377 (reduced to 1 Jan. 1850), but proper motions, when determinable, were inserted, with, in all cases, the secular variation of the annual precessions (see Baily's preface). Resolved upon at the Liverpool meeting of the British Association in 1837, the work was wholly superintended by Baily, and was left by him at his death almost complete. It was published in 1845 at the public cost, and is still in high repute. Owing to the deficiency of reliable materials, however, the places of many of the southern stars included in it were found defective, and were immediately revised by Maclear at the Cape of Good Hope (see, for his list of corrections, *Mem. R. A. S.* xx. 46). The value of this catalogue, as well as of the two others compiled under the same authority (those of Lalande and Lacaille), was much enhanced by the uniform system of nomenclature adopted throughout. This material improvement was the result of Baily's severe labours in revising the boundaries of the constellations, and marshalling into recog-

nissable order the stars composing them. A paper on the subject, read by him before the Royal Astronomical Society 12 May 1843, was appended to the report of a committee (consisting of Herschel, Whewell, and Baily) appointed by the British Association in 1840 to consider the subject (*Report*, 1844, p. 34), and was also reprinted in his introduction to the 'Catalogue.'

The reform of the 'Nautical Almanac' was another of the benefits derived by science from his zeal. It was rendered inevitable by his strictures on its deficiencies in 1819, 1822, and 1829, and the admiralty having, on the death of the superintendent, Dr. Thomas Young, 10 May 1829, submitted the matter to the Astronomical Society, Baily formed one of the deliberating committee, and drew up the report upon which the present National Ephemeris was modelled (*Mem. R. A. S.* iv. 449).

In view of Captain Foster's proposed expedition, Baily devised, in 1828, a simplified kind of convertible pendulum (described in *Phil. Mag.* iv. 137), of which two specimens, of iron and copper respectively, formed part of the scientific equipment of the Chanticleer. The accidental death of her commander (5 Feb. 1831) threw upon him the onerous duty of digesting and completing (by swinging the pendulums in London) the numerous observations made in both hemispheres; and his elaborate and admirable report, presented to the admiralty and ordered to be printed at the government expense, filled the entire seventh volume of the 'Royal Astronomical Society's Memoirs.' The general result of 20,000 experiments gave 1/289.48 for the ellipticity of the earth, showing a most satisfactory agreement with Sabine's of 1/288.40.

Meanwhile Baily had prosecuted independently a research entitling him to a distinguished share of merit in the determination of the length of the seconds' pendulum. Bessel pointed out in 1828 (*Abhandlungen Kön. Ak. der Wiss.* Berlin, 1826, p. 32) that, in the received 'correction for buoyancy,' no allowance was made for the expenditure of force in setting the particles of surrounding air in motion. In order to estimate with precision this neglected element of reduction, Baily had a vacuum-apparatus erected in his house, and there carried out, in 1831-2, a series of most delicate experiments on eighty-six pendulums of every variety of form and material, of which the details were communicated to the Royal Society 31 May 1832 (*Phil. Trans.* cxxii. 399). It appeared thence that the value of the new correction, while varying very sensibly with the shape and

size of the pendulum, was in many cases more than double the old. The subject of the length of the seconds pendulum led naturally to that of the national unit of length, defined by act 5 George IV in terms of that (as it had now proved) uncertain quantity. Baily accordingly obtained in 1833 from the Royal Astronomical Society authority to construct for them a tubular scale of five feet (see his admirable report, *Mem. R. A. S.* ix. 35), the accuracy of which had been ascertained by repeated comparisons with the standard yard, when the latter was irreparably injured in the conflagration of the houses of parliament 16 Oct. 1834. A commission of seven, appointed 11 May 1838 to consider the best means of replacing it, included him amongst its members; and to him was entrusted in 1843, by the unanimous desire of his colleagues, the actual reconstruction of the standards of length, in the preparatory experiments for which laborious task he was arrested by fatal illness.

The most arduous and conspicuous labour of his life has still to be adverted to. This was the repetition of the 'Cavendish experiment' for measuring the density of the earth. The principle of this research depends upon the comparison between the observed attractive effects of masses of ascertained weight and density with the known force of gravity at the earth's surface; but its adequate execution is attended by difficulties of the most baffling description. A remark made by Professor De Morgan at the council-table of the Royal Astronomical Society occasioned the appointment, in 1835, of a committee to consider the matter; but no progress was made until Baily offered his services in 1837, and the treasury granted 500*l.* towards expenses. The operation, conducted in an upper room of his house, twelve feet square, lasted from October 1838 to May 1842, and resulted in establishing, within narrow limits of error, that our globe is composed of materials, on an average, 5.66 times as heavy as water (*Mem. R. A. S.* xiv. table vii.) Nevertheless, in spite of precautions incredibly minute, the experiments were vitiated during eighteen months by an unknown cause of error. Ultimate success seemed scarcely to be hoped for, yet Baily resolved to persevere; and to this determination, Lord Wrottesley remarked (*Mem. R. A. S.* xv. 280), it is due that his memoir (occupying the entire fourteenth volume of *Mem. R. A. S.*) 'is hardly less valuable as a lesson upon the nature and use of the torsion pendulum in measuring small forces than as a determination of the mean density of the earth.' It was at length suggested by Professor Forbes that the anoma-

lies in question might be due to the radiation of heat from the leaden masses employed to deflect the pendulum, and proposed gilding both them and the torsion-box. The remedy was completely successful; and the process begun *de novo* in January 1841 was conducted to a successful issue. The printed observations numbered 2,153 (besides upwards of a thousand rejected as untrustworthy), varying in duration from ten to thirty minutes. This memorable labour was rewarded with the Royal Astronomical Society's gold medal (of which Baily thus for the second time became the recipient) 10 Feb. 1843.

The few noteworthy observations of the heavens made by Baily referred, singularly enough, to the subject of his first astronomical investigation. On 15 May 1836, while watching an annular eclipse of the sun at Inch Bonney, near Jedburgh, he witnessed a phenomenon to which he first directed explicit attention, and which, from his vivid description, received the name of 'Baily's Beads.' It consists in the breaking up of the fine solar crescent visible at the beginning and end of central eclipses into a row of lucid points, the intervals separating which at times appear to be drawn out, as the moon advances, into dark lines or belts; the whole being a combined effect of irradiation and the inequalities of the moon's edge. Baily's narrative (*Mem. R. A. S.* x. 1) excited strong interest, and effectively roused astronomers to the importance of eclipses under their *physical* aspect, that of 8 July 1842 being at his suggestion prepared for with this view. Baily observed it from an empty room in the university of Pavia, with the same instrument (a  $3\frac{1}{2}$ -foot Dollond's achromatic) used at Inch Bonney. The 'beads' were less conspicuous than before; but he was (in his own words) 'electrified' by the unexpected and 'appalling' splendour of the corona, through which rose three vast prominences resembling the 'snowy tops of Alpine mountains when coloured by the rising or the setting sun' (*Mem. R. A. S.* xv. 6). But towards the solution of the magnificent problem thus presented to science he did not live to see any advance made.

In June 1841 he was knocked down by a furious rider while crossing Wellington Street, and lay for a week senseless. Nevertheless, he completely recovered, and was able to resume his experiments in weighing the earth by the end of September. It was not until the spring of 1844 that his health, until then remarkably stable, finally gave way, although he rallied sufficiently to attend commemoration at Oxford, when an honorary degree of D.C.L. (previously, in 1835, re-

ceived from the university of Dublin) was conferred upon him, in company with Airy and Struve. Soon after his return to London, however, an internal complaint became manifest, and he sank gradually and without pain, expiring 30 Aug. 1844, aged 70. He was at the time president of the Royal Astronomical Society.

The abilities of Francis Baily were not of the highest order. As a mathematician his range was a limited one. He never mastered the refinements of modern analysis, and was frequently indebted to the aid of Professors Airy and De Morgan in working out his investigations. Nor was his mind visited by any of the luminous inspirations of genius. Yet his life presents an almost unique example of laborious usefulness to science. More than to any single individual, the rapid general advance of practical astronomy in the British islands was due to him. To clear discernment of the precise wants of his time he joined untiring activity in supplying them. His organising energy was guided by a tact which rendered it irresistible. Add a rare faculty of order and concentration, with a perfect knowledge of and complete mastery over his powers, and the sources of his almost unparalleled effectiveness as a worker become in some degree apparent. Besides the special tasks executed by him with astonishing thoroughness, precision, and rapidity, he took a leading part in the general conduct of scientific affairs. He was unfailing at the annual visitation of the Royal Observatory during twenty-seven years. He succeeded Babbage in 1839 as permanent trustee of the British Association, and had belonged to its council for two years previously. He aided in the foundation (in 1830) and became vice-president of the Geographical Society, acted, during considerable periods, as vice-president and treasurer of the Royal Society, generally held a seat on the council, and rarely missed one of its meetings from the date of his election as fellow, 22 Feb. 1821. Scientific distinctions were showered upon him. He was a fellow of the Linnean and Geological societies, a corresponding member of the Institute of France, of the Academies of Berlin, Naples, and Palermo, and was enrolled on the lists of the American and Royal Irish Academies. Few men have left behind them so enviable a reputation. He was gentle as well as just; he loved and sought truth; he inspired in an equal degree respect and affection. He was never married; and his sister, Miss Elizabeth Baily (who survived him fifteen years), superintended his hospitable establishment.

[Sir J. Herschel, in *Memoirs R. Astr. Soc.* xv. 311, published separately under the title *Memoir*

of F. Baily, Esq. (1845), also prefixed to the *Journal of a Tour*, with a list of Baily's writings, ninety-one in number; *Month. Not. R. Astr. Soc.* xiv. 112; *Abstracts Phil. Trans.* v. 524; *Peacock's Address Brit. Ass.* 1844, xxxix.; *Dublin Review*, xviii. 75 (*De Morgan on Repetition of Cavendish Experiments*).] A. M. C.

**BAILY, JOHN WALKER** (1809-1873), archaeologist, brother of Charles Baily [q.v.], was born 9 Jan. 1809, and died 4 March 1873. He was head of the firm of William Baily & Sons, and master of the Ironmongers' Company in 1862-3. He is chiefly known to archaeologists as having formed an important collection of Romano-British and mediæval remains unearthed by excavations in the City of London during the years 1862-72. This collection was purchased in 1881 by the Corporation of London for their museum of City antiquities. In the same year his collection of arms and armour, formed 1835-45, became the property of the Baron de Cosson, of Chertsey.

[Information from Mr. W. Baily; *Journal of British Archaeological Association*, xxx. 349-51; *Nicholl's Hist. of the Ironmongers' Company*, pp. 417 n., 507.] G. G.

**BAILY, THOMAS, D.D.** (d. 1591), catholic divine, was a native of Yorkshire, and studied at Clare Hall, Cambridge, where he proceeded B.A. in 1546. Soon afterwards he became a fellow of that house, and in 1549 he commenced M.A. In 1554 he served the office of proctor, and in the following year subscribed the Roman catholic articles. He was appointed master of Clare Hall probably about November 1557. When Queen Elizabeth succeeded to the throne, he refused to comply with the change in religion; and on being deprived of his mastership he went to Louvain, where he was admitted D.D. He remained there till January 1576, when he removed to Douay on the invitation of Dr. (afterwards Cardinal) Allen, who employed him in the government of the English College, both at Douay and Rheims. In Allen's absence he was usually appointed regent of the college. He had the chief hand in managing the temporalities of the college, while Dr. Bristow regulated the schools, and Dr. Allen himself inspected discipline. Dodd remarks that 'the college was very prosperous under this triumvirate; but as a nation quickly finds the loss of a zealous and able ministry, so it happened to the English College, which, upon their decease, was oppressed with debts and divided by parties.' Dr. Baily, who was succeeded in the vice-presidency of the college by Dr. Worthington, became a prebendary of Cambrai when Allen

was advanced to the dignity of cardinal in 1587. He died at Douay 7 Oct. 1591.

**BAIN.** [See also **BAINES** and **BAYNE**.]

**BAIN, ALEXANDER** (1810-1877), the author of several important telegraphic inventions, the chief of which was the automatic chemical telegraph, was born in the parish of Watten, Caithness-shire. After having served as apprentice to a clockmaker at Wick, he came up to London in 1837 as a journeyman. He was led, by lectures which he attended at the Adelaide Gallery, to apply electricity to the working of clocks, and was one of the first to devise a method by which a number of clocks could be worked electrically from a standard time-keeper, though the credit of this invention is claimed by Wheatstone as well as by Bain. It is doubtful, again, whether he was the inventor of the first printing telegraph, as this too is disputed. In both cases he was unquestionably very early in the field. He discovered independently the use of the earth circuit, but here he was certainly anticipated by Steinheil. Electric fire-alarms and sounding apparatus were also among his inventions. His most important invention was the chemical telegraph of 1843 previously mentioned. This apparatus could be worked at a speed hitherto impossible, and its invention certainly entitles Bain to the credit of being the pioneer of modern high-speed telegraphy. It is stated that the rate at which the apparatus was capable of working was discovered accidentally, in consequence of the breaking of a spring during an experiment. The machine ran down, but the message was nevertheless properly received. Perhaps the most valuable part of the invention consisted in the use of strips of perforated paper for the transmission of the message. This contrivance was long after adopted by Wheatstone, and is in use in all the existing high-speed systems of telegraphy. He received as much as 7,000*l.* for his telegraphic patents, but the money was wasted in litigation, and he died a poor man. Intemperance was another cause of his non-success in life. In 1873 he received a grant from the Royal Society of 150*l.*, and at the time of his death he was supported by a government pension of 80*l.* a year.

[In 1843 John Finlaison published an account

of Bain's claims to the invention of electric clocks and of the printing telegraph. A description of his chemical telegraph was given in a paper read by Bain before the Society of Arts in 1866 (Soc. of Arts Journ. xiv. 138).] H. T. W.

**BAINBRIDGE, CHRISTOPHER** (1464?–1514), archbishop of York and cardinal, was born of a good family at Hilton, near Appleby, in Westmoreland. He is said to have been fifty years old at his death (BROWN'S *Venetian Calendar*, ii. 450), and must therefore have been born about 1464. He studied at Queen's College, Oxford, of which he became provost before 1495, and a liberal benefactor afterwards. He received from the university the degree of LL.D. His first recorded promotion was to the prebend of South Grantham in Salisbury, which he resigned in February 1485–6 for that of Chardstock in the same cathedral; and in April following he was made prebendary of Horton, also in Salisbury. On 26 Feb. 1495–6 he received the prebend of North Kelsey in Lincoln Cathedral, which he resigned in 1500. In 1497 he was made treasurer of St. Paul's. In 1501 he was named archdeacon of Surrey. In September 1503 he was admitted to the prebend of Strensall in York Cathedral, and on 21 Dec. in the same year he was installed dean of York. In 1505 he was also made dean of Windsor, and resigned the rectory of Aller in the diocese of Bath and Wells. Meanwhile he had been appointed master of the rolls on 13 Nov. 1504, and held the office till his elevation to the bishopric of Durham three years later. He was nominated to that see by the king, and had the temporalities restored to him on 17 Nov. 1507, but he only received his bulls in January following (GAIRDNER'S *Memorials of Henry VII*, 106). So rapidly, however, did he advance in the king's favour that in July, only six months later, he was talked of for the archbishopric of York, which had been vacant even before his promotion to Durham (*ibid.* 125). And the rumour proved to be correct, the bull for his translation being dated 12 Sept. 1508.

In 1509 he was sent by Henry VIII as his ambassador to the pope, and arrived at Rome on 24 Nov. Just at this time Julius II had taken alarm at the invasion of Italy by Louis XII, and the friendship of England was of special importance to him. He departed from Rome to relieve Bologna, and was nearly taken prisoner in the war. A faction among the cardinals in the interest of France ventured to summon a council in opposition to him at Pisa. Julius opposed council to council, and made a new batch of cardinals at Ravenna to counterbalance the schismatics. They were created on 10 March

1511–2, and Bainbridge was one of them. The title given him was Cardinal St. Praxedis. But the first duties he was expected to perform for the warlike pontiff were those of a general, for he was despatched with troops to besiege Ferrara. The pope appointed him legate, but gave him command of the army as well. In October of the same year the pope concluded the Holy League against France, and Henry VIII intimated his adhesion to it through Bainbridge, who continued a steadfast enemy to France to his dying day. At his request even Leo X, who succeeded Julius in the papacy, seems to have been willing to invest Henry VIII with the title of Most Christian king, which Louis had forfeited by raising war against the pope. But the peace made between France and England in 1514 must have prevented Henry's formal acceptance of the title. Bainbridge died on 14 July in that year, just before these negotiations had come to maturity. He had been poisoned by a chaplain in his own service named Rinaldo de Modena. The man was taken and thrown into the castle of St. Angelo, where he not only confessed his crime, but stated that he had done it at the instigation of Silvester de Giglis, bishop of Worcester, the resident English ambassador at the court of Rome, who regarded Bainbridge as his rival. De Giglis, however, who was very influential at Rome, found means to get him to retract his confession; after which he stabbed himself and died in prison. Richard Pace and John Clerk, the cardinal's executors, were eager to prosecute De Giglis, but he maintained that the priest was a madman whom he had dismissed from his own service some years before in England, and his defence was accepted as sufficient.

Bainbridge was buried at the English hospital at Rome, since called the English College. He is said to have been a man of violent temper. His own secretary, Pace, acknowledged that there were faults in his character—indeed, that he had some positive vices; but declared that he was strong in his fidelity to the king, and most outspoken in defence of Henry's interests at Rome when no one else durst utter a word. His epitaph is quoted in Ciaconius and in the 'Biographia Britannica.' He has been confounded by some biographers with Christopher Urswick, almoner to Henry VII, who, bearing the same christian name, was his predecessor in several of his numerous church preferments before he became a bishop.

[Wood's *Athenæ Oxonienses*, ii. 702; *Biographia Britannica*, ed. Kippis (where the name appears under the rather doubtful form of Baimbridge); Surtees' *Durham*, i. lxxiv; Le Neve's

Fasti; Baronius; Ciaconius; Calendar of Henry VIII, vol. i.; Venetian Calendar, vol. ii.] J. G.

**BAINBRIDGE, JOHN, M.D.** (1582-1643), physician and astronomer, son of Robert and Anne Bainbridge, was born at Ashby-de-la-Zouch, Leicestershire. He received his education at the grammar school of this little town, and at Emmanuel College, Cambridge, where his kinsman, Dr. Joseph Hall, afterwards bishop of Norwich, was his tutor, and where he took the degrees B.A. (1603), M.A. (1607), and M.D. (1614). For some years after leaving the university he kept a school and practised medicine at Ashby-de-la-Zouch, occupying what little leisure he had in following up an early taste for mathematics, especially astronomy. He next removed to London, living 'near All-hallows in the Wall,' and was admitted a licentiate of the College of Physicians (6 Nov. 1618). In 1619 Sir Henry Savile, whose notice he had attracted by publishing an astronomical description of the comet of the previous year, appointed him to the Savilian professorship which he had just founded at Oxford, and Bainbridge entered Merton College as a master commoner. In the following year he was incorporated doctor of medicine at Oxford, and in 1631 and 1635 was respectively appointed junior and senior reader of Linacre's lecture. With the view to publishing correct editions of the Arabian astronomers, in accordance with the statutes of his professorship, at the age of forty he began the study of Arabic. Among his friends at Oxford was Archbishop Usher, at whose instance he wrote the treatise 'Canicularia,' and to whom he bequeathed his unpublished works.

Speaking of his first astronomical publications, the writer of his life in the 'Biographia Britannica' says with reason that Bainbridge seems to have given in a little too much to the vulgar notion of comets being presages of some impending calamity; but it is only fair to add that he must have quite outgrown such superstition, for the year before his death he wrote 'Antiprogностicon,' in which he points out 'the vanity of astrological predictions grounded upon the grand conjunctions of Saturn and Jupiter,' which, he says, 'will recur in almost every twenty years agreeably to the stated laws of nature.' Bainbridge died at his house opposite to Merton College 3 Nov. 1643, and his body was taken to the public schools and an oration pronounced over it by the university orator. He was buried near the altar in Merton College Church, where there is a monument and a long Latin epitaph to his memory.

Bainbridge's published works are: 1. 'An Astronomical Description of the Comet of 1618,' London, 1619. 2. 'Procli Sphæra et Ptolomæi de Hypothesibus Planetarum,' to which was added Ptolemy's 'Canon Regnorum,' 1620. 3. 'Canicularia,' published after his death by Mr. Greaves, Oxford, 1648. He left a number of manuscripts, some of which have been preserved with those of Archbishop Usher in the library of Trinity College, Dublin. These include astronomical, mathematical, and chronological collections, and calculations, a catalogue of his mathematical instruments, and his correspondence with Savile, Usher, and others.

[Munk's College of Physicians, i. 175; Smith's *Vitæ quorund. Erudit. et Illustr. Virorum*, London, 1703; Wood's *Athenæ* (Bliss), iii. 67; *Biographia Britannica*; Nichols's *Hist. of Leicestershire*, vol. iii. pt. ii. p. 631; *Hist. MSS. Com. Rep.* iv. 594.] P. B.-A.

**BAINBRIGG, or BAYNBRIDGE, REGINALD** (1645-1606), schoolmaster and antiquary, was born, probably in Westmoreland, about 1556. He matriculated as a sizar of Peterhouse, Cambridge, 12 June 1573, and took his B.A. degree in 1576-7. In 1580 he was appointed headmaster of the grammar school at Appleby, endowed by Queen Elizabeth in 1574 (*CARLISLE'S Endowed Schools*, ii. 694), and combined his school work with antiquarian and archaeological research. He zealously collected all stones bearing ancient inscriptions in the three counties of Northumberland, Cumberland, and Westmoreland, and in 1602 he built a small house in his garden for their preservation. An inscription cut in one of its walls stated that its owner had been teaching at Appleby for twenty-two years, and was fifty-seven years old. The house, with its contents, was standing till the close of the seventeenth century, but the collection appears, soon afterwards, to have been broken up, and no trace of it has since been found. Bainbrigg sent copies of the inscriptions he had brought together to William Camden, who printed them in his 'Britannia,' and acknowledged his indebtedness to 'the very learned Reginald Bainbrigg.' Bainbrigg died in 1606. By his will dated 11 May in that year, he bequeathed his household furniture and a garden to succeeding headmasters of the grammar school, and the annual rental of a small burgage, amounting to 2s. 4d., to the head boy for the time being, provided he wrote a copy of Latin verses in praise of himself and two other benefactors of the school. Other lands, building material, and books he left for a new schoolhouse, about

to be erected when he died. Among the Cottonian MSS. at the British Museum (Jul. F. vi.) are the following papers ascribed to Bainbrigg: 1. 'Account of Antiquities in Northumberland, Cumberland, Westmoreland, and Durham, with several Roman inscriptions, drawings of altars, figures, and descriptions of the country' (No. 162); 2. 'Genealogica Gossipatriciorum et Curwenorum' (No. 163); 3. 'De Baronibus de Kendala et familia de Bruis' (No. 164). An 'Inscription on the Picts' wall sent by Reginald Bainbrigg to Mr. William Camden' is among the Lansdowne MSS. (121, art. 20). Some Latin elegiacs on the death of Sir Philip Sidney, signed 'R. Banningus,' in the 'Lacrimæ Cantabrigienses' (1587), have been attributed to Bainbrigg.

Another REGINALD BAINBRIGG, probably an uncle of the schoolmaster and antiquary, was born at Middleton, Westmoreland, about 1489. He took the degree of B.A. at Cambridge in 1506, of M.A. in 1509, and of B.D. in 1526. He was proctor of the university in 1517, instituted to the rectory of Downham in Essex 27 June 1525, and to that of Stambourne, in the same county, 1 Dec. 1526, and became shortly afterwards master of Catherine Hall, Cambridge. He was made vicar of Bricklessea, Essex, 19 May 1530; of Steeple Barmstead, 13 May 1532; of Great Oakley, 11 Jan. 1537-8. In 1537 he was appointed to a prebend stall at Wells. He probably died in 1554-5 (COOPER's *Athenæ Cantab.* i. 124; NEWCOURT's *Diocese of London*).

[Cooper's *Athenæ Cantab.* ii. 439; Camden's *Britannia*, ed. Gough, iii. 148, 157; Charity Commissioners' Report (1823), ix. 638-9.]

S. L.

BAINBRIGG, THOMAS (*d.* 1646), master of Christ's College, Cambridge, was 'descended out of the North,' and was not improbably a native of Kirkby-Lonsdale in Westmoreland. He became master of Christ's College in 1620, and was vice-chancellor of the university in 1627. Thomas Baker, the antiquary, calls Bainbrigg 'a severe governor,' and supposes that during his mastership and by his authority the poet Milton was either expelled from the college or rusticated, whereby he missed a fellowship to which another candidate was admitted by royal mandate, 'a circumstance, as is supposed, together with his expulsion, that disgusted him first against the king, clergy, and universities.' Bainbrigg was a benefactor to his college, which flourished greatly under his government. He was accounted a witty man and a good preacher, and a funeral sermon by

him, on 16 Oct. 1620, had the effect of seriously awakening the famous independent divine, Dr. Thomas Goodwin, who was originally of Christ's College, but subsequently became a fellow of Catherine Hall.

Dr. Burn (*Hist. of Westmoreland*, i. 258) states that Hawkin Hall, the most remarkable building in the parish of Kirkby-Lonsdale, 'was built by Dr. Christopher Bainbridge, master of Christ's College in Cambridge, in the reign of King Charles I., adding that 'Dr. Bainbridge was born at this place, and married at sixty years of age, and by his wife had nineteen children.' However improbable the latter part of the tale is, it seems of a piece with the whole; for the name of the master of Christ's College was not Christopher, but Thomas. There was indeed a fellow of the college named Christopher Bainbridge at that period, and it is just possible that he may be the person meant. The story of the nineteen children is repeated in the 'Critical Review' for 1778.

The master of Christ's College died at Cambridge in September 1646, and was buried in the parish of St. Andrew the Great on the 9th of that month. Duport has honoured him with a Latin epitaph.

[MS. Addit. 5821, f. 67, 5863, f. 78; Prynne's *Trial of Abp. Laud*, 193; Peck's *New Memoirs of Milton*, 34, 35; Masson's *Life of Milton* (1881), 123 n., 239; Cambridge Antiquarian Communications, ii. 154; Critical Review, 1778, p. 258.]

T. C.

BAINBRIGG, BAMBRIDGE, or BEMBRIDGE, THOMAS, D.D. (1636-1703), protestant controversialist, son of Richard and Rose Bainbrigg, was born at Cambridge. He was educated at the university there, proceeded B.A. in 1654, M.A. in 1661, was incorporated M.A. of Oxford in 1669, became proctor at Cambridge in 1678, there graduated D.D. by royal mandate in 1684, and held for many years the posts of fellow and vice-master of Trinity College, Cambridge. He was sometime vicar of Chesterton and subsequently rector of Orwell. He died suddenly at Cambridge, and was buried in Trinity College Chapel, where there is a monument to his memory. In 1687 he published 'An Answer to a Book entitled Reason and Authority, or the Motives of a late Protestant's Reconciliation to the Catholic Church, together with a brief account of Augustine the Monk, and conversion of the English. In a letter to a Friend.' The 'Letter' does not bear Bainbrigg's name, but is generally ascribed to him. It is a courageous and pungent onslaught upon the accredited author of 'Reason and Authority.' The pamphlet assailed—an attack upon Til-

lotson's discourse against transubstantiation — was attributed to Joshua Basset [see BASSSET, JOSHUA], for a time master of Sidney College. Bainbrigg thinks that 'it is a grief to have an adversary so weak and yet so confident.' 'He names Pope Gregory and Bede,' he adds, 'but gives not any ground to think that ever he has read over Bede's History or consulted Pope Gregory's Epistles.'

P. B. A.

**BAINBRIGGE, SIR PHILIP** (1786–1862), lieutenant-general, was descended from an ancient family long resident in the counties of Leicester and Derby. He was the eldest son of Lieutenant-colonel Philip Bainbrigg, of Ashbourne, Derbyshire, and Rachel, daughter of Peter Dobree, Esq., of Beauregard, Guernsey, and was born in London in 1786. He entered the navy as a midshipman in the *Cæsar*, under Admiral Sir James Saumarez, in 1799, but left it from ill-health. His father, who served under the Duke of York in the expedition to Holland, was killed in the attack on Egmont-op-Zoom on 2 Oct. 1799, and the next year the duke appointed young Bainbrigg to an ensigncy in the 20th regiment. On 13 Nov. 1800 he became a lieutenant, but being then only fourteen years of age, he obtained a year's leave, which he spent at Green's military academy at Deptford, and joined his regiment at Malta in 1801. At the peace of Amiens his regiment was reduced and he was placed on half-pay, but was brought on full pay into the 7th fusiliers. Returning to England in 1803, he was employed in obtaining volunteers from the militia to form the 2nd battalion of the 7th, which when completed was removed to Colchester. Here the troops were reviewed by the Duke of York, and Lieutenant Bainbrigg, who by his zeal and diligence had given much satisfaction, was gazetted, on 17 Oct. 1805, to a company in the 18th Royal Irish, and joined the 1st battalion of the regiment in the West Indies. After the taking of Curaçoa from the Dutch in 1807, he was appointed inspector of fortifications in that island, where he made plans of the forts and defences which subsequently recommended him to the authorities at the Horse Guards. He exchanged into the 93rd, and, returning to England, laid his plans and surveys before the Duke of York, who advised him to qualify himself for the staff by studying at the senior department of the Royal Military

College at High Wycombe. He entered the college in 1809, and studied so diligently that in a year and a half he passed his examination with distinction. While at the college he invented a protracting pocket sextant, which was favourably noticed by the board of examiners, and enabled him to make surveys with remarkable accuracy and rapidity. On leaving the college Captain Bainbrigg was appointed deputy assistant quartermaster-general in the British army in Portugal. On arriving at Lord Wellington's head-quarters he was posted to the fourth division, commanded by Major-general Cole, and stationed near Torres Vedras, and was at once sent to examine the island of Lyceria, a tract of flat alluvial land in the Tagus, to ascertain whether troops could cross it. He was then brought to headquarters, where for some time he was employed in sketching ground and reporting on positions in various directions, which exposed him to the risk of capture by the enemy who occupied the country. His ability was acknowledged, for in a letter to Marshal Beresford, dated Cartaxo, 4 Jan. 1811, Lord Wellington said he was appointed to the staff of the army on account of the ability he showed at High Wycombe.

He was present at the sieges and storming of Ciudad Rodrigo and Badajoz. As soon as Badajoz was taken he was ordered to join the sixth division, under Sir H. Clinton, at Albuera, and take charge of the quartermaster-general's department. On the advance of the army into Spain in 1812, Captain Bainbrigg, who had examined the country which was to become the scene of operations, was brought to headquarters. He was present at the siege of the forts of Salamanca, at the affairs of Costillejos and Costrejon, and at the crossing of the Guarena, his duties being to carry orders and make sketches of the country and positions. On one occasion, being with Lord Wellington on high ground on the right bank of the Tormes watching the enemy crossing the river at Huerta, his lordship suddenly told him to ride in the direction which he pointed out on the other side of the Tormes, to examine the ground and make a sketch of it. He accordingly rode down to the ford of Santa Marta, and crossing over to the ground between the ford and the two Arapile hills, a distance of about three miles, made his sketch while the enemy's skirmishers were in immediate proximity, and brought back a plan in about two hours and a half. It was on part of this ground that the battle of Salamanca was afterwards fought. On another occasion he was ordered to conduct a column of the army then at Pareda,

three leagues off, through a difficult country and in face of the enemy to Vallesa. He did so successfully, and brought the column in the midst of the night safely to its destination. On the day of the battle of Salamanca he was constantly with Lord Wellington, and at a critical moment he carried the order for the advance of General Leith's division.

After this decisive victory he accompanied the army in the advance to Madrid, and from thence to Valladolid and Burgos. He was present at part of the siege of Burgos, and soon after was appointed permanent assistant quartermaster-general with the rank of major. In the retreat from Burgos he rendered very important services through his knowledge of the country, which was considered of so much value that Sir H. Clinton asked for his return to the sixth division, but it was decided that he should remain at headquarters. Major Bainbrigge continued to hold the same position till the end of the war in 1814, and surveyed and sketched the country through which the army passed till it entered France. He was present at the battles of Vittoria and Pyrenees, at the last siege of San Sebastian, and at the battles of Nive and Toulouse. Rewards and distinctions were not lavishly bestowed in those days, and, as Major Bainbrigge had not been in action as the head of his department with a division, but under his seniors at headquarters, he did not receive the gold medal, and could not become a companion of the Bath. Through some strange omission he was not recommended for brevet rank, but on 21 Jan. 1817 this was rectified, when he was promoted to the brevet rank of lieutenant-colonel.

In 1815 he applied for employment abroad, and joined the British army in its advance to Paris. When he returned home after the peace, he continued to hold the appointment of permanent assistant quartermaster-general until 1841, when he was made deputy quartermaster-general in Dublin. Having attained the rank of major-general, 9 Nov. 1846, he was appointed by the Duke of Wellington to the command of the Belfast district. In 1852 the duke selected him to command the forces in the island of Ceylon. During his stay in Ceylon his unremitting exertions for the welfare of the troops under his command made him beloved and respected by all classes, and his departure, when promoted to the rank of lieutenant-general on 20 June 1854, was much regretted.

In 1838 he was made a companion of the Bath, and subsequently received the 'grant for distinguished service.' On 31 March 1854 he was appointed colonel of the 26th (Cameronian) regiment. For his services in the

Peninsula he received the war medal with seven clasps, and in May 1860 he was created a knight commander of the Bath.

In his military career he showed the advantage of scientific knowledge, and much of his success in life was owing to his diligent application of this knowledge in the field. His talents and high sense of duty caused him to be greatly valued as an officer, and esteemed by all who knew him. He died at St. Margaret's, near Titchfield, Hants, on 20 Dec. 1862, at the age of 76.

[Gent. Mag. 1863, xiv. 230; United Service Mag. 1863, part i. p. 271; Times, 29 Dec. 1862; Army Lists for 1861-4-6.] A. S. B.

**BAINES, JAMES** (1710-1790), one of the most distinguished ministers of the second great secession from the church of Scotland which took the name of 'the Relief Church,' was son of the parish minister of Bonhill, Dumbartonshire, and born in the manse there in 1710. His elementary education was received at the parish school. He afterwards proceeded to the university of Glasgow. He had a brilliant career there and graduated M.A. Having been licensed as a preacher of the gospel, he was presented by the Duke of Montrose to the church of Killearn, the parish adjoining his father's. In 1756 he was translated to the high church of Paisley, and in 1757 had the celebrated Dr. John Witherspoon for a colleague. From the outset he was ardent in support of evangelical doctrine as opposed to the morality which came to be known as 'moderationism.' So early as 1745, he is found promoting a revival of religion in the west of Scotland. In the general assembly and presbytery, and from his pulpit, he stood forth as a zealous defender of the church's spiritual freedom and against all ecclesiastical tyranny. When the general assembly of the church of Scotland in 1752 deposed Thomas Gillespie of Carnock, Baines pleaded for him. Ultimately circumstances determined him to join Gillespie, the founder of the Relief church. He therefore resigned his great living of Paisley, in a letter to the presbytery of date 10 Feb. 1766. Called thereupon 'to the bar of the general assembly,' he made a masterly statement and vindication of himself and Gillespie. He foresaw the issue, viz. that he was declared to be no longer a member of the church of Scotland. He published, on his deposition, 'Memoirs of Modern Church Reformation, or the History of the General Assembly, 1766, with a Brief Account and Vindication of the Presbytery of Relief.' This rare book takes the form of letters to a ministerial friend. His sketches of the 'moderates' are

in the vein made famous later by Witherspoon. On 13 Feb. 1766, he was inducted into the ministry of the first Relief congregation erected in Edinburgh—in College Street. College Street church remains one of the largest and most important of the now United Presbyterian churches. Prior to his deposition and induction—the latter of which was conducted by Thomas Gillespie, of Carnock and Dumfermline—he and his people worshipped in Old Greyfriars under the venerable Dr. John Erskine, and sat down together at the sacrament of the Lord's Supper there, in accordance with the principle of his denomination 'to hold communion with all visible saints.'

Baine had remarkable popular gifts, and even at Killearn his musically modulated voice had earned for him the name of the 'Swan of the West.' His sermons were eloquent and convincing. He was plain-spoken in denunciation of the vices of the day. He came into collision with Foote in 1770 by preaching and publishing a sermon entitled 'The Theatre Licentious and Perverted.' Foote's memorable ridicule of the great evangelist, George Whitefield, stung him. John Kay, the caricaturist portrait-taker, introduced him into his gallery. In 1777 he published a volume of sermons of fairly representative character, though, as is frequently the case, it is very evident that they needed his eye and voice to interpret them. He married the only daughter of Dr. Michael Potter, professor of divinity in Glasgow University, and son of Michael Potter, one of the martyrs of the Bass Rock. By her he had a large family, and representatives remain till now of varied distinction. He died on 17 Jan. 1790, aged eighty.

[Struthers's History of the Relief Church; Anderson's Scottish Nation.] A. B. G.

**BAINES, EDWARD** (1774-1848), journalist, was born at Walton-le-Dale, Lancashire, on 5 Feb. 1774, his father being a tradesman of Preston in that county. He was sent to the Preston free grammar school at eight years of age, and apprenticed at sixteen to a printer of the town. He gave some promise at this early age of a useful career in life. Before his term of apprenticeship was expired an arrangement was made for completing the period at Leeds in the house of Messrs. Binns & Brown, printers and booksellers, and proprietors of the 'Leeds Mercury.' Young Baines soon won the confidence of his employers and of his new fellow-townsmen by painstaking and industrious habits, and by his uniformly amiable disposition. At the close of his apprentice-

ship he started in business, at first for a few months with a somewhat unsatisfactory partner, and ultimately on his own account. In March 1801 he became the proprietor of the 'Leeds Mercury,' which had been languishing for several years past in the hands of his former employers. Improved management of the newspaper resulted in a steady increase in its circulation, and it soon became recognised as the leading whiggish paper in Yorkshire. At Baines's death, in 1848, the 'Leeds Mercury' had for many years ranked among the first provincial newspapers of the kingdom.

Baines was now becoming a prominent and valued citizen of his adopted town. He took an active part in parochial affairs, promoted local reforms, and largely aided in the establishment of the Leeds Mechanics' Institution and similar works of usefulness. At the period of the elections which ensued on the accession of George IV he took part in county politics, and the columns of his newspaper were henceforth steadily devoted to the questions of catholic emancipation, parliamentary reform, and the other whig agitations of the day. During the period of the reform bill agitation Baines was in frequent consultation and correspondence with leading members of parliament as a person of wide information and sound judgment. With all his activity and industry, Baines found the time also to indulge a fancy for topographical research. He produced, in 1823, the 'History, Directory, and Gazetteer of the County of York,' and in 1825 a similar work for Lancashire. Some years afterwards this latter work was expanded into a 'History of the County Palatine and Duchy of Lancaster,' published in 4 vols. 4to. Another praiseworthy effort of Baines's was the reclamation of a portion of Chat Moss, in Lancashire; of which he lived to see a large area converted into a fine estate, covered with farms and plantations.

Leeds obtained two members upon the passing of the Reform Act, Macaulay the historian being one of them. Upon Macaulay's resignation in order to accept his Indian appointment, Baines was almost unanimously chosen to be the liberal candidate, and in the result was elected in February 1834 by a small majority over his conservative opponent. He continued to represent Leeds in parliament until failing health compelled him to retire in 1841.

Baines was immediately welcomed in London society, both on account of his social qualities and his untiring efforts to fulfil his civic duties. He was principally involved in questions of factory legislation and the abo-

lition of church rates and of civil disabilities, and gave an independent but hearty support to the Corn Law League. He was a good speaker, and enjoyed much personal influence and even popularity. His retirement from parliament was signalled by the presentation of a testimonial in recognition of his services. He died 3 Aug. 1848, a public funeral being accorded to him.

Baines is recollected as a benevolent, just, and liberal-minded man. He made an excellent local magistrate. He was married in 1798 to Charlotte, daughter of Matthew Talbot, currier, of Leeds, by whom he had eleven children. Of these more than one attained distinction.

Besides the works already mentioned, Baines wrote a 'History of the Wars of the French Revolution from 1792 to 1816: comprehending the civil history of Great Britain and France during that period,' 2 vols. (1818), which was afterwards extended, and became a 'History of the Reign of George III,' in 4 vols. 4to (1823).

E. S.

**BAINES, FRANCIS**, jesuit. [See SANDERS.]

**BAINES, JOHN** (1787-1838), mathematician, was born at Westfield farmhouse in the parish of Horbury, Yorkshire, in 1787. From his boyhood he gave proofs of a strong mathematical bias, and in his latter years was a well-known correspondent of the 'Ladies' Diary,' the 'Gentleman's Diary,' the 'York Miscellany,' and other similar periodicals, which in those days were noted for their geometrical and algebraic problems. He died at Thornhill, near Wakefield, Yorkshire, on 1 May 1838, where for nine years he had been master of the grammar school.

Besides many mathematical contributions to the above-named periodicals, nearly all of which evince considerable talent, we find on p. 24 of the 'Ladies' Diary' for 1833 an article of Baines on Cuvier's 'Theory of the Earth,' written to prove that it is a confirmation of the Mosaic account. From the Latin inscription on his tombstone in Horbury churchyard he appears to have been also skilled in Latin, Greek, and natural science, especially botany.

[Private information; Gentleman's Diary for 1835, pp. 33-46, 1836, p. 48, 1837, &c., and previous volumes; Ladies' Diary for 1833, p. 24, 1836, p. 35, 1837, pp. 15-47.] R. E. A.

**BAINES, MATTHEW TALBOT** (1799-1860), politician, was the eldest son of Edward

Baines, of Leeds, author of the 'History of Lancashire,' and was born 17 Feb. 1799. He obtained a scholarship at Trinity College, Cambridge, and graduated in 1820 as a senior optime. He was called to the bar in 1825, and, after practising with success on the northern circuit, was, in 1837, appointed recorder of Hull, and in 1841 became a queen's counsel. In 1847 he entered parliament as member for Hull, which he continued to represent until 1852, when he was chosen for Leeds. In Lord John Russell's administration he became, in 1849, president of the poor-law board, and he held the same appointment in Lord Aberdeen's ministry. After Lord Palmerston acceded to power in 1855, he was appointed chancellor of the duchy of Lancaster, with a seat in the cabinet. Though not a brilliant debater, his solid talents won for him high consideration, and his firmness, impartiality, and special knowledge of the forms of the house pointed him out as a probable occupant of the speaker's chair, had not ill health caused his retirement from public life in April 1859. He died 22 Jan. 1860.

**BAINES, PAUL**. [See BAYNES.]

**BAINES, PETER AUGUSTINE, D.D.** (1786-1843), catholic bishop, was born on 25 June 1786, at Pear Tree Farm, within the township of Kirkby, near Liverpool, in Lancashire. In 1798 Peter Baines, in company with three brothers named John, Edward, and Vincent Glover, left this country to study for the church at the English Benedictine abbey of Lambspring, in the kingdom of Hanover. He remained at Lambspring for four years and five months as an ecclesiastical student in that then flourishing monastery of SS. Adrian and Dionysius. On 6 April 1803 the abbey of Lambspring was seized, and its territory, some twenty-six miles in circumference, formally occupied by the Prussian government. Students and monks had to scatter back, as they best could, to England. Hospitality was opportunely offered to them by the Rev. John Bolton, chaplain of Lady Ann Fairfax, of Gilling Castle, in the West Riding of Yorkshire. Bolton was then living in a commodious presbytery connected with a mission founded by Lady Ann in 1780, for the Benedictines, near York, at Ampleforth, in the parish of Oswaldkirk. There the newly arrived community from Lambspring were cordially welcomed, and there almost immediately afterwards they inaugurated the now well-known Benedictine college of St. Lawrence at Ampleforth.

On 4 May 1803 Peter Baines reached Ampleforth, and before that month was out had assumed the habit of a Benedictine. On 8 June 1804 he made his religious profession, consecrating himself to God in the order of St. Benedict. He was ordained subdeacon at Durham on 16 Sept. 1807 by Bishop William Gibson, the vicar apostolic of the northern district. By the same prelate, two years afterwards, in 1809, he was ordained deacon at Ushaw College; and in the following year, in the old chapel at Ampleforth, was anointed to the priesthood by Bishop Thomas Smith. Baines was employed at an unusually early age as a teacher at Ampleforth. After more than fourteen years in this post he was selected as the one best qualified to undertake the charge of the mission at Bath, where he arrived July 1817. His exceptional gifts then began first to be fully recognised. Conspicuous among these were his eloquence as a preacher, his vigour as a controversialist, and above all, the charm and dignity of his personal bearing. Six years afterwards he was raised to the episcopal dignity as the coadjutor to Bishop Collingridge. He was appointed coadjutor bishop by propaganda decree 13 Jan., and approved by the pope 19 Jan., his brief being dated 4 Feb. 1823. On 1 May 1823, in Townshend Street chapel, Dublin, he was consecrated bishop of Siga, in Mauritania, by Archbishop Murray, assisted by Bishop James Doyle, and by Dr. Edmund French, the warden of Galway.

Three years having elapsed since the time of his episcopal consecration, Bishop Baines fell into such serious ill-health that he made a tour on the continent. During a long stay in Rome he became a great favourite of the then pontiff, Leo XII. His arrival in Rome was in the winter of 1826, his illness at the time being of a most critical character. Loitering as a visitor during the summer of 1827 between Assisi and Porto Fermo, his enfeebled constitution was at length re-established by the climate and by repose. The reputation acquired by him in England grew rapidly at Rome. Leo XII, not long before, had opened the pulpit of the Gesù, in the Corso, to a succession of English preachers. The church, which had been comparatively empty, was crowded to excess whenever Bishop Baines was announced. Cardinal Wiseman, where he describes the effect of these discourses in his 'Recollections of the Last Four Popes' (p. 206), speaks of the easy and copious flow of his words, the elegance of his imagery, and the solidity of his arguments, and adds that Bishop Baines's great power was in his delivery, in voice, in tone, in look, and gesture. 'His whole manner,'

he remarks, 'was full of pathos; there was a peculiar tremulousness of voice which gave his words more than double effect, notwithstanding the drawback of a provincial accent and occasional dramatic pronunciations.' And Cardinal Wiseman states, on the authority of Monsignore Nicolai, who had received the assurance from the lips of the pontiff, that Baines 'was the person destined in the mind of Leo to be the first English cardinal.' Quite unexpectedly, however, the whole project fell through at the last moment, owing to the illness and death of Leo XII on 10 Feb. 1829.

Bishop Collingridge, to whom Baines had hitherto acted as coadjutor, but of whom he was now of right the successor, died on 3 March 1829. So soon as he could arrange his affairs, Bishop Baines hastened back from Rome to England to assume his responsibility as the vicar apostolic of the western district. During the previous year (1828) he had been appointed by Leo XII domestic prelate of his holiness and assistant at the pontifical throne. He now, in the spring of 1829, obtained permission from Pius VIII to become secularised, having by that time been no less than five-and-twenty years a Benedictine. Before the year was out, in the December of 1829, he had secured to himself the realisation of the noblest day-dream of his life by completing the purchase of Prior Park. The property which then passed into his hands consisted of a stately mansion, erected at about the middle of the last century by Ralph Allen [see ALLEN, RALPH], surrounded by nearly 200 acres of land. On its coming into the possession of Bishop Baines, the two wings, attached to the central structure by open corridors, were replaced by two noble colleges, one of which, St. Peter's, was set apart for lay, and the other, St. Paul's, for ecclesiastical students. Although in the carrying out of this great enterprise the date of the foundation was nominally 1 May 1830, it was not until the July of that year that it was formally opened. Its success after a little time was commensurate even with the sanguine anticipations of its originator. A disastrous fire destroyed the centre building, with the exception of its four walls and its superb Corinthian portico, on 30 May 1836. From that time until the close of his life Bishop Baines had to contend, as he heroically did to the very last, with an ever increasing load of anxieties. Death came to him in the end with startling suddenness. On 5 July 1843 he assisted pontifically at the opening, on the quay at Bristol, of St. Mary's Church, then recently purchased from the Irvingites. Having returned to Prior

Park towards evening in apparently his usual health, he was found dead in his bed early on the following morning by his man-servant. An apoplectic stroke was the immediate cause of death, but more than a year previously, early in the March of 1842, he had had a paralytic seizure. His funeral obsequies took place on 13 July 1843. At the lying-in-state, upwards of 13,000 persons passed round the catafalque. His remains, temporarily deposited at Prior Park, were a few years afterwards removed to St. Gregory's College, Downside.

Bishop Baines was the author of numerous controversial writings, sermons, lectures, and pastorals.

[Four boxes of manuscripts (in the handwriting of Bishop Baines and of Monsignor Thomas Brindle, the first President of the Colleges of SS. Peter and Paul) preserved among the archives of Prior Park, have been carefully examined for the authentication of facts in this memoir. Beyond this, reference may be made to the following authorities: *Corrispondenza fra S.E.R. Wilmot Horton, Membro del Parlamento e Consigliere Privato di sua Maestà Britannica, e Monsig. Pietro A. **BAINES, ROGER.** [See **BAYNES.**]

**BAINES, SIR THOMAS, M.D.** (1622-1680), the lifelong companion of Sir John Finch, M.D., was born about 1622. He was educated at Christ College, Cambridge, under the tuition of Henry More, and took the degree of B.A. in 1642, and M.A. in 1649. An accident brought him under the notice of John Finch, then at the same college, and from this time they became inseparable friends. Having accompanied Finch to Italy, Baines was created doctor of physic at Padua, and he received the same degree from Cambridge on his return to England in 1660. On 8 March of the same year he was chosen Gresham professor of music, and in May he was elected, along with Sir John Finch, a fellow extraordinary of the College of Physicians, London. From 1664 to 1670 he was at Florence, where Finch was ambassador. On his appointment, in 1672, to

accompany Sir John Finch to Tuscany, in the character of physician, he received the honour of knighthood. Some years afterwards he was transferred, along with Finch, to Constantinople. He made arrangements for discharging his professional duties by deputy, but, on account of his prolonged absence, he was deprived of the chair before the news of his death, at Constantinople, 5 Sept. 1680, reached England. His remains were embalmed by Sir John Finch, who brought them to England on his return thither, and deposited them in the chapel of Christ's College, Cambridge. Finch died shortly afterwards, and was buried in the same grave, above which there is an epitaph in Latin to their joint memories by Henry More.

T. F. H.

**BAINES, THOMAS (1822-1875)**, artist and African explorer, was born in 1822 at King's Lynn, where his father was the master of a small vessel. After learning heraldic painting with a coach-builder, his love of travel led him to Cape Colony, where he arrived in 1842. From 1848 to 1851 he accompanied the British army in the Kafir war as artist, and in 1855 joined an expedition which was appointed under Mr. A. Gregory to explore North-west Australia. His energy and skill during this appointment secured for him the special thanks of the colonial government, and in 1858, at the recommendation of the Royal Geographical Society, he was appointed artist to the Zambesi expedition under Livingstone, whom he accompanied as far as Tete in the Portuguese territory. In 1861 he joined Chapman in his expedition from the south-west coast to the Victoria Falls, when, besides making a complete route survey, and collecting much information for the naturalist and man of science, he made a large number of sketches and paintings. His drawings of the Victoria Falls, reproduced in coloured lithographs, form a handsome folio published in 1866. Remaining in England till 1868, he then started in charge of an expedition to explore the gold-fields of the Tati. He mapped and wrote a valuable description of the route thither from the capital of the Transvaal republic. His last journey was amongst the Kafirs, everywhere carefully laying down his routes and making sketches of the scenery and people. On 8 May 1875 he died of dysentery at Durban, Natal, when preparing to explore the country north of the Tati.

Hall, F.R.G.S.; and a French translation of the work by M. Belin de Launay was published in Paris in 1868.] R. E. A.

**BAINES, THOMAS** (1806-1881), journalist and local historian, the third son of the late Edward Baines, M.P., was born at Leeds in 1806. In 1829 he settled in Liverpool as editor of the 'Liverpool Times' newspaper, and for thirty years was an active promoter of liberal interests in Lancashire. In 1852 he published a valuable history of the commerce and town of Liverpool, and in 1867 'Lancashire and Cheshire Past and Present,' having in 1859 settled in London at the Liverpool Office as a parliamentary agent. His last work, 'Yorkshire Past and Present,' was published in 1875; and on 31 Oct. 1881, he died at his residence, Seaford Hall, near Liverpool. Two minor books of his were 'Agricultural Resources of Great Britain and the Colonies,' and 'Observations on the River Plate.' His county histories are characterised by fulness of details, clearness of statement, and orderly arrangement.

[*Leeds Mercury*, 2 Nov. 1881.] R. E. A.

**BAINHAM, JAMES** (d. 1532), martyr, was, according to Foxe, a son of Sir Alexander Bainham, who was sheriff of Gloucestershire in 1497, 1501, and 1516, though his name does not occur in any of the pedigrees of the family. He was a member of the Middle Temple, and practised as a lawyer. He married the widow of Simon Fish, author of the 'Supplication of Beggars.' In 1531 he was accused of heresy to Sir Thomas More, then chancellor, who imprisoned and flogged him in his house at Chelsea, and then sent him to the Tower to be racked, in the hope of discovering other heretics by his confession. On 15 Dec. he was examined before Stokesley, Bishop of London, concerning his belief in purgatory, confession, extreme unction, and other points. His answers were as far as possible couched in the words of Scripture, but were not satisfactory to the court, and his approval of the works of Tynedale and Frith was evident. The following day, being threatened with sentence, he partially submitted, pleading ignorance, and was again committed to prison. In the following February he was brought before the bishop's chancellor to be examined as to his fitness for readmission to the church, and after considerable hesitation abjured all his errors, and, having paid a fine of 20*l.* and performed penance by standing with a faggot on his

shoulder during the sermon at Paul's Cross, was released. Within a month after he repented of his weakness, and openly withdrew his recantation during service at St. Austin's church. He was accordingly apprehended and brought before the bishop's vicar-general on 19 and 20 April. One of the articles alleged against him was that he asserted Thomas Becket to be a thief and murderer, an opinion which the king adopted within a very few years. He was sentenced as a relapsed heretic and burned in Smithfield on 30 April 1532. In the 'Calendar of State Papers of Henry VIII.' (v. app. 30) there is a notice of a contemporary account of an interview between him and Latimer, the day before his death.

[Foxe's *Acts and Monuments*, iv. 697; Harl. MS. 422, f. 90.] C. T. M.

**BAIOCIS, JOHN DE.** [See **BAEUX.**]

**BAIRD, SIR DAVID** (1757-1829), general, was the fifth son of William Baird of Newbyth, who was grandson of Sir Robert Baird, Bart., of Saughton, and cousin and heir of Sir John Baird, Bart., of Newbyth, and was born at Newbyth in December 1757. His father died in 1765, but his mother managed to obtain an ensigncy for him in the 2nd regiment in 1772. He joined his regiment at Gibraltar in 1773, and returned with it to England in 1776. In 1778 he was promoted lieutenant, and in the September of the same year, being then nearly twenty-one and of great height and fine military bearing, he was selected by Lord Macleod, a Scotch neighbour of his mother's, to be captain of the grenadier company in the Scotch regiment just raised by him, and at first called the 73rd, but afterwards famous as the 71st Highland light infantry. In 1779 the regiment embarked for India, captured Goree on the way, and after spending three months at the Cape reached India in January 1780. When Lord Macleod arrived, Hyder Ali was besieging Arcot, and his regiment was at once attached to a force under Sir Hector Monro, which was destined to relieve that city, and also to succour a force under Colonel Baillie, which was in danger of being cut off by Hyder Ali. To assist Baillie a small detachment, including the grenadier company of Macleod's regiment under Captain Baird, was sent off by Monro in advance. After a night march it effected a junction with Baillie, but on the next day the whole force was cut to pieces by Hyder Ali and his son, Tippoo Sahib. Baird had been severely wounded, and was left for dead, but nevertheless managed, with two companions, to find his way to the French camp. The

French treated the prisoners kindly, but were soon obliged to surrender them to their ally. Hyder Ali treated the captives with oriental barbarity, and had not Captain Lucas volunteered to bear two sets of irons, Captain Baird, though wounded and nearly dead, would have been heavily ironed. The captive officers lived for three years and eight months in most terrible agony, seeing their fellows going mad, and dying of fever, and knowing that many of them were taken from prison only to be poisoned or tortured to death. Nevertheless they managed to keep up their spirits, and Baird mentions that in three successive years they gaily drank the king's health on the 4th of June. At last, in March 1784, the remaining officers were released, and Captain Baird joined his regiment, and had the bullet, which had lodged in his thigh three years before, extracted. In 1787 he became major in his regiment, and came home to England in 1789. He purchased the lieutenant-colonelcy of his regiment in 1790, but, owing to the slowness of his agent, was not gazetted till after Moore, Cavan, and Ludlow, a mistake which, on two occasions, lost him the command-in-chief of an army.

In 1791 Lieutenant-colonel Baird returned to India, and was at once appointed by Lord Cornwallis to the command of a brigade of sepoys in the war against Tippoo. With it he did good service in reducing the southern hill forts of Mysore, and was present in 1792 at the operations of Lord Cornwallis and General Medows before Seringapatam. In 1793 he took Pondicherry, almost without resistance, from the French, and in 1795 was promoted colonel, and appointed to command at Tanjore. Here he got into considerable trouble by opposing the resident, who, under the direction of Lord Hobart, the governor of Madras, was doing his best to procure the annexation of Tanjore. The consequences might have been serious had not the 71st regiment been at this time ordered home after an absence of eighteen years, when Lieutenant-colonel Baird and one sergeant were the only survivors of the original establishment. The regiment was in splendid condition, so much so that whenever a European regiment arrived in India it was always sent to the quarters of the 71st to learn how a regiment should be conducted in India; but the men were now drafted into various other regiments, and only the officers and headquarters returned home. On his way to England Colonel Baird touched at the Cape, and was implored by Lord Macartney, the governor, to remain there as brigadier-general, for the opposition of both officers and men to Sir David Dundas, who commanded in the colony, was

so great that a mutiny was expected. Baird, therefore, remained at the Cape till 1798, when he was promoted major-general, and ordered to proceed to India with the Scotch brigade and 86th regiment. Major-general Baird was disappointed to find that, owing to the number of general officers in India, he could only receive the command of the first European brigade instead of a division in the second war with Tippoo, and was especially chagrined that the important command of the Nizam's contingent should be given to Colonel Arthur Wellesley instead of himself. Nevertheless, from his thorough knowledge of Indian warfare and his former experience in Mysore, he did good service, and when the storming of Seringapatam was determined on, he volunteered to lead the storming column. The confidence of the troops in him was unbounded, and the former prisoner of Hyder Ali successfully stormed Seringapatam on 4 May 1799, and Tippoo Sultan fell in the assault. Wearied with his exertions he requested to be relieved, and Colonel Wellesley was ordered to relieve him, and immediately afterwards appointed governor of Seringapatam. Baird felt that he had won this lucrative appointment, and indignantly complained to General Harris. Of course General Harris had a perfect right to bestow the governorship on whomsoever he pleased, and Lord Wellesley afterwards declared that he would have himself appointed his brother; yet there can be no doubt that it was Baird who had taken Seringapatam, and not Wellesley or Harris. Baird's temper was not improved when Lord Wellesley took him to Calcutta and gave him the subsidiary command at Dinapore, and he openly remonstrated when he found the governor-general's brother appointed to command an important expedition to the Spanish islands, and that too without surrendering his lucrative post at Seringapatam. This time Lord Wellesley felt obliged to yield, and the command of the expedition, the destination of which was now altered, was transferred to Baird.

When Lord Wellesley heard that the English army in the Mediterranean under Sir Ralph Abercromby was ordered to capture the French army which had been left in Egypt by Bonaparte, he determined that a force should co-operate from India, and Baird obtained the command. Arthur Wellesley was appointed second in command, but illness detained him at Bombay, and Baird reaped the whole credit of the operations. He reached Cosseir, on the Red Sea, in June 1801, and determined to march across the desert to the Nile. The march was a most difficult one; it was the middle of summer, the country

was unknown, and the commissariat had broken down. But the intrepidity of Baird and the ingenuity of Auchmuty, his adjutant-general, overcame all obstacles, and the army reached the Nile in safety. Baird then dropped down the river in boats, and joined General Hutchinson, who had succeeded Sir Ralph Abercromby, three days after the surrender of Cairo. The Indian troops were, however, in time to co-operate in the taking of Alexandria. After General Hutchinson's departure a dispute arose between Lord Cavan, who succeeded him, and General Baird, his junior by a few days, as to whether the Indian force should be combined with the English army, or be maintained as a separate force. The dispute was eventually settled by Baird's official appointment as second in command in Egypt. Baird's expedition had particularly caught the fancy of the English people; his march across the desert had something romantic in it; catchpenny lives of him with bad pictures, and harrowing accounts of his former imprisonment, were largely circulated, and he became a popular hero. But his actual rewards were not great; his dispute with Lord Cavan had excited the displeasure of the military authorities, and he was only made a knight of the Crescent by the sultan, and colonel of the 54th regiment by the king. He returned to India in 1802, was warmly received there, and given the command of the northern division of the Madras army. On the approach of the Mahratta war he prepared his division for active service; but when Major-general Arthur Wellesley received the most important command he perceived at last that he had no chance against the governor-general's brothers, and threw up his command in disgust. He then started for England, but on the way home was taken prisoner by a French privateer, and retaken before he reached France. He had, however, given his parole, and was formally exchanged with the French general Morgan.

On reaching England, after twenty-four years' nearly continuous absence in the East, he was received with enthusiasm by the people, and knighted by the king. He did not stop long at home, but in 1805 was promoted lieutenant-general, and ordered to command the army which was to recapture the Cape of Good Hope. He was particularly fitted for this task, as he knew the ground thoroughly from his former sojourn there as brigadier-general. The expedition left England in August 1805, and reached the Cape on 5 Jan. 1806. The operations there were extremely short. On Jan. 8 he defeated General Janssens, the Dutch general; on 10 Jan. Capetown surrendered; and on 18 Jan. the Dutch

general surrendered. But unfortunately Sir Home Riggs Popham [q. v.], the commodore on the station, a restless ambitious man, persuaded Sir David to lend him a brigade under General Beresford, to assist in the expedition against Spanish South America. General Beresford himself was taken prisoner, and though General Auchmuty, who came out with reinforcements, had a temporary success in taking Monte Video, the utter failure of General Whitelocke made the ministry eager to find scapegoats. Baird was one scapegoat, and in July 1806 he received a curt letter informing him that his successor, as governor of the Cape, was on his way. In January 1807 he left the Cape in great indignation, but on reaching England he found that the ministry had been changed, and Baird was appeased by being at once appointed to the command of the first division in the great expedition then preparing to invade Denmark, and seize the Danish fleet, under Lord Cathcart. The expedition was a simple one; but the bombardment of Copenhagen was under the immediate supervision of the first division, and during it Sir David was wounded in two places. On his return he was removed from the colonelcy of the 54th to that of the 24th regiment, which had two battalions, and told he might expect a more important command. In September 1808 he sailed from Cork with 10,000 men, to reinforce Moore's army in Spain, and to take up the appointment of second in command. He reached Corunna on 8 Oct., and at once detached General Mackenzie to reinforce Cradock at Lisbon. The Spanish authorities at Corunna would not allow him to land, and sent him to Vigo, whence he was sent back to Corunna. At last, on 19 Oct., he was allowed to land one brigade, but did not get his whole army ashore till 22 Oct. He then advanced towards Moore as he had been ordered, and reached Astorga on 19 Nov. There he waited, while Moore remained at Salamanca, until at last Baird was directed by Moore to move on Villa Franca. Fortunately he did not march till 4 Dec., for on 7 Dec. he was ordered to retreat on Corunna. On 20 Dec. the two armies met at Mayorga, and the terrible retreat was continued. Baird's troops were not in good condition, and whether it was that Baird had lost his vigour or was not a good general of retreats, there can be no doubt that his men straggled very much, and that their discipline was very poor compared with that of the reserve, who had to fight a battle nearly every day. At last Corunna was reached, and as the ships were not there a pitched battle was inevitable. Baird was to command the right wing, but he was not long in the field,

as early in the action his left arm was broken by a cannon-ball. He was at once carried to a transport, where his arm was amputated, and where he heard the news of Moore's death and of the safe embarkation of the troops, and received Hope's famous report, which he at once sent home by his aide-de-camp, Captain Gordon. On reaching England he was made a K.B., and in the following year a baronet.

Corunna was the last of Sir David Baird's battles, and he never again commanded an army in the field. Whether it was want of political influence or the presence of some prejudice against him cannot be certainly said; but it is certain that even his earnest application for the government of the Cape in 1813 was refused, and he could not serve in the Peninsula under Lord Wellington, his junior. In spite of much unmerited neglect his latter years were very happy; he married a great heiress, Miss Campbell-Preston, and in 1814 became full general. At last the veteran could no longer be passed over, and in 1819 he was made governor of Kinsale. In 1820 he became commander of the forces in Ireland in succession to Sir G. Beckwith, and a privy councillor; but had to resign in 1822, when the office was reduced to a lieutenant-general's command. In 1829 he was made governor of Fort George; on 29 Aug. in that year he died at the age of 72. His widow erected an obelisk to him at Crieff, and employed Theodore Hook to write his life, which was published in 1832.

If Baird was not a very great general, he was certainly a gallant soldier, and the prisoner of Hyder Ali, the stormer of Seringapatam, and the general of the march across the desert, will deservedly remain a popular hero. There was a chivalrous gallantry in his nature which made the old pun, 'Not Baird, but Bayard,' particularly applicable to him.

[The principal authority for Baird's life is his *Life by Theodore Hook*, 2 vols. 1832; and for his differences with Harris should be consulted *Lushington's Life of Lord Harris*, 1840. For the Egyptian campaign should be consulted Sir Robert Wilson's *Campaign in Egypt*, and *Mémoires relatifs à l'expédition anglaise partie du Bengale en 1800 pour aller combattre l'armée de l'Orient*, par M. le comte de Noé, Paris, 1826. For his campaign in the Peninsula see Napier's *Peninsular War*, book iii.; *Notes on the Campaign of 1808-9 in the North of Spain*, in reference to some passages in Lieut.-Colonel Napier's *History of the War in the Peninsula*, and in Sir W. Scott's *Life of Napoleon Bonaparte*, by Lieut.-Colonel T. S. Sorell, military secretary and aide-de-camp to Sir David Baird during the campaign, 1829, with Napier's reply, published in his *Answer to various Criticisms*, 1832, and republished at the end of the last volume of his history.] H. M. S.

BAIRD, GEORGE HUSBAND, D.D. (1761-1840), principal of the university of Edinburgh, was a native of the parish of Borrowstounness (or Bo'ness) on the Forth, Linlithgowshire; his father, a landed gentleman of Stirlingshire, rented a farm from the Duke of Hamilton. Born in 1761, Baird received his primary education in the parish school of Bo'ness, and, on the family's removal to a newly purchased property, named Manuel, in West Lothian, at the parish school of Linlithgow. He was a plodding, persevering, and well-mannered, rather than a brilliant schoolboy. In 1773, in his thirteenth year, he was entered as a student in humanity (Latin) and Greek at Edinburgh. He speedily came under the favourable notice of Principal Robertson, the historian, and Professor Dalzel, and others, because of his devotion to his class-work and marked progress. 'Not content with the tasks of the university classes, he carried on simultaneously philological and philosophical researches. He was associated therein with Finlayson—afterwards a professor at Edinburgh—and Josiah Walker. The ripened fruit of these extra-collegiate studies was shown in his exceptionally varied and accurate knowledge of nearly all the living languages of Europe.

In 1784 he was recommended by Professor Dalzel as tutor in the family of Colonel Blair, of Blair. In 1786 he received license as a preacher of the gospel from the presbytery of Linlithgow of the kirk of Scotland. In 1787 he was presented to the parish of Dunkeld by the Duke of Athole, through influence brought to bear by his friend Finlayson. Before leaving for his parish he had met with Robert Burns, then the observed of all observers. In his old age he delighted to tell of his having repeatedly met with the 'Ayrshire ploughman.' He religiously preserved his copy of the poet's first volume, published at Kilmarnock in 1786—his name being among the subscribers. Baird was evangelical rather than of the 'moderates,' but family ties threw him a good deal into the cultivated circle of the Robertsons and Blairs and their school. Whilst parish clergyman at Dunkeld he was resident in the duke's family, and superintended the education of his grace's three sons. The late Lord Glenlyon was wont to speak gratefully of his tutor's earnestness and accuracy in instruction. In 1789-90 he was presented to the large and important parish church of Edinburgh, known as 'Lady Yester's,' but the ducal house of Athole persuaded him to decline the call. In 1792 he accepted another Edinburgh presentation, viz. to New Greyfriars church. Contemporaneously he

was elected and ordained to the professorship of oriental languages at Edinburgh. He had won for himself so high a reputation that in 1793, on the death of Principal Robertson, he was appointed his successor in the principalship. He was then in his thirty-third year. As principal he was called upon to punish a breach of the discipline of the university committed by three students who subsequently attained to pre-eminent distinction. A challenge had been addressed to one of the professors, and the parties implicated in the misdemeanour were Lord Henry Petty (afterwards Marquis of Lansdowne), Henry Brougham (afterwards Lord Brougham and Vaux), and Francis Horner (afterwards M.P.) These students were summoned before the *Senatus Academicus*. Only Brougham appeared, and the rebuke of the principal was so delivered and accepted that a warm friendship ensued, and lasted long after Brougham had entered public life.

In 1799 Principal Baird was translated to the new North parish church. In 1801, on the death of Dr. Blair, he was appointed his successor in the high parish church, where he remained until his death.

He married the eldest daughter of Thomas Elder, Esq., lord provost of Edinburgh. Towards the close of his life he threw his whole soul into a scheme for the education of the poor in the highlands and islands of Scotland. He submitted his proposals to the supreme court of the kirk—the general assembly—in May 1824, advocating with statesmanlike breadth of view enlarged education in the great centres, and especially the extension of the system to the neglected Celtic race. The general assembly of 1825 gave its sanction to the scheme, and it was launched most auspiciously. His intellectual and social influence provided all over Scotland for the education of the poor. In his sixty-seventh year, when enfeebled in health, he traversed the entire highlands of Argyll, the west of Inverness and Ross, and the western islands, from Lewis to Kintyre. In his sixty-eighth year he similarly visited the north highlands, and the Orkneys and Shetland. Through his influence Dr. Andrew Bell, of Madras, bequeathed 5,000*l.* for education in the highlands of Scotland. In 1832 the thanks of the general assembly were conveyed to him by the moderator for the year, the illustrious Dr. Thomas Chalmers, then in the zenith of his oratorical powers. Baird died on 14 Jan. 1840, at Manuel, near Linlithgow, in his seventy-ninth year.

A. B. G.

**BAIRD, JAMES** (1802–1876), a wealthy ironmaster and benefactor to the church of Scotland, was born at Kirkwood, 5 Dec. 1802. He was the fourth son of Alexander Baird, by Jean, daughter of James Moffat, of Whitburn. Alexander Baird was almost exclusively a farmer and miller until he made his first purely commercial venture by leasing, in 1809, the Woodside coalworks, near Dalsersf, which he managed in addition to his land, and to which he added in 1816 the coalfield of Rochsolloch, near Airdrie, and, in 1822, the coalfield of Merryston. James received his early education at the parish school of Old Monkland, and, the circumstances of the family having improved, passed a short time at the university of Glasgow (*Scotsman*, 21 June 1876). In May 1826 Alexander Baird, then of Lockwood, and his sons William, Alexander, and James, obtained a lease from Mr. Hamilton Colt, of Gartsherrie, of the coalfields of Sunnyside, Hollandhirst, and New Gartsherrie. In 1828 the Bairds became ironmasters as well as coalowners by acquiring a forty years' lease of the ironstone in the lands of Cairnhill, adjoining Gartsherrie. They afterwards erected blast furnaces, the first of which was put in blast 4 May 1830, and when in the same year the founder of the firm went out of the business, his sons formed a partnership, under the style and title of William Baird & Co. Alexander Baird died at Newmains in 1833. James Baird assumed in 1830 the active management of the business, and especially gave his attention to the improvement of the machinery. The result of his improvements was to raise the production of a furnace from 60 to 250 tons a week. By 1842 the Gartsherrie works boasted their full number of sixteen furnaces. The Bairds proceeded to acquire coal and iron works in other parts of Lanarkshire, as well as in the counties of Ayr, Stirling, Dumbarton, and Cumberland. Under the title of the Eglinton Iron Company, they added works at Eglinton 1846, Blair 1852, Muirkirk and Lugar 1856, and Portland 1864, and thus possessed between forty and fifty furnaces, with a power of turning out 300,000 tons of iron per annum, and of giving employment to nearly 10,000 men and boys. The brothers invested their revenues in the purchase of land, and the estates acquired by the family in the course of their career represented in round numbers the sum of 2,000,000*l.* James Baird represented the Falkirk group of burghs in the House of Commons from 1851–2 and 1852–7,

being the same constituency which was represented, in 1841-6, by his brother, William Baird, the first conservative returned by a burgh constituency in Scotland after the Reform Act. Retiring from parliament in 1857, James Baird devoted much of his time to religious and educational questions, and built and endowed a large number of schools. He was a firm believer in the teaching of the Bible in schools, and a staunch supporter of the so-called 'use-and-wont' platform. In 1871 he founded the 'Baird Lectures' for the defence of orthodox teaching, and his liberality culminated in a gift of 500,000*l.*, made in 1873, to the established church of Scotland, which he passed over to a body described as the 'Baird Trust,' 'to assist in providing the means of meeting, or at least as far as possible promoting the mitigation of, spiritual destitution among the population of Scotland.' The benefaction was well intended, but it did not escape exception as being 'hampered by conditions distasteful to not a few of the more liberal members of the establishment' (*Scotsman*, 21 June 1876). A month before his death, Baird was credited with the design of devoting a second 500,000*l.* for the advancement of the higher education of the ministers of all presbyterian denominations, but no mention of this was made in his will. All the brothers of James Baird predeceased him, and by the death of Robert Baird in 1856 he succeeded to the estate of Auchmedden in Aberdeenshire. Besides being owner of smaller properties in Ayrshire, James Baird acquired the considerable estates of Cambusdoon in Ayrshire in 1853; of Knoydart in Invernesshire in 1857; and of Muirkirk in Ayrshire in 1863. He was a magistrate for Lanarkshire, and a deputy-lieutenant for the counties of Ayr and Inverness. He was twice married: the first time, in 1852, to Charlotte, daughter of Mr. Robert Lockhart, of Castle Hill, Lanarkshire, who died in 1857, and secondly, in 1859, to Isabella Agnew, daughter of Admiral James Hay, of Belton, Haddingtonshire, who survived him. He had no children by either marriage; and the firm, of which he continued a member to the last, and the annual profits of which in prosperous years were believed to exceed 1,000,000*l.*, consisted, at the time of his death, of himself and three nephews. He 'left property valued at 3,000,000*l.* sterling' (IRVING, *Annals of our Time*). Baird died after a few weeks' illness on 20 June 1876, at Cambusdoon, near Ayr, and was buried on the Friday following, 23 June, by the side of his first wife at Alloway, whose church he had endowed.

H. G.

BAIRD, SIR JOHN (1620-1698), of Newbyth in Aberdeenshire, judge, son of James Baird of Byth in the same county, advocate, and for some time commissary of Edinburgh, and Bathia, daughter of Sir John Dempster of Pitliver, was admitted advocate on 3 June 1647. It must have been about the same year that he married Margaret, daughter of Sir William Hay of Linplum, by whom he had four children, three sons and one daughter, viz. John, born on 4 Oct. 1648; Margaret, born on 23 Dec. 1649; John, born on 23 Sept. 1652; and William, born on 12 Nov. 1654. He appears to have been knighted by Charles II on his accession to the throne of Scotland in 1651. In the correspondence of the Earls of Ancrum and Lothian (1616-67) we find him referred to as Sir John, under date 1653. Thenceforward his name occurs with some frequency in that correspondence, and usually in such a connection as to suggest that he was regarded as a person of some weight and sagacity. Like his father he belonged to the covenanting party, and was considered of sufficient consequence to be excluded from the operation of the Act of Indemnity passed by the parliament of Scotland in 1662, being then mulcted in the sum of 2,400*l.* His eminence at the bar, however, could not be ignored, and in 1664 he was created an ordinary lord of session, assuming the title of Lord Newbyth. In the Scottish parliaments of 1665 and 1667 he represented Aberdeenshire, and sat on the committee of taxation in the former, and on that of supply in the latter, parliament. He was not returned to the parliament of 1669. In that year a grant of the barony of Gilmertoun within the sheriffdom of Edinburgh, made in his favour by the crown in 1667, was ratified by the parliament. In 1670 he was nominated one of the commissioners to negotiate the then projected treaty of union between England and Scotland. In 1680 his youngest and only surviving son, William, was created knight baronet. By reason of his opposition to the arbitrary measures of the government he was superseded in the office of lord of session in 1681, Sir Patrick Ogilvie of Boyne being appointed in his place. He acted as commissioner of the coss for the shire of Edinburgh in 1685, and also as commissioner of supply for the same county. On the accession of

the Prince of Orange he was re-appointed ordinary lord of session (1689), and retained his seat upon the bench until his death in 1698.

In the Advocates' Library at Edinburgh there are preserved certain papers in the handwriting of Lord Newbyth, being a collection of decisions ranging from 1664 to 1667, and a collection of practiques belonging to the period between 1664 and 1681.

[Memorials of the Troubles in Scotland and England (Spalding Club), ii. 416; Corresp. of the Earls of Ancrum and Lothian (1616-1667), 375, 384, 391-6, 508; Nicholl's Diary (1650-1667), 428; Fountainhall's Hist. Notices (1661-1688), ii. 333-4; Brunton and Haig's Hist. Fraser, and re-edited by F.M.B.S., London, 1870, 4to.] J. M. R.

**BAIRD, JOHN, D.D.** (d. 1804), Irish divine, came to Dublin from the Isle of Man, and was ordained minister of the presbyterian congregation of Capel Street 11 Jan. 1767. Here he ministered for ten years, not very happily, and in 1777 he was compelled to resign. Shortly after doing so he brought out the first and only volume of a projected series on the Old Testament; a work of some learning, originally delivered as lectures at Capel Street, and dedicated (12 Nov. 1777) to James Trail, bishop of Down. Baird soon afterwards conformed, and on 7 Sept. 1782 was appointed by the crown to the rectory of Cloghran, near Dublin, where he died unmarried early in 1804. He published 'Dissertations, Chronological, Historical, and Critical, of all the Books of the Old Testament; through which are interspersed Reflections, Theological and Moral,' &c., Dublin, 1778, vol. i. (extending to Exod. xx.)

[Armstrong's Appendix to Ord. Serv. of James Martineau, 1829, p. 100; Witherow's Hist. and Lit. Memorials of Presbyterianism in Ireland, 2nd ser. 1880; Adams's Hist. of Santry and Cloghran Parishes, 1883.] A. G.

**BAIRD, JOHN** (1799-1861), Scotch divine, the eldest son of the Rev. James Baird, who was successively minister of Legertwood, Eccles, and Swinton, all in Berwickshire, was born at Eccles 17 Feb. 1799, and educated in the grammar schools of Whitson and Kelso. Later he proceeded to the university of Edinburgh, where, in 1823, he founded the Plinian Society for the

study of natural history, and was its first president. Going to Ireland in 1825, he was for some time engaged by the Irish Evangelical Society as one of their preachers. In 1829 he was ordained minister at Yetholm, Roxburghshire, where he died 29 Nov. 1861. A colony of gipsies, who were little better than heathens, had long been settled at Kirk Yetholm, and Baird set himself resolutely to reclaim these people, and to make them christians and useful members of society. The work was done in connection with a society formed in Edinburgh for the 'Reformation of the Gipsies in Scotland,' and it met with a considerable amount of success. Baird wrote the 'Scottish Gipsies' Advocate,' Edinburgh, 1839, and contributed an 'Account of the Parish of Yetholm' to the 'New Statistical Account of Scotland.' A memoir of him, by his younger brother William Baird (London, 1862), contains a list of words used by the gipsies of Yetholm, compared with Grellman's list of the continental gipsy language, and the corresponding words in Hindustani.

[William Baird's Memoir of John Baird, minister of Yetholm, Roxburghshire: with an Account of his Labours in Reforming the Gipsy Population of that Parish, London, 1862, 12mo; Geo. Smith's I've been a Gipsying, 322, 330, 331.] T. C.

**BAIRD, WILLIAM, M.D.** (1803-1872), physician, was born at Eccles, Berwickshire, in 1803. He was a younger son of the Rev. James Baird, at the time of his birth minister of Eccles, and was a younger brother of the Rev. John Baird (1799-1861) [q. v.] He was educated at the High School, Edinburgh. He studied medicine at Edinburgh, Dublin, and Paris, and entered the service of the East India Company as surgeon. He was a zoologist of considerable ability, and communicated several papers to the Zoological and Linnean Societies. In 1829 he helped to establish the Berwickshire Naturalists' Club, which served to extend the pursuit of natural science. In 1850 his important work on the 'Natural History of British Entomostraca' (i.e. the lower orders of crustacea, including Phyllopods, Ostracods, Copepods, and Cirripedes) was published by the Ray Society, and in 1858 he published a 'Cyclopædia of the Natural Sciences.' In 1862 he brought out a memoir of his elder brother, John Baird (1799-1861) [q. v.], minister of Yetholm, Roxburghshire, who died in the previous year. For some time Dr. William Baird practised medicine in London, but he eventually accepted an appointment in the zoological department of the British Museum, which he held for

nearly one-and-thirty years—from 1841 to the time of his death on 27 Jan. 1872.

[Obituary Notice in the Proceedings of the Royal Society, vol. xx.] R. E. T.

**BAKER, ALEXANDER** (1582-1638), jesuit, was born in Norfolk in 1582, entered the Society of Jesus about 1610, was professed of the four vows in 1627, twice visited India as a missionary, and died on 24 Aug. 1638 in London, where he had resided for many years. He reconciled the Rev. William Coke, a son of Sir Edward Coke, the famous lawyer, to the catholic church in 1615. Baker was not altogether free from persecution while he pursued his vocation in England. At the end of James I's reign he was in prison. The French ambassador called the attention of Charles I in the summer of 1625, a few months after his accession, to the situation of Baker and other of his co-religionists. Despite the avowed desire of his first parliament that he should put into force anew the penal laws against catholic priests, Charles ordered the Lord Keeper Williams to prepare and seal a pardon for Baker and ten of his companions. This was done on 12 July 1625. A copy of the pardon is in the archives of the House of Lords (cf. *Historical MSS. Commission*, Fourth Report, p. 4; *Journal of the House of Lords*, III. 477). Among the 'State Papers' (Domestic, James I, vol. clxxxix. No. 25, under date 1625) is a manuscript by Father Baker in defence of the doctrine of regeneration by baptism as held by catholics, showing its difference from the opinion of protestants. After Baker's death complaint would seem to have been made that he had failed to pay a debt of 600*l.*, which had been owing to Sir Thomas Bromley, knight, since 1617. The creditor petitioned the House of Lords in the early days of the Long parliament (30 June 1641) to compel Baker's executors, Alexander and John Baker (apparently his nephews), to answer the complaint, and the petition was granted. The petitioner alleged incidentally that Baker had incurred a penalty from the Crown of 1,600*l.*, which he had undertaken to pay to Charles I; but, by dint of a corrupt and fraudulent wording of his bond, he had relieved himself of the obligation of payment (cf. House of Lords Archives, calendered in *Historical MSS. Commission*, Fourth Report, p. 80).

**BAKER, ANNE ELIZABETH** (1786-1861), philologist, was born at Northampton 16 June 1786. She was the sister of George

Baker, the historian of Northamptonshire [q. v.], and to her his great work owes its geology and botany. Miss Baker was the companion of her brother's journeys, his amanuensis, and his fellow-labourer, especially in the natural history, and she made drawings and even engraved some of the plates for his great work. To the opportunities afforded her when she rode through the county by her brother's side we are indebted for the 'Glossary of Northamptonshire Words and Phrases, to which are added the customs of the county,' 2 vols., London, 1854, 8vo, one of the best of our local lexicons. Miss Baker died at her house in Gold Street, Northampton, 22 April 1861.

**BAKER, ANSELM** (1834-1885), artist, first acquired a knowledge of drawing and painting at Messrs. Hardman's studios in Birmingham. He became a Cistercian monk at Mount St. Bernard's Abbey, Leicestershire, in 1857, and died there on 11 Feb. 1885. As a heraldic artist he was unequalled in this country, and his work was eagerly sought for by those who appreciated the beauty of mediæval blazonry. About two-thirds of the coats-of-arms in Foster's 'Peerage' were drawn by him, and are signed 'F. A.' (Fratr Anselm). He also executed the mural paintings in the chapel of St. Scholastica's Priory, Atherstone; in St. Winifred's, Sheepshed; in the Temple in Garendon Park, and in the Lady and Infirmary chapels at Mount St. Bernard's Abbey. The 'Hortus Animæ' and 'Horæ Diurnæ,' published at London, and several beautiful works brought out at Mechlin and Tournai, bear witness to his inventive genius. Baker's 'Liber Vitæ,' a record of the benefactors of St. Bernard's Abbey, is magnificently illustrated with pictures of the arms and patron saints of the benefactors. He also left unpublished 'The Armorial Bearings of English Cardinals' and 'The Arms of the Cistercian Houses of England.'

[*Tablet*, 21 Feb. 1885; *Athenæum*, 21 Feb. 1885; *Academy*, 21 Feb. 1885.] T. C.

**BAKER, AUGUSTINE** (1575-1641), Benedictine. [See **BAKER, DAVID**.]

**BAKER, CHARLES** (1617-1679), jesuit, whose real name was **DAVID LEWIS**, was the son of Morgan Lewis, master of the royal grammar school, Abergavenny. He was born in Monmouthshire in 1617, and studied in his father's school. When about nineteen years old he was converted to the catholic faith, and sent by his uncle, a priest of the Society of Jesus, to the English college at Rome (1638). He was ordained priest in 1642, entered the

Society of Jesus in 1644, and became a professed father in 1655. The South Wales district, of which he was twice superior, was the principal field of his missionary labours. There he zealously toiled for twenty-eight years, visiting the persecuted catholics, chiefly by night, and always making his circuits on foot. A victim to the Oates plot persecution, he was arrested 17 Nov. 1678, while preparing to say mass, was committed to Usk gaol, tried and condemned to death for the priesthood at the Monmouth assizes, 29 March 1679, and executed at Usk on 27 August following.

After his apprehension there appeared a pamphlet, by Dr. Herbert Croft, bishop of Hereford, entitled 'A Short Narrative of the Discovery of a College of Jesuits at a place called the Come, in the county of Hereford. To which is added a true relation of the knavery of Father Lewis, the pretended bishop of Llandaffe,' London, 1679, 4to. The charge brought by Dr. Croft against Baker was that he had extorted money from a poor woman under the pretence that he would liberate her father's soul from purgatory. Sir Robert Atkyns, the judge who tried Baker, declared that the pamphlet, which had been produced in court, was false and scandalous.

[Foley's Records, v. 912-931, vii. 456; Chaloner's Memoirs of Missionary Priests (1803), ii. 225; Oliver's Collectanea S. J. 48; Dodd's Church Hist. iii. 321; Cat. of Printed Books in Brit. Mus.; Cobbett's State Trials, vii. 250.] T. C.

**BAKER, CHARLES** (1803-1874), instructor of the deaf and dumb, was the second son of Thomas Baker, of Birmingham, and was born 31 July 1803. While a youth he was for a short time an assistant at the Deaf and Dumb Institution at Edgbaston, near Birmingham. He then tried other employments, but his services were again sought by the committee of the institution, when in a difficulty on the failure of their master, who was a Swiss, to control the pupils. Charles Baker had never contemplated teaching as a profession, but without much thought for the future he entered upon his work. He at once obtained the affections of the children, and, to their delight, he remained at the institution. Three years afterwards he was invited to aid in the establishment at Doncaster of a Deaf and Dumb Institution for the county of York. The plan had originated with the Rev. William Fenton, in company with whom he visited all the large towns of the county, and obtained such support as justified the carrying out of the scheme. The deficiency of class-books was an evil which Baker

soon found to be pressing. Although the deaf and dumb had been gathered together in various institutions for forty years, no attempt had been made to provide such a course as they required. This want he set himself to supply. He wrote the 'Circle of Knowledge' in its various gradations, consecutive lessons, picture lessons, teachers' lessons, the 'Book of the Bible' in its several gradations, and many other works which had special relation to the teaching of the deaf and dumb. The 'Circle of Knowledge' obtained great popularity. It was used in the education of the royal children, and of the grandchildren of Louis-Philippe. It has been largely used in the colonies and in Russia, and the first gradation has been translated into Chinese, and is used in the schools of China and Japan. Many years ago the publisher reported that 400,000 copies had been sold. Baker also wrote for the 'Penny Cyclopædia' various topographical articles, and those on the 'Instruction of the Blind,' 'Dactylology,' 'Deaf and Dumb,' 'George Dalgarno,' and the 'Abbé Sicard. He contributed to the 'Journal of Education,' to the 'Polytechnic Journal,' and the publications of the Central Society of Education, and translated Amman's 'Dissertation on Speech' (1873). He was an active worker in connection with the local institutions of Doncaster, and was a member of the committee for the establishment of a public free library for the town. He was held in high regard by teachers of the deaf and dumb in England and in America, and in June 1870 the Columbian Institution of the Deaf and Dumb conferred on him the degree of doctor of philosophy, an honour which he appreciated, but he never assumed the title. He died at Doncaster 27 May 1874, and his old pupils erected a mural tablet to his memory in the institution where he had laboured so long.

[Information from Sir Thomas Baker; American Annals of the Deaf and Dumb (with portrait), xx. 201.] C. W. S.

**BAKER, DAVID**, in religion AUGUSTINE (1575-1641), Benedictine monk, ecclesiastical historian, and ascetical writer, was born at Abergavenny, Monmouthshire, on 9 Dec. 1575. His father, William Baker, was steward to Lord Abergavenny, and his mother was the daughter of Lewis ap John, *alias* Wallis, vicar of Abergavenny, and sister of Dr. David Lewis, a judge of the admiralty. At the age of eleven he was sent to the school of Christ's Hospital, London, and in the beginning of 1590 he entered the university of Oxford as a commoner of Broad-

gates Hall, now Pembroke College. Led away by sin, he gave up all practices of religion; 'yet there remained in him,' observes his biographer, 'a natural modesty, whereby he was restrained from a scandalous impudence in sin.' At the end of two years, before he had had time to graduate, his father summoned him home, with a view of settling him in some profession. Whilst at Abergavenny he began the study of the law under the guidance of his elder brother Richard, a barrister, and after the lapse of four years he was sent to London, where he became a member first of Lincoln's Inn, and afterwards, in November 1596, of the Inner Temple—not of the Middle Temple, as Wood erroneously states (COOKE, *Students admitted to the Inner Temple*, 146).

His father made him recorder of Abergavenny. An escape whilst riding through a dangerous ford on one of his business journeys was ascribed by him to providential interference, and led to his taking a serious interest in religion and ultimately becoming a catholic.

Having been formally reconciled to the catholic church by the Rev. Richard Floyd the elder, he came to London, where he formed an acquaintance with some Italian Benedictine monks of the congregation of Monte Cassino. At their instance he proceeded in 1605 to the Benedictine monastery of St. Justina in Padua, and commenced his novitiate on 27 May, when he assumed the name of Augustine. Ill-health made it necessary for him to return home, but after the death of his father, whom he converted to catholicism, he went back to his convent.

At this period there still survived in England one representative of the old Benedictine congregation in the person of Dom Robert (Sigebert) Buckley, who had endured an imprisonment of forty-four years for refusing the oath of supremacy. On 21 Nov. 1607 two priests, named Sadler and Maihew, were brought to his prison at the Gatehouse in London. He assisted in 'clothing' them with his own hands, and on their profession they were admitted, as monks of Westminster, to all the rights and privileges of that abbey, and of the old English Benedictine congregation. Father Cressy is evidently wrong, however, in his statement, which has been generally accepted, that Baker was the chief instrument in effecting this restoration, whereby, in the language of Dodd (*Church History*, iii. 116), 'the link of succession was pieced up, and the Benedictines put in the way of claiming the rights formerly belonging to that order in England.' The truth is that Baker had been

professed by the Italian fathers in England as a member of the Monte Cassino congregation. Subsequently he was aggregated by Father Sigebert Buckley, and became a member of the English congregation, being the first who was admitted after Fathers Sadler and Maihew. Three separate congregations existed for a time, namely, the Spanish, the Italian, and the renewed English congregation. A union amongst them was felt to be most desirable, and after many difficulties and obstacles was secured by the brief 'Ex incumbenti' of Pope Paul V in 1619. After the foundation of the first houses, when each member was ordered to select one as his convent, Baker chose St. Laurence's at Dieulowart in Lorraine, though it does not appear that he ever resided within its walls.

After his return to England Baker had been for a time companion to a young nobleman—probably Lord Burghersh, the Earl of Westmorland's son—who had lately been converted, and who expressed a great desire to dedicate himself to a retired spiritual life. Baker afterwards resided in the house of Sir Nicholas Fortescue, where he led a life of almost total seclusion. Next he went to Rheims, and was ordained priest. In 1620 he was engaged as chaplain in the house of Mr. Philip Fursden of Fursden in the parish of Cadbury, Devonshire. Subsequently he removed to London.

In July 1624 he took up his residence with English Benedictine nuns at Cambrai as their spiritual director. During his nine years' residence there he drew up many of his ascetical treatises. In a letter addressed to Sir Robert Cotton from Cambrai, 3 June 1629 (printed in ELLIS's *Orig. Letters*, 2nd ser. iii. 256–8, from *M.S. Cotton*, Jul. c. iii. f. 187), Father Baker writes: 'Ever since my being with you I have lived in a cittle in thes forein partes, called Cambraie, assisting a convent of certein religious English women of the order of St. Benet newlie erected. They are in number as yet but 29. They are inclosed and never seen by us nor by anni other unlesse it be rarelie uppon an extraordinarie occasion, but uppon no occasion maie they go furth, nor maie anie man or woman gette in unto them. Yet I have my diet from them and uppon occasions conferre with them, but see not one another; an live in a house adioning to them. Their lives being contemplative the comon bookes of the worlde are not for their purpose, and litle or nothing is in thes daies printed in English that is proper for them. There were manie good English bookes in olde time whereof thoughte they have some, yet they want manie, and thereuppon I am in their

behalf become an humble suitor unto you, to bestowe on them such bookes as you please, either manuscript or printed, being in English, containing contemplation, Saints lives, or other deuotions. Hampooles workes are proper for them. I wish I had Hilltons scala perfectionis in latein; it would helpe the understanding of the English (and some of them understande latein). The favour you shall do them herein, will be had in memorie both toward you and your posteritie, whereof it maie please god to sende some hether to be of the number, as there is allreadie one of the name, if not of your kindred. This bearer will convey hether such bookes as it shall please you to single out and deliver to him' (*MS. Cotton. Jul. C. iii. f. 12*).

In 1633 Baker removed to Douay, and became a conventual at St. Gregory's. From thence he was sent on the English mission, where his time was divided between Bedfordshire and London. He appears to have been chaplain to Mrs. Watson, mother of one of the first nine novices of the convent of Cambrai. Eventually he settled in Holborn, where he carried on his meditation, solitude, mental prayer, and exercises of an internal life to the last. He died in Gray's Inn Lane on 9 Aug. 1641, after four days' illness, of an infectious disorder closely resembling the plague.

Dr. Oliver truly observes that 'Father Baker shone pre-eminently as a master of the spiritual life; he was the hidden man of the heart absorbed in heavenly contemplation.' Nine folio volumes of ascetical treatises by him were formerly kept in the convent at Cambrai, but unfortunately many of these manuscripts perished at the seizure of that religious house. Wood, Dodd, and Sweeney give the titles of thirty writings by Baker on spiritual subjects that are still extant. From Baker's manuscripts Father Serenus Cressy compiled the work entitled 'Sancta Sophia. Or Directions for the Prayer of Contemplation, &c. Extracted out of more than XL. Treatises written by the late Ven. Father F. Augustin Baker, A Monke of the English Congregation of the Holy Order of St. Benedict: And Methodically digested by the R. F. Serenus Cressy, of the same Order and Congregation, and printed at the Charges of his Convent of S. Gregories in Doway,' 2 vols., Douay, 1657, 8vo, with a fine engraved portrait of Baker, in his monk's habit, prefixed. A new edition, by the Very Rev. Dom Norbert Sweeney, D.D., was published at London in 1876. In 1657 there was also published another work by Baker, entitled 'The Holy Practises of a Devine Lover or the Sainctly Ideots Deuotions. The Contents of the books

are contained in the ensuing page,' Paris, 1657, 12mo. The contents are: '(i) The Summarie of Perfection; (ii) The Directions: for these Holy Exercises and Ideots Deuotions; (iii) A Catalogue of such Bookes as are fitt for Contemplative Spirits; (iv) The Holy Exercises and Ideots Deuotions; (v) The Toppe of the Heauenlie ladder, or the Highest steppe of Prayer and Perfection, by the Example of a Pilgrime goinge to Ierusalem.' Some religious tracts by Baker are preserved in the British Museum (*Add. MS. 11510*). Baker is sometimes considered to give countenance to the errors of the Quietists, but orthodox Roman catholic writers hold that he is perfectly free from all taint of false doctrine. Moreover, his doctrine was approved in a general assembly of the English Benedictine monks in 1633. Objections were taken by Father Francis Hull to his conduct as spiritual director of the nunnery at Cambrai; and Father Baker wrote a vindication of his conduct, now preserved among the Rawlinson MSS. in the Bodleian (C 460). In the same collection (A 36) is a packet of letters, chiefly dated 3 March 1655, from nuns at Cambrai, complaining of proceedings on the part of Claude White, president of the English Benedictine congregation, to compel them to give up certain books of Father Baker's charged with containing poisonous and diabolical doctrine.

Although a large portion of his life was occupied in mental prayer and meditation, Baker was a diligent student of ecclesiastical history and antiquities. Some persons having contended that the ancient Benedictine congregation in England was dependent on that of Cluni in the diocese of Mâcon, founded about the year 910, Father Baker, at the wish of his superiors, devoted much time to refute this error. For this purpose he inspected very carefully the monuments and evidences in public and private collections in London and elsewhere. He had the benefit of the opinions of Sir Robert Cotton, John Selden, Sir Henry Spelman, and William Camden, and the result of his researches is embodied in the learned folio volume, entitled 'Apostolatus Benedictinorum in Angliâ, sive Disceptatio Historica de Antiquitate Ordinis,' published by order of the general congregation holden in 1625, and printed at Douay in 1626. His friend, Father John Jones, D.D., reduced the mass of materials into respectable Latinity, and they left Father Clement Reyner, their assistant, an excellent scholar, to edit the work, so that it passes for being finished 'operâ et industriâ R. P. Clementis Reyneri.'

Baker's six folio volumes of collections for

Ecclesiastical History were long supposed to have been irrecoverably lost. However, four of them are now existing in the archives of Jesus College, Oxford. Many of the documents are published in Reyner. These volumes were written some thirty years before Dodsworth and Dugdale published their collections. Two treatises by Baker on the Laws of England were lost in the Revolution of 1688, when the catholic chapels were pillaged.

**BAKER, DAVID BRISTOW** (1803-1852), religious writer, born in 1803, was educated at St. John's College, Cambridge, where he graduated B.A. in 1829, and M.A. in 1832. He was for many years incumbent of Claygate, Surrey. In 1831 he published 'A Treatise of the Nature of Doubt . . . in Religious Questions,' and in 1832 'Discourses and Sacramental Addresses to a Village Congregation.' He died in 1852.

[Gent. Mag. vol. xxxviii. new series; Brit. Mus. Cat.] A. H. B.

**BAKER, DAVID ERSKINE** (1730-1767), writer on the drama, a son of Henry Baker, F.R.S. [q. v.], by his wife, the youngest daughter of Daniel Defoe, was born in London, in the parish of St. Dunstan-in-the-West, on 30 Jan. 1730, and named after his godfather, the Earl of Buchan. As he showed early a taste for mathematics, the Duke of Montague, master of the ordnance, placed him in the drawing room of the Tower, to qualify him for the duties of a royal engineer. It appears from one of his father's letters in 1747 to Dr. Doddridge that the boy was unremitting in his studies. 'At twelve years old,' says his father, 'he had translated the wholetwenty-four books of "Telemachus" from the French; before he was fifteen he translated from the Italian, and published, a treatise on physic of Dr. Cocchi of Florence concerning the diet and doctrines of Pythagoras, and last year, before he was seventeen, he likewise published a treatise of Sir Isaac Newton's "Metaphysics" compared with those of Dr. Leibnitz, from the French of

M. Voltaire. He is a pretty good master of the Latin and understands some Greek, is reckoned no bad arithmetician for his years, and knows a great deal of natural history, both from reading and observation, so that by the grace of God I hope he will become a virtuous and useful man.' Communications from David Erskine Baker were printed in the 'Transactions of the Royal Society,' xliii. 540, xlv. 529, xlv. 598, xlv. 467, xlviii. 564. But the father's hopes of a scientific career for his son were not to be fulfilled. Having married the daughter of a Mr. Clendon, a clerical empiric, the young man joined a company of strolling actors. In 1764 he published his useful and fairly accurate 'Companion to the Play House,' in two duodecimo volumes. A revised edition, under the title of 'Biographia Dramatica,' appeared in 1782, edited by Isaac Reed. In the second edition Baker's name is given among the list of dramatic authors, and we are told that 'being adopted by an uncle, who was a silk throwster in Spital Fields, he succeeded him in his business; but wanting the prudence and attention which are necessary to secure success in trade he soon failed.' Stephen Jones, the editor of the third edition (1812), says that he died in obscurity at Edinburgh about 1770. In 'Notes and Queries,' 2nd ser. xii. 129, he is stated to have died about 1780, and the authority given is Harding's 'Biographical Mirror;' but in that book there is no mention at all of Baker. Nichols (*Literary Anecdotes*, v. 277) fixes 16 Feb. 1767 as the date of his death.

In compiling his 'Companion to the Play House' Baker was largely indebted to his predecessor Langbaine. He adds but little information concerning the early dramatists, but his work is a useful book of reference for the history of the stage during the first half of the eighteenth century. He is the author of a small dramatic piece, 'The Muse of Ossian,' 1763, and from the Italian he translated a comedy in two acts, 'The Maid the Mistress' (*La Serva Padrona*), which was acted at Edinburgh in 1763, and printed in the same year. It is improbable that he was (as stated in the British Museum Catalogue) the 'Mr. Baker' who, in 1745, wrote a preface to the translation of the 'Continuation of Don Quixote;' for he was then but fifteen years of age, and we may be sure that this instance of his son's precocity would have been mentioned by Henry Baker in the letter to Doddridge.

[Diary and Correspondence of Doddridge, v. 29; Nichols's *Literary Anecdotes*, v. 274, 276, 277; *Biographia Dramatica*, 1782, 1812; *Notes and Queries*, 2nd ser. viii. 94; Watt's *Bibl. Brit.*; British Museum Catalogue.] A. H. B.

**BAKER, FRANKLIN** (1800-1867), unitarian minister, was born in Birmingham 27 Aug. 1800. He was the eldest son of Mr. Thomas Baker of that town. After the usual school education, and when unusually young for such a charge, he took the management of Baylis's school at Dudley. One of his early friends and advisers was the Rev. John Kentish, of Birmingham; another was the Rev. James Hews Bransby, of Dudley, who directed his private studies by way of preparing him for the university of Glasgow, with the view of his ultimately becoming a unitarian minister. By the aid of a grant from Dr. Daniel Williams's trustees he was enabled to go to Glasgow, where he spent three sessions and graduated M.A. On the completion of his college course in 1823 he was invited to become minister of Bank Street chapel, Bolton, a charge which he accepted, though there had been dissensions there which made his work difficult. His connection with the chapel lasted for forty years, during which time the congregation became one of the most prosperous in the county, and the chapel was entirely rebuilt. In his earlier time, when the dissenters were battling for equal rights, he engaged in the political movements of the day, but his after-life was devoted to the work of his calling and the promotion of the charitable and educational institutions of the town. No one in that community was more heartily respected than Baker, and he received gratifying testimony of this in an offer from the lord lieutenant of the county to insert his name in the commission of the peace. He did not, however, consider it consistent with his position to accept it. Besides occasional sermons and pamphlets on matters of passing interest, he was the author of various articles in the 'Penny Cyclopædia.' He also published in 1854 a 'History of the Rise and Progress of Nonconformity in Bolton.' This work is a valuable and accurate record, covering a period of 200 years. He resigned his ministerial position in 1864, and retired to Caton, on the banks of the Lune, but at the end of three years he removed to Birmingham, where he could have the attention of a brother, who held a high medical position. He died 25 May 1867.

[Information from Sir Thomas Baker; The Inquirer, 8 June 1867; Unitarian Herald, 31 May 1867.] C. W. S.

**BAKER, GEOFFREY** (fl. 1350), chronicler, whose name has been given less correctly as **WALTER OF SWINBROKE**, or, according to Camden, of Swinborn, was, to quote his own description of himself, by profession a clerk,

and drew up his shorter and earlier chronicle at Osney, near Oxford, by the request of Thomas de la More, knight. Swinbroke, Oxfordshire, seems to have been his native place. Camden, but apparently without authority, calls him a canon of the Augustinian foundation at Osney, and in this statement has been followed by both Pits and Tanner. The same authorities declare that this Walter or Geoffrey Baker only translated into Latin an account of Edward II's reign, which Sir Thomas de la More had previously drawn up in French ('Gallice script'). As a matter of fact, however, there appear to be two chronicles due to the pen of Geoffrey Baker. Of these the earlier and shorter extends from the first day of creation to the year 1326. This very scanty work has a double method of marking the dates, namely, by the common method of the christian era, and by the distance of each event from 1347. A note tells us that it was completed on Friday, St. Margaret's day (13 July), 1347. The second and by far the more important of Geoffrey's two compilations is a longer chronicle extending from 1303 to 1356. This chronicle is, at all events for its earliest years, based upon that of Adam of Murimuth, or both writers have borrowed largely from a common source (cf. Chron. of Adam of Murimuth, p. 88, with that of Geoffrey Baker, p. 134). But, to use Dr. Stubbs's words, 'Geoffrey adds very largely to Murimuth, and more largely as he approaches his own time of writing.' This second chronicle purports, according to its heading, to have been drawn up by Geoffrey le Baker of Swinbroke, clerk, at the request of Thomas de la More. This knight is mentioned by name in one passage relating to the resignation of Edward II as the French chronicler whose interpreter, in some degree, the present compiler, Geoffrey Baker, is ('cujus ego sum talis qualis interpres'). Hence it would appear that Sir Thomas de la More had drawn up a French account of at least the reign of Edward II, of which Geoffrey Baker availed himself in his longer chronicle. Sir Thomas's original work has wholly disappeared. In the early years of Queen Elizabeth manuscript copies of what purported to be a Latin translation of Sir Thomas's 'Life and Death of Edward II' were in circulation, and Camden printed a version of that work in the 'Vita et Mors Edwardi II,' published in his 'Anglica Scripta' (1603). But both the manuscript translation and Camden's publication seem to be merely abbreviated extracts from Baker's longer chronicle (cf. introduction to STUBBS's *Chronicles of the Reigns of Edward I and II*). Dr. Stubbs has pointed out, as perhaps a partial expla-

nation of the connection of Geoffrey Baker's work with that of Adam of Murimuth, and with that attributed to Sir Thomas de la More, that Swinbroke, the home of Geoffrey, Northmoor, from which Sir Thomas in all probability drew his name, and 'Fifield, the lordship of the house of Murimuth, all lay within the hundred of Chadlington,' on the borders of Oxfordshire. The only other event that can be considered as fairly certain in the life of Geoffrey Baker is, that some time after the great pestilence of 1349 he had, as he himself tells us, seen and spoken with William Bisschop, the comrade of Gurney and Maltravers, Edward II's murderers, and from his lips had gathered many of the tragic details of that king's last days.

[Stubbs's *Chronicles* of Ed. I and II (R.S.) ii. Introduction, lvii-lxxv; Giles's *Chronica Galfridi le Baker* (Caxton Society), pp. 43, 46, 85, 90, 91; Hardy's *Catalogue*, iii. 389-91; Pits, 846; Fabric. *Biblioth. Lat.* iii. 112; Tanner (under Walter and Geoffrey Baker), who distinguishes the writer of the shorter from the writer of the longer chronicle; Camden's *Anglica, Authorum Vita*, and 593-603. Manuscript copies of the *Vita et Mors* are in the British Museum: Cotton MSS. Vitell. E. 5; Harley MSS. 310. Geoffrey Baker's two chronicles are to be found in the Bodleian Library (MS. Bodley, 761), and are possibly in the author's own handwriting.] T. A. A.

**BAKER, GEORGE** (1540-1600), surgeon, was a member of the Barber Surgeons' Company and was elected master in 1597. In 1574, when he published his first book, Baker was attached to the household of the Earl of Oxford, and the writings of his contemporaries show that he had already attained to considerable practice in London. Banester of Nottingham speaks of his eminence in Latin verse:—

*Ergo Bakere tuum superabit sidera nomen,  
Atque aliqua semper parte superstes eris.*

And Clowes, another contemporary, prophesies the lasting fame of his works in English verse of the same quality. His first book is called 'The Composition or Making of the most excellent and pretious Oil called Oleum Magistrale and the Third Book of Galen. A Method of Curing Wounds and of the Errors of Surgeons,' 8vo. In 1576 Baker published a translation of the 'Evonymus' of Conrad Gesner under the title of 'The Newe Jewell of Health, wherein is contayned the most excellent Secretes of Physicke and Philosophie divided into fower bookes,' 4to. Baker's own preface to the 'Newe Jewell' is a good piece of English prose. He defends, as do many authors of that time, the writing a book on a learned subject in the vulgar

tongue. He was in favour of free translation, 'for if it were not permitted to translate but word for word, then I say, away with all translations.' The book treats of the chemical art, a term used by Baker as synonymous with the art of distillation. Distilled medicines, he says, exceed all others in power and value, 'for three drops of oil of sage doth more profit in the palsie, three drops of oil of coral for the falling sickness, three drops of oil of cloves for the cholicke, than one pound of these decoctions not distilled.' Both in this and in his other treatises on pharmacy, the processes are not always fully described, for Baker was, after all, against telling too much. 'As for the names of the simples, I thought it good to write them in the Latin as they were, for by the searching of their English names the reader shall very much profit; and another cause is that I would not have every ignorant asse to be made a chirurgian by my book, for they would do more harm with it than good.' Baker's 'Antidotarie of Select Medicine,' 1579, 4to, is another work of the same kind. He also published two translations of books on general surgery: Guido's 'Questions,' 1579, 4to, and Vigo's 'Chirurgical Works,' 1586. Both had been translated before, and were merely revised by Baker. He wrote an essay on the nature and properties of quicksilver in a book by his friend Clowes in 1584, and an introduction to the 'Herball' of their common friend Gerard in 1597. This completes the list of his works, all of which were published in London. The 'Galen' was reprinted in 1599, as also was the 'Jewell' under the altered title of 'The Practice of the New and Olde Physicke.'

[Works of Baker and of Clowes.] N. M.

**BAKER, SIR GEORGE** (1722-1809), physician, was the son of the vicar of Modbury, Devonshire, and was born in that county in 1722. He was educated at Eton and at King's College, Cambridge, of which college he became a fellow and graduated in 1745. He proceeded M.D. in 1756, and the following year was elected a fellow of the College of Physicians. He began to practise at Stamford in Lincolnshire, but in 1761 settled in London. He soon attained a large practice, and became F.R.S., physician to the queen and to the king, and a baronet in 1776. Between 1785 and 1795 he was nine times elected president of the College of Physicians, and in his own day was famed for deep medical learning. He was a constant admirer of literature as well as of science, and wrote graceful Latin prose and amusing epigrams. Baker made an important addition to medical know-

ledge in the discovery that the Devonshire colic and the colica Pictorum were forms of lead-poisoning. That lead would produce similar symptoms was known, but no one had suggested the connection between these forms of colic and lead, and they were reputed endemic to the soil or climate of Devonshire and of Poitou. Baker, as a Devonshire man, was familiar with the disease. He noticed that it was most common where most cider was made in Devonshire, and that in Herefordshire, where cider was also a local production, colic was almost unknown. He inquired into the process of manufacture, and found that in the structure of the Devonshire presses and vats large pieces of lead were used, while in Herefordshire stone, wood, and iron formed all the apparatus. That colic and constipation, followed by palsy, might be produced by lead, was known. Baker completed his argument by extracting lead from Devonshire cider and showing that there was none in that of Herefordshire. Great was the storm that arose. He was denounced as a faithless son of Devonshire; the lead discovered was said to be due to shot left in the bottles after cleaning, the colic to acid humours of the body (ALCOCK, *The Epidemic Colic of Devon not caused by a Solution of Lead in the Cider*, Plymouth, 1768, &c.) Baker extended and repeated his experiments, and at last convinced the Devonians, so that from that time forth leaden vessels were disused, and with their disuse colic ceased to be endemic in Devonshire. In other essays Baker traced other unsuspected ways in which lead-poisoning might occur, as from leaden water-pipes, from tinned linings of iron vessels, from the glaze of earthenware, and from large doses of medicinal preparations of lead. He examined the subsequent symptoms in detail, and left the whole subject clear and in perfect order. His other works are, a graduation thesis, 1755; a Harveian oration, 1761; 'On the Epidemic Influenza and Dysentery of 1762,' 1764; the preface to the 'Pharmacopeia' of 1788, all in Latin; and in English 'An Inquiry into the Merits of a Method of Inoculating the Small-pox,' 1766, and some other medical essays contained in the collected edition of his 'Medical Tracts' published by his son in 1818. His portrait was painted by Ozias Humphrey, R.A., and is preserved at the College of Physicians. Baker retired from active practice in 1798, and after a healthy old age died on 15 June 1809. He is buried in St. James's Church, Piccadilly.

[Munk's Roll, ii. 213; Baker's Medical Tracts, &c.] N. M.

**BAKER, GEORGE (1773?-1847)**, musician, was probably born in 1773. He himself, at the time of his matriculation at Oxford in 1797, stated his age to be twenty-four, thus dating his birth at 1773; in after life, however, he considered himself to have been born in 1750. But the later date is most probably the correct one, since the eccentricities of character which marked the latter part of his life might well account for his imagining himself much older than he really was. He was born at Exeter, and received his first musical instruction from his mother's sister, becoming, it is said, a proficient on the harpsichord at the age of seven. He was next placed under Hugh Bond and William Jackson of Exeter, remaining there until his seventeenth year, when he came to London under the patronage of the Earl of Uxbridge. His patron caused him to become a pupil of Cramer and Dussek, and during his residence in London he performed 'his celebrated "Storm"' at the Hanover Square Rooms, meeting with the approbation of Dr. Burney. In 1794 or 1795 he was appointed organist of St. Mary's Church, Stafford, a new organ by Geib having been purchased five years before. He seems to have matriculated and taken the degree of Mus. Bac. in 1797 at Oxford, but he appears not to have taken his doctor's degree during his residence at Stafford, for in the Corporation Books of that town he is called 'Mr. Baker.' The same documents hint at a state of affairs that can hardly have been satisfactory. On 5 March 1795 there is an entry to the effect 'that the organist be placed under restrictions as to the use of the organ, and that the mayor have a master key to prevent him having access thereto.' And on 16 July in the same year 'it is ordered that Mr. George Baker be in future prohibited from playing the piece of music called "The Storm."' The inhabitants of Stafford did not therefore concur in Dr. Burney's opinion as to the excellence of this piece, apparently its composer's *chef d'œuvre*. During the following years several entries prove that Baker habitually neglected his duties, and on 19 May 1800 the entry is 'Resignation of Baker.' In 1799 he had married the eldest daughter of the Rev. E. Knight of Milwich. If he ever took the degree of Mus. Doc., it must have been in or before 1800, as after that year the registers in Oxford were most carefully kept, but they contain no entry of the kind, while from 1763 to 1800 musical degrees were systematically omitted from the register, so that the absence of his name from the list does not absolutely prove that he did not receive the degree. In the pub-

lished copies of several glees, printed about this time and dedicated to the Earl of Uxbridge, he is called simply 'Mus. Bac. Oxon. ;' thus we are entitled to regard his claim to the more distinguished title as at least problematical. In 1810 he was appointed to the post of organist at All Saints', Derby, and finally, in 1824, he accepted a similar situation at Rugeley, where he remained until his death, which took place on 19 Feb. 1847. Since 1839 his duties had been undertaken by a deputy. He produced a large number of compositions, which are now completely forgotten. He is said to have been singularly handsome, with an exceedingly fair complexion; generous, even to the point of improvidence. In his later years the eccentricities, which probably gave rise to a large proportion of his difficulties with the Stafford authorities, increased, and he was moreover afflicted with deafness.

J. A. F. M.

**BAKER, GEORGE (1781-1851)**, topographer, was a native of Northampton. While a schoolboy, at the age of thirteen, he wrote a manuscript history of Northampton, and from that time he was always engaged in enlarging his collections. His first printed work was 'A Catalogue of Books, Poems, Tracts, and small detached pieces, printed at the press at Strawberry Hill, belonging to the late Horace Walpole, earl of Orford,' London (twenty copies only, privately printed), 1810, 4to. His proposals for 'The History and Antiquities of the County of Northampton' were issued in 1816. The first part was published in folio in 1822, the second in 1826, and the third, completing the first volume, in 1830. This volume contains the hundreds of Speltho, Newbottle Grove, Fawsley, Wardon, and Sutton. The fourth part, containing the hundreds of Norton and Cleley, appeared in 1836, and about one-third of a fifth part, containing the hundred of Towcester, in 1841. At the latter date, 220 of his original subscribers had failed him, and with health and means exhausted he was compelled to bring the publication to a close. His library and manuscript collections were dispersed by auction in 1842, the latter passing into the possession of Sir Thomas Phillipps. Baker's 'Northamptonshire' is, on the whole, as far as it goes, the most complete and systematic of all our county histories. In the elaboration and accuracy of its pedigrees it is unsurpassed. An index to the places mentioned

in the work was published at London in 1868.

Baker, who was a unitarian, took a deep interest in various local institutions, and was a magistrate for the borough of Northampton. He was not married. A sister, Miss Anne Elizabeth Baker [q. v.], was his constant companion for more than sixty years. He died at his residence, Mare Fair, Northampton, 12 Oct. 1851.

[Northampton Mercury, 13 Oct. 1851; Northampton Herald, 18 Oct. 1851; Quarterly Review, ci. 1; Gent. Mag. (N.S.) xxxvi. 551, 629; Notes and Queries, 4th series, i. 11, 376, 5th series, iii. 447; Cat. of Printed Books in Brit. Mus.; Addit. MS. 24864 ff. 75, 77, 79, 81, 83, 85, 87; Egerton MS. 2248 ff. 71, 112.] T. C.

**BAKER, HENRY (1734-1766)**, author, was born at Enfield, Middlesex, 10 Feb. 1734, the second son of Henry Baker, F.R.S. [q. v.], and Sophia, daughter of Daniel Defoe. According to Nichols (*Anecdotes of Bowyer*, 416), he followed the profession of a lawyer, but in no creditable line. He contributed occasional poetry and essays to periodicals, and in 1756 published, in two volumes, 'Essays Pastoral and Elegiac.' Wilson, in his 'Life of Defoe,' states that he died 24 Aug. 1776, and was buried in the churchyard of St. Mary-le-Strand beside his mother, but the parish register gives the date of his burial as 24 Aug. 1766. According to Chalmers, he left ready for the press an arranged collection of all the statutes relating to bankruptcy, with cases, precedents, &c., entitled 'The Clerk to the Commission,' which is supposed to have been published under another title in 1768. His son, William Baker, born 1763, afterwards rector of Lyndon and South Luffenham, Rutlandshire, inherited the property and papers of Henry Baker, F.R.S.

[Notes and Queries, 2nd series, viii. 94; Nichols's *Anecdotes of Bowyer*, 416; Nichols's *Literary Anecdotes*, v. 277-8; Wilson's *Life of Defoe*, iii. 647; Chalmers's *Biog. Dict.* iii. 341.] T. F. H.

**BAKER, HENRY, F.R.S. (1698-1774)**, naturalist and poet, was born in Chancery Lane, 8 May 1698, the son of William Baker, a clerk in chancery. In his fifteenth year he was apprenticed to John Parker, bookseller, whose shop was afterwards occupied by Dodsley, of the 'Annual Register.' At the close of his indentures in 1720, Baker went on a visit to John Forster, a relative, who had a daughter, then eight years old, born deaf and dumb. Although considerable attention had already been given in England to the education of deaf mutes, no method

of instruction was in general use; and with characteristic ingenuity Baker set himself to instruct her by an improved system of his own. His experiment was so successful that he resolved to make the education of deaf mutes his chief employment; and his services being in great demand among the upper classes, he soon realised a substantial fortune. Regarding the character of his method there is no information, for he wished to retain his own secret, and it is said took a bond of 100*l.* from each pupil not to divulge it. His remarkable success attracted the attention of Defoe, who invited him to his house; and in April 1729, after some delay in the arrangement of settlements, he married Defoe's youngest daughter, Sophia.

In the earlier period of his life, Baker devoted much of his leisure to the writing of verse. The 'Invocation of Health' appeared in 1723 without his sanction, and in the same year he published 'Original Poems,' a volume which was reprinted in 1725. Some indication of the result of his studies in natural science was given by the publication in 1727 of 'The Universe, a Poem intended to restrain the Pride of Man,' the last edition of which was that of 1805, with a short life prefixed. In 1787 he brought out, in two volumes, 'Medulla Poetarum Romanorum,' a selection from the Roman poets, with translations; and in 1739 he published a translation of Molière. His verse is spirited and rhythmical, but the sentiments are hackneyed, and the wit artificial, true poetic inspiration being imitated by sounding but commonplace rhetoric. In 1728, under the name of Henry Stonecastle, he began, along with Defoe, the 'Universal Spectator and Weekly Journal,' the first number being written by Defoe. The copy of the journal which belonged to Baker is now in the Hope collection of newspapers in the Bodleian Library, and attached to it there is a tabular statement by Baker of the authors of the several essays. The last of those written by Baker was published 19 May 1738.

In January 1740, Baker was elected a fellow of the Society of Antiquaries, and in March following a fellow of the Royal Society. Along with Mr. Folkes he began to make experiments on the polypus, and continuing them after Mr. Folkes was too much immersed in other matters to give the subject his attention, he published the result of his observations in the 'Philosophical Transactions,' and afterwards, in 1743, in a separate treatise. The same year appeared 'The Microscope made Easy,' a work which at once became popular, and went through several editions. In 1744 he was awarded

the Copley medal for his microscopical experiments on the crystallisations and configurations of saline particles. His earlier treatise was supplemented, in 1753, by the publication, in two parts, of 'Employment for the Microscope,' which attracted an equal amount of attention. These two works contain the bulk of his more important communications on the subject to the Royal Society. Besides communicating to the society many interesting results of his own experiments, he supplied to it much important information by means of the extensive correspondence he carried on with men of science of other countries. In this way we also owe to him the introduction into England of the Alpine strawberry and of the rhubarb plant (*Rheum palmatum*). He took a very active part in the establishment of the Society of Arts in 1754. For a considerable time he discharged gratuitously the office of secretary, and he was for many years chairman of the committee of accounts. He died at his apartments in the Strand 25 Nov. 1774. Nichols, in his 'Anecdotes of Bowyer,' states that he was buried in the churchyard of St. Mary-le-Strand, but there is no mention of his burial in the register. His two sons, David Erskine Baker and Henry Baker, are noticed separately. The bulk of his property and his manuscripts were bequeathed to his grandson, William Baker, afterwards rector of Lyndon and South Luffenham, Rutlandshire. By his will he bequeathed to the Royal Society 100*l.* for the institution of an oration, now known as the Bakerian. He had formed an extensive natural history and antiquarian collection, which was sold by auction on 13 March 1775 and the nine following days.

[Biographia Britannica, ed. Kippis, i. 525-8 (imperfect and incorrect); Nichols's Anecdotes of Wm. Bowyer, 413-16, 596, 645; Chalmers's Biog. Trans.; MSS. Sloane 4435 and 4436; MSS. Egerton 738 and 834.] T. F. H.

**BAKER, HENRY AARON** (1758-1836), Irish architect, was a pupil of James Gandon, 'and acted as clerk of the works to the buildings designed and chiefly constructed by his master for the Inns of Court, then called the King's Inns, at Dublin.' He was a member of, and for some time secretary to, the Royal Hibernian Academy. In 1787 he was appointed teacher of architecture in the Dublin Society's school, and retained the post till his death. He erected the triumphal arch known as Bishop's Gate at Derry, and he gained (1802-4) the first prize for a design

for converting the Irish parliament house into a bank. The superintendence of that work was given, however, to another architect, Francis Johnstone. He died on 7 June 1886.

[Duhigg's History of the King's Inns, 1806; Mulvany's Life of J. Gandon, Dublin, 1846; Dict. Architectural Publication Society, 1853; Redgrave's Dict. of Artists, 1879.] E. R.

**BAKER, SIR HENRY WILLIAMS** (1821-1877), hymn writer, was the son of Vice-admiral Sir Henry Loraine Baker, C.B., by his marriage with Louisa Anne, only daughter of William Williams, Esq., of Castle Hall, Dorset. His father served with distinction at Guadaloupe in 1815. His grandfather was Sir Robert Baker of Dunstable House, Surrey, and of Nicholas-hayne, Culmstock, Devon, on whom a baronetcy was conferred in 1796. Sir Henry Williams Baker was born in London on Sunday, 27 May 1821, at the house of his maternal grandfather; and after completing his university education at Trinity College, Cambridge, took his B.A. degree in 1844, and proceeded M.A. in 1847. In 1851 he was presented to the vicarage of Monkland near Leominster. On the death of his father, on 2 Nov. 1859, he succeeded him as third baronet. In 1852, while at Monkland, Sir Henry wrote his earliest hymn, 'Oh, what if we are Christ's.' Two others, 'Praise, O praise our Lord and King,' and 'There is a blessed Home,' have been referred to 1861 (SELBORNE'S *Book of Praise*, pp. 176, 207-8, 288-9). Sir Henry Baker's name is chiefly known as the promoter and editor of 'Hymns Ancient and Modern,' first published in 1861. To this collection Baker contributed many original hymns, besides several translations of Latin hymns. In 1868 an 'Appendix' to the collection was issued, and in 1875 the work was thoroughly revised. The hymnal was compiled to meet the wants of churchmen of all schools, but strong objections were raised in many quarters to Sir Henry Baker's own hymn addressed to the Virgin Mary, 'Shall we not love thee, Mother dear?' Sir Henry Baker held the doctrine of the celibacy of the clergy, and at his death the baronetcy devolved on a kinsman. He was the author of 'Daily Prayers for the Use of those who have to work hard,' as well as of a 'Daily Text-book' for the same class, and of some tracts on religious subjects. He died on Monday, 12 Feb. 1877, at the vicarage of Monkland, and was buried in the churchyard of the parish. Stained glass windows have been put up to his memory in his own church and in All Saints, Notting Hill.

[Foster's Baronetage, 1882; Gent. Mag., June 1796 and Dec. 1859; Crockford's Clerical Directory, 1877; Annual Register, 1877; Literary Churchman, 24 Feb. 1877; Academy, 24 Feb. 1877; Church Times, 16 and 23 Feb. 1877; Guardian, 21 Feb. 1877; Earl Selborne's Book of Praise, 1865; Miller's Singers and Songs of the Church, 1869; Stevenson's Methodist Hymn Book, illustrated, with Biography, &c., 1883.] A. H. G.

**BAKER, HUMPHREY** (A. 1562-1587), writer on arithmetic and astrology, was a Londoner. In 1562 he published 'The Well-spring of Sciences,' said by Henry Philip-pes, who edited and enlarged the work in 1670, to have been one of the first and 'one of the best books on arithmetic which had appeared up to that date in this country.' Philip-pes does not name Cocker, who had given to the world his celebrated book two years previously, but he can hardly have considered Baker's work superior or even on a par with it. Baker was an enthusiast for his science. In the dedication of his edition of 1574 'to the Governor, Consuls, Asis-tentes, &c. of the Company of Merchentes Adventurers,' he excuses himself for not entering fully into the merits of arithmetic, on the ground that 'where good wine is to sell, there needs no garlande be haged out.' He nevertheless proceeds to state that it is well known 'that the skil hereof im-mediately flowed from the wisdom of God into the harte of man, whome he coulde not con-ceave to remayne in the most secrete mis-terie of Trinitie in Unitie, were it not by the benifite of most Devine skill in Numbers. . . . Take away Arithmetick, wherein differeth the Sheppard fro the sheepe, or the horse keeper from the Asse? It is the key and entrance into all other artes and learninge, as well approved Pythagoras, who caused this inscription to be written (upon his schoole doore where hee taught Philosophy) in greate letters, "Nemo Arithmetice igna-narus hic ingrediatu-r." He calls the rule of three 'the golden rule.' Philip-pes added considerably to Baker's book in his edition, giving us, among other things, a chapter 'Of Sports and Pastime done by numbers. To know what number any one thinketh,' &c. In the library of the British Museum there are six different editions of Baker's work, from 1574 to 1655, besides Philip-pes's edition of 1670.

Baker also translated from the French and published in London in 1587 a little book in black letter entitled 'The Rules, &c. touch-ing the use and practice of the common almanacs which are named Ephemerides, a brief and short instruction upon the Judicial

Astrologie for to prognosticate of things to come by the help of the same Ephemerides, with a treatise added hereunto touching the conjunction of the Planets.' Among the prognostications are many such as this: 'If the moon be in conjunction with Jupiter, it is good to let blood.'

[Baker's Wellspring of Sciences, 1574 and ed. Philipps, 1670; Tanner's Bibl. Brit.]

P. B. A.

**BAKER, SIR JOHN** (d. 1558), chancellor of the exchequer, is said to have been of a Kentish family; but, as Lodge says, 'his pedigree at the College of Arms begins with his own name.' He was bred for the law. On 12 May 1520 he was made under-sheriff and judge of the sheriff's court of London (*Letter-book* N, fo. 136b). That post he held until he became recorder of London in Nov. 1526 (ib. O, fo. 168b). In 1526 he was joined with Henry Standish, bishop of St. Asaph, in an embassy sent to Denmark. In 1529 he was elected M.P. for both Bedford and the city of London, and sat for the latter till 1536. He was subsequently M.P. for Guildford (1542-4), Lancaster (1545-7), Huntingdonshire (1547-52), Bramber (1553), and Kent (1554) until his death. In July 1535, when he resigned the recordership, he was appointed attorney-general and a member of the privy council. In 1545 he was made chancellor of the exchequer. Two years later he was elected speaker. Baker (contrary to Lodge's statement) signed the 'Device for the Succession,' which Edward VI drew up on his death-bed, and which was designed to exclude the princesses Mary and Elizabeth, as well as the 'Letters patent for the limitation of the Crown,' subsequently issued (NICHOLS, *Queen Jane and Queen Mary*, Camden Soc.). Baker continued in his office of chancellor of the exchequer until his death in December 1558. Almost his last employment in the service of the state was upon a commission appointed in March 1558 to see to the defences of the country. He married Elizabeth, daughter and heir of Thomas Dinely, and widow of George Barret, Esq.; he had an estate at Sisinghurst, Kent; and was grandfather of the chronicler, Sir Richard Baker [q. v.].

[Lodge's *Illustrations of English History*, 2nd ed. i. 60; cf. Wood's *Athenæ Oxon.* (Bliss), i. 93; *State Papers, Domestic, Mary*, vols. x. xii., *Eliz.* vol. i.]

C. F. K.

**BAKER, JOHN** (1661-1716), admiral, was appointed a lieutenant by Lord Dartmouth on 14 Nov. 1688; on 12 Oct. 1691 he was advanced to be captain of the Mary galley, and during the war then raging with

France successively commanded the Newcastle, the Falmouth, and the Medway, for the greater part of the time in the Mediterranean, but without any opportunity of especial distinction. Early in 1701 he was appointed to the Pembroke, and a year later to the Monmouth of seventy guns, in which he continued for nearly six years, serving in the grand fleet under Sir George Rooke or Sir Clowdisley Shovell, at Cadiz and Vigo in 1702, at Gibraltar and Malaga in 1704, at Barcelona in 1705, and Toulon in 1707. He returned to England with the squadron of which so many of the ships were lost amongst the Scilly Islands on 22 Oct. 1707 [see SHOVELL, SIR CLOWDISLEY], and, having arrived at the Nore, was ordered to refit and keep the men on board with a view to their being sent to other ships. Baker remonstrated; he thought their case was hard, and that they ought to be allowed to go home. 'Most of them,' he wrote, on 3 Nov., 'have been with me in this ship for almost six years, and many have followed me from ship to ship for several years before.' It does not appear that any good came of the application, which the admiralty probably considered a bit of maudlin and absurd sentimentality. On 26 Jan. 1707-8 he was promoted to be rear-admiral of the white, and commanded in the second post under Sir George Byng on the coast of Scotland. He afterwards conducted the daughter of the emperor, the betrothed queen of Portugal, from Holland to Spithead, and with Sir George Byng escorted her to Lisbon. On 12 Nov. 1709 he was advanced to be vice-admiral of the blue, and hoisted his flag in the Stirling Castle as second in command in the Mediterranean under Sir John Norris and afterwards Sir John Jennings. Towards the end of 1711 he was detached by Jennings to Lisbon and the Azores, to protect the Portuguese, East India, and Brazil trade, especially from Duguay-Trouin and Cassard. In the course of a cruise from Lisbon in February 1711-2 he drove a large Spanish ship ashore near Cape St. Mary's, but the weather was rough, and before he could approach, the wreck was gutted and destroyed by the Portuguese. Afterwards he captured a richly laden French ship for Martinique, and returned to Lisbon by the beginning of March. At the Azores he remained till the following September, and having intelligence that the Brazil fleet was near, he put to sea on the 11th, and escorted it to the Tagus. He returned to England at the peace, and soon after the accession of George I was again sent out to the Mediterranean in command of a squadron to negotiate with or restrain the corsairs of

North Africa. He concluded a treaty with Tripoli and Tunis, and inflicted punishment on some of the Sallee cruisers. He had just been relieved by Rear-admiral Charles Cornwall, when he died at Port Mahon, 10 Nov. 1716. He was whig M.P. for Weymouth in 1713, was unseated on petition next year, and was re-elected in 1715. A monument was erected in Westminster Abbey to him as 'a brave, judicious, and experienced officer, a sincere friend, and a true lover of his country.' His nephew, Hercules Baker, captain in the navy, serving in the Mediterranean at the time of the vice-admiral's death, was whig M.P. for Hythe in four parliaments from 1722, and was treasurer of Greenwich Hospital from 1736 till his death in 1744.

[Charnock's Biog. Nav. ii. 379; Official Letters in the Public Record Office.] J. K. L.

BAKER, JOHN, D.D. (d. 1745), vice-master of Trinity College, Cambridge, was admitted to Westminster School, on the foundation, in 1691, and thence elected to Trinity College in 1695 (B.A. 1698, M.A. 1702, B.D. 1709, D.D. *comitii regis* 1717). He was elected a minor fellow of Trinity 2 Oct. 1701, and a major fellow 17 April 1702 (*Addit. MS.* 5846 f. 123 b). In 1722 he was appointed vice-master of the college, and in 1731 rector of Dickleburgh in Norfolk. He also held the perpetual curacy of St. Mary's, Cambridge. Baker was the unscrupulous supporter of Dr. Richard Bentley in all his measures, and rendered the master of Trinity great service by obtaining signatures in favour of the compromise between Bentley and Serjeant Miller in 1719. His subserviency to Bentley is ridiculed in 'The Trinity College Triumph':—

But Baker alone to the lodge was admitted,  
Where he bow'd and he cring'd, and he smil'd and  
he prated.

He died 30 Oct. 1745, in Neville's Court in Trinity College, where, owing to pecuniary misfortunes, he had ceased to be vice-master, and was buried at All Saints' Church, Cambridge, according to directions given by him a few days before his death. His living of Dickleburgh had been sequestrated for the payment of his debts. 'He had been a great beau,' says Cole, the Cambridge antiquary, 'but latterly was as much the reverse of it, wearing four or five nightcaps under his wig and square cap, and a black cloak over his cloath gown and cassock, under which were various waistcoats, in the hottest weather' (*Addit. MS.* 5804, f. 81).

[*Addit. MS.* 5846, f. 118 b, 5863, f. 208; *Graduati Cantabrigienses* (1787), 18; *Monk's Life of Bentley* (1830), 401, 403; *Blomefield's Norfolk*

(1805), i. 196; *Gent. Mag.* xlix. 640; *Welch's Alumni Westmon.* (Phillimore), 216, 229.]

T. O.

BAKER, JOHN, R.A. (d. 1771), flower-painter, is said to have been mainly employed in the decoration of coaches. His biographer, Mr. Edward Edwards, remarks sententiously upon the caprice of fashion in this modest department of art, and tells us that Baker's floral enrichments were thought in their day to be of the first order. On the foundation of the Royal Academy John Baker was elected a member. He died in 1771.

[*Edwards's Anecdotes of Painters*; *Bryan's Dict. of Artists*; *Redgrave's Artists of the Eng. School.*] E. R.

BAKER, JOHN WYNN (d. 1775), agricultural and rural economist, was from 1784 until the time of his death officially connected with the Dublin Society, of which he had previously been an honorary member. His enlightened schemes for the improvement of agriculture received liberal support from the society. Under its patronage he was enabled to establish at Laughlinstown, in the county of Kildare, a factory for making all kinds of implements of husbandry, to maintain apprentices, and to open classes for practical instruction in the science. His 'Experiments in Agriculture,' published at intervals from 1766 to 1773, gained for their author a wide reputation. Baker died at Wynn's Field, co. Kildare, on 24 Aug. 1775. In his short life he probably did more for the advancement of agriculture in Ireland than any of his predecessors. The Royal Society had recognised his merits by electing him a fellow in 1771.

Baker also published: 1. 'Considerations upon the Exportation of Corn' (which was written at the request of the Dublin Society), 8vo, Dublin, 1771. 2. 'A Short Description and List, with the Prices, of the Instruments of Husbandry made in the Factory at Laughlinstown,' 8vo, Dublin, 1767 (3rd ed. 1769).

[*Proceedings of the Dublin Society*, vols. i.-vii., xii.; *Hibernian Magazine*, v. 566; *Donaldson's Agricultural Biography*, p. 54.] G. G.

BAKER, PACIFICUS (1695-1774), Franciscan friar, discharged with credit the offices of procurator and definitor of his order, and was twice elected provincial of the English province, first in 1761 and secondly in 1770. He appears to have been attached to the Sardinian chapel in Lincoln's Inn Fields, and he certainly attended at the execution of Lord Lovat, 9 April 1747. His death occurred in London 16 March 1774.

Baker wrote: 1. 'The Devout Christian's Companion for Holy Days,' London, 1757, 12mo. 2. 'Holy Altar and Sacrifice explained in some familiar dialogues on the Mass,' London, 1768, 12mo, being an abridgment of F. A. Mason's 'Liturgical Discourse on the Mass.' 3. 'A Lenten Monitor to Christians, in pious thoughts on the Gospels for every day in Lent, from Ash Wednesday to Easter Tuesday, inclusive,' third edition, London, 1769, 12mo; again London, 1827, 8vo. 4. 'The Christian Advent,' 1782. 5. 'Sundays kept holy; in moral reflections on the Gospels for the Sundays from Easter to Advent. Being a supplement to the Christian Advent and Lenten Monitor,' second edition, London, 1772, 12mo. 6. 'The Devout Communicant,' London, 1813, 12mo. 7. 'Essay on the Cord of St. Francis.' 8. 'Scripture Antiquity.' 9. 'Meditations on the Lord's Prayer,' from the French. Dr. Oliver says: 'Without much originality all these works are remarkable for unction, solidity, and moderation; but we wish the style was less diffuse and redundant of words.'

[Oliver's History of the Catholic Religion in Cornwall, &c., 543, 571; Cat. of Printed Books in Brit. Mus.] T. C.

**BAKER, PHILIP, D.D.** († 1558-1601), provost of King's College, was born at Barnstaple, Devonshire, in or about 1524, and educated at Eton, whence he was elected in 1540 to King's College, Cambridge (B.A., 1544; M.A., 1548; B.D., 1554; D.D., 1562). He was proctor in 1549 and was nominated provost of King's College in 1558. Baker held several church livings and cathedral appointments (he was prebendary of Hereford 1560-9); and he was vice-chancellor of the university in 1561-2. About February 1561-2 he was compelled to resign the rectory of St. Andrew Wardrobe on account of his refusal to subscribe a confession of faith which Grindal, bishop of London, required from all his clergy. Queen Elizabeth occupied the provost's lodge at King's College during her visit to Cambridge in 1564, and Baker was one of the disputants in the divinity act then kept before her majesty. In 1565 some of the fellows of the college exhibited articles against Baker to Nicholas Bullingham, bishop of Lincoln, their visitor. In these the provost was charged with neglect of duty in divers particulars, and with favouring popery and papists. The bishop gave him certain injunctions, which, however, he disregarded. 'By them the provost was enjoined to destroy a great deal of popish stuff, as mass books, couchers, and grails, copes, vestments,

candlesticks, crosses, pixes, paxes, and the brazen rood, which the provost did not perform, but preserved them in a secret corner.'

In 1569 the fellows again complained of him to Bishop Grindal and Sir William Cecil, chancellor of the university; and ultimately the queen issued a special commission for the general visitation of the college. Thereupon Baker fled to Louvain, 'the great receptacle for the English popish clergy,' and was formally deprived of the provostship 22 Feb. 1569-70. About the same period he lost all his other preferments. Fuller (*Hist. of Univ. of Camb.*, ed. Prickett and Wright, 271) says: 'Even such as dislike his judgment will commend his integrity, that having much of the college money and plate in his custody (and more at his command, aiming to secure, not enrich himself), he faithfully resigned all; yea, carefully sent back the college horses which carried him to the sea side.' He was living in 1601, when he had probably been permitted to return to England.

Hardy, i. 528, iii. 604, 618, 683; Nichols's *Progresses of Queen Elizabeth*, iii. 119, 120; Cooper's *Annals of Cambridge*, ii. 175, 176, 191, 199, 200, 203, 224, 225, 244-247, 293; Cooper's *Athen. Cantab.* ii. 322.] T. C.

**BAKER, SIR RICHARD** (1568-1645), religious and historical writer, was born about 1568. His father, John Baker, is stated to have been the elder son of Sir John Baker [q.v.], of Sisinghurst, near Cranbrook, Kent, who was chancellor of the exchequer and privy councillor in the reign of Henry VIII. His mother was Catherine, daughter of Reginald Scott, of Scots Hall, near Ashford, Kent. His father was disinherited, according to recent accounts, in favour of his younger brother Richard, the head of the family in the historian's youth. This Richard Baker was M.P. successively for Horsham, Lancaster, Romney and Shoreham between 1554 and 1558. He entertained Queen Elizabeth at the family seat of Sisinghurst in 1573, was soon afterwards knighted, acted as high sheriff of Kent in 1562 and 1582, and died on 27 May 1594. Care must be taken to distinguish between the uncle and nephew. Henry, a grandson of the elder Sir Richard Baker, and second cousin of the younger, was created a baronet in 1611.

Sir Richard Baker, the writer, became a commoner of Hart Hall (afterwards Hertford College), Oxford; in 1584, where he shared rooms with Sir Henry Wotton. He left Oxford without graduating, and studied law in London. His education was completed

by a foreign tour, which extended as far as Poland (BAKER'S *Chron.* s.a. 1583). On 4 July 1594 he was created M.A. In 1593 he was elected M.P. for Arundel, and in 1597 for East Grinstead. In 1603 he was knighted by James I at Theobalds, and was then residing at Highgate. In 1620 he was high sheriff of Oxfordshire, where he owned the manor of Middle Aston. Soon afterwards Baker married Margaret, daughter of Sir George Mainwaring, of Ightfield, Shropshire, and good-naturedly became surety for heavy debts owed by his wife's family. He thus fell a victim to a long series of pecuniary misfortunes. In 1625 he was reported to be a debtor to the crown, and his property in Oxfordshire was seized by the government (cf. *Cal. State Papers* (Dom. 1628-9), p. 383). On 17 Oct. 1635 Sir Francis Cottington desired of the exchequer authorities 'particulars' of the forfeited land and tenements, which were still 'in the king's hands.' Fuller writes that he had often heard Baker complain of the forfeiture of his estates. Utterly destitute, Sir Richard had, about 1635, to take refuge in the Fleet prison. There he died on 18 Feb. 1644-5, and was buried in the church of St. Bride's, Fleet Street. Several sons and daughters survived him. Wood reports that one of his daughters, all of whom were necessarily dowryless, married 'Bury, a seedsman at the Frying Pan in Newgate Street;' and another, 'one Smith, of Paternoster Row.' Smith is credited with having burned his father-in-law's autobiography, the manuscript of which had fallen into his hands.

'The storm of [Baker's] estate,' says Fuller, 'forced him to flye for shelter to his studies and devotions.' It was after Baker had taken up residence in the Fleet that he began his literary work. His earliest published work, written in a month, when he was sixty-eight years old, was entitled 'Cato Variegatus, or Catoes Morall Distichs. Translated and Paraphrased with variations of Expressing in English Verse, by S<sup>r</sup> Richard Baker, Knight,' London, 1636. It gives for each of Cato's Latin distichs five different English couplets of very mediocre quality, and is only interesting as the work of the old man's enforced leisure. In 1637 Baker's 'Meditations on the Lord's Prayer' was published. In 1638 he issued a translation of 'New Epistles by Moonsieur D'Balzac,' and in 1639 he began a series of pious meditations on the Psalms. The first book of the series bore the title of 'Meditations and Disquisitions upon the Seven Psalmes of David, commonly called the Penitentiall Psalmes, 1639.' It was dedicated to Mary, countess

of Dorset, and to it were appended meditations 'upon the three last psalmes of David,' with a separate dedication to the Earl of Manchester. In 1640 there appeared a similar treatise 'upon seven consolatorie psalmes of David, namely, the 23, the 27, the 30, the 34, the 84, the 103, the 116,' with a dedication to Lord Craven, who is there thanked by the author for 'the remission of a great debt.' The last work in the series, 'Upon the First Psalm of David,' was also issued in 1640, with a dedication to Lord Coventry. (These meditations on the Psalms were collected and edited with an introduction by Dr. A. B. Grosart in 1882.) In 1641 Baker published a reasonable 'Apologie for Laymen's Writing in Divinity, with a short Meditation upon the Fall of Lucifer,' which was dedicated to his cousin, 'Sir John Baker, of Sissingherst, baronet, son of Sir Henry Baker, first baronet.' In 1642 he issued 'Motives for Prayer upon the seauen dayes of y<sup>e</sup> weeke,' illustrated by seven curious plates treating of the creation of the world, and dedicated to the 'wife of Sir John Baker.' A translation of Malvezzi's 'Discourses upon Cornelius Tacitus' was executed by Baker in 1642 under the direction of a bookseller named Whittaker.

Baker's principal work was a 'Chronicle of the Kings of England from the time of the Romans' Government unto the Death of King James,' 1643. The author describes the book as having been 'collected with so great care and diligence, that if all other of our chronicles were lost, this only would be sufficient to inform posterity of all passages memorable, or worthy to be known.' The dedication was addressed to Charles, Prince of Wales, and Sir Henry Wotton contributed a commendatory epistle to the author. The 'Chronicle' was translated into Dutch in 1649. It reached a second edition in 1653. In 1660 a third edition, edited by Edward Phillips, Milton's nephew, continued the history till 1658. Fourth, fifth, sixth, seventh, and eighth editions, with continuations, appeared in 1665, 1670, 1674, 1679, and 1684 respectively. 'The ninth impression, freed from many errors and mistakes of the former edition,' appeared in 1696. An edition continued 'by an impartial hand' to the close of George I's reign was issued in 1730, and was reprinted in 1738. An abridgment of the 'Chronicle' was published in 1684. The account of the restoration given in the fourth and succeeding editions is attributed to Sir Thomas Clarges, Monck's brother-in-law. Phillips and the later anonymous editors of the book omit many original documents, which are printed in the two original editions. Baker's 'Chronicle' was long popular

with country gentlemen. Addison, in the 'Spectator' (Nos. 269 and 329), represents Sir Roger de Coverley as frequently reading and quoting the 'Chronicle,' which always lay in his hall window. Fielding, in 'Joseph Andrews,' also refers to it as part of the furniture of Sir Thomas Booby's country house. But its reputation with the learned never stood very high. Thomas Blount published at Oxford in 1672 'Animadversions upon Sr Richard Baker's "Chronicle," and its continuation,' where eighty-two errors are noticed, but many of these are mere typographical mistakes. The serious errors imputed to the volume are enough, however, to prove that Baker was little of an historical scholar, and depended on very suspicious authorities. Daines Barrington, in his 'Observations on the Statutes,' writes that 'Baker is by no means so contemptible a writer as he is generally supposed to be; it is believed that the ridicule on this "Chronicle" arises from its being part of the furniture of Sir Roger de Coverley's hall' (3rd ed. p. 97, quoted in GRANGER); but the only claim to distinction that has been seriously urged in recent times in behalf of the 'Chronicle' is that it gives for the first time the correct date of the poet Gower's death.

Sir Richard Baker was also the author of 'Theatrum Redivivum, or the Theatre Vindicated,' a reply to Prynne's 'Histrio-Mastix,' published posthumously in 1662. There are interesting references here to the Elizabethan actors, Tarlton, Burbage, and Alleyn (p. 34), and much good sense in the general argument. A reprint of the book under the title of 'Theatrum Triumphans' is dated 1670.

A portrait of Sir Richard appears in the frontispiece to the early editions of the 'Chronicle.' Baker's library is said to have been purchased by Bishop Williams, the lord keeper, in behalf of Westminster Abbey (*Notes and Queries*, 3rd ser. xi. 384).

Among the Sloane MSS. (No. 881) is an incomplete unpublished work by one Richard Baker, entitled, 'Honour, Discours'd of in the Theory of it and the Practice, with Directions for a prudent Conduct on occurrences of Incivility and Civility.' Dr. Grosart assigns this long-winded treatise to Sir Richard Baker, the chronicler, and the religious spirit in which it is written may for a moment support the theory. But the fact that the dedication, undoubtedly written by the author, is addressed to Henry [Compton] bishop of London, proves that the work was not completed until after 1675, the date of Compton's appointment to the see of London. And at that date Sir Richard Baker had been dead for more than thirty years.

[Wood's *Athenæ Oxon.* (Bliss), iii. 148-51; *Biog. Brit.* (Kippis); Granger's *Biog. Hist.* (1775), ii. 321; Baker's *Meditations on the Psalms*, ed. Grosart, pp. i-xl; *Notes and Queries*, 1st ser. ii. 67, 244, 507, vi. 318 (where an account of a legend connected with the elder Sir Richard Baker, of no historical importance, is fully discussed), 2nd ser. ii. 509, iii. 76, 3rd ser. ii. 275, 475.] S. L.

BAKER, RICHARD, D.D. (1741-1818), theological writer, was educated at Pembroke College, Cambridge, where he graduated B.A. (as seventh senior optime) in 1762, M.A. in 1765, and D.D. in 1788. He was elected to a fellowship in his college, and in 1772 was presented to the rectory of Cawston-with-Portland in Norfolk, which he held till his death in 1818. His works are: 1. 'How the Knowledge of Salvation is attainable,' a sermon on John vii. 17, 1782, 4to. 2. 'The Harmony or Agreement of the Four Evangelists, in four parts,' London, 1783-87, 8vo. 3. 'The Psalms of David Evangelized, wherein are seen the Unity of Divine Truth, the Harmony of the Old and New Testament, and the peculiar Doctrines of Christianity, in agreement with the Experience of Believers in all Ages,' London, 1811, 8vo.

BAKER, ROBERT (fl. 1562-3), voyager to Guinea, started on his first voyage 'to seeke for golde' in October 1562. The expedition consisted of two ships, the *Minion* and the *Primrose*, and was 'set out by Sir William Garrard, Sir William Chester, Mr. Thomas Lodge, Anthony Hickman, and Edward Castelin.' Baker's efforts to traffic with the natives on the Guinea coast were not very successful, and he was wounded in a fight. But he returned home in safety early in 1563. In November of the same year he made a second voyage to 'Guinie and the river of Sesto' as factor in an expedition of two ships, the *John Baptist* and the *Marlin*, sent out by London merchants. On arriving at Guinea, Baker landed with eight companions to negotiate with the natives, but a storm drove the ships from their moorings, and Baker and his companions were abandoned. After suffering much privation six of the nine men died. The three survivors were rescued by a French ship, and imprisoned in France as prisoners of war; but they appear to have been subsequently released.

Baker wrote accounts in verse of both voyages, which were printed by Richard Hakluyt in his 'Voyages,' in 1589.

[Hakluyt's Collections (1810), ii. 518-23; J.H. Moore's Collections of Voyages and Travels, i. 328.]

**BAKER, SAMUEL, D.D.** (*d.* 1660?), divine, was matriculated as a pensioner of Christ's College, Cambridge, 11 July 1612, became B.A. in 1615-6, M.A. in 1619, and was elected a fellow of his college. On 7 May 1623 he was incorporated M.A. at Oxford, and he proceeded B.D. at Cambridge in 1627. The corporation of London presented him to the rectory of St. Margaret Pattens in that city, where he at one time enjoyed great popularity as a puritanical preacher. He was, however, 'taken off from those courses,' and made domestic chaplain to Juxon, bishop of London. On 29 Oct. 1636 he became prebendary of Totenhall in the church of St. Paul. Having in 1637 resigned the rectory of St. Margaret Pattens, he was, on 5 July in the same year, instituted to that of St. Mary-at-Hill. On 28 Aug. 1638 the king conferred on him a canonry of Windsor. This he resigned on 17 May 1639, and on the 20th of the same month he was nominated to a canonry in the church of Canterbury. In the same year he was created D.D. In 1640 he resigned the rectory of St. Christopher in London, and on 4 April in that year became rector of South Weald in Essex. Soon after the assembling of the Long parliament he was complained of for having licensed certain books and refused his license to others, and he was subsequently sequestered from all his preferments, persecuted, and imprisoned.

Baker, who is supposed to have died in the early part of 1660, was one of the learned persons who rendered material assistance in the preparation of Bishop Walton's Polyglot Bible.

T. C.

**BAKER, THOMAS** (1625? - 1689), mathematician, is said to have been fifteen years old when he became a battler at Magdalen Hall, Oxford, in 1640. In spite of the puritanical education which, according to Wood, he received at the hall, 'he did some little petite service for his majesty within the garrison of Oxon.' It does not appear what was the nature of the 'little employments' through which, according to the same autho-

rity, he became 'minister' of Bishop's Nympton, in Devonshire. He was collated to the vicarage of Bishop's Nympton in 1681; but he seems to have lived for some years previously in that retired spot (perhaps as curate). His secluded life—as much of it at least as could be spared from professional occupations and the cares of a family—was devoted to mathematical studies. He speaks of himself as one 'who pretend(s) not to learning nor to the profession of the mathematic art, but one who(m) at some subciseive hours for diversion sake its study much delights.' He published in 1684 the 'Geometrical Key, or Gate of Equations Unlocked.' Montucla remembers having 'read somewhere' that Baker was imprisoned for debt at Newgate; upon which it was facetiously remarked that it would have been better for him to have had the key of Newgate than that of equations.

The leading idea of Baker's work is the solution of biquadratic equations (and those of a lower degree) by a geometrical construction, a parabola intersected by a circle. The method is distinguished from that of Descartes by not requiring the equation to be previously deprived of its second term. The general principle is worked out in great detail; the author being of opinion that conciseness, like 'a watch contrived within the narrow sphere of the signet of a ring,' is rather admirable than useful. Some account of the work is given in the 'Transactions of the Royal Society' (referred to below).

There exists a 'catalogue of the mathematical works of the learned Mr. Thomas Baker, with a proposal about printing the same.' The proposal was 'approved and agreed to by the council of the Royal Society,' but was not carried out.

[Bibliograph. Brit. ed. 1; Wood's Athen. Oxon. ed. Bliss, iv. 286; Rigaud's Correspondence of Scientific Men of the Seventeenth Century; Lysons's Magna Britannia, Devonshire, ii. 368; Birch's History of the Royal Society, iv. 155, 156, 527; Philosophical Transactions, vol. xiv. no. 157, pp. 549-50.] F. Y. E.

**BAKER, THOMAS** (*d.* 1700 - 1709), dramatist, is said to have been the son of an eminent attorney of London, and is credited, probably with just cause, with having been educated in Oxford. A disparaging estimate of his character and his powers is furnished in the 'List of Dramatic Authors with some Account of their Lives,' attributed to John Mottley (the compiler of 'Joe Miller's Jests'), which appears at the close of Thomas Whincop's tragedy of 'Scanderbeg.' According to this rather prejudiced authority, Baker 'was

under disgrace' with his father, 'who allowed him a very scanty income,' and was compelled to retire into Worcestershire, where he is reported to have 'died of that loathsome disorder, the *morbus pediculosus*.' His namesake, David Erskine Baker, in the 'Biographia Dramatica,' undertakes at some length his defence. He, however, states that a character named Maiden, introduced in 'Tunbridge Walks,' the best-known comedy of Thomas Baker, was intended by the author for himself, and was designed for purpose of warning, to place his own failings in a ridiculous light. If this story, which is unsupported by any obtainable evidence, is true, Baker must have been sufficiently despicable in early life to justify the dislike of his first biographer. Maiden, first played by an actor inappropriately named Bullock, is one of the most effeminate beings ever put on the stage. The character sprang into favour, and was imitated in the Fribbles and Beau Mizens of subsequent comedy. The plays of Baker, all of them comedies, consist of: 1. 'Humour of the Age,' 4to, 1701, played the same year at Drury Lane, with Wilks, Mrs. Verbruggen, and Mrs. Oldfield in the principal parts. 2. 'Tunbridge Walks, or the Yeoman of Kent,' 4to, 1703, played 27 Jan. of the same year at Drury Lane; revived at the same theatre in 1738 and 1764, and at Covent Garden in 1748, and given, in three acts, under the title of 'Tunbridge Wells,' at the Haymarket, so late as 13 Aug. 1782, by Palmer, Parsons, and Mrs. Inchbald. 3. 'An Act at Oxford,' 4to, 1704. This piece, one scene in which is in the theatre at Oxford, disclosing the doctors, the undergraduates, and the ladies, in their proper places, commences with the two opening lines of the 'Iliad,' delivered in Greek by Bloom, a gentleman commoner. Its performance was prohibited, it is supposed through university influence, and it saw the footlights in an altered version, called (4) 'Hampstead Heath,' Drury Lane, 30 Oct. 1705. Under this title it was reprinted in 4to, 1706. 5. The 'Fine Lady's Airs,' 4to, no date (1709), played at Drury Lane 14 Dec. 1708, and revived 20 April 1747. A curious reference to some of these plays and to the author occurs in the preface to the 'Modern Prophets, or New Wit for a Husband,' a comedy by Thomas Durfey, London, no date (1709). In this Durfey speaks not very intelligibly of Baker as one of 'a couple of bloody male criticks,' from whose 'barbarous assassinating attempts' he has escaped. Durfey condemns the plotless and trifling quality of 'Tunbridge Walks,' accuses Baker, in reference to two other comedies, of having 'brought Oxford upon Hampstead Heath,' and declares that the 'Fine Ladies

Airs' (*sic*) was 'deservedly hist' (hissed). Baker's plays are indeed 'plotless.' They are fairly written, however, and are up to the not very exalted level of comedies of the period. Baker is credited with the authorship of the 'Female Tatler' (London, 1709), which Lowndes, who omits all mention of Baker under his name, describes as a 'scurrilous periodical paper.' After 1709 all reference to Baker ceases.

[Biographia Dramatica; Gilliland's Dramatic Mirror; G(iles) J(acob)'s Poetical Register, or Lives and Characters of the English Poets, 1723; Thespian Dictionary; Genest's Account of the English Stage; List of Dramatic Authors appended to Whincop's Scanderbeg, 1747, &c.]  
J. K.

**BAKER, THOMAS** (1656-1740), an eminent author and antiquary, was born at Lanchester, in the county palatine of Durham, 14 Sept. 1656, the younger son of George Baker, esquire, of Crook, and Margaret Forster, his wife. He received his early education at Durham, and at the age of sixteen was entered a pensioner of St. John's College, Cambridge, along with his elder brother George (MAYOR, *Admissions to St. John's*, pt. ii. p. 50), under Ralph Sanderson, a north-countryman and fellow of the college. He was elected a scholar, and subsequently (30 March 1680) fellow of his college, on the foundation of Dr. Ashton, dean of York, to whom he has recorded his sense of gratitude as one to whom he was indebted for 'the few comforts' he afterwards enjoyed in life. Horace Walpole (*Corresp. with Cole*, iv. 114) observes, 'that it would be preferable to draw up an ample character of Mr. Baker, rather than a life. The one was most beautiful, amiable, conscientious; the other totally barren of more than one event.' During the time that he retained his fellowship, his pursuits afforded an admirable illustration of the uses which such endowments, when rightly applied, are capable of subserving. He was a model of an able, high-minded, and conscientious scholar, his time and energies being mainly devoted to antiquarian and historical research. Unfortunately he was a nonjuror, and as early as 1690 he resigned the living of Long Newton to which he had been presented by Lord Crewe, bishop of Durham. On the accession of George I, the enactment of the abjuration oath brought the law to bear with renewed severity on non-compliers, and on 21 Jan. 1716-7 Baker also was compelled to resign his fellowship—a fate, observes Cole, which had already befallen 'many more worthy and conscientious men.' Dr. Jenkin,

the master of St. John's, had himself been required to take the oath of allegiance on proceeding B.D., and had complied, although he had formerly professed the same principles as Baker. The latter, however, was possessed by the belief that Dr. Jenkin could have screened him had he chosen to do so, and he continued long after to cherish feelings of dignified resentment. Baker, in fact, could never altogether overcome his sense of wrong at his ejection, although the blow was considerably mitigated by the consideration shown him by the college authorities, and by the kindness of friends. He was permitted to retain his rooms in college, and continued to reside there as a commoner-master until his death. Among the fellows of St. John's was Matthew Prior, the poet; and according to Dr. Goddard, the writer of the life in the 'Biographia Britannica' (p. 520), being in easy circumstances, Prior handed his fellowship dividend, as he received it, over to his friend Baker. This statement, however, is discredited by Masters (*Life of Baker*, p. 120), who states that Baker 'lived comfortably and much to his own satisfaction' on an annuity of 40*l.* a year which he inherited from his father (*ibid.* p. 39).

Such were the circumstances under which the indefatigable scholar laboured on for some four-and-thirty years, during which period he acquired the well-earned reputation of being inferior to no living English scholar in his minute and extended acquaintance with the antiquities of our national history. His friends and correspondents, among whom were Burnet, Fiddes, Kennet, Hearne, Strype, Archbishop Wake, Le Neve, Peck, Dr. Rawlinson, Dr. Ward, Ames, Browne Willis, Dr. Richardson, John Lewis, Humphrey Wanley, and Masters (his biographer), represented the chief names in English historical literature in his day. To Wake, at that time dean of Exeter, he rendered material assistance in the compilation of his 'State of the Church,' although the work was conceived in a spirit diametrically opposed to the doctrines of the Anglican party. Wake, in order to show his sense of these services, afterwards offered to present any one of Baker's friends, whom the latter (being himself ineligible) might name to him, to a benefice of the value of 200*l.* per annum. Baker declined the offer, but asked the archbishop to present him with a copy of his 'State of the Church,' containing corrections and additions in his own handwriting. To this request Wake acceded, and the volume is now in the possession of the university library at Cambridge. To Burnet, Baker rendered similar service by

forwarding a series of corrections and criticisms of the 'History of the Reformation.' It is not surprising that Burnet should have felt himself unable to accept them all without some reservations; but the following entry by Baker in the third volume of his copy of the 'History' preserved in the university library is creditable to both: 'Ex dono doctissimi auctoris, ac celeberrimi præsulis Gilberti episcopi Sarisburiensis. I shall always have an honour for the author's memory, who entered all the corrections I had made at the end of this volume. If any more are found they were not sent, for he suppressed nothing.'

Baker himself aspired to write an 'Athenæ Cantabrigienses,' if not a history of the university, on the plan of Anthony Wood's well-known work relating to Oxford (Letter to Wanley, *Harl. MSS.* 3778); and with this design accumulated a great mass of materials, mainly from manuscript sources, which he transcribed into forty-two folio volumes. The sound judgment and scrupulous care shown in this collection impart to it an unusual value. The first twenty-three volumes, which he bequeathed to his friend Harley, Lord Oxford, are now in the Harleian collection in the British Museum; volumes xxiv. to xlii. are in the university library at Cambridge. An index to the whole series was published in 1848 by four members of the Cambridge Antiquarian Society, and a 'Catalogue' (of a far more elaborate character) of the contents of the Cambridge volumes, by Professor John E. B. Mayor, was published for the syndics of the University Press in 1867. The 'History of St. John's College' in the former series (*MSS. Harl.* 1039), by Baker himself, has been edited by Professor Mayor (1869) with extensive additions and annotations, and the whole work stands unrivalled as a history of a single collegiate foundation, in accuracy, completeness, and general excellence.

Baker also reprinted, with a valuable biographical preface, Bishop Fisher's funeral sermon for the Lady Margaret, mother of King Henry VII (London, 12mo, 1708); a copy, with transcripts of his manuscript notes, is preserved in the Bodleian library, and has been printed by Dr. Hymers. But the work by which he earned his chief contemporary reputation was published anonymously; this was his 'Reflections on Learning,' a treatise which went through seven editions. In its main object it somewhat resembled Dryden's 'Religio Laici,' being designed to enforce the insufficiency of the human understanding and of science as guides for the formation of belief and the conduct of life. The literary merits of the work, and

the manner in which it harmonised with the theological prejudices of the time, gained for it an amount of popularity which it scarcely merited, when we consider that its depreciatory estimate of the value of scientific research is derived from a survey of the subject in which Bacon is but faintly commended, the name of Locke entirely omitted, and the Copernican system referred to in contemptuous terms (7th ed. pp. 104-9). 'We,' says Baker, in conclusion, 'who know so little of the smallest matters, talk of nothing less than *new theories of the world*, and *vast fields of knowledge*; busying ourselves in natural inquiries, and flattering ourselves with the wonderful discoveries and mighty improvements that have been made in humane learning, a great part of which are purely imaginary, and at the same time neglecting the only true and solid and satisfactory knowledge' (p. 285).

Baker died somewhat suddenly on 2 July 1740, having been seized with apoplexy and found insensible on the floor of his study. During his lifetime he had expressed the wish that he might be buried near the grave of the founder, to whose liberality he felt himself under so much obligation. His desire found its accomplishment, and he was interred near Dr. Ashton's tomb in the ante-chapel of the former chapel of St. John's College. Cole (MSS. xlix. 93) describes his funeral as 'very solemn, with procession round the first court in surplices and candles.'

Baker was a grandson of Colonel Baker of Crooke, a staunch royalist, who distinguished himself in the civil war by his gallant defence of Newcastle against the Scots in 1639. A nephew of the antiquarian, George Baker, entered as a fellow commoner at St. John's only the day before his uncle's seizure. Few scholars have enjoyed a better reputation than Baker even among those who differed from them in opinion; and his slender purse was ever open even to assist those with whose views he did not altogether sympathise. In imparting knowledge from his own great stores, he was equally unselfish; and by Zachary Grey (a friend of Cole's), who collected the materials for his life, he is designated not only 'the most knowing in our English history and antiquities,' but also 'the most communicative man living' (*Examination of Neal's History of the Puritans*, ii. 62 n.; see also FIDDES'S *Life of Wolsey*, p. 312). His generosity met with a certain return, and many of his friends were in the habit of presenting him with books, while he himself was an indefatigable collector. He subscribed to all antiquarian works, and procured subscribers. At his death the greater part of

his collections came into the possession of the college, and the shelves of the college library were enlarged for their reception. Two large volumes of his letters to Hearne are in the Bodleian, and also some of his books. His letters to Strype are in the Cambridge University library, and the publication of his whole correspondence is in contemplation by the Surtees Society. His notes on Wood's 'Athenæ' are incorporated in the edition by Bliss. Most of his books contain notes, sometimes of considerable value, in his own handwriting, a hand always recognisable by its size and great legibility. His sense of the wrong which he had experienced is left on lasting record, owing to his invariable practice of appending to his name on the blank leaf the words 'Socius ejectus.' There are portraits of Baker in St. John's College and in the Bodleian, the latter having been formerly in the possession of Lord Oxford.

Baker's valuable manuscript collections have been largely utilised by Messrs. C. H. and Thompson Cooper in their successive works, the 'Annals of Cambridge,' the 'Athenæ Cantabrigienses,' and the 'Memorials of Cambridge.' The fact that his history of his own college was allowed to remain so long in manuscript is probably to be attributed to the prejudices excited against him as a nonjuror, and, consequently, an opponent of all religious tests. The college, however, early procured a transcript (see MAYOR'S *Pref.* p. vi). The additions to the copy in the Cole manuscripts are incorporated in the edition of 1869, Cole tells us that Dr. Powell (master of St. John's 1765-75), a violent, dogmatic man, could never listen with patience to any commendation either of the history or its author.

J. E. B. Mayor; Brydges's *Restituta*, iv. 409; Freeman's *Portrait Pictures of St. John's College*; Index to *Reliquiæ Hearnianæ*.] J. B. M.

BAKER, WILLIAM (1668-1732), bishop of Norwich, was the son of William Baker, vicar of Ilton, Somersetshire, where he was born in 1668. He was educated at Crewkerne School, and entered at Wadham College, Oxford, of which college he was first fellow, and eventually became warden in 1719. He was successively rector of St. Ebbes, of Padworth, and of Blayden, all in the diocese of Oxford. In 1714 he was collated to the archdeaconry of Oxford. In

1723 he was promoted to the see of Bangor, whence in 1727 he was translated to Norwich. He held the rectory of St. Giles-in-the-Fields in *commendam* up to the time of his death, which occurred at Bath, 4 Dec. 1732. He was never married. During his brief tenure of the see of Bangor he managed to make his only brother treasurer of the church there, and his two nephews were provided for by being made registrars of the diocese of Norwich. Blomefield, the historian of Norfolk, who was ordained by him, gives the titles of four sermons which he printed; one of them was published by special command of Queen Anne in 1710. He was chaplain in ordinary to George I. In the abbey church at Bath there is a monument to him with a fulsome epitaph.

[Blomefield's *Norf.* iii. 595; Le Neve's *Fasti.* A. J.]

**BAKER, WILLIAM** (1742–1785), printer, was born at Reading in 1742, and was the son of William Baker, for more than forty years schoolmaster at that place, and an amiable and accomplished man. Even at an early age young Baker's close application to study injured his health. His father had hoped to devote him to the church, but being disappointed by Dr. Bolton, dean of Carlisle, who had promised to give the youth a university training, he apprenticed him to Mr. Kippax, a printer, of Cullum Street, London. Baker diligently applied himself to his calling, and still employed his leisure in self-improvement. The money earned by working overtime was spent in books. Before he was twenty-one years old his exertions produced severe illness. On the death of Kippax, Baker succeeded to his business, afterwards removing to Ingram Court, where he was in partnership with John William Galabin. In 1770 he published '*Peregrinations of the Mind*,' a series of twenty-three essays, after the style of the '*Rambler*,' and upon such subjects as the stage, love, happiness, war, patriotism, cruelty, the unreasonable compliments paid to the ancients for their works, &c. It had always been his practice to note passages which struck his attention in the course of reading, and in 1783 he printed a little volume of short extracts, noticeable for beauty of language or elevation of thought, from a wide range of Greek and Latin authors. No special arrangement is observed, but the precision of the references gives the book a value usually absent in such compilations. He contributed some poetical pieces to the magazines, and is said to have written sermons for clerical friends. He was an excellent linguist and

good classical scholar. His modesty and learning made him many friends among the leading antiquaries and men of letters of the day, including O. Goldsmith, Dr. Edmund Barker, James Merrick, Hugh Farmer, and Cæsar de Missy. He left in manuscript a correspondence with another Reading worthy, Robert Robinson, author of '*Indices in Dion. Longinum, in Eunapium, et in Hieroclem*' (Oxon. 1772), besides many other letters on points of Greek scholarship. A small unfinished treatise on abuses of grammatical propriety in ordinary conversation also remained unprinted. His limited but choice library of classical books ultimately became the property of Dr. J. C. Lettsom.

About Christmas 1784 he suffered from over-exertion in walking, and after an illness of nine months died from 'an enlargement of the omentum' 29 Sept. 1785, in his forty-fourth year. He was buried in the vault of St. Dionis Backchurch, the parish in which he had lived when in London. A Latin inscription to his memory was placed by his younger brother upon the family tomb in the churchyard of St. Mary, Reading.

His works are: 1. '*Peregrinations of the Mind* through the most general and interesting subjects usually agitated in life, by the late W. Baker, printer. A new edition, to which is prefixed a biographic memoir of the author.' London, printed by the editor [Maurice], 1811, sm. 8vo. The first edition was in 1770, sm. 8vo. 2. '*Theses Græcæ et Latinae selectæ*.' Lond. in off. J. W. Galabin et W. Baker, 1783, sm. 8vo.

[An anonymous biography by a friend first appeared in the *Encyclopædia Londinensis* (1810), reprinted on a single 4to leaf as '*Original Anecdotes of W. Baker*' (n.d.), and reproduced in C. Coates's *Hist. of Reading*, 1802; Chalmers's *Biog. Dict.*, and the memoir prefixed to the 1811 ed. of the *Peregrinations*; see also Nichols's *Illustrations*, ii. 666, viii. 498, 609, and his *Lit. Anecdotes*, iii. 715–6.] H. R. T.

**BAKER, SIR WILLIAM ERSKINE** (1808–1881), general, and a distinguished engineer, was the fourth son of Captain Joseph Baker, R.N., and was born at Leith in 1808. He was educated at the East India Company's military college at Addiscombe, and went out to India as a lieutenant in the Bengal engineers in 1826. He was promoted captain in 1840, and saw service in the first Sikh war. He led one of the attacking columns to the entrenchments at Sohraon, for which he was thanked in the despatch and promoted major. He was afterwards exclusively employed in the public works department, and was successively superin-

tendent of the Delhi canals, superintendent of canals and forests in Scinde, director of the Ganges canal, consulting engineer to the government of India for railways, and secretary to the government of India in the public works department. His services as a civil engineer were very great, and he was regarded as the greatest authority of his time on irrigation. His military promotion continued during his civil employment, and he became lieutenant-colonel in 1854 and colonel in 1857. In 1857 he returned to England, and in the following year was appointed military secretary to the India Office. But his knowledge was rather that of an engineer than a soldier, and in 1861 he became a member of the council of India, and in that capacity chief adviser to the home government on Indian engineering matters. He was promoted major-general in 1865, colonel-commandant of the royal (late Bengal) engineers in 1871, and lieutenant-general in 1874; he was made a K.C.B. in 1870, and in 1875 he withdrew from public life. He retired to his seat in Somersetshire, and, after becoming general in 1877, died there on 16 Dec. 1881. Sir William Erskine Baker's work in Scinde is particularly memorable; the great irrigation works which he carried out there have rendered Sir Charles Napier's conquest of real value, and, according to Captain Burton, have made 'the desert flourish like the rose.'

[For Sir W. E. Baker's life and services consult the Times for 20 Dec. 1881; for the engineering works in Scinde see Capt. Burton's Scinde, or the Unhappy Valley.] H. M. S.

**BAKEWELL, ROBERT** (1725-1795), grazier, was born at Dishley, otherwise Ditley, and Dishley Grange, near Loughborough, Leicestershire, in 1725. His father, who had been born at the same place, was a farmer, renting a farm there of 440 acres; and Robert Bakewell, having qualified himself for experiments in husbandry and cattle-breeding by visiting farms in the west of England and other parts of the country where various modes of procedure prevailed, took charge of the farm on the failure of his father's health, about the year 1755, and succeeded to the entire management of it on his father's death in 1760 (*Gent. Mag.* vol. lxx. part ii. pp. 969, 970). He aimed at obtaining a better breed of sheep and oxen, believing 'that you can get beasts to weigh where you want them to weigh, i.e. in roasting pieces and not boiling pieces' (YOUNG, *Farmers' Tour*, 1771, pp. 102-35). He succeeded in producing the new Leicestershire breed of sheep, which 'within little more than half

a century spread themselves over every part of the United Kingdom and to Europe and America' (YOUATT, *On Sheep*, p. 318), and thus England 'had 2 lbs. of mutton where there was only 1 lb. before' (*Husbandry of Three Celebrated Farmers*, p. 15). Bakewell succeeded in producing the Dishley cattle, called also the new Leicestershire long-horn, 'a small, clean-boned, round, short-carcased, kindly-looking cattle, inclined to be fat' (CUTLER, *Observations on Live Stock*, p. 26), which 'the grazier could not too highly value,' though 'their qualities as milkers were greatly lessened' (YOUATT, *On Cattle*, p. 192); and he 'produced a breed of black horses, remarkable for their strength in harness on the farm, and for their utility in the army. In this capacity of breeder, Bakewell, in his desire to obtain the 'barrel' shape, was the first to carry on the trade of ram-letting on a large scale, and he established a club, the Dishley Society, for the express object of insuring purity of breed. Amongst his own stock, prices rose with so much rapidity that whereas in 1760 his rams were hired for a few shillings the season, by 1770 they fetched 25 guineas, and a few years later still he made 3,000*l.* a year by their hire, deriving in one year from one particular ram, known as 'Two-pounder,' as much as 1,200 guineas. Measurements of his rams and ewes were taken in 1770, and published as remarkable examples of careful breeding (NICHOLS, *Leicestershire*, p. 759); a sketch of one of his sheep was taken by Schnebbie in 1790 (*ib.* p. 768); and other sketches of his stock appear in Garrard's 'British Oxen,' and in Youatt 'On Cattle,' p. 196. In 1785 Bakewell exhibited a famous black horse for some months in London; the king, George III, had previously had it brought before him by Bakewell in the courtyard of St. James's Palace. Many of the present humane notions regarding animals were anticipated by Bakewell, his stock being treated with marked kindness, his sheep being 'kept as clean as race-horses, and sometimes put into body-clothes' (THROSBY, *Views in Leicestershire*, p. 411), and even his bulls were remarkable for obedience and docility.

In Bakewell's experiments on feeding and housing stock he was as bold as in breeding. He stood first in the kingdom 'as an improver of grass-land by watering' (MARSHALL, *Rural Economy of Midland Counties*, i. 284 *et seq.*); he flooded his meadows, making a canal of a mile and a quarter in length, and was able by means of irrigation to cut grass four times a year (MONK's *Agricultural Report*); he had methods, by double floors to his stalls, of collecting farm refuse and diluting it, in

order to obtain liquid manure. On these accounts his farm was visited as a curiosity by all classes. All were shown the boats in which he carried some of his crops; his wharf for these boats; his plan of conveying his turnips about the farm by water (in his own words, 'We throw them in, and bid them meet us at the Barn End'); his teams of cows instead of oxen; his collection of skeletons of animals, and of carcases of animals (in pickle), to test where breeds varied in bone and flesh; and, there being no inn near at hand, his visitors were hospitably entertained by him (*Gent. Mag.* vol. lxxiii. part ii. p. 792 *et seq.*).

Bakewell died, unmarried, on 1 Oct. 1795, aged 70, and was buried at Dishley, where, however, no monument was erected to him (NICHOLS). His nephew, Honeybourn, succeeded to his farm, which maintained its reputation for some years; but though the name and recollection of the new Leicestershire cattle will never be lost, the breed itself has completely passed away (YOUTT, *On Cattle*, p. 208), and the first expenses of Bakewell's experiments would appear to have exceeded his profits, for he was bankrupt in November 1776 (*Gent. Mag.* xli. 581).

[*European Magazine*, vol. xxviii.; *Chalmers's Biog. Dict.*; *The Husbandry of Three Celebrated British Farmers*, Messrs. Bakewell, Arbuthnot, and Duckett, by the secretary to the Board of Agriculture (Young), 1811; *British Husbandry*, 1834; Humphry Davy's *Lectures*, p. 321, where, however, Davy is mistaking Bakewell for the subject of the succeeding article; *Annual Register*, 1771, pp. 104-10; *Royal Agricultural Journal*, iv. 262, vi. 17, viii. 2, xvi. 223, xvii. 479, xxiii. 73.] J. H.

BAKEWELL, ROBERT (1768-1843), geologist, born in 1768, was not of the family of the preceding Robert Bakewell, to whom, however, he was known, and with whom he has sometimes by error been identified. He records that he was asked by the Countess of Oxford 'whether he was related to the Mr. Bakewell who invented sheep' (*Introduction to Geology*, 5th edition, pp. 402 and 403, *note*), and he replied that there was no connection between them. There is no evidence as to his parentage, though it is probable he was one of the Bakewells of Nottingham, quakers and wool-staplers of that city (*Observations on Wool*, appendix, p. 183). Bakewell, as a schoolboy, amused himself with the construction of telescopes (*Phil. Mag.* xlv. 299), and, being placed amongst wools in his early life, submitted them to the microscope. He afterwards speculated as to the effects of soil and food upon them, and published his 'Observations on Wool' in 1808, at Wake-

field, Yorkshire; thenceforth he devoted himself to science. In 1810 he was in communication with Kirwan, and investigated the Cobalt Mine at Alderley Edge, Cheshire (see his *Description*, &c., *Monthly Mag.* for Feb. 1811). From 1811 onwards he lectured on geology all over the country, exhibiting sections of rock formation and a geological map, the first then of its kind (*Introduction to Geology*, 5th edition, Preface, p. xii). In 1812 he was engaged in a controversy with John Farey and others (*Phil. Mag.* xl. 45, and xlii. 116 and 121). In the same year he discovered a fine scenite, in large blocks, whilst examining Charnwood Forest (*Gent. Mag.* vol. lxxxi. part i. p. 81); and his mineralogical surveys having taken him into Ireland, and up Cader Idris, and into every English county except one, Hampshire (*Travels in the Tarentaise*, i. 270), he brought out his 'Introduction to Geology' in 1813, making its distinguishing feature the fact that he drew his illustrations from situations in our own island, accessible to his readers (*Review in LONDON'S MAG. of Nat. Hist.* i. 353 *et seq.*). This work was a great success; it came from 'a person whose name is undecorated with any appendages' (Preface to 2nd edition, p. xi), and there was much novelty, at the time, about all geological investigation, the Geological Society (of which Bakewell never was admitted a member) having only been formed late in 1807. Bakewell was encouraged to establish himself at 13 Tavistock Street, Bedford Square, as geological instructor; and he continued his mineralogical surveys, in company with his pupils and alone, till he had again travelled 2,000 miles, when he brought out a second edition of his work in 1815. This was translated into German by Müller at Friburg, and it was followed by an 'Introduction to Mineralogy' in 1819. Meanwhile Bakewell was examining the coalfield at Bradford (*Trans. Geol. Soc.* ii. 282); he was inventing a safety furnace for preventing explosions in coal mines (*Phil. Mag.* l. 211); and he was publishing his 'Observations on the Geology of Northumberland and Durham' (*ib.* xlv. 81 *et seq.*), and his 'Formation of Superficial Part of Globe' (*ib.* pp. 452-9), with some refutations of a charge against him of plagiarism (*ib.* pp. 219 and 297). Between 1820 and 1822 Bakewell was travelling in the Tarentaise, the Graian and Pennine Alps, in Switzerland, and Auvergne; and in 1823 published his 'Travels,' so described in the sub-title, in two volumes, with illustrations, some of which were by his wife. These 'Travels,' undertaken for geological study, yet full of humour and personal detail, caused a theological attack upon Bakewell by Dr.

Pye Smith (*Vindication of Citizens of Geneva from Statements, &c.*, 1825). Continuing his scientific investigations, Bakewell published his 'Salt' (*Phil. Mag.* lxiii. 86, reprinted in 'Silliman's American Journal,' x. 180); his 'Lava at Boulogne' (*Phil. Mag.* lxiv. 414); his 'Thermal Waters of the Alps' (*ib.* iii. 14, also reprinted in Silliman, xx. 219); his 'Mantell's Collection of Fossils' at Lewes (*Mag. Nat. Hist.* iii. 9); and a third edition of his 'Geology' in 1828, immediately reprinted in America. At that date Bakewell had settled at Hampstead, where his garden afforded him the opportunity of writing on the action of the 'Pollen of Plants' (*Mag. Nat. Hist.* ii. 1), and where he prepared the following scientific papers: 'Organic Life,' 1831 (*Phil. Mag.* ix. 33, appearing also in Forriep's 'Notizen,' xxx. col. 134); 'Gold Mines in United States,' 1832 (*Mag. Nat. Hist.* v. 434); and 'Fossil Elephants in Norfolk,' 1835 (*ib.* ix. 37). A fourth edition of the 'Geology' was issued in 1833, which provoked a criticism from Professor Sedgwick (*Geol. Trans.* iii. 472, 1835); it reached a fifth edition in 1838, and still has its readers and supporters of its theories. Bakewell died at Downshire Hill, Hampstead, on 15 Aug. 1843, aged 76 (*Annual Register*, 1843).

A list of Bakewell's fugitive productions is in the 'Royal Society's Catalogue of Scientific Papers,' 1867, p. 165, but it is incorrect. Three of the articles enumerated, all three on 'Niagara,' are by one of the geologist's sons, also a Robert Bakewell. The error is curious, because the geologist himself introduces this son to the scientific world in 1880, in the preface to the first of the three papers in question (*Mag. Nat. Hist.* iii. 117). Robert Bakewell the younger became a resident at New Haven, America, whence he dated his second and third papers, 1847 and 1857. Another of the geologist's sons, Frederick C. Bakewell, wrote 'Philosophical Conversations,' 1833, and 'Natural Evidences of a Future Life,' 1835, both of which passed through several editions.

[Poggendorf's Biographisch-litterarisches Handwörterbuch; Donaldson's Agricultural Dictionary; and the authorities cited in the article.]  
J. H.

BALAM, RICHARD (*A.* 1653), mathematician, was the author of 'Algebra, or the Doctrine of composing, inferring, and resolving an Equation' (1653). There seems to be nothing original in this work but a multitude of terms which have perished with their inventor. The following sentence may be worth quoting: 'It seems probable to me that quantity is not the true genus of number

but that measure and number, magnitude and multitude, quantity and quosity, are two distinct species of one common genus.'

[Algebra, preface, cf. p. 15.] F. Y. E.

BALATINE, ALAN (*A.* 1560), is mentioned by Edward Hall in the list of the English writers from whose works he compiled his 'Chronicle.' Pits on this account classes him as an Englishman, but, according to Dempster, he was of Scotch origin, and, after studying privately, went to Germany, where he completed his education, and also taught in the gymnasiums. He wrote 'De Astrolabio,' 'De Terræ Mensura,' and 'Chronicon Universale.' Dempster states that he flourished about 1560, but as Hall's 'Chronicle' was published in 1542, Balatine must have written his 'Chronicon Universale' at least twenty years before 1560. He died in Germany.

[Pits, De Angliæ Scriptoribus, p. 825; Dempster's Hist. Ecc. Gent. Scot. (1627), p. 100; Tanner's Bibl. Brit. p. 66.]

BALCANQUHALL, WALTER (1548-1616), presbyterian divine, derives his surname originally from lands in the parish of Strathmiglo, Fifeshire. It is nearly certain that Walter was of the 'ilk' of Balcanquhall, and that he was born there—according to his age at death—in 1548 (cf. Sibbald's 'List of the Heritors' (1710) in *History of Fife*, appendix No. 2).

Our earliest notice of him is that he was entered as 'minister of St. Giles, Edinburgh,' on Whit Sunday 1574, when we learn that 'he was desyrit by other towns and large stipend promist,' but 'yet he consented to stay and accept what they pleased.' At this time he is described in James Melville's 'Diary' (p. 41, *Wodrow Society*) as 'ane honest, upright hearted young man, latlie enterit to that menestrie of Edinbruche' [Edinburgh]. He was elected to the chaplaincy of the Altar called Jesus, 20 Nov. 1579. Having preached a memorable sermon, mainly directed against the influence of the French at court, 7 Dec. 1580, he was called before the privy council on the 9th, and 'discharged.' He attended the Earl of Morton while in prison under condemnation, 2 June 1581. When James VI of Scotland devised his scheme of re-establishing 'the bishops' in Scotland, he found Balcanquhall, along with James Lawson, Robert Pont, and Andrew Melville, and their like-minded brethren, in active opposition. On the calling together of the estates of the realm in 1584, the king sent an imperative message to the magistrates of Edinburgh 'to seize and im-

prison any of the ministers who should venture to speak against the proceedings of the parliament.' But Balcanquhall (along with James Lawson) preached fearlessly against the proposals; and along with Pont and others took his stand at the cross while the heralds proclaimed the acts passed by the subservient parliament, and publicly 'protested and took instruments' in the name of the 'kirk' of Scotland against them. The sermon was delivered on 24 May. A warrant was issued, and Balcanquhall and Lawson fled to Berwick-on-Tweed (MELVILLE, *Diary*, p. 119).

The storm blew over, though his house in Parliament Square was given to another in the interval. On his return to Edinburgh, a house formerly occupied by Durie was given to him (1585). On 2 Jan. 1586 he preached before the king 'in the great kirk of Edinburgh' [St. Giles] when the sovereign 'after sermon rebuikit Mr. Walter publiclie from his seat in the loft [gallery] and said he [the king] would prove there sould be bishops and spirituall magistrats endued with authoritie over the minestrie; and that he [Balcanquhall] did not his dutie to condemn that which he had done in parliament' (MELVILLE, *Diary*, p. 491). In this year (1586) he is found one of eight to whom was committed the discipline of Lothian by the general assembly. A larger house, which had been formerly occupied by his colleague Watson, was assigned to him 28 July 1587, and his stipend augmented. He was appointed to attend the coronation of Queen Anne, 17 May 1590. For some years he seems to have been wholly occupied with his pulpit and pastoral work. In 1596, however, his bold utterances again brought him into conflict with the sovereign; but a warrant having again been issued, again he escaped—this time to Yorkshire, after being 'put to the horn' as a fugitive. He appears to have been absent from December 1596 to April or May 1597. In May 1597 he resigned his 'great charge' of St. Giles in order to admit of new parochial divisions of the city. In July he was permitted to return, and was chosen 'minister' of Trinity College Church, to which he was admitted 18 April 1598. He was the friend and companion of the Rev. Robert Bruce, and bribes were tendered him in vain to get him to 'fall away' from Bruce. On 10 Sept. 1600 he was once more in difficulties, having been called before the privy council for doubting the truth of the Gowrie conspiracy. 'Transported' by the general assembly to some other parish, 16 May 1601, he was afterwards allowed to return to Trinity College (19 June), and he was in the

general assembly of 1602. In conjunction with Robert Pont, he again took his stand at the cross, and publicly protested in name of the 'kirk' against the verdict of assize finding the brethren who met in general assembly at Aberdeen guilty of treason. Later, for condemning the proceedings of the general assembly in 1610 he was summoned before the privy council and admonished. He ceased preaching on 16 July 1616 from a disease in his teeth, and died 14 Aug. following, in the sixty-eighth year of his age and forty-third of his ministry.

He married Margaret, a daughter of James Marjoribanks, merchant; in right of whom he had become 'burgess and good brother' of the city (15 Feb. 1591). They had three sons, Walter [see BALCANQUHALL, WALTER, 1586?-1645], Robert, minister of Tranent, and Samuel, and a daughter Rachel.

[Reg. Assig. Presby.; Edinburgh Counc. Reg.; Hew Scott's *Pasti Ecclesiarum Scotticarum*, i. pt. i. 5-6, 31; Bruce's Sermons; Balfour's *Historical Works*; Stevens's *Mem. of Heriot*; Boke of the Kirke; Crauford's *Univ. of Edinburgh*; Murray's *Life of Rutherford*.] A. B. G.

**BALCANQUHALL, WALTER, D.D.** (1586?-1645), royalist, son of the Rev. Walter Balcanquhall [q. v.], who steadfastly opposed episcopacy, was born in Edinburgh 'about 1586'—the year of his father's 'rebuke' by King James. Convinced, it has been alleged, by the arguments in favour of bishops maintained by the sovereign, he proceeded to the university of Edinburgh with a purpose ultimately to take orders in the church of England. In 1609 he graduated M.A. He afterwards removed to Oxford, entering at Pembroke College. He passed B.D., and was admitted a fellow on 8 Sept. 1611. He was appointed one of the king's chaplains, and in 1617 he received the mastership of the Savoy, London. In 1618 James sent him to the synod of Dort. His letters from that famous synod, which were addressed to Sir Dudley Carleton, are preserved in John Hales's 'Golden Remains.' Before proceeding to Dort the university of Oxford conferred upon him the degree of D.D. In March 1624-5 he obtained the deanery of Rochester, and in 1639 he was made dean of Durham. The 'Calendars of State Papers' from 1625 onward reveal him as a pushing suppliant for offices and dignities. On the death of the celebrated George Heriot on 12 Feb. 1624, it was found that Balcanquhall was one of the three executors of his will and was assigned the most responsible part in founding the hospital which was to bear the royal jeweller's name. Balcanquhall

drew up the statutes in 1627, and discharged the weighty trust imposed on him with integrity and ability.

In 1638 he revisited his native country, as chaplain to the Marquis of Hamilton, the royal commissioner. Balcanquhall was accused of shiftiness and treachery in his conduct towards 'the people,' who were contending earnestly for their religious rights. He was the undoubted author of an apologetical narrative of the court proceedings under the title of 'His Majestie's Large Declaration concerning the Late Tumults in Scotland' (1639). On 29 July 1641 he and others of kin with him were denounced by the Scottish parliament as 'incendiaries.' He was afterwards 'hardly entreated' by the dominant puritan party, and was one of the 'sufferers' celebrated by Walker in his 'Sufferings.' He retreated to Oxford and shared the waning fortunes of the king. He died at Chirk Castle, Denbighshire, on Christmas day 1645. Sir Thomas Middleton erected a 'splendid monument' to him in the parish church of Chirk.

**BALCARRES, EARLS OF.** [See LINDSAY ALEXANDER, first EARL, 1618-1659; LINDSAY, COLIN, third EARL, 1654?-1722; LINDSAY, ALEXANDER, sixth EARL, 1752-1825.]

**BALCARRES, COUNTESS OF (1621?-1706?).** [See CAMPBELL, ANNA MACKENZIE.]

**BALCHEN, SIR JOHN (1670-1744),** admiral, was born, according to local tradition and an anonymous inscription on his picture, 'of very obscure parentage, 4 Feb. 1669-70, at Godalming, in Surrey.' In a memorial to the admiralty, dated 12 June 1699, he related of his early history: 'I have served in the navy for fourteen years past in several stations, and was lieutenant of the Dragon and Cambridge almost five years, then had the honour of a commission from Admiral Neville in the West Indies to command the Virgin's prize, which bears date from 25 July 1697, and was confirmed by my lords of the admiralty on our arrival in England. I continued in command of the Virgin till September 1698, then being paid off, and never at any time have committed any misdemeanour which might occasion my being called to a court martial, to be turned out or suspended.' He was asking for the command of one of the small ships employed

on the coast of Ireland; but it was fully eighteen months before he was appointed to the Firebrand for the Irish station. In December 1701 he was turned over to the Vulcan fireship, was attached to the main fleet under Sir George Rooke on the coast of Spain, and was with it at the capture or burning of the French and Spanish ships at Vigo, 12 Oct. 1702. It is uncertain whether the Vulcan took any active part in the burning, but Balchen brought home the Modéré prize of 56 guns. A few months later, February 1702-3, he was appointed to the Adventure, 44 guns, and continued in her for the next two years, cruising in the North Sea and in the Channel, and for the most part between Yarmouth and Portsmouth. On 19 March 1704-5 he was transferred to the Chester, and towards the end of the year was sent out to the Guinea coast. He returned home the following summer, and continued cruising in the Channel and on the Soundings, where, on 10 Oct. 1707, he was one of a small squadron which was captured or destroyed by a very superior French force under Forbin and Duguay-Trouin. The Chester was taken, and a year later, 27 Sept. 1708, when Balchen had returned to England on parole, he was tried by court-martial and fully acquitted; the decision of the court being that the Chester was in her station, and was engaged by three of the enemy, who laid her on board, entered many men, and so forcibly got possession of the ship. He was, however, not exchanged till the next year, when, in August 1709, he was appointed to the Gloucester, a new ship of 60 guns then fitting at Deptford. On 8 Oct. he had got her round to Spithead, and wrote that he would sail in a few days; but he had scarcely cleared the land before he again fell in with Duguay-Trouin (26 Oct., in lat. 50° 10' N.), and was again captured. He was therefore again tried by court-martial for the loss of his ship (14 Dec. 1709), when it appeared from the evidence that the Gloucester was engaged for above two hours with Duguay's own ship, the Lis, 74 guns, another firing at her at the same time, and three other ships very near and ready to board her. She had her fore-yard shot in two, so that her head-sails were rendered unserviceable, and had also received much damage in her other yards, masts, sails, and rigging. The court was therefore of opinion that Captain Balchen and the other officers and men had discharged their duties very well, and fully acquitted them. It may be added that the French sold the Gloucester to the Spaniards, and that for many years she was on the strength of the Spanish navy under the name of Conquistador.

Within a few months after his acquittal Balchen was appointed to the Colchester, 48 guns, for Channel service. He continued in her, between Portsmouth, Plymouth, and Kinsale, for nearly five years, and in February 1714-15 was transferred to the Diamond, 40 guns, for a voyage to the West Indies and the suppression of piracy. His orders were to stay out as long as his provisions would last, or he could get others cheap at Jamaica. He came home in May 1716, and whilst lying at the Nore waiting for orders was involved in a curious difficulty with a custom-house officer who desired to search the ship, but would show no authority and was exceedingly insolent. Balchen put him in irons as an impostor, but released him on the representation of the master, who seemed to have some knowledge of the fellow. Balchen was afterwards called on for an explanation, and wrote a somewhat lengthy and very amusing account of the whole affair, which began with a bowl of punch on the quarter-deck, round which the captain, the master, the surgeon, the stranger, and the stranger's friend sat and drank and quarrelled (*Calendar of Treasury Papers*, 22 Nov. 1716).

Immediately on paying off the Diamond Balchen was appointed to the Orford guardship in the Medway, and continued in her till February 1717-18, when he commissioned the Shrewsbury, 80 guns, and in her accompanied Sir George Byng to the Mediterranean. On arriving on the station, Vice-admiral Charles Cornwall, till then the commander-in-chief, put himself under Byng's orders, hoisted his flag on board the Shrewsbury, and was second in command in the battle off Cape Passaro, 31 July (BALCHEN'S *Journal*, Log of the Shrewsbury). The Shrewsbury returned to England in December, and in the following May Balchen was appointed to the Monmouth, 70 guns, in which ship he accompanied Admiral Sir John Norris to the Baltic in the three successive summers of 1719, 1720, and 1721. Between the years 1722 and 1725 he commanded the Ipswich guardship at Spithead, and in February 1725-6 was again appointed to the Monmouth, and again went for the then yearly cruise up the Baltic, in 1726 with Sir Charles Wager, and in 1727 with Sir John Norris. He was afterwards, in October 1727, sent out as part of a reinforcement to Sir Charles Wager at Gibraltar, then besieged by the Spaniards, but came home in the following January, when the dispute had been arranged. On 19 July 1728 he was promoted to be rear-admiral, and in 1731 went out to the Mediterranean as second in command under Sir Charles Wager, with his flag on board the Princess Amelia. It

was a diplomatic pageant rather than a naval expedition, and the fleet returned home in December. In February 1733-4 he was advanced to be vice-admiral, and commanded a squadron at Portsmouth for a few months. In 1740 he had again command of a squadron of six sail of the line, to look out for the Spanish homeward-bound fleet of treasure-ships, which, however, escaped by keeping far to the north, making Ushant, and then creeping to the south well in with the coast of France, whilst the English squadron was looking for them broad off Cape Finisterre. In August 1743 Balchen was promoted to be admiral of the white. He commanded for a few months at Plymouth; but in the following April he was appointed to be governor of Greenwich Hospital, and was knighted. The appointment was considered as an honourable retirement from the active list, and in addition to its emoluments a pension of 600*l.* a year on the ordinary estimate of the navy was settled on him during life (13 April, *Admiralty Minute*); but on 1 June he was restored to his active rank as admiral of the white. A large fleet of store-ships on their way to the Mediterranean was blockaded in the Tagus by a powerful French squadron under the Count de Rochambeau. Balchen was ordered to relieve it, and, with his flag on board the Victory, sailed from St. Helen's on 28 July. Rochambeau was unable to oppose a force such as Balchen commanded; he drew back to Cadiz, whilst Balchen conveyed the store-ships to Gibraltar, saw them safely through the straits, and started on the return voyage. In the chops of the Channel his fleet was caught in a violent storm, on 3 Oct.; the ships were dispersed, but, more or less damaged, some dismasted, some leaking badly, all got into Plymouth or Spithead, with the exception of the Victory. She was last seen in the early morning of 4 Oct., and nothing was ever positively known as to her fate, whether she foundered at sea, or whether, as was more commonly believed, she struck on the Caskets. It was said that during the night of 4-5 Oct. her guns were heard by the people of Alderney, but even that was doubtful. Her maintop-mast was washed ashore on the island of Guernsey (*Voyages and Cruises of Commodore Walker* [1762, 12mo], p. 45). The admiral, Sir John Balchen, her captain, Samuel Faulknor, all her officers and men, and an unusual number of volunteers and cadets, 'sons of the first nobility and gentry in the kingdom,' being in all, it was estimated, more than eleven hundred souls, were lost in her. A gift of 500*l.* and a yearly pension of the same amount was immediately (27 Nov.) settled on the admiral's

widow, Dame Susan Balchen, and a monument to his memory was erected at the public cost in Westminster Abbey. His portrait, by Sir Godfrey Kneller, and bearing the inscription above referred to, is in the Painted Hall at Greenwich. He had one son, George, a captain in the navy, who died in command of the *Pembroke* in the West Indies, in December 1745.

[Official Letters and other Documents in the Public Record Office; Charnock's account (Biog. Nav. iii. 155), more especially of the early part of Balchen's career, is very imperfect and inaccurate; Lediard's *Naval History* (under date).]

J. K. L.

**BALD, ALEXANDER** (1783-1859), poetical writer, was born at Alloa, 9 June 1783. His father was for a long time engaged in superintending coal works in the neighbourhood, and was the author of the 'Corn Dealer's Assistant,' for many years an indispensable book for tenant-farmers in Scotland. A brother, Robert, attained some eminence as an engineer. Alexander was from an early age trained for commerce, and for more than fifty years conducted business at Alloa as a timber-merchant and brick-manufacturer. Throughout his life he devoted much of his leisure to literature, and was the friend and patron of many literary men in Scotland. He was among the first to acknowledge the merits of the poems of James Hogg, the Ettrick Shepherd, and paid him a visit many years before he had obtained general recognition as a poet. He established a Shakespeare Association in his native town, and at its annual celebrations secured the presence of eminent men of letters. To the 'Scots Magazine,' at the beginning of this century, Bald was a regular poetical contributor; but his poems show a very thin vein of poetical sentiment. One of them, 'The Lily of the Vale,' has been erroneously attributed to Allan Ramsay. Bald died at the age of 76, at Alloa, in 1859.

[Rogers's *Century of Scottish Life*, p. 237; Rogers's *Modern Scottish Minstrelsy*, v. 34.]

S. L.

**BALDOCK, RALPH DE** (d. 1313), bishop of London and lord chancellor, whose early history is unknown, first appears in 1271 as holding the prebendal stall of Holborn, in which Robert Burnel, Edward I's great chancellor, had preceded him. This disposes of Godwin's assertion that he was educated at Merton College, Oxford, which was not founded till 1274. His influence and ability must have been considerable, for he obtained the highest preferment in his diocese. In 1276

he was collated to the archdeaconry of Middlesex; became dean of St. Paul's in 1294; and was elected bishop of London in 1304. Three canons, who had been deprived by the archbishop during the vacancy of the see, appealed to the pope to declare the election void owing to their exclusion, but the bishop-elect won his cause at Rome, and was consecrated at Lyons in 1306. Though he does not appear to have spent his life at court or in the ministerial offices, he attracted the attention of Edward I, who nominated him lord chancellor in April 1307. The king's death followed in July, and Baldock was at once removed by Edward II at the instigation of the favourite Gaveston. His position and character marked him out as one of the ordainers forced by the parliament of 1310 on the king for the better regulation of his household. But he took little part in public affairs, preferring the duties and pastimes of a churchman. He wrote a history of England, and collected the statutes and customs of St. Paul's, works which existed in the sixteenth century, but are now lost. St. Paul's Cathedral was at this time being rebuilt and enlarged, and its new lady chapel was built by Baldock. He began it while he was yet dean, continued it as bishop, bequeathed money for its completion, and in it he was buried, after his death in 1313, 'under a goodly marble, wherein his portraiture in brass was curiously represented.'

[Wharton's *Hist. de Episc. Lond.* pp. 108-12; Godwin de Præsul.; Newcourt's *Repertorium*; Rot. Pat. et Fin. temp. Ed. I.; Foss's *Judges of England*, iii. 220-3.]

H. A. T.

**BALDOCK, ROBERT DE** (d. 1327), lord chancellor, first appears in the records as obtaining a grant of the royal rights over a manor in Surrey in 1287. As he held a stall in St. Paul's whilst his namesake [see **BALDOCK, RALPH DE**] was yet bishop of London, it may be inferred that they were related. Admitted to the prebend of Holywell in 1312, he obtained the archdeaconry of Middlesex two years later. But his attention was fixed on the court rather than on the church, which was looked upon by many clever adventurers at this time as a mere stepping-stone to ministerial greatness. Most of them, reading the signs of the times, were opposed to the government of Edward II. Yet Baldock was blinded to future dangers by the prospect of immediate aggrandisement. Soon after he became archdeacon he was permanently employed at court, and grew wealthy through pluralities. He held prebends at Lichfield and Lincoln, yet he never obtained a bishopric. In 1322, that of Winchester falling vacant,

Edward II bade his agent at the papal court demand it for Baldock, but the agent secured the papal nomination for himself, and three years later, in the case of Norwich, the king's candidate was again thwarted by the pope's favourite, William de Ayreminne [q. v.]. Ministerial offices were more at the king's disposal, and in 1320 he made Baldock his privy seal; in 1323 he was one of the negotiators of a thirteen years' truce with Scotland; and soon after his return from the north he obtained the lord chancellorship. Together with the De Spencers he now exercised the greatest power and incurred the fiercest hate. Their position was critical. The queen sought to use the popular feeling to get rid of a husband who neglected her, and of ministers whom she could not control. The French king seized this moment of weakness to demand the personal homage of Edward for his foreign possessions. The ministers dared not let Edward go, yet dared not anger Charles, and, failing to bribe the French envoys to conceal the object of their mission, they hit upon the fatal policy of letting the queen and her son cross over and satisfy the French king. Having gathered a force abroad, she returned in 1326 to find the people ready to assist her in overthrowing the government. She proclaimed the De Spencers and Baldock enemies of the realm. As they fled westward with the king, the Londoners wrecked their houses. At Bristol the elder De Spencer was taken and beheaded, the hiding-place of the other fugitives in Wales was revealed by a sufficient bribe, Edward was forced to abdicate, and the younger De Spencer shared his father's fate. The death of Baldock was equally desired by the victorious party, but his orders protected him from a legal execution. He was handed over to Bishop Orlton of Hereford [see ADAM OF ORLTON], a ministerial churchman more able and more unscrupulous than himself. In February 1327 he was confined in this bishop's house in London, and the mob was allowed, or even incited, to break in and drag the prisoner with violence and cruelty to Newgate, where he shortly afterwards died of his ill-treatment.

[Chronicles of Adam of Murimuth, Trokelowe, and Walsingham, Rolls Series; Rot. Claus. et Pat. temp. Ed. II; Newcourt's Repertorium, p. 78; Foss's Judges of England, ii. 222-5.]

H. A. T.

**BALDOCK, SIR ROBERT** (d. 1691), judge, son and heir of Samuel Baldock of Stanway, in Essex, bore the same arms as Robert de Baldock [q. v.], lord chancellor in Edward II's reign. Entering as a stu-

dent at Gray's Inn in 1644, he was called to the bar in 1651. There appears to be no contemporary allusion to his early professional career beyond Roger North's mention of him in connection with a 'fraudulent conveyance managed by Sir Robert Baldock and Pemberton,' the chief justice, which he thinks 'Baldock had wit and will enough to do' (NORTH'S *Life of Lord Guilford*, 223). In 1671 he was recorder of Great Yarmouth, and was knighted on the king's visit to that town. In 1677 he took the degree of serjeant, and was autumn reader to his inn of court; and on the accession of James II he became one of the king's serjeants. The only event of any importance in which he is known to have taken a part was the trial of the seven bishops, in which he was one of the counsel for the king. His principal argument, in a tedious irrelevant speech, is that the reasons given by the bishops for not obeying the king are libellous, inasmuch as 'they say they cannot in honour, conscience, or prudence do it; which is a reflection upon the prudence, justice, and honour of the king in commanding them to do such a thing' (*State Trials*, xii. 419).

This argument seems to have commended him so strongly to the king that within a week he was promoted to a seat in the King's Bench, two of the judges, Sir John Powell and Judge Holloway, being removed in consequence of having expressed opinions in favour of the accused bishops (SIR J. BRAMSTON'S *Autobiography*, 311). The revolution which took place before the beginning of next term drove the new judge from the bench before he had time to render himself liable to the condemnation which in the next reign fell on so many of his fellow judges, of whom no less than six were excepted from the act of indemnity in consequence of their assistance to James II in his unconstitutional proceedings (*Stat. of Realm*, vi. 178).

The remaining three years of Sir Robert's life were spent in obscurity. He died on 4 Oct. 1691, and was buried at Hockham in Norfolk, in the parish church of which is a monument erected by him to his only son, Robert, who was killed in a naval battle in 1673. His first wife was Mary, the daughter of Bacqueville Bacon (third son of Sir Nicholas of Redgrave), and one of the three co-heiresses of her brother Henry, who was lord of the manor of Great Hockham. She having died in 1662, he married again, but the name of his second wife is not known (BLOMEFIELD'S *Norfolk*, i. 312, 314).

[Foss's Judges of England, and works cited above.] G. V. B.

**BALDRED**, or **BALTHERE** (*d.* 608?), saint, was a Northumbrian anchorite of the sixth century, the details of whose life are entirely mythical. Alban Butler gives 608 as the date of his death. He is said to have been suffragan of Kentigern of Glasgow, but all the localities connected with his cultus are in Lothian. Baldred was one of the island saints more common in Celtic than in English hagiology. His favourite place of retirement was the Bass Rock in the Firth of Forth. The special scenes of his teaching and miracles are reputed to be the three villages of Aldhame, Tynningham, and Prestonne; and when on his death the three churches importuned for his body, they found that Providence had supplied each place with a corpse of the holy man. Baldred's feast-day is 6 March. Another Baldred, or Baltherus, who was a hermit of Durham, flourished about a century later, and after such miracles as walking on the sea died in 756. Mr. Skene connects the two Baltheres together, and regards the later as the right date of the saint's death.

[Acta Sanctorum Ord. Benedic. 6 March; Forbes's Kalendar of Scottish Saints; Dictionary of Christian Biography; Skene's Celtic Scotland, iii. 223.] T. F. T.

**BALDRED** (*A.* 823-825), king of Kent, during the dissensions which weakened Mercia after the death of Cenwulf, endeavoured to make Kent independent of that kingdom. He seems to have been on good terms with Archbishop Wulfred, who was a Kentishman, and who had himself carried on a long dispute with the Mercian king about the rights of his church. Baldred's kingdom fell before Ecgerht. He was chased from Kent by a West-Saxon army led by Æthelwulf, the king's son, Ealhstan, the bishop of Sherborne, and the ealdorman Wulfheard, and fled 'northwards over the Thames.' At the moment of his flight he granted Malling to Christ Church, Canterbury, in the hope, it may be, of prevailing on the archbishop to espouse his cause. After his deposition Kent was held as a sub-kingdom by æthelings of the West-Saxon house, until it was finally incorporated with the rest of the southern kingdom on the accession of Æthelberht to the throne of Wessex.

[Anglo-Saxon Chron. sub an. 823; Kemble's Codex Dipl. cxli.; Haddan and Stubbs, Councils, &c., iii. 557; Stubbs, Const. Hist. i. 190 n., 256.] W. H.

**BALDREY**, **JOSHUA KIRBY** (1754-1828), engraver and draftsman, practised both in London and Cambridge between 1780 and 1810, working both in the chalk and dot

manners. Many of his works were printed in colours. He exhibited portraits at the Royal Academy in 1793 and 1794. Among his best works are: 'The Finding of Moses,' after Salvator Rosa, 1785; 'Diana in a Landscape,' after Carlo Maratti; 'Lady Rawdon,' after Reynolds, 1783; and some subjects after Penny and Bunbury. His chief work, however, is from the east window of King's College Chapel, Cambridge, which he drew and engraved, and then finished highly in colours. He published 'A Dissertation on the Windows of King's College Chapel, Cambridge' (Camb. 1818, 8vo), from which it appears he was engaged on an engraving of one of the south windows. He died in indigence at Hatfield Wood Side, Hertfordshire, 6 Dec. 1828, leaving a large family.

[Cooper's Annals of Cambridge, iv. 559; Redgrave's Dict. of Artists (1878).] T. C.

**BALDUCKIE**, **LORD** (*d.* 1608), Scottish judge. [See LYON, SIR THOMAS.]

**BALDWIN** (*d.* 1098), abbot and physician, was a monk of St. Denys, and was made prior of the monastery of Liberau, a cell of St. Denys, in Alsace. When Edward the Confessor refounded the monastery of Deerhurst and gave it to St. Denys, Baldwin was appointed prior of this new possession of his house. He was well skilled in medicine, and became the king's physician. On the death of Leofstan, abbot of St. Edmund's, in 1065, Edward caused the monks to elect Baldwin as his successor. The new abbot received the benediction at Windsor, in the presence of the king, from the Archbishop of Canterbury, for his house claimed to be exempt from the jurisdiction of the bishop of Elmham, in whose diocese it lay. The king further showed his regard for the new abbot by granting him the privilege of a mint. Baldwin became one of the physicians of the Conqueror, and his skill made him a favourite with the king, who enriched his house with grants of land. He had occasion to exert his influence with the king to the utmost, for Herfast, who was made bishop of Elmham in 1070, contemplated the removal of his see to St. Edmund's, and asserted his authority over the abbey. Baldwin rejected his claim, and obtained leave from the king to consult the pope. He journeyed to Rome in 1071, taking with him some of the relics of St. Edmund, and accompanied by the prior and chaplain of his house, both Englishmen. At St. Edmund's, unlike some other monasteries, the French abbot lived on friendly terms with his English monks. Alexander II. received Baldwin graciously. He

ordained him priest with his own hands, invested him with the ring and staff, and sent him home with a privilege which confirmed the exemption of his house. Although Lanfranc was a monk he was an archbishop, and he was therefore opposed to the claims of exemption from episcopal jurisdiction, which were made by many monasteries. Accordingly he did not interfere to check the attempts of Herfast against St. Edmund's. In spite of the papal privilege, Herfast renewed these attempts, and offered to give the king a large sum of money if he would allow the case to be tried. Hearing that the privilege of his predecessor was thus disregarded, Gregory VII wrote a letter to Lanfranc in 1078, reproaching him for his remissness in the matter, charging him to restrain Herfast from any further attempts against the liberty of the abbey, and warning the king not to yield to the persuasions of the bishop. A temporary victory is said to have been granted to Baldwin by the interposition of St. Edmund. As Herfast was riding through a wood a thorn pierced one of his eyes. The bishop was in danger of losing his sight altogether. In his pain and misery he was advised to entreat the abbot, whom he had injured, to cure him. He accepted the advice and went to St. Edmund's. Baldwin saw his opportunity, and took care to obtain his fee before he took the case in hand. He held a chapter, to which he invited certain great men who happened to be in the neighbourhood, and caused the bishop to renounce his claim before the whole assembly. When Herfast had humbly confessed his sin and received absolution, Baldwin began to treat his eyes, and in a short time effected their cure. Before long, however, the bishop renewed his attempts. Lanfranc, by command of the king, held a great court to inquire into the matter. The proceedings were conducted in the English fashion. The men of nine shires heard the pleadings, and their voices declared that the abbot's claim was good. The bishop succeeded in carrying the case to the king's court, where, in 1081, it was heard before all the chief men of England. Baldwin put the charters of his house in evidence, and pleaded moreover that neither he nor his predecessors had received the benediction from the bishop. The court decided in his favour, and the king issued a charter confirming to the abbey the exemption granted by his predecessors.

Baldwin's medical skill brought him many patients, some even from Normandy. He was kind and hospitable to all who came to him. As physician to the court he followed the king to Normandy. While there he was often made the bearer of royal messages, and

acted as physician to the nobles, as well as to the king and his queen. At the suggestion and with the assistance of William, he pulled down the church of his abbey, which had only been finished in 1032, and built another in its place after a more splendid fashion. Of this church William of Malmesbury declared that there was none to compare with it in England for beauty and size. Baldwin's church lived on until the dissolution. The stately tower leading into the abbey yard, on a line with the west front of the church, which now serves as the tower of the church of St. James, is doubtless part of his work. The building was finished in 1094, and the abbot obtained leave from William Rufus for its consecration and for the translation of the body of the saint. Before long, however, the king capriciously withdrew his license for the consecration. A report was set abroad that the body of St. Edmund was not really in the possession of the abbey, and it was suggested that the king should seize the rich work of the shrine and apply the profits to the payment of his mercenaries. It chanced that while such things were being said Walkelin, bishop of Winchester, and Ranulf, the king's chaplain, afterwards bishop of Durham, came to the town of St. Edmund on the king's business. Baldwin took advantage of their visit to arrange a solemn translation. In spite of the opposition of Bishop Herbert of Losing, the successor of Herfast, the ceremony was performed with great splendour in the presence of the bishop of Winchester on 29 April 1095. Baldwin, according to Florence of Worcester, died 'in a good old age' in 1097. According to the 'Annals' of his house his death did not take place until the next year.

**BALDWIN OF MOELES** (d. 1100?) was the second son of Gilbert, count of Eu, who was a grandson of Richard the Fearless, and one of the guardians of the youth of William the Conqueror. On the murder of his father in 1040 Baldwin and his elder brother Richard, the ancestor of the house of Clare, were taken by their guardian to the court of Flanders for refuge. At the request of Baldwin of Flanders, Duke William, when he married Matilda, gave Baldwin, the son of Gilbert, the lordships of Moeles and Sap,

and married him to Albreda, the daughter of his aunt. Baldwin was greatly enriched by the conquest of England. Besides lands in Somerset and Dorset, he had no less than 159 estates in the county of Devon, where he held the office of sheriff. On the fall of Exeter, in 1068, the king left him to keep the city, and to complete the building of the castle. By his wife Albreda, Baldwin had three sons—Richard, who was made earl of Devon by Henry I [see BALDWIN OF REDVERS], Robert, the lord of Brionne, and William; and three daughters. He had also a natural son, Guiger, who became a monk of Bec. A Norman priest in 1101 beheld in a vision Baldwin and his brother, who had both died shortly before, clad in full armour.

[Will. of Jumièges, viii. 37; Orderic, 687, 694, 510; Dugdale's Baronage, i. 254; Monasticon, v. 377.] W. H.

**BALDWIN** (d. 1190), archbishop of Canterbury, was born at Exeter of poor parents. He received an excellent education, both in secular and religious learning, and bore a high character. He took orders, and was made archdeacon by Bartholomew, bishop of Exeter. Monastic in his tastes, Baldwin disliked the state and business which surrounded him as an archdeacon. He resigned his office, and became a monk of the Cistercian abbey of Ford in Devonshire. He entered on his new life with ardour, and within a year was made abbot. His literary work was done either wholly, or at least for the most part, while he held that office. In 1180 he was made bishop of Worcester. While Henry II was at Worcester in 1184, a man of good family, named Gilbert of Plumpton, was tried for forcibly carrying off an heiress, and was condemned to death. It was generally believed that many of the charges brought against Gilbert were false, and were included in the indictment to secure his condemnation. Baldwin was strongly urged to interfere to save him. He determined to do so, but was only just in time. The rope was actually round Gilbert's neck, when the bishop galloped up and called to the executioners to loose him, saying that their work might not be done on that day, for it was Sunday and a festival. A pardon was afterwards obtained from the king. The incident illustrates the bishop's character, which was at once wavering and impulsive. Baldwin was elected archbishop in the same year. His election was disputed; for the monks of Christ Church chose the abbot of Battle, while the bishops of the province chose Baldwin. The monks refused to agree in the choice of the bishops, and proceeded to

elect Theobald, cardinal-bishop of Ostia. The king interfered, and after some difficulty persuaded the monks to choose the bishop of Worcester, on the express condition that the claim of the bishops to elect should be disallowed. It was probably during the course of this dispute that Baldwin was employed by the king in a negotiation with Rhys ap Gruffydd, prince of South Wales. The new archbishop is described by his friend, Giraldus Cambrensis, as a gloomy and nervous man, gentle, guileless, and slow to wrath, very learned and religious. This character, as Dr. Stubbs has shown (*Epp. Cantuar.*, Introd., Rolls Series), is perhaps not inconsistent with 'the errors of temper, harshness, arbitrary severity, and want of tact' which he manifested in the long dispute with his convent; for he was weak of purpose and of an impulsive nature. His religious character is illustrated by the saying that, of the three archbishops, 'when Thomas came to town, the first place to which he went was the court, with Richard it was the farm, with Baldwin the church.' Pope Urban III, who was his enemy, addressed him in a letter as 'the most fervent monk, the zealous abbot, the lukewarm bishop, the careless archbishop.' As a simple monk Baldwin was fervent in spirit, and when he was invested with authority he did not exercise it negligently, but in a way which was unwelcome to the pope.

The privileges granted by the predecessors of Baldwin made the monks of Christ Church practically independent of the archbishop. Fresh dignity was conferred upon their convent by the martyrdom of St. Thomas. Over the large revenues of their church its titular ruler had no control. His claim on their obedience was disregarded, and he was looked upon by the chapter either as the instrument of their will, or as a stranger whose interests were different from their own. The house was no mere monastic foundation. The monks, as the congregation of the metropolitan church, cast off the bondage of monastic discipline. Princely hospitality and luxurious living reigned within the monastery. Trains of servants waited on the brethren and consumed the revenues of the house. While the archbishop had scanty means of rewarding his clerks and officers, he saw the community of which he was the nominal head indulging in lavish expenses. The independence of the convent was grievous to Baldwin as archbishop, and its luxury disgusted him as a Cistercian. When he was received by the monks, he expressed a hope that he and they would be one 'in the Lord.' His course of action was not such as was likely to promote unity. He determined to

raise a great collegiate church, in which he might provide for men of learning such as his nephew, Joseph the poet. The monks believed that he intended to supersede their house. Of the famous quarrel which arose on this matter a full and interesting account has been given by Dr. Stubbs in his introduction to the volume of Canterbury letters, which record each stage in the proceedings. A year after his enthronement Baldwin seized certain offerings (*xenia*) paid to the convent. He decided on building a college for secular priests at Hakington, about half a mile from Canterbury. The monks appealed to Rome, and begged the kings of England and France to uphold their cause. Before long most of the princes, cardinals, bishops, and great monasteries of western Europe took one side or the other in the quarrel. The archbishop was upheld by Henry. He suspended the appellants, and refused to obey the papal orders commanding him to restore the prior, to discontinue his building, and to give up the property of the convent. When the pope issued a second mandate, Ranulf Glanvill, the justiciar, forbade its execution. On the death of Urban the king openly adopted the cause of Baldwin. In 1188 two monks were sent to the archbishop, who had just come to England from Normandy to offer him the usual welcome on his return. Without admitting them to his presence he excommunicated them and seized their horses. The convent stopped the services of the church, and sent letters to Henry the Lion and Philip of Flanders, asking their help. On the other hand, Henry wrote to Pope Clement, declaring that 'he would rather lay down his crown than allow the monks to get the better of the archbishop.' The convent was kept in a state of blockade for eighty-two weeks. On the death of Henry II Baldwin tried to effect a reconciliation. He failed, and broke out into violent threats against the subprior. In order to reduce the convent to submission, he appointed to succeed the prior, who had died abroad, one Roger Norreys, who was wholly unfit for the post. King Richard visited Canterbury in November 1189, and effected a compromise of the dispute. Baldwin gave up his college at Hakington, and deposed his new prior. On the other hand it was declared that the archbishop had a right to build a church where he liked, and to appoint the prior of the convent, and the monks made submission to him. In virtue of this agreement he acquired by exchange from the church of Rochester twenty-four acres of the demesne of the manor of Lambeth, and there laid the foundation of a new college.

Meanwhile, in 1187, Baldwin made a legate visitation in Wales, a part of their province which none of the archbishops of Canterbury had yet visited. The tidings having arrived of the loss of Jerusalem and of the holy cross, Henry II held a great council at Geddington for the purposes of a crusade. There, 11 Feb. 1188, Baldwin took the cross, and preached for the cause with great effect. In the Lent of that year the archbishop, accompanied by Ranulf Glanvill and by Giraldus, the archdeacon of St. David's, made a tour through Wales, preaching the crusade. Entering Wales by Hereford, he spent about a month in the southern and a week in the northern principality. At Radnor the crusading party was joined by Rhys ap Gruffydd and other noble Welshmen. The archbishop made this progress a means of asserting his metropolitan authority in Wales, for he performed mass in each of the cathedral churches 'as a mark of a kind of investiture' (*Itin. Camb.* ii. 1; see also *Introduct.* by Mr. Dimock to Giraldus Cambrensis, vi., R.S.). Vast crowds of Welshmen took the cross. A history of the expedition was written by Giraldus. The crusade was delayed by the quarrel of Richard with his father. Soon after his return from Wales Baldwin was sent by the king to pacify Philip of France, but was unsuccessful in his mission. He was with the king during his last illness. He seems to have had considerable influence with Henry. In 1185 he prevailed on him to release his queen. He now strongly exhorted him to confession. He forbade the marriage of John with the heiress of the Earl of Gloucester on the ground of their kinship, but his prohibition was disregarded. In 1189 he officiated at the coronation of Richard, and attended the council which the king held at Pipewell in that year. At this council Geoffrey, the king's brother, was appointed to the archbishopric of York. Baldwin asserted the rights of his see by claiming that the new archbishop should not receive ordination from any one save from himself, and appealed to the pope to uphold his claim.

In March 1190 Baldwin set out on the crusade in company with Hubert, bishop of Salisbury, and Ranulf Glanvill. They parted with the king at Marseilles, as they went straight on to the Holy Land. They arrived at Tyre on 16 Sept., and at Acre on 12 Oct. During the illness of the patriarch, Baldwin, as his vicegerent, opposed the adulterous marriage of Isabel, the heiress of the kingdom, the wife of Henfrid of Turon, and Conrad, the marquis of Montferrat, and excommunicated the contracting and assenting parties. The crusading army made an attack,

12 Nov., upon the camp of Saladin. Before the battle Baldwin, in the absence of the patriarch, absolved and blessed the host. Nor was he wanting in more active duties. He sent to battle two hundred knights and three hundred attendants who were in his pay, with the banner of his predecessor, St. Thomas, borne on high before them; while he, in company with Frederick of Swabia and Theobald of Blois, guarded the camp of the crusaders. The excesses of the army weighed heavily on the spirit of the aged prelate. He fell sick with sorrow, and was heard to pray that he might be taken away from the turmoil of this world; 'for,' said he, 'I have tarried too long in this army.' He died 19 Nov. 1190. During his illness he appointed Bishop Hubert his executor, leaving all his wealth for the relief of the Holy Land, and especially for the employment of a body of troops to guard the camp.

The works of Baldwin which have been preserved are a Penitential and some discourses in manuscript in the Lambeth library, of which a notice is given in Wharton's 'Auctarium' of Usher's *Historia Dogmatica*, p. 407; two books entitled 'De Commendatione Fidei,' and 'De Sacramento Altaris,' and sixteen short treatises or sermons. While these works do not display any great learning, they prove that Baldwin had a wide acquaintance with the text of Scripture. The book on the 'Sacrament of the Altar' was printed at Cambridge with the title, 'Reverendissimi in Christo Patris ac Domini, Domini Baldvini Cantuariensis Archiepiscopi, de venerabili ac divinissimo altaris sacramento sermo. Ex præclara Cantabrigiensi Academia, anno MDXXI. Finis adest felicissimus,' 4to. It is printed by John Siberch, who styles himself, in the dedication to Nicholas, bishop of Ely, 'primus utriusque linguæ in Anglia impressor,' and is one of the earliest books known to have been printed at Cambridge (AMES, *Typog. Antig.* ed. Herbert, iii. 1412; BRUNET, *Manuel du Libraire*, i. 624). Baldwin's works are contained in the 'Bibliotheca Patrum Cisterciensium,' tom. v. 1662, from which they have been reprinted verbatim, with the remarkable error which makes Oxford the birthplace of Baldwin and the see of Bartholomew, by Migne in his 'Patrologiæ Cursus Completus,' tom. cciv.

**BALDWIN OF CLARE** (fl. 1141) was the youngest son of Gilbert Fitz-Richard, of the elder branch of the line of Gilbert, count of Eu, grandson of Richard the Fearless [see BALDWIN of Moeles, d. 1100]. His mother was perhaps Adeliza, daughter of the count of Claremont, though William of Jumièges does not mention him among her sons. The manor of Clare, from which Baldwin and others of his family took their name, was one of the estates held by his grandfather Richard in Suffolk. Baldwin's father, Gilbert, received the grant of Ceredigion (Cardiganshire) from Henry I in 1107. On the death of Henry, Richard, the eldest brother of Baldwin, was slain, and his lands were harried by Morgan ap Owen. Stephen gave Baldwin a large sum of money to enable him to hire troops for the relief of the lands of his house. Baldwin, however, retreated without, as it seems, striking a single blow. When, in 1141, Stephen's army was drawn up before the battle of Lincoln, the king, because his own voice was weak, deputed Baldwin to make a speech to the host. The Arundel MS. of the 'History of Henry of Huntingdon' (twelfth or thirteenth century) contains an outline drawing of Baldwin addressing the royal army in the presence of the king. In this speech he set forth the goodness of the cause of Stephen and the evil character of his enemies, reviling Robert, earl of Gloucester, as having the heart of a hare—a reproach which came singularly amiss from the speaker. In this battle, however, Baldwin fought bravely and received many wounds. He stood by the king to the last, and was taken prisoner with him. He was a benefactor of the abbey of Bec. Richard, earl of Striguil, the invader of Ireland, was his nephew.

**BALDWIN OF REDVERS** (d. 1155) was the eldest son of Richard, earl of Devon, the son of Baldwin of Moeles [q. v.]. He succeeded his father in the earldom, in the lordship of Okehampton, and also, it is said, in the lordship of the Isle of Wight. From his residence in Exeter Castle he is usually styled earl of Exeter. On a report being raised of the death of Stephen in 1136, Baldwin, with the connivance of other barons, made a revolt. He began to oppress the city of Exeter. The citizens sent to the king for help,

and Stephen ordered 200 horse to march at once to their relief. Baldwin's men, having heard that the citizens had complained of them, sallied forth to take vengeance on them. They were defeated, and had scarcely taken shelter within the walls of the castle, when the king with the main body of his army entered the city. Baldwin had a strong garrison in the castle, and held it against the royal forces. The siege and defence were alike conducted with all the military skill of the time. During its progress Baldwin's garrison at Plympton surrendered to the king. His rich lands were harried, and his tenants all through Devonshire were brought to submission. The blockade was strict, and want of water forced Baldwin to propose a capitulation. By the advice of the bishop of Winchester Stephen at first refused to grant any terms to the rebels, and withstood a piteous appeal made to him by Baldwin's wife, Adeliza. A large number, however, of the chief men of the king's own army were not disposed to allow him to take severe measures. Some had relatives within the castle, and some, though they were now fighting against Baldwin, had secretly counselled him to revolt. In the spirit of that continental feudalism from which England had hitherto been saved by the firmness of the earlier Norman kings, they reminded Stephen that the garrison had never made oath to him as king, and that in taking up arms against him they were acting faithfully to their lord. Stephen yielded to their wishes, and allowed the garrison to come forth. Baldwin fled to the Isle of Wight, and prepared to carry on the rebellion. On hearing that the king was about to embark at Southampton to reduce him to obedience, he surrendered himself. He was banished and took shelter with Geoffrey, count of Anjou, by whom he was honourably received. At the instigation of the empress he intrigued with the Norman lords, and raised up a revolt against Stephen in the duchy. He was taken prisoner by Ingelram de Say in a skirmish before the castle of Ormes. In 1139 he landed with a strong force at Wareham, and held Corfe Castle against the king. After a long siege Stephen turned away from Corfe on hearing of the landing of Robert of Gloucester. Baldwin joined the empress, and was present at the siege of Winchester in 1141. The earl was a great benefactor of religious houses. He founded a priory of Austin canons at Bromere in Hampshire, and a Cistercian abbey at Quarrer, or Arreton, in the Isle of Wight. He caused the secular canons of Christ Church at Twynham to give place to regular canons. He enriched the priory of Plympton, and gave

his chapelry of St. James at Exeter, with its tithes and estates, to the monasteries of St. Peter at Cluny and of St. Martin-des-Champs. Baldwin died in 1155, and was buried in his monastery at Arreton with Adeliza his wife. He left three sons—Richard, who succeeded him in his earldom; William, called Vernon, and Henry; and one daughter, named Hadwisa.

**BALDWIN, GEORGE** (1743 ?–1826), mystical writer, son of William Baldwin, hop-merchant in the Borough, was born, probably in London, in 1743. Dean Burgon wrote a memoir of Mrs. Baldwin, his great-aunt, who died in 1839.

George, who was a great traveller, visited Cyprus in 1760; thence he travelled to St. Jean d'Acre in 1763. In 1768 he returned to England, and obtained leave to go as a free mariner to the East Indies, with the idea of exploring the connection between India and Egypt by the Red Sea. On the point of embarkation he received news of the death of his brother, consul at Cyprus, and was advised to return thither. He did not accomplish his purpose there till 1773, when he passed over into Egypt, and was at Grand Cairo in the time of Mehemed Bey, who told him, 'If you bring the Indian ships to Suez, I will lay an aqueduct from the Nile to Suez, and you shall drink of the Nile water.' He then went to Constantinople, and made his plan known to Mr. Murray, his majesty's ambassador at that place, by whom it was favourably received. In 1774 he returned to Egypt and went to Suez, whence he accompanied the holy caravan on a dromedary to Cairo. His services there were accepted by the East India Company. He arrived in Alexandria in 1775, and succeeded in establishing a direct commerce from England to Egypt. Baldwin returned to England in 1781—having been plundered on the plains of Antioch by thieves and shot through the right arm—in a destitute condition, and petitioning for justice. He then received a summons from Mr. Dundas to attend the India Board, and to present to it a memorial, entitled, in his works, 'Political Recollections.' On this his majesty's ministers sent him as a consul-general to Egypt. He entered on the functions of his office in Alexandria 18 Dec. 1786. In 1796 Baldwin counteracted a public mission entrusted to Tinville, the

brother of Fouquier-Tinville, the notorious public accuser before the French revolutionary tribunal, who arrived in Cairo expressly to inveigle the beys of Egypt into the designs of the French. About this time he received an official letter that the office of consul in Egypt had been abolished as unnecessary four years before. 'The effect of this letter,' says Baldwin, 'was to depress me to such a degree as to bereave me of my strength, and of every faculty to attend to any earthly concern.' He left all his property behind him, and sailed on 14 March 1798, and on the 19th landed happily on the island of Patmos, in the grotto of the Apocalypse. From Patmos he went to Chismé, the sepulchre of the Turkish fleet, where the Greeks for five-and-twenty days came round him every night and danced the carmagnole. He went on to Trieste by Vienna, and then, disturbed by the battle of Marengo, retreated to Leghorn. He was there surprised by a party of republicans, and had just time to save himself on board his majesty's frigate, Santa Dorothea, with little more than a change of linen in his wallet. After a fortnight's cruise he landed at Naples, where he was requested by the English commander-in-chief to join them at Malta in the campaign of 1801.

Whilst acting as consul-general Baldwin first turned his attention to what he calls magnetic influence. The cures effected by this in Egypt he declares to be many and marvellous. In 1789 he commenced experiments in it himself with remarkable success. The gifts of which he considered himself possessed were, he says, obtained from the hand of one Cesare Avena di Valdieri, an extempore poet who had 'coursed and sung his carms (*sic*) over various regions of the world, and at length imported under my roof' in Alexandria on 23 Jan. 1795. The gifts were obtained from Cesare in his magnetic sleep. Baldwin's Italian work, 'La Prima Musa,' is written in poor and ungrammatical Italian. It reads more like the raving of a maniac than a wholesome speculation on a subject of science. He presented a copy of it to the British Museum in 1802. Baldwin died 19 Feb. 1826, aged 83 (*Gent. Mag.* 1826, i. 283). He speaks of his 'Legacy to his Daughter' as the only property he had to leave her.

Baldwin, during his long residence at Alexandria, after much observation of cases of the plague, proposed as beneficial for this hitherto incurable malady the rubbing of sweet olive oil into the skin. He communicated his ideas to the Rev. Lewis de Pavia, chaplain and agent to the hospital

called St. Anthony's at Smyrna, who, after five years' experience, pronounced it the most efficacious remedy he had known in the twenty-seven years during which the hospital had been under his management. One of the many ingenious observations made by Baldwin is that, amongst upwards of a million of inhabitants carried off by the plague in Upper and Lower Egypt during the space of forty years, he could not discover a single oilman or dealer in oil.

Baldwin was the author of some remarkable works and a few pamphlets. Amongst them are: 1. 'A Narrative of Facts relating to the Plunder of English Merchants by the Arabs, and other subsequent Outrages of the Government of Cairo in the course of the year 1779.' 2. 'Osservazioni circa un nuovo specifico contra la peste,' Florence, 1800. This has been translated into German. 3. 'Sur le Magnétisme Animal,' translated into French, 1818. 4. A pamphlet 'Memorial relating to the Trade in Slaves carried on in Egypt,' Alexandria, 1789. 5. 'Political Recollections relative to Egypt, containing Observations on its Government under the Mameluks; its Geographical Position; its intrinsic and extrinsic Resources; its relative Importance to England and France; and its Dangers to England in the Possession of France; with a narrative of the campaign in 1801,' London 1802, 8vo. 6. 'Philosophical Essays' (dedicated to Governor Johnstone, whom he addresses as his most honourable and most honoured friend), London, 1786, 8vo. 7. 'La Prima Musa Clio,' London, 1802. 8. 'La Prima Musa Clio, translated from the Italian of Cesare Avena di Valdieri by George Baldwin, or the Divine Traveller; exhibiting a series of writings obtained in the extasy of magnetic sleep,' 3 vols. (London, 1810?), 8vo; vols. ii. and iii. have no title-page. 9. 'Tre Opere Drammatiche prese nelle visioni di Dafni e concatenate istoricamente nell'ordine che segue, cioè, Il Trionfo di Melibeo, La Cipria Silene, e la Coronazione di Silene, scritte da Dafni ossia Timi Dafni così poeticamente divisato Arcade Pastore, essendo nell'estasi del sonno magnetico,' London, 1811, 4to, privately printed. 10. 'Mr. Baldwin's Legacy to his Daughter, or the Divinity of Truth in writings and resolutions matured in the course and study and experience of a long life' (including a series of writings obtained from the hand of Cesare Avena di Valdieri in the magnetic sleep), London, 1811, 4to.

BALDWIN, JOHN (*d.* 1545), chief justice of the common pleas, was a member of the Inner Temple, of which inn he was appointed reader in the autumn of 1516, at Easter 1524, and again in the autumn of 1531, while he twice filled the office of treasurer, in 1524 and 1530. In 1510 his name appears on the commission of the peace for Buckinghamshire, with which county he was connected throughout his life, acting on commissions of gaol delivery and subsidy, and for the assessment of the values of church property which formed the basis of the 'valor ecclesiasticus' of 1535. In 1520 he was a man of sufficient mark to be nominated on the sheriff roll, but was not selected by the king. In 1529 he was joined in commission with the master of the rolls, the chief baron of the exchequer, two of the justices of common pleas, and other distinguished lawyers, to hear causes in chancery committed to them by Cardinal Wolsey, then lord chancellor; and in the following year, on the cardinal's fall, he was selected to hold inquisitions as to the extent of his property in Buckinghamshire. He sat in the House of Commons once, being Burgess for Hindon, in Wiltshire, in the parliament which met on 3 Nov. 1529, and continued till 4 April 1536. On 13 April 1530 he was appointed attorney-general for Wales and the Marches (which were then governed by the Princess Mary's council under the presidency of the Bishop of Exeter), and also of the county palatine of Chester and Flint. He vacated these offices on the appointment of Richard Riche on 3 May 1532. His patent as serjeant-at-law is dated 16 Nov. 1531, but the title is given to him two months earlier in a commission of gaol delivery for Bedford Castle. Shortly after this promotion he accompanied Sir John Spelman as justice of assize for the northern circuit, and was placed on the commission of the peace in Cumberland, Northumberland, Westmoreland, and Yorkshire. He still, however, served on the commission of gaol delivery at Aylesbury in the same year. According to a manuscript copy of Spelman's 'Reports,' quoted by Dugdale, he and Thomas Willoughby were the first serjeants-at-law who received the honour of knighthood. This was in Trinity term, 1534. In the following year (19 April 1535) he was appointed chief justice of the common pleas, and almost the first cases in which he acted in a judicial capacity were the trials of the prior of the London Charterhouse, Bishop Fisher, and Sir Thomas More for treason. He also acted in the same capacity at the trials of Anne Boleyn and her companions, of Lord Darcy, and the ringleaders of the northern rebellion.

He appears to have lived principally at Aylesbury, from which place two letters from him in the 'Cromwell Correspondence' in the Public Record Office are dated, and in his later years acquired a considerable estate in the county, consisting of the house and site of the Grey Friars at Aylesbury (*Pat.* 32 Hen. VIII, pt. 8), and the manors of Ellesborough and Dunrich, forfeited by the attainer of Sir Henry Pole and the Countess of Salisbury. According to an inquisition taken at Aylesbury on 22 Dec. 1545 he died on 24 Oct. in that year, leaving as his next heirs Thomas Packington, son of his daughter Agnes (whose husband, Robert Packington, M.P. for London, was shot in Cheapside in 1536), and John Burlacy, son of his daughter Petronilla. In the pedigree in Harl. MS. 533 the elder daughter is called Ann, and Foss gives her name as Katharine, on what authority does not appear. He had also a son William, who married Mary Tyringham, but died in his father's lifetime. His widow became a lunatic shortly after his death. An extract from his will is given in the inquisition.

BALDWIN, RICHARD, D.D. (1672?-1758), provost of Trinity College, Dublin, first became connected with the college by obtaining a scholarship in 1686. He was afterwards made a fellow, and on 24 June 1717 was appointed provost. On his death, 30 Sept. 1758, he bequeathed his fortune of 80,000*l.* to the college. The will was disputed by certain persons in England who claimed to be his relatives; but after sixty-two years' litigation the case was in 1820 decided in favour of the college. His associates knew nothing of his nativity or parentage; but the claimants asserted that he was the son of James Baldwin, of Parkhill, near Colne, and that he was born in 1672 and educated at the grammar school at Colne, where he dealt a mortal blow to one of his schoolfellows, and on that account left England. A suggestion has also been made that he owed his promotion to the provostship to his relationship to some one of high influence. There is a marble monument to his memory in Examination Hall.

[*Liber Hiberniae*, ii. 123; Taylor's *History of the University of Dublin*, 248-51.] T. F. H.

**BALDWIN, THOMAS** (1750-1820), was appointed city architect at Bath about the year 1775, and continued in that office till 1800. Baldwin completed, upon an improved plan, the building of the new guildhall, which had been begun in 1768. He designed the Cross baths, the portico of the great pump room, and many other public and private buildings. Some time before 1796 he was made chamberlain of Bath. He had drawings prepared, which seem not to have been published, of a Roman temple discovered near the king's bath in 1790. He died on 7 March 1820, at the age of 70.

[Dict. of Architectural Publication Society, 1853; Natté's Views in Bath, fol., London, 1806; Redgrave's Dict. of English Artists.] E. R.

**BALDWIN, SIR TIMOTHY** (1620-1696), civil lawyer, younger son of Charles Baldwin of Burwarton, Shropshire, was born in 1620. He became a commoner of Balliol College, Oxford, in 1635, and proceeded B.A. on 13 Oct. 1638, B.C.L. on 26 June 1641, and D.C.L. in 1652. In 1639 he was elected fellow of All Souls' College, where he lived during the civil wars. As a royalist he was deprived of his fellowship by the parliamentary commissioners in 1648, but an application on his behalf to the wife of Thomas Kelsey, deputy-governor of the city of Oxford, accompanied by 'certain gifts,' secured his speedy reinstatement. He is mentioned by Wood in his autobiography (ed. Bliss, p. xxv) as joining in 1655 a number of royalists 'who esteem'd themselves either virtuosi or wits' in encouraging an Oxford apothecary to sell 'coffey publicly in his house against All Soules Coll.' At the restoration he was nominated a royal commissioner to inquire into the state of the university, was admitted principal of Hart Hall, now Hertford College (21 June 1660), and became a member of the College of Civilians (Coote's *English Civilians*, p. 84). Resigning his fellowship (1661), and his office of principal (1663), he was nominated chancellor of the dioceses of Hereford and Worcester. From 1670 to 1682, he was a master in chancery (Foss's *Judges*, vii. 8). He was knighted in July 1670, and was then described as of Stoke Castle, Shropshire. In 1679-80 he is found acting as one of the clerks in the House of Lords, and actively engaged in procuring evidence against the five lords charged with a treasonable catholic conspiracy. He died in 1696. At the time he held the office of steward of Leominster (Luttrell's *Brief Relation*, iv. 98).

Baldwin was the author of 'The Privileges of an Ambassador, written by way of letter

to a friend who desired his opinion concerning the Portugal Ambassador,' 1654. This very rare tract treats of the charge of manslaughter preferred in an English court against Don Pantaleone, brother of the Portuguese ambassador. Baldwin also translated into Latin and published in 1656 Lord Herbert of Cherbury's 'History of the Expedition to Rhé in 1627.' The English original, which was written in 1630, was first printed in 1870 by the Philobiblon Society. In 1663 Baldwin edited and published 'The Jurisdiction of the Admiralty of England asserted against Sir Edward Coke's "Articuli Auctoritatis" in xxii. chapter of his "Jurisdiction of Courts" by Richard Zouch, Doctor of the Civil Laws and late Judge of the High Court of Admiralty, 1663.' Baldwin contributed a brief preface to this work dated 'Doctors' Commons, 25 Feb. 1663.'

[Athenæ Oxon. (ed. Bliss), iii. 241, 512, iv. 334; Fasti Oxon. i. 479, 500, ii. 3, 171; State Trials, vii. 1285, 1373, &c.; Martin's Archives of All Souls' College, 381; Burrows' Worthies of All Souls, 196, 216.] S. L.

**BALDWIN, WILLIAM** (fl. 1547), a west-countryman, spent several years at Oxford in the study of logic and philosophy. He is supposed to be the William Baldwin who supplicated the congregation of regents for a master's degree in 1532 (Wood, *Athenæ*, i. 341). On leaving Oxford he became a corrector of the press to Edward Whitchurch, the printer, who, in 1547, printed for him 'A Treatise of Morall Philosophie, containing the Sayings of the Wyse,' a small black-letter octavo of 142 leaves. This book was afterwards enlarged by Thomas Paulfreyman, and continued popular for a century. In 1549 appeared Baldwin's 'Canticles or Balades of Salomon, phraselyke declared in Englyshe Metres,' which the author printed with his own hand from the types of Whitchurch. The versification has more ease and elegance than we usually find in metrical translations from the Scriptures; and the volume is remarkable for the care bestowed on the punctuation, a matter to which the old printers seldom paid the slightest attention. During the reigns of Edward VI and Queen Mary, it appears that Baldwin was employed in preparing theatrical exhibitions for the court (Collier, *Hist. of Eng. Dram. Poetry*, i. 149, &c.). In 1559 he superintended the publication of the 'Mirror for Magistrates,' contributing four poems of his own:—(1) 'The Story of Richard, Earl of Cambridge, being put to death at Southampton,' (2) 'How Thomas Montague, Earl of Salisbury, in the midst of his glory was by chance

slain by a Piece of Ordnance;' (3) 'Story of William de la Pole, Duke of Suffolk, being punished for abusing his King and causing the Destruction of good Duke Humphrey;' (4) 'The Story of Jack Cade naming himself Mortimer, and his Rebelling against the King.' In the preface, Baldwin speaks of having been 'called to other trades of lyfe.' He is probably referring to the fact that he had become a minister and a school-master. Wood states that he took to clerical work immediately after leaving the university; but this must be a mistake. In 1560 he published a poetical tract (of the greatest rarity) in twelve leaves, 'The Funerall of King Edward the Sixt; wherein are declared the Causes and Causes of his Death.' On the title-page is a woodcut portrait of Edward. The elegy is followed by 'An Exhortation to the Repentaunce of Sinnes and Amendment of Life,' consisting of twelve eight-line stanzas; and the tract concludes with an 'Epitaph: The Death Playnt or Life Prayse of the most Noble and Vertuous Prince, King Edward the Sixt.' One of the rarest and most curious of early ludicrous and satirical pieces, 'Beware the Cat' (1561), has been shown by Collier to be the work of Baldwin. The dedication is signed 'G. B.,' the initials of Gulielmus Baldwin; and Mr. Collier quotes from an early broadside (in the library of the Society of Antiquaries) the following passage:—

Where as there is a booke called Beware the Cat:  
The veri truth is so that Streamer made not that;  
Nor no such false fabells fell ever from his pen,  
Nor from his hart or mouth, as knoe mani honest men.

But wil ye gladli knoe who made that boke in dede?

One Wylliam Baldewine. God graunt him well to speede.

But the authorship is placed beyond all possible doubt by an entry in the Stationers' Registers, 1568-9, when a second edition was in preparation:—'Rd. of Mr. Iretonde for his lycense for pryntinge of a boke intituled Beware the Catt, by Wyllm Baldwin, iijjd.' The scene is laid in the office of John Day, the printer, at Aldersgate, where Baldwin, Ferrers, and others had met to spend Christmas. Personal allusions abound, and there are many attacks on Roman Catholics. The purpose is to show that cats are gifted with speech and reason; and in the course of the narrative, which consists of prose and verse, a number of merry tales are introduced. Of Baldwin's closing years we have no record; he is supposed to have died early in the reign of Queen Elizabeth.

Baldwin prefixed a copy of verses to Langton's 'Treatise ordrely declaring the Principall Partes of Physick' (1547). He is probably the author of 'A new Booke called The Shippe of Safegards, wrytten by G. B.' (1569), and a sheet of eleven eight-line stanzas:—

To warn the papistes to beware of three trees.

God save our Queene Elizabeth.

Finis qd. G. B.,

printed on 12 Dec. 1571, by John Awdelay. Wood ascribes to him 'The Use of Adagies; Similies and Proverbs; Comedies,' of which nothing is known.

[Wood's *Athenæ Oxon.* ed. Bliss, i. 341-3; Ritson's *Bibliogr. Poet.* p. 121; Dibdin's *Typogr. Antiq.* iii. 503, iv. 498; Collier's *Hist. of Engl. Dram. Lit.* i. 149, 154, new ed.; *Bibliogr. Account*, i. 43-7; Corser's *Collectanea*, i. 108-16, 123-9.] A. H. B.

**BALDWIN or BAWDEN, WILLIAM** (1563-1632), jesuit, was a native of Cornwall. He entered Exeter College, Oxford, on 20 Dec. 1577, studied in that university for five years, and passed over to the English College of Douay, then temporarily removed to Rheims, where he arrived on 31 Dec. 1582. The following year he proceeded to Rome, and entered the English College there. He was ordained priest in 1588, and served as English penitentiary at St. Peter's for a year. His health failing in Rome, he was sent to Belgium, where he entered the Society of Jesus in 1590, and was advanced to the dignity of a professed father in February 1602. He was professor of moral theology at Louvain for some time. Having been summoned to Spain at the close of the year 1594 or early in 1595, he was captured by the English fleet, then besieging Dunkirk, and sent as a prisoner to England; but the privy council, being unable to discover anything against him, set him at liberty. He remained for six months in England, living with Mr. Richard Cotton at Warblington, Hampshire, where he rendered great assistance to the catholic cause. Called thence to Rome, he was for some time minister at the English college, under Father Vitelleschi, the rector. He next went to Brussels (about 1599 or 1600), where he succeeded Father Holt as vice-prefect of the English mission. This important post he held for ten years. His zeal gave such offence to the privy council, that, although he had never left Belgium, they proclaimed him a traitor, and an accessory in the Gunpowder plot with Fathers Garnett and John Gerard, and further accused him of having formerly

treated with Frederick Spinola about the Spanish invasion. In 1610 Baldwin had to make a journey on business to Rome, during which, when passing the confines of Alsace and the Palatinate, he was apprehended by the soldiers of the Elector Palatine, Frederick VI, not far from the city of Spire. As the elector knew that he would be conferring a great favour upon King James, he kept him in close custody in various public prisons, and then sent him to England escorted by a guard of twelve soldiers, travelling sometimes on horseback and sometimes in a cart, bound with a heavy chain from the neck to the breast, where it was turned and wound round his entire body, 'being twice as long as would have been required to secure an African lion.' As if that did not suffice, they hung another chain behind him, eighteen feet long, to carry which it was necessary to have an assistant, whom in jest they called his train-bearer. To loosen or tighten these chains, four men, with as many keys, preceded him. They allowed him to have only one hand at liberty for the purpose of conducting food to his mouth, never both hands at once, nor was he permitted the use of a knife and fork, lest he might be driven by the infamy of the plot and the anticipation of the gallows to commit suicide. On his arrival in this country he was at once committed a close prisoner to the Tower of London. Although nothing was proved against him, his captivity lasted for eight years, till 15 June 1618, when, at the intercession of the Count de Gondomar, the Spanish ambassador, he was released and sent into banishment. In 1621 Baldwin was rector of Louvain, and then (1622) the fifth rector of St. Omer's College, which, under his government, prospered to such a degree as to number nearly 200 scholars. He died at St. Omer on 28 Sept. 1632.

Baldwin left in manuscript several voluminous treatises on pious subjects. A list of them is given in Southwell's 'Bibliotheca Scriptorum Soc. Jesu.'

[Oliver's Collectanea S. J. 49; More's Hist. Prov. Angl. S. J. 374; Tanner's Societas Jesu usque ad sanguinis et vitæ professionem militans, 629; Foley's Records, iii. 501-520, vii. 42; Dodd's Church Hist. ii. 393; Oliver's Collections concerning the Catholic Religion in Cornwall, &c. 236; Boase and Courtney's Bibl. T. C.

**BALDWULF, BEADWULF, or BALDULF** (d. 803?), bishop of Whithorn or Candida Casa, in Galloway, was consecrated to that see 17 July 791 by Archbishop Eanbald of York and Bishop Æthelberht of Hexham (*Anglo-Saxon Chronicle*, s. a. 791; SIM. DUR. 790; HEN. HUNT. *Hist. Angl.* lib. iv.) His assisting at the coronation of a Northumbrian king (Eardwulf, *Anglo-Saxon Chronicle*, s. a. 795), and shortly afterwards at the consecration of a Northumbrian archbishop (Eanbald II of York, *Anglo-Saxon Chronicle*, s. a. 796), shows that, in his hands, the bishopric established as an outpost of Anglian influence among the Celts of Galloway lost none of its original character. But Northumbria had by this time become so disorganised that it was found impossible to maintain any hold over this distant dependency. Baldwulf seems to have been the last Anglian bishop of Whithorn (WILL. MALM. *Gesta Pontificum*, lib. iii. f. 118). On his death about 803 (SKENE's *Celtic Scotland*, ii. 225—the date seems conjectural), either no bishop was appointed, or the bishop of Lindisfarne, Heathorð (FLOR. WIG. *M. H. B.* p. 626 D), added the nominal charge of Galloway to his own diocese. The Gallowegians had regained their ecclesiastical independence.

[Authorities cited above.]

T. F. T.

**BALDWIN, EDWARD** (1746-1817), pamphleteer, was educated at St. John's College, Oxford (B.A., 1767; M.A., 1784). For some years he was resident in Yorkshire, where, under the pseudonym of 'Trim,' he was engaged in a literary squabble with the Rev. William Atkinson and other clergymen of the 'evangelical' school. Subsequently he removed to Ludlow in Shropshire, and eventually became rector of Abdon in that county. He died in Kentish Town, London, 11 Feb. 1817, and was buried in Old St. Pancras churchyard.

He wrote: 1. 'A Critique on the Poetical Essays of the Rev. William Atkinson,' 1787. 2. 'Further Remarks on two of the most Singular Characters of the Age,' 1789. 3. 'A Letter to the Author of Remarks on two of the most Singular Characters of the Age. By the Rev. John Crosse, vicar of Bradford; with a reply by the former,' 1790, with which is printed 'The Olla Podrida; or Trim's Entertainment for his Creditors.' 4. 'Remarks on the Oaths, Declarations, and Conduct of Johnson Atkinson Busfield, Esq.,' 1791. 5. 'A Congratulatory Address to the Rev. John Crosse, on the Prospect of his Recovery from a Dangerous Disease,' 1791.

**BALÉ, JOHN** (1495-1563), bishop of Ossory, was born at the little village of Cove, near Dunwich in Suffolk, on 21 Nov. 1495. His parents were in a humble rank of life; but at the age of twelve he was sent to the Carmelite convent at Norwich, where he was educated, and thence he passed to Jesus College, Cambridge. He was at first an opponent of the new learning, and was a zealous Roman catholic, but was converted to protestantism by the teaching of Lord Wentworth. He laid aside his monastic habit, renounced his vows, and caused great scandal by taking a wife, of whom nothing is known save that her name was Dorothy. This step exposed him to the hostility of the clergy, and he only escaped punishment by the powerful protection of Thomas Cromwell, earl of Essex. He held the living of Thornden in Suffolk, and in 1534 was convened before the archbishop of York to answer for a sermon, denouncing Romish uses, which he had preached at Doncaster. Bale is said to have attracted Cromwell's attention by his dramas, which were moralities, or scriptural plays setting forth the reformed opinions and attacking the Roman party. The earliest of Bale's plays was written in 1538, and its title is sufficiently significant of its general purport. It is called 'A Breve Comedy or Enterlude of Johan Baptystes Preachynge in the Wyldernes; openynge the craftye Assaults of the Hypocrytes (i.e. the friars) with the glorious Baptyme of the Lord Jesus Christ' (*Harleian Miscellany*, vol. i.). Bale wrote several plays of a similar character. They are not remarkable for their poetical merits, but are vigorous attempts to convey his own ideas of religion to the popular mind. When Bale was bishop of Ossory, he had some of his plays acted by boys at the market-cross of Kilkenny on Sunday afternoon.

Cromwell recognised in Bale a man who could strike hard, and Bale continued to make enemies by his unscrupulous outspokenness. The fall of Cromwell betokened a religious reaction, and Bale had too many enemies to stay unprotected in England. He fled in 1540 with his wife and children to Germany, and there he continued his controversial writings. Chief amongst them in importance were the collections of Wycliffite martyrologies, 'A brief Chronicle concerning the Examination and Death of Sir John Oldcastle, collected by John Bale out of the books and writings of those Popish Prelates

which were present,' London, 1544; at the end of which was 'The Examination of William Thorpe,' which Foxe attributes to Tyndale. In 1547 Bale published at Marburg 'The Examination of Anne Askewe.' Another work which was the fruit of his exile was an exposure of the monastic system entitled 'The Actes of Englyshe Votaries,' 1546.

On the accession of Edward VI in 1547 Bale returned to England and shared in the triumph of the more advanced reformers. He was appointed to the rectory of Bishopstoke in Hampshire, and published in London a work which he had composed during his exile, 'The Image of bothe Churches after the most wonderfull and heavenlie Revelation of Sainct John' (1550). This work may be taken as the best example of Bale's polemical power, showing his learning, his rude vigour of expression, and his want of good taste and moderation.

In 1551 Bale was promoted to the vicarage of Swaffham in Norfolk, but he does not appear to have resided there. In August 1552 Edward VI came to Southampton and met Bale, whom he presented to the vacant see of Ossory. In December Bale set out for Ireland, and was consecrated at Dublin on 2 Feb. 1553. From the beginning Bale showed himself an uncompromising upholder of the reformation doctrines. His consecration gave rise to a controversy. The Irish bishops had not yet accepted the new ritual. The 'Form of Consecrating Bishops,' adopted by the English parliament, had not received the sanction of the Irish parliament, and was not binding in Ireland. Bale refused to be ordained by the Roman ritual, and at length succeeded in carrying his point, though a protest was made by the Dean of Dublin during the ceremony. Bale has left an account of his proceedings in his diocese in his 'Vocacyon of John Bale to the Bysshopperyecke of Ossorie' (*Harleian Miscellany*, vol. vi.). His own account shows that his zeal for the reformation was not tempered by discretion. At Kilkenny he tried to remove 'idolatryes,' and thereon followed 'angers, slaunders, conspiracies, and in the end slaughters of men.' He angered the priests by denouncing their superstitions and advising them to marry. His extreme measures everywhere aroused opposition. When Edward VI's death was known, Bale doubted about recognising Lady Jane Grey, and on the proclamation of Queen Mary he preached at Kilkenny on the duty of obedience. But the catholic party at once raised its head. The mass was restored in the cathedral, and

Bale thought it best to withdraw to Dublin, whence he set sail for Holland. He was taken prisoner by the captain of a Dutch man-of-war, which was driven by stress of weather to St. Ives in Cornwall. There Bale was apprehended on a charge of high treason, but was released. The same fortune befell him at Dover. When he arrived in Holland he was again imprisoned, and only escaped by paying 300*l*. From Holland he made his way to Basel, where he remained in quiet till the accession of Elizabeth in 1558. He again returned to England an old and worn-out man. He did not feel himself equal to the task of returning to his turbulent diocese of Ossory, but accepted the post of prebendary of Canterbury, and died in Canterbury in 1563.

Bale was a man of great theological and historical learning, and of an active mind. But he was a coarse and bitter controversialist and awakened equal bitterness amongst his opponents. None of the writers of the reformation time in England equalled Bale in acerbity. He was known as 'Bilious Bale.' His controversial spirit was a hindrance to his learning, as he was led away by his prejudices into frequent misstatements. The most important work of Bale was a history of English literature, which first appeared in 1548 under the title 'Illustrium Majoris Britanniae Scriptorum Summarium in quinque centurias divisum.' It is a valuable catalogue of the writings of the authors of Great Britain chronologically arranged. Bale's second exile gave him time to carry on his work till his own day, and two editions were issued in Basel, 1557-1559. This work owes much to the 'Collectanea' and 'Commentarii' of John Leland, and is disfigured by misrepresentations and inaccuracies. Still its learning is considerable, and it deserves independent consideration, as it was founded on an examination of manuscripts in monastic libraries, many of which have since been lost. The plays of Bale are doggerel, and are totally wanting in decorum. A few of them are printed in Dodsley's 'Old Plays,' vol. i., and in the 'Harleian Miscellany,' vol. i. The most interesting of his plays, 'Kynge Johan,' was printed by the Camden Society in 1838. It is a singular mixture of history and allegory, the events of the reign of John being transferred to the struggle between protestantism and popery in the writer's own day. His polemical writings were very numerous, and many of them were published under assumed names. Tanner (*Bibl. Brit.*) gives a catalogue of eighty-five printed and manuscript works attributed to Bale, and Cooper (*Athenæ Can-*

*tabrigienses*) extends the number to ninety. Besides Bale's works above mentioned, the following are the most important: 1. 'Acta Romanorum Pontificum usque ad tempora Pauli IV,' Basle, 8vo, 1538; Frankfurt, 1567; Leyden, 1615. 2. 'The Pageant of the Popes, containing the lyves of all the Bishops of Rome from the beginning to the yeare 1555, Englished with additions by J. S. [John Studley], London, 1574. 3. 'A Tragedie or Enterlude manifesting the chiefe promises of God unto man, by all ages in the olde lawe from the fall of Adam to the Incarnation of the Lord Jesus Christe,' 1538, reprinted in Dodsley. 4. 'New Comedy or Enterlude concerning the three lawes of Nature, Moyses and Christe, corrupted by the Sodomytes, Pharyses and Papistes,' 1538, London, 1562. 5. 'Yet a Course at the Romysh Foxe,' Zurich, 1543. 6. 'A Mysterye of Iniquyte, contayned within the heretycall Genealogye of Ponce Pantolabus, is here both dysclosed and confuted,' Geneva, 1545. 7. 'The Apologye of Johan Bale agaynste a ranke Papyist,' 1550.

[The materials for Bale's life are chiefly supplied by himself in scattered mentions in his many writings, and especially in 'The Vocacyon of John Bale to the Byshopperye of Ossorie' (Harleian Miscellany, vol. vi.). The Parker Society published (1849) the Select Works of John Bale, to which is prefixed a biographical notice by Rev. H. Christmas. The fullest account of Bale is given in Cooper's *Athenæ Cantabrigienses*.] M. C.

**BALE, ROBERT** (*n*. 1461), chronicler, known as Robert Bale the Elder, is said to have been born in London. He practised as a lawyer, and was elected notary of the city of London, and subsequently a judge in the civil courts. He wrote a chronicle of the city of London, and collected the stray records of its usages, liberties, &c. The following is a list of his writings according to John Bale:—1. 'Londinensis Urbis Chronicon.' 2. 'Instrumenta Libertatum Londini.' 3. 'Gesta Regis Edwardi Tertii.' 4. 'Alphabetum Sanctorum Angliæ.' 5. 'De Prefectis et Consulibus Londini.'

[Bale's (John) Scriptor. *Illust. Major. Brit. Cat. Cent. xi. No. 53.*] C. F. K.

**BALE, ROBERT** (*d*. 1503), a Carmelite monk, was a native of Norfolk, and when very young entered the Carmelite monastery at Norwich. Having a great love of learning, he spent a portion of every year in the Carmelite houses at Oxford or Cambridge. He became prior of the monastery of his order at Burnham, and died 11 Nov. 1503. Bale enjoyed a high reputation for learning,

and collected a valuable library, which he bequeathed to his convent.

His principal works were: 1. 'Annales Ordinis Carmelitarum' (Bod. Arch. Seld. B. 72). 2. 'Historia Helii Prophetæ.' 3. 'Officium Simonis Angli' (i.e. of Simon Stock, a prior of his order who was canonised).

[Bale's (Balæi) Script. Illust. Major. Brit. Catal. Cent. 11, No. 59; Wood's *Athenæ Oxon.* (Bliss), i. 7; Tanner's *Bibl. Brit.*] C. F. K.

**BALES** or **BAYLES**, alias **EVERS**, **CHRISTOPHER** (executed 1589-90), priest, was a native of Cunsley, in the diocese of Durham, and studied in the English colleges at Rome and Rheims. From the latter he was sent on the English mission in 1588. Having been apprehended soon afterwards, he was tried and convicted under the statute of 27 Eliz. for taking priest's orders beyond the seas, and coming into England to exercise his sacerdotal functions. He was drawn to a gallows at the end of Fetter Lane, in Fleet Street, London, and hanged, disembowelled, and quartered, 4 March 1589-90. Two laymen suffered the same day for relieving and entertaining him, viz. Nicholas Horner in Smithfield, and Alexander Blage in Gray's Inn Lane.

[Stow's *Annales*, 760; Challoner's *Missionary Priests* (1803), i. 135; State Papers, Domestic, Elizabeth, ccxxx. art. 57; Dodd's *Ch. Hist.* ii. 75.] T. C.

**BALES**, **PETER** (1547-? 1610), calligraphist, whose name appears also as **BALESIUS**, speaks of himself in the year 1595 (*Harl. MS.* 675, fol. 20) as being 'within two yeares of fiftie,' which gives the date of his birth as 1547. Holinshed also (iii. 1262) speaks of Bales as 'an Englishman borne in the citie of London,' but beyond this nothing whatever is known of his parentage. Of his education it is recorded that he spent several years in Oxford at Gloucester Hall (Wood, *Athen. Ox.* i. 655, ed. 1813), where his microscopic penmanship, his writing from speaking (shorthand), and dexterous copying, attracted great attention, and where his conduct secured for him the respect of many men at his own hall and at St. John's; but there is no evidence whether he was at the university as a scholar or as a professor of his art, for which Englishmen in his day (**BAYLE**, art. *Quintilian*) enjoyed especial repute. In 1575 it is certain he had risen to great eminence. His skill enabled him (D'ISRAËLI, *Curiosities of Literature*, p. 100) to astonish 'the eyes of beholders by showing them what they could not see' when they were shown it, for example, the Bible written to go into the compass of a walnut (*Harl. MS.* 530, art. 2, f.

14); and this brought him so much fame that he, on 17 Aug. 1575, presented Elizabeth, then at Hampton Court, with a specimen of his work mounted under crystal or glass as a ring (together with 'an excellent spectacle by him devised' to allow the queen to read what he had written); and Elizabeth wore this ring many times upon her finger (*HOLINSHED*, iii. 1262), calling upon the lords of the council and the ambassadors to admire it. Bales resided in the upper end of the Old Baillie, near the sign of the Dolphin; he advertised himself as a writing schoolmaster 'that teacheth to write all manner of handes, after a more speedie way than hath heretofore been taught;' he promised his pupils that 'you may also learne to write as fast as a man speaketh, by the arte of Brachigraphie by him devised, writing but one letter for a word;' and that 'you may have anything faire written in any kind of hand usuall, and bookes of copies faire as you shall bespeake.' Many of the citizens and their children became his scholars. He was employed also in transcribing public documents into book form, one of these (*Harl. MS.* 2368), as even as type, being a beautiful specimen of his dexterity; and Walsingham and Hatton called him into use for other government purposes, such as deciphering and copying secret correspondence, and imitating the handwriting of intercepted letters, in order to add matter to them, which might bring replies to serve state ends. His services were turned to account in the discovery of Babington's plot in 1586 (*CAMDEN'S Annals*, anno 1586). Bales therefore hoped for appointment to some permanent post; but his hope was not realised, and a Mr. Peter Ferriman, his friend, wrote to Sir Thomas Randolph in 1589, urging his claims on the government (*MS. Collection of N. Boothe, Esq.*, late of Gray's Inn). In 1590 Bales published 'The Writing Schoolemaster,' for teaching 'swift writing, true writing, faire writing, which was to be bought at his own house; and he dedicated the little volume to Sir Christopher Hatton, his 'singular good lord and master.' His patron Walsingham dying in 1590, and Hatton dying in the next year, 1591, Bales petitioned Burghley for 'preferment to the office of armes, either for the roome of York Herald or for the Pursuivantes place' (*Lansdowne MSS.* vol. xcix. art. 59). There is no evidence that this was given to him; but in 1592 he obtained the support of Sir John Pickering, then lord keeper of the great seal. In 1594 Jodocus Hondius, calligraphist and engraver, visited England to collect specimens or copybook slips from the most celebrated masters of the

pen in Europe, and engaged Bales to produce slips for him which were duly engraved and published. In 1595 occurred the trial of skill between Bales and a rival penman, Daniel Johnson, his neighbour, living in 'Paules Churchyard, near the Bishops Palace.' He who wrote best, and whose chosen scholar wrote best, was to receive a golden pen of the value of 20*l*. The contest, being postponed from St. Bartholomew's day (24 Aug.), commenced on Monday, Michaelmas day, between seven and eight in the morning, at 'the Black Fryers, within the Conduit Yard, next to the Pipe Office,' before five judges and a concourse of about a hundred people. It ended in Bales's triumph; he had the pen 'brought to his house by foure of the judges and delivered unto him absolutelie as his owne;' and though Johnson disputed his victory, printing an appeal, which he pasted on posts all over the city, declaring that Bales had only obtained possession of the prize by asking permission to show it to his wife who was ill, and by declaring 'a fardle of untruths,' Bales demolished his objections, clause by clause, in 'The Originall Cause' (*Harl. MS.* 675 *supra*), written 1 Jan. 1596-7. Thenceforth he used a golden pen as a sign, and remained master of the field. In 1597 appeared a second edition of 'The Writing Schoolemaster,' with a longer list of Oxford friends setting forth Bales's talents in commendatory verses, English and Latin. In 1598, office not being yet found for him, 'Mr. Wyseman solycyted the Earle of Essex to have a clarke's place in the court for hym; as I take yt, to be clarke to her majestie, of her highness bills to be signed' (*Sufferings of John Danyell*, *MS.*: from the Fleet, 1602). In 1599 John Danyell, having found some of the Earl of Essex's letters to the countess, employed Bales to copy them, assuring him it was at the countess's desire. Bales suspected the truth of this, and asked 'Why do you cause mee to wryte one letter soe often, and so lyke a hand you cannot reade?' He threatened, too, if he found anything treasonable, to lay an information against Danyell, and Danyell refusing to lend him and his friend Ferriman 20*l*., a declaration of the whole was made by them to the countess, and delivered to her, 2 April 1600. In 1601, on 8 Feb., the earl himself was arraigned; Bales met Danyell on the way to Westminster Hall to be present at the trial, and informed him of this declaration; in 1602, Danyell being tried in the Star Chamber on a charge of causing these letters to be forged, Bales gave evidence there against him.

It is not known when and where Bales

died. Davies in his 'Scourge of Folly,' p. 154, nicknames him Clophonian, alludes to the sign at his house of a hand and golden pen, and speaks of him as going from place to place for the last half-year, from which it is known that he was alive in 1610, the date of the poem, and it is conjectured that he was poor and in disgrace. But no other mention of him has been found, and it is not known whether the Peter Bales, M.A., preaching at St. Mary Woolnoth, 1648, and publishing one or two sermons, was of his family or not.

A petition to be taken into 'honourable service' is still extant in his hand (*Leansdowne MSS.* vol. cxix. art. 102). In this Bales styles himself 'cyphery.' From a petition presented to the House of Lords (20 Jan. 1640-1) by his son John Bales, we learn that Peter Bales was at one time tutor to Prince Henry.

A copy of 'The Writing Schoolemaster' is at the Bodleian, and another at Lambeth Palace. There is not one at the British Museum. In the text, Bales lays down such rules as 'For comforting of the sight, it is verie good to cover the deske with greene' (cap. iv.), and it 'is good at the first, for more assurance in good writing, to write betweene two lines' (cap. vii.).

J. H.

**BALFE, MICHAEL WILLIAM** (1808-1870), musical composer, the third child of William Balfe, was born at 10 Pitt Street, Dublin, 15 May 1808. His father came of a family which had numbered among its members several professional musicians; his mother's maiden name was Kate Ryan. Balfe's first musical instruction was received from his father, who was himself no mean performer on the violin. Under his guidance the boy made such rapid progress that it soon became necessary to place him under a more advanced master. His education was accordingly entrusted to William O'Rourke, though he seems also to have received help in his studies from Alexander Lee, James Barton, and a bandmaster named Meadows. At this early period of his life Balfe already distinguished himself both as executant and composer, his first public appearance having been made as a violinist at a concert given on 20 June 1817, while a polacca from his pen was performed, under the direction of his friend Meadows, before he was seven years old. On O'Rourke's leaving Dublin, Balfe studied with James Barton for two years; at the end of that time, just as he was beginning his professional career as a

violinist, his father died. This was in 1823. At about the same time an eccentric relation of his mother's, who had amassed a fortune in the West Indies, offered to adopt young Balfe if he would go out to live with him. But the boy would not forsake his profession, and determined to try his fortune in London. Charles Edward Horn, the singer, happened at that time to be fulfilling an engagement in Dublin, and to him Balfe went, emboldened by the praise he had bestowed on a song of the young Irishman's, with a request to be taken to London as an articulated pupil. Horn recognised Balfe's genius, and the result was that articles were signed for a period of seven years. Balfe accompanied his new master to London, where he arrived in January 1823. After an unsuccessful début at the Oratorio concerts on 19 March 1823, he recognised the necessity of further study. Accordingly the next few years were spent under the tuition of C. E. Horn and his father, Carl Friedrich—a thoroughly sound musician, who was then organist of St. George's Chapel at Windsor. Meanwhile the young composer supported himself and assisted his mother by his earnings as a violinist in the orchestras of Drury Lane Theatre and the oratorio concerts. When he was about eighteen, finding that his voice was developing the pure quality for which it was afterwards so remarkable, he was induced to try his fortune on the operatic stage, and appeared at the Norwich Theatre as Caspar in a garbled version of Weber's 'Der Freischütz.' Fortunately for the cause of music, this experiment was a decided failure, and Balfe returned to London, where better luck awaited him. His geniality and talent had already made him many friends, and at a dinner at the house of one of them, a Mr. Heath, he met a Count Mazzara, who was so struck by the resemblance between Balfe and an only son whom he had recently lost that he offered to take the young musician with him to Italy. The count was not only a liberal patron but also a wise adviser, for on their way to Rome he introduced Balfe to Cherubini, who was so much struck by his talent that he wished him to remain and study in Paris. But Balfe preferred to continue his journey to Italy, though he parted with the stern master on the best of terms, Cherubini making him promise that if he had ever need of them he might demand his services on the plea of 'friendship based on admiration.' At Rome Balfe lived for several months with Count Mazzara. But little is known of his career there, save that he studied in a somewhat desultory manner under the composer Paer. In 1826 his

patron returned to England, but previous to his departure he sent Balfe to Milan, where he studied singing and composition with Galli and Federici. Here he was introduced to the manager of the Scala, an Englishman named Glossop, who commissioned him to write the music for a ballet, 'La Pérouse.' This work achieved remarkable success, and Glossop was induced to engage Balfe as a singer. Unfortunately, before the day arrived for his first appearance, the management of the theatre was changed, and the young musician had once more to find a fresh field for his talents. He returned to Paris, went to see Cherubini, and here again fortune befriended him. The Italian maestro introduced him to Rossini, who, it is said, was so charmed by his singing of the air from the 'Barbieri,' 'Largo al factotum,' as to promise him an engagement at the Italian Opera, provided he would study under Bordogni for a year previous to his *début*. The necessary funds were provided by a friend of Cherubini's, and the Florentine composer himself superintended Balfe's studies. Under these favourable auspices he appeared in 1827 at the Théâtre des Italiens, as Figaro in Rossini's 'Barbieri,' the other characters being sung by Graziani, Levasseur, Bordogni, Madame Sontag, and Mlle. Amigo. His success was so great that he was engaged for three years at a salary of 15,000 francs for the first year, 20,000 for the second, and 25,000 for the third. Balfe's voice was a baritone, of more sweetness of quality than strength, but his singing was always distinguished for purity of delivery and power of expression. During his engagement at Paris, Balfe did little or nothing to increase his reputation as a composer. He wrote some additional music for a revival of Zingarelli's 'Romeo e Giulietta,' and began an opera on the subject of Chateaubriand's 'Atala,' but before the end of his engagement his health broke down, and he was obliged to return to Italy. At Milan he obtained an engagement as leading baritone at Palermo, but on his way there he stopped some time at Bologna, where he met Grisi, who sang in an occasional cantata he wrote at the time. He appeared at Palermo in Bellini's 'La Straniera' on 1 Jan. 1830. In the course of his engagement he wrote and produced his first opera, 'I Rivali di se stessi,' a little work without chorus, which was written in the short space of twenty days. On the termination of his engagement at Palermo, Balfe sang at Piacenza and Bergamo; at the latter place he first met his future wife, Mlle. Lina Rosa, a Hungarian singer of great talent and beauty,

whom he shortly afterwards married. His next engagement was at Pavia, where he superintended the production of Rossini's 'Mosè in Egitto,' and brought out a new work of his own, 'Un Avvertimento ai Gelosi,' in which the celebrated buffo Ronconi made his second appearance on the operatic stage. From Pavia he returned to Milan, where he received a commission for an opera for the Scala. This work, 'Enrico Quarto al Passo del Marno,' though very successful from an artistic point of view, brought Balfe only 200 francs, though even this small pecuniary success was compensated for by the fact that the work attracted the attention of Malibran to the composer. With this great artist he next went on an operatic and concert tour which ended at Venice, and on the recommendation of Malibran and her impresario, Puzzi, Balfe in 1833 returned to England. He was commissioned by Arnold to write an English opera for the opening of the newly built Lyceum Theatre, and in six weeks he produced the 'Siege of Rochelle.' Owing to some hitch in the negotiations, the work was not brought out by Arnold; but it was promptly secured by Alfred Bunn, the manager of Drury Lane, where it was produced with immense success on 29 Oct. 1835. The libretto was by Edward Fitzball, a versifier who is said once to have described himself as a 'lyric poet,' and was founded on a romance by Madame de Genlis; the principal parts were sung by Henry Phillips, Paul Bedford, and Miss Shirreff. Balfe's next work, 'The Maid of Artois,' was written to a libretto furnished by Bunn, the first of those astonishing farragoes of balderdash which raised the Drury Lane manager to the first rank amongst poetasters. The opera (for which Balfe received 100*l.*) was written for Malibran, who appeared in it with the greatest success on 27 May 1836. The 'Maid of Artois' was followed at short intervals by 'Catherine Grey' (libretto by George Linley), 'Joan of Arc' (libretto by Fitzball), and 'Diadeste' (libretto by Fitzball), all of which were produced at Drury Lane in 1837 and 1838, though only the last, an opera buffa, was as successful as the composer's earlier works had been. In 1838 Balfe was commissioned by Laporte, the manager of the Italian Opera, to write a work for Her Majesty's Theatre. In accordance with this request he composed a version of the 'Merry Wives of Windsor,' which was produced on 19 July 1838. 'Falstaff,' which contains some of its composer's best music, achieved great success, as could hardly fail to be the case, since the chief parts were sung by such

artists as Grisi, Albertazzi, Rubini, Tamburini, and Lablache. Bunn's management of Drury Lane coming to an end in 1838, Balfe accepted an engagement in an opera company at Dublin, after fulfilling which he produced several of his operas in the principal towns of Ireland, and after a successful tour in the west of England returned to London and resolved to start an English opera company on his own account. He opened the Lyceum on 9 March 1841 with a new work of his own, 'Keolanthé' (libretto by Fitzball); but though the opera was in every respect successful, internal dissensions broke up the company, and before the end of May the theatre had to be closed. Once more the disheartened composer left England, and again it was in Paris that his good fortune returned to him. A concert was given in order to introduce his works to the Parisian public, and the result was so satisfactory that Scribe, unsolicited, offered to write him a libretto for the Opéra Comique. This work, 'Le Puits d'Amour,' was produced in April 1843, where it achieved remarkable success. Every mark of distinction was showered upon the composer; Louis-Philippe offered him the cordon of the Legion of Honour, and, when his nationality prevented him from accepting it, proposed that he should become a naturalised Frenchman, offering to procure for him a post at the Paris Conservatoire. In the same year as his Parisian triumph, Balfe was recalled to London to superintend the production of an English version of 'Le Puits d'Amour' at the Princess's Theatre, and also to arrange with Bunn for a new opera for Drury Lane. This work was his famous 'Bohemian Girl,' the libretto of which was concocted by Bunn on the foundation of a ballet by St. Georges, the subject of which in its turn was taken from one of the novels of Cervantes. The 'Bohemian Girl' was produced at Drury Lane on 27 Nov. 1843, the principal characters being played by Miss Rainforth, Miss Betts, Harrison, Stretton, Borrani, and Darnset. The work ran for more than a hundred nights, and was translated into German, Italian, and French, being received everywhere with the greatest success. The following year (1844) witnessed the production at Paris of 'Les Quatre Fils Aymon' and in London of 'The Daughter of St. Mark,' in the libretto of which latter work Bunn excelled himself. These were followed at a short interval by 'L'Etoile de Séville' (Paris, 1845). In 1846, on the secession of Sir Michael Costa, Balfe was appointed conductor of the Italian Opera at Her Majesty's Theatre, then under the management of Lumley, a post for which he

was eminently fitted by his personal skill as an instrumentalist and vocalist and his intimate knowledge of operatic details. His chief compositions during this period were the 'Bondman' (Drury Lane, December 1846), 'The Devil's in it' (Surrey, 1847), and the 'Maid of Honour' (Covent Garden, 1847). The next few years were spent in various musical tours, both in England and abroad, the only work of importance which he composed being the 'Sicilian Bride,' produced at Drury Lane in 1852. In the same year he visited St. Petersburg, Vienna, and Italy, where he wrote an Italian opera, 'Pittore e Duca,' which was produced in 1856, and was played in an English version in London in 1882. In 1857 he returned to England, and was soon occupied in composing for the Pyne-Harrison company at Covent Garden the works which were its main support, the 'Rose of Castille' (October 1857), 'Satanella' (December 1858), 'Bianca' (December 1860), the 'Puritan's Daughter' (November 1861), 'Blanche de Nevers' (November 1862), and the 'Armourer of Nantes' (February 1863). These, with a cantata, 'Mazeppa,' and an operetta, the 'Sleeping Queen,' were the last works of Balfe's produced during his lifetime. In 1864 he left the house in Seymour Street, where he had lived for the last few years, and moved to Rowney Abbey, a small estate in Hertfordshire which he had bought. It was whilst living here, and on a visit to his daughter (the Duchess de Frias), that he wrote his last opera, the 'Knight of the Leopard,' the libretto of which was founded by the author, Arthur Mathison, on Sir Walter Scott's 'Talisman.' On this work Balfe bestowed more than ordinary care, and it was his hope that it would be performed on the English stage with Mlle. Tietjens and Messrs. Sims Reeves and Santley in the principal parts. With this aim before him he declined an offer which was pressed upon him by Napoleon III to have it produced in Paris; but his hope was never to be gratified, and the work was only destined to be produced in an Italian version and with a changed name four years after the composer's death. At the end of 1869 his 'Bohemian Girl' was produced in French at Paris, and once more foreign honours and decorations were conferred upon the Irish composer. In the spring of 1870 he returned from Paris to Rowney, but the severity of the winter and a domestic affliction he had sustained in the loss of his second daughter, Mrs. Behrend, had weakened his constitution to an alarming degree. In September he was taken ill with spasmodic asthma, a complaint from

which he had long suffered, and though for a time he seemed to rally, he gradually sank, and died at Rowney Abbey on 20 Oct. 1870. He was buried at Kensal Green, and eight years later a tablet was erected to his memory in Westminster Abbey.

In estimating Balfe's position amongst the musicians of his century, it is necessary to bear constantly in mind the circumstances under which he won his renown as an operatic composer. From his Irish parentage he inherited a gift of melody which never deserted him throughout his prolific career; from England he can have gained but little, for in those days English music was practically non-existent: it was from France and Italy that he received his musical education, and it was on French and Italian boards that his first laurels were won. But the period which Balfe's life covers saw the palm of musical pre-eminence transferred from Italy and France to Germany. When the 'Siege of Rochelle' was written, Wagner was unknown. Forty years later, when 'Il Talismano' was produced, the only living Italian composer of eminence had proclaimed to a great extent his adherence to the principles preached by the German school. Thus it is that opinions differ so widely as to the merits of Balfe's music. To musicians who judge him from the point of view of the old ideal, his brilliancy, melody, and fertility of invention will entitle him to a place beside Berlioz, Rossini, and Auber, while, on the other hand, by those who look for deeper thought and more intellectual aims in music, he will be regarded as a mere melodist, the ephemeral caterer to a generation who judged rather by manner of expression than by the value of what was expressed. The truth, as is usual in such cases, lies midway between these extremes. His invention, knowledge of effect, and above all his melody, will keep his works from being forgotten; and if they are deficient in those higher qualities demanded by the taste of the present day, that is no reason why, within their limits, they should cease to please. Balfe's music may not be the highest, but of its kind it attains a very high degree of excellence. A thorough master of the means at his command, and intimately aware of the limits of his powers, he never attempted what he could not perform, and the result was that he produced such a number of works which are always satisfactory and often delightful.

[Kenny's Life of Balfe (1865); Barrett's Balfe and his Works (1882); Harmonicon for 1823; contemporary newspapers; Add. MSS. 29261, 29498; information from Madame Balfe.]

W. B. S.

BALFE, VICTOIRE (1837-1871). [See CRAMPTON.]

BALFOUR, ALEXANDER (1767-1829), novelist, was born of humble peasantry in the parish of Monikie, Forfarshire, Scotland, on 1 March 1767. Being a twin, he was cared for by a relative. He was physically weak. His education was of the scantiest. When a mere lad he was apprenticed to a weaver. Later he taught in a school in his native parish, and many lived to remember him gratefully for his rough and ready but successful teaching of them. In his twenty-sixth year (1793) he became one of the clerks of a merchant manufacturer in Arbroath. In 1794 he married. He commenced author at the age of twelve. Not very long after he filled 'the poets' corner' in the local newspaper. Later he contributed verse to the 'British Chronicle' newspaper and to the 'Bee' of Dr. Anderson. In 1793 he was one of the writers in the 'Dundee Repository' and in 1796 in the 'Aberdeen Magazine.' Four years after his removal to Arbroath he changed his situation, and two years later, on the death of his first employer, he carried on the business in partnership with his widow. On her retirement in 1800 he took another partner, and, having succeeded in obtaining a government contract to supply the navy with canvas, in a few years he possessed considerable property. During the war with France, he published patriotic poems and songs in the 'Dundee Advertiser,' which were reprinted in London. To the 'Northern Minstrel' of Newcastle-on-Tyne he furnished many songs, and a number of poems to the Montrose 'Literary Mirror.' He wrote an account of Arbroath for (Sir David) Brewster's 'Encyclopædia,' and several papers for Tilloch's 'Philosophical Journal.' In 1814 he removed to Trotrick, near Dundee, as manager of a branch of a London house. In the following year it became bankrupt, and Balfour was again thrown on the world. He found a poor employment as manager of a manufacturing establishment at Balgonie, Fifeshire. In October 1818, for the sake of his children's education, he transferred himself to Edinburgh, and obtained a situation as clerk in the great publishing house of the Messrs. Blackwood. Unhappily in the course of a few months he was struck down by paralysis, and in June 1819 was obliged to relinquish his employment. He recovered so far that he could be wheeled about in a specially prepared chair. His intellect was untouched, and he devoted himself to literature. In 1819 appeared his 'Campbell; or the Scottish Probationer' (3 vols.). The

novel was well received. In the same year he edited Richard Gall's 'Poems,' with a memoir. In 1820 he published 'Contemplation, and other Poems' (1 vol.). In 1822 came his second novel of the 'Farmer's Three Daughters' (3 vols.), and in 1823 'The Foundling of Glenthorn; or the Smuggler's Cave, a Romance' (3 vols.). In 1825 he republished from Constable's 'Edinburgh Magazine' 'Characters omitted in Crabbe's Parish Register' (1 vol.), and his 'Highland Mary' (4 vols.) in 1827. He died on 12 Sept. 1829. The 'Remains,' entitled 'Weeds and Wildflowers,' were edited by Dr. D. M. Moir (Δ) with a sympathetic memoir, whence ours is mainly drawn. Balfour wrote his novels for 'the Minerva Press,' as needing 'daily bread,' but he never pandered to the low *morale* of its habitual readers. Pathos and shrewdness of insight and a very graphic faculty of sketching character are his chief characteristics. Canning sent him a grant of 100*l.* in recognition of his ability and misfortunes.

[Balfour's Remains, edited by Dr. D. M. Moir.]  
A. B. G.

BALFOUR, SIR ANDREW (1630-1694), botanist, was born on 18 Jan. 1630 at Balfour Castle, Denmiln, Fifeshire; the youngest son of his parents, Sir Michael Balfour, and Joanna, daughter of James Durham of Pike-row. His eldest brother James [see BALFOUR, SIR JAMES, 1600-1657] was thirty years his senior, the family consisting of five sons and nine daughters. He was baptised on the day of his birth, and his education was conducted in the parish school of Abdie, and afterwards at the university of St. Andrews; at the latter he began his study of natural history and medicine, and then came to Oxford. He spent some years in foreign travel; in France he studied in Paris, Montpellier, and Caen, also in Italy at Padua, but spent most time in Paris, studying medicine, anatomy, and botany, in the royal garden, of which Joncquet was then prefect. On his return, after taking his degree of M.D. at Caen on 20 Sept. 1661, he stayed long in London in the practice of his profession, Harvey, De Mayone, Glisson, and Wharton being named as his compeers. He travelled as tutor to the Earl of Ross again on the continent, and spent four years in France and Italy, visiting Zanoni at Bologna, who showed him the unpublished plates of his 'Historia Plantarum,' and Torre at Padua. After fifteen years' travel abroad he returned to St. Andrews, where he recommenced the practice of medicine, but afterwards removed to Edinburgh. A year or two after his settlement at the latter place he began his botanic garden; procuring seeds from Dr.

Robert Morison of Blois, and afterwards of Oxford, and M. Marchant of Paris, and others, he soon had more than a thousand species in cultivation. He founded the public botanic gardens at Edinburgh about 1680 by the good offices of Lord Patrick Murray of Levisstone, and he transferred thither his own plants to the care of Sutherland, the first curator, who published a catalogue in 1683. On Lord Murray's death in 1671, the cost of maintenance fell upon Balfour and Sir Robert Sibbald, until the university granted an annual subsidy from the corporate funds. He died 10 Jan. 1694, aged 62, leaving his curiosities and manuscripts to Sibbald. After his death his son published at Edinburgh in 1700 'Letters writtē to a Friend' [Lord Murray], containing excellent directions and advices for travelling through France and Italy. Sibbald published in 1699 a life of Sir Andrew and his brother Sir James, under the title of 'Memoria Balfouriana.'

[Sibbald's *Memoria Balfouriana*, Edin. 1699; *Auctarium Mussei Balfouriani e Musæo Sibbaldiano*, Edin. 1697; *Pulteney's Sketches*, ii. 3, Lond. 1790.] B. D. J.

**BALFOUR, OLARA LUCAS** (1808–1878), lecturer and authoress, was born in the New Forest, Hampshire, on 21 Dec. 1808. Her parents' name was Liddell; she was their only child, and on the death of her father in her childhood, her mother, who was a woman of much intellectual power, left Hampshire and took up her residence in London. Miss Liddell was educated with extreme care by her mother; and in 1827 became the wife of Mr. James Balfour, of the Ways and Means Office in the House of Commons, her new home being in Chelsea. There, in 1837, some socialistic movement opposed to her views was being actively organised; she wrote a tract against it, completely breaking it up, for which Mrs. Carlyle called upon her to thank her, and began a friendship with her; and there also, in the same year, in the month of October, she first turned her attention to the teetotal agitation (*Our Old October*, reprinted as a penny pamphlet from the 'Scottish Review'). Having taken the pledge at the Bible Christians' chapel, a very humble meeting-place close by her house, and having from that moment adopted teetotalism as the earnest business of her life, Mrs. Balfour, in 1841 (after removing to Maida Hill), began her career as a temperance lecturer at the Greenwich Literary Institution, and with much power, but much also of modesty and quiet charm, continued the public advocacy of her principles for nearly thirty years. Her lectures

were not, however, confined to the temperance topic. She lectured on the influence of woman on society, and kindred subjects; and she held the post for some years of lecturer on *belles lettres* at a leading ladies' school. Her publications, mostly to advocate temperance, but also with a theological aim, and covering a varied surface, had an immense sale, and were very numerous. They were as follows: 1. 'Moral Heroism,' 1846. 2. 'Women of Scripture,' 1847. 3. 'Women and the Temperance Movement,' 1849. 4. 'A Whisper to the Newly Married,' 1850. 5. 'Happy Evenings,' 1851. 6. 'Sketches of English Literature,' 1852. 7. 'Two Christmas Days,' 1852. 8. 'Morning Dew Drops,' with preface by Mrs. Beecher Stowe, 1853. 9. 'Working Women,' and several short sketches, as 'Instructors,' of Mrs. Barbauld, Mrs. Trimmer, Mrs. Sherman, Hannah More, &c., 1854. 10. 'Introductory Essay to Ann Taylor's Maternal Solitude,' 1855. 11. 'Bands of Hope,' 1857. 12. 'Dr. Lignum's Sliding Scale,' 1858. 13. 'Frank's Sunday Coat,' 1860. 14. 'Scrub,' 1860. 15. 'Toil and Trust,' 1860. 16. 'The Victim,' 1860. 17. 'The Warning,' 1860. 18. 'The Two Homes,' 1860. 19. 'Sunbeams for all Seasons,' 1861. 20. 'Drift,' 1861. 21. 'Uphill Work,' 1861. 22. 'Confessions of a Decanter,' 1862. 23. 'History of a Shilling,' 1862. 24. 'Wanderings of a Bible,' 1862. 25. 'A Mother's Sermon,' 1862. 26. 'Our Old October,' 1863. 27. 'Cousin Bessie,' 1863. 28. 'Hope for Number Two,' 1863. 29. 'A Little Voice,' 1863. 30. 'A Peep out of the Window,' 1863. 31. 'Club Night,' 1864. 32. 'Troubled Waters,' 1864. 33. 'Cruelty and Cowardice,' 1866. 34. 'Bible Patterns of Good Women,' 1867. 35. 'Ways and Means,' 1868. 36. 'Harry Wilson,' 1870. 37. 'One by Herself,' 1872. 38. 'All but Lost,' 1873. 39. 'Ethel's Strange Lodger,' 1873. 40. 'Lame Dick's Lantern,' 1874. 41. 'Light at last,' 1874. 42. 'Women worth Emulating,' 1877. 43. 'Home Makers,' 1878. Besides these, 'Lilian's Trial' was being published at the time of Mrs. Balfour's death in the 'Fireside'; 'Job Tufton' appeared as late as 1882 in the National Temperance publications; and 'The Burmish Family,' and 'The Manor Mystery,' are other tales brought out posthumously. Of these works several were printed again and again, and the 'Whisper to the Newly Married' reached as many as twenty-three editions. Mrs. Balfour contributed many of these shorter tales, in the first instance to the 'British Workman,' 'Day of Days,' 'Hand and Heart,' 'Animal World,' 'Meliora,' 'Family Visitor,' 'Home Words,' 'Fireside,'

'Band of Hope Review,' and the 'Onward' series. Others were issued as Social Science Tracts, and some published by the Scottish and the British Temperance Leagues, with which she was closely identified.

Mrs. Balfour's last public appearance was at the Memorial Hall, Farringdon Street, E.C., in May 1877, when she was elected President of the British Women's Temperance League. She died at Croydon 3 July 1878, aged 70 years, and was buried at the Paddington Cemetery, the Rev. Dawson Burns, M.A., preaching her memorial discourse (which was afterwards published) in the Church Street Chapel, Edgware Road.

[Templar and Temperance Journal, 10 July 1878; Hand and Heart, 12 July 1878; The Oracle, 22 July 1882, p. 60; Notice prefixed to Home Makers, 1878.] J. H.

BALFOUR, FRANCIS, M.D. (A. 1812), Anglo-Indian medical officer, appears to have taken the degree of M.D. at Edinburgh. He entered the East India Company's service in Bengal as assistant-surgeon on 3 July 1769, was appointed full surgeon on 10 Aug. 1777, and retired from the service on 16 Sept. 1807 (DODWELL and MILES' *Indian Medical Officers*, 4-5). He afterwards returned to Edinburgh; but the date of his death is uncertain. He appears to have been living in 1816.

Balfour lived for several years on terms of some intimacy with Warren Hastings. He dedicated a book—'The Forms of Herkern'—to him in 1781, and addressed him a letter in the same year complaining of the want of courtesy shown him by other officials in the East India service at Lucknow (*Addit. MS.* 29151, f. 109). In May, June, and July 1783, Balfour, while at Benares, corresponded frequently with Hastings in an abortive attempt to disclose a plot between the resident of Benares, Francis Powke, and Rajah Cheyts Sing, which he claimed to have discovered (*Addit. MSS.* 29159, ff. 257, 388, 394, 400; 29160, ff. 49, 50, 69, 83, 104, 116). Balfour not only interested himself in politics and medicine, but devoted much time to Oriental studies. 'The Forms of Herkern . . . translated into English . . . by Francis Balfour,' was published at Calcutta in 1781, and republished in London in 1804. It is a state letter-writer in Persian; a vocabulary is given by the translator at the end. Balfour was one of the earliest members of the Bengal Asiatic Society, founded, under the presidency of Sir William Jones and the patronage of Warren Hastings, in 1784. To the 'Asiatic Researches' ('Transactions of the Bengal

Asiatic Society') Balfour contributed in 1790 a paper on Arabic roots, showing how the Arabic language had entered into the Persian and the language of Hindostan (ii. 205), and in 1805 a paper entitled 'Extracts from Tehzebul Mantik; or the Essence of Logic, proposed as a small supplement to Arabic and Persian Grammar, and with a view to elucidate certain points connected with Oriental Literature' (viii. 89).

Balfour's medical works were as follows: 1. 'Dissertatio de Gonorrhœa Virulenta,' 1767. 2. 'A Treatise on Sol-Lunar Influence in Fevers,' vol. i. Calcutta, 1784; 2nd ed. London, 1795; 3rd ed. Cupar, 1815; 4th ed. Cupar, 1816. A German translation of the book, with a preface by Herr Lauth, appeared at Strasburg in 1786. Balfour here expounds his favourite theory, that fevers are under the direct influence of the moon, and reach their critical stage with the full moon. 3. 'Treatise on Putrid Intestinal Remitting Fevers,' 1790; 2nd ed. 1795. 4. A paper on the Barometer in the 'Asiatic Researches' (iv. 195), 1795. 5. A paper on the Diurnal Variations of the Barometer, 'Edinburgh Phil. Trans.' (iv. pt. i. 25), 1798. 6. A paper on the Effects of Sol-Lunar Influence on the Fevers of India in 'Asiatic Researches' (viii. 1), 1805.

[Authorities cited above; Watt's *Bibl. Brit.*; Balfour's works; *Dict. of Living Authors*, 1816.] S. L. L.

BALFOUR, FRANCIS MAITLAND (1851-1882), naturalist, the third son of James Maitland Balfour, of Whittinghame, East Lothian, and Lady Blanche, daughter of the second Marquis of Salisbury, was born at Edinburgh, during a temporary stay of his parents there, on 10 Nov. 1851.

His first years were spent at Whittinghame, where a love for natural science, carefully fostered by his mother, early developed itself in him, and led him, while still a boy, to make not inconsiderable collections of the fossils and birds of his native county. After two years spent in a preparatory school at Hoddesdon, Herts, he entered at Harrow in 1865. In the ordinary studies of the school he did not greatly distinguish himself, but, under the guidance of one of the masters, Mr. G. Griffith, he made rapid progress in natural science, especially in geology. His attainments in this direction, together with the increasing proofs that he possessed a character of unusual strength, led those around him thus early to conclude that he would before long make his mark. In October 1870 he entered into residence at Trinity College, Cambridge, and, being now able to

devote his whole time to his favourite studies, soon began to show what manner of man he was. At Easter 1871 he became natural science scholar of his college, and very shortly afterwards, under the guidance of the Trinity prælector of physiology, Dr. Michael Foster, threw himself with great ardour into the investigation of certain obscure points in the development of the chick. For by this time his earlier love for geology had given way to a desire to attack the difficult problems of animal morphology, and these he, like others, saw could be best approached by the study of embryology, that is the history of the development of individual forms. The results at which he arrived in this, so to speak, apprentice work were published in the 'Quarterly Journal of Microscopical Science' in July 1873.

In December 1873 he passed the B.A. examination in the natural sciences tripos, and almost immediately after started for Naples to work at the Stazione Zoologica, which had recently been established by Dr. Anton Dohrn. He foresaw that the embryonic history of the elasmobranch fishes (sharks, rays, &c.), about which little was at that time known, would probably yield results of great morphological importance. Nor was he mistaken. His first year's work on these animals yielded new facts of supreme importance concerning the development of the kidneys and allied organs, concerning the origin of the spinal nerves, and concerning the initial changes in the ovum and the early stages of the embryo. And these facts did not in his hands remain barren facts. With remarkable power and insight he at once grasped their meaning, and showed how great a light they shed on the relations of sharks both to other vertebrates and especially to invertebrates. He made them tell the tale of evolution.

The worth of the young observer's works was soon recognised. In his college it gained for him a fellowship, while both in England, and perhaps even more abroad, biologists at once felt that a new strong man had arisen among them. The elasmobranch work took, however, some time to complete; it was carried on partly at Cambridge, partly at Naples, for the next two or three years, and the finished monograph was not published till 1878. Meanwhile, in 1876, he was appointed lecturer on animal morphology at Cambridge, and he threw himself into the labour of teaching with the same ardour, and showed in it the same power, that were so conspicuous in his original investigations. His class, at first small, soon became large, and before long he had pupils not content with knowing what was known, but anxious like

himself to explore the unknown; besides, students in embryology came to him from outside the Cambridge school, it may almost be said from all parts of the world. No sooner was the elasmobranch monograph off his hands than he set himself to write a complete treatise on embryology, the want of such a work being greatly felt. This *opus magnum*, which appeared in two volumes, one in 1880, the other in 1881, is in the first place a masterly digest of the enormous number of observations, the majority made within the last ten or twenty years, which form the basis of modern embryology. As a mere work of erudition and of lucid exposition it is a production of the highest value. But it is much more than this. In it there are embodied the results of so many inquiries carried out by Balfour or by his pupils under his care, that the book comes near to being even in matter an original work, while on almost every page there is the touch of a master hand. Every problem is grasped with a strong hold, cobwebs are brushed away with a firm but courteous sweep; and as the reader passes from page to page, subtle solutions of knotty points and bright suggestions for future inquiry come upon him again and again. Not once or twice only, but many times, the darkness in which previous observers had left a subject is scattered by a few shining lines. It is a work full of new light from beginning to end.

Nor was the world tardy in acknowledging the value of the young morphologist's labours. In 1878 he was elected a fellow of the Royal Society, and in 1881 received a 'royal medal' for his discoveries. Oxford was most anxious to gain him as a successor to the late Professor G. Rolleston, and Edinburgh made repeated efforts to secure him for her chair of natural history. But he would not leave his own university, and in recognition of his worth and loyalty a special professorship of animal morphology was in the spring of 1882 instituted for him at Cambridge.

In June 1882, his health having been impaired by an attack of typhoid fever during the previous winter, he started for Switzerland, hoping by some Alpine climbing, of which he had become very fond, and in which he showed great skill, to make complete the recovery of his strength. On 18 July he and his guide set out from Cormayer to ascend the virgin peak of the Aiguille Blanche de Peuteret. They never came back alive. A few days later their dead bodies were found on the rocks by an exploring party. Either on the ascent or descent, some time apparently of the next day, the 19th, they must have fallen and been killed instantaneously. His

body was brought home to England and buried at Whittinghame.

Probably few lives of this generation were so full of promise as the one thus cut short. The remarkable powers which Balfour possessed of rapid yet exact observation, of quick insight into the meaning of the things observed, of imaginative daring in hypothesis kept straight by a singularly clear logical sense, through which the proven was sharply distinguished from the merely probable, made all biologists hope that the striking work which he had already done was but the earnest of still greater things to come. Nor do biologists alone mourn him. In his college, in his university, and elsewhere, he was already recognised as a man of most unusual administrative abilities. Whatever he took in hand he did masterly and with wisdom. Yet to his friends his intellectual powers seemed a part only of his worth. High-minded, generous, courteous, a brilliant fascinating companion, a steadfast loving friend, he won, as few men ever did, the hearts of all who were privileged to know him.

[Personal knowledge.]

M. F.

**BALFOUR, SIR JAMES, LORD PITTEN-DREICH** (*d.* 1583), Scottish judge, was a son of Sir Michael Balfour, of Mountquhanny, in Fife. Educated for the priesthood, he adopted the legal branch of the clerical profession, as was common in Scotland at this period. Having taken part with his brothers, David and Gilbert, in the plot for the assassination of Cardinal Beaton, he shared the fate of the conspirators, who, on the surrender of the castle of St. Andrews, in June 1547, to the French, were allowed to save their lives by service in the galleys. John Knox, his fellow prisoner in the same galley, who looked upon Balfour as a renegade, and denounces him as a manifest blasphemer and the principal misguider of Scotland for his desertion from the party of the reformers, records his release in 1549, which, according to Spottiswoode, a less adverse authority, was due to his abjuring his profession. Soon after he became official of the archdeaconry of Lothian, and chief judge of the consistorial court of the archbishop of St. Andrews. He continued for some years to support the policy of Mary of Guise, then, passing over to that of the lords of the congregation, was admitted to their councils, and betrayed their secrets. He was rewarded by the preferment of the parsonage of Flick, in Fife. Soon after Queen Mary's return to Scotland, he was nominated an extraordinary lord, 12 Nov. 1561, and on 15 Nov. 1563 an ordinary lord, of the court

of session. The abolition, in 1560, of the ecclesiastical consistorial jurisdiction, one of the first fruits of the Reformation, led to great confusion with reference to the important causes that had been referred to it. Besides others, all those relating to marriage, legitimacy, and wills, were in its control, and it was found necessary to institute a commissary court at Edinburgh in its stead. Balfour was the chief of the four first commissaries, and the charter of their appointment, on 8 Feb. 1563, is printed in the treatise which has received the name of 'Balfour's Practicks.' With other partisans of Bothwell and Bothwell himself he is said to have escaped from Holyrood on the night of Rizzio's murder, but Macgill, the lord clerk register, having been deprived of that office for his share in the plot, Balfour succeeded to the vacancy. Common rumour, supported in this instance by probable evidence, assigned to Balfour the infamous part of having drawn the bond for Darnley's murder, and provided the lodging, a house of one of his brothers, in the Kirk o' Field, where the deed was done. Though not present, according to the confessions of the perpetrators, he was accused of complicity by the tickets or placards which appeared on the walls of Edinburgh immediately after the commission of the crime. His appointment, during the short period of Bothwell's power, to the incongruous post—for a lawyer—for governor of Edinburgh Castle; his acting as commissary in the divorce suit by Lady Bothwell against her husband, and as lord clerk register in the registration of Mary's consent to the contract of marriage with Bothwell, leave no doubt that he was a useful and ready instrument in the hands of the chief assassin, and received his reward. With an adroitness in changing sides in which, though not singular, he excelled the other politicians of the time, he forestalled the fall of Bothwell and made terms with Murray by the surrender of the castle, receiving in return a gift of the priory of Pittenweem, an annuity for his son out of the rents of the priory of St. Andrews, and a pardon for his share in Darnley's death. According to the journal ascribed to Mary's secretary, Nau, it was by the advice of Balfour, 'a traitor who offered himself first to the one party and then to the other,' that the queen left Dunbar and took the march to Edinburgh which led to her surrender at Carberry Hill. He was present at the battle of Langside, in the regent's army. Having surrendered the office of lord clerk register to allow of the reinstatement of Macgill, a friend of the regent Murray, Balfour received

a pension of 500*l.* and the presidency of the court of session, from which William Baillie, Lord Provand, was removed on the ground that he was not, as the act instituting it required, of the clerical order—a mere pretence on the part of the leader of the protestant party. That he betrayed Bothwell by giving the information which led to the interception of the casket letters is doubted, not because such an act would be in the least inconsistent with his character, but because it is deemed by many a more probable solution of the mystery that the letters were fabrications. During the regency of Murray he was suspected of intriguing with the adherents of the queen while ostensibly belonging to the party of the regent, and he was deprived of the office of president in 1568. Shortly before the death of Murray, Balfour was imprisoned, on the accusation of Lennox, for his share in Darnley's murder; but a bribe to Wood, the regent's secretary, procured his release without trial, and though he lost the presidency of the court he retained the priory of Pittenweem. After the accession of Lennox to the regency, he was forfeited on 30 Aug. 1571, but he made terms with Morton in the following year by abandoning his associates on the queen's side, Maitland of Lethington and Kirkcaldy of Grange, and negotiating the pacification of Perth in 1573. Not unnaturally distrusted, even by those he pretended to serve, and doubting his own safety, he soon afterwards fled to France, where he appears to have remained till 1580, and in 1579 the forfeiture of 1571 was renewed by parliament. On his return he devoted himself to the overthrow of Morton, which he accomplished, it has been said, by the production of the bond for Darnley's murder which he had himself drawn, but more probably of the subsequent bond in support of Bothwell's marriage with Mary. The last certain appearance of Balfour in history is in a long letter by him to Mary, on 31 Jan. 1580, offering her his services; but he is believed to have lived till 1583, from an entry in the books of the privy council on 24 Jan. 1584, restoring his children, which refers to him as then dead. By his wife Margaret, the heiress of Michael Balfour, of Burleigh, he had three daughters and six sons, the eldest of whom was created by James Lord Balfour of Burleigh in 1606. Balfour appears to have been a learned lawyer, and is praised by his contemporary, Henryson, for the part he took in the commission issued in 1566 for the consolidation of the laws. Some parts of the compilation, published in 1774 from a manuscript in the Advocates' Library, were taken from the collection probably

made by him in connection with this commission. But the special references to the Book of Balfour (*Liber de Balfour*) and the fact that there was a subsequent commission issued by Morton in 1574, in which, although he was a member, his exile in France cannot have admitted of his taking a leading part, deprive him, in the opinion of the best authorities, of the claim to the authorship of the whole manuscript, which has unfortunately been published under his name, and is known as 'Balfour's Practicks', the earliest text-book of Scottish law. The character drawn of him by an impartial historian is borne out by contemporary authority. 'He had served with all parties, had deserted all, yet had profited by all. He had been the partisan of every leader who rose into distinction amid the troubled elements of those times. Almost every one of these eminent statesmen or soldiers he had seen perish by a violent death—Murray assassinated, Lethington fell by his own hand, Grange by that of the common executioner, Lennox in the field, Morton on the scaffold. . . . Theirs was, upon the whole, consistent guilt. Balfour, on the other hand, acquired an acuteness in anticipating the changes of party and the probable event of political conspiracy which enabled him rarely to adventure too far, which taught him to avoid alike the determined boldness that brings ruin in the case of failure and that lukewarm inactivity which ought not to share in the rewards of success' (TYTLER, *Life of Craig*, p. 105). Member of a house which had, in the words of Knox, 'neither fear of God nor love of virtue further than the present commodity persuaded them,' he was himself, in the briefer verdict of Robertson, 'the most corrupt man of his age.'

[Knox's History of the Reformation; Spottiswoode's History of the Church of Scotland; Keith's History; Bannatyne's Journal; Sir James Melville's Memoirs; Goodal's Preface to Balfour's Practicks.] A. E. M.

**BALFOUR, SIR JAMES (1600–1657)**, of Denmiln and Kinnaird, historian and Lyon king-of-arms, the eldest son of Sir Michael Balfour of Denmiln in Fife, comptroller of the household of Charles I, and Joanna Denham, was born in 1600. The youngest of the family was Sir Andrew Balfour [q. v.], an eminent botanist, the friend of Sir Robert Sibbald, who has written his life, along with that of Sir James, in a small and now scarce tract, 'Memoria Balfouriana sive Historia rerum pro Literis promovendis gestarum a clarissimis fratribus Balfouris DD. Jacobo barone de Kinnaird equite, Leone rege armorum, et

DD. Andrea M.D. equite aurato, a R. S., M.D. equite aurato, 1699.' The family of this branch of the Balfours was so remarkable for its numbers that Sir Andrew told Sibbald his father had lived to see 300 descendants, and Sir Andrew himself twice that number descended from his father. Yet the male line is now extinct, and, with the exception of the two subjects of Sibbald's memoir and their brother David, who became a judge, they do not seem to have been men of note. After a good education at home Balfour was sent to travel on the continent, and after his return, although he had shown some inclination for poetry in his youth, when he translated the 'Panthea' of Johannes Leocæus (John Leech) into Scottish verse, he devoted himself to the study of the history and antiquities of Scotland. It was his good fortune, remarks Sibbald, to be stimulated to this line of study by the number of his countrymen who cultivated it at that time: Archbishop Spottiswoode and Calderwood, the church historians; David Hume of Godscroft, the writer of the history of the Douglasses; Wishart, afterwards Bishop of Edinburgh, the biographer of Montrose; Robert Johnston, who wrote the history of Britain from 1577; the poet Drummond of Hawthornden, the historian of the Jameses; the brothers Pont, the geographers; with the circle of friends, Sir Robert Gordon of Straloch, Sir John Scot of Scotstarvet and others, who contributed to the great atlas of Scotland published by Blaeu at Amsterdam; and Robert Maule, commissary of St. Andrews, a diligent antiquary and collector of the stamp of Balfour himself. Balfour was himself addicted to heraldry, and, to perfect himself in it, went to London in 1628, where he made the acquaintance of the English College of Heralds and Dodsworth and Dugdale, then the leading English historical antiquaries. To the 'Monasticon' of Dugdale he contributed a brief account of the religious houses of Scotland. On his return he was knighted by Charles I on 2 May 1630, made Lyon king-of-arms, and crowned by George Viscount Dupplin as king's commissioner by warrant dated 20 April 1630. He was created a baronet 22 Dec. 1633, and deprived of the office of Lyon by Cromwell about 1654. During the civil war he remained in retirement at Falkland or Kinnaird, collecting manuscripts and writing historical memoirs or tracts.

As none of his works, except his 'Annals of the History of Scotland from Malcolm III to Charles II,' and a selection of his tracts (edited by Mr. James Maidment, 1837), have been printed, it is worth while to give Sib-

bald's list of these in manuscript, most of which are now preserved in the Advocates' Library, although some were lost at the siege of Dundee, where they had been sent for safety.

The list is as follows: 1. 'A Treatise on Surnames, but especially those of Scotland.' 2. 'A Treatise of the Order of the Thistle.' 3. 'An Account of the Ceremonies at the Coronation of Charles I at Holyrood;' and 4. 'Of Charles at Scone.' 5. 'An Account of the Coats of Arms of the Nobility and Gentry of Scotland.' 6. 'A Genealogy of all the Earls of Scotland from their Creation to 1647.' 7. 'An Account of the Funeral Ceremonies of some Noble Persons.' 8. 'An Account of those who were knighted when he was Lyon.' 9. 'An Account of the Impresses, Devices, and Mottoes of several of our Kings and Queens.' 10. 'The Crests, Devices, and Mottoes of the Scotch Nobility.' 11. 'Injunctions by Sir James Balfour, Lyon King, to be observed by all the Officers-at-Arms.' 12. 'The True Present State of the Principality of Scotland.' 13. 'Lists of the various Officers of State in Scotland and of the Archbishops of St. Andrews.' 14. 'Memorials and Passages of State from 1641 to 1654.' 15. 'A Full Description of the Shore of Fife.' 16. 'A Treatise on Gems and the Composition of False Precious Stones.' Besides these he wrote several miscellaneous works, chiefly on heraldic subjects.

More important than the original work of Sir James Balfour was his diligence as a collector, which preserved, shortly after the dispersion of the treasures of the monastic libraries, many of the chronicles, cartularies, and registers of the Scottish bishoprics and religious houses, since published as the 'Chronicle of Melrose,' the Cartularies of Dunfermline, Dryburgh, Arbroath, and Aberdeen, the Registers of the Priory of St. Andrews and the Monastery of Cupar. A full list of these and his other manuscripts is given by Sibbald. His valuable library, along with that of his brother Sir David, was dispersed by auction after the death of the latter, and the catalogue printed at the close of Sibbald's memoir is a valuable record of the library of a Scottish gentleman in the seventeenth century. Balfour was four times married, and died in 1657, surviving his father only five years. He was interred in Abdie Church. The 'Annals' are not of much value, except in that part which is contemporary, and even in that they are jejune, preserving, however, some interesting particulars, chiefly in relation to the ceremonies in which he took part as Lyon king.

[Sibbald's *Memoria Balfouriana*, 1699; Bal-

four's Historical Works, edited by James Haig from the Manuscript in Advocates' Library, 1824.] Æ. M.

**BALFOUR, JAMES (1705-1795)**, philosopher, was born at Pilrig, near Edinburgh, in 1705, and, after studying at Edinburgh and at Leyden, was called to the Scottish bar. He held the offices of treasurer to the faculty of advocates and sheriff-substitute of the county of Edinburgh. In 1754 he was appointed to the chair of moral philosophy in the university of Edinburgh, and in 1764 transferred to that of the law of nature and nations. He was the author of three philosophical books: 1. 'A Delineation of the Nature and Obligation of Morality, with Reflexions upon Mr. Hume's book entitled "An Inquiry concerning the Principles of Morals."' This book was published anonymously, the first edition in 1753, the second in 1763. 2. 'Philosophical Essays,' published anonymously in 1768. 3. 'Philosophical Dissertations,' published in 1782 under the author's name. These writings are marked by a calm tone of good sense and good feeling, but are not very powerful in thought. Dr. McCosh, in his work on the 'Scottish Philosophy,' says of him: 'He sets out (in his "Delineation") with the principle that private happiness must be the chief end and object of every man's pursuit; shows how the good of others affords the greatest happiness; and then, to sanction natural conscience, he calls in the authority of God, who must approve of what promotes the greatest happiness. This theory does not give morality a sufficiently deep foundation in the constitution of man on the character of God, and could not have stood against the assaults of Hume. . . . In his "Philosophical Essays" he wrote against Hume and Lord Kaimes, and in defence of active power and liberty. Like all active opponents of the new scepticism, he felt it necessary to oppose the favourite theory of Locke, that all our ideas are derived from sensation and reflexion.'

Balfour's mother was a Miss Hamilton, of Airdrie, great-granddaughter of the late Sir William Hamilton, Bart., professor of logic and metaphysics in the university of Edinburgh 1836-1856. His eldest sister married Gavin Hamilton, bookseller and publisher in Edinburgh (also, it is believed, a member of the Airdrie family), whose eldest son was Robert Hamilton, professor of mathematics in Marischal College and University, Aberdeen, author of a treatise on the national debt.

[The Imperial Dictionary of Universal Biography; Anderson's Scottish Nation; McCosh's

Scottish Philosophy; Letter to the writer from John M. Balfour-Melville, Esq., of Pilrig and Mount Melville, great-grandson of Professor Balfour.] W. G. B.

**BALFOUR, JOHN (d. 1688)**, third **BARON BALFOUR OF BURLEIGH**, succeeded his father Robert, second Lord Balfour of Burleigh [q. v.], in 1663. In his youth he went to France for his education. In an 'affair of honour' he was there wounded. He returned home through London early in 1649, and married Isabel, daughter of another scion of his house—Sir William Balfour [q. v.] of Pitcullo, Fife, lieutenant of the Tower. The young married pair set off for Scotland in March. They found the father strongly displeased. The displeasure took the preposterous shape of asking the general assembly of the kirk of Scotland to annul the marriage. The petition was quietly shelved. The plea for the dissolution of the tie was 'the open wound' he still bore, and which paternal wrath deemed a disqualification for marriage. He died in 1688, leaving besides Robert, his heir and successor, two sons and six daughters. This Lord Balfour of Burleigh has been traditionally styled 'Covenanter,' which he assuredly never was. On Sir Walter Scott must be laid the blame—if blame it be—by having appropriated the name and designation in his 'John Balfour of Burley' in 'Old Mortality.' John Balfour, the 'Covenanter,' was historically 'of Kinloch,' not of Burleigh, and the principal actor in the assassination of Archbishop Sharp in 1679. For this crime his estate was forfeited and a large reward offered for his capture. He fought at Drumclog and at Bothwell Bridge, and is said to have escaped to Holland, and to have there tendered his services to the Prince of Orange. It is generally supposed that John Balfour of Burley died at sea on a return voyage to Scotland. But in the 'New Statistical Account of Scotland,' under 'Roseneath,' strong presumptions are stated for believing that he never left Scotland, but found an asylum in the parish of Roseneath, Dumbartonshire, under the wing of the Argyll family. According to this account, having assumed the name of Salter, his descendants continued there for many generations, the last of the race dying in 1815. Scott noted in his 'Old Mortality' that in 1808 a Lieutenant-colonel Balfour de Burleigh was commandant of the troops of the King of Holland in the West Indies.

[Authorities as under **BALFOUR, ROBERT**, second Lord Balfour; Scott's Old Mortality, note 2, 3; Anderson's Scottish Nation; Letter from the present Lord Balfour of Burleigh, Kennet.] A. B. G.

**BALFOUR, JOHN HUTTON** (1808-1884), botanist, was born in Edinburgh on 15 Sept. 1808, his father having been a surgeon in the army, and one of his near relatives having been James Hutton, author of the 'Theory of the Earth.' After completing his early education at the High School of Edinburgh he studied at St. Andrew's and Edinburgh Universities, graduating M.A. and M.D. Edin., the latter in 1832. He gave up the intention of seeking ordination in the church of Scotland, for which he at first prepared, became M.R.C.S. 1831, F.R.C.S. (Edin.) 1833, and, after studying some time in continental medical schools, commenced medical practice in Edinburgh in 1834. He had previously been greatly attracted to botanical studies by Professor Graham's lectures and excursions, and continuing to enlarge his botanical knowledge, in 1836 he was prominent in establishing the Botanical Society of Edinburgh, and in 1838 the Edinburgh Botanical Club. In 1840 he commenced to give extra-academical lectures on botany at Edinburgh, and had considerable success. In 1841 he succeeded Dr. (afterwards Sir) W. J. Hooker as professor of botany at Glasgow University, and thenceforward gave up medical practice. In 1845, on the death of Graham, Balfour became professor of botany at Edinburgh, and was nominated regius keeper of the Royal Botanic Garden and queen's botanist for Scotland. Becoming F.R.S. (Edinburgh) in 1835, he was for many years an active secretary of the society. For thirty years he was dean of the medical faculty of the university of Edinburgh, in which capacity he was most valuable to the medical school, and very popular with the students. His botanical excursions with pupils were most energetically conducted, and extended to almost every part of Scotland. He ascended every important peak, and gathered every rarity in the flora. Under his care and in co-operation with the curators, the Macnabs, father and son, the Royal Botanic Gardens were much enlarged and improved, and a fine palm-house, an arboretum, a good museum, and excellent teaching accommodation provided. He was the first in Edinburgh to introduce classes for practical instruction in the use of the microscope. He retired from office in 1879, when he received the title of emeritus professor of botany, became assessor in the university court for the general council, and each of the three universities with which he had been connected conferred on him the degree of LL.D. For many years he was a fellow of the Royal Society of London, and a member of a large number of British and foreign scientific societies. He died at

Inverleith House, Edinburgh, on 11 Feb. 1884.

Inducted into botany before microscopical work had been largely developed, and before the advent of modern views on vegetable morphology and physiology, Balfour was almost necessarily for the most part a systematic botanist. His original work was not extensive, and it is as a teacher and writer of text-books that he was chiefly known. His teaching was painstaking and conscientious, earnest and impressive, and characterised by wealth of illustration and a faculty of imparting his own enthusiasm. He was impartial in the breadth of his teaching, and ever anxious to assimilate new knowledge. His character was deeply religious, and he saw in the objects of nature indubitable evidences of a great designing mind. His geniality was contagious, and it is related of him that on his botanical excursions, as the party neared the habitat of some rare Alpine herb, the wiry and energetic professor—'Woody Fibre' as they called him—would outstrip all in his eagerness to secure it; and that in toiling up a long ascent, his jokes and puns would keep the whole party in good spirits.

Balfour was for many years one of the editors of the 'Annals of Natural History' and of the 'Edinburgh New Philosophical Journal,' and contributed important articles to several cyclopædias. In biography he wrote: 'Biographical Sketch of Dr. Golding Bird,' Edin. 1855; 'Biography of J. Coldstream,' Lond. 1866; and a 'Sketch of D. T. K. Drummond,' prefixed to 'Last Scenes in the Life of Our Lord,' 1878. His botanical text-books went through numerous editions, and included a 'Manual,' 1848, revised 1860; a 'Class Book,' 1852; 'Outlines,' 1854; 'Elements,' 1869; a 'First' and a 'Second Book,' with other minor manuals; 'Botanist's Companion,' 1860; 'Botanist's Vade Mecum;' 'Guide to the Royal Botanic Gardens, Edinburgh,' 1873. His 'Introduction to Palæontological Botany,' 1872, was the least successful of his botanical works. He wrote several botanico-religious books, such as 'Phyto-Theology,' 1851, entitled in its third edition, 'Botany and Religion;' 'Plants of the Bible,' 1857; 'Lessons from Bible Plants,' 1870. He also wrote the botany in MacCrie's 'Bass Rock,' 1848.

**BALFOUR, NISBET** (1743-1823), a most distinguished officer under Lord Cornwallis in the American war of independence, was not (as Draper's 'American Biography' asserts)

the son of a small bookseller in Edinburgh, but the last representative of the Balfours of Dunbog in the county of Fife. Harry Balfour, the first laird of Dunbog, was the third son of John, third Lord Balfour of Burleigh [q. v.], and in the middle of the last century officers had very little chance of rising to higher rank who were not of good family. He was born at Dunbog in 1743, and entered the army as ensign in the 4th regiment in 1761. He was promoted lieutenant in 1765, and captain in 1770, but did not see service till the outbreak of the American war. He distinguished himself at the battle of Bunker's Hill, where he was severely wounded, and at Long Island and Brooklyn. In August 1776 his services were so conspicuous at the taking of New York, that he was sent home with the despatches announcing the success, and was promoted major by brevet. He at once returned to America, and struck up a warm friendship with many of the younger officers, including Lord Cornwallis and Lord Rawdon. He was present at the battles of Elizabethtown, Brandywine, and Germantown, and, after being appointed lieutenant-colonel of the 23rd regiment in 1778, accompanied Cornwallis to Charleston. After the capture of the city he was appointed commandant at Ninety-Six, and there 'by his attention and diligence,' says Cornwallis, succeeded in raising 4,000 militia among the loyal colonists. In the following year he accepted the difficult and invidious post of commandant at Charleston, and there acquitted himself to the complete satisfaction of Cornwallis. He obeyed to the letter the rigorous orders of Cornwallis against the colonists, and incurred much odium for carrying out the execution of a planter named Isaac Hayne, which Lord Rawdon had ordered. 'You have done what few officers in our service are capable of doing,' wrote Cornwallis to Balfour on 12 Nov. 1780, 'and have voluntarily taken responsibility on yourself to serve your country and your friend' (*Cornwallis Despatches*, Cornwallis to Balfour, i. 46). When the war was over, Balfour was rewarded for his services with the rank of colonel and the appointment of aide-de-camp to the king. He was also appointed, with a lawyer named Spranger, on a commission to award the money granted by parliament to those loyal colonists who had suffered in the war. He now enjoyed high reputation, and moved in the best military society, and in 1790 Mr. Stewart, of Castle Stewart in Wigtonshire, who had married his only sister, returned him to parliament for the Wigton Burghs. In 1793, on the outbreak of the war with France, he was promoted major-

general, and received the command of a brigade in the force which his old comrade, Lord Rawdon, now Lord Moira, was to take to the west coast of France. With the rest of Lord Moira's army, Balfour joined the Duke of York in Flanders in 1794. Though Lord Moira returned home, Balfour volunteered to continue his services in any capacity in which he could be useful, and assisted General Ralph Abercromby in commanding the reserve till December 1794. He never again saw active service, but continued in parliament, for Wigton burghs (1790-6), and for Arundel (1797-1802). He was made colonel of the 93rd regiment in 1793 and of the 89th in 1794, lieutenant-general in 1798, and general in 1803. He retired to his family seat, Dunbog, and there died at the age of eighty, in October 1823, being then sixth general in seniority after sixty-two years' service. He bequeathed Dunbog to his nephew William Stewart, who took the name of Balfour. His reputation was made in the American war, and the friendship of such generals as Hastings and Cornwallis seems to justify it.

[For Balfour's services see the Royal Military Calendar. For his services in America consult Bancroft's History of the United States, *passim*, and the contemporary accounts of the war in South Carolina; see also the Cornwallis Despatches, edited by Ross, 1859. For the campaign in Flanders, see the Journals and Letters of Sir Harry Calvert.] H. M. S.

**BALFOUR, ROBERT** (1550?-1625?), Scotch philosopher and philologist, is believed to have been born about 1550. According to the statement of David Buchanan, he derived his lineage from a distinguished family in Fifeshire, but he has himself informed us (*Commentarius in Cleomedem*, 196) that he was born in Forfarshire, probably near Dundee. From a school in his native district he was sent to the university of St. Andrews, and thence he proceeded to the university of Paris, where he attracted much attention by the ability with which he publicly maintained certain philosophical theses against all opposers. Afterwards he was invited to Bordeaux by the archbishop of that see, and there he became a member of the college of Guienne. He was elected professor of Greek, and at length, probably in 1586, was appointed principal of the college, which he continued to govern for many years. It appears that he was alive in 1625, but the date of his death is not recorded. Balfour left behind him the character of a learned and worthy man, the only fault attributed to him by one biographer being his zealous

adherence to the Roman catholic faith. His contemporary, Dempster, says he was 'the phoenix of his age; a philosopher profoundly skilled in the Greek and Latin languages; a mathematician worthy of being compared with the ancients; and to those qualifications he joined a wonderful suavity of manner, and the utmost warmth of affection towards his countrymen.' His reputation as a scholar rests mainly on his commentary on Aristotle.

The titles of his works are: 1. '*Ἐκείνου τῶν κατὰ τὴν ἐν Νικαίᾳ ἁγίαν Σύνοδον πραχθέντων*' Paris, 1599, 8vo; Heidelberg, 1604, fol. An edition of the Greek text, accompanied by a Latin translation. Gelasius, with Balfour's translation, has been reprinted in several editions of the Concilia. 2. '*Cleomedis Meteora Græce et Latine*. A Roberto Balforeo ex MS. codice Bibliothecæ Illustrissimi Cardinalis Ioyosii multis mendis repurgata, Latine versa, et perpetuo commentario illustrata.' Bordeaux, 1605, 4to. This work was commended by Barthius and other learned men, and even in the present century it was held in such estimation that it was republished by Professor James Bake at Leyden in 1820, 8vo. 3. '*Prolegomena in libros Topicorum Aristotelis*,' 1615, 4to. 4. '*Commentarii in Organum Logicum Aristotelis*,' Bordeaux, 1618, 4to. 5. '*Commentarii in lib. Arist. de Philosophia tomus secundus, quo post Organum Logicum, quæcumque in libros Ethicorum occurrunt difficilia, dilucide explicantur*,' Bordeaux, 1620, 4to.

Ecclesiastica Gentis Scotorum*, 119; Irving's *Lives of Scottish Writers* (1839), i. 234-46; Anderson's *Scottish Nation*, i. 217; Chambers's *Biog. Dict. of Eminent Scotsmen*, ed. Thomson, i. 68; *Cat. of Printed Books in Brit. Mus.*] T. C.

**BALFOUR, ROBERT** (d. 1663), second **BARON BALFOUR OF BURLEIGH**, military commander, was son of Sir Robert Arnot of Fernie, chamberlain of Fife. He married Margaret, daughter of Michael Balfour of Burleigh and Margaret, daughter of Lundie of Lundie, and his wife succeeded her father (who was created 7 Aug. 1606 Lord Balfour of Burleigh) as Baroness Balfour of Burleigh. Thereupon, by a letter from the king (James I) Arnot became Lord Balfour of Burleigh, the second holder of the title. At the assembly of the Scottish parliament in 1640 (11 June) the 'estates' appointed him their president. He was continued in the office in 1641, and was one of the commissioners for a treaty of peace with England in 1640-1. He was also constituted of the privy council '*ad vitam aut culpam*' by the parliament of

Scotland 11 Nov. 1641. During the wars of Montrose he was energetic on the side of the government. He assumed military command, but was not successful. Montrose defeated him 12 Sept. 1644 near Aberdeen, and again (with General Baillie) at Kilsyth, 15 Aug. 1645. He was opposed to the celebrated and unfortunate 'engagement' to march into England for the rescue of the king. He had weight enough to dissuade Cromwell then from the invasion of Scotland. In 1649, under the act for putting 'the kingdom in a posture of defence,' he was one of the colonels for Fife. He was further nominated in the same year one of the commissioners of the treasury and exchequer. He died at Burleigh, near Kinross, 10 Aug. 1663. His wife died before him (in 1639). They had one son [see **BALFOUR, JOHN**, third Lord Balfour of Burleigh] and four daughters.

[Lamont's *Annals*, MS.; Balfour's *Annals*, MS.; Douglas's *Peerage of Scotland*, by Wood, 2 vols. folio, 1813; George Crawford's *Peerage of Scotland*, 1716, folio, pp. 53-4; Sibbald's *Kinross and Fife*; Anderson's *Scottish Nation*.] A. B. G.

**BALFOUR, ROBERT** (d. 1757), fifth **BARON BALFOUR OF BURLEIGH**, Jacobite, when a youth fell in love with a 'pretty face,' far inferior in rank, much to the annoyance of the family. He was sent to travel abroad in the hope that he would forget his attachment. Before he set out he declared to his lady-love that if in his absence she married he should kill her husband. Notwithstanding the threat, she did marry a Henry Stenhouse, schoolmaster at Inverkeithing, acquainting him beforehand of the hazard. On Balfour's return his first inquiry was after the girl. On being informed of her marriage, he proceeded on horseback (with two attendants) directly to the school at Inverkeithing, called Stenhouse out, deliberately shot him (wounding him in the shoulder), and quietly returned to Burleigh. This was on 9 April 1707. The poor schoolmaster lingered twelve days, and then died. Balfour was tried for the murder in the high court of justiciary on 4 Aug. 1709. The defence was ingenious, but inadequate. He was brought in guilty, and sentenced to be beheaded on 6 Jan. 1709-10. But a few days prior to this he escaped from the prison ('Heart of Midlothian') by exchanging clothes with his sister, who resembled him. He skulked for some time in the neighbourhood of Burleigh, and a great ash-tree, hollow in the trunk, was long shown as his place of concealment. On the death of his father, in 1718, the title devolved on him. His next appearance was at the meeting of Jacobites

at Lochmaben, 29 May 1714, when 'the Pretender's' health was drunk at the cross, on their knees, Lord Burleigh denouncing damnation against all who would not drink it. He engaged in the rebellion of 1715. For this he was attainted by act of parliament, and his estates forfeited to the crown. He died, without issue, in 1757.

A. B. G.

BALFOUR, SIR WILLIAM (d. 1660), parliamentary general, of the family of Balfour of Pitcullo, Fifeshire, appears to have been born before the accession of James I to the English throne, for in 1642 he obtained a naturalisation bill (*Lords' Journals*, 28 May 1642). He entered the Dutch service and continued in it till 1627. In that year he became lieutenant-colonel in the Earl of Morton's regiment, took part in the expedition to the isle of Rhé, and was noticed as being one of the officers most favoured by the Duke of Buckingham (FORSTER, *Life of Eliot*, ii. 78). In January 1628 he was charged by the king, in conjunction with Colonel Dalbier, to raise 1,000 horse in Friesland, but the suspicions this project aroused in the Commons obliged the king to abandon the plan, and to assure the house that these troops were never meant to be employed in England. On the death of Sir Allen Apsley, Sir William, who is described as one of the gentlemen of the king's privy chamber, was appointed governor of the Tower (18 Oct. 1630, *Cal. S. P.*, Dom.). In October 1631 he was employed on a confidential mission to the Netherlands. He also received many other marks of the king's favour, including the grant of a lucrative patent for making gold and silver money in the Tower (1633). Nevertheless Balfour, 'from the beginning of the Long parliament, according to the natural custom of his country, forgot all his obligations to the king, and made himself very gracious to those people whose glory it was to be thought enemies to the court' (CLARENDON, iv. 147). Perhaps religious motives had something to do with this change of parties, for Balfour was a violent opponent of popery, and had once beaten a priest for trying to convert his wife (*Strafford Corr.* ii. 165). Strafford was entrusted to Balfour's keeping, and though offered 20,000*l.* and an advantageous match for his daughter, he refused to connive at the earl's escape, or to admit Captain Billingsley and his suspicious levies to the Tower (2 May 1641, *RUSHWORTH*, iii. i. 250). The king, therefore, persuaded or obliged

Balfour to resign his post in the following December. The accounts given of the causes of this resignation differ considerably (CLARENDON, iv. 101; GARDINER, *History of England*, x. 108; and the pamphlet entitled *A Terrible Plot against London and Westminster*). When the parliament raised an army Sir William was appointed lieutenant-general of the horse, under the nominal command of the Earl of Bedford. He commanded the reserve at Edgehill, broke several regiments of the king's foot, and captured part of his artillery. Ludlow describes him spiking the king's guns with his own hands, and all accounts agree in praise of his services. He did not take part in the first battle of Newbury, having gone abroad to try the waters on account of his health (*Lords' Journals*, 2 Aug. 1643). In the spring of 1644 he was detached from the army of Essex with 1,000 horse to reinforce Waller, and shared the command at the victory of Alresford. His letter of 30 March 1644 to Essex, relating the battle, was ordered to be printed. He then rejoined Essex, accompanied him into Cornwall, and took Weymouth and Taunton (June 1644). When the infantry was forced to surrender, he broke through the king's lines, and 'by an orderly and well-governed march passed above 100 miles in the king's quarters,' and succeeded in joining General Middleton. At the second battle of Newbury he commanded the right wing of the parliamentary horse (see *Manchester's Quarrel with Cromwell*, Camden Society; and the letters signed by Balfour, p. 55). This was Balfour's last public exploit; with the organisation of the new model he retired from military service. The House of Commons appointed a committee 'to consider of a fit recompense and acknowledgment of the faithful services done by him to the public' (21 Jan. 1645), and the House of Lords voted the payment of his arrears (7,000*l.*) and specially recommended him to the Commons (21 July). But some intercepted correspondence seems to have awakened suspicions and caused delays in this payment (see *Commons' Journals*, 25 March and 12 April 1645). Sir William Balfour's will was proved in 1660.

[Clarendon's *History of the Rebellion*; *Vicars' Parliamentary Chronicle*; *Calendar of Domestic State Papers*; *Ricraft's Champions* (1647) contains a portrait and panegyric of Sir William Balfour (No. xviii.); in the *Strafford Correspondence* (vol. i. 88, 97, 120) are some passages which appear to prove that Balfour was indebted to the king's favour for the Irish estate which he is said to have purchased from Lord Balfour of Clonawley.] C. H. F.

**BALFOUR, WILLIAM** (1785-1838), lieutenant-colonel, was a boy-ensign in the 40th foot at the Helder, and won the approval of Sir John Moore. He served on the staff of Major-general Brent Spencer in the Mediterranean and at the capture of Copenhagen, and received a brevet lieutenant-colonelcy for service in the field with the 40th in the Peninsula and south of France in 1813-14. After a few years on half-pay, he became lieutenant-colonel of his old regiment, commanding it for several years in New South Wales, and he was afterwards in command of the 82nd foot in Mauritius. He retired from the army in 1832, and died in February 1838.

[Army Lists; London Gazettes; Gent. Mag. 1838.] H. M. C.

**BALGUY, CHARLES, M.D.** (1708-1767), physician, was born at Derwent Hall, Derbyshire, in 1708, and was educated at Chesterfield grammar school and St. John's College, Cambridge, where he took the degree of M.B. in 1731, and M.D. in 1750. He practised at Peterborough, and was secretary of the literary club there. He contributed to the 'Philosophical Transactions' (No. 434, p. 1413), and in 1741 he published, anonymously, a translation of Boccaccio's 'Decameron.' This has been several times reprinted, and is the only good translation in English. He wrote some medical essays, and particularly a treatise 'De Morbo Miliari' (Lond. 1758). He died at Peterborough 28 Feb. 1767, and was buried in the chancel of St. John's Church, where is a marble monument to his memory, describing him as 'a man of various and great learning.' The statement that he translated the 'Decameron' is evidenced by the notes of his school friend, Dr. Samuel Pegge, in the College of Arms, who expressly mentions the fact.

[Pegge's Collections in the College of Arms, vol. vi.; Derbyshire Archaeological Journal, vi. 11; Nichols's Literary Anecdotes, vi. 4, 74, 122.] S. O. A.

**BALGUY, JOHN** (1686-1748), divine, was born 12 Aug. 1686 at Sheffield. His father, Thomas, who was master of the Sheffield grammar school, died in 1696, and was succeeded by Mr. Daubuz, under whom John Balguy studied until admitted at St. John's College, Cambridge, in 1702. He wasted two years in reading romances, but upon meeting with Livy turned to classical studies. He graduated as B.A. in 1705-6 and M.A. in 1726. Upon leaving Cambridge he taught for a time in the Sheffield grammar school, and 15 July 1708 became tutor

to Joseph Banks, son of Mr. Banks of Scot-ton in Nottinghamshire, and grandfather of the famous Sir Joseph Banks. In 1710 he was ordained deacon, and in 1711 priest, by Sharp, archbishop of York; and in the last year entered the family of Sir Henry Liddel, of Ravensworth Castle, Durham, who presented him to the small livings of Lamesby and Tanfield. He wrote a new sermon every week for four years, and afterwards burnt 250 sermons in order that his son might be forced to follow the example of original composition. In 1715 he married Sarah, daughter of Christopher Broomhead, of Sheffield, and left Sir H. Liddel to settle in a house of his own, called Cox-Close, in the neighbourhood. In 1718 he took part in the Bangorian controversy, defending Hoadley against Stebbing. Bishop Hoadley and the booksellers—who thought that the public were tired of the subject—induced him to desist after publishing two pamphlets; and Hoadley persuaded him also to suppress in 1720 a letter to the famous Dr. Clarke which it was thought might injure the doctor's chances of preferment, though dealing with the purely philosophical question of natural immortality. Balguy was a disciple and admirer of Clarke, and his chief publications were in defence of Clarke's philosophical and ethical doctrines. They are:—'A Letter to a Deist, 1726, in which he attacks Shaftesbury; 'The Foundation of Moral Goodness,' 1728, which is an answer to Shaftesbury's disciple, Hutcheson, and argues, after Clarke, that morality does not depend upon the instincts or affections, but upon the 'unalterable reason of things.' A second part, published in 1729, is a detailed reply to the criticisms of a friend (Lord Darcy, as the younger Balguy tells us), who had defended Hutcheson. In 1730 he published 'Divine Rectitude,' in which he argued that 'the first spring of action in the Deity' was 'rectitude,' whilst Mr. Grove declared it to be 'wisdom,' and Mr. Bayes to be 'benevolence.' It was followed by 'A Second Letter to a Deist,' defending Clarke against Matthew Tindal's 'Christianity as Old as the Creation,' and by a pamphlet called 'The Law of Truth, or the Obligations of Reason essential to all Religion.' These tracts were collected in a volume dedicated to Hoadley. In 1741 appeared 'An Essay on Redemption,' of a rationalising tendency, and considered by Hoadley to be stronger in the 'demolishing' than the 'constructive' part. He also published (1727-8) an essay and sermon upon party spirit. Two volumes of his sermons were published in 1748 and 1750 (NICHOLS, *Anecdotes*, iii. 220, and ix. 787).

On 25 Jan. 1727-8 Balguy was collated by Hoadley to a prebend in Salisbury, and through the friendship of Bishop Talbot obtained from the chapter of Durham (12 Aug. 1729) the vicarage of Northallerton in Yorkshire, worth 270*l.* a year. He had many friends in all parties, including Bishops Benson, Butler, and Secker, and Lord Barrington. His tracts, which are terse and well written, are all applications of the principles of which Clarke is the chief exponent. He became an invalid, and saw little society except at Harrogate, which he frequented, and where he died, 21 Sept. 1748, leaving an only child, Thomas [see BALGUY, THOMAS] living.

[Life by son in *Biog. Britannica*; Nichols's *Anecdotes*, iii. 139, 220, ix. 787.] L. S.

BALGUY, THOMAS (1716-1795), divine, son of John Balguy [q. v.], was born at Cox-Close 27 Sept. 1716, educated at the Ripon Free School, and admitted to St. John's College, Cambridge, about 1732; was B.A. 1737, M.A. 1741, S.T.P. 1758. He was elected to a Platt fellowship at St. John's in March 1741, which he held till 1748. In 1744 he became assistant tutor to his friend Dr. Powell, tutor, afterwards master of St. John's College, and gave lectures on moral philosophy and the evidences 'for sixteen years.' In 1748 he was deputy public orator, and in 1758 tutor to the Duke of Northumberland. He states in his father's 'Life' that he owed all his preferments to 'the favour and friendship of Bishop Hoadley,' who had given his father a prebend of Salisbury. His father, as prebendary, presented him (1748) to the rectory of North Stoke, near Grantham in Lincolnshire, which he vacated in 1771 on becoming vicar of Alton in Hampshire. He held a prebend at Lincoln from 1748 to his death. Through Hoadley's influence he obtained a prebend of Winchester in 1758, and became archdeacon of Winchester in 1759. Thomas was, however, less of a latitudinarian than his father, and opposed the agitation for a relaxation of the articles. In 1769 he published a sermon upon the consecration of Bishop Shipley (NICHOLS, *Anecdotes*, ix. 534), which was answered by Priestley in 'Observations upon Church Authority.' In 1772 he published an archidiaconal charge, in which he defended subscription to articles of religion; and in 1775 a sermon at the consecration of Bishops Hurd and Moore, which was answered in remarks 'by one of the prebendary clergy.' In 1775 he edited the sermons of his friend Dr. Powell, with a 'life' of the author; and in 1782 'Divine Benevolence asserted,' part of an unfinished

treatise on natural religion. In 1785 he republished his father's essay on Redemption, and a collection of sermons and charges. Balguy was one of the admiring disciples of Warburton, and his name frequently appears in Warburton's correspondence with Hurd. On Warburton's death in 1781 he declined the appointment to the vacant bishopric of Gloucester on the ground of failing health and approaching blindness, and died 19 Jan. 1795 at his prebendal house at Winchester. A monument to him is in the south aisle of the cathedral. His discourses, edited by Rev. James Drake (a relation to whom his manuscripts were bequeathed), were republished at Cambridge in 1820.

[Chambers's Dictionary; Warburton's Letters to Hurd; Nichols's *Anecdotes*, iii. 220, viii. 157, and elsewhere; Nichols's Illustrations, iii. 516; Preface to Discourses by Drake.] L. S.

BALIOL, ALEXANDER DE (fl. 1246?-1309?), lord of Cavers and chamberlain of Scotland, is one of the members of the Baliol family about whose pedigree great confusion exists. He was certainly not Alexander, son of Hugh Baliol of Barnard Castle, an elder brother of John Baliol the king, for this Alexander died in 1279 without issue, leaving a widow, Eleonora de Genovra (RYMER's *Fœdera*, i. 10, 779). It is probable, but not certain, that he was the same person as Alexander de Baliol, the son of Henry de Baliol, chamberlain of Scotland, who died in 1246, and Lora or Lauretta de Valoines, the coheirress along with her sister Christian, wife of Peter de Maule of Pamure, of the fiefs of the Valoines family in England. If so he can be traced in the records of Hertfordshire between 6th and 32nd Edward I in connection with the manor of Benington in that county, which he inherited through his mother (CLUTTERBUCK's *Hertfordshire*, vol. ii.). This identification would account for his appointment to the office of chamberlain of Scotland, which had been held by his father, his great-grandfather, William de Berkeley, Lord of Reidcastle, and one of his maternal ancestors, Peter de Valoines. But there are two difficulties attending it. Alexander de Baliol the chamberlain is never mentioned as possessing Reidcastle in Forfarshire, the estate of Henry de Baliol, and it is difficult to account for his constant association with the estate of Cavers in Teviotdale, and not with any English fiefs. Possibly the latter circumstance is due to the references being in the Scottish records. It appears that in 32 Edward I (1304) Bennington was sold by Alexander de Baliol to John de Binsted, and the conjecture seems admissible

that Baliol may have made Scotland the chief place of his residence, though retaining English fiefs in right of his mother and his wife. His preference for Scotland would be confirmed by his succession to the high office which his father Henry had held. Whatever may be thought of this hypothesis, it is certain that Alexander de Baliol the Scottish chamberlain first appears as Dominus de Cavers in the Scottish records in 1270. Seven years later he was commissioned, as lord of Cavers, to serve in Edward's Welsh wars. In 1284, under the same designation of Dominus de Cavers, he was one of the Scottish barons who bound themselves to receive Margaret, the Maid of Norway, as queen in the event of failure of male issue of Alexander III; and as, in the same year, he received a summons to attend Edward's army, he must still have retained English fiefs. In 1287 he is for the first time mentioned in a writ by the guardians of Scotland as chamberlain of Scotland, an office in which he succeeded John Lindsay, bishop of Glasgow. Two years later he took part in the negotiations which resulted in the treaty of Salisbury, 6 Nov. 1289, confirmed by the parliament at Brigham 14 March 1290, by which Edward the Prince of Wales was to marry Margaret, and Edward I solemnly recognised the independence of Scotland. Her death prevented the marriage, and Edward soon forgot or ignored his engagements. On 5 June 1291 Baliol and his wife Isabella de Chilham, widow of David de Strathbogie, earl of Athol, received a letter of attorney and safe conduct from Edward permitting them to remain for a year in Scotland. He still continued to hold the office of chamberlain after the seisin of Scotland had been given to Edward I, as the condition of his determining the suit as to the succession of the crown of Scotland; but in the beginning of 1292 we find Robert Heron, rector of Ford, associated with Baliol in this office, and as a writ of 1 Feb. of that year mentions that Heron's wages had been granted to him by the King of England, it appears reasonable to conclude that Heron had been appointed to control Baliol in the execution of the office. On 30 Dec. 1292 certain of the records of Scotland which had been in the hands of Edward were redelivered to Alexander Baliol as chamberlain of Scotland. Baliol is last mentioned as chamberlain on 16 May 1294, and it seems probable that the disputes between Edward and John Baliol led to his deprivation by the English king after or perhaps even before the campaign of 1296, when Edward forced John Baliol to resign the crown and carried him

captive to England. In 1297 John de Sandale, an English baron, appears as chamberlain of Scotland. From entries in the accounts of the expenses of John Baliol when a prisoner in England with reference to a horse of Alexander de Baliol, it would seem that he shared the captivity of his kinsman. On 13 Jan. 1297 Edward made a presentation to the church of Cavers, upon the ground that the lands of Alexander de Baliol were in his hands. A few scanty notices between 1298 and 1301 indicate that he took part on the English side in the war with Scotland; and from one of these we learn that he had manors in Kent, the wood of which he received the king's license to sell.

Amongst the barons present at the siege of Caerlaverock in 1300 was

Mes Alissandres de Baillouel,  
Ke a tout bien fers mettoit le oel,  
Jaune baniere avoit el champ  
Al rouge escu voidie du champ.

In 1303 he seems to have shown symptoms of again falling off from the English side, for his chattels in Kent, Hertfordshire, and Roxburghshire were in that year seized by Edward; but we find him employed, in May 1304, in Edward's service in Scotland, and in the first year of Edward II he was summoned to join John de Bretagne, earl of Richmond, in the Scottish campaign.

His estates in Kent, of which the chief was the castle and manor of Chilham, were held by him in right of his wife Isabella de Chilham, by whom he left a son of his own name. The date of his death is unknown, but as he was summoned to all the parliaments of Edward I between 1300 and 1307, and is not mentioned as summoned to any of Edward II, he probably died soon after the accession of that monarch. His son Alexander had a son, Thomas de Baliol of Cavers, who sold that estate to William, earl of Douglas, in 1368, and is the last of the Baliols who appears in the Scottish records.

Æ. M.

BALIOL, BERNARD DE, the elder (fl. 1135-1167). There is great difficulty in fixing with precision the early history of the family of Baliol, which was destined to play so ill-omened a part in the annals of Scotland, a

circumstance which no doubt contributed to the obscurity of its records and the extinction of its name. The founder of the house in England was the Norman baron Guido or Guy de Baliol, whose French fiefs of Bailleul, in the department of L'Orne, two leagues from Argenton, Dampierre, Harcourt, and Vinoy, in Normandy, were long retained by his descendants, and afforded a refuge when their English inheritance was forfeited along with the Scottish crown, which John wore so short a time and Edward failed to recover. Guy is said, in a manuscript on which Surtees, the historian of Durham, relies, to have come 'to England with the Conqueror, and to him gave William Rufus the barony of Bywell in Northumberland, and the forests of Teesdale and Charwood, with the lordship of Middleton in Teesdale and Gainsford, with all their royalties, franchises, and immunities' (*Bowes MS., SURTEES' Durham*, iv. 50). Bernard or Bernard Baliol is stated by the same manuscript to have built 'the fortress which he called Castle Barnard, and created burgesses and endowed them with the like franchises and liberties as those of Richmond,' a statement corroborated by the ancient and noble ruin which still overhangs the Tees, with 'its uttermost walls of lime and brick' and 'innermost cut in rocks of stone,' as the ballad runs, and by the charter of his son, a second Bernard, which confirms his father's grant to the burgesses (*SURTEES*, iv. 71). In 1135 the first Bernard did homage, along with David I of Scotland, to the Empress Matilda, daughter of Henry I, but prior to the battle of the Standard, 1138, he renounced his homage and joined the party of Stephen. Along with Robert de Bruce, Lord of Annandale, a common interest then uniting the ancestors of the future rivals, he was sent before the battle by the northern barons to make terms with David I, but without success. Continuing to support Stephen, Bernard de Baliol was taken prisoner with him at Lincoln on 2 Feb. 1141. The charter of the second Bernard, still preserved, is unfortunately without date, and there is no charter-evidence to fix his father's death, but a fine exacted in 14 Henry II (1167), for neglecting to certify the number of his knights' fees, is assumed with probability by Surtees to refer to the time of his succession, and to make the fact which history records of the capture of William the Lion at Alnwick in 1174 by a Bernard de Baliol along with other northern barons applicable to the second and not the first bearer of the name.

[Dugdale's Baronage, corrected by Surtees' *Durham*, iv. 51.] Æ. M.

**BALIOL, BERNARD DE**, the younger (*Æ.* 1167). Dugdale does not recognise a second Bernard, but for the reasons stated in the last article, the opinion of Surtees appears preferable, though it must be admitted that his existence rests on the evidence of one charter and the improbability of a single life having covered the period from 1135, when the first Bernard must have at least attained majority, to nearly the close of the century. This Bernard joined Robert de Stuteville, Odonel de Umfraville, Ranulf de Glanville, and other northern barons, who raised the siege of Alnwick and took William the Lion prisoner in 1174. Our only further information about him consists of grants to various abbeys, one of which, to Rievaulx, was 'for the good of his own soul and that of his consort Agnes de Pinkney,' and the confirmation of the privileges granted by his father to the burgesses of Barnard Castle. He was succeeded by his son Eustace, whose existence is only known from charters of which the earliest, dated in 1190, is a license to marry the widow of Robert Fitzpiers for a fine of 100 marks. He was succeeded about 1215 by his son Hugh, the father of John de Baliol I, whose son was John de Baliol II, king of Scotland.

[Dugdale's Baronage and Monasticon Anglicanum; Surtees' *Durham*, iv. 51-2.] Æ. M.

**BALIOL, EDWARD DE** (*d.* 1363), king of Scotland, the eldest son of John de Baliol, king of Scotland, and Isabel, daughter of John de Warenne, earl of Surrey, on his father's death in 1314 succeeded to his French fiefs, on which he lived till 1324, when he was invited by Edward II to England, which he again visited in 1327, with the view of being brought forward as a pretender to the Scottish crown. A more favourable opportunity presented itself after the death of Robert Bruce in 1329. Baliol was again summoned to England 20 July 1330, with permission to remain as long and return as often as he pleased in order that preparations might be made for the invasion of Scotland. Placing himself at the head of the disinherited barons whose lands had been forfeited by Bruce for their adherence to England, of whom the chief were Henry de Beaumont, Gilbert de Umfraville, and Thomas, Lord Wake of Liddell, and a small force of 400 men-at-arms and 3,000 foot, Baliol sailed from Ravenspur, near the mouth of the Humber, and landed at Kinghorn, in Fife, on 6 Aug. 1332. The death of Randolph, the valiant regent who found a feeble successor in Donald, earl of Mar, gave Baliol an advantage he was prompt

to seize. After defeating the Earl of Fife, who opposed his landing, he marched by Dunfermline to the river Earn, surprised and routed Mar at Dupplin Moor with great slaughter on 12 Aug., and took possession of Perth. A threatened blockade of that town by the Earl of March having been abandoned, Baliol was crowned at Scone on 24 Sept. by William Sinclair, bishop of Dunkeld. Leaving Perth in charge of the Earl of Fife, who soon surrendered it to the Scotch, Baliol marched towards the border, and at Roxburgh on 23 Nov. met Edward III, acknowledged him as superior and lord of Scotland, and bound himself to serve in all his wars. He further engaged to put him in possession of Berwick and to marry the princess Johanna, already betrothed to David II. It was soon seen how fragile was his tenure of the country he affected to dispose of, for on 16 Dec. he was surprised at Annan by Archibald Douglas and completely defeated. His brother Henry was slain, and he had himself difficulty in escaping across the English border. In the following year, 9 March 1333, with additional aid from England, Baliol returned and established his camp near Roxburgh, with the view of besieging Berwick. The Scots lost about this time the services of two of their bravest leaders, Sir Andrew Murray of Bothwell, and Sir William Douglas, the knight of Liddesdale, and Edward, having himself advanced with a great force to the siege of Berwick, defeated Archibald Douglas, who had succeeded to the chief command, at Halidon Hill on 12 July, which forced the capitulation of Berwick.

In February 1334 Baliol held a parliament at Edinburgh, where, on the 12th of that month, his engagements to Edward were renewed and Berwick was annexed to the English crown. Not satisfied with this severance of the great fortress which was the key to the borders from the Scottish kingdom, Edward demanded and Baliol agreed at Newcastle-on-Tyne to the absolute surrender to the English crown of the forests of Jedburgh, Selkirk, and Ettrick, the counties of Roxburgh, Peebles, Dumfries, and Edinburgh, the constabularies of Haddington and Linlithgow, with all the towns and castles in the territory annexed. This comprised the whole of ancient Lothian, the richest and most important part of Scotland. Edward at once parcelled it into sheriffdoms, and appointed a chamberlain and justiciary for Lothian. On 18 June he received the homage of Baliol for the whole kingdom of Scotland, and, as if to mark the ignominy of his vassal with a deeper stain, declared that

his private estates were not to be understood as falling within the surrender of the rights of his country. In the autumn of this year a dispute as to the succession of Alexander de Mowbray, one of the disinherited barons, between his brother as heir male, who was at first supported by Baliol, and his daughter as heir general, whose cause was espoused by Henry de Beaumont, earl of Buchan, and David de Hastings, earl of Athole, exposed the weakness of Baliol, who was compelled to change sides and abandon Mowbray through fear of these powerful earls. The return of Sir Andrew Murray from England, and of the Earl of Moray, now acknowledged as regent on behalf of David II, gave able leaders to the Scottish patriots, and Baliol was forced to take refuge in England. In winter he was again brought back, rather than restored, by the aid of Edward, and after wasting Annandale celebrated Christmas at Renfrew, where he created William Bullock, an ecclesiastic, chamberlain of Scotland. In July of the following year Edward again invaded Scotland, and although the fortunes of war were not all on one side, Guy, count of Namur, a mercenary ally of Edward, being defeated on the Borough Muir and forced to leave Scotland, the capture of the Earl of Moray and the aid of the Mowbrays and others enabled Edward to conclude a treaty at Perth 18 Aug. 1335, by which the Earl of Athole and all who submitted to the English king were to be pardoned for their rebellion, and the ancient laws and usages of Scotland as in the days of Alexander III restored. Athole, who was named lieutenant of Scotland, now espoused the side of Baliol, but was soon after surprised and slain by the Earl of March, William Douglas of Liddesdale, and Sir Andrew Murray, in the forest of Kilblain. Baliol succeeded in detaching John, the lord of the Isles, from the national cause by ceding to him Cantire and Knapdale in Argyle, and several of the principal Hebrides, along with the wardship of the young heir of Athole, on 12 Dec. 1335. A loan of 300 marks by Edward on 16 Oct. 1335 and a daily pension of 5 marks during pleasure, granted on 27 Jan. 1336, indicated the poverty and dependence of Baliol. The command of the English troops was given not to Baliol but to the Earl of Lancaster. In August Edward himself suddenly returned to Perth, which was the chief fortress held by Baliol, and overran the north-east of Scotland. After establishing a weak line of forts from Dunottar to Stirling and reinforcing the garrison of Perth, he returned to England, leaving his brother, the Earl of Cornwall, in command. Sir Andrew Murray

made an ineffectual attempt to take Stirling, but succeeded in reducing the more northern forts after Edward's departure. In the spring of the following year, 1337, he took Falkland, Leuchars, and St. Andrews in Fife, Cupar alone holding out under the command of Bullock, Baliol's chamberlain. By a sudden diversion to the west he surprised and took Bothwell Castle, and, having thus secured the passage of the Clyde, made a raid into Cumberland, and on his return invested but did not take Edinburgh. In 1338 this gallant commander, who had upheld the cause of Scottish independence for forty years, since he was associated with Wallace against Edward I, died. Robert, the steward of Scotland, succeeded him as regent, and prepared for the siege of Perth, where Baliol still was, and Edward, having no confidence in his military talents, required him to entrust its custody to Sir Thomas Ughtred, an English commander. Before the end of the year Baliol, who had borne no part of any moment in the war nominally conducted on his behalf, but really for that of Edward, retired to England. There he appears to have remained until the defeat and capture of David II at Neville's Cross, 17 Oct. 1346, encouraged him again to return to Scotland. Taking up his residence at Caerlaverock Castle, on the Solway, and aided by English men-at-arms under Percy and Neville, he made a raid as far as Glasgow, wasting Nithsdale and Cunningham. The title, but not the contents, of a treaty in this year between Lionel, duke of Clarence, son of Edward III, and Percy and Neville, has been preserved, which makes it probable that the ambitious prince had set on foot the intrigue for his succession to the Scottish crown with Baliol which was afterwards renewed with David II. Meanwhile the Scots had accepted Robert the Steward, grandson of Robert the Bruce on the mother's side, as regent; and though the English king in official documents continues to style Baliol 'our dear cousin Edward, king of Scotland,' he negotiated at the same time with his captive, David II, and finally, in 1354, released him for the large ransom of 90,000 marks, by annual instalments of 10,000, on non-payment of which he was to return to prison at Berwick or Norham. The Scotch preferring the French alliance and failing to pay the instalment due in 1355, David honourably surrendered himself, and in 1356 Edward mustered a large force for the subjugation of Scotland. Before he set out Baliol at Roxburgh, on 21 Jan., made an absolute surrender of the whole kingdom of Scotland to Edward by delivery of a portion of its soil along

with his golden crown, in return for an obligation of payment of 5,000 marks and a pension of 2,000*l.* which Edward granted on the previous day at Bamborough. This was the last of Baliol's acts as king; but his ignoble life lasted till 1367, when he died without issue at Wheatley, near Doncaster, where, during his last years, 'reft of the crown, he still might share the chase,' as is proved by the writs granting him a license to sport in the royal forests and pardon to some of the neighbouring gentry who joined in his amusement. Except for the brief period of his success at the head of the disinherited barons at Dupplin Moor, he showed no qualities worthy of respect in a warlike age. His character was similar to that of his father, unequal to the honour and peril of a crown, and content to survive the disgrace of doing what lay in his power to sacrifice the independence of his country.

[Rymer's *Fœdera*, vol. iii.; Fordun's and Wyntoun's *Chronicles* give the events of his life from the Scottish, Knyghton, Adam of Murimuth, and Walsingham from the English side. Lord Hailes's *Annals* is still the fullest and most accurate modern account of this period of Scottish history, but Tytler's *History of Scotland* and Longman's *History of the Reign of Edward III* may also be consulted with advantage.]

Æ. M.

**BALIOL, HENRY DE** (*d.* 1246), chamberlain of Scotland, was the son of Ingelram and grandson of Bernard de Baliol, of Barnard Castle. His mother was daughter and heiress of William de Berkeley, lord of Reidecastle in Forfarshire, and chamberlain of Scotland under William the Lion in 1165. William de Berkeley was succeeded in this high office, not yet divided into those of the treasurer and comptroller, and entrusted with the superintendence of the whole royal revenues, by Philip de Valoines and his son William de Valoines, lords of Panmure. The latter died in 1219, leaving only a daughter, and Henry de Baliol, who had married his sister Lora, obtained the chamberlainship which had been held by the father both of his mother and his wife. Although invited by King John to take his side shortly before Magna Charta, it is probable that, like his sovereign, Alexander II, he joined the party of the barons. He is mentioned in the Scottish records in various years between 1223 and 1244, and the appointment of Sir John Maxwell, of Caerlaverock, who appears as chamberlain in 1231, must either have been temporary, or Baliol must have retained the title after demitting the office, which Crawford (*Officers of State*, p. 261) supposes him to have done in 1231. In 1234 he succeeded, in right of his wife as

coheiress, along with Christian de Valoines, her niece, wife of Peter de Maule, ancestor of the Maules of Panmure, to the English fiefs of the Valoines, vacant by the death of Christian, countess of Essex, a rich inheritance, situated in six shires. In 1241 he attended Henry III to the Gascon war, and, dying in 1246, was buried at Melrose. It is probable, but not certain, that Alexander de Baliol of Cavers, also chamberlain of Scotland [see BALIOL, ALEXANDER DE], was his son. His only daughter, Constance, married an Englishman of the name of Fishburn.

[Documents in Panmure Charter Chest; Act. Parl. Scot. i. 403*a*, 405*b*, 407*b*, 408*b*; Chronicle of Melrose; Dugdale's Baronage; Crawford's Lives of Officers of State, p. 260.]  
Æ. M.

**BALIOL, JOHN DE** (d. 1269), of Barnard Castle, founder of Balliol College, Oxford, was the son of Hugh, the grandson of Eustace, and the great-grandson of Bernard de Baliol the younger [q. v.]. He married Devorguila, one of the daughters of Alan of Galloway, constable of Scotland, by Margaret, eldest daughter of David, earl of Huntingdon, brother of William the Lion. In his own right and that of his wife, coheiress of two great inheritances, Baliol was one of the wealthiest barons of his time, possessing, it is said, as many as thirty knights' fees in England, besides one-half of the lands of Galloway; though his possession of the latter must have been precarious during the reign of Alexander II, who favoured the claim of Roger de Quincey, husband of Helen, the elder daughter of Alan of Galloway, to the whole, while the Galwegians supported Alan's natural son, Thomas de Galloway. According to the Chronicle of Lanercost, Thomas de Galloway, being taken prisoner in 1235, was committed to the custody of Baliol, who kept him in the dungeons of Barnard Castle, where he remained until, in extreme old age, he was released at the instance of Edward I.

Baliol was one of the regents of Scotland during the minority of Alexander III, but was deprived of that office and his lands forfeited for treason in 1255, when a new regency was appointed through the influence of Henry III. Making terms with that monarch, Baliol escaped the consequences of his forfeiture, and sided with Henry in the barons' war (1258-65). He was taken prisoner at Lewes, but, having been released, did all that was in his power to support the royal cause, along with the barons of the north, against Simon de Montfort. About the year 1263 he gave the first lands for the endowment of the college at Oxford, which received his name, and this

endowment was largely increased by his will, and after his death by his widow, Devorguila. He died in 1269, leaving three sons, Hugh, Alexander, and John, who succeeded to the family estates by the death of his elder brothers, without issue, and afterwards became king of Scotland. Devorguila survived her husband, dying 28 Jan. 1290. There is a writ in the 'Memorial Rolls of Edward I,' dated 1 June 1290, ordering the customary inquisition after her death.

[Historical Documents, Scotland, 1286-1406, arranged by Rev. J. Stevenson, i. 155; Acts Parl. Scotland, vol. i.; Fordun; Chronicle of Lanercost. The work of Henry Savage, master of Balliol College, entitled *Balio-Fergus*, Oxford, 1664, is untrustworthy as to the Baliol genealogy, but gives some interesting particulars as to the endowments of the college by the Baliols, and its first statutes made by Devorguila.] Æ. M.

**BALIOL, JOHN DE** (1249-1315), king of Scotland, was the third son of the preceding John de Baliol, of Barnard Castle, and Devorguila, daughter of Alan of Galloway. His elder brothers, Hugh and Alexander, having died without issue in 1271 and 1278, John succeeded to the large inheritance of the Baliols of Barnard Castle in Northumberland, Hertfordshire, Northampton, and other counties, as well as to their Norman fiefs, and in right of his mother to the lordship of Galloway. Prior to the disputed succession which arose after the death of Alexander III, Baliol scarcely appears in history; but by an inquest as to the extent of the vill of Kempston, in Bedfordshire, in 1290, we learn that he was forty years of age in the year preceding, and was then served heir to his mother Devorguila, who died on 28 Jan. 1290. He also then succeeded to other manors in England, Fotheringay and Driffield. On 16 Nov. 1290 John Baliol, already styling himself 'heres regni Scotiæ,' grants to Antony Beck, bishop of Durham, the manors which Alexander III held in Cumberland, or the sum of five hundred marks if Edward I did not confirm the grant. On the death of Margaret, the Maid of Norway, grandchild of Alexander III, on 7 Oct. 1290, no less than thirteen claimants presented themselves for the crown of Scotland; but of these only three seriously contested the succession. John de Baliol claimed in right of his maternal grandmother, Margaret, the eldest daughter of David, earl of Huntingdon, brother of William the Lion, and grandson of David I. Robert Bruce, earl of Annandale, claimed in right of his mother, Isabel, the second daughter of the same earl; and John Hastings claimed in right of his grandmother, Ada, the third

daughter. The claim of Bruce was rested mainly on his being one degree nearer in descent; that of Baliol on his descent from the eldest daughter; and that of Hastings on the ground that the kingdom was partible, as an estate, among the descendants of the three daughters. By the principles of modern law the right of Baliol would be incontestable; but these principles were not then settled, and it was deemed a fair question for argument by feudal lawyers of the thirteenth century. But what tribunal was competent to decide it? At an earlier period it would have been submitted to the arbitrament of war. The parliament or great council of Scotland, which had already begun, in the reigns of the Alexanders, to organise itself after the English model, or by development from the Curia Regis, might have seemed the natural tribunal, but this would have been only a preliminary contest before the partisans of the rival claimants resorted to arms. The legal instinct of the Norman race, to which all the competitors belonged, suggested or acquiesced in a third course, not without precedent in the graver disputes of the later Middle Ages—a reference to a third party; and who could be more appropriate as a referee than the great monarch of the neighbouring kingdom, to whom each of the competitors owed allegiance for their fiefs in England? This course was accordingly proposed by Fraser, bishop of St. Andrews, in a letter to Edward before Margaret's death, but when the news of her illness had reached Scotland. After some delay, caused by the death of Eleanor, the mother of Edward I, that monarch summoned a general assembly of the Scottish and English nobility and commons to meet him at Norham on 10 May 1291. Its proceedings were opened by an address from Roger de Brabazon, chief justice of England, who declared that Edward, moved by zeal for the Scottish nation, and with a desire to do justice to all the competitors, had summoned the assembly as the superior and direct lord of the kingdom of Scotland. It was not Edward's intention, the chief justice explained, to assert any undue right against any one, to delay justice, or to diminish liberties, but only, he repeated, as superior and direct lord of Scotland, to afford justice to all. To carry out this intention more conveniently, it was necessary to obtain the recognition of his title as superior by the members summoned, as he wished their advice in the business to be done. The Scottish nobles asked for time to consult those who were absent, and a delay of three weeks was granted. When the assembly

again met, on 2 June, at the same place, the nobles and clergy admitted Edward's superiority, but the commons answered in terms which have not been preserved, but are described by an English annalist as 'nihil efficax,' nothing to the purpose. No attention was paid to their opinion, and another address, reiterating Edward's superiority, was delivered by the Bishop of Bath and Wells, who called on the competitors to acknowledge his right, and their willingness to abide by the law before their lord Edward. This was done by all who were present, and by Thomas Randolph as procurator for Baliol, who was absent. Next day Baliol attended and made the acknowledgment in person. The acknowledgment was embodied in a formal instrument signed by all the competitors on 4 June, which declared their consent that Edward should have seisin of the land and castles of Scotland pending the trial, upon the condition that he should restore them two months after its decision. Immediately after the recognition of his superiority, and the seisin given in ordinary feudal form, Edward surrendered the custody of Scotland to the former regents, adding Brian Fitzallan to their number, and appointing Alexander de Baliol chamberlain and the Bishop of Caithness chancellor. The castles were delivered to Edward's officers, Umfraville, earl of Angus, alone refusing to give up Dundee until promised an indemnity. On 15 June Baliol and Bruce, along with many other barons and the regent, took the oath of fealty to Edward, and his peace having been proclaimed as superior of Scotland, the proceedings were adjourned to 2 Aug. at Berwick. Before the adjournment the court for the trial of the succession was appointed, consisting of twenty-four Englishmen appointed by Edward and forty Scotchmen by Baliol and Bruce respectively. The court met on the appointed day, and the competitors put in claims, but only three were pressed by Bruce, Baliol, and Hastings. After the petitions had been read there was another adjournment to 2 June 1292. The question was then raised by what law the case was to be determined, whether by the imperial laws or by the law of England and Scotland, and if the latter differed, by which. The commissioners asked time to consider the point, and at their next meeting, on 14 Oct. declared that the king ought to decide according to the law of the kingdom over which he reigned if there were any applicable, and if not make a new law with the advice of his council. They added that the same principles should govern the succession to the crown as that to earldoms,

baronies, and other indivisible inheritances. Bruce and Baliol now gave in their pleadings. The former rested his claim (1) on a declaration of Alexander II in his favour at a time when he had no issue; (2) on the law of nature, which he alleged preferred the nearer in degree as heir; (3) on certain precedents derived from the Celtic law of tanistry, by which the brother had been preferred to the son as nearer in degree in the succession to the Scottish crown; (4) on similar instances in other countries, where the direct line of descent had been passed over; and (5) on the impossibility of succession through a female, as Baliol's claim was based on the right of his mother, Devorguilla. To these arguments Baliol answered (1) that Alexander's declaration was only in the event of his having no issue, an event which had not occurred; (2) that the feudal law and not the law of nature was applicable; (3) that the cases in which a brother had been preferred to a son were inapplicable, for a son was nearer to his father than his father's brother, so that these cases told the other way, and were precedents for preferring the more remote degree; (4) that whatever might be the law in other countries, the feudal law of England and Scotland recognised representation in the elder line in succession to earldoms and baronies; and (5) that the argument against descent through females was equally adverse to the claim of Bruce, who also claimed through his mother.

The commissioners decided in Baliol's favour, declaring 'that by the laws and usages of both kingdoms in every heritable succession the more remote by one degree lineally descended from the eldest sister was preferable to the nearer in degree issuing from the second sister,' and on 6 Nov. Edward confirmed their decision.

A question which had been nominally reserved, whether the kingdom was partible, was now taken up, and decided in the negative, and on 17 Nov. 1292 the final judgment was pronounced: 'As it is admitted that the kingdom of Scotland is indivisible, and as the king of England must judge the rights of his own subjects according to the laws and usages of the kingdom over which he reigns, and as by those of England and Scotland in the succession to indivisible heritage the more remote in degree of the first line of descent is preferable to the nearer in degree of the second, therefore it is decreed that John Baliol shall have seisin of the kingdom of Scotland.'

Two days later the seal used by the regents was broken, and they were ordered to give seisin to Baliol. On 20 Nov. he swore

fealty to Edward at Norham upon Scottish ground, on the 30th he was crowned at Scone, and within a month, on 26 Dec., he did homage to Edward at Newcastle.

There is no reason to doubt the justice of the decision between the competitors; and if the rules of descent were uncertain in such a case before, this solemn decision, after careful argument, aided in fixing the principle of representation and the preference for the senior line of descent. But the acknowledgment of Edward's title as superior, which the necessities of the case had wrung from the competitors and the barons, was a different matter. It was attempted to be supported by returns obtained from the English monasteries and religious houses of precedents dating back to Saxon times of a similar recognition; but no returns were sought from Scotland, while those received were evidently prepared to suit the wishes of Edward. The earlier precedents from Saxon times and from the reigns of Canute, William the Conqueror, and Rufus were instances of isolated conquests of brief duration and doubtful extent. No mention is made of the more recent points in the long-protracted controversy, the surrender of all such claim by Richard Cœur de Lion in the treaty of Canterbury, or the treaty of Salisbury, by which Edward himself had acknowledged the independence of Scotland, or the refusal of Alexander III to do homage. A further consequence of the recognition of Edward's title as superior, which had apparently not been foreseen by Baliol, but can scarcely have been overlooked by the astute feudal lawyers who counselled Edward, or by that monarch, was soon brought to light. As Edward was superior, an appeal lay from the court of his vassal Baliol to his own court at Westminster. Within six months after the decision in favour of Baliol a Burgess of Berwick, Roger Bartholomew, presented such an appeal. Baliol in vain referred to the clause of the treaty of Salisbury, by which no Scotch cause was to be heard out of Scotland, and he was compelled to make an implicit surrender of the right to independent jurisdiction. Shortly after he was himself summoned in a suit at the instance of Macduff, earl of Fife, to appear before the judges at Westminster, and declining to attend he was condemned for contumacy in October 1293, and it was ordered that three of his castles should be seized to enforce the judgment. He again yielded, and promised to appear at the next English parliament to answer in the suit. He accordingly attended the parliament held in London in May 1294, but either quitted it suddenly to avoid being compelled to take

part in the French war then in contemplation, for which offence his English fiefs were forfeited, as is stated by John of Walsingham, or granted the revenue of these for three years as an aid to the English king, according to the more common account of the English chroniclers, consenting, at the same time, to surrender Berwick, Roxburgh, and Jedburgh to the English king. The Scottish writers attribute Baliol's quarrel with Edward to his being required to plead in person in Macduff's suit, and other indignities put upon him when in England. Whatever the precise cause alleged, the real question at stake was the independence of Scotland; and on his return to Scotland Baliol or his parliament determined to brave the displeasure of the English monarch. The summons addressed to him and his barons to send men to the French war were treated with contempt; and at a parliament at Scone all the English at Baliol's court were dismissed, the fiefs held by the English forfeited, and a council of four bishops, four earls, and four barons appointed to advise or control Baliol.

Next year an alliance with Philip the Fair was made, by which the French and Scotch kings promised to aid each other in the event of an English invasion of their respective countries, and Philip agreed to give his niece, Isabel de Valence, the daughter of the Count of Anjou, in marriage to Baliol's heir. In 1296, Edward having invaded Gascony, the Scotch proceeded to carry out their part of the treaty, and with a large force, headed by six earls and not by Baliol in person, ravaged Cumberland, but failed to take Carlisle. This was towards the end of March, and Edward, with his usual promptness, before the close of the month advanced in person with a better disciplined army to the eastern border, and stormed Berwick (30 March). While there Henry, abbot of Arbroath, brought him a formal renunciation of Baliol's homage and fealty, which had been agreed upon by the Scottish parliament. In words of Norman French, preserved by the Scottish chroniclers, Edward exclaimed, 'Has the foolish fellow done such folly? If he does not wish to come to us, we shall go to him.' No time was lost in the execution of the threat. On 28 April his general, John de Warenne, earl of Surrey, captured Dunbar; in May Roxburgh and Jedburgh surrendered; and in June Edinburgh Castle was taken by Edward himself. Stirling, Perth, and Scone yielded without resistance, and on 7 July, in the churchyard of Stracathro, in Forfarshire, Baliol renounced his alliance with the French king, and three

days later, at Brechin, Baliol gave up his kingdom to Antony Beck, bishop of Durham, as the representative of the English king, and, apparently on the same day, appeared before Edward, who was then at Montrose, and delivered to him the white rod, the usual feudal symbol of resignation by a vassal of his fief into the hands of his superior. (The notary's instrument, dated Brechin, 10 July, is printed by Stevenson, 'Documents illustrative of Scottish History,' ii. 61, and the surrender at Montrose, of the same date, is in the 'Diary of Edward's Scottish Campaign,' ii. 28.) Edward went as far north as Elgin, ending his triumphant progress there on 26 July. 'He conquered the realm of Scotland,' says a contemporary diary, 'and searched it within twenty-one weeks without any more.' But the conquest was rather of Baliol than of Scotland; for although Edward took the oaths of the leading men in the districts he passed through, he did not remain to confirm his victories. By 22 Aug. he had returned to Berwick, carrying with him the coronation-stone of Scone, the regalia of Scotland, and the black rod, sacred as a supposed relic of the cross of Christ, and as the gift of Queen Margaret. At Berwick Edward convened a parliament for Scotland, and received the homage of all who attended. He allowed the nobility who submitted to retain their estates, and conferred on the clergy the privilege of free bequest they had not hitherto enjoyed in Scotland; after appointing officers of state as his deputies, of whom Earl Warren, as guardian of Scotland, was the chief, and entrusting the castles to English custodians, he returned to London.

John Baliol and his son Edward were carried as captives to England, and remained prisoners, at first at Hertford and after August 1297 in the Tower, until 18 July 1299, when, on the request of the pope, they were liberated. Placed under the custody of Raynald, bishop of Vicenza, the delegate sent by the pope to make peace between France and England, Baliol pledged himself to live where the pope ordered. After various wanderings to Wissant, Cambrai, Châtillon, in November 1302, Baliol took refuge on his French estates, where he led an obscure life until his death, without making the slightest effort to recover the kingdom he had lost. For a time he was regarded as its virtual sovereign, and when Wallace, by his valour and generalship, roused the patriotism of his countrymen, abandoned by the king and most of the nobles, and drove out the English, recovering for a brief space the independence of Scotland, he governed under the title of

'guardian of the realm of Scotland and leader of its army in the name of Lord John (Baliol), by the consent of the community.' But in the future of Scotland, whether prosperous or adverse, John Baliol had no longer any share. The war of independence, the careers of Wallace and Bruce, grandson of the competitor who better understood the temper of the Scottish people and became their king, lie outside of the biography of Baliol. He died early in 1315 at Castle Galliard, in Normandy, according to tradition, blind, and probably about sixty-five years of age, of which four only had been spent on the throne and fifteen in exile. By his wife Isabel, daughter of John de Warenne, earl of Surrey, he left, besides other children, a son Edward, who succeeded to his French estates, and made an attempt to recover the Scottish crown [see BALIOL, EDWARD DE]. The Scots gave to Baliol the byname of the 'Toom Tabard' ('Empty Jacket'), or 'Tyne Tabard' ('Lose Coat'), as the English gave John that of Lackland. His christian name of John was not allowed to be borne by John, earl of Carrick, who, when he succeeded, took the title of Robert III. A tradition of late origin and doubtful foundation grew up that his family name, owing to his impotent character and abandonment of his country, became so discredited that those who inherited it took the name of Baillie, a common one, while that of Baliol is an unknown name in modern Scotland. The retreat of the head of the family from Barnard Castle to Normandy, and the extinction of its principal cadet, the Baliols of Cavers, in 1368, sufficiently account for the disappearance of the name.

[The documents relative to the trial of the succession to the crown of Scotland are printed by Sir F. Palgrave in Documents and Records illustrating the History of Scotland, preserved in the treasury of her Majesty's Exchequer, 1837, but his commentary on them is to be accepted with reserve, as that of a partisan of Edward. For the other facts in the life of Baliol, reference must be made to the ordinary histories, of which the chief English chronicles are those of Rishanger, Hemingford, and John of Walsingham. The Scottish authorities, Barbour's Bruce, Wyntoun's and Fordun's Chronicles are of somewhat later date. Some important documents are contained in Documents illustrative of the History of Scotland, 1286-1306, edited by Rev. J. Stevenson, Rymers's Fœdera, ii., and Ryley's Placita. The best modern authorities are Lord Hailes's Annals and the Histories of Tytler and Burton. The anonymous Life of Edward I, the greatest of the Plantagenets, represents the English view of the origin of the war of independence in an extreme form, which should be corrected by reference to

the more impartial English histories of Hallam, Pearson, and Green, and Pauli, Geschichte von England, vol. iv.] Æ. M.

**BALL, SIR ALEXANDER JOHN** (1757-1809), rear-admiral, of an old Gloucestershire family, and not improbably a lineal or collateral descendant of Andrew Ball, the friend and companion of Blake, after serving for some time in the Egmont with Captain John-Elphinstone, was on 7 Aug. 1778 promoted to the Atalanta sloop as lieutenant, and served in her on the North American and Newfoundland stations till May 1780. On 17 Aug. 1780 he joined the Santa Monica, a frigate lately captured from the Spaniards, and went in her to the West Indies, where in April 1781 he had the good fortune to be moved into the Sandwich, Sir George Rodney's flag-ship, and followed the admiral to the Gibraltar, for a passage to England. There he was appointed to Sir George's new flag-ship, Formidable, on 6 Dec. 1781, went out with him again to the West Indies, and served with him in his great victory of 12 April 1782. Two days afterwards he received his commander's commission and was appointed to the Germain, in which he continued on the same station until posted on 20 March 1783. Very shortly after his return to England he, like many other naval officers, went over to France on a year's leave, partly for economy whilst on half-pay, partly with a view to learning the language. Nelson, then a young captain, was one of those who did the same, and was at St. Omer whilst Ball was there. He wrote to Captain Locker on 2 Nov. 1783: 'Two noble captains are here—Ball and Shepard: they wear fine epaulettes, for which I think them great coxcombs. They have not visited me, and I shall not, be assured, court their acquaintance.' Epaulettes were not worn in our navy till 1795, but in France they marked the rank, and possibly enough were found to serve in lieu of letters of introduction. On 4 Nov. 1784 Ball, writing from Gloucester, reported himself as having returned from foreign leave. He continued, however, on half-pay, notwithstanding his repeated applications to the admiralty, till July 1790, when, on the occasion of the Spanish armament, he was appointed to the Nemesis, 28 guns, a frigate which he commanded on the home station for the next three years. He was then appointed to the Cleopatra, 32 guns, and continued for the three following years on the Newfoundland station under Vice-admiral Sir Richard King and Rear-admiral Murray. He was then transferred to the Argonaut, 64 guns, and returned to England in August

1796. On his arrival he was appointed to the *Alexander*, 74 guns, and spent the following winter off Brest, under the command of Vice-admiral Colpoys. Some little time afterwards he was ordered out to join Lord St. Vincent off Cadiz, and in the beginning of May 1798 was sent into the Mediterranean under the orders of Sir Horatio Nelson. When he went on board the *Vanguard* to pay his respects, Nelson, perhaps remembering his pique of fifteen years before, said, 'What, are you come to have your bones broken?' Ball answered that he had no wish to have his bones broken, unless his duty to his king and country required it, and then they should not be spared. The *Vanguard*, with the *Orion* and *Alexander*, sailed from Gibraltar on 9 May, and on the 21st, off Cape Sicie, was dismasted in a violent gale of wind. Her case was almost desperate, and after she was taken in tow by the *Alexander* the danger seemed so great that the admiral hailed Captain Ball to cast her off. Ball, however, persevered, and towed the ship safely to St. Pietro of Sardinia. Sir Horatio lost no time in going on board the *Alexander* to express his gratitude, and, cordially embracing Captain Ball, exclaimed 'A friend in need is a friend indeed!' (*Nelson's Despatches*, iii. 21*n*). It was the beginning of a close and lifelong friendship, which took the place of the former jealousy; and Nelson, being reinforced by a considerable squadron, proceeded to look for the French fleet, which he found and destroyed in Aboukir Bay on 1 Aug. The *Alexander* and *Swiftsure* had been detached in the morning to look into Alexandria, and did not get into the action till two hours after its commencement, when they found themselves directly opposed to the French flag-ship *l'Orient*, which blew up about ten o'clock. The fire has been supposed to have been kindled by some combustible missiles of the nature of fire-balls, which the *l'Orient* and all the French ships had on board, and it was probably from misunderstanding Captain Ball's description of this that Coleridge framed the extraordinary story of the ship having been set on fire by some inflammable composition which Ball had invented, and which was thrown on board from the *Alexander*. In this there is certainly not one word of truth; for at that time the whole feeling of the English navy was intensely opposed to all such devices. On 4 Oct. 1798 Ball was ordered to go to Malta and institute a close blockade of the island. The blockade then begun was continued without intermission for the next two years, when the French garrison, having suffered the direst extremities of famine, was compelled to capi-

tulate. The force employed in the siege was exceedingly small. On shore there were not more than 500 marines, English and Portuguese, and some 1,500 of the Maltese, who hated the French and were devoted to Ball. Ball, on his part, devoted himself to their interests. He left the *Alexander* in charge of her first lieutenant, and personally took command of the militia. The garrison was reduced entirely by famine, which pressed almost as severely on the islanders as on the French. They might indeed have starved with the French, had not Ball on his own responsibility sent the *Alexander* to Girgenti and seized a number of ships which were laden with corn and lying there, with stringent orders from the Neapolitan court not to move.

After the reduction of Malta, Ball was for some time commissioner of the navy at Gibraltar, at which place Nelson wrote to him from the Baltic on 4 June 1801: 'My dear, invaluable friend, . . . believe me, my heart entertains the very warmest affection for you, and it has been no fault of mine, and not a little mortification, that you have not the red ribbon and other rewards that would have kept you afloat; but as I trust the war is at an end, you must take your flag when it comes to you, for who is to command our fleets in a future war? . . . I pity the poor Maltese; they have sustained an irreparable loss in your friendly counsel and an able director in their public concerns; you were truly their father, and, I agree with you, they may not like stepfathers. . . . Believe me at all times and places, for ever your sincere, affectionate, and faithful friend.' Ball's services were, however, soon after rewarded, not, indeed, with a red ribbon, but with a baronetcy, and he was appointed governor of Malta, where he spent the remainder of his life, and where, after his death, which took place on 20 Oct. 1809, his remains were interred. Notwithstanding Nelson's wishes and often expressed advice, he virtually retired from the naval service, and though in course of seniority he became rear-admiral in 1805, he never hoisted his flag. His affectionate care of the Maltese was considered by many of the English settlers and place-seekers impolitic and unjust, but he maintained throughout that we had won the island largely by the aid of the Maltese, and that we held it by their free-will, as fellow-subjects and fellow-citizens. By the Maltese he was adored. When he appeared in public the passengers in the streets stood uncovered till he had passed; the clamours of the marketplace were hushed at his entrance and then exchanged for shouts of joy and welcome.

With Nelson he maintained to the last a familiar and most affectionate correspondence, the expressions of which on Nelson's part are frequently almost feminine in their warmth. Nelson habitually wrote as he felt at the moment, and for good or evil his language dealt largely in superlatives; but through the many letters which during the last seven years of his life he wrote to Sir Alexander Ball, there is not a trace of any feeling but the strongest affection. On Sir Alexander's death the title descended to his son, William Keith Ball, but is now extinct. An admirable portrait of Ball by H. W. Pickersgill, R.A., is in the Painted Hall at Greenwich, to which it was presented in 1839 by Sir W. K. Ball.

[Official Papers in the Record Office; Nicolas's Despatches of Lord Nelson, *passim*—see Index at end of vol. vii.; Coleridge's *Friend*—'The Third Landing Place' is an apotheosis of Ball, in which the truth is so overlaid by the products of imagination or misunderstanding and by palpable absurdities, that its biographical value is extremely slight.] J. K. L.

BALL, ANDREW (d. 1653), captain in the navy, is believed to have been a native of Bristol; but of his family and early life there is no certain account. The first official mention of his name is as captain of the *Adventure* in 1648, when Vice-admiral Batten carried part of the fleet over to Holland to join the Prince of Wales. Ball was one of those who stayed with Sir George Ayscue, and who afterwards, 25 Sept. 1648, signed the manly refusal to desert what they considered the cause of the nation (*Life of Penn*, i. 265). During 1649 he was employed in the Channel, cruising off the Lizard or Land's End for the safeguard of merchant ships against pirates and sea-rovers, and on 21 December was ordered specially 'to attend Rupert's motions.' In November 1650, still in the *Adventure*, he was selected to accompany Captain Penn to the Mediterranean [see PENN, SIR WILLIAM], and continued absent on that voyage for nearly sixteen months, arriving in the Downs on 1 April 1652. During the following summer he was engaged in fitting out the *Antelope*, a new ship only just launched, and in September was sent to Copenhagen in command of a squadron of eighteen ships. The King of Denmark, on some misunderstanding about the Sound dues, had laid an embargo on about twenty English merchant ships that were in Danish harbours, and it was hoped that the appearance of a respectable force would at once remove the difficulty. They sailed from Yarmouth on 9 Sept., and on the 20th anchored a few miles below

Elsinore; there they remained, treating with the King of Denmark, but forbidden to use force (*Instructions to Captain Ball*, 30 Aug.), as the King of Denmark was probably aware. They were still hoping that the ships might be released, when, on 30 Sept., they were caught in the open roadstead in a violent storm; the cables parted, the *Antelope* was hurled on shore, the other ships, more or less damaged, were swept out to sea. It was not till 2 Oct. that they could get back and take up the survivors from the wreck; after which, having had enough of Denmark, they did not tarry for further negotiations, but set sail for England, and arrived in Bridlington Bay on the 14th, whence they went to Harwich and the Thames, to refit (John Barker to the Navy Commissioners, 15 Oct. 1652; the *Rolls' Calendar*, by misprint, reads Bonker for Barker). After the severe check which Blake received off Dungeness, on 30 Nov., Ball was appointed to the *Lion*, of fifty guns, in the room of Captain Saltonstall, whose conduct in the battle had been called in question. He accordingly was occupied during the next two months in refitting the *Lion*, and joined the fleet off Queenborough in the beginning of February, when Blake promoted him to the command of his own ship, the *Triumph*, a position somewhat analogous to that now known as captain of the fleet, which confers the temporary rank of rear-admiral. The fleet, having sailed to the westward, encountered the Dutch off Portland on 18 Feb. 1652-3. The fight lasted with great fury throughout the day, and during the whole time the enemy's chief efforts were directed against the *Triumph*, which suffered heavily in hull, in rigging, and in men; her captain, Andrew Ball, being one of the killed. In acknowledgment of his services, the state assigned a gratuity of 1,000*l.* to his widow; no mention is made of any children, but it is perhaps allowable to conjecture that the Andrew Ball who commanded the *Orange Tree* in the Mediterranean, under Sir Thomas Allin, in 1668, and was then accidentally drowned, may have been a son.

BALL, FRANCES (1794-1861), called Mother Frances Mary Theresa, was the daughter of a wealthy merchant of Dublin, where she was born, 9 Jan. 1794. In her twenty-first year she joined the Institute of the Blessed Virgin Mary at Micklegate Bar

convent, York. This sisterhood, which had long existed at York, was originally established on the continent in the seventeenth century by Mary Ward to supply the means of a sound religious and secular education to young ladies. Frances Ball introduced this institute into Ireland in 1821, and since then it has spread to most of the British colonies, where the nuns are usually called Sisters of Loreto. Before her death, which occurred at Rathfarnham Abbey, 19 May 1861, she founded thirty-seven convents in various parts of the world.

[Life by William Hutch, D.D., Dublin, 1879; Addis and Arnold's Catholic Dict. (1884) 451.]

**BALL, HANNAH** (1734–1792), Wesleyan Methodist, was born on 13 March 1733–4. When Wesley and other Methodist preachers visited High Wycombe, where she was resident for the greater part of her life, she was attracted by their teaching. In 1766 she began to keep a diary, some extracts of which have been published. Several of the letters that passed between her and Wesley have also been printed. By Wesley's advice she broke off an engagement to be married to one who, in the language of the sect, was 'an ungodly man.' This Wesley termed, and not without reason, 'a very uncommon instance of resolution.' She was a mystic, and Wesley warns her that 'a clear revelation of several persons in the ever blessed Trinity was by no means a sure trial to Christian perfection.' In 1769 she began a Sunday school. The germ of the modern Sunday school may be traced in the methods of instruction established by Luther, Knox, and St. Charles Borromeo. There are traces of them in France in the seventeenth century. The Rev. Joseph Alleine was in the habit of drawing young pupils together for instruction on the Sunday. Bishop Wilson instituted such schools in the Isle of Man in 1703. The Seventh Day Baptists had one between 1740 and 1747 at Euphrata, Lancaster, Pennsylvania. In 1763 Mrs. Catharine Cappe and the Rev. Theophilus Lindsey had such a gathering of the young at Catterick. Dr. Kennedy, about 1770, established one in Bright parish, co. Down. In 1778 the Rev. David Simpson opened one at Macclesfield. There was another at Little Lever, taught by 'Owd Jemmy o' th' Hey,' whose services were paid for by a wealthy paper-maker, Adam Crompton. These and others preceded the experiment made at Gloucester in 1783 by Robert Raikes, who is usually described as the founder of Sunday schools.

Hannah Ball died on 16 Aug. 1792. The school was continued by her sister Anne. At this time the Wesleyans, whilst having their own separate meetings, were still attenders at the parish churches, and both Hannah Ball and her sister were in the habit of taking the school children with them. At the funeral of Mrs. Ball, a relative, the Rev. W. B. Williams observed that 'if any Arminian entered heaven the angels would cease to sing.' Anne Ball arose in her place and, gathering her little flock around her, marched out of the church, which she never re-entered. The little Sunday school was reorganised in 1801, and is still in existence.

[Memoir of Miss Hannah Ball, with extracts from her Diary and Correspondence, originally compiled by the Rev. Joseph Cole, and published at York in 1796; it was revised and enlarged by John Parker, with a preface by the Rev. Thomas Jackson, London, 1839; Rules of the Wesleyan Sabbath School at High Wycombe; information supplied by Mr. John Parker and others.]

W. E. A. A.

**BALL, JOHN** (d. 1381), priest, fomented the insurrection of Wat Tyler. Very little is known of his previous career, except that he had been preaching for twenty years and had been three times committed to the archbishop of Canterbury's prison for his indiscreet utterances. He was probably, therefore, over forty years of age when he became so conspicuous in history. His career seems to have commenced at York, where, he tells us, he was St. Mary's priest—probably attached to the abbey of St. Mary's. Afterwards he removed to Colchester. He was certainly living in Essex in the year 1366, when the dean of Bocking was ordered to cite him to appear before the archbishop of Canterbury, and to forbid persons attending his preaching (WILKINS, iii. 64). And ten years later we meet with an order for his arrest as an excommunicated person addressed to some of the clergy in the neighbourhood of Colchester (*Patent Roll, 50 Edw. III*, p. 2. m. 8 *in dorso*). All, however, had little effect; for, according to Walsingham, he preached things which he knew to be agreeable to the vulgar. His doctrines were in great part those of Wycliffe, especially about the right of withholding tithes from unworthy clergymen. But he added some of his own, among which (if it be not an exaggeration of his enemies) was the extraordinary opinion that no one was fit for the kingdom of God who was not born in matrimony. His popularity, however, was no doubt mainly due to his advocacy of the claims of bondsmen to be put on terms of equality with the gentry.

There was at that time a growing dissatisfaction with the laws which subjected the villains to forced labour. 'We are all come,' they said, 'from one father and one mother, Adam and Eve. How can the gentry show that they are greater lords than we? Yet they make us labour for their pleasure.' It was this feeling that produced the insurrection of Wat Tyler, which broke out in June 1381. Ball was at that time lodged in the archbishop's prison at Maidstone, to which he had been committed probably about the end of April, as on the 26th of that month the archbishop issued a writ to his commissary to denounce him as an excommunicate (WILKINS, iii. 152). Formerly, it seems, he had been excommunicated by Archbishop Islip, and the sentence had never been annulled; yet, in defiance of all authority, he had gone about preaching in churches, churchyards, and market-places. It does not appear whether Islip was the archbishop who, according to Froissart, thought it was enough to chastise him with two or three months' imprisonment, and had the weakness to release him again. He excited the people not only by his preaching, but by a number of rhyming letters which passed about the country, some curious specimens of which have been preserved by Knighton and Walsingham. When committed to prison by Archbishop Sudbury he is said to have declared that he would be delivered by 20,000 friends. The prophecy was fulfilled; for, on the breaking out of the rebellion in Kent, one of the first acts of the insurgents was to deliver him from Maidstone gaol, whence they carried him in triumph to Canterbury. Here he expected to have met the archbishop who had committed him to prison, but he was then in London, where he was afterwards murdered by the rebels. The host then turned towards London, and as at Canterbury so also at Rochester, they met with an enthusiastic reception. At Blackheath, Ball preached to them from the famous text—

When Adam dalf, and Eve span,  
 Wo was thanne a gentleman?—

in which, as distinctly alleged by contemporary writers, he incited the multitude to kill all the principal lords of the kingdom, the lawyers, and all whom they should in future find to be destructive to the common weal. The project was clearly to set up a new order of things founded on social equality—a theory which in the whole history of the middle ages appears for the first and last time in connection with this movement. The existing law and all its upholders

were looked upon as public enemies, and every attorney's house was destroyed on the line of march. The Marshalsea prison was demolished and all the prisoners set free. John of Gaunt's magnificent palace, the Savoy, was burned to the ground. The rebels took possession of London and compelled the king and his mother to take refuge in the Tower. Nor were they safe even there from molestation, as the reader of history knows. John Ball is mentioned among those who rushed in when the Tower gates were thrown open, when Archbishop Sudbury was seized and beheaded just after saying mass before the king. But the reign of violence was short-lived. The great body of the rebels deserted their leaders and went home on a promise of pardon, but a considerable number still remained when Tyler had his celebrated interview with the king at Smithfield. At that interview Ball was present, and probably saw his leader fall under the sword of Sir William Walworth. He afterwards fled to the midland counties and was taken at Coventry—'hidden in an old ruin,' says Froissart. He was brought before the king at St. Albans, where he was sentenced to be hanged, drawn, and quartered as a traitor. The sentence seems to have been promptly carried out, and the king himself witnessed its execution at St. Albans on 15 July. The four quarters, after the barbarous fashion of those days, were sent to four different towns to be publicly exhibited.

[Walsingham's *Historia Anglicana*, ii. 32-34; Knighton (in Twysden's *Scriptores Decem*), 2633-8; Froissart (Johnes's Translation), ii. 460-80. In Maurice's 'English Popular Leaders,' vol. ii., a slight memoir of Ball is given, in which a more favourable view is taken of his character.] J. G.

BALL, JOHN (1585-1640), puritan divine, was born at Cassington, Oxfordshire, in October 1585. He was educated at Brasenose College, Oxford, where he was entered in 1602, and proceeded B.A. and M.A. at St. Mary's Hall. Having completed his academic course, he entered the family of Lady Cholmondeley, in Cheshire, as tutor. It was there that he bethought him of 'spiritual things,' and was 'converted.' He obtained ordination without subscription in 1610. He was then presented to the living of Whitmore, near Newcastle, in Staffordshire. There having been apparently no residence, he was the guest of Edward Mainwaring, Esq. Ball was a nonconformist wherever the relics of popery left in the national church touched his conscience. He was overwhelmed by the evils of the time, and used to associate him-

self with near brethren in long fast-days and prayer-days. For keeping Ascension day, he and his little circle were summoned by John Bridgman, the high-church bishop of Chester, who was specially indignant that the 'prayers, with fasting,' were kept on that 'holy day.' Thenceforward Ball was 'deprived' and imprisoned, released and re-confined—alike arbitrarily, finding always a refuge, when at liberty, with Lady Bromley, of Sheriff-Hales, in Shropshire. Calamy tells us that John Harrison, of Ashton-under-Lyne, in Lancashire, was exceedingly harassed by the intolerant proceedings of the bishop, and put to great expenses in the ecclesiastical courts; and when he consulted Mr. Ball what he should do to be delivered from these troubles, Mr. Ball recommended him to reward the bishops well with money, 'for it is that,' said he, 'which they look for.' Harrison tried the experiment, and afterwards enjoyed quietness (CALAMY, *Account*, ii. 396-7).

Ball was an eminent scholar. He was specially learned in the whole literature of the controversy with the church of Rome as represented by Bellarmine. He died on 20 Oct. 1640, aged fifty-five. Fuller says of him: 'He lived by faith; was an excellent schoolman and schoolmaster, a powerful preacher, and a profitable writer, and his "Treatise of Faith" cannot be sufficiently commended.' Wood writes: 'He lived and died a nonconformist, in a poor house, a poor habit, with a poor maintenance of about twenty pounds a year, and in an obscure village, teaching school all the week for his further support, yet leaving the character of a learned, pious, and eminently useful man.' Richard Baxter pronounced him as deserving 'of as high esteem and honour as the best bishop in England.'

Ball's earliest book was 'A Short Catechisme, containing all the principal Grounds of Religion.' Before 1632 it had passed through fourteen editions, and was translated into Turkish by William Seaman [q. v.] in 1660. His other works were: 'Treatise of Faith' (1632 and 1637), which was very popular in New England; 'Friendly Trial of the Grounds of Separation' (1640); 'Answer to two Treatises of Mr. John Can, the leader of the English Brownists at Amsterdam (1642), edited by Simeon Ashe; 'Trial of the New Church-way in New England and Old' (1644), written against the New England 'independents'; 'Treatise of the Covenant of Grace' (1645), edited by Simeon Ashe; 'Of the Power of Godliness doctrinally and practically handled' (1657); a posthumous folio, edited by Simeon Ashe; and 'Divine Meditation' (1660).

[Brook's Lives of the Puritans, ii. 440-4; MS. Chronology, ii. 395 (23), iii. A.D. 1640; Clark's Lives, 148-52; Fuller's Worthies, ii. 339; Wood's Athenæ (Bliss), ii. 670; Watt's Bibl. Brit.; Biog. Brit.; Ball's Works.] A. B. G.

BALL, JOHN (1665?-1745), presbyterian minister, was one of ten sons of Nathanael Ball, M.A. [q. v.] ejected from Barley, Herts. He was educated for the ministry under the Rev. John Short at Lyme-Regis, Dorset, and finished his studies at Utrecht, partly under the Rev. Henry Hickman, ejected fellow of Magdalen College, Oxford, who died minister of the English church at Utrecht in 1692. He was ordained 23 Jan. 1695, and became minister in 1705 of the presbyterian congregation at Honiton (extinct 1788), where he united two opposing sections, and ministered for forty years, being succeeded by John Rutter (d. 1769). He was a laborious scholar, and 'carried the Hebrew psalter into the pulpit to expound from it.' His learning and high character caused a seminary, which he opened prior to the Toleration Act, to be not only connived at, but attended by the sons of neighbouring gentry, though of the established church. Ball is remarkable for retaining the puritan divinity unimpaired to a late period. He had no sympathy with any of the innovations upon Calvinism which, long before his death, became rife among the presbyterians of the West. He published: 1. 'The Importance of Right Apprehensions of God with respect to Religion and Virtue,' Lond. 1736, 8vo. 2. 'Some Remarks on a New Way of Preaching,' 1737 (this was answered by Henry Grove, the leader of the more moderate school of presbyterian liberalism). He died 6 May 1745, in his ninety-first year.

[Calamy's Account; Palmer's Nonconf. Mem. i. 191; Funeral Sermon by John Walrond, 1745; Records of Exeter Assembly; Murch's Hist. of the Presb. and Gen. Bapt. Churches in West of England, 1835, p. 316; Davids' Ann. of Nonconf. in Essex, 1863, p. 596.] A. G.

BALL, NATHANAEL (1623-1681), divine, assistant to Walton in his great 'Polyglot,' was born at Pitminster, near Taunton Dean, Somersetshire, in 1623. He carried all before him in his parish school, and proceeded early to the university of Cambridge, being entered of King's College. Here he speedily won a name as a classical, oriental, and biblical scholar. He also spoke French so idiomatically that he was sometimes mistaken for a native of France. While at the university he gained the friendship of Tillotson. Having taken the degrees of B.A. and M.A., he received orders, and was settled

at Barley in Hertfordshire, this vicarage having been recently sequestered from Herbert Thorndike, according to Walker (*Sufferings*, ii. 160). In Barley he proved himself an active and pious clergyman (CALAMY'S *Acc.* 362; PALMER'S *Nonconf. Mem.* ii. 309; FALDO'S *Epistle*, prefixed to *Spiritual Bondage*). He married there the daughter of a neighbouring clergyman named Parr, by whom he had ten sons and three daughters. The 'Register' records five children of 'Mr. Nathaniel Ball, minister, and Mary, his wife' (DAVIDS, *Annals of Evangelical Non-conformity in Essex*, 1863, p. 597). Thorndike in 1658-9 recovered his living, and Ball was ejected. For some time subsequent he resided in his parish, and then removed to Royston, where 'the people . . . chose him as their publick minister.' But the Act of Uniformity came, and he resigned the office as one of the two thousand. He did not immediately quit Royston, but 'continued in the town for some time,' preaching in the neighbourhood and beyond, as opportunities offered. He afterwards retired to Little Chishill, of which parish his brother-in-law, Robert Parr, became the rector soon after the ejection of James Willett. While at Chishill he acted as an evangelist in the town and parish, and at Epping, Cambridge, Bayford, and other places. In 1668 he took part with Scandaret, Barnard, Havers, Coleman, and Billio in two public disputes with George Whitehead, an irrepressible and fluent quaker. In 1669 he was returned to Archbishop Sheldon as a 'teacher to a conventicle at Thaxted, in connection with Scambridge [Scandaret] and Billoway [Billio].' On the 'Declaration' of 1672 he was described as of Nether Chishill, and obtained a license (25 May 1672) to be a 'general presbyterian teacher in any allowed place.' In June 1672 his own house was licensed to be a presbyterian meeting-place, and he himself was licensed in August to be a 'presbyterian teacher in his own house' there. He lived 'in a small cottage of forty shillings a year rent,' and frequently suffered for nonconformity. Amid his multiplied labours and poverty he died on 8 Sept. 1681, aged 58. He left his manuscripts to his 'brother beloved,' the Rev. Thomas Gouge, of St. Sepulchre's, London, who died only a few weeks after him. They came into the possession of John Faldo, another of the ejected, who published a now extremely rare volume by Ball entitled '*Spiritual Bondage and Freedom; or a Treatise containing the Substance of several Sermons preached on that subject from John viii. 36, 1683.*' Ball also wrote 'Christ the Hope of Glory, several Sermons on Colossians i. 27,

1692.' The former is dedicated to 'the right honourable and truly virtuous the Lady Archer, of Coopersail, in Essex,' one of Ball's numerous friends. It is greatly to be deplored that his biblical and oriental manuscripts—the laborious occupation of a lifelong student—and his extensive correspondence are now lost. They are known to have been in existence in comparatively recent times.

A. B. G.

BALL, NICHOLAS (1791-1865), Irish judge, son of John Ball, silk mercer of Dublin, was educated at Stonyhurst and Trinity College, Dublin, where his fellow students were Richard Sheil and W. H. Curran. He was called to the Irish bar in 1814, and afterwards passed two winters in Rome with Mr. (afterwards Sir Thomas) Wyse. The two young men saw much of Cardinal Gonsalvi, secretary of state. They were vehemently denounced and defended in the Irish press, because it was supposed that they used their influence to support a scheme for catholic emancipation, by which the pope should appoint Irish catholic bishops, subject to the veto of the English government. Ball obtained silk in 1830, and was admitted a bencher of the King's Inn in 1836. His success at the bar was not brilliant, but he soon obtained a very lucrative practice in the rolls court and in the court of chancery, where his reputation was that of an acute, clear, and ready advocate. In 1836 he was elected member of parliament for Clonmel, in 1837 was appointed attorney-general and in 1838 privy councillor for Ireland. He disliked parliamentary life, and spoke seldom and briefly, but in terse and lucid language. He was glad to take refuge in a judgeship of the common pleas (Ireland), to which he was preferred in 1839, and which he held till his death. He was the second Roman catholic barrister promoted to a judgeship after the passing of the Emancipation Act. He was a sound and able lawyer, and some of his charges are said to have been unsurpassed in his day. A silly story was current about him that 'he had ordered a mill to cease clacking until otherwise ordered by the court, and forgetting the withdrawal of the order before he left Cork, the owner had brought against him an action for damages.' Justice Ball was a sincere Roman catholic, but no ultramontanist, a zealous Irish liberal, but strongly opposed to the disintegration of the empire. His literary acquirements were extensive and

accurate. He married in 1817 Jane, daughter of Thomas Sherlock, of Butlerstown Castle, co. Waterford, by whom he had several children, his eldest son, John, being under-secretary of state for the colonies under Lord Palmerston's first administration. Justice Ball died at his residence in Stephen's Green, and was buried in the family vault under the chancel of the Roman catholic cathedral, Dublin.

[Freeman's Journal, 16 and 20 Jan. 1865; Dublin Daily Express, 16 and 19 Jan. 1865; Gent. Mag. 3rd series, xviii. 389; Tablet, 21 Jan. 1865.] P. B.-A.

**BALL** or **BALLE**, **PETER**, M.D. (*d.* 1675), physician, was brother of William Ball [q. v.], F.R.S. On 13 Jan. 1658-9, being then twenty years of age, he was entered as a medical student at Leyden, but proceeded to Padua, where he took the degree of doctor of philosophy and physic with the highest distinction 30 Dec. 1660. To celebrate the occasion verses in Latin, Italian, and English were published at Padua, in which our physician, by a somewhat violent twist of his latinised names, Petrus Bale, is made to figure as 'alter Phœbus.' Ball was admitted an honorary fellow of the Royal College of Physicians in Dec. 1664. He was one of the original fellows of the Royal Society, one of the council in 1666, and in the following year was placed on the committee for causing a catalogue to be made of the noble library and manuscripts of Arundel House, which had been presented to the society by Henry Howard, Esq., afterwards Duke of Norfolk. While at Mamhead in October 1665, Ball, in conjunction with his elder brother, William, made the observation of Saturn mentioned under **WILLIAM BALL**. Dying in July 1675, he was buried on the 20th of that month in the round of the Temple Church.

[Prince's Worthies of Devon, pp. 111-13; Munk's Roll of Royal College of Physicians (1878), i. 335; Apollinare Sacrum, &c. 4to, Patavii, mdcx.; Birch's Hist. Roy. Soc. vol. i.-iii. passim; Athenæum, 21 Aug. and 9 Oct. 1880; Temple Register.] G. G.

**BALL**, **ROBERT** (1802-1857), naturalist, was born at Cove (now Queenstown), county Cork, on 1 April 1802. His father, Bob Stawel Ball, was descended from an old Devonshire family which settled in Youghal in 1651. He early showed a decided spirit of inquiry, especially into natural history. He was principally educated at Ballitore, county Kildare, by a Mr. White, who appreciated and encouraged his zoological studies. At home at Youghal he became an active outdoor observer, and recorded much that

he saw with little aid. Taking an interest in public and useful institutions, he was appointed a local magistrate in 1824, a few months after coming of age. A little later the Duke of Devonshire induced him to enter the government service in Dublin, although he desired to study medicine, if he could do so without expense to his father. From 1827 to 1852 he was a zealous public servant in the under-secretary's office in Dublin, chained to the desk in occupation distasteful to him, disappointed of advancement or change of employment, at one time being put off with the reply that his duties were so well done that a change must be refused. A stranger was appointed to the head clerkship of his office when a vacancy occurred; and finally in 1852 a reduction took place in the chief secretary's office, and Ball was placed on the retired list, on the ground that 'he devoted much attention to scientific pursuits, and that it was not expedient that public servants should be thus occupied;' although he had most faithfully performed his duties. His retiring allowance, however, allowed him to live in moderate comfort. The time he could spare from official work he always devoted to natural history pursuits, making zoological expeditions during his holidays, frequently with Mr. W. Thompson of Belfast, to whose many zoological publications, and especially the 'Natural History of Ireland,' he added numberless facts of interest. During almost the whole of his residence in Dublin he was one of the most prominent figures in its scientific life. He was for many years a member of the council of most of the Dublin scientific societies, and became president of the Geological Society of Ireland, and of the Dublin University Zoological Association. For many years secretary of the Zoological Society of Ireland, he devoted unwearied care and ingenious suggestiveness to its gardens. To him the working classes of Dublin were indebted for the penny charge for admission. He always exerted himself as far as possible to promote the general diffusion of scientific knowledge, especially by lectures and museums; and in 1844, on being appointed director of the museum in Trinity College, Dublin, he presented to it his large collection of natural history, which was richer in Irish specimens than any other, and included many original examples and new species. In recognition of his services and merits, Trinity College in 1850 conferred on him the honorary degree of LL.D. In 1851 he was appointed secretary of the Queen's University in Ireland, and discharged the office with distinguished success. Other offices in which

Dr. Ball's services were of great importance were that of secretary to the Joint Committee of Lectures, appointed in 1854 by the government and the Royal Dublin Society, to direct scientific lectures in Dublin and in provincial centres, and assistant examiner to the Civil Service Commission (1855). He had been appointed president of the natural history section of the British Association for the Dublin meeting of 1857, but died several months previous to the meeting, on 30 March 1857, of rupture of the aorta. His busy public life had in later years left him no leisure, and his life was shortened by overwork. In private life his social qualities and his honourable nature were most highly esteemed, and, like his friend, Professor Edward Forbes, he had a genius for enlivening a children's party. His principal scientific papers were on fossil bears found in Ireland, on remains of oxen found in Irish bogs, on Loligo, and other minor zoological topics, and were published in *Proc. and Trans. Roy. Irish Acad.* 1837-50; *Proc. Zool. Soc.* 1844; *Ann. Nat. Hist.* 1846-50; *Nat. Hist. Rev.* 1855.

[Memoir, by R. Patterson, *Nat. Hist. Rev.* 1858, v. 1-34.] G. T. B.

BALL, THOMAS (1590-1659), divine, was born at Aberbury in Shropshire, in 1590. His parents were of 'good and honest repute,' having neither 'superfluity nor want.' His education was liberal; and having a natural prepossession to learning, he was noted for his 'constant and unconstrained industry about his books.' While still a youth he was appointed usher in the then famous school of Mr. Fuller, at Epping, in Essex, 'where he was two years.' Thence he proceeded to Cambridge, entering at Queens' College in 1615. He proceeded M.A. in 1625. He was received by the Rev. Dr. John Preston as a pupil 'through the pleasing violence of a friendly letter which Mr. Fuller writt in his high commendation.' Preaching on the 'Trinity,' Preston found his pupil very much 'troubled' over some of his statements and arguments. Ball put his questions and difficulties so modestly and ingenuously that the preacher was deeply interested in him. From that time they were devoted to each other. Dr. Preston, having become master of Emmanuel College, took Ball along with him from Queens', 'perceiving his growing parts.' Ever after the master of the great puritan college 'esteemed him not only as his beloved pupil but as his bosom friend and most intimately private familiar.' He obtained a fellowship, and had an 'almost incredible multitude of pupils.'

His 'exercises' and sermons at St. Mary's gained him much distinction as a preacher. He accepted with some hesitation a 'call' to the great church of Northampton about 1630, and conducted the 'weekly lecture' there for about twenty-seven years. When the plague came to the town, he remained and ministered. He printed only one book apparently, namely, 'Ποιμνόνρυπος—Pastorum Propugnaculum, or the Pulpit's Patronage against the Force of Unordained Usurpation and Invasion. By Thomas Ball, sometime Fellow of Emmanuel College in Cambridge, now Minister of the Gospel in Northampton, at the request and by the advice of very many of his Neighbour-Ministers: London, 1656' [in *British Museum*, marked 22 Jan. 1655] pp. viii. and 344. This is a noticeable book, full of out-of-the-way learning, like Burton's 'Anatomy of Melancholy,' and it has quaint sayings and stories equal to Fuller at his best.

So far as this treatise, 'Pastorum Propugnaculum,' is a defence of the church of England, it takes comparatively humble ground. It vindicates the reasonableness and scripturalness of 'ordination' and of adequate learning; he states with candour the objections of his opponents.

Ball, in association with Dr. Goodwin, edited and published the numerous posthumous works of his friend Dr. John Preston.

He was thrice married, and had a large family. He died, aged sixty-nine, in 1659, and was buried 21 June. His funeral sermon was preached by his neighbour, John Howes. It was published under the title of 'Real Comforts,' and included notes of his life. This sermon is very rare.

[Howes's Real Comforts, dedicated to Mrs. Susanna Griffith, wife of Mr. Thomas Griffith, of London, merchant, and daughter of Thomas Ball, 1660 (but really 30 June 1659); *Brook's Lives of the Puritans*; Wood's *Athenæ Oxon.* (Bliss), iv. 756; *Cole MSS.*, Cantab. *Athenæ* and *Miscel.*, in *British Museum*.] A. B. G.

BALL or BALLE, WILLIAM (d. 1690), astronomer, was the eldest of seventeen children born to Sir Peter Ball, knight, recorder of Exeter and attorney-general to the queen in the reigns of Charles I and Charles II, by Ann, daughter of Sir William Cooke, of Gloucestershire, his wife. In 1638, when William Ball was probably about eleven years of age, Robert Chamberlain, a dependant of his father, dedicated his 'Epigrams and Epitaphs' to him in the character of a precocious poet. His observations and drawings of Saturn from 5 Feb. 1656 to 17 June 1659 (communicated by Dr. Wallis) are frequently cited by Huygens (*Op. Varia*, iii. 625-6) as confirmatory

of his own, in his 'Brief Assertion' (1660) of the annular character of the Saturnian appendages against the objections of Eustachio Divini. Ball joined the meetings of the 'Oxonian Society' at Grasham College in 1659, co-operated in founding the Royal Society in the following year, and was named, in the charter of 15 July 1662, its first treasurer. On his resignation of this office, 30 Nov. 1663, he promised, and subsequently paid to the funds of the society, a donation of 100*l*. (WELD, *Hist. Royal Soc.* i. 171). Soon after 15 June 1665, when he was present at a meeting of the Royal Society (BIRCH, *Hist. Royal Soc.* i. 439), he appears to have left London, and resumed his astronomical pursuits at his father's residence, Mamhead House, Devonshire, about ten miles south of Exeter. Here, at six P.M. 13 Oct. 1665, he made, in conjunction with his brother, Peter Ball, M.D., F.R.S., an observation which has acquired a certain spurious celebrity. He described it in the following sentence of a letter to Sir Robert Moray, which was accompanied by a drawing; the words were inserted in No. 9 of the 'Philosophical Transactions' (i. 153):

'This appear'd to me the present figure of Saturn, somewhat otherwise than I expected, thinking it would have been decreasing; but I found it full as ever, and a little hollow above and below. Whereupon, the report continues, 'the person to whom notice was sent hereof, examining this shape, hath by letters desired the worthy author of the "Systeme of this Planet" [Huygens] that he would now attentively consider the present figure of his anses or ring, to see whether the appearance be to him as in this figure, and consequently whether he there meets with nothing that may make him think that it is not *one* body of a circular figure that embraces his disks, but *two*.'

Owing to some unexplained circumstance, the plate containing the figure referred to was omitted or removed from the great majority of copies of the 'Philosophical Transactions,' and the letterpress standing alone might naturally be interpreted to signify that the brothers Ball had anticipated by ten years Cassini's discovery of the principal division in Saturn's ring. This merit was in fact attributed to them by Admiral (then Captain) Smyth in 1844 (*A Cycle of Celestial Objects*, p. 51), and his lead was followed by most writers on astronomical subjects down to October 1882, when Mr. W. T. Lynn pointed out, in the 'Observatory,' the source of the misconception. In the few extant impressions of the woodcut from Ball's drawing not the slightest indication is given of separation into two

concentric bodies, but the elliptic outline of the wide-open ring is represented as broken by a depression at each extremity of the minor axis. Sir Robert Moray's suggestion to Huygens seems (very obscurely) to convey his opinion that these 'hollownesses' were due to the intersection of a pair of *crossed* rings. Their true explanation is unquestionably that Ball, though he employed a 38-foot telescope with a double eyeglass, and 'never saw the planet more distinct,' was deceived by an optical illusion. The impossible delineations of the same object by other observers of that period (see plate facing p. 634 of Huygens's *Op. Varia*, iii.) render Ball's error less surprising. Indeed, it was anticipated at Naples in 1633 by F. Fontana (*Novæ Observationes*, p. 130; see *Observatory*, No. 79, p. 341).

Pepys tells us (Bright's ed. v. 375) that Ball accompanied him and Lord Brouncker to Lincoln's Inn to visit the new Bishop of Chester (Wilkins) 18 Oct. 1668, and he was one of a committee for auditing the accounts of the Royal Society in November following. He succeeded to the family estates on his father's death in 1680, and erected a monument to him in the little church of Mamhead. He died in 1690, and was buried in the Round of the Middle Temple 22 Oct. of that year (*Temple Register*; cf. *Letters of Administration P. C. C.*, by decree, 14 Jan. 1692). He married Mary Posthuma Hussey, of Lincolnshire, who survived him, and had by her a son, William. The last of the Balls of Mamhead died 13 Nov. 1749.

[Prince's Worthies of Devon (1701), 111-3; Polwhele's *Hist. of Devonshire* (1797), ii. 155-7; Watt's *Bibl. Brit.* i. 67; Prof. J. C. Adams (Month. Not. Royal Astr. Soc. Jan. 1883, pp. 92-7) attempts to prove that Ball's observation was misrepresented, both in the plate (cancelled, as he suggests, on that account) and in the letterpress of Phil. Trans. See, on the other side, Vivian in Month. Not. March 1883, and Lynn, in *Observatory*, 1 June and 1 Oct. 1883. Prof. Bakhuyzen of Leyden gives, *Observatory*, 2 July 1883, the passage from Moray's letter to Huygens referred to in Phil. Trans. i. 153. Huygens's reply has not yet been brought to light.]

A. M. C.

BALLANDEN. [See BELLENDEN.]

BALLANTINE, JAMES (1808-1877), artist and man of letters, born at Edinburgh in 1808, was entirely a self-made man. His first occupation was that of a house-painter. He learned drawing under Sir William Allen at the Trustees' Gallery in Edinburgh, and was one of the first to revive the art of glass-painting. In 1845 he

published a treatise on 'Stained Glass, showing its applicability to every style of Architecture,' and was appointed by the royal commissioners on the fine arts to execute the stained-glass windows for the House of Lords. He was the author of several popular works: 1. 'The Gaberlunzie's Wallet,' 1843. 2. 'The Miller of Deanhaugh,' 1845. 3. An 'Essay on Ornamental Art,' 1847. 4. 'Poems,' 1856. 5. 'One Hundred Songs, with Music,' 1865. 6. 'The Life of David Roberts, R.A.' 1866. There is also a volume of verses published by Ballantine in Jamaica, whither in later life he seems to have retired for the benefit of his health. 'The Gaberlunzie's Wallet' and some of his songs are still popular in Scotland. He died in Edinburgh in December 1877. He was the head of the firm of Messrs. Ballantine, glass stainers, Edinburgh.

[Athenæum, 22 Dec. 1877; Academy, 29 Dec. 1877; Cooper's Men of the Time, 1875.]

E. R.

**BALLANTYNE, JAMES (1772-1833),** the printer of Sir Walter Scott's works, was the son of a general merchant in Kelso, where he was born in 1772. His friendship with Scott began in 1783 at the grammar school of Kelso. After mastering his lessons, Scott used to whisper to Ballantyne, 'Come, slink over beside me, Jamie, and I'll tell you a story;' and in the interval of school hours it was also their custom to walk together by the banks of the Tweed, engaged in the same occupation. Before entering the office of a solicitor in Kelso, Ballantyne passed the winter of 1785-6 at Edinburgh University. His apprenticeship concluded, he again went to Edinburgh to attend the class of Scots law, and on this occasion renewed his acquaintance with Scott at the Teviotdale club, of which both were members. In 1795 he commenced practice as a solicitor in Kelso, but as his business was not immediately successful he undertook in the following year the printing and editing of an anti-democratic weekly newspaper, the 'Kelso Mail.' A casual conversation with Scott, in 1799, led to his printing, under the title of 'Apologies for Tales of Terror,' a few copies of some ballads which Scott had written for Lewis's Miscellany, 'Tales of Wonder.' So pleased was Scott with the beauty of the type, that he declared that Ballantyne should be the printer of the collection of old Border ballads, with which he had been occupied for several years. They were published under the title of 'Minstrelsy of the Scottish Border,' the first two volumes appearing in Jan. 1802; and the connection thus inaugurated between author and printer remained uninterrupted

through 'good and bad weather' to the close of Scott's life.

Induced by the strong representations of Scott, Ballantyne, about the close of 1802, removed to Edinburgh, 'finding accommodation for two presses and a proof one in the precincts of Holyrood House.' Scott, besides advancing a loan of 500*l.*, exerted himself to procure for him both legal and literary printing; and such was the reputation soon acquired by his press for beauty and correctness of execution that in 1805 the capital at his command was too small to fulfil the contracts that were offered him, and he applied to Scott for a second loan, who thereupon became a third sharer in the business. In 1808 the firm of John Ballantyne & Co., booksellers, was also started, Scott having one half share, and James and John Ballantyne one fourth each. John Ballantyne [q.v.] undertook the management of the book-selling and publishing business, the printing business continuing under the superintendence of the elder brother; but the actual head of both concerns was Scott, who, although in establishing them he was actuated by a friendly interest in the Ballantynes, wished both to find a convenient method of engaging in a commercial undertaking without risk to his status in society, and also as an author to avoid the irksome intervention of a publisher between him and the reading public. The publishing business was gradually discontinued, but the printing business was in itself a brilliant success. The high perfection to which Ballantyne had brought the art of printing, and his connection with Scott, secured such enormous employment for his press that a large pecuniary profit was almost an inevitable necessity. But though not deficient in natural shrewdness, he was careless in his money transactions, and it was the artistic and literary aspect of his business that chiefly engaged his interest. Much of his time was occupied in the correction and revision of the proofs of Scott's works, the writing of critical and theatrical notices, and the editing of the 'Weekly Journal,' of which, along with his brother, he became proprietor in 1817. Scott's hurried method of composition rendered careful inspection of his proofs absolutely necessary, but the amendments of Ballantyne had reference, in addition to the minor points of grammar, to the higher matters of taste and style. Though himself 'a loose and bombastic writer, he had a keen eye for detecting solecisms, inaccuracies, or minute imperfections in phrases and expressions, and his hints in regard to the general treatment of a subject were often of great value. If Scott

seldom accepted his amendments in the form suggested, he nearly always admitted the force of his objections, and in deference to them frequently made important alterations. Indeed, it is to the criticism of Ballantyne that we owe some of Scott's most vivid epithets and most graphic descriptive touches. (For examples, see LOCKHART'S *Life of Scott*, chap. xxxv.) Love of ease and a propensity to indulgence at table were the principal faults of Ballantyne. On account of the grave pomposity of his manner Scott used to name him 'Aldiborontiphoscophornio,' his more mercurial brother being dubbed 'Rigdumfunnidos.' In 1816, Ballantyne married Miss Hogarth, sister of George Hogarth, the author of the 'History of Music.' He lived in a roomy but old-fashioned house in St. John Street, Canongate, not far from his printing establishment. There, on the eve of a new novel by the Great Unknown, he was accustomed to give a 'gorgeous' feast to his more intimate friends, when, after Scott and the more staid personages had withdrawn, and the 'claret and olives had made way for broiled bones and a mighty bowl of punch,' the proof sheets were at length produced, and 'James, with many a prefatory hem, read aloud what he considered as the most striking dialogue they contained.'

The responsibility of Ballantyne for the pecuniary difficulties of Sir Walter Scott has been strongly insisted on by Lockhart, but this was not the opinion of Scott himself, who wrote: 'I have been far from suffering from James Ballantyne. I owe it to him to say that his difficulties as well as his advantages are owing to me.' Doubtless the printing-press, with more careful superintendence, would have yielded a larger profit, but the embarrassments of Scott originated in his connection with the publishing firm, and were due chiefly to schemes propounded by himself and undertaken frequently in opposition to the advice of Ballantyne. In 1826 the firm of James Ballantyne & Co. became involved in the bankruptcy of Constable & Co., publishers. After his bankruptcy Ballantyne was employed at a moderate salary by the creditors' trustees in the editing of the 'Weekly Journal' and the literary management of the printing-house, so that his literary relations with Scott's works remained unaltered. He died 17 Jan. 1833, about four months after the death of Scott.

Humburg handled by the author of the *Life of Sir Walter Scott*, 1839; Reply to Mr. Lockhart's pamphlet, entitled 'The Ballantyne Humburg handled,' 1839; Archibald Constable and his Literary Correspondents, 1873.] T. F. H.

**BALLANTYNE, JAMES ROBERT** (d. 1864), orientalist, after being connected with the Scottish Naval and Military Academy, was sent out to India in 1845, on the recommendation of Professor H. H. Wilson, to superintend the reorganisation of the government Sanskrit college at Benares. The intimate relations he here established with native teachers and students, and the high opinion he formed of the philosophical systems of India, led him to undertake a comprehensive series of works with the design of rendering the valuable elements in Hindu thought more accessible and familiar to European students than they had hitherto been. This was the aim of his translations of the Sanskrit aphorisms of the Sāṅkhya and many of those of the Nyāya school, with tracts bearing upon these and also upon the Vedānta system. The converse process—the communication of European ideas to the Brahmins—is exhibited in his 'Synopsis of Science, in Sanskrit and English, reconciled with the truth to be found in the Nyāya Philosophy,' and most of his works are filled with the design of establishing more intelligent relations between Indian and European thought. Dr. Ballantyne had an original bent of mind, and his method of dealing with philosophical systems was often suggestive.

The list of his works is as follows: 1. 'A Grammar of the Hindustani Language,' Edinburgh, 1838, with a second edition. 2. 'Elements of Hindi and Braj Bhāṣā Grammar,' London and Edinburgh, 1839. 3. 'A Grammar of the Mahratta Language,' Edinburgh, lithographed, 1839. 4. 'Principles of Persian Calligraphy, illustrated by lithographic plates of the Naskh-Ta'lik character,' London and Edinburgh, 1839. 5. 'Hindustani Selections in the Naskhi and Devanagari character,' Edinburgh, 1840; 2nd edition, 1845. 6. 'Hindustani Letters, lithographed in the Nuskh-Tu'leek and Shikustu-Amez character, with translations,' London and Edinburgh, 1840. 7. 'The Practical Oriental Interpreter, or Hints on the art of Translating readily from English into Hindustani and Persian,' London and Edinburgh, 1843. 8. 'Catechism of Persian Grammar,' London and Edinburgh, 1843. 9. 'Pocket Guide to Hindoostani Conversation,' London and Edinburgh. (The preceding books were published before Dr. Ballantyne went to India.) 10. 'Catechism of Sanskrit Grammar,' 2nd edition, London and Edinburgh,

1845. 11. 'The Laghu Kaumudi, a Sanskrit Grammar, by Varadarāja,' 1st edition, 1849; 2nd, 1867, posthumous. 12. 'First Lessons in Sanskrit Grammar, together with an Introduction to the Hitopadēsa,' 1st edition, 1850; 2nd, 1862. 13. 'A Discourse on Translation, with reference to the Educational Despatch of the Hon. Court of Directors, 19 July 1854,' Mirzapore, 1855. 14. 'A Synopsis of Science in Sanskrit and English, reconciled with the Truths to be found in the Nyāya Philosophy,' Mirzapore, 1856. 15. 'The Mahābhāṣya (Patanjali's Great Commentary on Pāṇini's famous grammar), with Commentaries,' Mirzapore, 1856. 16. 'Christianity contrasted with Hindu Philosophy, in Sanskrit and English' (a work to which was awarded the moiety of a prize of 300*l*. offered by a member of the Bengal Civil Service, and decided by judges appointed by the Archbishop of Canterbury and the Bishops of London and Oxford), London, 1859.

Dr. Ballantyne also edited and partly wrote a series of educational books for the use of the Sanskrit college. Some of these appeared under the title of 'Reprints for the Pandits,' and included treatises on chemistry, physical science, logic, and art, and an explanatory version, in Sanskrit and English, of Bacon's 'Novum Organon' (1852), which reached a second edition in 1860. 'The Bible for the Pandits' was the title of a translation of the first three chapters of Genesis into Sanskrit, with a commentary (1860).

In 1861 Dr. Ballantyne resigned his position at the Benares college, where for sixteen years he had been an indefatigable and judicious principal and a liberal professor of moral philosophy, and on his return to England was appointed librarian to the India Office. His health, however, had long been failing, and he died on 16 Feb. 1864. The Benares college owed much to his wise and broad-minded direction, and native students have profited greatly by his zealous labours on their behalf.

**BALLANTYNE, JOHN** (1774-1821), publisher, younger brother of James Ballantyne, printer of Sir W. Scott's works [q.v.], was born at Kelso in 1774. After spending a short time in the banking house of Messrs. Currie, London, he returned, in 1795, to Kelso, and became partner in his father's business as general merchant. On his marriage in 1797 the partnership was dissolved, one principal

part of the business being resigned to him. Gradually he got into money difficulties, and, having disposed of his goods to pay his debts, went to Edinburgh in January 1806, to become clerk in his brother's printing establishment at a salary of 200*l*. a year. When Scott in 1808, on the ostensible ground of a misunderstanding with Messrs. Constable & Hunter, established the firm of John Ballantyne & Co., John Ballantyne was appointed manager at a salary of 300*l*. a year and one-fourth of the profits. The private memorandum-book of Ballantyne records that already in 1809 the firm was getting into difficulties; and during the next three years their general speculations continued so uniformly unsuccessful, that in May 1813 Scott opened negotiations with Constable for pecuniary assistance in return for certain stock and copyright, including a share in some of Scott's own poems, and on a pledge of winding up the concerns of the firm as soon as possible. Although 'Waverley' was published by Constable in 1814, Scott, owing either, as stated by Lockhart, to the misrepresentations of John Ballantyne regarding Constable, or to the urgent necessity for more ready money than Constable was willing to advance, made arrangements in 1815 for the publication of 'Guy Rannering' by Longman, and in the following year of the 'Tales of my Landlord' by Murray. Lockhart states that Ballantyne, in negotiating with Constable in 1817 regarding a second series of 'Tales of my Landlord,' so wrought on his jealousy by hinting at the possibility of dividing the series with Murray, that he 'agreed on the instant to do all that John shrank from asking, and at one sweep cleared the Augean stable in Hanover Street of unsaleable rubbish to the amount of 5,270*l*.;' but from a passage in the 'Life of Archibald Constable' (iii. 98) it would appear that this was not effected till a later period. John Ballantyne, whom Scott continued to employ in all the negotiations regarding the publication of his works, had in 1813, on the advice of Constable, started as an auctioneer chiefly of books and works of art, an occupation well suited to his peculiar idiosyncrasies. As he had also made a stipulation with Constable that he was to have a third share in the profits of the Waverley novels, he suffered no pecuniary loss by the dissolution of the old publishing firm. In addition to this, Scott, in 1820, gratuitously offered his services as editor of a 'Novelist's Library,' to be published for his sole benefit. His easily won gains were devoted to the gratification of somewhat expensive tastes. At his villa on the Firth of Forth, which he had named 'Harmony Hall,' and had 'in-

vested with an air of dainty, voluptuous finery,' he gave frequent elaborate Parisian dinners, among the guests at which was sure to be found 'whatever actor or singer of eminence visited Edinburgh.' He frequented foxhunts and race-meetings, and even at his auction 'appeared uniformly, hammer in hand, in the half-dress of some sporting club.' His imprudent pursuit of pleasure told gradually on his constitution, and after several years of shattered health he died at his brother's house in Edinburgh 16 June 1821. Ballantyne is the author of a novel—'The Widow's Lodgings'—which, though stated by Lockhart to be 'wretched trash,' reached a second edition. In his will he bequeathed to Sir Walter Scott a legacy of 2,000*l.*; but after his death it was found that his affairs were hopelessly bankrupt. In the antics and eccentricities of Ballantyne Scott discovered an inexhaustible fund of amusement; but he also cherished towards him a deep and sincere attachment. Standing beside his newly closed grave in Canongate churchyard, he whispered to Lockhart, 'I feel as if there would be less sunshine for me from this day forth.'

[Lockhart's *Life of Scott*; *Refutation of the Misstatements and Calumnies* contained in Mr. Lockhart's *Life of Sir Walter Scott* respecting the Messrs. Ballantyne, 1835; *The Ballantyne Humbug* handled by the author of the *Life of Sir Walter Scott*, 1839; *Reply to Mr. Lockhart's pamphlet, entitled 'The Ballantyne Humbug handled,'* 1839; Archibald Constable and his *Literary Correspondents*, 1873.] T. F. H.

**BALLANTYNE, JOHN** (1778–1830), divine, was born in the parish of Kinghorn 8 May 1778; entered the university of Edinburgh in 1796, and joined the Burgher branch of the Secession church, though his parents belonged to the establishment. He was ordained minister of a congregation at Stonehaven, Kincardineshire, in 1805. In 1824 he published 'A Comparison of Established and Dissenting Churches, by a Dissenter.' In 1830 this pamphlet, which had failed to excite notice, was republished with additions during the 'voluntary church' controversy of the period. Ballantyne's partisanship in the controversy is said to have injured the reception of his 'Examination of the Human Mind,' the first part of which appeared in 1828; two further parts were intended, but never appeared. The failure, however, may be accounted for without the influence of party spirit. It is the work of a thoughtful but not very original student of Reid and Dugald Stewart, with some criticism of Thomas Brown. It is recorded that Ballantyne managed to pay for publication out of his own savings, handing over a sum bestowed on

the occasion by a generous patron to some missionary purpose. Ballantyne suffered from indigestion brought on by excessive application, and died 5 Nov. 1830.

[McKerrow's *Church of the Secession*, pp. 913–16; *Recollections* by T. Longmuir, Aberdeen, 1872; McCosh's *Scottish Philosophy*, pp. 388–392.]

**BALLANTYNE, THOMAS** (1806–1871), journalist, was a native of Paisley, where he was born in 1806. Becoming editor of the 'Bolton Free Press,' he at an early period of his life took an active part in advocating social and political reforms. While editor of the 'Manchester Guardian' he became intimately associated with Messrs. Cobden and Bright in their agitation against the corn laws, and in 1841 he published the 'Corn Law Repealer's Handbook.' Along with Mr. Bright he was one of the four original proprietors of the 'Manchester Examiner,' his name appearing as the printer and publisher. After the fusion of the 'Examiner' with the 'Times,' he became editor of the 'Liverpool Journal,' and later of the 'Mercury.' Subsequently he removed to London to edit the 'Leader,' and he was for a time associated with Dr. Mackay in the editorial department of the 'Illustrated London News.' He also started the 'Statesman,' which he edited till its close, when he became editor of the 'Old St. James's Chronicle.' Notwithstanding his journalistic duties, he found time to contribute a number of papers on social and political topics to various reviews and magazines, in addition to which he published: 1. 'Passages selected from the Writings of Thomas Carlyle, with a Biographical Memoir,' 1855 and 1870. 2. 'Prophecy for 1855, selected from Carlyle's Latter-day Pamphlets,' 1855. 3. 'Ideas, Opinions, and Facts,' 1865. 4. 'Essays in Mosaic,' 1870. Regarding his proficiency in this species of compilation, Carlyle himself testifies as follows: 'I have long recognised in Mr. Ballantyne a real talent for excerpting significant passages from books, magazines, newspapers (that contain *any* such), and for presenting them in lucid arrangement, and in their most interesting and readable form.' Ballantyne died at London 30 Aug. 1871.

**BALLANTYNE, WILLIAM** (1616–1661), catholic divine. [See **BALLENDE**.]

**BALLARD, EDWARD GEORGE** (1791–1860), miscellaneous writer, was the son of Edward Ballard, an alderman of

Salisbury, and Elizabeth, daughter of G. F. Benson of that city. Owing to the delicacy of his health, his education was much neglected. He obtained a situation in the Stamp Office in 1809, and, having resigned this appointment, entered the Excise Office, which he also left of his own accord in 1817. He applied himself vigorously to study. In 1817 he became a contributor to Wooller's 'Reasoner.' The following year he married Mary Ann Shadgett, and wrote several criticisms and verses for the 'Weekly Review,' then edited by his brother-in-law, William Shadgett. He contributed to the 'Literary Chronicle' and the 'Imperial Magazine' under the signature E. G. B., and to the 'Literary Magnet' and the 'World of Fashion' under that of R. He published in 1825 a volume entitled 'A New Series of Original Poems,' and a few years after another entitled 'Microscopic Amusements.' He was exceedingly fond of research. Robert Benson [q. v.], his cousin, and Hatcher received no small help from him in writing their 'History of Salisbury' (1843), which formed part of Hoare's 'Wiltshire.' He helped John Gough Nichols in the works undertaken for the Camden Society. In 1848 he brought out some parts of a continuation of Strype's 'Ecclesiastical Annals' in a publication called the 'Surplice,' but this paper and Ballard's scheme soon came to an end. He wrote occasionally in the 'Gentleman's Magazine,' and in 'Notes and Queries.' He lost his wife in 1820. He died at Islington on 14 Feb. 1880, leaving a son, Edward Ballard, M.D., author of several medical works, and a daughter.

[Gent. Mag. 3rd ser. vol. viii. 1860.] W. H.

**BALLARD, GEORGE** (1706-1755), a learned antiquary, was born of mean parentage at Campden, Gloucestershire. His mother was a midwife. As his health was weak, a light employment was chosen for him, and he was apprenticed to a staymaker or woman's habit-maker. He showed early a taste for learning, particularly for the study of Anglo-Saxon, and when his day's work was over he would read far into the night. Lord Chedworth and some gentlemen of the hunt, who usually spent a month in the neighbourhood of Campden, hearing of Ballard's ability and industry, generously offered him an annuity of 100*l.* a year for life, in order to allow him to pursue his studies. Ballard replied that he would be fully satisfied with 60*l.* a year; and with this allowance he proceeded in 1750, at the age of forty-four, to Oxford, where he was made one of the eight clerks at Magdalen College, receiving his rooms and commons free. In earlier life he had

already visited Oxford several times, and had made the acquaintance of Thomas Hearne, the antiquary. Hearne describes in his diary a visit Ballard paid him on 2 March 1726-7, and writes of him as 'an ingenious curious young man,' who 'hath picked up an abundance of old coins, some of which he shewed me.' 'He is a mighty admirer of John Fox,' Hearne adds, 'and talks mightily against the Roman Catholics. . . . Mr. Ballard hath a sister equally curious in coins and books with himself. He told me she is twenty-three years of age.' Hearne makes many similar entries between 1727 and 1733. Ballard was afterwards chosen one of the university bedells. In 1752 he published 'Memoirs of several Ladies of Great Britain who have been celebrated for their writings or skill in the learned languages, arts, and sciences,' 4to, a book which contains much curious and interesting matter. A second edition appeared in 1775. In 'Letters from the Bodleian,' 1813, ii. 140-7, there is printed a long letter to Dr. Lyttelton, dean of Exeter, in which Ballard defends his 'Memoirs' from some hostile criticism that had appeared in the 'Monthly Review.' When Ames was preparing his 'History of Printing,' Ballard aided him with notes and suggestions (NICHOLS, *Literary Illustrations*, iv. 206-26). An account of Campden church by Ballard is printed in the 'Archæologia.' He held frequent correspondence on literary subjects with the learned Mr. Elstob. He copied out in manuscript Ælfred's version of Orosius, prefixing an essay on the advantages of the study of Anglo-Saxon. Ballard left Oxford for Campden some months before his death, while suffering from the stone, from which he died 24 June 1755. At his death he bequeathed his volume on Orosius to his friend Dr. Lyttelton, bishop of Carlisle, who presented it to the library of the Society of Antiquaries. Other manuscripts he left to the Bodleian. They consist of forty-four volumes of letters, of which five volumes contain letters addressed to himself, and the remainder letters to Dr. Charlett and others. A few of the letters were published in 'Letters written by Eminent Persons,' 2 vols. London, 1813.

[Bloxam's Magdalen College Registers, ii. 95-102; Nichols's *Literary Anecdotes*, ii. 466-70, iv. 123; Nichols's *Literary Illustrations*, iv. 206-26; Letters from the Bodleian, 1813, ii. 89-90, 140-47.]

A. H. B.

**BALLARD, JOHN** (d. 1586), Roman catholic priest, owes his fame solely to his connection with the Babington conspiracy, of which a general account is given under

ANTHONY BABINGTON. He was apparently educated at Rheims, and first sent upon a mission to England in 1581 (Archives of English College at Rome, in FOLEY'S *Records*, iii. 44). He passed under various aliases, first Turner, then Thompson, but later on always under that of Foscue or Fortescue. It has been doubted whether his real name was not Thompson. The object of his coming was to 'reconcile' doubting or recalcitrant catholics to the church of Rome, and doubtless to sound their political dispositions. He was well furnished with money, was commonly called captain, and seems to have been fond of fine clothes and fine company (TYRRELL'S *Confession*). Among the persons whose acquaintance he made was Anthony Tyrrell, the jesuit, whose confession, could it be accepted as trustworthy, would give us most of the facts of Ballard's career. But Tyrrell's confession was retracted, reaffirmed, and then again retracted, and is at least as much open to suspicion as the testimony of any other informer. Tyrrell made Ballard's acquaintance at the Gatehouse, Westminster, where they were both temporarily confined in 1581. In 1584 these two travelled to Rouen, and afterwards to Rheims, where they held a conference with Cardinal Allen, and from Rheims they proceeded to Rome, where they arrived on 7 Sept. 1584 (*Pilgrims' Register at Rome*, and TYRRELL). It was then that Tyrrell, in his confession, represents them as having an interview with Alfonso Agazzari, rector of the English college, in which they inquired as to the lawfulness of attempting the assassination of Elizabeth, and received assurances in the affirmative, and subsequently the blessing of Gregory XIII upon their enterprise. This account, although accepted as an undoubted fact by some historians, rests on no better authority than the confession of Tyrrell. They left Rome in October and journeyed homeward through France. In the late months of 1585 Ballard, disguised as a military officer and passing under the name of Captain Fortescue, travelled through almost every county of England and visited every catholic or semi-catholic family. In May 1586 Ballard went to Paris, where he informed Charles Paget, the adherent of Mary Queen of Scots, and the Spanish minister Mendoza, that the catholic gentry in England were willing, with the help of Spain, to rise in insurrection against Elizabeth and her counsellors. Mauvissière, the French ambassador in London, refused to countenance the scheme (TYRRELL'S *Conf.*). Chateaufort, another French envoy to England, believed Ballard to have been at one time a spy of Walsingham (*Mémoire de*

*Chateaufort* ap. LABANOFF, vi. 275 seq.). But Paget and Mendoza trusted him, and on his return to England, at the end of May 1586, he instigated Anthony Babington to organise without delay his famous conspiracy. He came to England, bearing a letter of introduction from Charles Paget to Mary Queen of Scots (dated 29 May 1586, ap. MURDIN, p. 531). He reported to her the condition of the country, and she sent him again to France to hasten the active co-operation of the King of Spain and of the pope (Mary to Paget, 17 July, LABANOFF). Meantime Ballard imagined he had found a useful ally in his negotiations abroad and at home in Gilbert Gifford, a catholic, and to him many details of the plot were communicated; but Gifford had since 1585 been in Walsingham's secret service, and reported to her the English government the progress of the conspiracy. Owing mainly to the revelations of Gifford, whom Ballard suspected too late, Ballard was suddenly arrested in London on 4 Aug., on a warrant drawn up early in July. He was committed to the Tower and severely racked, but without the government being able to extort from him more than a general confession of his guilt. Before the close of August all the leaders of the conspiracy had shared Ballard's fortune. The trial of Ballard, with Babington and five other conspirators, took place on 13 and 14 Sept., and they were all convicted. At the trial Babington charged Ballard with having brought him into his perilous situation, and Ballard acknowledged the justice of the rebuke. Ballard was executed on 20 Sept. The full penalty of the law, which involved the disembowelling of the criminal before life was extinct, was carried out with all its cruelty: Ballard, who was the first of the conspirators to be executed, is reported to have borne his sufferings with remarkable fortitude.

F. K.

**BALLARD, JOHN ARCHIBALD** (1829-1880), general, distinguished for his services at the defence of Silistria and in Omar Pasha's campaign in Mingrelia, was an officer of the Bombay engineers, which corps he joined in 1850. After having been employed in India

for four years in the ordinary duties of a subaltern of engineers, Lieutenant Ballard was ordered to Europe on medical certificate in the spring of 1854. Attracted by intelligence of the events then going on in the Danubian provinces, he turned aside to Constantinople, and, proceeding to Omar Pasha's camp at Shumla, was invested by that general with the rank of lieutenant-colonel in the Turkish army, and deputed to Silistria as a member of the council of war in that fortress, which was then besieged by the Russians. Previous to Ballard's arrival, on 13 June, two other British officers, Captain Butler of the Ceylon rifles and Lieutenant Nasmyth of the Bombay artillery, had been aiding the garrison in the defence of the place; but Butler had received a wound which proved fatal shortly afterwards, and Nasmyth was called away to Omar Pasha's camp a few days after Ballard's arrival. During the remainder of the siege, which was raised by the Russians on 23 June, Ballard was the only British officer in the fortress, and it was mainly owing to his exertions, and the influence which he exercised over the garrison, that the defence was successfully maintained. Kinglake, in his brief sketch of the siege, refers to Ballard's services in these terms: 'Lieutenant Ballard of the Indian army, coming thither of his own free will, had thrown himself into the besieged town, and whenever the enemy stirred there was always at least one English lad in the Arab Tabia, directing the counsels of the garrison, repressing the thought of surrender, and keeping the men in good heart.'

At the subsequent attack and capture of the Russian position at Giurgevo, Ballard commanded the skirmishers, and kept back the enemy until the Turks could entrench themselves. He received the thanks of her majesty's government for his services at Silistria, and from the Turkish government a gold medal and a sword of honour.

After serving with the Turkish troops at Eupatoria and in the expedition to Kertch, Ballard commanded a brigade in Omar Pasha's Transcaucasian campaign, undertaken for the relief of Kars. The chief event in this campaign was the battle of the Ingour river, at which Ballard and his brigade were for several hours hotly engaged with the Russians, the former conspicuous, as he had been at Silistria and at Giurgevo, for his coolness under fire. It was related of him by an eyewitness of this battle that when he saw a man firing wildly or unsteadily he would, in the gentlest way, say to him: 'My friend, don't be in a hurry. You will fire better with a rest: take aim over my

shoulder.' He was also remarkable for his watchful care over the comfort and wellbeing of his men.

Returning to India in 1856, still a subaltern of engineers, but in virtue of his rank and services in the Turkish army decorated with the order of companion of the Bath, and also with that of the Medjidie, Ballard was appointed to proceed with Captain (now Sir Henry) Green on a mission to Herat; but the mission having been abandoned, he served as assistant-quartermaster-general in the Persian campaign, and afterwards in the same capacity in the Indian mutiny with the Rajputana field force, taking part in the pursuit and rout of Tantia Topsee's forces. This was his last military service. He was subsequently mint-master at Bombay; the extraordinary demand for Indian cotton in consequence of the civil war in America made the office an onerous one, but he discharged it with marked ability and success. He retired from the army and from the public service in 1879, having then attained the rank of lieutenant-general. His promotion after his return to India in 1856 had been singularly rapid, advancing in a single year (1858) from the rank of lieutenant to that of lieutenant-colonel. He received the honorary degree of LL.D. from the university of Edinburgh in 1868. He died suddenly in Greece, when visiting the Pass of Thermopylae, on 1 April 1880.

[Hart's Army List; Records of War Office and India Office; Kinglake's History of the War in the Crimea, vol. i.; Journal of the Royal Engineers; Household Words, 27 Dec. 1856.]

A. J. A.

**BALLARD, SAMUEL JAMES** (1764?-1829), vice-admiral, was the son of Samuel Ballard, a subordinate officer in the navy, who had retired without promotion after the peace of 1763 and had engaged in business at Portsmouth. Young Ballard entered the navy in December 1776, under the patronage of the Hon. Leveson-Gower, the captain of the *Valiant*, which ship formed part of the grand fleet under the command of Admiral Keppel during the summer of 1778. In October 1779 the youth was transferred to the *Shrewsbury*, Captain Mark Robinson, and in her was present when Sir George Rodney annihilated the Spanish fleet off Cape St. Vincent, 16 Jan. 1780. In the following July the *Shrewsbury* rejoined Rodney's flag in the West Indies, was present off Martinique on 29 April 1781, and led the van in the action off the Chesapeake on 5 Sept. 1781. On this fatal day the brunt of the fight fell on the *Shrewsbury*, which

had fourteen killed and fifty-two wounded, including Captain Robinson, who lost a leg. The ship afterwards returned to the West Indies with Sir Samuel Hood, and was with him in the operations at St. Kitts in January 1782, after which she had to be sent to Jamaica for repairs. On 10 Feb. 1783, whilst still at Jamaica, Ballard was made a lieutenant by Admiral Rowley, and was actively employed in different ships during the ten years of peace. When war again broke out he was a lieutenant of the *Queen*, which carried Rear-admiral Gardiner's flag through the last days of May and 1 June 1794. This great victory won for Ballard his commander's rank (5 July), and on 1 Aug. 1795 he was further advanced to the rank of post-captain. Early in 1796 he was appointed to the *Pearl* frigate, and during the next two years was continuously and happily employed in conveying the trade for the Baltic or for Newfoundland and Quebec. In March 1798 he accompanied Commodore Cornwallis to the coast of Africa and to Barbadoes, from which station he returned in June of the following year. In October he carried out General Fox to Minorca, and remained attached to the Mediterranean fleet for the next two years. The *Pearl* was paid off on 14 March 1802, after a commission of upwards of six years, during which time she had taken, destroyed, or recaptured about eighty vessels, privateers and merchantmen. Captain Ballard was now kept with no more active command than a district of sea fencibles for more than seven years; it was not till October 1809 that he was appointed to the *Sceptre*, of 74 guns, and sailed shortly afterwards for the West Indies. Here he flew a commodore's broad pennant, and on 18 Dec. 1809 commanded the squadron which captured the two heavily armed French frigates *Loire* and *Seine*, and destroyed the protecting batteries at Anse-la-Barque of Guadeloupe. At the reduction of Guadeloupe in January and February 1810 he escorted one division of the army, and commanded the naval brigade, which, however, was not engaged. Commodore Ballard returned to England with the *Sceptre* in the following September, and was for the next two years attached to the fleet in the Channel and Bay of Biscay, but without being engaged in any active operations. His service at sea closed with the paying off of the *Sceptre* in January 1813, although in course of seniority he attained the rank of rear-admiral, 4 June 1814, and of vice-admiral, 27 May 1825. He died at Bath, where he had for several years resided, on 11 Oct. 1829. He was twice married, and had by

the first wife several children, of whom only three survived him.

[Marshall's Roy. Nav. Biog. ii. (vol. i. part ii.), 876; Gent. Mag. xcix. ii. 639.] J. K. L.

**BALLARD, VOLANT VASHON** (1774?-1832), rear-admiral, a nephew of Admiral James Vashon, served as a midshipman with Vancouver in his voyage to the north-west coast of America. Shortly after his return to England he was made a lieutenant, 6 June 1795; and in 1798, whilst commanding the *Hobart* sloop, on the East India station, was posted into the *Carysfort* frigate. He subsequently commanded the *Jason* frigate, the *De Ruyter*, of 68 guns, and the *Beschermer*, of 50 guns, but without any opportunity of special distinction. In 1807, whilst commanding the *Blonde*, a 32-gun frigate, he cruised with great success against the enemy's privateers, capturing seven of them within a few months; and in 1809-10, still in the *Blonde*, served under the command of his namesake, Commodore Ballard of the *Sceptre*, at the capture of the French frigates in Anse-la-Barque, and the reduction of Guadeloupe [see **BALLARD, SAMUEL JAMES**], for which he was honourably mentioned by both the naval and military commanders-in-chief. He obtained his flag rank in May 1825, and died at Bath 12 Oct. 1832.

J. K. L.

**BALLENDEEN or BALLANTYNE, WILLIAM** (1616-1661), prefect-apostolic of the catholic mission in Scotland, was a native of Douglas, Lanarkshire, of which parish his father was the minister. His paternal uncle was a lord of session, with the title of Lord Newhall. He studied in the university of Edinburgh, and afterwards travelled on the continent. At Paris he was converted to the catholic religion. He entered the Scotch college at Rome in 1641, and, having received the order of priesthood, left it in 1646, and then stayed in the Scotch college at Paris, preparing himself for the mission, till 1649, when he returned to his native country. At this period the secular clergy of Scotland were in a state of utter disorganisation, and dissensions had arisen between them and the members of the religious orders, particularly the Jesuits. Ballenden, perceiving the disastrous results of this want of union, despatched the Rev. William Leslie to Rome to solicit the appointment of a bishop for Scotland. This request was not granted by the holy see, but in 1653, by a decree of propaganda, the Scotch secular clergy were freed from the jurisdiction of the

English prelates and jesuit superiority, and were incorporated into a missionary body under the superintendence of Ballenden, who was nominated the first prefect-apostolic of the mission. Besides effecting many other conversions, he received the Marquis of Huntly into the church. In 1856 Ballenden visited France, and on his return, landing at Rye in Sussex, he was arrested by Cromwell's orders and conveyed to London, where he remained in confinement for nearly two years. He was then banished, and withdrew to Paris in great poverty. In 1660 he returned to Scotland, and he spent the brief remainder of his life in the house of the Marchioness of Huntly at Elgin, where he died 2 Sept. 1661. Out of the writings of Suffren he composed a treatise 'On Preparation for Death,' which was much esteemed in its day, and of which a second edition was published at Douay in 1716.

[Gordon's Account of the Roman Catholic Mission in Scotland, introd. v-xi, 519-521; Blackhal's Breife Narration of the Services done to three Noble Ladies, pref. xxvii; Catholic Directory (1884), 60.] T. C.

**BALLINGALL, SIR GEORGE, M.D.** (1780-1855), regius professor of military surgery at Edinburgh, was son of the Rev. Robert Ballingall, minister of Forglen, Banffshire, where he was born 2 May 1780. He studied at St. Andrew's, and in 1803 proceeded to the university of Edinburgh, where he was assistant to Dr. Barclay, lecturer on anatomy. He was appointed assistant-surgeon of the 2nd battalion 1st Royals in 1806, with which he served some years in India; in November 1815 he became surgeon of the 33rd foot, and retired on half-pay in 1818. In 1823 he was chosen as lecturer on military surgery at the university of Edinburgh, which then, and for some years afterwards, was the only place in the three kingdoms where special instruction was given in a department of surgical science, the importance of which had too plainly been demonstrated during the long war just ended. In 1825 Ballingall succeeded to the chair of military surgery, the duties of which he discharged with untiring zeal for thirty years. He was knighted on the occasion of the accession of King William IV. Sir George, who was a fellow of the Royal Societies of London and Edinburgh, and corresponding member of the French Institute, was author of various professional works, the most important being: 1. 'Observations on the Diseases of European Troops in India.' 2. 'Observations on the Site and Construction of Hospitals.' 3. 'Outlines of Military Surgery.' The last, which

is still regarded as an instructive work, went through five editions, the fifth appearing at the time of the Russian war, shortly before the author's death, which occurred at Blairgowrie on 4 Dec. 1855.

# **BALLIOL.** [See BALLIOL.]

**BALLOW or BELLEWE, HENRY** (1707-1782), was a lawyer, and held a post in the exchequer which exempted him from the necessity of practice. He is said to have obtained it through the influence of the Townshends, in whose family he was some time a tutor. He was a friend of Akenside, the poet, who was at one time intimate with Charles Townshend. Johnson says that he learned what law he knew chiefly from 'a Mr. Ballow, a very able man.' He died in London on 26 July 1782 (*Gent. Mag.*), aged 75. Malone, who calls him *Thomas Ballow*, attributes to him a treatise upon equity, published in 1742. A copy in the British Museum, dated 1750, and assigned in the catalogue to Henry Ballow, belonged to Francis Hargrave. A note in Hargrave's handwriting states that it was ascribed to Mr. Bellewe, and first published in 1737. Hargrave adds that Mr. Bellewe was a man of learning and devoted to classical literature, and that his manuscript law collections were in the possession of Lord Camden (lord chancellor), who was his executor and literary legatee. Fonblanque, however, in his edition of the treatise on equity (1794), thinks that the book could not have been written by a man of less than ten years' standing, and that Ballow, who could have been only thirty years of age at the time of its publication, would have openly claimed it if it had been his. Fonblanque calls him Henry Ballow. A Henry Ballow, possibly father of this Ballow, was deputy chamberlain in the exchequer in 1703.

Hawkins gives the following anecdote: 'There was a man of the name of Ballow who used to pass his evenings at Tom's Coffee House in Devereux Court, then the resort of some of the most eminent men for learning. Ballow was a man of deep and extensive learning, but of vulgar manners, and, being of a splenetic temper, envied Akenside for the eloquence he displayed in his conversation. Moreover, he hated him for his republican principles. One evening at the coffee house a dispute between these two persons rose so high, that for some expression uttered by Ballow, Akenside thought himself obliged to demand an apology, which

not being able to obtain, he sent his adversary a challenge in writing. Ballow, a little deformed man, well known as a saunterer in the park, about Westminster, and in the streets between Charing Cross and the houses of parliament, though remarkable for a sword of an unusual length, which he constantly wore when he went abroad, had no inclination for fighting, and declined an answer. The demand for satisfaction was followed by several attempts on the part of Akenside to see Ballow at his lodgings, but he kept close till, by the interposition of friends, the difference could be adjusted. By his conduct in this business Akenside acquired but little reputation for courage, for the accommodation was not brought about by any concessions of his adversary, but by a resolution from which neither of them would depart, for one would not fight in the morning, nor the other in the afternoon.'

**BALLYANN, BARON OF.** [See KAVANAGH, CAHIR MAC ART, *d.* 1554.]

**BALMER, GEORGE** (*d.* 1846), painter, was the son of a house-painter, and destined to follow his father's trade, but, under the influence of Ewbank, made his first endeavours in painting. His earliest works being exhibited at Newcastle attracted attention, and he followed up his success with a large picture, 'A View of the Port of Tyne.' In 1831 he exhibited at Newcastle some water-colour paintings, of which one, 'The Juicy Tree bit,' was thought the best in the rooms. In conjunction with J. W. Carmichael he painted 'Collingwood at the Battle of Trafalgar.' This work is now in the Trinity House of Newcastle. In 1832 or 1833 he made a tour on the continent, travelling by way of Holland to the Rhine and Switzerland, and returning by way of Paris to England. Many pictures resulted from this excursion; a large 'View of Bingen' and one of 'Haarlem Mere' being amongst the best. But Balmer 'was never so much in his element as when painting a stranded ship, an old lighthouse, or the rippling of waves on a shingly coast.' In 1836, in the employ of Messrs. Finden, Balmer began a publication called 'The Ports and Harbours of England.' It began well, but ended ill. He retired from London in 1842, and gave up painting. He died near Ravensworth, in Durham, 10 April 1846. Pictures of shipping, of street architecture, and of rural scenery came alike from his hand.

His prints show great versatility. His reputation in his day was considerable.

**BALMER, ROBERT** (1787-1844), minister of the United Secession church, was born at Ormiston Mains, in the parish of Eckford, Roxburghshire, 22 Nov. 1787, and, evincing considerable abilities and a disposition towards the christian ministry, entered the university of Edinburgh in 1802, and in 1806 the Theological Hall at Selkirk, under Dr. Lawson, professor of divinity in the body of seceders called the Associate Synod. In 1812 he received license as a preacher from the Edinburgh presbytery of the Secession church, and in 1814 was ordained minister in Berwick-on-Tweed, where he remained till his death. In 1834 he was appointed by the Associate Synod professor of pastoral theology in the Secession church, and this office he exchanged later for the professorship of systematic theology. In 1840 he received the degree of D.D. from the university of Glasgow. Balmer wielded influence in his denomination. When discussions arose among his brethren on some Calvinistic doctrines, he supported the less stringent views. At a meeting held in Edinburgh in 1843, to commemorate the bicentenary of the Westminster Assembly, his speech in favour of christian union attracted the attention of Dr. Chalmers and others, and led to important measures being taken by John Henderson of Park for promoting that cause. Balmer died 1 July 1844. After his death two volumes of 'Lectures and Discourses' were published in 1845.

**BALMERINO, BARONS.** [See ELPHINSTONE, JAMES, first BARON, 1553?-1612; ELPHINSTONE, JOHN, second BARON, *d.* 1649; ELPHINSTONE, ARTHUR, sixth BARON, 1688-1746.]

**BALMFORD, JAMES** (*b.* 1556), divine, published in 1593-4 a 'Short and Plaine Dialogue concerning the unlawfulness of playing at cards,' London, 12mo. The tract, which consists of eight leaves, is dedicated to the mayor, aldermen, and burgesses of Newcastle-on-Tyne, his patrons (*Life of Ambrose Barnes* (Surtees Society), 296, 297, 299); the dedication is dated 1 Jan. 1593-4. It is stated in Hazlitt's 'Handbook' that the 'Dialogue' appeared also in broadside form. In 1623 Balmford reprinted this 'Dialogue,'

and added some animadversions on Thomas Gataker's treatise 'Of the Nature and Use of Lots.' In the 'Address to the Christian Reader, being one of those men who (according to St. Paul's prophecy) love pleasures more than God,' which is dated 14 Sept. 1620, the author speaks of himself as 'a man of 64 yeares compleate.' Gataker lost no time in replying, and in the same year published 'A Just Defence of certaine Passages in a former Treatise concerning the Nature and Use of Lots against such exceptions and oppositions as have been made thereunto by Mr. J. B.,' 4to, a voluminous book of some two hundred and fifty pages, in which the writer states his opponent's objections in full, and answers them point by point. In 1607 Balmford published 'Carpenter's Chippe, or Simple Tokens of unfeined good will to the Christian friends of J. B., the poor Carpenter's sonne.' The book, which is dedicated to the Countess of Cumberland, contains three discourses:—(1) 'The Authoritie of the Lord's Day;' (2) 'State of the Church of Rome;' (3) 'Execution of Priests.' Balmford is also the author of 'A Shorte Catechisme summarily comprizing the principal points of the Christian faith,' London, 1607, 8vo, and of 'A Short Dialogue concerning the Plagues Infection,' 1608, 8vo, dedicated by Balmford to his parishioners at St. Olave's, Southwark.

**BALMFORD, SAMUEL** (d. 1659?), puritan divine, is the author of two sermons published in 1659, after his death, 'Habakkuk's Prayer applyed to the Churches present occasions, on Hab. iii. 2; and Christ's Counsel to the Church of Philadelphia, on Rev. iii. 11, preached before the Provincial Assembly of London. By that late reverend and faithful minister of Jesus Christ, Mr. Samuel Balmford, pastor of Albons, Wood Street,' 8vo. From Thomas Parsons's address to the reader, it appears that the two sermons were intended as a first instalment of a collected edition of Balmford's writings; but nothing more was published. Parsons speaks of the author's piety and ability in terms of very high praise. We are told that he 'was a person of eminent orthodoxy of word and life, by both which as a burning and shining light he was an exact and powerful teacher; the observant eye of impartial conversers with him finding the transcript of his sermons in his life, his actions being living walking sermons. . . . For his labours in the mini-

stry he was one would not do the work of the Lord negligently nor offer unto God what cost him nothing or a corrupt thing, whenas indeed he (if any) had a male in the flock, and was a workman that needed not be ashamed.' Edmund Calamy corroborates the editor's testimony.

[Habakkuk's Prayer applyed to the Churches present occasions, 1659.] A. H. B.

**BALMUTO, LORD** (1742–1824), Scottish judge. [See BOSWELL, CLAUD IRVING.]

**BALMYLE or BALMULE, NICHOLAS DE** (d. 1320?), chancellor of Scotland and bishop of Dunblane, was brought up as a clerk in the monastery of Arbroath. By 1296 he had been appointed parson of Calder, for in the September of this year his name appears in that capacity among a list of Scotchmen to whom Edward I restored their estates on their swearing fidelity to him (*Rot. Scot.* i. 25). He is said to have been made chancellor of Scotland in 1301, and about that year confirmed a donation of the archbishop of St. Andrews to the church of Dervisyn. But even before this Balmyle seems to have been acting a very prominent part in an interesting Scotch ecclesiastical quarrel. In 1297 William Lamberton had been elected archbishop of St. Andrews by the canons regular of that foundation. It so happened, however, that the Culdees had long claimed the right of electing to this see, and as they now opposed the appointment of Lamberton, both parties appealed to Boniface VIII at Rome, and he gave a final decision in favour of Lamberton and the canons. So the once famous name of Culdee vanishes from history. Fordun, however, tells us that while the bishopric was vacant, its jurisdiction remained entirely in the hands of the chapter, and that this body appointed Nicholas de Balmyle, one of its officers, to execute all its functions, a duty which, the same chronicler adds, was discharged by him with the utmost vigour throughout the diocese. Balmyle is said to have been removed from the chancellorship in 1307, and it is certain that about this time he was appointed bishop of Dunblane. For in 1309 we find his name, in company with those of many other prelates, prefixed to a document declaring Robert Bruce to be the rightful king of Scotland (*Act. Parl. Scot.* i. 100). Here he is described simply as bishop of Dunblane. His successor in the great office of state was Bernard, like Nicholas, a member of Arbroath Abbey, and for seventeen years the faithful councillor of Robert Bruce, till he, too, retired from political life to a bishopric. In the seventh year

of Robert Bruce's reign the names of both the late and present chancellor are found attached to one of the deeds of the chartulary of Scone; and this seems to be the last document in which Nicholas's name occurs before his death. He is said to have died in 1319 or 1320; but he must have been already dead for some time by 25 June of the latter year, for Rymer has preserved a letter of this date, written by Edward II to the pope, begging John XXII to appoint Richard de Pontefract, a Dominican, to the see of Dunblane, and alluding to many previous letters on the same subject. In this suit, however, the king of England was unsuccessful, for Nicholas's successor appears to have been a certain Maurice.

T. A. A.

**BALNAVES, HENRY** (d. 1579), Scottish reformer, is usually described as of 'Halhill,' after a small estate belonging to him in Fifeshire. He was born in Kirkcaldy during the reign of James V of Scotland (1513-1542); but the exact date is unknown. He proceeded in very early youth to the university of St. Andrews, and afterwards, it is said, to Cologne. While abroad he accepted the principles of the Reformation, and became acquainted with the German and Swiss reformers. On his return to Scotland he studied law, and was for some time a procurator at St. Andrews. On 31 July 1538 James V appointed him a lord of session. On 10 Aug. 1539 he obtained by royal charter the estate of Halhill, near Collesie, Fife. The charter ran in favour of himself and 'Christane Scheves, his wife.' Appointed secretary of state by the Earl of Arran the regent, he promoted the act of parliament introduced by Lord Maxwell, which permitted the reading of holy scripture in the 'vulgar tongue.' In 1542 he was depute-keeper of the privy seal. In 1543 he was elected by parliament one of the Scottish ambassadors sent to Henry VIII to discuss the proposed marriage of the infant Queen Mary (of Scots) and Edward, prince of Wales. The treaties of peace and of marriage were arranged on 1 July 1543 (*SADLER'S State Papers*, i. 90). But all was overturned by the reacceptance of popery by Arran and his reconciliation with Cardinal Beaton. Balnaves was removed from all his offices, partly because of his protestantism, and partly from having favoured the English alliance. In November of 1543, with the Earl of Rothes and Lord Gray, he was ap-

prehended at Dundee by the regent and cardinal, and confined in Blackness Castle, on the Forth, until the following May. He was released on the arrival of Henry VIII's fleet in the Firth of Forth. In 1546, though he had in no way mixed himself up with the plot that ended in the assassination of Cardinal Beaton, he proceeded to St. Andrews, joining Norman Leslie and the others. For this he was declared a traitor, and his life and lands forfeited. Whilst St. Andrews was besieged, he was sent as the agent of its defenders to England for aid, and in February 1547, a month after the death of Henry VIII, he obtained from the guardians of Edward VI large sums of money and provisions (*Froude*, iv. 273). He himself had a pension bestowed on him of 125*l.* from Lady day of that year. He undertook that Leslie and his compatriots should do their utmost to deliver the young queen Mary and the castle of St. Andrews to England. But the fortress of St. Andrews had to be surrendered to the regent. The garrison, including Leslie and Balnaves, was sentenced to transportation to the galleys at Rouen.

During his confinement at Rouen Balnaves prepared what John Knox has called 'a comfortable treatise of justification.' It was revised and prefaced by the great reformer, and published with this title-page: 'The Confession of Faith; containing how the troubled man should seeke refuge at his God, thereto led by faith, &c. Compiled by M. Henry Balnaues, of Halhill, and one of the Lords of Session and Counsell of Scotland, being a prisoner within the old pallace of Roane, in the yeare of our Lord 1548. Direct to his faithfull brethern, being in like trouble or more, and to all true professours and fauorers of the syncere worde of God. Edin. 1584' (8vo). The manuscript, though 'ready for the press,' was not discovered until after Knox's death; hence the delay in publication.

In 1556 the 'forfeiture' which Balnaves had incurred was removed. He thereupon returned to Scotland, and in 1559, 'the year,' says Pitcottie, 'of the uprore about religion,' he took a prominent part in behalf of the reformers. In August the protestant party secretly delegated him to solicit the aid of Sir Ralph Sadler, Elizabeth's envoy at Berwick-on-Tweed. He obtained from him the promise of 2,000*l.* sterling. On 11 Feb. 1563 he was reinstated as a lord of session, and in December of the same year he was nominated one of the commissioners for revising the 'Book of Discipline.'

On the trial of Bothwell for Darnley's murder in 1567, he was appointed one of the four assessors to the Earl of Argyre, the

lord justice-general. In 1568 he and George Buchanan accompanied the regent Murray when he went to York to take part in the inquiry of English and Scottish commissioners into the alleged guilt of Queen Mary of Scots. In recompense of his many services the regent bestowed upon him the lands of Letham in Fife. He retired from the bench previous to October 1574, and died, according to Dr. Mackenzie, in 1579. Calderwood and Sadler, following Melville and Knox, eulogise Balnaves as one of the mainstays of the Scottish reformation. Knox describes him as 'a very learned and pious man,' and Melville as 'a godly, learned, wise, and long experienced counsellor.' Dr. Irving enrolled him among the minor minstrels of Scotland, on the strength of a short ballad signed 'Balnaves,' which appeared in Allan Ramsay's 'Evergreen,' entitled 'Advise to a headstrong Faith.' It commences—

O gallandis all, I cry and call.

[McCrie's Life of John Knox, and of Melville; Diplomata Regia, vii. 176; Rymer's Federa, xv. 133; Calderwood's History; Melville's Memoirs, p. 27; Anderson's Scottish Nation; Irving's Lives of Scottish Poets; Bannatyne MS. (Hunterian Society).] A. B. G.

**BALNEA, HENRY DE** (fl. 1400?), an English monk of the Carthusian order, was author of a work entitled 'Speculum Spiritualem,' which was preserved at Norwich in Tanner's days. Of the exact date at which he flourished there seems to be no certain information; but as he quotes from both Richard Hampole, who died in 1349, and Walter Hylton, who died in 1395, he cannot well be assigned to an earlier period than the fifteenth century. Tanner infers that Henry de Balnea was an Englishman from the fact that he quotes Hylton in that tongue.

[Tanner's Bibliotheca Britannico-Hibernica.]

T. A. A.

**BALSHAM, HUGH DE** (d. 1286), bishop of Ely and founder of Peterhouse, Cambridge, was born in the earlier part of the thirteenth century, most probably in the Cambridgeshire village from which he may be presumed to have taken his name. Matthew Paris, in the only passage where he mentions the bishop by name, calls him Hugo de Belesale, which is doubtless the reason why Fuller introduces him as 'Hugo de Balsham (for so he is truly written)' (see *Chronica Majora*, v. 589, and *Worthies*, i. 165). 'It was fashionable,' says Fuller, 'for clergymen in that age to assume their surnames from the place of their nativity;' and 'there is no other village of that name throughout the dominions of England.' The bishop's supposed birthplace lies about

ten miles from Cambridge and nine from Newmarket, in a pleasant neighbourhood, which justifies to this day Henry of Huntingdon's description of it, cited by Fuller, as 'amœnissima Montana de Balsham.' The village is one of those specified in 1401, in connection with a long-standing controversy between the bishops of Ely and the archdeacons of Ely who called themselves archdeacons of Cambridge, as under the direct jurisdiction of the bishops (BENTHAM's *Ely*, 269). At one time the place was an episcopal manor-seat, and Bishop Simon Montague from time to time abode there (MULLINGEE, 224, note 3). The church, which has been recently restored, contains some ancient monuments, among them a small brass figure on a slab, said to be that of Hugh de Balsham.

At the time of the death of William de Kilkenny, which occurred in September 1256 (STUBBS), or possibly as late as January 1257 (ABP. PARKER), and in any case within two years after his election to the bishopric of Ely, Hugh de Balsham was (according to the usually accepted reading of Matthew Paris) sub-prior of the monastery of Ely. As such, it was his duty to assist the prior, and in his absence to preside over the convent; he was accordingly lodged in convenient apartments, and a sufficient income was assigned to his office (BENTHAM). The Ely monks cannot but have been mindful of the unfairness with which, in the earlier part of the century, Hervey, the first bishop of the see, had carried out the royal mandate for a division of the lands of the monastery of Ely between the convent itself and the newly created see; and this may have helped to determine their independent conduct on the death of William de Kilkenny. The last two bishops had been personages of political consequence. It appears to have been the intention of Henry III to insure the appointment at Ely of a successor of the same stamp; for upon William's death the king immediately, by special supplicatory letters and official messengers, urged upon the monks the election of his chancellor, Henry de Wingham, to the vacant see. But the monks, or the seven of them whom it was usual for the whole conventual body to name as electors, acting on the principle (says Matthew Paris) that it is unwise to prefer the unknown to the known, without delay chose their sub-prior, 'a man fitted for the office, and of blameless character.' The king, angered at this repulse, refused to accept the election, and allowed John de Waleran, to whom he had committed the custody of the temporalities of the see, shamefully to abuse

his trust. Without the fear either of St. Ethelreda or of God before his eyes, he cut down the timber, emptied the parks of their game and the ponds of their fish, pauperised the tenants, and did all the harm in his power to the monks and to the diocese at large. And while the bishop-elect and the convent were hoping to be heard in their own exculpation on a day appointed by the king for the purpose, Henry made use of the occasion to break out into abuse against the choice they had made, inveighing against the bishop-elect above all on the ground that the isle of Ely had from of old been a place of refuge for defeated and desperate persons, and that it would be unsafe to commit the custody of a place which was much the same as a citadel to a simple cloistered monk, feeble, unwarlike, and without experience in statecraft. Accordingly, on the feast of St. Gordian and St. Epimachus, 10 May 1257, the election of Hugh, though perfectly in order, was quashed by the united action of the king and Boniface of Savoy, the archbishop. But before this (for such seems to have been the order of events) the bishop-elect had betaken himself to Rome, there to appeal to the pope (Alexander IV); while the archbishop had written to his personal friends at the papal Curia, asking them to thwart Hugh's endeavours. The archbishop appears (from a statement in BENTHAM'S *Ely*, 179, note 7) to have taken up the untenable position that, should the election be annulled, the appointment would devolve upon himself; in which case he intended to name Adam de Marisco. Hugh spent considerable sums in vindication of his claims; and Henry de Wengham, who had been no party to the royal application in his favour, entreated the king to stay his manœuvres and 'armed supplications' against the pious monks who had chosen a better man than had been recommended to them. When he heard that the famous Franciscan, Adam de Marisco (Marsh), had been proposed by the Archbishop of Canterbury (Boniface), the modest chancellor protested that either of the two others was worthier of the see than himself. On the other hand, Adam de Marisco (according to the same authority, Matthew Paris, whose prejudice against the Franciscans is transparent), although an old and learned man and a friar who had renounced all worldly greatness and large revenues in assuming the religious habit, was reported to have given a willing consent to the substitution of himself for Hugh de Balsham.

Hugh de Balsham succeeded in obtaining not only confirmation, but also consecration from Pope Alexander IV, 14 Oct. 1257 (*Pro-*

*fession Roll of Canterbury*), and returned home. As for Henry de Wengham, his modesty was rewarded by his election to the bishopric of Winchester two years afterwards (see MATT. PARIS, v. 731). Adam de Marisco died within a few months of the termination of the dispute. Had his life been prolonged, his election to the contested bishopric might have exercised a momentous influence not only upon the history of that see, but also upon that of the university with which it was already closely connected. He had been the first Franciscan who read lectures at Oxford, and was, 'if not the founder, an eminent instrument in the foundation, of that school, from which proceeded the most celebrated of the Franciscan schoolmen' (BREWER, *Monumenta Franciscana*, preface, lxxx). A generation had hardly passed since (in 1226) the Franciscans had arrived in England, and already their numbers had risen to more than 1,200, and Cambridge as well as Oxford was among the towns where they multiplied. Readers or lecturers belonging to the order were here appointed in regular succession (for a list of those at Cambridge, seventy-four in number, see *Monumenta Franciscana*, 555-7). The success of the Franciscans at the English universities was doubtless in some measure due to the fact that after a violent struggle between the citizens and the university of Paris, ending in 1231, the regulars had there achieved a complete triumph over the seculars, and that in this triumph the Franciscans had largely participated (CREVIER, *Histoire de l'Université de Paris*, i. 389 seq.). Not only did the Franciscans establish themselves at Cambridge as early as 1224, but in 1249 the Carmelites moved in from Chesterton to Newnham; in 1257 the friars of the Order of Bethlehem settled in Trumpington Street; and in 1258 the friars of the Sack or of the Penitence of Jesus Christ settled in the parish of St. Mary (now St. Mary the Great), whence they were afterwards moved to the parish then called St. Peter's without Trumpington Gate. So many orders, writes Matthew Paris, under the year of Hugh de Balsham's election, had already made their appearance in England, that the confusion of orders seemed disorderly (*Chronica Majora*, v. 631). At Cambridge there were added at a rather later date (1273) the friars of St. Mary, and two years afterwards the Dominicans. Besides these establishments older foundations existed, of which here need only be mentioned that of the Augustinian Canons who had been for a century and a half settled in their priory at Barnwell, and that of the brethren of St. John's Hospital, who were

likewise under the rule of St. Augustine, and whose house had been founded in 1135 by Henry Frost, a Cambridge burgess (see COOPER, *Annals of Cambridge*, i. 25-55; and cf. MULLINGER, 138-9). Under these circumstances, there can be little doubt that the succession to the Ely bishopric of such a personage as the eminent Franciscan, the *Doctor Illustris*, would have been a very important if not a very welcome event for the university of Cambridge, as well, perhaps, as for the diocese at large; and the election of Hugh de Balsham accordingly possesses, even negatively, a certain significance. (The above account of the dispute and its issue is mainly collected from the *Chronica Majora* of MATT. PARIS, v. 589, 611, 619-20, 635-36, 662.)

Of matters concerning Hugh de Balsham's episcopal administration nothing very noteworthy is handed down to us. He certainly took no leading part in the great political struggle contemporary with the earlier years of his episcopate; but there is no reason for supposing that he sided against the leader of the barons, the friend of the great Franciscan teachers. On the contrary, we have the statement of Archbishop Parker (*Acad. Hist. Cantab.* appended to *de Antiq. Britann. Eccl.*) that Hugh de Balsham was one of those bishops who denounced the penalty of excommunication against violators of Magna Charta and of the forest statutes. It is improbable that he sought to effect any important improvements in the architecture of his beautiful cathedral, in emulation of the achievements in this direction of his last predecessor but one, Bishop Hugh Northwold. On the other hand, he seems to have been a zealous guardian of the rights of his see, and a liberal benefactor both to it and to the convent out of which it had grown, and to which he had himself so much reason to be attached. Soon after his return from Rome, in the year 1258, he recovered the right of hostelage in the Temple, formerly possessed by the bishops of Ely, from the master of the Knights Templars who had contested it. The power of the Templars was already on the wane, and Hugh Bigot, justiciary of England, condemned the bishop's opponent to heavy damages and costs (BENTHAM, 150). The estate in Holborn, on which the bishops of Ely afterwards fixed their London residence, was not acquired till the time of Hugh de Balsham's successor, Bishop John de Kirkeby. Bishop Hugh's acquisitions were nearer home. He purchased the manor of Tyd, which he annexed to the see; and in lieu of two churches (Wisbeach and Foxton) which had belonged to the see, and which he

had appropriated to the convent, and of a third (Triplow) which he had assigned to his scholars in Cambridge, of whom mention will be made immediately, he purchased for his bishopric the patronage of three other churches (BENTHAM, 150). He augmented the revenues of the almoner of the convent by appropriating the rectory of Foxton to that officer (*ib.* 128). And we may be tempted to recognise the influence of comfortable Benedictine training as well as a considerate spirit in his obtaining (if it was he that obtained) the papal dispensation granted during his episcopate to the monks of Ely, which, in consideration of their cathedral church being situate on an eminence and exposed to cold and sharp winds, allowed them to wear caps suited to their order during service in church. On the other hand, he had a vigilant eye upon the indispensable accompaniments of episcopal authority, issuing in 1268 an order to his archdeacon to summon all parish priests to repair to the cathedral every Whitsuntide and to pay their pentecostals, and to exhort their parishioners to do the like, under pain of ecclesiastical censures (*ib.* 150). In 1275 we find him maintaining the rights of his see against the claims of (the dowager) Queen Eleanor, who was a benefactress of the university, to present to the mastership of St. John's Hospital at Cambridge (COOPER, *Annals*, i.).

But it is in the services rendered by this prelate to the university of Cambridge itself, where he laid the foundations of a system of academical life which has, in substance, endured for six centuries, that his title to fame consists. Apparently a man without commanding genius, and belonging to an order which was already thought to have degenerated from its greatness and usefulness, the Benedictine bishop became the father of the collegiate system of Cambridge, and at the same time the founder of a college which has honourably taken part in the activity and achievements of the university. A few words are necessary to show how Bishop Hugh de Balsham came to accomplish the act that has made his name memorable, and what precedents or examples were followed in the foundation of Peterhouse.

Various circumstances had contributed to hasten the growth of the two English universities in the earlier half of the thirteenth century, and to draw closer the relations between them and the university of Paris upon which they were modelled. At Paris not fewer than sixteen colleges are mentioned as founded in the thirteenth century (indeed two are placed as early as the twelfth), among which the most famous is that of

the Sorbonne, established about 1250. At the Sorbonne, as elsewhere, poverty was an indispensable condition of membership (MULLINGER's *History of Cambridge*, 127 and note 3). At Oxford, where the intellectual efforts of Paris had, under the guidance of the Franciscans, been equalled and were soon to be outstripped, it might seem strange that the earliest collegiate foundation—that of Walter de Merton (1264)—should have expressly excluded all members of regular orders (MULLINGER, 164). But the dangers involved in the ascendancy of the monks and friars must have been already patent to many sagacious minds; and it may be worth noting that Bishop Walter de Merton had been chancellor of the kingdom in the years almost immediately preceding the date of the foundation of his college (1261–1262), when the king's troubles were at their height (MULLINGER, 164, note 1), and that he was accordingly by position an adversary of the Franciscan interest. And in any case the monks and friars were already sufficiently provided for, so that there was no need for including them in a new foundation. In 1268, when Hugh de Balsham presumably had not yet formed the design of establishing a college of his own, he appropriated to Merton College a moiety of the rectory of Gamlingay in Ely diocese and Cambridge county (KILNER, *Account of Pythagoras's School*, 1790, 87–90). These examples, then—for the 'hostels' which already existed in the university can hardly be taken into account—Bishop Hugh had before him when, manifestly after mature reflection, he proceeded, by giving a new form to an earlier benefaction of his own, to open a new chapter in the history of one of our universities.

The bishops of Ely, it should be premised, had consistently claimed to exercise a jurisdiction over the university of Cambridge; all the chancellors of the university, from the middle of the thirteenth century (1246), when the earliest mention of the dignity occurs, to the end of the fourteenth, received episcopal confirmation; nor was it till 1433 that the university was by papal authority wholly exempted from the jurisdiction of the bishops (BENTHAM, 159, note 7). Indeed, it has been argued that the prerogatives of the chancellor were originally ecclesiastical, and that the highly important powers of excommunication and absolution were derived by him in the first instance from the Bishop of Ely (MULLINGER, 141). This relation is illustrated by the circumstance that in 1275 Bishop Hugh de Balsham issued letters requiring all suits in the university to be brought before the chancellor, and limiting his own authority

to appeals from the chancellor's decisions (MULLINGER, 225). The bishop's readiness to make a concession to the university deserves to be contrasted with his tenacity in resisting the master of the Temple and the queen dowager. Again, in 1276, the bishop settled the question of jurisdiction between the chancellor of the university and the archdeacon of Ely, who, having the nomination of the master of the glomerels (i.e., it would seem, the instructor of students in the rudiments of Latin grammar), sought to make this privilege the basis of further interference with the chancellor's rights. Bishop Hugh's decision on this head was given with great clearness, and at the same time he approved a statute, published by the university authorities, subjecting to expulsion or imprisonment all scholars who within thirteen days after entering into residence should not have procured or taken proper steps to procure 'a fixed master' (BENTHAM, 150; MULLINGER, 226; and cf. as to the master of the glomerels *evmā*. 140, 340. The entire very interesting decree is printed in COOPER, i. 56–58). Rather earlier, in 1273, under date 'Shelford, on Wednesday next after the Sunday when "Letare Jerusalem" is sung,' he brought about a composition between the university and the combative rector of St. Bene't, who had denied to the university the customary courtesy of ringing the bell of his church to convene clerks to extraordinary lectures (COOPER, i. 54). Nothing of course could be more natural than that the bishops of Ely should look with a kindly eye upon the neighbouring seat of learning, as in the thirteenth century it might already be appropriately called. The tradition that the priory of canons regular at Cambridge, known as St. John's House or Hospital, 'upon' which St. John's College was founded several centuries afterwards, was instituted by Nigellus, second Bishop of Ely, rests on no solid grounds (see BAKER, 13, 14); the origin of this house was, in fact, due, as stated above, to the munificence of a Cambridge burgess. Eustachius, fifth Bishop of Ely, it is true, 'stands in the front of the founders and benefactors' of St. John's hospital (*ib.* 17), and it was he who appropriated to it St. Peter's Church without Trumpington Gate. Hugh Northwold, eighth bishop, is said by at least one authority to have placed some secular scholars as students there, who devoted themselves to academical study rather than to the services of the church. (The authority is PARKER, *Sceletos Cant.*, 1622, cited by KILNER, and by BENTHAM, 147, note 4.) Bishop Northwold also obtained for the hospital the privilege of exemption from taxation with respect to their

two hostels near St. Peter's church. William de Kilkenny, ninth bishop, had little time for the concerns of his diocese, though he left two hundred marks to the priory at Barnwell for the maintenance of two chaplains, students of divinity in the university.

Among the charters of Peterhouse are letters patent of the 9th of Edward I (1280), attested at Burgh 24 Dec., which, after a preamble, conceived in the mediæval spirit, about King Solomon, grant to Bishop Hugh the royal approval (license) of his intention to introduce into his hospital of St. John at Cambridge, in lieu of the secular brethren there, 'studious scholars who shall in everything live together as students in the university of Cambridge according to the rule of the scholars at Oxford who are called of Merton' (*Documents relating to the University and Colleges of Cambridge*, ii. 1). This document at all events fixes the date of the royal license, on which there can be little doubt that action was immediately taken. It is clear that Hugh de Balsham's scholars were placed in St. John's Hospital in substitution for the secular brethren already residing there. Very possibly the designation of the Ely scholars as 'scholars of the bishops of Ely' may imply an acknowledgment of the anticipation by Bishop Northwold of Bishop Hugh de Balsham's intention to provide for secular students. For not more than four years afterwards, in 1284, it was found that a separation of the two elements would better meet the purpose which the bishop had at heart. By an instrument dated Dodington, 31 March 1284, which was confirmed by a charter of King Edward I, dated 28 May 1284, Bishop Hugh de Balsham separated his scholars from the brethren of the hospital. Dissensions had from various causes and on several occasions arisen between the brethren and the scholars, and finding a further continuance of their common life 'difficult if not intolerable,' they had on both sides proffered a humble supplication that the localities occupied as well as the possessions held by them in common might be divided between them. The bishop accordingly assigned to his scholars the two hostels (*hospicia*) adjoining the churchyard of St. Peter without Trumpington Gate, together with that church itself and certain revenues thereto belonging, inclusive of the tithes of the two mills belonging to that church. The brethren were compensated by certain rents and some houses near to their hospital which had formerly been assigned to the scholars. By another instrument of the same date, and confirmed by the same royal charter, he assigned the church of Triplow, formerly allotted to his

scholars and the brethren in common, to his scholars alone. (Both instruments are recited at length in the charter confirming them; see *Documents*, ii. 1-4).

This account agrees with the statement in the second of the statutes afterwards given to Peterhouse by Simon Montague (seventeenth Bishop of Ely, 1337-1345) 9 April 1344, according to which his predecessor, Hugh de Balsham, 'desirous for the weal of his soul while he dwelt in this vale of tears, and to provide wholesomely so far as in him lay for poor persons wishing to make themselves proficient in the knowledge of letters by securing to them a proper maintenance, founded a house or college for the public good in our university of Cambridge, with the consent of King Edward and of his beloved sons the prior and chapter of our cathedral, all due requirements of law being observed; which house he desired to be called the House of St. Peter or the Hall (*Aula*) of the scholars of the bishops of Ely at Cambridge; and he endowed it, and made certain ordinances for it (*in aliquibus ordinavit*) so far as he was then able, but not as he intended and wished to do, as we hear, had not death frustrated his intention. In this house he willed that there should be one master and as many scholars as could be suitably maintained from the possessions of the house itself in a lawful manner.' Bishop Simon adds that the capabilities of the house had since proved barely sufficient for the support of fifteen persons, viz. a master and fourteen scholars (fellows), a number which has only in our own days been reduced to that of a master and eleven fellows (*Documents*, ii. 7-8).

It would be useless to inquire to what precise extent the statutes of Simon Montague represent the wishes of the founder. There can, however, be no reasonable doubt but that in general they closely correspond to them, more especially as the second of Bishop Simon's statutes declares his intention of following the desire of Bishop Hugh to base the statutes of Peterhouse upon those of Merton (*Documents*, ii. 8). The Peterhouse statutes are actually modelled on the fourth of the codes of statutes given by Merton to his college, which bears date 1274. Accordingly, the formula 'ad instar Aulæ de Merton' constantly recurs in Simon Montague's statutes, e.g. in statutes 16, 22, 28, 30, 39, 40, 57, 58. Inasmuch as according to statute 43 a fellow who has entered into a monastic order is after a year of grace to vacate his fellowship, Hugh de Balsham may fairly be assumed to have, in the same spirit as that in which his successor legislated for his college, designed that it should provide assistance for students, with-

out, on the one hand, obliging them to become monks, or, on the other, intending anything hostile against monasticism. The endowment of the college was not given, as the same statute affirms, 'nisi pro actualiter studentibus et proficere volentibus.' It must be allowed that the true principle of collegiate endowments could not be more concisely stated (see MULLINGER, 233). The directions taken by the studies of the college were necessarily determined by the educational views of the age; but statute 27 shows it not to have been intended that the study of divinity should either absorb all the energies of the college, or be entered upon until after a preliminary study of the 'liberal arts.' It may be added that statute 27, which allows one or two scholars of the college at a time to carry on their studies at Oxford, is most inaccurately represented by Warton's assertion (*History of English Poetry*, section 9), that 'Bishop Hugh de Balsham orders in his statutes, given about the year 1280, that some of his scholars should annually repair to Oxford for improvement in the sciences—that is, to study under the Franciscan readers.'

Bishop Hugh de Balsham did not long survive the foundation of Peterhouse. He died at Doddington 15 June 1286, and was interred on the 24th of the same month in his cathedral church, before the high altar, by Thomas de Ingoldesthorp, bishop of Rochester (BENTHAM, 151). His heart was separately buried in the cathedral near the altar of St. Martin (see memorandum appended to Peterhouse statute of 1480 in *Documents*, ii. 45). His benefactions to his foundation had been numerous, and are duly recorded in the same memorandum, 'to wit, four "baudekins" with birds and beasts, five copes, of which one is embroidered in red, a chasuble, a tunic and a dalmatic, three albs, two cruets, the church of St. Peter without Trumpington gates, the two hostels adjoining, mill-tithes' (i.e. of Newnham mills), 'several books of theology and other sciences, and three hundred marks towards the building of the college.' According to another source of information (see BENTHAM, 151) the books and the three hundred marks were left by the bishop in his last will; and with the money his scholars purchased a piece of ground on the south side of St. Peter's church (now St. Mary the Less), where they erected a very fine hall. There seems reason to believe that the land on part of which the present hall is built was bought by the college from the Brethren de Sacco and the Brethren of Jesus Christ. For the rest, the college biography of the founder is extremely meagre, and dwells especially on his good works in ap-

propriating rectories to religious and educational purposes, but not without at the same time compensating the see at his own personal expense.

The services and benefactions of Hugh de Balsham were not left unacknowledged either by his college or by the university. The latter, by an instrument dated Cambridge, 25 May 1291, and sealed with the university seal, bound itself annually to celebrate a solemn commemoration of his obit (BENTHAM, 151). His successors have, through all the changes which the statutes of the college have undergone, remained its visitors. It is noticeable in this connection that when in 1629 an amended statute was obtained at the instance of the college from Charles I prohibiting the tenure of fellowships by more than two natives of the same county at the same time, an exception was made in favour of Middlesex, and of Cambridgeshire with the isle of Ely, whence 'the greater part of the college income is derived.' Of these two counties four natives might simultaneously hold fellowships (Peterhouse statute of Charles I in *Documents*, ii. 105), it having been urged that 'Hugo de Balsham, the founder, and all the prime benefactors of the college were of those counties (the southern) which the statute' of Warkworth, assigning half the fellowships of the college to the north of England, 'most wrongs' (*Ibid.* 99). Quite recently, when, on the occasion of the restoration of the hall at Peterhouse, the college and its friends provided for a becoming artistic commemoration of its worthies and benefactors, the place of honour was as of right assigned to a finely imagined semblance of its revered founder. It may be added that the arms of Peterhouse (gules, three pales or) are those of its founder, with the addition of the border, usual in the case of religious foundations (BENTHAM, *Appendix*, p. 42).

Mayor, Cambridge, 1869; Monumenta Franciscana, ed. Brewer, Rolls series, London, 1858. The writer has to acknowledge the kindness of the late Mr. E. R. Horton, fellow of Peterhouse, who revised the whole of this article, and made numerous valuable suggestions embodied in it.] A. W. W.

**BALTHER** (d. 756), saint, presbyter of Lindisfarne, lived as an anchorite, according to Mabillon, at Tynningham, in Scotland, although possibly he may be confounding him with Baldred, who also lived at Tynningham. Balthar is celebrated by Alcuin for his sanctity, his power of walking on the sea like St. Peter, and his victory over evil spirits. According to Simeon of Durham he died in 756, and Mabillon states that in the Benedictine calendars his name occurs on 27 Nov. He was buried at Lindisfarne, but in the eleventh century his remains were removed to Durham Cathedral, whence they were stolen, along with those of the venerable Bede and others.

**BALTIMORE, EARLS OF.** [See CALVERT, GEORGE, first EARL, 1580?-1642; CALVERT, FREDERICK, seventh EARL, 1731-1771.]

**BALTINGLAS, third VISCOUNT** (d. 1585). [See EUSTACE, JAMES.]

**BALTRODDI, WALTER DE** (d. 1270), bishop of Caithness, succeeded Bishop William in 1261. He was doctor of the canon law, and his diocese included Caithness and Sutherland, the chapter consisting of ten canons. Thurso was the seat of the bishopric of Caithness in Bishop Walter's time, although it had been temporarily removed to Dornoch between 1222 and 1245. An historic ruin in the neighbourhood of Thurso still preserves its name of the 'bishop's palace'; the ruined church of St. Peter's, within the town, is on the site of the ancient cathedral, part of which is incorporated in the existing building of five centuries old or more.

Bishop Walter's surname is suggestive of an Italian origin. He is characterised as 'a man discreet in counsel and commendable for the sanctity of his life' in the seventeenth-century Latin MSS. of Father Hay, the historian and relative of the Roslin family, preserved in the Advocates' Library, Edinburgh. According to the collections of Sir James Dalrymple, an earlier antiquarian, he is one of three Caithness bishops described as 'of good memory' in a writ dated the 10th of the calends of October, 1275. The document is a decretal-arbitral between Walter's successor, Archibald, bishop of Caithness, and William, earl of Sutherland, as to a dispute that had been open during the prelacies of Archibald and his predecessors, Walter de Baltroddi, William, and Gilbert Murray,

concerning the rights of the see to certain lands, ferry tolls, and salmon fishings.

[Alex. Nisbet, in his famous work on 'Heraldry,' published in 1722, declared that he saw and examined the writ referred to above. In Sir Robert Gordon's 'Genealogical History of the House of Sutherland,' written in the reign of James I, its contents are summarised; and part of its text, which was in Latin, is quoted in Bishop Keith's 'Catalogue of Scottish Bishops.' A passing notice in Grub's 'Ecclesiastical History of Scotland,' which probably came from one of the sources already referred to, mentions Bishop Walter.]  
T. S.

**BALTZAR, THOMAS** (1630?-1663), violinist, was born at Lübeck and settled in England in 1656. We do not hear that he had acquired much fame in Germany, but he was the first great violinist that had been heard in England at the time. On his arrival in England he stayed with Sir Anthony Cope of Hanwell. He was not long in making his reputation in England, for we find his playing much praised in Evelyn's 'Diary,' under date 4 March 1656-7, where he is called 'the incomparable *Lubicer*.' Evelyn heard him at the house of Roger L'Estrange, and he says: 'Tho' a young man, yet so perfect and skilful, that there was nothing, however cross and perplex . . . which he did not play off at sight with ravishing sweetness and improvements, to the astonishment of our best masters.' Anthony à Wood heard him play on 24 July 1658, and he says (life of himself), speaking of his alacrity of execution, that 'neither he nor any in England saw the like before. . . . Wilson thereupon, the greatest judge of music that ever was, did . . . stoop down to Baltzar's feet to see whether he had a huff on; that is to say, to see whether he was a devill or not, because he acted beyond the parts of man.' The same author states that Baltzar formed habits of intemperance, which ultimately brought him to the grave. In one of the manuscript suites for strings, several of which are preserved in the library of the Music School, Oxford, the author's name is given as 'Mr. Baltzar, commonly called y<sup>e</sup> Swede, 25 Feb. 1659.' At the Restoration he was placed at the head of Charles II's new band of (twenty-four) violins. He died in 1663 and was buried in the cloisters of Westminster Abbey on 27 July in that year. His name appears there as 'Mr. Thomas Balsart, one of the violins in the king's service.'

From Wood's statement 'that he saw him run up his fingers to the end of the finger-board of the violin,' it has been inferred that the introduction of the 'shift' was due to him, but it is probable that the practice is

of considerably earlier origin. Baltzar's works consist almost entirely, so far as is known, of suites for strings; four of these are in the Music School Library, Oxford. Playford's 'Division Violin' is said to contain all that was printed of his composition. Burney refers (*Rees's Encyclopædia*) to a manuscript collection of solos in his possession.

**BALUN, JOHN DE.** [See BAALUN.]

**BALVAIRD, first BARON** (1597?-1644). [See MURRAY, SIR ANDREW.]

**BALWEARIE, LORD** (d. 1532), Scottish judge. [See SCOTT, SIR WILLIAM.]

**BALY, WILLIAM, M.D.** (1814-1861), physician, was born at King's Lynn, Norfolk, in 1814, and educated in the grammar school there. In 1831 he entered as a pupil University College, London, and in 1832 St. Bartholomew's Hospital. In 1834, after passing the College of Surgeons and the Apothecaries' Hall, Baly went to Paris, after a winter's study there, to Heidelberg, and thence to Berlin, where he graduated M.D. in 1836. On his return to England he started in practice in Vigo Street, London, removing subsequently to Devonshire Street, and finally to Brook Street. In 1840, he reported on the state of the Millbank Penitentiary, and in 1841 he was appointed physician to that establishment. He often acted as a principal adviser of the government on the hygiene of prisons. The chief results of his studies at the prison are comprised in his numerous reports, but more especially in an elaborate paper on the 'Diseases of Prisons' in vol. xxviii. of the 'Medico-Chirurgical Transactions,' and in his 'Gulstonian Lectures on Dysentery,' 1847. In addition to the minute knowledge which these lectures show of dysentery proper, they prove that Baly was the first to observe the fact that dysenteric sloughs in the large intestine may be associated with the true ulcers of enteric fever in the small intestine. To the same studies also may be referred much of the knowledge displayed in his 'Report on Cholera,' written at the desire of the College of Physicians. In 1841 Dr. Baly became lecturer on forensic medicine at St. Bartholomew's Hospital. In 1846 he was admitted a fellow of the College of Physicians, and in 1847 a fellow of the Royal Society. In 1854 he became assistant-physician to St. Bartholomew's Hospital, and in 1855, in conjunction with Dr. (now Sir)

George Burrows, lecturer on medicine there. In 1859, when a physician was required who might share with Sir James Clark the office of regular attendant on the queen and royal family, Dr. Baly was selected as the fittest person. Afterwards he discharged the duties of censor of the College of Physicians, and he was nominated to a seat on the medical council as one of the representatives of the crown in the place of Sir James Clark. Dr. Baly had come to be regarded as one of the brightest ornaments of the medical profession when his career was brought to a sudden and tragical end, for on 28 Jan. 1861 he was crushed to death in a railway accident on the South-Western line near Wimbledon.

Besides the above-mentioned works he published: 1. A translation from the German of Müller's 'Elements of Physiology,' 2 vols. 1837. 2. 'Recent Advances in the Physiology of Motion, the Senses, Generation, and Development. Being a supplement to the 2nd vol. of Professor Müller's "Elements of Physiology,"' London, 1848, 8vo (conjointly with William Senhouse Kirkes). 3. 'Reports on Epidemic Cholera,' 2 parts, London, 1854, 8vo (conjointly with Dr. (now Sir) W. W. Gull).

**BAMBRIDGE, CHRISTOPHER**, cardinal. [See BAINBRIDGE.]

**BAMBRIDGE, THOMAS** (fl. 1729), warden of the Fleet prison, is notorious for atrocious cruelties to the prisoners under his charge. By profession Bambridge was an attorney. In August 1728 John Huggins sold the office of warden of the Fleet to Bambridge and Dougal Cuthbert for 5,000*l*. A committee was appointed by the House of Commons on the motion of James Oglethorpe on 25 Feb. 1728-9 to inquire into the state of the gaols of the kingdom, which had been for a long time a disgrace to the country. On the 28th the chairman reported to the house that Bambridge had treated the order of its committee with contempt, and it was thereupon ordered that he should be taken into custody. On 20 March the report of the committee was read, and it was resolved by the house, 'That Thomas Bambridge, the acting warden of the prison of the Fleet, hath wilfully permitted several debtors of the crown in great sums of money, as well as debtors to divers of his majesty's subjects, to escape; hath been guilty of the most notorious breaches of his trust, great extortions, and the highest crimes and misdemeanours in the execution of his said office;

and hath arbitrarily and unlawfully loaded with irons, put into dungeons, and destroyed prisoners for debt, under his charge, treating them in the most barbarous and cruel manner, in high violation and contempt of the laws of this kingdom.' At the same time it was resolved to petition the king to direct the prosecution of Bambridge, and ordered that he should be forthwith committed to Newgate. An act was also passed (2 Geo. II, cap. 32) to enable the king to grant the office of warden to some other person and to incapacitate Bambridge from enjoying that office or any other whatever. On 22 May 1729 Bambridge was tried at the Old Bailey for the murder of Robert Castell (one of the Fleet prisoners), but was acquitted. He continued in prison until 25 Oct., when he was admitted to bail. In the following year he was tried on appeal for the murder of Robert Castell, but was again acquitted. He was afterwards prosecuted in several actions at the suit of John Huggins, the former warden, and was imprisoned in the Fleet himself for some little time. Some twenty years after this it is said that he committed suicide. Hogarth made the examination of Bambridge before the committee of the House of Commons the subject of one of his early pictures. The faces are said to be all portraits, and no doubt the painter had unusual facilities for making this picture, as Sir James Thornhill was a member of the committee.

[Hansard's Parliamentary History, viii. 706-764; Historical Register, 1729, xiv. 157-175; Political State of Great Britain, 1729, xxxvii. 203, 359-77, 459, 463-5, 484-6, xxxviii. 80-1; Howell's State Trials (1813), xvii. 297-310, 383-462; Chambers's Book of Days (1864), i. 466-7; Knight's London (1843), iv. 42-8; Biographical Anecdotes of William Hogarth (1785), pp. 18-19.] G. F. R. B.

**BAMFORD, SAMUEL** (1788-1872), weaver and poet, born at Middleton, Lancashire, on 28 Feb. 1788, was the son of an operative muslin weaver, afterwards governor of the Salford workhouse. He was sent to the Middleton and the Manchester grammar school. He learned weaving, and was subsequently occupied as a warehouseman in Manchester. While thus employed he made an accidental acquaintance with Homer's 'Iliad' and with the poems of Milton, and his life was thenceforward marked with a passionate taste for poetry, which brought forth fruit in the shape of several crude productions of his own. Bamford appears to have led a somewhat unsettled life in his youth. He followed the occupation of a sailor for a short time, in the employ of a collier trading be-

tween Shields and London; then resumed his place in the warehouse; and at length settled down as a weaver. It was about this time that his first poetry appeared in print, and he now became known in his district as one who had practical sympathy with the difficulties of his class. Mrs. Gaskell, in her novel of 'Mary Barton' (p. 89, ed. 1882), quotes a poem of his, beginning 'God help the poor,' to illustrate the popularity of his verses with the Lancashire labouring classes in their times of trial. Resistance to trade oppression was the order of the day, and Bamford went about with the endeavour to discover the true means of relief. He had many of the peculiar talents necessary for the popular leader, while averse to violence in any shape. He was brought into great public notoriety on the occasion of that meeting of local clubs the dispersal of which became known as the Peterloo massacre. It was proved that Bamford's contingent to the meeting was peaceful and orderly, and that his speech was of the same tendency. Yet he suffered an imprisonment of twelve months on account of this affair. He subsequently, by his personal influence alone, hindered the operations of loom-breakers in South Lancashire. About 1826 he became correspondent of a London morning newspaper, and having ceased to be a weaver by employment, he incurred some dislike or distrust on the part of his old fellow-workmen. Yet he always pleaded their cause as opportunity served, even when, as a special constable during the Chartist agitation, he incurred the downright enmity of his own class.

In 1851 or thereabouts Bamford obtained a comfortable situation as a messenger in Somerset House. With almost a sinecure, however, and raised above the prospect of want, he became dissatisfied with London life and people, and pined for his native county; and after a few years of government employ he returned to his old trade of weaving. He died at Harpurhey, Lancashire, 13 April 1872, at a very advanced age, his last years having been provided for by the generosity of a few friends. Bamford's publications include: 1. 'An Account of the Arrest and Imprisonment of Samuel Bamford, Middleton, on Suspicion of High Treason,' 1817. 2. 'The Weaver Boy, or Miscellaneous Poetry,' 1819. 3. 'Homely Rhymes,' 1843. 4. 'Passages in the Life of a Radical,' 1840-4. 5. 'Tawk o' Seawth Lankeshur, by Samhul Beamfort,' 1850. 6. 'Life of Amos Ogden,' 1853. 7. 'The Dialect of South Lancashire, or Tim Bobbin's Tummus and Meary, with his Rhymes, with Glossary,' 1854. 8. 'Early Days,' 1849, 1859.

**BAMPFIELD, STR COPLESTONE** (1636-1691), the eldest son of Sir John Bampffield (created baronet in 1641), of Poltimore, Devon, was born at that place in 1636. He was sent to Corpus Christi College, Oxford, and distinguished himself, according to Prince in his 'Worthies of Devon,' by his 'splendid way of living,' and by his munificent present of plate. On settling in his native county he took an active part in promoting the restoration of Charles II. When the gentlemen of Devon met at Exeter in 1659 and declared for a free parliament, Sir Coplestone Bampffield was one of the number. When Monk advanced into England with his army, Sir Coplestone presented to him a petition for right on behalf of the county, and for this action was confined to the Tower for a short time. In the parliament summoned for 27 Jan. 1659, he was member for Tiverton; and from 1671 to 1679, and from 1685 to 1687, he sat for his native county. He was one of the twenty-seven Devonshire justices who determined, in 1681, to put the laws in execution against all dissenters, and next year he joined with those who expressed their desire to harass the dissenting ministers in boroughs. Under James II he was ejected from the commission of the peace, but he was so dissatisfied with the succeeding government that he refused the payment of any new-made rates and taxes, and they were levied on his goods. He died at Warleigh, not far from Plymouth, in 1691, and was buried at Poltimore. His first wife was Margaret, daughter of F. Bulkeley, of Burgate, Hampshire; his second wife was Jane, daughter of Sir Courtenay Pole. His grandson succeeded him in the baronetcy. The family name is now spelt 'Bampfylde,' and his descendant, Sir George Warwick Bampfylde, was in 1831 created Baron Poltimore.

[Prince's Worthies, pp. 121-5; Burke's Peerage; Hamilton's Quarter Sessions, Elizabeth to Anne, pp. 185, 191.] W. P. C.

**BAMPFIELD, FRANCIS** (d. 1683), divine, was the third son of John Bampffield, of Poltimore, Devon, and brother of Sir John, first baronet. He was from his birth designed for the ministry by his parents (*A Name, an After One*, p. 7). In 1631, at about the age of sixteen, he entered Wadham College, Oxford, where he remained

seven or eight years, taking his M.A. degree in 1638. He was ordained in 1641, and preferred to a living in Dorsetshire, worth about 100*l.* a year. This sum he spent upon his parishioners, supplying his own wants out of a small private income. He was also collated to a prebend in Exeter Cathedral, in which he was reinstated at the Restoration. A conviction that the church stood in urgent need of reform induced him to take steps distasteful to his parishioners, and, after much solicitation, he accepted the less valuable living of Sherborne. Here he remained until, in 1662, the Act of Uniformity drove him from his preferments. In the September of that year he was arrested at home, and compelled to find sureties for his good behaviour. Soon afterwards he was again arrested, and detained for nearly nine years in Dorchester gaol. At his discharge in 1675, he travelled through several counties preaching, and finally settled in London. After ministering in private for some time, he gathered a congregation of Sabbatarian Baptists at Pinners' Hall, Broad Street. Whilst conducting service there, in February 1682-3, he was arrested and carried before the lord mayor. After several appearances at the Old Bailey sessions, Bampffield was convicted and returned to Newgate, where he died on 16 Feb. 1683-4. Large crowds of sympathisers attended his funeral at the Anabaptists' burial-ground in Aldersgate Street. His works are: 1. 'The Judgment of Mr. Francis Bampffield for the Observation of the Jewish or Seventh-day Sabbath,' 1672. 2. 'All in One: All Useful Sciences and Profitable Arts in the One Book of Jehovah Elohim,' 1677. 3. 'A Name, an After One,' 1681. 4. 'The House of Wisdom,' 1681. 5. 'The Lord's Free Prisoner,' 1683. 6. 'A Just Appeal from the Lower Courts on Earth to the Highest Court in Heaven,' 1683. 7. 'A Continuation of the former Just Appeal,' 1683. 8. 'The Holy Scripture the Scripture of Truth,' 1684.

[The Conformist's Fourth Plea for Nonconformity, 1683, p. 44; Crosby's History of the English Baptists, 1738-40, i. 363, ii. 355, iii. 7; Calamy's Nonconformists' Memorial, ed. Palmer, 1802, ii. 149; Hutchins's Hist. and Antiq. of Dorset, 1774, ii. 385; Wood's Athenæ Oxon. (Bliss), iv. 126.] A. R. B.

**BAMPFIELD, JOSEPH** (fl. 1639-1685), a royalist colonel, was, according to Clarendon, an Irishman, his real name being Bamford; but the assertion is not corroborated by any other authority. Bampffield himself states that he began to serve Charles I at seventeen years of age, entering the army as 'ancient' under

Lord Ashley in his first expedition against the Scots in 1639. At the end of the war he was promoted captain. He became colonel of a regiment shortly after the outbreak of the civil war, and served with special distinction under the Duke of Somerset in the west of England. From an entry in Wood's 'Fasti' (ii. 33) it would appear that in 1642 he was created M.A. of Oxford by virtue of the king's mandamus. In a short time his remarkable gifts for intrigue attracted the attention of the king, who, when he shut himself up in Oxford in 1644, sent him in disguise to London 'to penetrate the designs of the two parties in parliament.' He was also the agent employed by Charles in his 'secret negotiations' at Oxford and Newport, and in contriving the escape of the Duke of York from St. James's Palace in April 1648. To aid him in the latter plot, Bampffield secured the services of Anne Murray, afterwards Lady Halkett, whom he had greatly impressed by his 'serious, handsome, and pious discourse,' after a very slight acquaintance. In her autobiography she gives an interesting account of the manner in which she provided a female dress for the duke's disguise, and of the circumstances attending his escape. Bampffield's disbursements in connection with the exploit amounted to 19,559*l.*, and the receipts to 20,000*l.* (*Calen. Clarendon State Papers*, i. entry 2982). After accompanying the duke to Holland, Bampffield, at the special request of Charles, returned again to England. Remaining in concealment 'beyond the Tower,' he again opened up communications with Anne Murray. One day he took occasion to inform her that news had reached him of his wife's death, and shortly afterwards he made her an offer of marriage, stating that he had a promise of being one of his majesty's household, and that in any case their joint fortunes would amount to 800*l.* per annum. She agreed to marry him as 'soon as convenient;' but the story of his wife's death was a concoction in order to enable him for his own interests to win the complete devotion of the lady by appearing in the character of a lover. After the death of Charles he remained in England, and he was preparing to follow his mistress to Scotland when he was arrested and secured in the Gatehouse at Westminster, but succeeded in escaping through a window and went to Holland. By this time it had come out that his wife was still alive; and as Sir Henry Newton, brother-in-law of Anne Murray, happened to cross over to Holland in the same ship with him, the two, as soon as they landed, fought a duel, with the result that Newton was severely wounded in the head. Bampffield failed to win the confidence

of Charles II, and returned to England, but in August 1652 was brought before the council and commanded to leave the country. When Lord Balcarres, in 1653, began to put into operation a scheme for a rising in the Highlands, Bampffield made his way to Scotland and again sought out Anne Murray, who had always given him credit for believing that his wife was dead. So much did he commend himself to the Highland chiefs that during a temporary illness of Lord Balcarres he was entrusted with the supreme direction of the affair; but he was justly suspected by Charles II to be acting a double part, and in July 1654 he was finally dismissed from the service of the royalists. In December of this year he had an interview in London with Anne Murray, who falsely informed him that she was already married to Sir James Halkett, upon which he took his leave, and 'she never saw him more.' In fact, he went to Paris, where, and afterwards at Frankfort, he, as is abundantly proved by his letters in the Thurloe State Papers, acted as Cromwell's spy and agent in many 'weighty affairs.' After the death of Cromwell, who compelled him always to remain abroad, he returned to England; but at the Restoration he was imprisoned in the Tower for more than a year. Finding that all hope of advancement in England was gone, he went to the Hague and entered the service of Holland, obtaining the command of an English regiment. Though now somewhat advanced in years, he still retained his 'gallantry' towards the other sex, and made use of it to aid him in his political intrigues. According to a letter in the State Papers, he had, in 1666, 'screwed himself into the Prince of Orange's favour;' but this he would appear to have afterwards lost, for in 1674 he had conceived a fancy for a 'hermit life' in the country. His health giving way under the ordeal, he returned, in 1679, to Leuwarden; but henceforth, according to his own account, he determined 'neither to discompose himself nor to give any umbrage to others by meddling with worldly affairs.' He did, however, trouble himself to write several letters to persons of influence in England, and in 1685 printed at the Hague an 'Apologie,' narrating the main events of his career, and representing his whole political conduct in a very innocent light. The tract, which is now very rare, but of which there is a copy in the British Museum, is cleverly composed, and both it and his letters sufficiently support the statement of Clarendon that he was a man of 'wit and parts,' although they scarcely bear out the opinion of Lady Halkett that the 'chiefest ornament he had was a devout life and conversation.'

[Apologie of Colonel Bampffield, 1685; Autobiography of Lady Anne Halkett, published by the Camden Society, 1875; Clarendon's History of the Rebellion; Thurlow State Papers, containing many of his letters in full; State Papers of the Domestic Series, and the Clarendon State Papers in the Bodleian Library.] T. F. H.

**BAMPFIELD, THOMAS** (d. 1693), speaker of the House of Commons, was son of John Bampffield, of Poltimore in Devon, and brother of Sir John, the first baronet. He was recorder of Exeter, and represented that city in Oliver Cromwell's parliaments of 1654 and 1656. In Richard Cromwell's parliament of 1658 he was again returned for Exeter, and on 18 May, 'Mr. Chute the speaker being so infirm that he could not attend the serving of the house, and Sir Lislebone Long, who was chosen to execute the office for him, being actually dead, the house was obliged to go to another election, when Mr. T. Bampffield was unanimously chosen to succeed him, and Mr. Chute dying soon after, the other continued speaker to the end of the parliament' (*Parl. Hist.* iii. col. 1542). His tenure of office was brought to a close by the dissolution of 22 April 1659. In the convention parliament of 1660, Bampffield, having been returned both for Exeter and Tiverton, chose to sit for his old constituency. He took an active part in the proceedings of this parliament. He opposed the impeachment of Drake for publishing a pamphlet entitled 'The Long Parliament revived.' On 12 Sept. he moved 'that the king should be desired to marry, and that it should be to a protestant.' After an interesting debate the motion dropped. Bampffield did not sit in the parliament of the following year. He died in 1693. He was uncle of Sir Coplestone Bampffield [q. v.].

[Manning's Lives of the Speakers of the House of Commons, p. 338; Parliamentary History, iii. iv.; Whitelocke's Memorials, iv. 341, 342, Oxford ed.] W. H.

**BAMPFYLDE, COPLESTONE WARRE** (d. 1791), landscape painter, was the only son of John Bampfylde, M.P. for Devonshire. He resided at Hestercombe in Somersetshire, and exhibited his works at the Society of Artists, the Free Society of Artists, and the Royal Academy between the years 1763 and 1783. Two views of Stour Head in Wiltshire have been engraved after him by Vivares, and 'The Storm' by Benazech. He etched a few landscapes, and made some humorous designs for the illustration of Christopher Anstey's 'Election Ball,' which were etched by William Hassel, and published at Bath in 1776 in an 'Epi-

stola Poetica Familiaris' addressed by Anstey to Bampfylde. He was for some time colonel of the Somersetshire militia, and died at Hestercombe on 29 Aug. 1791.

[Bryan's Dictionary of Painters and Engravers (ed. Graves), 1885.] R. E. G.

**BAMPFYLDE, JOHN CODRINGTON** (1754-1796), poet, was second son of Sir Richard Warwick Bampfylde, of Poltimore, Devonshire. He was born on 27 Aug. 1754, educated at Cambridge, and published in 1778 'Sixteen Sonnets.' William Jackson, a well-known musician of Exeter, told Southey that Bampfylde lived as a youth in a farmhouse at Chudleigh, whence he used to walk over to show Jackson his poetical compositions. He went to London and fell into dissipation. He proposed to Miss Palmer, niece of Sir Joshua Reynolds, afterwards Marchioness Thomond, to whom the sonnets are dedicated. His mother, Lady Bampfylde, sat to Sir Joshua in April 1777; and one of her sons, probably John, in January 1779. Sir Joshua, however, disapproved the match, and closed his door to Bampfylde, who thereupon broke Sir Joshua's windows and was sent to Newgate. Jackson coming to town soon after found that his mother had got him out of prison, but that he was living in the utmost squalor in a disreputable house. Jackson induced his family to help him, but he soon had to be confined in a private mad-house, whence he emerged many years later, only to die of consumption about 1796.

Bampfylde's poems consist of the sonnets above mentioned, with two short poems added by Southey and one by Park. Southey called them 'some of the most original in our language.' They give, at any rate, fresh natural descriptions.

[Southey's Specimens of Later English Poets (1807), iii. 434; Brydges' Censura Lit. (1815), iv. 301; Letter from Southey in Brydges' Autobiography (1834), ii. 257; Works in Park's British Poets (1808), vol. xli.; British Poets (Chiswick, 1822), lxxiii. 183-95; Routledge's British Poets (1853) (with Thomson, Beattie, and West); Selections in Dyce's Specimens of English Sonnets (1833), 140-50; D. M. Main's Treasury of English Sonnets (1880), pp. 393-4.] L. S.

**BAMPTON, JOHN** (fl. 1340), a theologian of the fourteenth century, was born at Bampton, in Devonshire. He seems to have entered the order of the Carmelites, and to have become a member of this brotherhood at Cambridge, where the Carmelites had had their own schools since about the year 1292 (LELAND, *Coll.* i. 442). Bale, quoting from Leland, states that he paid special

attention to the works of Aristotle, and was at last admitted to his doctor's degree in divinity ('supremo theologi titulo donatus fuit'). He is said to have had an acute intellect, but to have been much inclined to 'sophistical tricks.' The names of two treatises by this author have been preserved, respectively entitled 'Octo questiones de veritate propositionum' and 'Lecturae scholasticae in Theologia.' The year 1340 is assigned as the date when he flourished; but he must have been alive some years later than this, if Tanner's entry of the death of John de Bampton, rector of Stavenley in the archdeaconry of Richmond in 1361, refer to the subject of this article (TANNER quoting 'e regist. commiss. Richmond'). There is a tradition to be found in some topographical works that makes him the first lecturer on Aristotle's philosophy in Cambridge University. But there does not seem to be any sufficient authority for this statement, which is probably only based upon a misinterpretation of Leland's words with reference to Bampton's Aristotelian studies.

[Bale, ii. 46, and Pits, 449, both profess to quote from Leland, whose catalogue, however, does not seem to contain any reference to John Bampton; Tanner's Bibl. Brit.; St. Etienne's Biblioth. Carmel.] T. A. A.

**BAMPTON, JOHN** (1690-1751), founder of the Bampton lectures at Oxford, was educated at Trinity College in that university, where he graduated B.A. in 1709, and M.A. in 1712. Having taken orders, he was, in 1718, collated to the prebend of Minor pars altaris in the cathedral church of Salisbury, which preferment he held till his decease in 1751. In pursuance of his will, eight divinity lecture-sermons are preached on as many Sunday mornings in term between the commencement of the last month in Lent term, and the third week in Act term, upon one of the following subjects: To confirm and establish the christian faith, and to confute all heretics and schismatics; upon the divine authority of the holy scriptures; upon the authority of the writings of the primitive fathers, as to the faith and practice of the primitive church; upon the divinity of our Lord and Saviour Jesus Christ; upon the divinity of the Holy Ghost; upon the articles of the christian faith as comprehended in the Apostles' and Nicene creeds. The lecturer, who must be at least a M.A. of Oxford or Cambridge, is chosen annually by the heads of colleges on the fourth Tuesday in Easter term. No one can be chosen a second time. Although the founder died on 2 June 1751, aged 61, his bequest did not take effect till 1779, when the first lecturer was chosen.

[Le Neve's Fasti Eccl. Anglicanae, ed. Hardy, ii. 667, 672; The Oxford Ten-year Book (1882), 158-160; Cat. of Oxford Graduates (1851), 80.] T. C.

**BANASTRE, ALARD** (fl. 1174), was sheriff of Oxfordshire under Henry II in 1174 and 1175, and in this capacity was appointed, in company with the constable of Oxford, to fix the tallages and assizes on the king's demesnes in that county. He seems likewise to have been empowered to settle the pleas of the crown and the common pleas of the same shire. In 1175, though Alard Banastre was still sheriff, he does not appear to have acted in the capacity of justice errant. Possibly the king was again dissatisfied with the conduct of his sheriffs in judging their own counties; for, while in 1174 the number of counties judged by their own sheriffs bears a very considerable proportion to the whole, in 1175 the whole kingdom seems to have been practically placed under the power of six justices acting in couples. It was probably as a result of the great rebellion of 1174 that Henry II inaugurated this change; but in any case the name of Alard Banastre does not, apparently, occur again as one of the king's justices. The sheriff of Oxfordshire for the four years preceding 1174 was one, Adam Banastre, who, as Foss suggests, may have been the father of Alard Banastre.

[Foss's Judges, i.; Madox's History of Exchequer, i. 124, 125; Fuller's Worthies.]

T. A. A.

**BANASTRE, BANESTER, or BANISTER, GILBERT** (d. 1487), poet and musician, probably belonged to the Yorkshire family of that name (cf. *Harleian MS.* 805, ff. 29-30, and *Cal. Patent Rolls*, 1467-1477, p. 257), and may have been educated at Bardney Abbey, Lincolnshire, where in later life he held a corrody. He devoted himself to the study of literature and music, and his earliest work was probably composed about 1450. This is extant in British Museum Addit. MS. 12526, the greater part of which consists of a transcript in Banastre's hand of Chaucer's 'Legend of Ladies,' or 'Legend of Good Women,' appended to it in the same hand is an English poem in seven-line stanzas on 'Sismonda,' which in the last stanza Banastre says he wrote at the request of one John Rayner. This poem appears to be the earliest known English version of the legend of 'Sismonda and Guiscard' [cf. art. WALTER, WILLIAM]; in the 'Cat. of Additional MSS.' the manuscript is erroneously ascribed to the end of the fourteenth century; a nineteenth-century transcript is in Brit. Mus. Addit. MS. 20775. Another work by

Banastre was his 'Miracle of St. Thomas,' written in 1467, and extant at Corpus Christi College, Cambridge (*MS. Q. viii.*); and he is also said to have written a drama, or more probably a sort of interlude, in 1482.

Banastre was a musician as well as an author, and in 1482 he appears as 'master of the song,' otherwise of the children of the chapel royal. On 22 Aug. 1486 Robert Colet was granted two corrodies, one within the monastery of St. Benet, the other within the monastery of St. Oswald of Bardney, co. Lincoln, 'upon the surrender of the same by Gilbert Banastre' (*CAMPBELL, Materials for the Hist. of the Reign of Henry VII, Rolls Ser. i. 547*). On 1 Sept. 1487 Thomas Worley, 'one of the gentlemen of the king's chapel,' was granted 'the corrody or sustentation in the monastery of Bardney,' vacant by the death of Gilbert Banastre (*ib. ii. 189*). He was succeeded as master of the children of the chapel royal by William Newark. Banastre left behind him several musical compositions in a somewhat stiff and unpretending counterpoint. Some three-voiced pieces are in Pepys' MS. 1236 at Magdalene College, Cambridge; there are others in a manuscript at Eton College, and one song for three voices is in the 'Fayrfax Boke' now in the British Museum (*Addit. MS. 5465, f. 90 b*). Leland (*Collectanea*, ed. 1770, ii. 520) mentions a William Banastre who was author of 'Prophetiæ quædam,' and Tanner says 'one or other' of these was extant among the manuscripts of one Henry Worsley, while Brian Twyne [q. v.] cites some 'Vaticinalia Carmina' by this William as belonging to one H. Mason. Tanner suggests that this William may have been the Gilbert Banastre who, he says, was prebendary and canon of Wells in 1363 (*Bibliotheca Brit. Hibern. p. 72*).

**BANBURY**, first EARL OF. [See KNOX, WILLIAM, 1547-1632.]

**BANCHINUS** (*A.* 1382), Augustinian friar. [See BANKYN, JOHN.]

**BANCK, JOHN VAN DER** (1694?-1739), portrait painter. [See VANDERBANK.]

**BANCK, PETER VAN DER** (1649-1697), line engraver. [See VANDERBANK.]

**BANCKS, JOHN** (1709-1751), miscellaneous writer. [See BANKS.]

VOL. I.

**BANCROFT, EDWARD, M.D., F.R.S.** (1744-1821), politician, naturalist, and chemist, was born at Westfield, Massachusetts, on 9 Jan. 1744. He received only a rudimentary education, and after a few years' apprenticeship to some trade, he ran away to sea. In 1763 he settled in Guiana, where he commenced to practise medicine. He then removed to England, where in 1769 he published 'An Essay on the Natural History of [Dutch] Guiana . . . with an account of the Religion, Manners, and Customs of several Tribes of its Indian Inhabitants' (London, 8vo). Bancroft had by this time become a freethinker, and in 1770 he published a novel, 'Charles Wentworth,' of which the motive is said to have been an attack on the Christian religion (there is no copy in the British Museum Library).

Meanwhile, in 1769, Bancroft published, in answer to William Knox (1732-1810) [q. v.] and George Grenville, his 'Remarks on the Review of the Controversy between Great Britain and her Colonies' (London, 8vo). Possibly it was this work that brought him the acquaintance of Benjamin Franklin and Joseph Priestley, who secured him employment on the 'Monthly Review.' He was elected fellow of the Royal Society on 20 May 1773, being then described as M.B.; he afterwards became M.D., though of what university is not known (THOMSON, *Royal Soc. App. p. liv*). When the breach with the American colonies became complete, Bancroft seems to have acted as a spy in London for Franklin, who removed to Passy. In 1777 he was suspected of complicity in the attempt to burn Portsmouth dockyard, but he escaped to France (cf. FRANKLIN, *Memoirs*, 1861, i. 315). There he proceeded to turn king's evidence, and forwarded to the British government information communicated to him by Silas Deane, one of the American commissioners in Europe.

After the close of the war Bancroft became principally concerned in dyeing and calico printing, in which he made important discoveries. In 1785 an act of parliament secured him special rights of importing and using a certain kind of oak bark in calico-printing, but in 1799 a bill which had passed the House of Commons, for extending his rights for seven years, failed to pass the Lords, in consequence of the opposition of many northern calico-printers. Bancroft was bitterly disappointed, as he considered he had exercised his rights liberally; and in less than twelve months the bark in question rose to three times the price at which Bancroft had invariably supplied it, and at which,

by the proposed bill, he would have been bound to supply it for seven years more. In 1794 he published 'Experimental Researches concerning the Philosophy of Permanent Colours.' The first volume was remodelled and a second added in 1813. The work contains a valuable account and discussion of the theory of colours and the methods of fixing them.

Bancroft died at Margate on 8 Sept. 1821 (*Gent. Mag.* 1821, ii. 379). He was married, and Edward Nathaniel Bancroft [q.v.] was his son.

[Bancroft's Works in Brit. Mus. Libr. ; Biogr. Dict. of Living Authors, 1816 ; Priestley's Works, xix. 293, Letters, ed. Rutt, ii. 63, 65, 66.] G. T. B.

**BANCROFT, EDWARD NATHANIEL**, M.D. (1772-1842), physician, son of Edward Bancroft [q.v.], was born in London and received his schooling under Dr. Charles Burney and Dr. Parr. He was entered at St. John's College, Cambridge, and graduated B.M. in 1794. In 1795 he was appointed a physician to the forces. He served in the Windward Islands, in Portugal, in the Mediterranean, and with Abercromby's expedition to Egypt in 1801. On his return to England he proceeded M.D. in 1804, and began to practise as a physician in London, retaining half-pay rank in the army. He joined the College of Physicians in 1805, became a fellow in 1806, was appointed to give the Gulstonian lectures the same year, and was made a censor in 1808, at the comparatively early age of thirty-six, doubtless for the reason that he had endeavoured to do the monopoly of the college some service by pamphleteering against the growing pretensions of army surgeons. In 1808 he was appointed a physician to St. George's Hospital, but in 1811 he gave up practice in London, owing to ill-health, and resumed his full-pay rank as physician to the forces, proceeding to Jamaica. He remained in that colony for the rest of his life (thirty-one years), his ultimate rank being that of deputy inspector-general of army hospitals. He died at Kingston on 18 Sept. 1842; a mural tablet to his memory was placed in the cathedral church of Kingston 'by the physicians and surgeons of Jamaica' (*MUNK'S Roll of the College of Physicians*, vol. iii.).

Bancroft's earliest writings were two polemical pamphlets—'A Letter to the Commissioners of Military Enquiry, containing Animadversions on the Fifth Report,' London, 1808, and 'Exposure of Misrepresentations by Dr. McGrigor and Dr. Jackson to the Commissioners of Military Enquiry,'

London, 1808—on certain proposed changes in the army medical department in which he contended for the then existing artificial distinctions between physician to the forces and regimental surgeon, and for the precedence of the former. His opponents in the controversy were two army medical officers holding Scotch degrees, Dr. James McGrigor (afterwards created baronet, and director-general of the army medical department) and Dr. Robert Jackson. McGrigor charges Bancroft with want of accuracy, want of candour, and partiality. Jackson accuses him of being 'presumptuous in his professional rank, which he conceives to be superior to actual knowledge.' A perusal of the writings on both sides will serve to show that these criticisms were justified. Bancroft's best title to be remembered in medicine is his 'Essay on the Disease called Yellow Fever, with Observations concerning Febrile Contagion, Typhus Fever, Dysentery, and the Plague, partly delivered as the Gulstonian Lectures before the College of Physicians in the years 1806 and 1807,' London, 1811, with a 'Sequel' to the same, London, 1817. 'Never,' says Murchison (*Continued Fevers of Great Britain*, 1st ed. 1862, p. 111), 'has any work effected a greater revolution in professional opinion in this country.' The spontaneous, autochthonous, or *de novo* origin of the contagia of pestilential diseases was then the generally accepted one, although the doctrine now current of the continuous reproduction of a virus existing *ab æterno* had been stated in the most precise terms, among others, by Eggerdes, a Prussian physician, for the plague as early as 1720. Bancroft's undoubted skill in dialectic made the *ab æterno* doctrine popular. 'There is no chance, nor even possibility, of thus generating anything so wonderful and so immutable as contagion, which, resembling animals and vegetables in the faculty of propagating itself, must, like them, have been the original work of our common Creator. . . . As well might we revive the for-ever exploded doctrine of equivocal generation' (*Essay*, p. 109). This ingeniously misleading use of an analogy is a fair specimen of his method. All through his book he shows great cleverness in explaining away an entire set of facts vouched for by competent observers, such as Pringle, Donald Monro, and Blane, who lived in the great days of typhus, and were intimately acquainted with its natural history. The value of his argumentation for yellow fever may be judged of from the fact that there runs through it a side-contention for the identity of that disease with malarial fevers. In falling into that radical error,

Bancroft only followed most of his contemporaries; but it was peculiarly unfortunate for him that he should have raised a lofty structure of dialectic upon that foundation of sand. The single fact, which he might easily have verified in the West Indies, that malarious conditions are irrelevant for yellow fever, should have kept him right. Murchison's statement that 'the doctrine of Bancroft was generally adopted, without investigation of the facts upon which it was founded,' may be accepted as true, without prejudice to the facts that may have been collected in support of the same dogma by subsequent writers. The popularity of the *ab æterno* doctrine of febrile contagion, which is said to have followed Bancroft's 'Essay on Yellow Fever,' &c., is rather an evidence of his skill in word-fence than of his scientific fairness of mind.

C. C.

**BANCROFT, GEORGE** (A. 1548), translator, was a divine of the church of England, who, for the edifying of his dear brethren in Christ and for the prevention of their deception by crafty connivance, translated into the English tongue the 'Responso Prædicatorum Basileensium in defensionem rectæ Administrationis Cœnæ Dominicæ.' The preface is dedicated to the right worshipful and his 'singuler good Master Silvester Butler,' and wishes him 'prosperitye and healt he boeth of bodye and soule.' The book is written in the common heated fashion of his time. It speaks of the clergy of the Roman Catholic church as 'devilles apes,' 'beastly bishops of Babylon,' and 'maskinge masse priestes.' The precise title of Bancroft's book is 'The Answer that the Preachers of the Gospel at Basile made for the defence of the true administration and use of the holy Supper of our Lord. Agaynst the abhominatiõ of the Popysh Masse. Translated out of Latin into Englyshe by George Bancrafte, 1548.'

J. M.

**BANCROFT, JOHN, D.D.** (1574-1640), the seventh bishop of Oxford, was born in 1574 at Asthall, a village between Burford and Witney, in Oxfordshire. He was the son of Christopher, brother to Archbishop Bancroft; and his paternal grandmother was a niece of Hugh Curwen, second bishop of Oxford [q. v.]. He was educated at Westminster School, where, under the mastership of Edward Grant, 'the most noted Latinist and Grecian of his time,' he remained till 1592. He was elected to a Westminster student-

ship at Christ Church, Oxford, in that year, and took the degree of B.A. in 1596, and of M.A. in 1599. For some time after graduating he is known to have preached in and about Oxford, and before quitting Christ Church to have acted as tutor to Robert Burton, 'Democritus Junior,' the author of the 'Anatomy of Melancholy.' In 1601 he was presented by his uncle, at that time bishop of London, to the rectory of Finchley, Middlesex, vacant by the death of Richard Latewar, who, while in attendance on Lord Mountjoy as his chaplain, was killed in a battle with Irish rebels at Carlingford. This living Bancroft retained till 1608.

On the occasion of a visit of King James I to Christ Church in 1605, he composed a Latin poem, which was printed with others in 'Musa Hospitalis.' In 1607 he took his B.D. degree. In 1608 he was presented by his uncle, who had become archbishop of Canterbury, to the living of Orpington in Kent, and in the following year to that of Biddenden, in the same county, both of which, being sinecures, he continued to hold later *in commendam* with his bishopric. The rectory of Woodchurch, Kent, he resigned in 1633. In 1609 he obtained the degree of D.D., and was presented with the prebend of Maplesbury, St. Paul's, on the promotion of Dr. Samuel Harsnett to the see of Chichester. On 2 March 1609-10 he was elected master of University College, Oxford. For twenty-three years he filled this office with considerable administrative ability, settling on a firm basis the rights of the college to its various landed estates. He had an aptitude for affairs of this nature, as was seen later in the part he took in giving effect to Laud's benefactions to St. John's College, and more strikingly in his erection of the palace at Cuddesdon, soon after his elevation to the episcopal bench. It might be said of him with truth that he was made rather for a good steward than for a great ecclesiastic. In 1629, however, he was chosen one of the delegates to revise the university statutes. Though sharing the high church opinions of his uncle, the primate, who died in 1610, and of his friend Laud, Bancroft took no prominent part in the controversies between high churchmen and puritans that raged in Oxford while he was presiding over University College. Bancroft's mastership of University College terminated on 23 Aug. 1632, on his appointment to the bishopric of Oxford. Severe language is used concerning his conduct as a bishop, in the charge drawn up by Prynne against Laud, who, when bishop of London, had procured Bancroft's elevation to the episcopal bench; 'and what a

corrupt, unpreaching popish prelate Bancroft was, is known to all the university of Oxford' (PRYNNE, *Canterburie's Doom*, fol. 1646, p. 353).

The work which has most contributed to preserve the memory of this bishop was the building of a residence for himself and his successors at Cuddesdon, seven miles south-east of Oxford. Gloucester Hall, which had originally been assigned as a residence for bishops of this diocese, was resumed by the crown in the time of Edward VI, and the holders of the see had since been compelled to lodge in private houses. Bancroft, finding soon after his elevation that the vicarage of Cuddesdon was vacant and in his gift, collated himself to it, and with the assistance of Laud procured its annexation in perpetuity to the bishopric by royal warrant. He at the same time obtained a grant of timber from the royal forest of Shotover, also by Laud's influence, and an annual rent-charge of 100*l.* secured on the forests of Shotover and Stowood. He built the new palace, a commodious rather than splendid mansion, which was completed with its chapel in 1635, at the then large cost of 3,500*l.* In 1636 Bancroft assisted at the reception of Charles I at Oxford, and gave a grand entertainment in his new palace. When Oxford became the fortified residence of Charles I during the civil war, Colonel William Legg, the governor of Oxford, fearing the palace might be used as a garrison for the parliamentary forces, had it burned down, though with as much reason and more piety, observes Dr. Heylin (*Life of Laud*, p. 190), he might have garrisoned it for the king, and preserved the house. The ruins remained untouched till Bishop Fell rebuilt the palace and chapel at his own cost in 1679. Wood thus describes Bancroft's end: 'In 1640, when the Long parliament began and proceeded with great vigour against the bishops, he was possessed so much with fear (having always been an enemy to the puritan), that, with little or no sickness, he surrendered up his last breath in his lodgings at Westminster. His body was conveyed to Cuddesdon, and there buried in the church, Feb. 12, 1640-41.' His arms are in a window in University College, and his portrait, with a draft of the new Cuddesdon palace in the right hand, hangs in the college hall. There is also a half-length portrait of him in his episcopal robes in the hall of Christ Church.

[Welch's List of Westminster Scholars, 63-4; Wood's *Athenæ Oxon.* (Bliss), ii. 893-5; Fuller's *Church Hist.* iii. 369; Lysons's *Environs* (Finchley); Kippis's *Biogr. Brit.* i. 469-70.] R. H.

BANCROFT, JOHN (*d.* 1696), dramatist, was by profession a surgeon. He is said to have had a good practice among the 'young wits and frequenters of the theatres,' and to have been thus led to write for the stage. On tragedy, the materials for which are drawn from Plutarch, is unquestionably his. This is 'Sertorius,' a dull and ignorant work, which was licensed for performance 10 March 1678-79, and was printed in 4to in 1679. It was played in the same year at the Theatre Royal, subsequently known as Drury Lane. 'Henry the Second, King of England, with the Death of Rosamond,' produced in 1692 at the Theatre Royal, is also assigned to Bancroft, though the dedication is signed 'Will. Mountfort, 1693,' a date subsequent to Mountfort's murder. 'Henry the Second,' a decidedly superior production to the previous, was printed in 1693. It is included in 'Six Plays written by Mr. Mountfort in two volumes,' London, 1720. Coxeter, by whom the materials were collected for the compilation known as 'Cibber's Lives of the Poets,' attributes to Bancroft 'King Edward the Third with the Fall of Mortimer, Earl of March,' published in 4to 1691, and also included in the collection of Mountfort. He states that Bancroft made a present to Mountfort, both of the reputation and profits of the piece. In the bookseller's preface to Mountfort's collected works it is said of these two dramas that 'tho' not wholly composed by him, it is presum'd he had, at least, a share in fitting them for the stage.' Bancroft was buried in St. Paul's Church, Covent Garden.

[Biographica Dramatica; Genest's Account of the English Stage; Giles Jacob's Poetical Register; Langbaine's Account of the English Dramatic Poets.] J. K.

BANCROFT, RICHARD, D.D. (1544-1610), archbishop of Canterbury, son of John Bancroft, gentleman, and Mary, his wife, was born at Farnworth, Lancashire, in September 1544. His mother, whose maiden name was Curwen, was niece of Hugh Curwen, bishop of Oxford [q. v.], and young Bancroft, after being well grounded in 'grammar' (i.e. the Latin language) at the excellent school in his native town, was sent at his great-uncle's expense, and at a somewhat more advanced age than ordinary, to Christ's College, Cambridge. Here he was elected a scholar, and proceeded B.A. in 1566-7. He was further aided at this time by the archbishop in the prosecution of his studies, by the grant of the prebend of Malhidert in St. Patrick's Church in Dublin, with the royal license to be absent for six months. He was required, however, to leave Christ's

College, which lay under the suspicion of 'Novelism' (i.e. puritan principles), and to join the society of Jesus College (HEYLIN, *Aerius Redivivus*, p. 347). Here, according to the historian of the college (SHERMANNI *Hist. Coll. Jesu Cant.* (original manuscript), p. 64), although eminently successful as a college tutor, and himself assisting many of his pupils to fellowships, he was not elected a fellow; and the fact that he was among the opponents of the Elizabethan statutes given to the university in 1572 (LAMB, *Letters and Documents*, p. 359) would lead us to conclude that he had at this time a certain sympathy with the puritan party. As, however, he was shortly afterwards appointed one of the chaplains of Richard Cox, bishop of Ely, a staunch supporter of the above statutes, it may be inferred that this sympathy was not of long duration.

On 24 March 1575-6 he was collated by the bishop to the rectory of Teversham, near Cambridge, and before the end of the year was appointed one of the twelve preachers whom, on their acceptance of the Thirty-nine Articles, the university was empowered to license. This appointment led to important after-results; for in 1583, on the holding of the assizes at Bury in Suffolk, the sheriff, being unable to hear of a duly qualified preacher in the county, sent to Cambridge to obtain the services of one for the occasion, and Bancroft was selected. While inspecting the churches of that ancient town, he discovered attached to the queen's arms suspended over one of the altars a libellous piece of writing, in which Elizabeth was compared to Jezebel. The discovery would appear to have stimulated the judges to severity; for they sentenced to death two Brownists who were brought before them, while Bancroft gained credit for his vigilance in the detection of sedition.

In 1584 we find him acting on behalf of Adam Loftus, archbishop of Dublin (to whom, as a contemporary at Cambridge, he was probably well known), as a supporter of a remonstrance drawn up and forwarded to Burghley against the scheme of Sir John Perrot, whereby it was proposed to appropriate the site and endowment of St. Patrick's Church, Dublin, for the purpose of founding a new college. The scheme, as subsequently modified, resulted in the foundation of Trinity College, but without involving the sacrifice of the ecclesiastical foundation.

He was admitted D.D. of Cambridge in April 1585. A treatise which he compiled about this time, entitled 'Discourse upon the Bill and Book exhibited in Parliament by the Puritans for a further Reformation of

the Church Principles,' &c. (an unprinted manuscript in the State Paper Office), shows that he had now definitely taken up the rôle for which he was afterwards distinguished, as a vigorous and uncompromising opponent of puritanism. Dignities and emoluments followed very quickly. On 10 Feb. 1585-6 he was made treasurer of St. Paul's; Sir Christopher Hatton presented him to the rectory of Cottingham in Northamptonshire; he was one of the commission appointed to visit the diocese of Ely, which had become vacant through the death of his former patron, Cox; and shortly after he was included in the much-dreaded Ecclesiastical Commission. On 19 July 1587 he was installed a canon of Westminster. An able but intolerant sermon which he preached at Paul's Cross on 9 Feb. 1588-9 gave rise to much indignant feeling. He not only attacked the puritans with considerable acerbity, designating them as 'the Martinists' (with reference to the Marprelate tracts), but he also asserted, with a plainness hitherto unheard in the English church, the claims of episcopacy to be regarded as of divine origin. Episcopacy and heresy, he maintained, were essentially opposed the one to the other. In insisting on this view he contrived to cast a slur upon the principles of presbyterianism, which was warmly resented in Scotland, where steps were even taken with the design of forwarding a remonstrance on the subject to Elizabeth. It does not appear, however, that any petition was actually presented. In the following February Bancroft was presented to the prebend of Bromesbury in the church of St. Paul.

It was mainly through his vigilance that the printers of the Marprelate tracts were detected, and when they were brought before the Star Chamber he instructed the queen's counsel. He is also said to have originated the idea of replying to the tracts in a like satirical vein, as was done by Thomas Nash and others (see *Pappe with a Hatchet, An Almond for a Parrot*, &c.) with considerable success. In 1592 he was appointed chaplain to the primate, Whitgift, and in this capacity took a prominent part against Barrow, Cartwright, and others of the puritan leaders. In 1593 he published his two most notable productions—'A Survey of the pretended Holy Discipline' (a criticism of the 'Disciplina,' the doctrinal text-book of the puritans) and 'Daungerous Positions and Proceedings, published and practised within the Iland of Brytaine under pretence of Reformation' (reprinted in 1640), &c.

Bancroft, who was prebendary of Canterbury (1595-7), gained royal favour. Aylmer, bishop of London, was unpopular with the

puritan party in his diocese. Elizabeth was desirous that he should be transferred to the see of Worcester, and that Bancroft should succeed to his episcopate. 'Bishop Elmer,' says Baker, 'offered thrice in two years to have resigned his bishoprick with him upon certain conditions, which he [Bancroft] refused. Bishop Elmer signy'd the day before his death how sorry he was that he had not written to her majestie, and commended his last suit unto her highness, viz. to have made him his successor' (*Baker MSS.* xxxvi. 335). Richard Fletcher, who was appointed Aylmer's successor, held the office only about eighteen months, and on 21 April 1597 Bancroft was elected, and his enthronement took place on 5 June. Shortly after he expended no less than a thousand pounds on the repair of his London house.

He was now, if we may credit Fuller (*Worthies*, Lancash. p. 112), virtually primate; for Whitgift's increasing infirmities rendered him unable to discharge the active duties of his office, and his former chaplain had gained his entire confidence. Bancroft also appears as often now taking part in political affairs. We find him, along with Dr. Christopher Perkins and Dr. Richard Swale, forming one of a diplomatic mission to Embden in the year 1600 for the purpose of there conferring with ambassadors from Denmark respecting certain matters in dispute between the two nations; but the arrangements having miscarried, the mission proved fruitless (*CAMDEN, Reign of Elizabeth*, ii. 625, 648). When the Earl of Essex attempted to induce the citizens of London to rise in his favour, Bancroft collected a body of pikemen, who repulsed the earl's followers at Ludgate. He was present at the death-bed of Elizabeth, and joined in proclaiming King James; and when the new monarch set out on his progress from Scotland to London, he was met near Royston by the bishop, attended by an imposing retinue. On 22 July following, James and his consort honoured the bishop with a visit at his palace at Fulham.

His conduct from this time was marked by a severity and arbitrariness which his apologists have vainly endeavoured to defend. At the Hampton Court conference (January 1604) his hostility to the puritan party was evinced in a manner which drew down upon him the royal rebuke; and when Reynolds, on the second day's conference, brought forward a well-sustained proposal for a new translation of the Bible, Bancroft petulantly observed that 'if every man's humour should be followed, there would be no end of translating' (*BARLOW, Sum of the Conference, &c., Phoenix*, i. 157). Of his whole conduct

throughout the proceedings Mr. S. R. Gardiner writes: 'It is scarcely possible to find elsewhere stronger proofs of Bancroft's deficiencies in temper and character' (*GARDINER, History of England*, i. 155).

Archbishop Whitgift having died shortly after the conference, Bancroft was appointed to preside in the convocation of the clergy of the province of Canterbury, which assembled on 20 March 1604. By his directions a book of canons was compiled which embodied some of the most coercive provisions of the various articles, injunctions, and synodical acts put forth in the reigns of Edward VI and Elizabeth. This collection was presented to convocation, and, after having passed both houses, received the royal approval. It was, however, strenuously opposed and denounced in the session of parliament in the following May, and a bill was passed by the Commons declaring that no canon or constitution ecclesiastical made in the last ten years, or hereafter to be made, should be of force to impeach or hurt any person in his life, liberty, lands, or goods, unless first confirmed by the legislature. This has always been regarded as a serious blow to the authority of convocation, as the highest legal authorities have since agreed that these canons are not binding on the laity (*LATHBURY's Convocation*, p. 231). Bancroft, as the reputed originator of the above collection, was exposed to all the odium attaching to the measure, and the result was to place him in a position of bitter antagonism to the civil courts for the rest of his life. It was one of his favourite ideas that, by fomenting the controversies that were then being waged between the secular catholic clergy and the Jesuits, he should succeed in winning many of the former over to the English church; and with this view he seems to have given a kind of sanction to the study of the literature which illustrated the points of difference between the two parties in the Roman communion. He had already been glanced at on this account in the Hampton Court conference (*BARLOW, Sum of the Conference*, pp. 158-9), and an act was now brought into the House of Commons, and an information laid against him by William Jones, the printer, declaring 'certain practices of the Bishop of London, the publishing traitorous and popish books, to be treason' (*State Papers*, Dom. James, viii. 21-3). These proceedings led to no result, and on 17 Nov. following (1604) Bancroft was elected archbishop of Canterbury. In this exalted position he was still unable to forget former differences, and having been appointed commissioner in the following May in conjunction with the lord admiral and others, to hold an ecclesiastical

court in the diocese of Winchester, he availed himself of the information which he was thus enabled to collect to lay before the privy council, in the following Michaelmas, the famous Articles of Abuses ('Articuli Cleri'), in which he protested, in the name of the collective clergy of the realm, against the 'prohibitions' which the civil judges were in the practice of issuing against the proceedings of the ecclesiastical courts. This interference was repudiated by the majority of the clergy, who maintained that those courts were amenable for their proceedings to the crown alone. Bancroft, although supported by King James, found himself confronted by Coke and the rest of the common-law judges, and the whole dispute (see GARDINER, *History of England*, ii. 35-42) affords a striking illustration of the struggle which the interpreters of the law, in accord with the national feeling, now found it necessary to carry on against the combined influence of the crown and the church. It is difficult indeed to doubt the justice of Hallam's observation when he asserts (*Const. Hist.* c. vi.) that Bancroft, while magnifying the royal authority over the ecclesiastical courts, was really aiming at rendering those courts independent of the law.

The scheme of a new translation of the Bible, which he had opposed when it had emanated from a puritan quarter, found in him a ready supporter when enforced by the royal sanction; and it is due to Bancroft to recognise the fact that much of the success which ultimately attended that great undertaking was due to his zealous co-operation.

In the excess of indignation directed against the Roman catholics in consequence of the discovery of the Gunpowder plot, Bancroft seems to have striven to mitigate the violence of popular feeling; but that he himself inclined to catholicism is an allegation which rests on no adequate evidence. In January 1605-6 he brought forward a motion in the House of Lords for the appointment of a committee to inquire into the laws in force for the preservation of religion, the protection of the king, and the maintenance of the commonwealth; and his efforts resulted in the enactment of two additional measures directed against popish recusants.

With reference to the puritan party his conduct was far less defensible. Soon after his confirmation as archbishop he devised the 'ex animo' form of subscription, as a further test of unreserved compliance on the part of the clergy with the doctrines of the prayer-book. Many who had before been ready to yield a general conformity to Whitgift's three articles could not be brought to subscribe to a declaration that they did so with

full approval and unreserved assent. Bancroft extended to them no indulgence, and some two or three hundred were consequently dispossessed of their benefices and driven from the church. Of the feelings which he thus evoked against himself we have a notable example in the language addressed to him by the eminent Scotch divine, Andrew Melville, when cited before the privy council in November 1606. On that occasion Melville, to quote the description given by his own nephew, 'burdeinit him with all thais corruptiounes and vanities, and superstitiounes, with profanatioun of the Sabbath day, silenceing, imprissouning, and beiring doun of the true and faithfull preichers of the Word of God, of setting and holding up of antichristiane hierarchie and popische ceremonies; and taking him by the quhyt sleives of his rochet, and schalking them, in his manner, frielie and roundlie, callit them "Romishe ragis, and a pairt of the Beastes mark!"' (*Diary of James Melville* (Wodrow Soc.), p. 679).

In 1608 Bancroft was elected chancellor of the university of Oxford, and was incorporated D.D. of the university. In the parliament of 1610 he brought forward an elaborate scheme (which he failed to carry) for bettering the condition of the clergy, whereby, among other provisions, all parial tithes were to be made payable in kind, while those collected in cities and large towns were to be estimated according to the rents of houses.

Another project, attributed to him by Wilson, was that of founding a college of controversial divinity at Chelsea, wherein 'the ablest scholars and most pregnant wits in matters of controversies were to be associated under a provost,' for the express purpose of 'answering all popish books . . . or the errors of those that struck at hierarchy' (*Complete History of England*, ii. 685). According, however, to another writer (see *Biog. Brit.*), the author of the scheme was Sutcliffe, dean of Exeter, who was afterwards first provost of the college. But that Bancroft warmly sympathised with the design is shown by the fact that when, at his death, he bequeathed his valuable library to his successors in the see of Canterbury, it was on the condition that they should successively give security for the due preservation of the collection in its entirety, and, failing such security, the books were to go to Chelsea College, then in process of erection. The college proved a failure; and when, at the puritan revolution, the episcopal office was abolished, Bancroft's library was, by order of parliament, transferred to the university of Cambridge, which he had himself designated

in the event of Chelsea College not being completed within a certain time after his decease. At the Restoration Archbishop Sheldon asserted his claim, and the collection went back to Lambeth.

Bancroft died (after protracted suffering) of the stone 2 Nov. 1610, and was interred in Lambeth Church. There are portraits of him at the palace, at Durham Castle, at Cambridge University Library, at Trinity Hall, and Jesus College.

An examination of his various writings can hardly fail to convince the reader that his literary abilities and his attainments were considerable, when estimated by the standard of his age. Although his disposition was arbitrary and his temper irritable, he could at times, like his predecessor Whitgift, show much conciliatory prudence and tact in winning over opponents. Hallam compares him with Becket, and in one respect there was undoubtedly a strong resemblance, viz. in the leniency with which both were disposed to regard the general misdemeanours and offences of the orthodox clergy. In dealing with such cases in the Court of High Commission, Bancroft was as merciful as he was inflexible in the suppression of schism. Hacket, in his 'Life of Archbishop Williams' (p. 97)—a writer not likely unduly to eulogise the prelate whom Laud took for his model—says: 'He would chide stoutly, but censure mildly. He considered that he sat there rather as a father than a judge. "Et pro peccato magno paululum supplicii satis esse patri." He knew that a pastoral staff was made to reduce a wandering sheep, not to knock it down.' Camden speaks of him as a prelate of 'singular courage and prudence in all matters relating to the discipline and establishment of the church' (*Britannia*, ed. Gibson, i. 242). But Camden, it is to be noted, was one of Bancroft's personal friends, and the archbishop is entitled to the credit of having induced the historian to bequeath some of his manuscript collections to Lambeth library (*Camdeni Vita*, by T. Smith, prefixed to 'Camdeni Epistolæ', 1691, p. 1v). Clarendon, in an oft-quoted comparison of his virtues as a disciplinarian with the latitudinarian tendencies of his successor George Abbot [q. v.], says that he 'disposed the clergy to a more solid course of study than they had been accustomed to; and if he had lived, would quickly have extinguished all that fire in England which had been kindled at Geneva; or if he had been succeeded by Bishop Andrews, Bishop Overall, or any man who understood and loved the church' (*History of the Rebellion*, i. 125).

B. M.

BANCROFT, THOMAS (fl. 1633-1658), poet, was a native of Swarston, a village on the Trent, in Derbyshire. This we learn from one of his own epigrams, and from Sir Aston Cokaine's commendatory lines. He has also an epigram in celebration of his father and mother, 'buried in Swarston Church.' He was a contemporary of James Shirley at Catherine Hall, Cambridge, to whom he addresses an epigram. He seems to have lived for some time in his native Derbyshire. Sir Aston Cokaine, as a neighbour and fellow-poet, appears to have visited and been visited by him. He had apparently only a younger son's fortune, his elder brother, 'deceased in 1639,' having broken up the little family-property.

Bancroft's first publication was 'The Glutton's Feauer', 1633. This is a narrative, in verse of seven-line stanzas, of the parable of the Rich Man and Lazarus. Thomas Corser, in his 'Collectanea Anglo-Poetica' (pt. i.), writes of it: 'There is a smoothness and grace, as well as force and propriety, in Bancroft's poetical language, which have not, as we think, been sufficiently noticed.' Bancroft's next and better-known book was his 'Two Bookes of Epigrammes and Epitaphs. Dedicated to two top-branches of Gentry: Sir Charles Shirley, Baronet, and William Davenport, Esquire, 1639.' The interest of these epigrams lies in the number of the men of letters whom they celebrate, including Sidney, Shakespeare, Ben Jonson, Donne, Overbury, John Ford, Quarles, Randolph, Shirley, the Beaumonts, &c. In 1649 Bancroft contributed to Brome's 'Lachrymæ Musarum, or the Teares of the Muses,' a poem 'To the never-dying memory of the noble Lord Hastings.' Finally he published, in 1658, 'The Heroical Lover, or Antheon and Fidelta'—a work smooth rather than strong, in spite of Cokaine's laudation. In 1658 Bancroft was living in retirement at Bradley, near Ashbourne, Derbyshire. It is probable that he continued there until his death, of the date of which we have no knowledge. Incidental notices inform us that

Bancroft was 'small of stature,' and that he was talked of as 'the small poet,' partly in reference to his littleness, and partly in allusion to his 'small' poems and epigrams.

**BANCROFT, THOMAS** (1756-1811), vicar of Bolton, the son of Thomas Bancroft, a thread-maker, was born in Deansgate, Manchester, in 1756. At the age of six he was admitted into the Manchester grammar school, where, in course of time, he became a teacher. He held a school exhibition from 1778 to 1781, and graduated B.A. at Brasenose College, Oxford, 10 Oct. 1781. In 1780 he obtained the Craven scholarship; in the same year he assisted in correcting the edition of Homer published by the Clarendon Press, and further helped Dr. Falconer in correcting an edition of Strabo. Being disappointed of a fellowship at Oxford, he returned to Manchester grammar school as assistant master, and remained there until he was appointed head-master of King Henry VIII's school at Chester. 'Towards the end of last century,' writes Dr. Ormerod, 'the school attained a considerable degree of classical celebrity under the direction of the late Rev. Thomas Bancroft, afterwards vicar of Bolton-le-Moors in Lancashire. Plays were occasionally performed by the boys, and a collection of Greek, Latin, and English exercises, partly written by the scholars and partly by Mr. Bancroft, was published at Chester (1788) under the title of "Prolusiones Poeticæ" (*Hist. of Cheshire*, i. 366 note). While at this school he married Miss Bennett, of Willaston Hall, against the wishes of her father, a wine merchant in Chester. Her father prevented an attempted elopement by running his sword through Bancroft's leg, a feat for which he had to pay Bancroft 1,000*l.* compensation. A marriage soon afterwards took place in defiance of the father, who was never reconciled to his daughter. He bequeathed, however, 1,000*l.* each to her two daughters. In 1793 Bancroft was presented by Bishop Cleaver to the living of Bolton-le-Moors, then worth about 250*l.* a year. In 1798 Bancroft was made chaplain to the Bolton volunteers by royal warrant, and four years previously he had been appointed domestic chaplain to Viscount Castle-Stewart. He was made one of the four 'king's preachers' allowed to the county of Lancaster by Dr. Majendie, bishop of Chester, in 1807. He continued vicar of Bolton until his death on 5 Feb. 1811. There is a tablet to his memory in the parish church.

He published various sermons, the 'Prolusiones' already mentioned, and wrote three dissertations (Oxford, 1835). Two tracts, 'The Credibility of Christianity vindicated,' Manchester, 1831, and 'The Englishman armed against the Infidel Spirit of the Times,' Stockport, 1833, were privately printed for his son-in-law, J. Bradshaw Isherwood. There remain several of his manuscripts in possession of the family of Major Fell, of Bolton, who married one of Bancroft's granddaughters.

R. H.

**BANDINEL, BULKELEY, D.D.** (1781-1861), librarian of the Bodleian Library, was born at Oxford 21 Feb. 1781, and was descended from an Italian family long settled in Jersey. Having been educated at Reading, Winchester, and New College, and having served as chaplain to Sir James Saumarez in the Baltic, he was in 1810 appointed under-librarian of the Bodleian, the librarian, Mr. Price, being his godfather, and he succeeded the latter in 1813. He appears to have entered upon his duties with energy, it being recorded in Macray's 'Annals of the Bodleian' that the sum expended in purchases immediately rose from 261*l.* to 725*l.*, and the catalogue of annual additions from two pages to seventeen. At the visit of the allied sovereigns to Oxford in 1814 Bandinel was proctor for the university, and in this capacity gained great credit. The most important administrative occurrences during his long tenure of office as Bodley's librarian were the publication of the catalogue in 1843 and succeeding years, and the adoption of the means by which it has ever since been kept in alphabetical order. The acquisitions during the period were exceedingly numerous and important, including the Canonici MSS., the Oppenheim Hebrew library, the Sutherland collection of prints, and the stores of various kinds accumulated by Bruce, Horace Wilson, Count Mortara, Malone, and Douce, the latter acquisition being said to be due to the personal courtesy shown to the irritable antiquary by Bandinel. In 1860 Bandinel, worn out by age and infirmity, resigned his post. He retired on his full salary, and was appointed an honorary curator, but only survived his resignation a few months, dying on 6 Feb. 1861. He is highly eulogised for 'zeal, energy, courtesy, and discretion,' as well as for his surprisingly accurate acquaintance with the collections committed to his charge.

In addition to his official publications in connection with the Bodleian Library, Bandinel edited Dugdale's 'Monasticon' (1817, and again in 1846), and Clarendon's 'History of the Rebellion' (1826).

[Gentleman's Magazine, March 1861; Macray's Annals of the Bodleian Library.] R. G.

**BANDINEL, DAVID** (*d.* 1644-5), dean of Jersey, the date of whose birth is uncertain, but who is supposed to have been of Italian descent, was appointed to the office of dean of Jersey on its revival by James I, about 1623. Paulet had been dean of the Channel Islands in Queen Mary's reign, when, if Heylin is to be believed, the persecution of protestants was carried to even greater excesses in this dependency than elsewhere. He retained the office till 1566, after which time, in consequence of the immigration of persecuted French protestants, the islands were inundated by a flood of Calvinism, and threw off almost entirely their allegiance to the church of England. The diaconal office consequently lapsed, the discipline of Calvin being observed under the direction of a consistory—a colloque and a synod. James I, on the understanding that this arrangement had been formally sanctioned by Elizabeth, confirmed it in the first year of his reign. He soon, however, repented of his decision, and appointed a governor, Sir John Peyton, who was expressly charged with the duty of urging a return to unity with the English church. Peyton's measures, provoking a storm of anger and irritation, resulted in an appeal to the court of England, whereupon Archbishop Abbot commanded the islanders, in the name of the king, to adopt again the English liturgy and make use of the Book of Common Prayer in all their churches. This act of authority met with resistance which, however, after a time relaxed, and by the twenty-first year of James's reign the opinions of the inhabitants had become so far modified that an address, drawn up by Bandinel in conjunction with others of the clergy, was presented to the king, begging him to restore the office of dean and the use of the liturgy. Upon this Bandinel was appointed dean, with instructions to draw up, for submission to the king, a body of canons agreeable to the discipline of the church of England, which were referred to a commission consisting of Archbishop Abbot, the lord keeper Williams, and Andrewes, bishop of Winchester. These were, after modification, confirmed, and the islands were placed under the jurisdiction of the dean, subject to the Bishop of Winchester, in whose diocese they were declared to be.

The chief personal interest of Bandinel's life lies in the part he took in the dissensions which convulsed the island at the time of the great civil troubles in England, his quarrel with the Carterets, and consequent tragical end. Sir Philip de Carteret was appointed lieutenant-governor of the island by Charles I, and, although a zealous protestant, was always an ardent loyalist. He is said to have been a man of ability and integrity, but of austere manners, and he was accused by his enemies of absorbing all the more lucrative offices in the island. He is charged with having attempted to deprive the dean of part of his tithes, an aggression that roused in Bandinel an animosity to the lieutenant-governor, which was fostered by subsequent events, and which endured throughout his life. At the time of the civil war in England, Bandinel was considered the head of the parliamentary party in Jersey, whose cause he is said to have espoused chiefly out of opposition to the leading loyalist Carteret. When the parties were in conflict in the island, Bandinel kept back all supplies from the fortresses of Elizabeth Castle and Mont Orgueil, where the lieutenant-governor and his wife were shut up. The rigours and mortifications which he had to endure brought Carteret to his grave, and in his last illness Bandinel evinced the bitterness of his enmity by refusing all spiritual and material comforts to the dying man, keeping even his wife from him until the last moment. On Carteret's death, in 1643, his son, Sir George Carteret, was appointed by the king lieutenant-governor in his stead, and he gratified at the same time his resentment for the treatment of his father, and his loyal zeal, by arresting Bandinel and his son on a charge of treason. They were confined first in Elizabeth Castle and afterwards in Mont Orgueil, where, after more than twelve months' imprisonment, they formed a plan for escape. Having made a line of their bed-linen and such other material as they could procure, on the night of 10 Feb. 1644-5 they forced their way through the grating of their cell, and proceeded to lower themselves down the side of their prison. The son succeeded in reaching the end of the line, which, however, being too short, he fell and was seriously injured; but the dean, by his weight breaking the line, fell from a great height on to the rocks below, where he was discovered insensible by a sentinel on the following morning, and only lingered to the next day, when he died. His son escaped for a time, but was recaptured and died in prison. Dean Bandinel was also one of the rectors of the island,

from which office, however, he derived but small emolument.

**BANDINEL, JAMES** (1783-1849), writer on slavery, born in 1783, was son of James Bandinel, a doctor of St. Peter's, Oxford. Bulkeley Bandinel [q. v.], keeper of the Bodleian Library, was his elder brother. James Bandinel was a clerk in the Foreign Office for some fifty years, from which he retired shortly before his death on a full pension. In 1842 he published 'Some Account of the Trade in Slaves from Africa, as connected with Europe and America,' and dedicated the book to Lord Aberdeen, the then foreign secretary. It describes, first, 'the introduction of the African slave trade into Europe, and progress of it among European nations;' secondly, 'the abandonment of the slave trade by England;' and thirdly, 'the efforts of the British government with other governments to effect the entire extinction of the trade.'

James Bandinel died on 29 July 1849 at his residence in Berkeley Square, at the age of 66.

**BANIM, JOHN** (1798-1842), novelist, dramatist, and poet, was born in the city of Kilkenny, 3 April 1798. His father pursued the double occupation of farmer and trader in all the necessities of a sportsman's and angler's outfit. Prospering in business, he was enabled to give his sons, Michael [q. v.] and John, a good education. The latter, who was the younger son, was sent, after some preparatory training, to Kilkenny college. There he evinced aptitude for poetical composition, as well as talent for drawing and painting. Desiring to adopt the profession of artist, Banim was sent in the year 1813 to Dublin, where he became a pupil in the drawing academy of the Royal Dublin Society. He was constant in his attendance at the academy, and 'he had the honour to receive the highest prize in the gift of the committee for his drawings placed in the first exhibition held after his year of entrance' (MURRAY'S *Life*). On leaving Dublin he became a teacher of drawing in Kilkenny, and while pursuing his profession was the subject of a romantic but unfortunate love-attachment. It had a very pathetic end in the death of the lady, and Banim embalmed his grief in the best of his early poems. The mental agony and

bodily pain he endured at this time obtained so firm a hold upon his system that he was never afterwards able to shake off their evil effects. Driven almost to despair, he now spent several years unhappily and unprofitably. It became obvious to his friends that a complete change was essential, and accordingly in 1820 Banim removed to Dublin. It was largely owing to his efforts that the artists of the Irish capital obtained a charter of incorporation and a government grant, and to mark their sense of his services they presented Banim with an address and a considerable sum of money. Giving up the artistic profession, and devoting himself to literature, he wrote, in addition to much ephemeral work, a lengthy poem entitled 'The Celt's Paradise,' which was very favourably regarded by Lalor Sheil and Sir Walter Scott. This was followed by an unsuccessful dramatic composition, 'Turgessius,' but a second tragedy which he shortly produced, 'Damon and Pythias,' deservedly brought him high reputation. Although 'Damon and Pythias' is frequently stated to have been the joint work of Banim and Sheil, Banim's biographer affirms that the only assistance rendered by Sheil to the young dramatist consisted of an introduction and recommendation to a manager. 'Damon and Pythias' was performed at Covent Garden theatre 28 May 1821, with Macready and Charles Kemble in the principal parts. The success of this tragedy enabled Banim to pay his debts.

In the year 1822 John and Michael Banim conceived the idea of writing a series of novels which should do for the Irish what Scott had done for the Scotch in his 'Waverley Novels.' Hitherto such Irish characters as had appeared in fiction had been ridiculous and grotesque. There was a wealth of Irish feeling, sentiment, and patriotism which had heretofore been untouched and unrepresented, but which the Banim brothers now began to utilise and explore. John had now married, and, having settled in London, was working as a periodical writer, and contributing largely to the 'Literary Register.' He wrote another tragedy, 'The Prodigal,' which was accepted at Drury Lane (with parts cast for Kean and Young), but never performed. Towards the close of 1823, Banim was enabled to be of service to another Irishman of genius, Gerald Griffin, who had gone up to London for the purpose of pursuing a literary career. A series of essays by Banim, under the title of 'Revelations of the Dead-Alive,' met with great favour in 1824. The year following appeared the first series of the 'O'Hara Tales,' which at once enjoyed

considerable popularity. The second of these tales, 'The Fetches,' was the work of John Banim, as was also 'John Doe' or 'The Peep o' Day,' with the exception of the opening chapter. He next wrote the 'Boyne Water,' a political novel, which dealt with the period of William of Orange and James II. It contained graphic descriptions of the siege of Limerick and other episodes of the time. 'This work was severely handled by the critics, and we have good authority for stating that the author regretted having written it, and his brother prevented its being reprinted in the new edition of the "O'Hara Tales," published by Messrs. Duffy & Son in 1865' (READ's *Cabinet of Irish Literature*). As sometimes happens, however, that which the critics abused found fervent admirers amongst the reading public; and after the appearance of the 'Boyne Water,' Colburn offered a very large sum for the next tale of the O'Hara family.

Accepting the offer, John Banim produced 'The Nowlans,' a powerful though painful story. Success was insured to the toiler, but he was harassed by bodily affliction. Nevertheless he toiled on, suffering 'wringing, agonising, burning pain.' Though not eight-and-twenty, he had the appearance of forty, and he tottered as he walked. At this time he found an excellent friend in John Sterling. In 1826 Banim wrote his tragedy of 'Sylla,' founded upon the play of M. Jouy. Domestic illness and anxiety now preyed upon him, but he laboured on, producing 'The Disowned' and other stories for the second series of 'The O'Hara Tales.' In 1829 he went abroad, but continued to write for periodicals and for the stage. But he was straitened in circumstances as well as ill in body. Writing from Boulogne to his brother Michael, 25 Feb. 1832, he thus revealed his position: 'Yes, it is but too true, I am embarrassed, more so than I ever expected to be. By what means? By extravagance? My receipts and my living since I left England would contradict that. By castle-building? No—"the visitation of God."' In another letter he stated that of twenty volumes he had written, and of treble their quantity of matter in periodicals, no three pages had been penned free from bodily torture. An appeal was made on his behalf in the 'Times,' 'Spectator,' and other journals, with liberal results, including contributions from Earl Grey and Sir Robert Peel. But Banim's sufferings increased; he lost the use of his lower limbs, and was pronounced incurable by his physicians. He was brought from France to London by easy stages, and finally he was conveyed home to Kilkenny. This was in the year 1835, and in passing

through Dublin Banim was greeted with popular enthusiasm. He experienced much kindness from the lord-lieutenant, the Earl of Mulgrave, and a performance in his honour and for his benefit was given at the Dublin Theatre Royal. On arriving at Kilkenny his fellow-townsmen showed their appreciation of his genius by presenting him with an address and a handsome sum of money. Banim, who was of a warmly sensitive and grateful nature, was deeply moved by this tribute from his native city.

In 1836 Banim was granted a pension of 150*l.* from the civil list, chiefly owing to the exertions of the Earl of Carlisle, who more than once called upon the novelist in his little cottage of Windgap, just outside the town of Kilkenny. A further pension of 40*l.* was granted on account of Banim's daughter, whom he was otherwise unable to educate. These pensions greatly lessened his anxiety, and when the evening of his life closed in upon him prematurely it found him patient and resigned. When 'Father Connell,' the last joint work of the brothers, had been produced, it became apparent that John Banim was gradually sinking, and at length, on 13 Aug. 1842, he expired at the age of forty-four.

John Banim has been called 'the Scott of Ireland.' He delineated the national character in a striking manner, and his pictures of the Irish peasantry will doubtless live for many generations. 'Fault has been found with him on the ground that there is throughout the whole of his writings a sort of overstrained excitement, a wilful dwelling upon turbulent and unchastened passions.' Of the strong writing thus complained of, which was characteristic of both brothers, an example is furnished in the story of 'The Croppy,' relating to the rising in 1798. The authors wrote in this novel: 'We paint from the people of a land amongst whom, for the last six hundred years, national provocations have never ceased to keep alive the strongest and often the worst passions of our nature; whose pauses, during that long lapse of a country's existence, from actual conflict in the field, have been but so many changes into mental strife, and who to this day are held prepared, should the war-cry be given, to rush at each other's throats and enact scenes that, in the columns of a newspaper, would show more terribly vivid than any selected by us from former facts for the purposes of candid though slight illustration.'

But full justice has been done to the realistic powers of Banim, one English critic acknowledging that he united the truth and circumstantiality of Crabbe with the dark and

gloomy power of Godwin; while in knowledge of Irish character, habits, customs, and feeling, he was superior even to Miss Edgeworth or Lady Morgan. Had Banim possessed the hearty humour of a Lover or a Lever, he would have been saved from many of his literary excesses. As a delineator of life in the higher ranks of society, Banim conspicuously failed; his strength lay in his vigorous and characteristic sketches of the Irish peasantry, and these in their light and shade have something of the breadth and the strong effects of Rembrandt.

A selection from Banim's contributions to periodical literature (together with some sketches by his brother) appeared in 1838 under the title of 'The Bit o' Writin', and other Tales.' His other works are: 1. 'The Celt's Paradise.' 2. 'Turgessius.' 3. 'Damon and Pythias.' 4. 'Sylla.' 5. 'The Prodigal.' 6. 'The Moorish Wife.' 7. 'Revelations of the Dead-Alive.' 8. 'John Doe.' 9. 'The Fetches.' 10. 'The Boyne Water.' 11. 'The Disowned.' 12. 'The Smuggler.' 13. 'Peter of the Castle.' 14. 'The Nowlans.' 15. 'The Anglo-Irish.' 16. 'The Denounced,' a work which included two tales, 'The Last Baron of Crana,' and 'The Conformists.' He also collaborated, as we have seen, with his brother in several of the O'Hara tales, furnished sketches as a basis for others, and wrote besides many essays, sketches, and stories of a slighter character.

[Murray's Life of John Banim, 1857; The O'Hara Tales, new edition, 1866; Read's Cabinet of Irish Literature; and the various works of Banim.] G. B. S.

**BANIM, MICHAEL** (1796-1874), brother of John Banim [q. v.], and co-worker with him in the series of novels called the 'O'Hara Tales,' was born at Kilkenny, 5 Aug. 1796. He was educated first in Kilkenny and afterwards at a well-known catholic school conducted by Dr. Magrath. At the age of sixteen he was offered the choice of a profession, and chose that of the bar. He studied assiduously for some time, and looked forward hopefully to his future. But his prospects were overcast by a serious reverse of fortune which befell his father. 'With a self-sacrifice for which his whole life was remarkable, Michael Banim gave up his cherished design, and quietly stepped back into what he considered the path of duty. He took up the tangled threads of business, applied his whole energy and perseverance to the task, and at length had the satisfaction of unravelling the complication, and replacing his parents in comfort, both material and mental' (READ). For himself he found happiness in studying

the lives of those around him, and in the enjoyment of the beautiful scenery of Kilkenny. It was in 1822 that John Banim broached to Michael his scheme for a series of national tales. The elder brother at once fell in with the idea, and related certain circumstances which were well adapted to serve as the foundation of one of these novels. Urged by his brother to write the story himself, Michael consented to do so in such hours as he could snatch from business, and the result was the novel entitled 'Crohoore of the Billhook,' which proved one of the most popular in the first series of the 'O'Hara Tales.' Many years later, in explaining the reasons why these tales were undertaken, and in also defending their bias, Michael Banim wrote: 'When Irish character was dealt with only to be food for risibility in consequence of its peculiar divergence from established rules of judgment, the wish of the authors of the "O'Hara Tales" was to retain its peculiarity of humour, even in adversity, while accounting for its darker phase of retaliation for insult and injury. It was the object of the authors, while admitting certain and continued lawlessness, to show that causes existed, consequently creating the lawlessness. Through the medium of fiction this purpose was constantly kept in view.'

Michael Banim travelled through the south of Ireland for the purpose of supplying the historical and geographical details for his brother's novel, the 'Boyne Water;' and in 1826 he visited John in London, making the acquaintance of many distinguished men of letters. When the struggle for catholic emancipation was at its height, Michael worked energetically for the cause. In 1828 he published the 'Croppy,' and the same year, after his return to Kilkenny, he had the honour of a visit from the Comte de Montalembert, who was then on a tour through Ireland. The comte told Banim that he had first read the 'O'Hara Tales' in Stockholm, and that he could not leave Ireland without journeying from Cork to Kilkenny, specially to thank the writers of those tales. A prolonged illness interfered with Banim's literary exertions; and it was not until five years after the publication of the 'Croppy' that his next venture, the 'Ghost Hunter and his Family,' appeared. But from 1834 onward, for a number of years, stories appeared in rapid succession from his pen. When John Banim was struck down by illness, his brother wrote and earnestly besought him to return to Kilkenny and share his home. 'You speak a great deal too much,' he observed in one letter, 'about what you think you owe me. As you are my brother, never allude to

it again. My creed on this subject is, that one brother should not want while the other can supply him.' In 1840 Michael Banim married, being then a man of ample means; but in less than a year he lost almost the whole of his fortune through the failure of a merchant. The blow fell severely upon him, and a second serious illness ensued, through which he bravely struggled. When he had sufficiently recovered, he wrote 'Father Connell,' one of the most pleasing of the fictions written by either brother, the chief character being a faithful delineation of a worthy priest who had been known to Banim since childhood. As a creation, Father Connell has been compared by some critics, and not unfavourably, with the Dr. Primrose of Oliver Goldsmith. In 1852 Banim's 'Clough Fion' appeared in the 'Dublin University Magazine,' and about the same time, through the influence of the Earl of Carlisle, the author was appointed postmaster of his native city of Kilkenny. Although Banim was in a very delicate state of health for some years after receiving this appointment, he fulfilled its duties; but all literary occupation was suspended. It was not until 1864 that the 'Town of the Cascades,' his last work, was published. In this story, which exhibited no lack of power, the author depicted the terrible effects of the vice of intemperance. Banim's health completely broke down in 1873, and he was obliged to resign his situation of postmaster. Leaving the neighbourhood, he went with his family to reside at Booterstown, on the coast of the county of Dublin. The committee of the Royal Literary Fund made him an annual allowance. But there is no doubt that his closing years were years of anxiety and hardship. He died at Booterstown on 30 Aug. 1874. The Prime Minister (Mr. Disraeli) granted his widow a pension from the civil list.

In character Michael Banim was amiable, unambitious, modest, and generous to a degree. He unselfishly thrust himself into the background, in order that his younger brother might enjoy to the full the fame that was dear to him. He even refrained from claiming his fair share in the tide of popularity which set in upon the authors of the 'O'Hara Tales.' 'At the same time, it is a noteworthy fact that his contributions to the joint publications, which appeared under the well-known *nom de plume* of the "O'Hara Family," were most favourably criticised by the public journals.' While not possessing the poetic vein of the younger brother, Michael Banim was certainly his equal in the power of vividly depicting passion and character. He

had also an irresistible, if at times uncouth, eloquence of style.

As there has been much misunderstanding concerning the relative share of the brothers in the composition of the various tales written by them, we may quote from a document drawn up by Michael Banim, in which he set forth his own share of their joint labours. Out of a total of twenty-four volumes, he claimed to have written thirteen and a half, including the following stories: 1. 'Crohoore of the Billhook.' 2. 'The Croppy.' 3. 'The Ghost Hunter and his Family.' 4. 'The Mayor of Windgap.' 5. 'The Bit o' Writin'.' 6. 'Father Connell.' 7. 'The Town of the Cascades.'

[The Nation (Dublin); Cabinet of Irish Literature; Freeman's Journal (Dublin); Murray's Life of John Banim.] G. B. S.

**BANISTER or BANESTER, JOHN** (1540-1610), surgeon, was well known among surgeons in London in the latter half of Queen Elizabeth's reign. He began his professional life as surgeon to the forces sent under the Earl of Warwick in 1563 to relieve Havre. On this expedition he and William Clowes [q. v.], another surgical author, began a friendship which lasted throughout their lives. Some time after his return he studied at Oxford, and received a license to practise in 1573. For several years he practised both physic and surgery at Nottingham. Leicester's expedition to the Low Countries in 1585 gave Banister another opportunity of public service, and he served on board ship (*Royal Letter*, 1593; see MUNK). After the expedition he settled in London, and in 1588 he and Clowes are associated in the dedication of Read's 'Translation of Arceus.' They saw many cases together, and in 1591 T. P., a patient of theirs, praised both surgeons in a wretched English poem. Complaints were often made at that time to the College of Physicians as to surgeons practising medicine, and, perhaps in consequence of some such difficulty, Banister in 1593 obtained a royal letter of recommendation which led the college to grant him a license (15 Feb. 1593-4) on the condition that in dangerous cases he should call in one of its fellows. Banister was famed for his kindness to the poor, especially to old soldiers, and for his extensive professional reading. He edited Wecker, with corrections, 'A Compendious Chyrurgerie gathered and translated (especially) out of Wecker,' 12mo, London, 1585. He compiled a collection of remedies and prescriptions, 'An Antidotarie Chyrurgicall,' London, 1589, in which he acknowledges the generous help of his contemporaries, George Baker [q. v.], Balthrop,

Clowes, and Goodrus. He also published in folio 'The History of Man, sucked from the Sap of the most approved Anatomists, 9 books, London, 1578.' Calametiuss, Tagaltius, and Wecker, three dry and unprofitable writers on surgery, form the basis of his writings. No cases from his own practice are given, and neither domestic history nor interesting examples of style are to be found in his pedantic pages. He lived in Silver Street (*Antidotarie*), and was buried in the church of St. Olave in that street, since destroyed, with the record of his death, in the great fire. He had a long epitaph in English verse, which bears sufficient resemblance to some poems of Clowes to make it likely that it was written for Banister's tomb by his old friend. In 1633, some time after Banister's death, a collected edition of his surgical works was published, 'The Workes of that Famous Chyrurgian, Mr. John Banester,' in six books.

[Clowes's Works; Munk's Roll of Physicians, i. 104.] N. M.

BANISTER, JOHN (1630-1679), musical composer and violinist, was the son of one of the 'waits' of the parish of St. Giles-in-the-Fields, and that profession he at first followed. His father was his first instructor, and he arrived at such proficiency on the violin that Charles II became interested in him and sent him for further education to France, appointing him on his return to the post of leader of his own band, vacated by the death of Baltzar [q. v.] in 1663. A warrant of that year (*Add. MS. 5750*) informs us that he was appointed to the band at a salary of 40*l.* per annum, payable quarterly. About 1666-7 he is said to have been dismissed by the king for an impertinent remark concerning the appointment of French musicians to the royal band. This seems to be referred to in Pepys's Diary, date 20 Feb. 1666-7, although Banister's name occurs in a list of the King's Chapel in 1668 (*Egerton MS. 2159*). On 30 Dec. 1672 he inaugurated a series of concerts at his own house, which are remarkable as being the first lucrative concerts given in London. One peculiarity of the arrangements was that the audience, on payment of one shilling, were entitled to demand what music they pleased to be performed. These entertainments continued to be given by him, as we learn from advertisements in the 'London Gazette' of the period, until within a short time of his death, which took place on 3 Oct. 1679. He was buried in the cloisters of Westminster Abbey.

His most important composition is the music to the tragedy of 'Circe' by Dr. C.

Davenant, which was performed at the Duke of York's Theatre in 1676. Manuscript copies of the first act are preserved in the library of the Royal College of Music, and in the Fitzwilliam Museum at Cambridge. In the same year he wrote music to 'The Tempest' in conjunction with Pelham Humphrey. Several songs by Banister, some of them belonging to some classic tragedy of which the name is unknown, and written jointly with Dr. Blow, are in a manuscript in the Christ Church Library, Oxford. In the collections of printed music which date from about this time his name is of frequent occurrence. Besides his vocal compositions, which are not of very great interest or importance, he wrote a great many short pieces for one, two, and three violins, and also for the lute. He was especially skilled in writing upon a ground bass. A work of this kind is preserved in the British Museum (*Add. MS. 18940*) for two violins on a ground, and several similar compositions are among the manuscripts in the Music School at Oxford. There also many of his other compositions are preserved, one of which (*MS. 35*) is curious, as it appears to be an exercise in bowing. The name is given variously as Bannister, Banester, and Banster, but most commonly, and no doubt correctly, as Banister.

His son, John Banister the younger, was a pupil of his father's, and became, like him, a violinist in the royal band, where he remained under Charles II, James II, William and Mary, and Anne. When the first Italian operas were given in this country at Drury Lane, he played the first violin. He died in 1735.

[Burney's History of Music; Hawkins's History of Music; Grove's Dictionary of Music and Musicians; MSS. in Fitzwilliam Museum, Cambridge, Music School and Christ Church, Oxford, and in the British Museum.] J. A. F. M.

BANISTER, JOHN (*d.* 1692?), naturalist, travelled first in the East Indies and later in Virginia, apparently as a Church of England missionary, as well as with the purpose of investigating the natural history of those regions. His stay in Virginia extended over at least fourteen years, during which time he corresponded with John Ray, Compton (bishop of London), and Martin Lister. To Ray he sent in 1680 a lengthy catalogue of Virginia plants, which is published in the 'Historia Plantarum' (ii. 1928), where Ray styles him 'eruditissimus vir et consummatissimus botanicus.' In the previous year he had sent a similar catalogue, with drawings, to Compton. He was an entomologist as well as a botanist, and published papers on the insects, mollusks, and plants of Virginia in the 'Philo-

sophical Transactions.' In one of his expeditions in Virginia he fell from the rocks and was killed (about 1692). His notes and papers were sent to Compton; his dried plants were acquired by Sir Hans Sloane, and are now in the British Museum.

[Phil. Trans. xvi. 667-72; Pulteney's Sketches, 55-7.] J. B.

BANISTER, RICHARD (d. 1626), an oculist, of Stamford in Lincolnshire, was educated under his near kinsman, John Banister, the surgeon [q. v.]. He devoted himself especially to certain branches of surgery, such as 'the help of hearing by the instrument, the cure of the hare-lip and the wry-neck, and diseases of the eyes.' He studied under various persons eminent in these subjects, among whom were 'Henry Blackborne, Robert Hall of Worcester, Master Velder of Fennie Stanton, Master Surflet of Lynn, and Master Barnabie of Peterborough.' To complete his education he betook himself to the study of the best authors, as Rhazes, Mesne, Fernelius, Vesalius, &c.

Banister then established himself in Stamford, and acquired considerable reputation as an oculist. He was in request in all the large towns round about, and was even sent for to London. He appears to have performed numerous operations for cataract, and to have cured twenty-four blind persons at Norwich, of which he obtained a certificate from the mayor and aldermen.

Banister published in 1622 a second edition of a 'Treatise of One Hundred and Thirteen Diseases of the Eyes and Eyelids, with some profitable additions of certain principles and experiments, by Richard Banister, oculist and practitioner in physic.' It is a translation from the French of Jacques Guillemeau, made by one A. H., and at its first publication dedicated to the elder Banister. Guillemeau was a distinguished surgeon at the courts of Charles IX., Henry III., and Henry IV of France, and his work, 'Traité des Maladies de l'Œil,' was published at Paris in 1585, and at Lyons in 1610, and was translated both into Flemish and into German. The English translation by A. H. having become out of print, a second edition was published in 1622 by Richard Banister, together with an 'appendant part' called 'Cervisia Medicata, Purging Ale, with divers aphorisms and principles.' The work received the name of Banister's Breviary of the Eyes. In this treatise he names the best oculists for the last fifty or sixty years, not university graduates. Banister was buried at St. Mary's, Stamford, Lincolnshire, 7 April 1626. His wife Anne was buried there 16 April 1624.

[Wood's Athenæ (Bliss), i. 563; Hutchinson's Biographia Medica; Banister's Treatise, as above.] R. H.

BANISTER, SIR WILLIAM (d. 1721), judge, was a student of the Middle Temple, and received the coif in 1706. For a few years he was one of the judges of South Wales, and through the friendship of Lord Chancellor Harcourt was promoted in June 1713 to be a baron of the exchequer, when he was knighted. On the accession of George I., Lord Chancellor Cowper, in his proposals for reforming the judicial staff, advised the removal of Banister as being 'a man not at all qualified for the place' (CAMPBELL'S *Lives of the Lord Chancellors*, iv. 350), and on 14 Oct. 1714 he was accordingly removed (LORD RAYMOND'S *Reports*, 1261, 1318). His public career and his private life appear to have been equally devoid of general interest. Turk Dean in Gloucestershire 'descended to him from his ancestors,' and he possessed 'a great estate in this and other places' (ATKYN'S *Gloucestershire*, 787). He died at Turk Dean on 21 Jan. 1720-1, and was buried in the parish church, where there is a memorial to him (*Hist. Reg. 1721, Chron. Diary*, p. 6).

[Foss's Judges of England, and works cited above.] G. V. B.

BANKE, RICHARD (fl. 1410), judge, was appointed a baron of the exchequer by the continual council in 1410, during the virtual interregnum caused by the mental and physical decay of Henry IV., and re-appointed by Henry V in 1414. He married Margaret, daughter of William de Rivere. The date of his death is altogether uncertain, there being nothing to indicate who succeeded him on the bench. He was interred in the priory of St. Bartholomew, London, on the site of which St. Bartholomew's Hospital now stands, as was also his wife. Stow, to whom we are indebted for the record of this fact, spells his name Vancke and his wife's maiden name Rivar.

[Dugdale's Chron. Ser. 57; Stow's Survey of London, ed. Strype, i. 715.] J. M. R.

BANKES, GEORGE (1788-1856), the last of the cursitor barons of the exchequer—the office being abolished on his death in 1856—was the third son of Henry Bankes [q. v.], of Kingston Hall, Dorsetshire, who represented Corfe Castle for nearly fifty years, and of Frances, daughter of Wm. Woodley, governor of the Leeward Islands. He was a lineal descendant of Sir John Bankes [q. v.], chief justice of the common pleas in the reign of Charles I. Bankes was

educated at Westminster School and Trinity Hall, Cambridge. He studied law first at Lincoln's Inn, and afterwards at the Inner Temple, and was called to the bar by the latter society in 1815. In the following year he entered parliament as his father's colleague for the family borough of Corfe Castle, which he represented in every succeeding parliament until 1823. He was again returned for Corfe Castle in 1826, and sat until 1832, when the family borough was united with that of Wareham. He does not appear to have achieved any remarkable professional success, but owing, presumably, to his family influence, he was appointed one of the bankruptcy commissioners in 1822, and *cursitor baron* in 1824. In 1829, under the Wellington administration, he became chief secretary of the board of control, and in the next year a junior lord of the treasury, and one of the commissioners for the affairs of India. At the general election in 1841 he again entered parliament, being returned by the county of Dorset, for which he continued to sit until his death. He supported the tory party, and strenuously opposed Sir Robert Peel's commercial reforms. During the short administration of the Earl of Derby in 1852, Bankes held the office of judge-advocate-general, and was sworn a privy councillor. On the death of his elder brother, William John [q. v.], in 1855, he succeeded to the family estates. He died at his residence, Old Palace Yard, Westminster, leaving issue three sons and five daughters by his wife Georgina Charlotte, only child of Admiral Sir Charles Nugent, G.C.B. Bankes was the author of 'The Story of Corfe Castle and of many who have lived there' (London, 1853), and of 'Brave Dame Mary,' a work of fiction founded on the 'Story.'

"[Illustrated London News, 12 July 1856; Burke's Dictionary of the Landed Gentry; Foss's Lives of the Judges of England.] G. V. B.

**BANKES, HENRY (1757-1834)**, politician and author, was born in 1757, the only surviving son of Henry Bankes, Esq., and the great-grandson of Sir John Bankes [q. v.], chief justice of the common pleas in the time of Charles I. He was educated at Westminster School and at Trinity College, Cambridge, where he graduated B.A. in 1778, and M.A. in 1781. After leaving Cambridge he sat for the close borough of Corfe Castle from 1780 to 1826; in the latter year he was elected for the county of Dorset, and re-elected in the general election in the same year and in 1830, but was rejected after a contest in 1831. In politics he was a conservative; he gave a general support to Pitt, but pre-

served his independence. He took an active but not a leading part in nearly every debate of his time, and closely attended to all parliamentary duties. He was a trustee of the British Museum, and acted as its organ in parliament. Bankes published 'A Civil and Constitutional History of Rome, from the Foundation to the Age of Augustus,' 2 vols. 1818. He married in 1784 Frances, daughter of William Woodley, governor of the Leeward Isles, and left a large family. His second son was William John Bankes [q. v.], and his third George Bankes [q. v.]. His daughter married the Earl of Falmouth. Bankes died at Tregothnan, Cornwall, 17 Dec. 1834, and was buried in Wimborne Abbey.

[Gent. Mag. iii. new series, p. 323; Parliamentary Debates, 1780-1829; Brit. Mus. Cat.] A. G.-N.

**BANKES, SIR JOHN (1589-1644)**, chief justice of the common pleas, 'was born at Keswick, in Cumberland, of honest parents, who, perceiving him judicious and industrious, bestowed good breeding on him in Gray's Inn, in hope he should attain to preferment, wherein they were not deceived' (FULLER, *Worthies*, ed. Nichols, i. 237). His father was a merchant, and his mother, according to some authorities, Elizabeth, daughter of one Hassell, but according to Burke's 'Landed Gentry,' Bankes's mother was Jane Malton, and his grandmother Anne Hassel. Bankes was sent to a grammar school in his own county, and thence to Queen's College, Oxford, in 1604, at the age of fifteen. Leaving the university without a degree he entered Gray's Inn as a law student in 1607; was called to the bar 30 Nov. 1614; became a bench of the society in 1629, reader in 1631, and treasurer the next year (DUGDALE, *Orig.* 297, 299). He was returned to parliament in 1624 for Wootton Bassett and in 1628 for Morpeth, and took part in the debate on the question of privilege arising out of the seizure of a member's goods for tonnage by order of the king (19 Feb. 1628), on which occasion he declared that 'the king's command cannot authorise any man to break the privilege' (*Parl. Hist.* ii. 480). He did not, however, take much part in the politics of the day.

In 1630 the king made him attorney-general to the infant Prince Charles, then Duke of Cornwall, and on the death of Attorney-general Noy, Bankes succeeded to his place, Sept. 1634. His professional reputation was very high at this moment, for one of Lord Wentworth's correspondents mentions 'how Banks, the attorney-general, hath been commended to his majesty—that he

exceeds Bacon in eloquence, Chancellor Ellesmere in judgment, and William Noy in law' (BANKES, *Corfe Castle*, 54). His wealth appears to have grown as rapidly as his reputation, for about this time he purchased the manor of Corfe Castle, in Dorsetshire, from Lady Hatton, widow of Sir Edward Coke. That he should have been able to purchase so important a property at so comparatively early an age as 46, apparently out of the legitimate earnings of his private practice, proves the very lucrative nature of the legal profession in those days. As attorney-general it fell to his lot in 1637 to carry out the arbitrary prosecutions in the Star Chamber against Prynne, Bishop Williams, and others (*State Trials*, iii, 711, 771). In the same year he represented the crown in the still more important case of John Hampden, on which occasion his argument lasted for three days (*ibid.* 1014). The chief justiceship of the common pleas becoming vacant by the promotion of Sir Edward Lyttleton to be lord keeper was given to Sir John Bankes, 29 Jan. 1640-1 (RYMER, xx, 447). A month later, while sitting as temporary speaker of the House of Lords during the illness of the lord keeper, his friend and former client, the Earl of Strafford, was brought before him to the bar on some matter connected with his impeachment (*Corfe Castle*, 83). Sir John remained at his post at Westminster for some time after the king had left London, but, fearing that this might be considered as showing approval of the parliamentary cause, he soon followed the king to York. He was now admitted to the privy council, and signed the declaration made by the lords at York, in which they asserted that the king had no intention of making war on the parliament. Sir John accompanied the king to Oxford in the winter, and received from the university the honorary degree of D.C.L., 20 Dec. 1642 (WOOD, *Fasti*, ii, 44).

Though steadily adhering to the king's cause, he incurred the royal displeasure by his caution and moderation. In a letter, dated York, May 1642, to Mr. Green, one of the members for Corfe Castle, he says: 'The king is extremely offended with me touching the militia; saith that I should have performed the part of an honest man in protesting against the illegality of the ordinance; commands me upon my allegiance yet to do it. I have told him it is not safe for me to deliver anie opinion in things which are voted in the houses.' In this and other private letters to the leaders of parliament he warmly urges the necessity of frankness and compromise on both sides with a view to an 'accommodation,' foreseeing that 'if we should

have civile wars it would make us a miserable people' (*Corfe Castle*, 135). His efforts to preserve the peace seem to have been appreciated by the parliament; for, notwithstanding the prominent part he had taken in the Star Chamber prosecutions and the ship-money case, parliament requested that he might be continued in his office of chief justice (*Parl. Hist.* iii, 70). The king's displeasure soon passed away, and Sir John gave ample proofs of his devotion to the king by his liberal contributions to the royal treasury, and still more by the stubborn resistance offered by his castle long after all the neighbouring strongholds had fallen into the hands of parliament. The heroic defence of Corfe Castle by Lady Mary Bankes [q. v.] during nearly three years, against great odds, to which she yielded only when betrayed, is one of the brightest spots in that gloomy period. The parliament, on the other hand, had ceased to regard Sir John as a mediator, and the commons were so highly incensed against him by his charge to the grand jury at Salisbury, where several members of both houses were indicted for high treason before Bankes and three other judges, that they ordered the four judges to be impeached (WHITELOCKE, 78). A similar order was made the next year against the same judges in consequence of the trial and execution of Captain Turpine at Exeter (*ibid.* 96). Fortunately for Sir John he was beyond the reach of the commons, but they made him feel their displeasure by ordering the forfeiture of all his property, even to his books (*ibid.* 177). He continued to act as privy councillor and chief justice at Oxford until his death, which occurred there 28 Dec. 1644. He was buried in Christ Church Cathedral, where there is a monument to his memory. 'It must not be forgotten that by his will he gave to the value of 30*l.* per annum with other emoluments to be bestowed in pious uses, and chiefly to set up a manufacture of coarse cottons in the town of Keswick' (FULLER, i, 237).

Clarendon tells us that at one time the king, being displeased with Lord-keeper Lyttleton, proposed to give the great seal to Sir John Bankes, but that the latter 'was not thought equal to that charge in a time of so much disorder, though otherwise he was a man of great abilities and unblemished integrity' (CLARENDON, v, 209). Elsewhere the same writer speaks of him as 'a grave and a learned man in the profession of the law' (*ibid.* vi, 396). This estimate of him appears to be acquiesced in by all his contemporaries. His conduct as well as his letters prove him to have been moderate and cautious, but

steadily loyal to the royal cause. His property was restored to his family in 1647 by parliament after considerable payments by Lady Bankes and her children (WHITELOCKE, 270). Sir John left a numerous family, and his descendants, who still own considerable property in the neighbourhood, represented the borough of Corfe Castle until it was disfranchised in 1832. The present head of the family lives at Kingston Lacy, not far from the ruins of their ancient castle.

[Foss's Judges of England; Biographia Britannica; Bankes's Story of Corfe Castle; Fuller's Worthies; Wood's Fasti (Bliss), ii. 44; Lloyd's Memoires of Sufferers for Charles I.] G. V. B.

**BANKES, MARY, LADY** (d. 1661), the heroine of Corfe Castle, was the only daughter of Ralph Hawtrej, of Ruislip, in the county of Middlesex, the representative of an ancient family of Norman origin. Of her early life nothing seems to be recorded; but having married Sir John Bankes [q.v.], chief justice of the common pleas in the latter part of the reign of Charles I, she retired with her children, on the commencement of the civil troubles, to Sir John's newly purchased residence, Corfe Castle, in the Isle of Purbeck, Dorsetshire, for many centuries a royal residence and one of the strongest castles in England. Here Lady Bankes, with the assistance of a small garrison, stood two prolonged sieges, the first in 1643, lasting six weeks and ending in the flight of the besiegers; the second in 1645, which after eight weeks ended in the taking of the castle through the treachery of one of the garrison. The fullest and best original account of the first siege is contained in a contemporary royalist publication, '*Mercurius Rusticus*,' No. xi., which, notwithstanding its contemptuous banter of 'the rebels,' is probably a fairly truthful account, and is confirmed by occasional allusions in contemporary newspapers of the opposite side.

From this authority we learn that in May 1643, Sir John being in attendance on the king, the commissioners of Poole sent a force of forty seamen ('they in the castle not suspecting any such thing') to demand of Lady Bankes the surrender of the four small pieces of cannon which formed the armament of Corfe Castle, 'but instead of delivering them, though at that time there were but five men in the castle, yet these five, assisted by the maid servants, at their lady's command mount these pieces on their carriages, and lading one of them they give fire, which small thunder so affrighted the seamen that they all quitted the place and ran away.'

On 23 June 1643 the regular siege was

begun by Sir Walter Earle, with a force of 500 or 600 men, and a few pieces of ordnance. Lady Bankes meantime had quietly laid in a good store of provisions, and had obtained from Prince Maurice, by her earnest entreaties, a garrison of about eighty men, commanded by Captain Lawrence. Her resolution was unshaken by the oath taken by the besiegers, 'that if they found the defendants obstinate not to yield, they would maintain the siege to victory and then deny quarter unto all, killing without mercy men, women, and children.' All the assaults of the besiegers were successfully repelled by the little garrison. In the last of these attacks, 'the enemy being now pot-valiant and possessed with a borrowed courage, which was to evaporate in sleep, they divide their forces into two parties, whereof one assaults the middle ward, defended by valiant Captain Lawrence and the greater part of the soldiers; the other assault the upper ward, which the Lady Bankes (to her eternall honour be it spoken), with her daughters, women, and fivesouldiers, undertooke to make good against the rebels, and did bravely perform what she undertooke, for by heaving over stones and hot embers, they repelled the rebels, and kept them from climbing their ladders.' Having lost in this assault 100 men in killed and wounded, and hearing that the king's forces were at hand, Sir Walter on 4 Aug. drew off his men so precipitately that they left their artillery, ammunition, and horses behind.

For the next two years Lady Bankes seems to have lived unmolested, partly at Corfe Castle and partly near London. The death of her husband in December 1644 caused no abatement of her devotion to the royal cause, and in the summer of 1645 Corfe Castle was again attempted several times by the parliamentary forces, and at last closely besieged a second time, there being now 'no garrison (but this) between Excester and London' still holding out for the king (SPRIGGE, iii. 146). On 26 Feb., or according to some accounts 8 April, 1646, Lady Bankes and her little garrison, apparently as far as ever from yielding, were betrayed by one of her own officers who was 'weary of the king's service.' Under pretence of bringing in reinforcements this officer introduced by night fifty of the enemy, and next morning the garrison, finding themselves betrayed and further resistance useless, gave themselves up prisoners at discretion, their lives only excepted.

In Sprigge's table of battles and sieges Corfe Castle is said to have been taken in April 'by stratagem and storm' after forty-

eight days' siege, during which eleven men were killed. By order of parliament the castle was 'slighted.' The massive fragments of mediæval masonry which still occupy its site bear witness at once to the difficulty of the task and the thoroughness with which it was accomplished.

Lady Bankes was allowed to depart with her children in safety, leaving, however, all her household effects behind. She now petitioned the sequestrators to be allowed her jointure, which, along with Sir John's property, had been sequestered. Her petition, being 'a case of difficulty,' was referred to headquarters, but appears to have remained unanswered until Cromwell's accession to power, when, on payment of large sums by herself and her children, the sequestration was removed (*Corfe Castle*, pp. 123, 244). She was not further molested during the Commonwealth. In the church of Ruislip there is a monument dedicated by Sir Ralph Bankes, her son and heir, which tells us that 'having had the honour to have borne with a constancy and courage above her sex a noble proportion of the late calamities, and the happiness to have outlived them so far as to have seen the restitution of the government,' she 'with great peace of mind laid down her most desired life 11 April 1661' (Lysons). Posterity has willingly endorsed this brief summary of her career. Lady Bankes had four sons and six daughters. Several noble families, as well as the Bankes of Kingston Lacy, near Corfe, claim her as an ancestress (*Notes and Queries*, 1st series, iii. 453).

[Lysons's *Middlesex*, p. 211; Hutchins's *Dorset*, i. 284; Vicars's *Parliamentary Chronicle*, iv. 372; Sprigge's *Anglia Rediviva*; Mercurius Rusticus, No. xi.; Lloyd's *Memoires*, 586; Bankes's *Story of Corfe Castle*; *Notes and Queries*, 1st series, iii. 458.] G. V. B.

**BANKES, WILLIAM JOHN** (d. 1855), traveller in the East, was second but eldest surviving son of Henry Bankes [q. v.], of Kingston Hall, Dorsetshire, and elder brother of the Right Hon. George Bankes [see **BANKES, GEORGE**, 1788-1856]. He was educated at Trinity College, Cambridge (B.A. 1808, and M.A. 1811). From 1810 to 1812 he represented as a tory Truro in parliament. In 1822 he was returned for Cambridge University, but was defeated in 1826 by Lord Palmerston and Sir J. Copley. In 1829-32 he sat for Marlborough, and was returned by the county of Dorset to the first reformed parliament, but retired voluntarily in 1835, after which he did not re-enter parliament. On the death of his great-uncle, Sir William Wynne, he succeeded to Soughton Hall in Flintshire, and on his father's death in 1835 he

came into the family estates in Dorsetshire. Byron, his contemporary, describes him as the leader of the set of college friends which included C. S. Matthews and Hobhouse. Bankes was Byron's friend through life. Byron gave him letters of introduction when he was starting on an eastern journey in 1812. Bankes afterwards visited Byron in Venice. Byron speaks of him with affection. Several letters to him are given by Moore. Rogers says in his 'Table Talk' (ed. Dyce, p. 291) that he had known Bankes eclipse Sydney Smith by the vigour of his talk. He was known to the literary world by his travels in the East. He inspired or wrote a review of Silk Buckingham's work on Palestine, which appeared in the 'Quarterly Review' for January 1822. He afterwards published a letter to Hobhouse, repeating charges against Buckingham, who had accompanied him in Syria, of appropriating his drawings. Buckingham obtained a verdict of 400*l.* damages for the libel, 26 Oct. 1826. He also translated from the Italian in 1830 an autobiographical memoir of Giovanni Finati, with whom he travelled in Egypt and the East. In 1815 he discovered an ancient Egyptian obelisk in the island of Philæ, and had it brought to England for the purpose of erecting it in his own grounds at Kingston Hall. He died at Venice 15 April 1855, leaving no issue, and was succeeded by his brother the Right Hon. George Bankes.

[Gent. Mag. August 1855; Burke's *History of the Landed Gentry*; Bankes's *Life of Giovanni Finati*.] G. V. B.

**BANKHEAD, JOHN** (1738-1833), Irish presbyterian minister, was born in 1738 of a family said to have come from Bank Head in Mid-Lothian, and settled near Clough, co. Antrim. He is said to have graduated at Glasgow, but his name is not found in the college register. He was licensed by Ballymena presbytery (before 29 June 1762), and called 13 Feb. 1763 to the congregation of Ballycarry (or Broadisland), co. Antrim. This, the oldest presbyterian church in Ireland, was founded by Edward Brice in 1613 [see **BRICE, EDWARD**], and had been vacant since the death of James Cobham (22 Feb. 1759). Bankhead subscribed (26 July 1763) the confession of faith in the following cautious form: 'I believe the Westminster Confession to contain a system of the christian doctrines, which doctrines I subscribe as the confession of my faith;' and was ordained by Templepatrick presbytery, 16 Aug. 1763. A unanimous call was given him in July 1774 by the richer congregation of Comber, co. Down; but he remained at Ballycarry all his days, and made a considerable fortune out of a grazing farm.

In 1786 he published a catechism, valuable as indicating the departure from the old standards of doctrine, already hinted at in the terms of his subscription. The questions are precisely those of the Westminster Shorter Catechism; the answers are naked extracts from Scripture, without comment. In the second edition, 1825, a further progress is made; some of the Westminster questions are omitted, others are altered. Bankhead was moderator of synod in 1800. On 30 July 1812 William Glendy (*d.* 24 July 1853, aged 71) was ordained as his assistant and successor. In 1829 Glendy took the congregation with him to join the heterodox remonstrant synod; but Bankhead remained on the roll of the general synod till his death, which occurred on 5 July 1833, he being then in the ninety-sixth year of his age, and the seventieth of his ministry (the inscription on his tombstone overestimates on both points). It is remarkable that the whole period of 220 years (1613–1833) in the history of Ballycarry congregation is spanned by the pastorates of four men, the interstices between their ministries amounting collectively to seventeen years. Bankhead was a man of much natural ability. A satirical poem of 1817 ('The Ulster Synod,' by Rev. William Heron, of Ballyclare) describes him, in his eightieth year, as 'scattering bright wit, sound sense, and Dublin snuff.' He published: 1. 'Faith the Spring of Holiness' (Hab. ii. 4), Belf. 1769 (funeral sermon for Arch. Edmonstone of Redhall, who left Bankhead his library). 2. 'A Catechism,' &c. Belf. 1786, 12mo (the date is misprinted 1736); 2nd ed. Belf. 1825, 12mo (described above). He was twice married, (1) to Jane Martin, (2) in February 1812 to Mary Magill, and was the father of twenty-two children, nineteen of whom reached maturity, and some found distinction. His eldest son was John Bankhead, M.D., a leading physician of Belfast. Another was James Bankhead, ordained 23 March 1796, presbyterian minister of Dromore, co. Down (*d.* 10 Jan. 1824). Another son, Charles Bankhead, M.D., was private physician to the celebrated Lord Londonderry, who expired in his arms in 1822; he died at Florence, aged 91, and was father of Charles Bankhead, British envoy to Washington. The latest survivor of the twenty-two children was William Bankhead, unitarian minister at Brighton and Diss, Norfolk (1837–43), who left the ministry, and died in Edinburgh, 1881, aged 69.

[Belfast News-Letter, 12 July 1833 (see letter proving the year of his birth); Chr. Unitarian, 1863 (extracts from original records of Templepatrick presbytery); Witherow's Hist. and Lit.

BANKS, — (*A.* 1588–1637), a famous showman, to whose 'dancing horse' allusion is made by all the best-known authors of his day, was a native of Scotland. He is stated in 'Tarlton's Jestes' (1600) to have originally served the Earl of Essex, and to have exhibited his horse 'of strange qualities . . . at the Crosse Keyes in Gracious-streete' before 1588. The animal went by the name of Morocco or Marocco. His feats, which are briefly described in an epigram in Bastard's 'Chrestoleros' (1598), included, among many like accomplishments, the power of counting money, to which reference is made by Shakespeare (*Love's Labour's Lost*, i. 2.1. 53), by Bishop Hall (*Toothless Satyrs*, 1597), and by Sir Kenelm Digby (*Nature of Bodies*, 1644, p. 321); of singling out persons named by his master (TARLTON'S *Jests*; BRATHWAITE'S *Strappado* for the *Divell*, 1615); of dancing, to which very frequent allusion is made by the Elizabethan dramatists. At the end of 1595 there appeared a pamphlet, of which only two copies are now extant, entitled 'Marroccus Extaticus, or Bankes Bay Horse in a Trance, a discourse set downe in a merry dialogue between Bankes and his beast, anatomizing some abuses and bad trickes of this age, written and intituled to mine host of the Belsavage, and all his honest guests, by John Dando, the wier-drawer of Hadley, and Harrie Runt, the head ostler of Bosomes Inne, 1595.' A woodcut represents Banks in the act of opening his entertainment, and the horse standing on his hind legs, with a stick in his mouth and dice on the ground. From the title-page it appears that Banks was at the time exhibiting his horse at the Belsavage Inn without Ludgate, where such entertainments were frequent, and where, as was his custom, Banks charged twopence for admission to his performance (BRATHWAITE'S *Strappado*). The dialogue, of which the pamphlet consists, deals with the hypocrisy of the puritans and other alleged abuses. It promises a second part, which never appeared. About 1600 the horse is reported to have performed his most famous but hardly credible exploit—that of climbing the steeple of St. Paul's. In the 'Owles Almanacke' (1618) it is stated that 'since the dancing horse stood on the top of Powles, whilst a number of asses stood braying, below seventeen yeares.' References to the event are to be found in many of Dekker's plays and prose tracts, in Rowley's 'Search for Money,' and elsewhere. In 1601 Banks crossed the Channel, and exhibited his horse at Paris; and the best account of

Morocco's feats is given by a French eye-witness, Jean de Montlyard, Sieur de Melleray, in a note to a French translation of the 'Golden Ass' of Apuleius (1602). The horse's age is there stated to be about twelve years, but he was certainly some three or four years older. The magistrates of Paris suspected that his tricks were performed by magic, and for some time Banks was imprisoned and his horse impounded. But on his master declaring that he had carefully instructed Morocco by signs, they were both released, and Banks was permitted to continue his exhibition. At Orleans, according to Bishop Morton (*Direct Answer unto the Scandalous Exceptions of Theophilus Higgons*, 1609, p. 11), Morocco was again suspected of being a pupil of the devil, and Banks, to allay the suspicion, 'commanded his horse' (who at once obeyed him) 'to seek out one in the prease of the people who had a crucifixe on his hat; which done, he had him kneele downe unto it, and not this onely, but also to rise up againe and to kisse it.' According to the same authority, Banks, with Morocco, visited Frankfurt shortly after this adventure. In 1608 he had returned to England, and was temporarily employed by Henry, Prince of Wales, in the management of his horses (*MS. Privy Purse Expenses*, 1608-9). In succeeding years Banks, according to references in the works of Ben Jonson, Sir Walter Raleigh (*History of the World*, 1614, i. 173), Michael Drayton, John Taylor, and Sir John Harington, continued to give his entertainment in London. An elaborate account of 'how a horse may be taught to doe any tricke done by Banks his curtall' is given at the end of Gervase Markham's 'Cavelarice' (1607). Some mystery has been ascribed to the fate of Banks and Morocco. According to playful allusions in Ben Jonson's 'Epigrams' (1616) and in a marginal note to the mock romance of 'Don Zara del Fogo' (1656), they were both burned at Rome 'by the commandment of the pope.' But no importance need be attached to these statements. The showman is almost certainly to be identified with Banks, a vintner in Cheapside in later years, who is said to have 'taught his horse to dance, and shooed him with silver' (*Life and Death of Mistress Mary Frith*, 1662, p. 75). As a vintner, Banks was evidently alive in May 1637 (*Ashmole MS.* 826), and mention is made of 'mine host Bankes' in Shirley's 'Ball,' 1639. Curious allusions to Banks and his dancing horse are found as late as 1664 (*KILLIGREW's Parson's Wedding*). An early Lancashire pedigree states that a 'daughter of . . . Banks, who kept the horse with the admirable tricks, married John Hyde

of Urmstone, a member of an ancient county family (HUNTER's *Illustrations to Shakespeare*, i. 265).

[The best accounts of Banks, with numberless references to contemporary authorities, appear in Halliwell-Phillips's folio *Shakespeare*, iv. 243 et seq., and in his privately printed *Memoranda on Love's Labour's Lost* (1879), pp. 21-57. The rare tract, *Maroccus Extaticus*, one copy of which is now in the British Museum, was reprinted with notes by E. F. Rimbault for the Percy Society (No. 47). See also Douce's *Illustrations to Shakespeare*, i. 212; Corser's *Collectanea*, i. 152 et seq.; and Frost's *Old Showmen*, p. 23.] S. L.

**BANKS, BENJAMIN** (1750-1795), a violin-maker, was one of the most prominent among the English followers of Amati. He began as a pupil of Peter Walmsley, of the 'Golden Harp' in Piccadilly, the great imitator of Stainer violins. Banks, following Daniel Parker, discarded the Stainer traditions, and copied the instruments of Nicholas Amati. His violas and violoncellos are excellent, but his violins are not so good. At an early period of his life he established himself at Salisbury. His business there was carried on after his death by his two sons, James and Henry, who subsequently migrated to Liverpool.

[Grove's *Dictionary of Music and Musicians*, ii. 164 b.] J. A. F. M.

**BANKS, SIR EDWARD** (1769?-1835), builder, raised himself from the humble station of a day labourer to the chief control of the firm of Jolliffe & Banks, contractors for public works, and was the builder of Waterloo, Southwark, and London bridges. He owed his fortune principally to these contracts, which he took with the Rev. W. J. Jolliffe, under the superintendence of the Rennies. Among his other undertakings may be mentioned Staines bridge, the naval works at Sheerness dockyard, and the new channels for the rivers Ouse, Nene, and Witham in Norfolk and Lincolnshire. In June 1822 Banks received the honour of knighthood. He died at Tilgate, Sussex, the residence of his daughter, Mrs. Gilbert East Jolliffe, 5 July 1835, in his sixty-sixth year. While working as a day labourer upon the Merstham tram-road, he had been struck with the beauty of the neighbouring hamlet of Chipstead, and, when he died nearly forty years later, desired that he might be buried in its quiet churchyard.

**BANKS, GEORGE LINNÆUS** (1821-1881), miscellaneous writer, born at Birmingham 2 March 1821, was the son of John Banks, a seedsman. The father was a rigid methodist; he once took a 'Robinson Crusoe' from his son, and thrust it into the fire. When a boy George was totally blind for seven months, and was eventually cured by a quack, who applied leeches to the soles of his feet. He was sent to an engraver, but his eyes proved too weak for this work, and he afterwards went to a modeller, and, when neglected by his father, bound himself apprentice to a cabinet-case maker. His master failed, and he became, at the age of seventeen or eighteen, a contributor to newspapers and magazines, an amateur actor, and orator. He had a remarkable faculty for silhouette portraiture, and was also a rapid improvisatore. For years he was intimately associated with many of the movements for the political enfranchisement and social advancement of the masses of the people. One of his lyrics, called 'What I live for,' was frequently quoted by platform and pulpit orators, and is widely known. It is believed that it first appeared in a Liverpool newspaper. During his residence in Liverpool he wrote a play called 'The Swiss Father,' in which Creswick took the leading part. He also wrote for the negro actor, Ira Aldridge, a drama entitled 'The Slave King,' and in later years two smart burlesques for the Durham and Windsor theatres. These were 'Old Maids and Mustard,' and 'Ye Doleful Wives of Windsor.' He wrote the long popular negro melody 'Dandy Jim of Caroline,' 'The Minstrel King,' set by Macfarren, and 'Warwickshire Will,' are still sung at Shakespearean gatherings.

In 1846 he married Isabella Varley, of Manchester, the authoress of 'Ivy Leaves' and of several novels. Between 1848 and 1864 Banks was editor of the 'Harrogate Advertiser,' 'Birmingham Mercury,' 'Dublin Daily Express,' 'Durham Chronicle,' 'Sussex Mercury,' and 'Windsor Royal Standard.' For a time he had some share along with Mr. William Sawyer in the 'Brighton Excursionist.' He also wrote 'Blossoms of Poetry,' 1841; 'Spring Gatherings,' 1845; 'Lays for the Times,' 1845; 'Onward,' 1848; 'Peals from the Belfry,' 1853; 'Slander, a Remonstrance in Rhyme,' 1860; 'Life of Blondin,' 1862; 'Finger-post Guide to London,' 'Staves for the Human Ladder,' 1850; 'All about Shakspeare,' 1864; and 'Daisies in the Grass,' 1865 (this is a volume of poems by Banks and his wife). He took part in the tercentenary of Shakespeare and the Durham Burns centenary. He was actively in-

terested in the success of friendly societies and mechanics' institutes.

It was the intention of his wife to edit a complete collection of his poems, and to write a memoir of his active public career. Unfortunately in the later and clouded years of his life he destroyed much of the requisite material. He died after a long and painful illness, 3 May 1881, in London, and is buried in Abney Park Cemetery.

[Information supplied by Mrs. G. L. Banks, and by personal friends.] W. E. A. A.

**BANKS, JOHN** (fl. 1696), a dramatist of the Restoration, of whom very little is definitely known, is supposed to have been born about 1650. He was bred to the law, and was a member of the society of the New Inn. In 1677 he was tempted by the success of Lee's 'Rival Queens' to write a similar tragedy in verse, entitled 'Rival Kings,' and this was accepted and played at the Theatre Royal. In November 1678 another tragedy by Banks, the 'Destruction of Troy,' was acted at the Dorset Garden Theatre, and printed in 1679. In 1682 was brought out at the Theatre Royal the 'Unhappy Favourite,' a tragedy on the romantic fate of the Earl of Essex. This enjoyed considerable success, and Dryden wrote the prologue and the epilogue. It is a play which, although ill-written, showed a considerable power over the emotions of the audience, and Banks doubtless imagined that it was to be the precursor of a long theatrical success. He was, however, disappointed. In 1683 he wrote the 'Innocent Usurper,' a play founded on the story of Lady Jane Grey, but he failed to find for it either a publisher or a stage. He was scarcely less unfortunate with his 'Island Queens' in 1684, for that also was rejected at the theatres. He printed it, however, and twenty years later, on 6 March 1704, it was brought out at Drury Lane as the 'Albion Queens,' and so reprinted. For many years Banks did not appear before the public. In 1692 he brought out his 'Virtue betrayed,' a tragedy on the story of Anne Boleyn, which was the most successful of all his works, and held the stage until 1766. In October 1693 he again brought forward the 'Innocent Usurper,' but this time the play was prohibited. He published it in 1694. His last production was 'Cyrus the Great,' produced at Lincoln's Inn Fields in 1696. For some time the actors refused to act this play on account of its insipidity; their objections, however, were overruled, and the piece enjoyed a considerable success, but had to be withdrawn after the fourth night on account

of the sudden death of Smith, the tragedian. Nothing more is known about Banks; it is reported that he was buried at St. James's, Westminster. He published nothing except the seven dramas mentioned above, all of which are tragedies in five acts and in verse. Banks is a dreary and illiterate writer, whose blank verse is execrable. It appears, however, that his scenes possessed a melodramatic pathos which appealed to vulgar hearers, and one or two of his pieces survived most of the Restoration drama upon the stage.

[Genest's History of the Stage, i, ii; Cibber's Lives of the Poets, iii, 174.] E. G.

**BANKS or BANCKS, JOHN** (1709-1751), miscellaneous writer, was born in 1709 at Sonning in Berkshire. Losing his father early he was placed by his mother's brother at a private school, and taught by an 'anabaptist' minister. His teacher, jealous, it is said, of his abilities, pronounced him to be hopelessly dull, and his uncle accordingly removed him from school and apprenticed him to a weaver at Reading. Before his apprenticeship was finished an accident disabled him from following that employment, and he removed to London, buying with the proceeds of a small legacy left him by a relative a parcel of old books, and setting up a bookstall in Spitalfields. Stimulated by the patronage which 'The Thresher' of that poet of humble life, Stephen Duck, received from Queen Caroline, Banks produced, but without success, 'The Weaver's Miscellany.' Giving up his bookstall he entered as journeyman the service of a bookseller and bookbinder, and published by subscription poems, two sets of which, it is said, were ordered by Pope, who, it is also said, praised them and bestowed encouragement on their author. The poems bringing him some money and reputation, Banks became an author by profession. His next work was a large folio 'Life of Christ.' In 1739 he published anonymously his best-known book, 'A Short Critical Review of the Life of Oliver Cromwell, by a Gentleman of the Middle Temple,' although it does not appear that the author ever went to the bar. Several editions of this volume were called for during his lifetime, and on the title-page of the fifth, issued in 1767, it is described as being 'by the late John Banks, Esq.' The book is written with some vigour, and was one of the earliest in which was taken a view on the whole favourable of Cromwell's career and character. In his account of 'the biographies of Oliver,' prefixed to his 'Oliver Cromwell's Letters and Speeches,' Carlyle notes this peculiarity of Banks's work, which he pronounces to be 'otherwise of no moment.'

In speaking of Banks as 'a kind of lawyer and playwright, if I mistake not,' Carlyle seems to confound him with John Banks the dramatist [q.v.]. In 1744, when apprehensions of a landing of the Pretender and of a French invasion were entertained, Banks published a 'History of the Life and Reign of William III, King of England,' in tone and tenor strongly anti-Jacobite. In his latest years he is said to have conducted two London newspapers, 'Old England' and the 'Westminster Journal.'

Banks died at his house at Islington on 19 April 1751, and is described as cheerful and good-natured. On the title-page of an edition of his poems in two volumes (London, 1738), his name is spelt Bancks.

[Cibber's Lives of the Poets (1755), v, 310; Gent. Mag. xxi, 187; Banks's Works in Brit. Mus. Libr.] F. E.

**BANKS, JOHN SHERBROOKE** (1811-1857), major, was in 1823 nominated to a cadetship in the Bengal army by the Right Honourable Charles Wynn, at that time president of the board of control. Arriving in India in 1829, he was posted to the 33rd regiment Bengal native infantry, of which he became quartermaster and interpreter in 1833. He was subsequently employed for some time on civil duties in the Saugor and Nerbudda territory. In 1842 he served with General Pollock's army of retribution in the march upon Cabul, and shortly afterwards was appointed to a subordinate office in the military secretariat. In this office some years later he was brought into contact with the governor-general, the Marquis of Dalhousie, whose confidence and personal regard he speedily acquired. Owing to the absence of the head of the department on sick leave, it devolved upon Major (then Captain) Banks to make all the arrangements for the expedition which resulted in the conquest and annexation of Pegu. Shortly after the close of the war, he accompanied Lord Dalhousie on a visit to British Burnmah, and subsequently became a member of the governor-general's personal staff in the capacity of military secretary. In July 1855 he was deputed upon a confidential mission to Lucknow, to communicate to Sir James Outram, the resident, the intentions of the governor-general regarding the annexation of Oudh.

When Lord Dalhousie left India, Major Banks joined the Oudh commission as commissioner of Lucknow, and soon became the trusted adviser and friend of the chief commissioner, Sir Henry Lawrence, by whom, on his death-bed, he was nominated to suc-

ceed as chief commissioner, but he survived his chief only a few weeks. In Sir John Inglis's memorable despatch on the defence of the Lucknow residency, the death of Major Banks was noticed in the following terms:—'The garrison had scarcely recovered the shock which it had sustained in the loss of its revered and beloved general, when it had to mourn the death of that able and respected officer, Major Banks, who received a bullet through his head while examining a critical outpost on 21 July, and died without a groan.'

Major Banks was a man of excellent judgment and tact, able and industrious in the discharge of his official duties, a brave soldier, and an excellent linguist. His widow, a daughter of Major-general R. B. Fearon, C.B., received a special pension from the India Office in recognition of her husband's services.

[Bengal Army List; Despatch of Brigadier Inglis, commanding the garrison of Lucknow, 26 Sept. 1857; Times newspaper, 15 Oct. 1857; family papers.] A. J. A.

**BANKS, SIR JOSEPH** (1743–1820), president of the Royal Society, born at Argyll Street, London, on 13 Feb. 1743–4, was the only son of William Banks of Revesby Abbey in Lincolnshire, and Sarah, daughter of William Bate. He received his early education under a private tutor, and at the age of nine was sent to Harrow School, and thence transferred to Eton when thirteen. He was described as being well disposed and good-tempered, but so immoderately fond of play that his attention could not be fixed to his studies. At fourteen his tutor had the satisfaction of seeing a change come over his pupil, which Banks afterwards explained as follows. One fine summer evening he had stayed bathing in the Thames so long, that he found that all his companions had gone. Walking back leisurely along a lane, the sides of which were clothed with flowers, he was so struck by their beauty as to resolve to add botany to the classical studies imposed by authority. He submitted to be instructed by the women employed in culling simples to supply the druggists' shops, paying sixpence for each material item of information. During his next holidays, to his extreme delight he found a book in his mother's dressing-room, which not only described the plants he had met, but also gave engravings of them. This proved to be Gerard's 'Herball,' and although one of its covers was gone and several of its leaves were lost, he carried it back to school in triumph, and was soon able to turn the tables upon his former instructors.

He left Eton in his eighteenth year, but lost the last half-year of his education there. He had been taken home to be inoculated for small-pox, but the first attempt failed, and when he had fully recovered from the second it was thought fit to send him to Oxford. He was accordingly entered a gentleman commoner at Christ Church in December 1760.

His liking for botany increased while at the university, and he warmly embraced the other branches of natural history. Finding that no lectures were given in botany, he sought and obtained from the professor permission to procure a teacher to be paid by the students. He then went by stage-coach to Cambridge, and brought back with him Mr. Israel Lyons, astronomer and botanist, who afterwards published a small book on the Cambridge flora. Many years subsequently Lyons, through the interest of Banks, was appointed astronomer under Captain Phipps, afterwards Lord Mulgrave, on his voyage towards the North Pole.

Banks's father died in 1761 during his first year at Oxford, leaving him an ample fortune and estate at Revesby. He left Oxford in December 1763. In February 1764 he came of age and took possession of his paternal fortune. He had already attracted attention in the university by his superior attainments in natural history; and in May 1766 he was elected fellow of the Royal Society. During the same summer he went to Newfoundland to collect plants with his friend Lieutenant Phipps. He returned to England during the following winter by way of Lisbon. After his return an intimacy was established between Dr. Daniel Solander and himself, which was only ended by the death of the former. Solander had been a favourite pupil of Linnæus, and at the time when Banks first came to know him was employed as an assistant librarian at the British Museum. He afterwards became Banks's companion round the world, and subsequently his librarian until his death.

By his influence with Lord Sandwich, first lord of the admiralty, Banks obtained permission to accompany Cook's expedition in the Endeavour, equipped at his own expense, taking with him Dr. Solander, two draughtsmen—Mr. Buchan for landscape, and Mr. Sydney Parkinson for objects of natural history—and two attendants. The journal which he kept was largely utilised by Dr. Hawkesworth in his relation of the voyages of Carteret, Wallis, and Cook. Thence we learn that the Endeavour left Plymouth on a fair wind on the afternoon of 25 Aug. 1768.

Crossing the Bay of Biscay, Banks captured many of the surface animals and marine birds, and three weeks after quitting England Madeira was sighted. The harbour of Rio de Janeiro was reached on 13 Nov. The jealousy of the Portuguese officials prevented much collecting being done, except by stealth, and after many altercations with the governor Cook set sail after three weeks' stay in that port. They reached Le Maire's Strait in January 1769, and Banks with his assistants gathered winter's-bark in abundance. Here Banks, Solander, Green the astronomer, and Monkhouse the surgeon started for a day's trip into the interior. Ascending a hill they came upon a swamp, where a fall of snow greatly incommoded and chilled them. Buchan, the artist, was seized with a fit, and, a fire being lit, the least tired completed the ascent to the summit and came down without much delay to the rendezvous. It was now eight o'clock, and they pushed forwards to the ship, Banks bringing up the rear to prevent straggling. Dr. Solander begged every one to keep moving. The cold suddenly became intense. Solander himself was the first who lay down to rest, and at last fell asleep in spite of all Banks's efforts. A few minutes afterwards some of the people who had been sent forward returned with the welcome news that a fire was burning a quarter of a mile in advance. Solander was aroused with the utmost difficulty, having almost lost the use of his limbs, and a black servant had nearly perished. The fire having been reached, Banks sent back two of those who seemed least affected by the cold to bring back the couple who were left with the negro. It was then found that a bottle of rum was in the knapsack of one of the men; the negro was roused by the spirit, but he and his companions drank too freely of it, and all but one of them succumbed to the frost. Others of the party showed signs of frost-bite, but, thanks to Banks's indomitable energy, they were brought to the fire. Here they passed the night in a deplorable condition. They were nearly a day's journey from the vessel, and were destitute of food, except for a vulture which had been shot. It was past eight in the morning before any signs of a thaw set in; then they divided the vulture into ten portions—about three mouthfuls apiece—and by ten it was possible to set out. To their great surprise, they found themselves in three hours upon the beach.

After passing Cape Horn on 10 April 1769 the Endeavour sighted Tahiti, and three days after anchored in Port-Royal Bay. Within four days from this Buchan, the landscape

artist, died. This island being the appointed place of observation, a fort was built and preparations made for observing the transit of Venus; during the night the quadrant was stolen by the natives, but Banks had sufficient influence over them to regain it. The transit was observed on 3 June, 1769, particulars of which are given in the 'Philosophical Transactions,' lxi. part 2.

Whilst in the island Banks lost no opportunity of observing the customs of the inhabitants, and of getting a knowledge of the natural productions also. He was present at a native funeral, blackened with charcoal and water as low as the waist. Previous to sailing from Tahiti, Banks made as complete an exploration of the island as time permitted, and sowed in suitable spots seeds of melons and other plants, which he had brought from Rio de Janeiro.

The Endeavour proceeded to New Zealand, where six months were spent in exploration of the coast and its productions.

Australia was next visited, and a small kangaroo observed for the first time in Botany Bay, which was so named by the exploring party on account of the abundance of forms of plants unknown to Banks and Solander. The course of the voyage was northward, inside the great barrier reef on the north-east coast of Queensland, and all went well until the night of 10 June 1770, when the Endeavour stuck fast on a coral rock. The ship was lightened nearly fifty tons by throwing overboard six guns, ballast, and heavy stores. Soon afterwards day broke, and a dead calm followed. The pumps were kept going, but the crew became exhausted, and the situation was very critical. But at last the ship was hauled off the rocks, and sail was set to carry her to the land, about six leagues distant. One of the midshipmen, Mr. Monkhouse, suggested the expedient of 'fothering' the ship, which he carried out by sewing oakum and wool on a sail and drawing it under the ship's bottom. The suction of the leak drew it inwards, so as to stay the rush of water inwards. On 17 June, a convenient harbour having been found, the Endeavour was taken into it for careening and repair. The timbers were found to have been cleanly cut away by the rocks, and, most singular of all, a fragment of rock remained plugging the hole it had made. Had it not been for this happy circumstance, the ship must have inevitably foundered. In the operation of laying her ashore, the water in the hold went aft, and the bread room was flooded. In this room were stored the dried plants collected with great trouble during the early part of the voyage. The bulk, by

indefatigable care and attention, were saved, but some were utterly ruined.

Whilst here the kangaroo and other Australian animals which were new to science were observed, and some cockles so large that one was more than two men could eat.

On 4 July Banks and his party left the Endeavour River, so named by Cook, and by the 13th they managed to find a channel to the open sea through the great Barrier Reef, which they re-entered through Providential Channel.

From the mainland the voyage was prosecuted to New Guinea, and thence by the Dutch possessions in the Malay Archipelago to Batavia, which was reached on 9 Oct. 1770. Here it was found necessary to refit. Ten days after their arrival almost everybody was attacked by fever. Banks and Solander were so affected that the physician declared their cases hopeless, unless they were removed to the country. A house about two miles out was therefore hired for them, and, to secure attentive nursing, each bought a Malay female slave. They recovered slowly, and were able to rejoin the Endeavour on Christmas day, sailing from Batavia on 27 Dec., with forty sick on board and the rest in a very feeble state. During the passage from Java to the Cape of Good Hope, Sporing, one of Banks's assistants, and Sydney Parkinson, the natural history draughtsman, died and were buried at sea: the total number lost by death being twenty-three, besides seven buried at Batavia.

The Endeavour touched at St. Helena, and left that place on 4 May 1771. On 10 June the Lizard was sighted, and two days afterwards they landed at Deal. On 21 Nov. Banks was created hon. D.C.L. of Oxford.

The success of this voyage, and the enthusiasm it evoked, led to a second voyage under the same commander in the Resolution. At the solicitation of Lord Sandwich, first lord of the admiralty, Banks offered to accompany this expedition. The offer being accepted, the outfit was begun, and Zoffany the painter, three draughtsmen, two secretaries, and nine other skilled assistants were engaged. The accommodation on board was found insufficient, and additional cabins were built on deck. These were found on trial not only to affect the ship's sailing powers, but also her stability. They were therefore ordered to be demolished, and Banks abandoned his intention of sailing in the Resolution. Dr. Lind had been appointed naturalist to the expedition under a grant of 4,000*l.*, but on hearing of Banks's decision he declined the post. Dr. Johann Reinhold Forster and his son Georg ultimately sailed with the expedition.

Being disappointed in this quarter, Banks resolved to visit Iceland with his followers and Dr. Solander. He reached that island in August 1772, climbed to the top of Hecla, and returned in six weeks, the results being summarised in Dr. von Troil's volume.

Sir John Pringle, president of the Royal Society, retired from the chair in 1777, and Banks was chosen as his successor on 30 Nov. 1778, and held that distinguished position until his death. He found, it is stated, secretaries assuming the power which belonged to the president alone, and other abuses which he determined to rectify. This intention, coupled with the fact that natural history had been less cultivated than mathematics in the Royal Society, caused an amount of discontent amongst some of the members, which broke out a few years later in the session of 1783-4. The office of foreign secretary at that time was filled by Dr. Hutton, professor of mathematics at Woolwich; and he having been charged with neglecting his duties, a rule was framed by the council requiring the secretaries to live in London. Upon this Dr. Hutton resigned, after having defended his conduct in open meeting and a vote of the society having been recorded in his favour. This action was followed by several stormy meetings, in which one of the chief speakers in opposition to the chair was the Rev. Dr. Horsley, formerly one of the secretaries and afterwards bishop of St. Asaph. His speeches were of extreme bitterness, and as a last resource he threatened to quit the society with his friends. He said: 'I am united with a respectable and numerous band, embracing, I believe, a majority of the scientific part of this society, of those who do its scientific business. Sir, we shall have one remedy in our power when all others fail: if other remedies should fail, we can at least secede. Sir, when the hour of secession comes the president will be left with his train of feeble amateurs and that toy' (pointing to the mace) 'upon the table, the ghost of that society in which philosophy once reigned, and Newton presided as her minister. A motion was ultimately carried in support of the president's conduct, and a few members, Dr. Horsley among them, left the society. Harmony was restored, and the ascendancy of Banks never again questioned.

In March 1779 Banks married Dorothea, daughter of William Weston-Hugessen, of Provender, in Kent, who survived him. He was created a baronet in 1781, invested with the order of the Bath 1 July 1795, and sworn of the privy council 29 March 1797.

In 1802 he was chosen a member of the National Institute of France; and his letter

of thanks in response for the honour was the occasion of a bitter anonymous attack by his old opponent, Dr. Horsley, who taxed him with want of patriotic feeling.

Towards the close of his life he was greatly troubled with gout, so much so as to lose at times the use of his limbs. He died at his house at Spring Grove, Isleworth, on 19 June 1820, leaving a widow but no children. By his express desire he was buried in the simplest manner in the parish church. By will he left 200*l.* per annum to his librarian at his death, Robert Brown, with the use of his herbarium and library during his life, the reversion being to the British Museum. Brown made over these collections to the nation within a short time after acquiring possession of them. Francis Bauer was also provided for during his life, to enable him to continue his exquisite drawings from new plants at Kew.

The character which Banks has left behind him is that of a munificent patron of science rather than an actual worker himself. His own writings are comparatively trifling. He wrote 'A Short Account of the Causes of the Disease called the Blight, Mildew, and Rust,' which was published in 1805, reaching a second edition in 1806, and re-edited in 1807, besides being reprinted by W. Curtis in his 'Observations on the British Grasses,' and in the 'Pamphleteer' for 1813. He was the author of an anonymous tract on the 'Propriety of allowing a Qualified Exportation of Wool' in 1782, and in 1809 he brought out a small work on the merino sheep, a pet subject of his as well as of the king, George III. There were some short articles by him in the 'Transactions of the Horticultural Society,' a few in the 'Archæologia,' one in the 'Linnean Society's Transactions,' and a short essay on the 'Economy of a Park' in vol. xxxix. of Young's 'Annals of Agriculture.' He published Kaempfer's 'Icones Plantarum' in 1791 in folio, and directed the issue of Roxburgh's 'Coromandel Plants,' 1795-1819, 3 vols. folio. He seems to have given up all thought of publishing the results of his collections on the death of Dr. Solander in 1782 by apoplexy, although the plates were engraved and the text drawn up in proper order for press. The manuscripts are preserved in the botanical department of the British Museum in Cromwell Road.

His collections were freely accessible to all scientific men of every nation, and his house in Soho Square became the gathering-place of science. The library was catalogued by Dr. Dryander, and issued in five volumes in 1800-5, a work greatly valued on account of its accuracy. Fabricius described his insects; Broussonet received his specimens of fishes;

Gaertner, Vahl, and Robert Brown have largely used the stores of plants, and four editions of 'Desiderata' were issued previously to the publication of the 'Catalogues.' Banks spared neither pains nor cost in enriching his library, which at his death must be considered as being the richest of its class. It is still kept by itself in a room at the British Museum, although the natural history collections have been transferred to the new building at South Kensington.

An unstinted eulogy was pronounced by Cuvier before the Académie Royale des Sciences in the April following the death of Banks. In this he testifies to the generous intervention of Banks on behalf of foreign naturalists. When the collections made by La Billardière during D'Entrecasteaux's expedition fell by fortune of war into British hands and were brought to England, Banks hastened to send them back to France without having even glanced at them, writing to M. de Jussieu that he would not steal a single botanic idea from those who had gone in peril of their lives to get them. Ten times were parcels addressed to the royal garden in Paris, which had been captured by English cruisers. He constantly acted as scientific adviser to the king; it was he who directed the despatch of collectors abroad for the enrichment of the gardens at Kew.

The influence of his strong will was manifest in all his undertakings and voyages; he was to be found in the first boat which visited each unknown land. After his return he became almost autocratic in his power; to him everything of a scientific character seemed to gravitate naturally, and his long tenure of the presidential chair of the Royal Society led him to exercise over it a vigorous authority, which has been denounced as despotic.

Dr. Kippis's account in his pamphlet seems very fairly to describe the disposition of Banks: 'The temper of the president has been represented as greatly despotic. Whether it be so or not I am unable to determine from personal knowledge. I do not find that a charge of this kind is brought against him by those who have it in their power to be better judges of the matter. He appears to be manly, liberal, and open in his behaviour to his acquaintance, and very persevering in his friendship. Those who have formed the closest intimacy with him have continued their connection and maintained their esteem and regard. This was the case with Captain Cook and Dr. Solander, and other instances might, I believe, be mentioned to the same purpose. The man who, for a course of years and without diminution, preserves the affection of those friends who know him best, is not likely

to have unpardonable faults of temper. It is possible that Sir Joseph Banks may have assumed a firm tone in the execution of his duty as president of the society, and have been free in his rebukes where he apprehended that there was any occasion for them. If this hath been the case, it is not surprising that he should not be universally popular.

**BANKS, SARAH SOPHIA** (1744-1818), only sister of Sir Joseph Banks, was born in 1744 and died on 27 Sept. 1818, at her brother's house in Soho Square, after a short illness. She had kindred tastes to her brother, and although debarred from such adventurous voyages as he undertook, she amassed a considerable collection of objects of natural history, books, and coins. Sir Joseph Banks presented her coins and engravings to the British Museum. The Abbé Mann, one of her brother's correspondents, presented her, in 1797, with a collection of German coins which she added to her collection (*Letters of Eminent Literary Men*, Camd. Soc. pp. 445-7).

B. D. J.

**BANKS, THOMAS** (1735-1805), sculptor, the first of his country, according to Sir Joshua Reynolds, to produce works of classic grace, was the eldest son of William Banks, the land steward and surveyor of the Duke of Beaufort. He was born in Lambeth on 29 Dec. 1735. He is said by Flaxman to have been instructed in the principles of architecture, and to have practised drawing under his father, 'who was an architect.'

Banks was sent to school at Ross, in Herefordshire. At the age of fifteen he was placed under Mr. Barlow, an ornament carver, and served his full term of seven years' apprenticeship. Barlow lived near Scheemakers, the sculptor, and after working at Barlow's from 6 a.m. to 8 p.m. the youth studied at Scheemakers' from 8 to 10 or 11. He was employed by Kent, the architect. At the age of twenty-three he entered the academy in St. Martin's Lane, and between 1763 and 1769 obtained at least three medals and premiums from the Society of Arts. One of these honours was awarded for a bas-relief of the 'Death of Epaminondas' (1763) in Portland stone; another for a bas-relief in marble of 'Hector's Body redeemed' (1765); and a third for a life-size model in clay of 'Prometheus with the Vulture.' The last is praised by Flaxman as 'boldly conceived, composition harmonious and compact.' This was in 1769, the year of the first exhibition of the Royal Academy; and in 1770 Banks's name appears as an exhibitor of two designs of 'Æneas and Anchises escaping from the Flames of Troy.' In the same year he obtained the gold medal of the Academy for a bas-relief of the 'Rape of Proserpine.' In 1771 he exhibited a cherub hanging a garland on an urn (in clay), and a drawing of the head of an Academy model. The ability shown in these works and the 'Mercury, Argus, and Io' of the next year procured him a travelling studentship, and he left his house in New Bond Street, Oxford Street, and went to Rome, where he arrived in August 1772. He was now thirty-seven years old, and had married a lady of the name of Wooton, coheirress of certain green fields and flower gardens which have since been turned into the streets and squares of Mayfair. The portion of his wife and some assistance from his mother (his father being dead) placed him above the fear of want, and enabled him to prolong his stay in Italy for seven years. In 1779 he returned and took a house in Newman Street (No. 5), which he retained till his death. During his absence he exhibited two works only at the Royal Academy—a marble bas-relief of 'Alcyone discovering the Body of Ceyx' in 1775, and a marble bust of a lady in 1778; but the following are reckoned by different authorities as amongst the works of his Roman period: A bas-relief of the 'Death of Germanicus,' bought by Thomas Coke, Esq., of Holkham; another of 'Thetis rising to comfort Achilles,' probably the original of the fine work in marble presented by his daughter, Mrs. Forster, to the National Gallery in 1845; 'Caractacus and his Family before Claudius,' in marble (exhibited 1780);

portrait of the Princess Sophia of Gloucester as Psyche plucking the golden wool (model, exhibited 1781); Love seizing the human soul in the form of a butterfly. The last was brought home by the artist unfinished, and is probably the marble statue of Cupid, which was exhibited in 1781. In this year, finding little encouragement in England, he went to Russia, taking this figure with him, which was bought for 380*l.* by the Empress Catherine, who gave him the 'Armed Neutrality' as a subject to be done into stone. He is said to have executed this and other works at St. Petersburg; but either because the climate did not agree with him, or from discontent at his prospects in Russia, he returned to London in 1782, when he met with considerable encouragement. From 1780 to 1803 his name is absent three times only from the catalogues of the Royal Academy—in 1786, 1790, and 1801. In 1784 appeared (in plaster) his grand figure of 'Achilles enraged for the Loss of Briseis,' which was afterwards presented by his widow to the British Institution, where it stood in the vestibule till the alteration of the gallery in 1868. It is now (1885) in the entrance hall of the Royal Academy at Burlington House. In this year (1784) he was elected an associate, and the year afterwards a full member of the Royal Academy. As his diploma work he presented his finely conceived figure of the 'Falling Titan.' This work is sufficient to show that Banks was gifted with unusual imagination of a poetic kind; but there was little encouragement in England for works of this order, and though he continued to model them for his own pleasure, his commissions till the end of his life were confined to busts and monuments. Colonel Johnes, of Hafod in Cardiganshire, did indeed engage him to execute the 'Achilles enraged' in marble; but this friend and patron changed his mind in favour of 'Thetis dipping Achilles,' with Mrs. Johnes as Thetis, and Miss Johnes as the infant hero. Many of Banks's works were burnt at a fire at Hafod. In Westminster Abbey there are monuments by Banks to Dr. Watts, Woollett, the engraver, and Sir Eyre Coote. The last is celebrated for its life-size figure of a Mahratta captive, which was exhibited in 1789. In St. Paul's are his monuments to Captains Hutt, Westcott, and Rundle Burgess. His figure of Shakespeare, which long adorned the front of Boydell's Shakespeare Gallery (afterwards the British Institution) in Pall Mall, has been removed to Stratford. Other important works of his are the monument to Mrs. Petrie in Lewisham Church, the model for which, called 'Pity weeping at the Tomb of Benevolence,' was exhibited in 1788; and

another to Penelope Boothby in Ashbourne Church, Derbyshire. The latter represents the sleeping figure of a child of six, and the queen and her daughters are said to have burst into tears on seeing it at Somerset House in 1793. Banks was also the author of the statue of Lord Cornwallis at Madras, of General Coutts (executed for the India House), and of the monuments to Mr. Hand in Cripplegate Church, and to Baretti in St. Marylebone Old Church. Amongst his busts may be mentioned Horne Tooke, Warren Hastings (now in the National Portrait Gallery), Mrs. Cosway, and Mrs. Siddons as Melpomene. His last exhibited work (1803) was a bust of Oliver Cromwell. At the International Exhibition in 1862, besides the 'Falling Titan,' 'Achilles enraged,' and 'Thetis rising to console Achilles,' there was a work called 'Achilles putting on Helmet,' belonging to Mr. E. H. Corbould. At his death his studio was full of sketches of poetical subjects, chiefly Homeric, many of which are praised by Allan Cunningham.

Few incidents are recorded in the life of Banks. He was the friend of Hoppner, Flaxman, Fuseli, and Horne Tooke, and was arrested on the charge of high treason about the same time as Tooke and Hardy. It is said that his practice suffered from suspicion of his revolutionary tendencies. He was noted for his kindness to young artists, and was of special service to young Mulready. Banks is represented as tall, erect, silent, and dignified, with a winning address and persuasive manners. He was religious and strict in his manners, frugal of habit, but liberal to others. He made a fine collection of engravings and drawings by the old masters, which, after his death, came into the possession of his daughter, Mrs. Forster, and have since been divided between E. J. Poynter, R.A., and Mrs. Lee Childe. He died on 2 Feb. 1805, and was buried in Paddington churchyard. Flaxman delivered an address to the students of the Royal Academy on the occasion of his death, and there is a plain tablet to his memory in the north aisle of Westminster Abbey.

**BANKS, THOMAS CHRISTOPHER** (1765–1854), genealogist, claimed by his father connection with the family of Banks of Whitley, in Yorkshire, whose descent he traced from Richard Bankes [q. v.], a baron of the exchequer in the time of Henry IV and

Henry V; and he asserted that his maternal ancestors were the Nortons of Barbados, baronets of Nova Scotia. He was educated for the law, and on the strength of his genealogical knowledge proffered his services as an agent in cases of disputed inheritance. From 1813 to 1820 he practised at 5 Lyon's Inn, and subsequently he took an office, called the Dormant Peerage Office, in John Street, Pall Mall. Although none of the cases he undertook possessed more than the very flimsiest claims, and there was scarcely any genealogical will-of-the-wisp which he was not ready, if the fancy struck him, to adopt as a reality, his researches, when his imagination was left unbiassed, were of the most thorough and painstaking kind, and many of his published works possess a very high degree of merit. The 'Manual of the Nobility,' his first publication, appeared in 1807. The same year he brought out the first volume of the 'Dormant and Extinct Baronage of England,' a second volume following in 1808, and a third in 1809. In 1812 he published the first volume of a corresponding work on the 'Peerage,' nearly one half of the volume being occupied with an account of the royal families of England down to the death of Queen Anne, and the remainder by the peerage from Abergavenny to Banbury; but the work was never carried beyond this volume. The same year he edited, in one volume, reprints of Dugdale's 'Ancient Usage in bearing Arms,' Dugdale's 'Discourse touching the Office of Lord High Chancellor,' with additions, together with Segar's 'Honores Anglicani.' The first of his pamphlets in support of spurious claims to peerages appeared also in the same year under the title 'An Analysis of the Genealogical History of the Family of Howard with its Connections; showing the legal course of descent of those numerous titles which are generally, but presumed erroneously, attributed to be vested in the dukedom of Norfolk.' In 1815 the pamphlet was republished with the more sensational title, 'Ecce Homo, the Mysterious Heir: or Who is Mr. Walter Howard? an interesting inquiry addressed to the Duke of Norfolk.' A third edition appeared in 1816, with a copy of Mr. Walter Howard's petition to the king. The same year there was published anonymously the 'Detection of Infamy, earnestly recommended to the justice and deliberation of the Imperial Parliament by an Unfortunate Nobleman.' The author of the pamphlet, as attested by his own hand in the British Museum copy, was Mr. Banks; the unfortunate nobleman was Thomas Drummond, of Bid-dick, who, as a descendant of the junior branch of the Drummonds, claimed to suc-

ceed to the estates in preference to James Drummond, who had been recognised as heir in 1784, and was created Lord Perth in 1797. About this time Banks was also engaged in compiling the cases printed by Lewis Dymoke on his claim to the barony of Marmion in right of the tenure of the manor of Scrivelsby, Lincoln. In 1814 he published an 'Historical and Critical Enquiry into the Nature of the Kingly Office, the Coronation, and Office of King's Champion;' and in 1816 a 'History of the Ancient Noble Family of Marmyun, their singular Office of King's Champion.' In 1825 he brought out 'Stemmata Anglicana; or, a Miscellaneous Collection of Genealogy, showing the descent of numerous ancient and baronial families, to which is added an analysis of the law of hereditary dignities, embracing the origin of nobility.' The second part contained an account of the ancient and extinct royal families of England, re-embodied from the 'Extinct Peerage.' In 1837 this was republished as a fourth volume of the 'Dormant and Extinct Baronage of England,' and continued down to January 1837, with corrections, appendices, and index. In 1830 he undertook the case of Alexander Humphrys, or Alexander, who laid claim to the earldom of Stirling, as descended from a younger branch of the family by the female side; his mother, who died in 1814, assuming to be Countess of Stirling in her own right. In support of the claims of Humphrys there appeared in 1830 'Letters to the Right Hon. the Lord K— on the Right of Succession to Scottish Peerages,' which reached a second edition. The letters were by Mr. E. Lockhart; the advertisement, pp. 1-8, and the appendix, pp. 43-118, by Banks. The same year Banks published on the subject a 'Letter to the Earl of Roseberry in relation to the proceedings at the late election of Scotch peers,' and this was followed in 1831 by an 'Address to the Peers of Scotland by Alexander, Earl of Stirling and Dovan,' and in 1832 by an 'Analytical Statement of the Case of Alexander, Earl of Stirling and Dovan.' Banks gave proof of his own personal faith in the claims of Humphrys by allowing the pseudo-earl, in accordance with rights conferred on the first Earl of Stirling by King James, to create him a baronet, and by accepting from him, in anticipation, a grant of 6,000 acres of land in Nova Scotia. When the documents on which Humphrys founded his claims were discovered to be forgeries, Banks ceased to make use of his own title; but in his obituary notice he is styled 'a Baronet of Nova Scotia and Knight of the Holy Order of St. John of Jerusalem.' While the Stirling case was still in progress, Banks

published the imaginary discovery of another unrecognised claim to a peerage, under the title of a 'Genealogical and Historical Account of the Earldom of Salisbury, showing the descent of the Baron Audley of Heleigh from the William Longespé, Earl of Salisbury, son of King Henry II by the celebrated Fair Rosamond, and showing also the right of the Baron Audley to the inheritance of the same earldom.' In 1844 he published, in two parts, 'Baronia Anglica Concentrata.' He also published, without date, 'Observations on the Jus et Modus Decimandi,' an 'Account of the ancient Chapel of St. Stephen's at Westminster,' and a 'Poem on the Family of Bruce.' During his later years he resided near Ripon, Yorkshire. He died at Greenwich 30 Sept. 1854.

[Gent. Mag. New Series, xliii. 206-8.]

T. F. H.

**BANKS, WILLIAM STOTT** (1820-1872), antiquary, was born at Wakefield, Yorkshire, in March 1820, of humble parentage. He received a scanty education at the Lancasterian school in that town, and at the age of eleven started life as office-boy to Mr. John Berry, a local solicitor. He was afterwards clerk in the office of Messrs. Marsden & Ianson, solicitors and clerks to the West Riding justices, and upon the dissolution of the firm in 1844 he remained with Mr. Ianson, to whom he subsequently articulated himself. After the usual interval Banks was admitted an attorney in Hilary Term, 1851, and in 1853 became a partner, the firm being Messrs. Ianson & Banks. On the formation of the Wakefield Borough Commission in March 1870 he was elected clerk to the justices, an office which he retained until his death. He had, in 1865, become known as an author by the publication of his 'List of Provincial Words in use at Wakefield,' an unpretending little volume, but a model of its kind. The following year he gave to the world the first of his excellent manuals, entitled 'Walks in Yorkshire: I. In the North-west; II. In the North-east,' which had previously appeared in weekly instalments in the columns of the 'Wakefield Free Press.' Shortly before his death he issued a companion volume, called 'Walks in Yorkshire: Wakefield and its neighbourhood.' Both works are remarkable for their completeness and happy research. Banks died at his house in Northgate, Wakefield, on the Christmas day of 1872, having returned but a few weeks from the continent, whither he had journeyed in a vain search for health.

[Wakefield Free Press, 28 Dec. 1872, and 18 Jan. 1873; Notes and Queries, 4th series,

xi. 132; Yorkshire Archaeological and Topographical Journal, ii. 459-60.] G. G.

**BANKTON, LORD** (1685-1760), Scottish judge. [See MACDOWALL, ANDREW.]

**BANKWELL, BAKWELL, BACQWELL, or BANQUELLE, JOHN DE** (d. 1308), judge, was alderman successively of Cripplegate (1286-9) and of Dowgate (1291-8) wards. He was the first 'clerk' or town clerk of London on record (cf. *Letter-book A*, fo. 74 b under date Nov. 1284). He was appointed in 1297 to travel the forests in Essex, Huntingdon, Northampton, Rutland, Surrey, and Sussex, to enforce the observance of the forest laws of Henry III, and in 1299 was made a justice itinerant for Kent, and a baron of the exchequer in 1307. Summoned to attend Edward II's coronation and parliament in 1308, he was trampled to death at court at the coronation 25 Feb. 1308. His widow, Cicely, was relieved from the payment of four marks, at which her property had been assessed for taxation, by favour of the king. Bankwell had landed property at Lee and elsewhere in Kent which descended, according to the Kentish custom of gavelkind, to his two sons Thomas and William.

[Parl. Writs, ii. div. ii. pt. i. 17, 18, pt. ii. 5; Madox's Hist. of Exch. ii. 230; Hasted's Kent, i. 64, 92; Dugdale's Chron. Ser. 33, 34.] J. M. R.

**BANKWELL, ROGER DE** (fl. 1340), judge, perhaps of the same family as John de Bankwell [q.v.], was one of three commissioners entrusted with assessment of tallage in the cos. of Nottingham and Derby in 1333, and a member of a commission directed to inquire into the circumstances connected with a fire which had recently occurred at Spondon in Derbyshire, on account of which the sufferers prayed exemption from taxation. He appears as a counsel in the year-book for 1340, in 1341 was appointed to a justiceship of the king's bench, and was trier of petitions from Gascony, Wales, Ireland, Scotland, and 'other foreign parts' 1341-7.

[Rot. Parl. ii. 147, 447; Rymer's Fœdera, ed. Clarke, ii. pt. ii. 1133; Dugdale's Chron. Ser. 44.] J. M. R.

**BANKYN or BANEKYNE, JOHN** (fl. 1382), Augustinian friar and opponent of Wycliffe, was born in London and educated in the Augustinian monastery of that city and afterwards at Oxford, where he attained the degree of doctor of divinity. He attended the provincial council of Blackfriars which condemned certain of Wycliffe's opinions in May 1382 (*Fasciculi Zizaniorum*, pp. 286, 499; cf. pp. 272 sq.: ed. Shirley, Rolls Series). Bishop Bale states that Bankyn was a popular preacher and an able disputant, and that his

writings comprise 'Determinaciones' and 'Sermones ad Populum,' as well as a book 'Contra Positiones Wiclevi' (*Script. Illustr. Catal.* vi. 97). Of these works, however, no copies are known to be extant.

The ambiguity of the manuscript of the 'Fasciculi Zizaniorum' (Bodl. Libr. e Mus. 86, fol. 65 b, col. 1), which ignores the distinction between *n* and *u*, has led Shirley to print the name 'Baukinus;' and Foxe (*Acts and Monuments*, i. 495, ed. 1684) anglicises it as 'Bowkin.' The *n*, however, appears in two other copies (*Fasc. Ziz.* p. 499, and WILKINS, *Concil. Magn. Brit.* iii. 158.)

[The additions which Pits (Relat. Hist. de Rebus Angl. i. 539, 161) makes to Bankyn's biography are ostensibly derived from the Fasciculi; but neither the edition nor the manuscript of this work contains anything beyond the bare name of the friar, and Pits's notice may be safely taken as a simple catholic version of Bale. The article in J. Pamphilus, Chron. Ord. Frat. Eremit. S. August. (Rome, 1581, quarto), is equally unoriginal.] R. L. P.

**BANNARD, JOHN** († 1412), Augustinian friar at Oxford, is mentioned in Anthony à Wood's account of the Oxford members of this fraternity. According to Wood he flourished about 1412, and is stated to have been professor of theology, and afterwards chancellor of the university. Wood professes to have collected the materials for his short notice of Bannard from some manuscript fragments extant in his time in the library of Corpus Christi College, Oxford, which formerly belonged to the library of Exeter Cathedral. Tanner adds that in the same college library (*MS. cxvi.*) there is a treatise directed against the views entertained by John Bannard, the Augustinian, on the question of the Immaculate Conception; but no mention of this author is to be found in Mr. Coxe's catalogue of the Oxford college manuscripts. According to Wood, Bannard's chief work was entitled 'Eruditæ Quæstiones in Magistrum Sententiarum;' and he adds that this production created such a stir as to call forth a refutation at the hands of other Oxford divines of the age.

[Tanner's *Bibl. Brit.*; Wood's *Historia et Antiquitates*, 118; Dugdale's *Monasticon* (ed. 1830), vi. 1598.] T. A. A.

**BANNATYNE, GEORGE** (1545-1608?), collector of Scottish poems, seventh of the twenty-three children of James Bannatyne of Kirktown of Newtyle in Forfarshire and Katherine Taillefer, was bred to trade, and acquired considerable property in or near Edinburgh, of which he was admitted a burgess in 1587. His only surviving child

by his wife Isobel Mawchan, Janet, married George Foulis of Woodhall and Ravelston, second son of James Foulis of Colinton. The family of Foulis preserved the manuscript well known as the 'Bannatyne MS.,' now in the Advocates' Library, Edinburgh, which entitles George Bannatyne to the gratitude of students of Scottish poetry. This manuscript was written during the pestilence of 1568, which forced him to leave his business and take refuge in Forfarshire, and is styled by him 'Ane most godlie mirrie and lustie Rapsodie maide be sundrie learned Scots poets and written be George Bannatyne in the tyme of his youth.' It is a neatly written folio of 800 pages divided into five parts, thus described in one of the verses by himself, which prove him a lover rather than a maker of poetry :

The first concernis Godis gloir and our salvatioun;  
The next are morale, grave, and als besyd it,  
Ground on gude counsale; the third, I will not  
hyd it,  
Ar blyth and glaid maid for our consollatioun;  
The ferd of luv and thair richt reformatioun;  
The fyft ar tailis and stories weill discydit.

In this, a somewhat earlier compilation by Sir Richard Maitland of Lethington, and that by John Asloan, now in the Auchenleck Library, are preserved most of the poems of Dunbar, Henryson, Lyndsay, and Alexander Scott, as well as many poems by less-known or unknown 'makers' of the fifteenth and first half of the sixteenth century, during which Scottish poetry was at its best, until its splendid revival in Burns and Scott. The contents of this manuscript were first partially printed by Allan Ramsay in the 'Evergreen,' and afterwards by Lord Hailes in his 'Ancient Scottish Poems,' but the whole manuscript has now been more accurately printed by the Hunterian Club. Bannatyne was adopted as the patron of the Bannatyne Club of Edinburgh, which, under the presidency of Sir Walter Scott, was instituted in 1823, and printed many valuable memorials of the history and literature of Scotland. In the 'Memorials of George Bannatyne,' one of its publications, will be found a grateful and graceful memoir of their patron by Scott, and a detailed catalogue of the contents of his manuscript by Mr. D. Laing. The exact date of his death is unknown, but it was prior to December 1608. On returning the manuscript to its owner, Mr. Carmichael, Ramsay added the lines :

In seventeen hundred twenty-four  
Did Allan Ramsay keen-  
ly gather from this Book that store  
Which fills his Evergreen.

Thrice fifty and sax towmonds neat  
 Frae when it was collected;  
 Let worthy Poets hope good fate,  
 Thro' time they'll be respected.  
 Fashions of words and witt may change,  
 And rob in part their fame,  
 And make them to dull fops look strange,  
 But sense is still the same.

Ramsay, however, took considerable liberties with the text and added some poems of his own, skilfully imitating the style of the ancient poets, whose genuine works must be read in the publication of Bannatyne's manuscript by the Hunterian Club or the standard editions of the principal authors.

[Memorials of George Bannatyne.] Æ. M.

BANNATYNE, RICHARD (d. 1605), secretary to John Knox, the Scottish reformer, has left no 'memorials' whatever of himself, though his 'Memorials of Transactions in Scotland from 1569 to 1578' is an important historic authority. It has been inferred that he was of the same family with George Bannatyne [q. v.], and that he was a reader or catechist under Knox. But there is really nothing to rest these inferences on. Beyond the facts that he appeared repeatedly in the general assembly of the 'kirk' of Scotland, and before the 'kirk' session of Edinburgh during the illness or absence of the great reformer, and that he was permitted to address the courts as a 'prolocutor' or speaker, there is no evidence that he filled any public office.

At the first general assembly held after the death of Knox, which took place in November 1572, Bannatyne presented a petition or supplication, praying that he should be appointed 'by the kirk to put in order, for their better preservation, the papers and scrolls left to him' by the reformer. The general assembly agreed to his request. About 1575, after he had completed the task, Bannatyne became clerk to a Mr. Samuel Cockburn, of Tempill, or Tempill-hall, advocate. He remained in his service for thirty years, and at last appointed him joint-executor of his last will and testament, in association with an only brother, James Bannatyne, a merchant of Ayr. He died on 4 Sept. 1605. It is his relation to John Knox that gives him his chief interest. The following notice of him, and of one of the latest appearances of the reformer in the pulpit, is taken from the 'Diary' of James Melville (1556-1601):—

'The toun of Edinbruche [Edinburgh] recovered againe, and the guid and honest men therof retourned to their houses. Mr. Knox, with his familie, past hame to Edin-

bruche; being in Sanct Andros he was verie weak. I saw him every day . . . go hulie and fear [lie], with a furring of martriks about his neck, a staff in the ane hand, and guid godly Richard Bellanden [Bannatyne], his servand, haldin vpe the other oxtar [arm-pit] from the Abbay to the parochie kirke, and be the said Richard and another servant, lifted vpe to the pulpit, whar he behouit to lean at his first entrie; bot or he haid done with his sermont, he was so active and vigorous, that he was lyke to ding the pulpit in blads, and flie out of it' (p. 26). Just when the reformer was breathing his last, Bannatyne is said to have addressed his beloved master thus: 'Now, Sir, the time yee have long called to God for, to witt, an end of your battell, is come, and seeing all natural powers faile, give us some signe that yee remember upon the comfortable promises which yee have oft shewed unto us.' 'He lifted up his one hand, and incontinent thereafter rendered his spirit about eleven hours at night' (CALDERWOOD'S *History*, iii. 237). Bannatyne's 'Memorials' (fully and carefully edited by Pitcairn for the Bannatyne Club) make no pretence to either learning or literary style. They are of permanent value for details of the time not ascertainable elsewhere.

[McCrrie's *Life of Knox*; Sir J. G. Dayell's and Pitcairn's edition of the *Memorials*; Anderson's *Scottish Nation*.] A. B. G.

BANNATYNE, SIR WILLIAM MACLEOD (1743-1833), Scotch judge, was the son of Roderick Macleod, writer to the signet, and was born 26 Jan. 1743-4. Admitted a member of the Faculty of Advocates in 1765, he soon acquired, by the help of his father and his gift of clear perspicuous statement, a good position at the bar. Through his mother he succeeded to the estate of Kames, in Bute, when he assumed the name of Bannatyne; but his careless and expensive habits rendered it necessary for him in a few years to part with the property. In 1799 he was promoted to the bench, with the title of Lord Bannatyne. In this position his upright and impartial conduct and sound legal acquirements secured him general respect, although his judgments—clear and precise as they were when he stated them—became strangely intricate and involved when they were put by him in writing. On his retirement from the bench, in 1823, he received the honour of knighthood. He died at Whitesford House, Ayr, 30 Nov. 1833.

Sir William Macleod Bannatyne was one of the projectors of the Edinburgh periodicals, the 'Mirror' and 'Lounger,' edited by

Henry Mackenzie, with whom, and with Blair, Cullen, Erskine, and Craig, he lived on terms of intimate friendship. Much of his spare time was spent in the gratification of his literary tastes, and his papers in the 'Mirror' and 'Lounger' display much genial wit and sprightliness. He was one of the originators of the Highland Society in 1784, and he was an original member of the Bannatyne Club, which, at its institution, was limited to thirty-one members. For some years he remained the sole survivor of the old literary society of Edinburgh, whose mild splendours were eclipsed by the brilliant achievements of the succeeding generation with whom he mingled during the latter period of his life. He was among the last of the Scotch gentlemen who combined in their manners dignity and grace with a homely simplicity now for ever lost, and could make use of the graphic and strong vernacular Scotch in the pure and beautiful form in which, for many years after the union, it continued to be the current speech of the Scotch upper classes.

[Kay's Series of Original Portraits and Caricature Etchings, edition of 1877, ii. 370-71; Gent. Mag. New Series, i. 105.] T. F. H.

**BANNERMAN, ANNE** (d. 1829), Scottish poetical writer, published at Edinburgh in 1800 a small volume of 'Poems,' which was followed in 1802 by 'Tales of Superstition and Chivalry.' In December 1803 she lost her mother, and about the same time her only brother died in Jamaica. She was thus left without relatives, and in a state of destitution. Dr. Robert Anderson, writing to Bishop Percy 15 Sept. 1804, says: 'I have sometimes thought that a small portion of the public bounty might be very properly bestowed on this elegantly accomplished woman. I mentioned her case to Professor Richardson, the confidential friend and adviser of the Duke of Montrose, a cabinet minister, who readily undertook to co-operate in any application that might be made to government. The duke is now at Buchanan House, and other channels are open, but no step has yet been taken in the business. . . . Perhaps an edition of her poems by subscription might be brought forward at this time with success.' The latter suggestion was acted upon, and about 250 subscribers of a guinea were obtained for the new edition of the 'Poems,' including the 'Tales of Superstition and Chivalry,' which was published at Edinburgh in 1807, 4to, with a dedication to Lady Charlotte Rawdon. Shortly afterwards Miss Bannerman went to Exeter as governess to Lady Frances Beresford's

daughter. She died at Portobello, near Edinburgh, on 29 Sept. 1829 (*Glasgow Courier*).

[Nichols's Illustrations of Literary History, vii. 97, 112, 123, 129, 133, 135, 138, 164, 181, 182; Cat. of Printed Books in Brit. Mus.; Biog. Dict. of Living Authors (1816), 13.] T. C.

**BANNERMAN, JAMES, D.D.** (1807-1868), theologian, son of Rev. James Patrick Bannerman, minister of Cargill, Perthshire, was born at the manse of Cargill, 9 April 1807, and after a distinguished career at the university of Edinburgh, especially in the classes of Sir John Leslie and Professor Wilson, became minister of Ormiston, in Midlothian, in 1833, left the Established for the Free church in 1843, and in 1849 was appointed professor of apologetics and pastoral theology in the New College (Free church), Edinburgh, which office he held till his death, 27 March 1868. In 1850 he received the degree of D.D. from Princeton College, New Jersey. He took a leading part in various public movements, especially in that which led in 1843 to the separation of the Free church from the state, and subsequently in the negotiations for union between the nonconformist presbyterian churches of England and Scotland. His chief publications were: 1. 'Letter to the Marquis of Tweeddale on the Church Question,' 1840. 2. 'The Prevalent Forms of Unbelief,' 1849. 3. 'Apologetical Theology,' 1851. 4. 'Inspiration: the Infallible Truth and Divine Authority of the Holy Scriptures,' 1865. 5. 'The Church: a Treatise on the Nature, Powers, Ordinances, Discipline, and Government of the Christian Church,' 2 vols. 8vo; published after his death in 1868, and edited by his son. 6. A volume of sermons (also posthumous) published in 1869. In 1839 he married a daughter of the Hon. Lord Reston, one of the senators of the College of Justice.

[Preface to The Church, by his son; Omond in Disruption Worthies, 1876; Scott's Fasti Eccl. Scot. pt. i. 303.] W. G. B.

**BANNERMANN, ALEXANDER** (A. 1766), engraver, was born in Cambridge about 1780. He engraved some plates for Alderman Boydell, 'Joseph interpreting Pharaoh's Dream,' after Ribera; the 'Death of St. Joseph,' after Velasquez; and 'Dancing Children,' after Le Maire. For Walpole's 'Anecdotes of Painters' he also engraved several portraits. In 1766 he was a member of the Incorporated Society of Artists; in 1770 he is known to have been living in Cambridge. In Nagler's dictionary (ed. 1878) is a long list of his works; there are good specimens in the print room of the British Museum.

[Redgrave's Dict. of Artists of Eng. School; Strutt's Dict. of Engravers; Nagler's Allgemeines Künstler-Lexikon; Heineken's Dictionnaire des Artistes.] E. R.

**BANNISTER, CHARLES** (1738?-1804), actor and vocalist, whose fame is eclipsed by that of his son John [q. v.], was born in Gloucestershire, according to the 'Thespian Dictionary,' no very trustworthy authority, in 1738. Seven years after his birth his father obtained a post in the victualling office at Deptford, to which place the family removed. Bannister appears from an early age to have had the run of the Deptford theatre, in which, before he was eighteen, he played as an amateur Richard III, Romeo, and probably some other characters. An application to Garrick for employment being unsuccessful, he joined the Norwich circuit. His début in London was made in 1762 at the Haymarket, then under the management of Foote. The piece was the 'Orators,' a species of comic lecture on oratory, written and spoken by Foote, supported by various pupils placed in the boxes, as though they belonged to the audience. The character assigned to Bannister was Will Tirehack, an Oxford student. Palmer, subsequently his close friend, is said, in the 'Life of John Bannister' by Adolphus, to have made his début as Harry Scamper in the same play. The statement is, however, inaccurate, the début of Palmer having taken place a few months earlier at Drury Lane. Bannister's imitations of singers like Tenducci and Champneys were successful, and led to his appearance as a vocalist at Ranelagh and elsewhere. Garrick's attention was now drawn to the young actor, who made his début at Drury Lane in 1767, it is said, as Merlin in Garrick's play of 'Cymon.' This is possible. Bensley, however, 'created' that character 2 Jan. 1767, and the name of Bannister does not appear in Genest till the following season, 1767-8, when he is found, 23 Oct., playing the Prompter in 'A Peep behind the Curtain, or the New Rehearsal,' a farce attributed to Garrick. During many years Bannister acted or sang at the Haymarket, the Royalty, Covent Garden, and Drury Lane. His death took place 26 Oct. 1804 in Suffolk Street. An excellent vocalist, with a deep bass voice and a serviceable falsetto, a fair actor, a clever mimic, smart in rejoinder, good-natured, easy-going, and thoroughly careless in money matters, he obtained remarkable social success, was popularly known as honest Charles Bannister, and was the hero of many anecdotes of questionable authority. In one or two characters he

was unrivalled. Of these, Steady, in the 'Quaker,' was probably best known. It has been said that no adequate representative of Shakespeare's Caliban has been seen since Bannister's death.

[Adolphus's Memoirs of John Bannister, 2 vols., 1838; Thespian Dictionary, 1805; Genest's Account of the English Stage, 1832; Doran's Their Majesties' Servants, 2 vols., 1864.] J. K.

**BANNISTER, JOHN** (1760-1836), comedian, born at Deptford 12 May 1760, was the son of Charles Bannister [q. v.]. A taste for painting which he displayed while a schoolboy led to his becoming a student at the Royal Academy, where he had for associate and friend Rowlandson, the caricaturist. His theatrical bent, shown at times to the interruption of his fellow students, and, according to Nollekens, to the great disturbance of Moser, the keeper of the Academy, led to his abandoning the pursuit of painting, and adopting the stage as a profession. Before quitting the Academy he called upon David Garrick, who, two years previously, in 1776, had retired from the stage. Bannister's account of an interview which, though formidable, was not wholly discouraging, is preserved in the diary used by his biographer, Adolphus. Garrick manifested some interest in the young aspirant, and appears to have afforded him instruction in the character of Zaphna, a rôle 'created' by Garrick in a version by the Rev. James Miller of the 'Mahomet' of Voltaire. Bannister's first appearance took place at the Haymarket, for his father's benefit, on 27 Aug. 1778, as Dick in Murphy's farce, the 'Apprentice.' The character, a favourite with Woodward, who had died in the April of the previous year, suggested formidable comparisons, which Bannister seems to have stood fairly well. He recited on this occasion a prologue by Garrick, which Woodward was also in the habit of delivering, and wound up his share in the entertainment by exercising a strong power of mimicry which he possessed, and giving imitations of well-known actors. The following season, 1778-9, saw Bannister engaged with his father as a stock actor at Drury Lane, the début being made on 11 Nov. 1778 in the character of Zaphna (Seid in the original), commended to him by Garrick, with whom it was a favourite. Palmira was played by Mrs. Robinson, better known as Perdita, Alcanor by Bensley, and Mahomet by Palmer. On 19 Jan. following, according to Adolphus, but more probably, according to Genest, 19 Dec., he appeared, again in Voltaire, as Dorislas in a version by Aaron Hill of 'Mérope.' On 2 Feb. at Covent Garden he played

Achmet in Dr. Brown's tragedy of 'Barbarossa.' His transference to these boards was attributable to a species of coalition between the two great houses then in practice. His only other appearance this season was for his benefit at Covent Garden on 24 April 1779, when he acted the Prince of Wales in the 'First Part of Henry IV,' and Shift in Foote's comedy, the 'Mirror,' and gave his imitations. While Drury Lane was shut, Bannister joined Mattocks's company at Birmingham, playing such characters as Macduff, Orlando, Edgar Lothario, George Barnwell, and Simon Pure. His first 'creation' of importance appears to have been Don Ferolo Whiskerandos in the 'Critic,' which was produced at Drury Lane on 29 Oct. 1779. An appearance in 'Hamlet' followed, and is not remarkable, except for the fact that Bannister had influence enough to induce the management to remove the alterations in the play made by Garrick. Whatever capacity Bannister possessed in tragedy that was not eclipsed by the established reputation of Henderson had shortly to yield to the growing fame of Kemble. Lamb, who in a noted parallel between him and Suett speaks of the two as 'more of personal favourites with the town than any actors before or after,' says Bannister was 'beloved for his sweet good-natured moral pretensions,' and adds that 'your whole conscience was stirred' with his Walter in 'The Children in the Wood.' Leigh Hunt speaks of him as 'the first low comedian on the stage.' So late as 1787 we find him still essaying George Barnwell, and during previous years such characters as Posthumus, Oroonoko, Chamont in the 'Orphan,' and Juba in 'Cato,' divide attention with happier efforts as Charles Surface and Parolles. By the year 1787 Bannister's social and professional position was established. Inkle in 'Inkle and Yarico' was created by him, and Almaviva in 'Follies of a Day' (La Folle Journée) and Scout in the 'Village Lawyer' (L'Avocat Patelin) added to his repertory. Brisk in the 'Double Dealer' of Congreve, Sir David Dunder in Colman's 'Ways and Means,' Ben in 'Love for Love,' Brass in the 'Confederacy,' Scrub in the 'Beaux' Stratagem,' Trappanti in Cibber's 'She would and she would not,' Speed in the 'Two Gentlemen of Verona,' are among the parts that prepared the way for his conspicuous success as Sir Anthony Absolute and Tony Lumpkin, characters in which he was received with pleasure to the end of his career. In 1792 the wife of Bannister, whom he had married at Hendon on 26 Jan. 1783, and who, under her maiden name of Harper, had acquired some reputation, retired from the stage, the reason

being her increasing family. Bannister still retained, in the height of his success, his taste for painting, and Rowlandson, Morland, and Gainsborough were his close friends. From this time forward his career was an unbroken triumph. The principal comic parts in the old drama fell by right into his hands, and his acceptance of a rôle in a new piece was of favourable augury. Bob Acres, Job Thornbury in 'John Bull,' Marplot, Caleb Quotem, Colonel Feignwell in 'A Bold Stroke for a Wife,' Dr. Ollapod, Young Philpot in the 'Citizen,' and Dr. Pangloss, are among his greatest performances; Mercutio being the only comic character of importance that seemed outside his range. In 1802-3 he was acting manager at Drury Lane. At one period, commencing 1807, he gave a monologue entertainment, with songs, entitled 'Bannister's Budget.' On 1 June 1815 Bannister retired from the stage, playing in Kenney's comedy, the 'World,' Echo, a character created by him, and affording room for a display of his mimetic gifts, and Walter in 'Children in the Wood.' He also spoke a farewell address. He died in Gower Street on 7 Nov. 1836, at 2 a.m., and was buried on the 14th in the church of St. Martin's-in-the-Fields in a vault with his father. The stage can point to few men of more solid virtue or unblemished character. His acting obtained the high praise of the acutest judges. Of the galaxy of comic actors which marked the close of the last and the beginning of the present century he was one of the brightest stars. A portrait of him, by Russell, R.A., in the Garrick Club, shows him with a bright and intellectual face, and a very well-shaped head.

[Adolphus's Memoirs of John Bannister, two vols. 1838; Genest's Account of the English Stage from the Restoration in 1660 to 1830, Bath, 1832, 10 vols.; Reminiscences of Michael Kelly, 2 vols., 2nd edit. Lond. 1826; Thespian Dictionary, 1805; Secret History of the Green Room, 2 vols. 1795; Dr. Doran's Their Majesties' Servants, 2 vols. 1864; Leigh Hunt's Critical Essays on the Performers of the London Theatres, 1807; Lamb's Essays of Elia, Works, vol. iii. ed. 1876.]  
J. K.

**BANNISTER, JOHN, LL.D.** (1816-1873), philologist, son of David Bannister, by his wife Elizabeth Greensides, was born at York on 25 Feb. 1816, and educated at Trinity College, Dublin (B.A., 1844; M.A., 1853; LL.B. and LL.D., 1866). He was curate of Longford, Derbyshire, 1844-5, and perpetual curate of Bridgehill, Duffield, Derbyshire, from 1846 till 1857, when he was appointed perpetual curate of St. Day, Cornwall, where he died on 30 Aug. 1873.

He is the author of: 1. 'Jews in Cornwall,' Truro, 1867, 8vo, reprinted from the 'Journal of the Royal Institution of Cornwall.' 2. 'A Glossary of Cornish Names, ancient and modern, local, family, personal, &c.: 20,000 Celtic and other names now or formerly in use in Cornwall; with derivations and significations, for the most part conjectural, suggestive and tentative of many, and lists of unexplained names about which information is solicited,' London, 1869-71, 8vo. This work was brought out in seven parts. The supplement, which was to have formed three additional parts, was never published, owing to the decease of the author. 3. 'Gerlever Cernouak, a vocabulary of the ancient Cornish language,' Egerton MS. 2328. 4. 'English-Cornish Dictionary,' a copy of Johnson's Dictionary, interleaved, with Cornish and other equivalents, Egerton MS. 2329. 5. 'Cornish Vocabulary,' being copious additions by Bannister to his printed work, Egerton MS. 2330. 6. Materials for a Glossary of Cornish Names, Egerton MS. 2331.

[Boase and Courtney's Bibl. Cornubiensis, i. 9, 10, iii. 1047; Athenæum, 27 Sept. 1873, p. 397; Cat. of Egerton MSS. in Brit. Mus.; Cat. of Printed Books in Brit. Mus.] T. C.

**BANNISTER, SAXE (1790-1877)**, miscellaneous writer, was born at Bidlington House, Steyning, Sussex, 27 June 1790. After a preliminary training in the grammar school of Lewes he spent some years at Tunbridge school under the celebrated Dr. Knox. He was then sent to Queen's College, Oxford, where he graduated B.A. in 1813 and M.A. in 1815. Although a great reader, he did not distinguish himself at college. In fact, he himself admitted that had it not been for the lucky circumstance of the examiners selecting the subject of Socrates, which he happened to have studied thoroughly, he would undoubtedly have been plucked. After leaving the university he lived at his father's for some time doing nothing. He joined the militia as an amusement, and on Napoleon's return from Elba, when the whole country was in a ferment, Bannister at once raised a company and volunteered for the army. He received a captain's commission, and was on the eve of starting for Belgium when the news of the battle of Waterloo brought peace to the country, and he retired from the army on half-pay.

After this he studied regularly for the bar, and was called in the ordinary course at Lincoln's Inn. Owing to some interest he obtained the appointment of attorney-general of New South Wales in 1823, the remuneration being set experimentally at 1,200*l.* He

took a lively interest in the welfare of the coloured races, and was one of the founders of the Aborigines' Protection Society. In Australia he did not work very well with several of the leading members of the government; he considered their treatment of the natives too harsh. Indeed, his condemnation of the masters' power of flogging their servants ultimately involved him in a duel, which happily was not attended by fatal consequences. He left the colony under somewhat mysterious circumstances, having been removed from office in April 1826. His own account of the matter was that he sent home a despatch, saying that unless his salary were increased he should have to resign, and that the government, wanting to get rid of him and to put a friend of theirs into the position, at once appointed his successor, to whom the increased salary was awarded. Probably the government, owing to his strained relations with the other officials, were glad to remove him. To his dying day Bannister had this grievance against every successive government. The petitions he presented were legion, and he printed in 1853 a statement of his 'Claims.' But his efforts to obtain compensation were fruitless, although he was supported by many old friends of position and influence, such as Vice-chancellor Sir John Stuart, Lord Chief Baron Kelly, Lord Chief Justice Bovill, Sir Thomas Duffus Hardy, and Sir Charles Eastlake.

About 1848 Dr. Paris, president of the Royal College of Physicians, gave Bannister the appointment of gentleman bedel of the college, which was a great boon at the time, the salary being 100*l.* and the fees about 50*l.* The closing years of his life he spent at Thornton Lodge, Thornton Heath, the residence of his only child, Mrs. Wyndham, the wife of Mr. Henry Wyndham, civil engineer. There he died 16 Sept. 1877.

In addition to many pamphlets on colonial and miscellaneous subjects he wrote: 1. 'Essays on the Proper Use and the Reform of Free Grammar Schools,' London, 1819, 8vo. 2. 'The Judgments of Sir Orlando Bridgman, Chief Justice of the Common Pleas in 1667,' London, 1823, 8vo, edited from the Hargrave MSS. 3. 'A Brief Description of the Map of the Ancient World, preserved in the Cathedral Church of Hereford,' Hereford, 1849, 4to. 4. 'Records of British Enterprise beyond Sea,' vol. i. (all published), 1849. 5. 'The Paterson Public Library of Finance, Banking, and Coinage; agriculture and trade, fisheries, navigation, and engineering; geography, colonisation, and travel; statistics and political economy; founded in Westminster in 1703, and proposed to be revived

in 1853,' London, 1853. 6. 'William Paterson, the Merchant Statesman and Founder of the Bank of England; his life and trials,' Edinburgh, 1858, 8vo. 7. 'The Writings of William Paterson, with biographical notices of the author,' 3 vols., 1859. 8. 'A Journal of the First French Embassy to China, 1698-1700; translated from an unpublished manuscript, with an essay on the friendly disposition of the Chinese government and people to foreigners,' London, 1859. 9. 'Classical and pre-Historic Influences upon British History,' second edition, 1871.

[Private Information; Bannister's Claims, Lond. 1853; Cat. of Advocates' Library, Edinburgh, pt. ii. p. 311; Cat. of Oxford Graduates.]

T. C.

**BANSLEY, CHARLES** (Æ. 1548), poet, clearly wrote in the time of Henry VIII and Edward VI, but the dates of his birth and death are unknown. He is remarkable for a rhyming satire on the love of dress in women, which concludes with a benediction on the latter monarch, and commences with the line

Bo pepe what have I spyed!

There can be no doubt of Bansley's religious opinions. Speaking in his poem of the feminine love for light raiment, he says—

From Rome, from Rome, thys carkered pryde,  
From Rome it came doubtles:

Away for shame wyth soch filthy baggage,  
As smels of papery and develyshnes!

He also complains very seriously that foolish mothers made 'Roman monsters' of their children. Perhaps, it has been said, he was an unworthy and therefore justly rejected suitor, and revenged himself by this wholesale attack on the sex. But the attack is not wholesale, as he expressly excepts right worthy, sad, and plain women who walk in godly wise. Indeed the whole satire is mainly directed against extravagant attire. Ritson says it was printed about 1540, but he erred by at least ten years (COLLIER, *Bibliogr. and Crit. Account*, i. xxvii). The title of his work, as it appears in a reprint from a unique copy in the British Museum, edited by J. P. Collier in the year 1841, is as follows: 'A Treatyse shewing and declaring the pryde and abuse of women nowa dayes: black letter, London (without date), probably about 1540, 4to.

[Lowndes's Bibliog. Man. i. 110; Brit. Mus. Cat.; Watt's Bibl. Brit.; Tanner's Bibl. Brit.-Hibern. p. 72.] J. M.

**BANTING, WILLIAM** (1797-1878), writer on corpulence, was an undertaker and furnisher of funerals in St. James's Street,

London. He was somewhat short in stature (5 feet 5 inches), and with advancing years suffered great personal inconvenience from his increasing fatness. Before sixty years of age he found himself unable to stoop to tie his shoe, 'or attend to the little offices which humanity requires, without considerable pain and difficulty.' He was compelled to go downstairs slowly backwards, to avoid the jar of increased weight on the ankle-joints, and with every exertion 'puffed and blowed in a way that was very unseemly and disagreeable.' He took counsel with the medical faculty, and was advised to engage in active bodily exercise. He walked long distances, rowed in a boat for hours together, and performed other athletic feats. But all this served but to improve his appetite and add to the weight of his body. On 26 Aug. 1862 he, being in the sixty-sixth year of his age, weighed 202 pounds, or fourteen stone six pounds, an amount which he found unbearable. After trying fifty Turkish baths and 'gallons of physic' without the slightest benefit, he consulted Mr. William Harvey for deafness. Mr. Harvey, believing that obesity was the source of the mischief, cut off the supply of bread, butter, milk, sugar, beer, soup, potatoes, and beans, and in their place ordered a diet, the details of which, mainly flesh meat, fish, and dry toast, are given in Tanner's 'Practice of Medicine' (i. 148). The result of this treatment was a gradual reduction of forty-six pounds in weight, with better health at the end of several weeks than had been enjoyed for the previous twenty years. The delight at being so much relieved by means so simple induced Banting to write and publish a pamphlet entitled 'A Letter on Corpulence, addressed to the Public,' 1863. Written in plain, sensible language, the tract on the 'parasite corpulence' at once gained the attention of the public. Edition followed edition in quick succession. 'To bant' became a household phrase, and thousands of people adopted the course which the word involves. The Germans have recognised the impression made by the pamphlet in the word 'Bantingeur,' which appears in the 'Conversations-Lexikon.'

Banting died at his house on the Terrace, Kensington, 16 March 1878.

[Blackwood's Mag. xvi. 607; Tanner's Practice of Medicine; Convers.-Lexikon.] R. H.

**BANYER, HENRY** (Æ. 1739), medical writer, studied at St. Thomas's Hospital, and practised as a physician at Wisbeach. He was admitted extraordinary licentiate of the College of Surgeons on 30 July 1736. His works are 'Methodical Introduction to the

Art of Surgery,' 1717, and 'Pharmacopœia Pauperum, or the Hospital Dispensary, containing the chief Medicines now used in the Hospitals of London,' 1721, 4th ed. 1739.

[Munk's Coll. of Phys. (1878), ii. 131; Brit. Mus. Cat.]

**BAPTIST, JOHN GASPARS** (*d.* 1691), portrait and tapestry painter, was born at Antwerp, and was a pupil of Bossaert. His right name appears to have been Jean-Baptiste Gaspars. He was known in England as 'Lely's' Baptist, and would seem to have also worked for Sir Godfrey Kneller. There is a portrait of Charles II by this artist in the hall of St. Bartholomew's Hospital.

[Biog. Nat. de Belgique; Pilkington's Dict. of Painters; Nagler's Allgemeines Künstler-Lexikon; Redgrave's Dict. of Painters of English School.] E. R.

**BARBAR, THOMAS** (*d.* 1587), divine, was admitted scholar of St. John's College, Cambridge, 8 Nov. 1560, proceeded B.A. 1563-4, M.A. 1567, and B.D. 1576, and was elected fellow 11 April 1565. He subscribed in 1570 a testimonial requesting that Cartwright might be allowed to resume his lectures. He became preacher at St. Mary-le-Bow, London, about 1576, and in June 1584 he was suspended on refusing to take the ex-officio oath. The parishioners petitioned the court of aldermen for his restoration. In December 1587 Archbishop Whitgift offered to remove his suspension if he would sign a pledge to conform to the law of the church and abstain from conventicles. He declined to pledge himself. His name is attached to the 'Book of Discipline,' and he belonged to the presbyterian church at Wandsworth, formed as early as 1572. In 1591 he was examined in the Star Chamber with other puritan divines for having taken part with Cartwright and others in a synod held at St. John's College, Cambridge, in 1589, when it was agreed to correct and subscribe the 'Book of Discipline.' He is probably the author of a translation of Fr. du Jout's 'Exposition of the Apocalypse' (Cambridge, 1596), and of a 'Dialogue between the Penitent Sinner and Satan' (London, without date).

[Cooper's *Athenæ Cantab.* ii. 236; Neal's *Hist. of Puritans*, 1793, i. 357; Baker's *Hist. of St. John's*, ed. Mayor, 601; Strype's *Annals* (8vo), II. i. 2, ii. 417; Strype's *Whitgift*, 8vo, i. 504, iii. 271, 282; Brook's *Puritans*, i. 429; Fuller's *Church Hist.*, ed. Brewer, iv. 386, v. 163-4.]

**BARBAULD, ANNA LETITIA** (1743-1825), poet and miscellaneous writer, was the only daughter and eldest child of John Aikin, D.D., and his wife Jane Jennings,

and was born in 1743 at Kibworth, Leicestershire. When she was fifteen years old, her father became one of the tutors of the newly established academy at Warrington. There she passed the next fifteen years of her life, and formed intimate and lasting friendships with several of her father's colleagues and their families, in whose cultivated society she had every encouragement to turn to account her early, not to say precocious, education. It is related of her that she could read with ease before she was three years old, and that when quite a child she had an acquaintance with many of the best English authors. When she had mastered French and Italian, her industry compelled her father, very reluctantly, to supplement these with a knowledge of Latin and Greek also, accomplishments rarely found in young women of that period. Learned as she was, even in her youth, she was so modest and unassuming, and had so little confidence in her powers, that no one but her brother was able to induce her to appear before the world as an author. It was at his instigation that she published, in 1773, her first volume of poems, including 'Corsica,' 'The Invitation,' 'The Mouse's Petition,' and 'An Address to the Deity.' The book had an immediate success, and went through four editions in the first year. The celebrated Mrs. Montagu wrote that she greatly admired the poem on Corsica, and had presented a copy to her friend Paoli. In the same year she, or rather her brother, published 'Miscellaneous Pieces in Prose,' by J. and A. L. Aikin. These also have been several times reprinted. The authors did not sign their respective contributions, and some of the pieces have in consequence been generally misappropriated, but in Mrs. Barbauld's share of the work we find several of her best essays, and notably those on 'Inconsistency in our Expectations,' and 'On Romances.' The former of these possesses every quality of good English prose; the latter is avowedly an imitation of Dr. Johnson's style and method of reasoning. Of this essay Johnson observes: 'The imitators of my style have not hit it. Miss Aikin has done it the best, for she has imitated the sentiment as well as the diction.' Croker refers this remark to the wrong essay. In the year following these literary successes, in 1774, Mrs. Barbauld married. Her husband, the Rev. Rochemont Barbauld, came of a French protestant family settled in England since the persecutions of Louis XIV. His father, a clergyman of the church of England, sent him, rather injudiciously, to the dissenting academy at Warrington, where he naturally imbibed presbyterian opinions. He

was an excellent man, but had a tendency to insanity, which became more and more pronounced towards the close of his life. Soon after their marriage the Barbaulds removed to Palgrave in Suffolk, where Mr. Barbauld had charge of a dissenting congregation, and proceeded to establish a boys' school. They had no children, but adopted a nephew, Charles Rochemont Aikin [q. v.], the 'little Charles' of the well-known 'Early Lessons.' At Palgrave were written the 'Hymns in Prose for Children,' Mrs. Barbauld's best work, which, besides passing through many editions, has been translated into several European languages. The school, chiefly owing to Mrs. Barbauld's exertions, was extremely prosperous during the eleven years of its existence. Among the pupils were the first Lord Denman, Sir William Gell, Dr. Sayers, and William Taylor of Norwich. The holidays were mostly spent in London, where at the houses of Mrs. Montagu and Mr. Joseph Johnson, her publisher, she made the acquaintance of many of the celebrities of the day. The school-work proving somewhat excessive, the undertaking, though successful and remunerative, was given up in 1785, and after travelling on the continent for about a year the Barbaulds returned to England and settled at the then rural village of Hampstead. Mr. Barbauld officiated at a small chapel there, and took a few pupils, while his wife found herself more at leisure for society and literature. At Hampstead Joanna Baillie and her sister were among her more intimate friends. Here she wrote several essays, and contributed fifteen papers—her share of the work is generally thought to be much larger—to her brother's popular book 'Evenings at Home.' In 1802, at the earnest request of her brother, in whose society she hoped to end her days, she and her husband left Hampstead for Stoke Newington. For a short time Mr. Barbauld again undertook pastoral work, but his mental health utterly gave way, and he died insane in London in 1808. This, the one great sorrow of Mrs. Barbauld's life, deeply affected her, but left her free, for the first time since her marriage, for serious literary work. Shortly after her husband's death Mrs. Barbauld undertook an edition, in fifty volumes, of the best English novelists. Prefixed to the edition is an essay, written at some length, on the 'Origin and Progress of Novel Writing,' and the works of each author are introduced by short, but complete, biographical notices. The novels thus edited include 'Clarissa,' 'Sir Charles Grandison,' 'The Castle of Otranto,' 'The Romance of the Forest,' 'The Mysteries of Udolpho,' 'Zeluco,' 'Evelina,' 'Cecilia,'

'Tom Jones,' 'Joseph Andrews,' 'Belinda,' 'The Vicar of Wakefield,' and many others. In 1811 she prepared for the use of young ladies a selection, formerly well known and popular, of the best passages from English poets and prose writers. This appeared in one volume, and was called 'The Female Speaker.' In the same year she wrote the most considerable of her poems, entitled 'Eighteen Hundred and Eleven,' a work which, at a time of the deepest national gloom, was written in eloquent but too despondent strains. Of this poem Mr. Crabb Robinson says: 'Dear Mrs. Barbauld this year incurred great reproach by writing a poem entitled "Eighteen Hundred and Eleven." It prophesies that on some future day a traveller from the antipodes will, from a broken arch of Blackfriars Bridge, contemplate the ruin of St. Paul's (this is the original of Macaulay's New-Zealander). This was written more in sorrow than in anger, but there was a disheartening and even gloomy tone which I, even with all my love for her, could not quite excuse. It provoked a very coarse review in the "Quarterly," which many years after Murray told me he was more ashamed of than any other article in the review.' Southey, the former friend of Mrs. Barbauld's brother, was the author of this article. This was the last of Mrs. Barbauld's published works, but to the day of her death, some years later, she constantly wrote letters and minor pieces which did not see the light till long afterwards, and were not, indeed, intended for publication. The remainder of her life was passed tranquilly at Stoke Newington, where she died in 1825. Her epitaph justly says of her that she was 'endowed by the Giver of all good with wit, genius, poetic talent, and a vigorous understanding;' and the readers of her works will readily allow the easy grace of her style and her lofty but not puritanical principles. Her letters, some few of which have been published since her death, show that though her life was habitually retired she greatly enjoyed society. They record friendships formed or casual acquaintance made with (among others) Mrs. Montagu, Hannah More, Dr. Priestley, Miss Edgeworth, Howard the philanthropist, Mrs. Chapone, Gilbert Wakefield, Dugald Stewart, Walter Scott, Joanna Baillie, H. Crabb Robinson, William Roscoe, Wordsworth, Montgomery, Dr. W. E. Channing, Samuel Rogers, and Sir James Mackintosh. Her writings in prose and poetry are both numerous and miscellaneous, and many of them were not printed in her lifetime. Her more important works include: 1. 'Poems' (1773). 2. 'Miscellaneous Pieces in Prose.' 3. 'Hymns in Prose for Children.' 4. 'Early

Lessons.' 5. 'Poetical Epistle to William Wilberforce.' 6. 'An Edition, with Essay and Lives, of the British Novelists.' 7. 'The Female Speaker.' 8. 'Eighteen Hundred and Eleven.'

**BARBER, CHARLES** (d. 1854), landscape painter, was a native of Birmingham, and moved to Liverpool in early life on being appointed teacher of drawing in the Royal Institution. He was intimately connected with the various associations established in Liverpool in his lifetime. He was among the earliest members and most frequent contributors of the Literary and Philosophical Society, and assisted to found the Architectural and Archaeological Association. Thomas Rickman found much support and encouragement from him in his early studies of Gothic architecture, and for years his house was the centre of the intellectual society of Liverpool. Among his nearest friends he numbered Traill and Roscoe. As a landscape painter he was a close observer of nature, and endeavoured to reproduce effects of mist and sunshine with accuracy. He exhibited three times in the Royal Academy, and was a regular contributor to local exhibitions. In spite of a severe attack of paralysis, he continued to practise his art to the end, and his two best-known pictures, 'Evening after Rain,' and 'The Dawn of Day,' were exhibited in Trafalgar Square in 1849. He was elected president of the Liverpool Academy some years before his death, which occurred in 1854.

[Liverpool Courier, 1854; Redgrave's Dictionary of English Artists.] C. E. D.

**BARBER, CHARLES CHAPMAN** (d. 1882), barrister, was educated at St. John's College, Cambridge, where he graduated ninth wrangler in 1833. In the same year he was called to the bar at Lincoln's Inn. He was a pupil of Mr. Duval, an eminent conveyancer. He acquired a high reputation as an equity draftsman and conveyancer, and, though he never took silk, had for nearly half a century an extensive practice at the junior bar. He was one of the commissioners appointed to reform the procedure of the Court of Chancery in 1853, his large experience of chancery business rendering his suggestions of the highest value in the work of framing the rules of practice issued under the Chancery Amendment Acts. In the chancery proceedings by which, in 1867, the celebrated

Orton or Castro first sought to establish his claim to the Tichborne baronetcy and estates, Barber held a brief for the defendants, as he did again in the first of the two actions of ejectment which were subsequently brought in the court of common pleas for the same purpose, in the well-known case of *Tichborne v. Lushington*, decided in 1872 after a trial which lasted 103 days. He also acted as one of the counsel for the crown in the prosecution for perjury which followed, and which occupied in the hearing from first to last 188 days. In 1874 he was appointed judge of county courts for circuit No. 6 (Hull and the East Riding), but resigned the post almost immediately, and resumed practice at the bar. He died at his residence (71 Cornwall Gardens) on 5 Feb. 1882.

[Solicitor's Journal, xxvi. 233.] J. M. R.

**BARBER, CHRISTOPHER** (1736-1810), miniature painter, was born in 1736, and exhibited in the Royal Academy in 1770. He worked in crayons as well as oil, and continued to be an occasional exhibitor, chiefly of portraits and half-lengths, in the Royal Academy until 1792. His portraits were celebrated for peculiar brilliancy, in consequence of the especial attention he devoted to the preparation of magilp. An enthusiastic lover of music, he was distinguished for a particular acquaintance with the works of Handel and Purcell, while his social gifts gathered a large and warm circle of acquaintance round him. He was for some time a member of the Incorporated Society of Artists, but his exhibiting with the opposing society, which was incorporated as the Royal Academy in 1768, led to his forced withdrawal in 1765. He was long resident in St. Martin's Lane, but afterwards removed to Great Marylebone Street, where he died, in 1810.

[Gent. Mag. 1810; Royal Academy Catalogues 1770-1792; Redgrave's Dictionary of English Artists.] C. E. D.

**BARBER, EDWARD** (d. 1674?), baptist minister, was originally a clergyman of the established church, but long before the beginning of the civil wars he adopted the principles of the baptists. He had numerous followers, who assembled for worship in the Spital in Bishopsgate Street, London, and appear to have been the first congregation among the baptists that practised the laying on of hands on baptised believers at their reception into the church. This custom was introduced among them about 1646 by Mr. Cornwell (D'ANVERS, *Treatise of Laying on of Hands*, 58; T. EDWARDS, *Gan-*

*græna*, 2nd edit. 136, 137). Previously to the year 1641 Barber was kept eleven months in Newgate for denying the baptism of infants and that the payment of tithes to the clergy was God's ordinance under the gospel (Preface to his *Treatise of Baptism*; and his petition to the king and parliament). He preached his doctrines in season and out of season, and he has himself left an account of the disturbance he caused in 1648 in the parish church of St. Benet Fink. The date of his death is unknown, but in 1674 he was succeeded in the care of the baptist church in Bishopsgate by Jonathan Jennings.

He is the author of: 1. 'To the King's most Excellent Maiesty, and the Honourable Court of Parliament. The humble Petition of many his Maiesties loyall and faithfull subiects, some of which having bene miserably persecuted by the Prelates and their Adherents, by all rigorous courses, for their Consciencs, practising nothing but what was instituted by the Lord Jesus Christ,' &c., London, 1641, *s. sh.* fol. This petition, which prays for liberty of worship for the baptists, is signed 'Edward Barber, sometimes Prisoner in Newgate for the Gospel of Christ.' 2. 'A small Treatise of Baptisme, or, Dipping, wherein is cleerly shewed that the Lord Christ ordained Dipping for those only that professe repentance and faith. (1) Proved by Scriptures; (2) By Arguments; (3) A paralell betwixt circumcision and dipping; (4) An answer to some objections by P[raisegod] B[arebone],' London, 1641, 4to. 3. 'A declaration and vindication of the carriage of Edward Barber, at the parish meeting house of Benetfinck, London, Fryday the 14 of July 1648, after the morning exercise of Mr. Callamy was ended, wherein the pride of the Ministers, and Babylonish or confused carriage of the hearers is laid down,' London, 1648, 4to. 4. 'An Answer to the Essex Watchmens Watchword, being 63 of them in number. Or a discovery of their Ignorance, in denying liberty to tender consciences in religious worship, to be granted alike to all,' London, 1649, 4to.

[T. Crosby's *Hist. of the English Baptists*, i. 151, 219, iii. 3; Ivimey's *Hist. of the English Baptists*, ii. 390; H. Brook's *Puritans*, iii. 330; Adam Taylor's *Hist. of the English General Baptists*, i. 119, 168, 260; *Cat. of Printed Books in Brit. Mus.*] T. C.

BARBER, JOHN, D.C.L. (*d.* 1549), clergyman and civilian, of All Souls College, Oxford, graduated doctor of civil law and became a member of the College of Advocates in 1532. He was one of Archbishop Cranmer's chaplains, and official of his court

at Canterbury, but his special vocation was to advise the archbishop on civil-law matters. In 1537 he was consulted by Cranmer on behalf of Henry VIII, on a subtle point of law touching the dower of the Duchess of Richmond, widow of the king's natural son; and in 1538 the archbishop, in a letter to Cromwell, requests that Dr. Barber, 'his chaplain' (who Jenkyns says is probably John Barber), may be one of a royal commission to try and examine whether the blood of St. Thomas of Canterbury was not 'a feigned thing and made of some red ochre, or of such like matter.' In the same year Cranmer used his influence with Cromwell to obtain for 'his chaplain, Doctor Barber,' a prebendal stall at Christ Church, Oxford. But he does not appear to have been successful, for Dr. Barber's name is not mentioned by Wood in his account of Christ Church. In this letter to Cromwell the archbishop speaks of Cromwell's knowledge of the 'qualities and learning' of Barber, and he himself calls him 'an honest and meet man.' Barber is probably identical, too, with the John Barbour who appeared as proctor for Anne Boleyn on the occasion of her divorce. In 1541 Cranmer appointed him to visit, as his deputy, for the second time, the college of All Souls, whose 'comptations, ingurgitations, and enormous commessations' had excited the archbishop's indignation (STRYPE, *Life of Cranmer*, i. 131). He is said by Rose to have assisted in the preparation of the famous 'King's Book,' a revised and enlarged edition of the 'Bishops' Book,' but his name does not appear upon the list of 'composers.' He was probably, however, consulted in the matter, for his signature is appended to 'a declaration made of the functions and divine institution of priests,' and to a Latin judgment on the rite of confirmation, both documents framed to suit the demands of the time. Barber made a poor return to Cranmer for all his kindness by joining, in 1543, a plot for his ruin. Foxe, on the authority of Ralph Morice, Cranmer's secretary, tells us that the archbishop elicited from Barber and the suffragan of Dover a condemnation of a hypothetical case of treachery, and then by producing their letters showed that they were the guilty persons, and magnanimously forgave them. Strype says, however, that Cranmer 'thought fit no more to trust them, and so discharged them of his service.' Barber died in 1549, and was buried at Wrotham in Kent, of which living—a 'peculiar' in the patronage of the Archbishop of Canterbury—he was probably incumbent. Hasted in his list of the rectors and vicars of Wrotham leaves a blank for the period likely to cover Barber's incumbency.

BARBER, JOSEPH (1757-1811), landscape painter, was born at Newcastle in 1757. He settled at Birmingham, where after several years of difficulty he succeeded in establishing a drawing school. He conducted this with unremitting industry, and gained in addition a considerable local reputation as a landscape painter. But his work was unknown in London, and he never exhibited in the Royal Academy. He attained to easy circumstances in his later years, and died in Birmingham in 1811, leaving a son, JOHN VINCENT BARBER, who followed his father's profession. John Vincent Barber exhibited landscapes at the Royal Academy in 1812, 1821, 1829, and 1830, and prepared some of the drawings for the 'Graphic Illustrations of Warwickshire' published in 1829. He died at Rome.

[Gent. Mag. 1811; Redgrave's Dictionary of English Artists.] C. E. D.

BARBER, MARY (1690?-1757), poetess and friend of Swift, was born about 1690, probably in Ireland, where she became the wife of one Barber, a wool clothier or tailor, living in Capel Street, Dublin. Several children were born to Mrs. Barber (among them a son, Constantine, born in 1714), and she, being 'poetically given, and, for a woman, having a sort of genius that way' (Swift to Pope, Scott's *Swift*, xvii. 388), began writing poetry for the purpose of enlivening her children's lessons. She taught them at first herself, as they sat round her tiled fireplace (her own *Poems on Several Occasions*, p. 8); and at the same time 'no woman was ever more useful to her husband in the way of his business' (Swift to Lord Orrery, Scott's *Swift*, xviii. 162). About 1724, while Tickell, the poet, was secretary to the lords justices of Ireland, Mrs. Barber wrote a poem to excite charity on behalf of an officer's widow left penniless and with a blind child (*Poems*, &c. supra, p. 2, 'The Widow Gordon's Petition'), and she sent the composition to Tickell anonymously, with a request that he would call the attention of Lord Carteret, then viceroy, to it. Tickell succeeded; Lady Carteret succoured the widow and sought out her benefactress, Mrs. Barber. The poetess was thus brought under Swift's notice, and

a friendship sprang up between them. Swift visited her at her shop (Swift to Pope, supra); presented her to Lady Suffolk at Marble Hill (Scott's *Swift*, xvii. 430); received her at the deanery, and for a while took charge of one of her sons, eccentrically sent him as a birthday present, together with some of his mother's verses echoing the current enthusiasm roused by 'Wood's Halfpence' and others of Swift's Irish patriotic pamphlets. Sapphira was the poetic name given to Mrs. Barber at the deanery; and there her poems were read, and canvassed, and corrected. 'Mighty Thomas, a solemn Senatus I call, To consult for Sapphira; so come, one and all,' are the opening lines of 'An Invitation by Dr. Delany, in the Name of Dr. Swift,' and they indicate the friendly and sympathetic treatment she enjoyed at the hands of Swift and his friends. In 1730 Swift provided Mrs. Barber with introductions to his most influential friends on her first visit to England in an endeavour to publish her poems by subscription. Her husband took indiscreet advantage of his wife's position, and when Lady Betty Germaine had coaxed the Duke of Dorset to order liveries from him, he asked 'a greater price than anybody else' (*ibid.* xvii. 410); at the same time the gout attacked her incessantly, and she was one of Dr. Mead's patients; but, in response, mainly, to Swift's recommendations, Arbuthnot, Gay, Mrs. Cæsar, Barber the printer (then lord mayor), the Boyles, the Temples, Pope, Ambrose Philips, Walpole, Tonson, Banks, and a host of the nobility, either visited her or became subscribers for her book; and after passing to and fro between Tunbridge Wells, Bath, and Dublin, for a long period, she finally abandoned her Irish home, and settled in England. In June 1731, when Mrs. Barber was busily seeking subscribers, the 'Three Letters to the Queen on the Distresses of Ireland' were published, with Swift's forged signature; they called express attention to Mrs. Barber as 'the best female poet of this or perhaps of any age,' and it was rumoured that they had been concocted by her to injure her patron and to serve her personal advantage. All evidence goes against this supposition, and Swift himself never entertained it. His opinion of Mrs. Barber, on the contrary, was as high as ever, and Lady Suffolk bantered him on the 'violent passion' he had for her (*ibid.* xvii. 415); in 1733 he wrote to Alderman Barber that he had 'not known a more bashful, modest person than she, nor one less likely to ply her friends, patrons, and protectors' (*ibid.* xviii. 154). In 1736 he invited her back to Ireland, promising to contribute to her support (*ibid.*

xix. 5). In his 'List of Friends Grateful, Ungrateful, Indifferent, and Doubtful,' he describes her with the best as 'G,' i.e. 'grateful;' and in his will, dated 1740, nine years after the 'Letters,' he makes a bequest to her of 'the medal of Queen Anne and Prince George which she formerly gave me' (SHERIDAN, *Swift*, p. 566). The false suspicion as to her authorship of the unfortunate 'Letters' did Mrs. Barber little injury with others of her friends. In 1734, her 'Poems on Several Occasions' (4to, Rivingtons) were at last published, and were prefaced by a letter from Swift to Lord Orrery. But many troubles now befell their authoress; a few severe critics said that the work was not poetic, and a few fine ladies complained that it was dull (*ibid.* xviii. 310). At the time Mrs. Barber was a victim to a three months' attack of gout; and she fell 'under the hands of the law,' in company with Motte, the printer, although she was discharged the same day with him (HAWKESWORTH, xiii. 105). Her condition excited pity in very many quarters, and the Duchess of Queensberry told Swift: 'Mrs. Barber has met with a good deal of trouble . . . we shall leave our guineas for her with Mr. Pope' (Scott's *Swift*, xviii. 198). In 1735 appeared a second edition of Mrs. Barber's 'Poems' (8vo), and in 1736 there followed a third. In November of the same year, at Bath, again laid up with gout, and having her husband and daughters to support, Mrs. Barber entertained a scheme for selling Irish linens. She could not let lodgings because of her ill-health (*ibid.* xix. 5); and, to support her meanwhile, she begged Swift to give her his 'Polite Conversations,' still in manuscript, though written thirty years before. Everybody, she said, would subscribe for a work of his, and the sale of it would put her in easy circumstances. In 1737 the manuscript was hers, conveyed to her by Lord Orrery (Scott's *Swift*, xix. 93); in 1738 it was published, and it met with so much favour that it was presented as a play at the theatre in Aungier Street, Dublin, with great applause (HAWKESWORTH, xiv. 692). It thus secured for Mrs. Barber all the benefits that Swift, in his continuous kindness to her, desired. In 1755 a selection from her 'Poems' was published in two volumes of 'Poems by Eminent Ladies,' including Aphra Behn, Elizabeth Carter, Lady Mary Wortley Montagu, and others, and Mrs. Barber's verse was given the first place. In 1757 she died.

Of her two sons, Rupert was well known as a miniature painter and engraver, and Constantine became president of the College of Physicians at Dublin.

[Ballard's *British Ladies*, ed. 1752, 461 et seq.; *Monthly Review*, vol. viii., 1753.] J. H.

BARBER, SAMUEL (1738?-1811), Irish presbyterian minister, a native of county Antrim, was the younger son of John Barber, a farmer near Killead. He entered Glasgow College in 1757, was licensed 1761 (on second trials 28 Aug. at Larne) by Templepatrick presbytery, and ordained by Dromore presbytery, 3 May 1763, at Rathfriland, co. Down, where he ministered till his death. He was a good Latinist, Tacitus being his favourite author; his Greek was thin; he was somewhat given to rabbinical studies, having collected a small store of learned books on this subject. He is best known for the public spirit with which he threw himself into the political and ecclesiastical struggles of his time. Feeling considers him 'one of the first and boldest advocates of the emancipation of his country and the union of all her sons.' When Lord Glerawley disbanded the Rathfriland regiment of volunteers in 1782, the officers and men chose Barber as their colonel in his stead. In this double capacity he preached (in regimentals) a sermon to the volunteers, in the Third Presbyterian Congregation, Belfast. He sat in the three volunteer conventions of 1782, 1783, and 1793, as a strong advocate of parliamentary reform, catholic emancipation, and a revision of the tithe system, the revenue laws, and the Irish pension list. Lord Kilwarlin, being asked to contribute to the rebuilding of his meeting-house, said he would rather pay to pull it down (broadsheet of August 1783). In 1786 Richard Woodward, bishop of Cloyne, published his 'Present State of the Church of Ireland,' to prove that none but episcopalians could be loyal to the constitution. Barber's 'Remarks' in reply showed him a master of satire, and embodied the most trenchant pleas for disestablishment that any dissenter had yet put forth ('Must seven-eighths of the nation for ever crouch to the eighth?'). Woodward made no response. In 1790 Barber was moderator of the general synod. He took a leading part in the Down election of that year, which returned the Hon. Robert Stewart (afterwards Lord Castlereagh) in the presbyterian interest, after a contest of thirteen weeks. In 1798 the authorities regarded him as a dangerous man. He was seized by a body of troops at his residence in the townland of Tullyquilly, and lodged in Downpatrick gaol on a charge of high treason. On 14 and 16 July he was tried by court-martial, but nothing was proved against him; he was never a United Irishman. However, he was detained in durance, and his third daughter, Margaret, a girl of sixteen, voluntarily shared

his imprisonment. On his release, after a long confinement, he could obtain no redress. In religion, as in politics, he was a pronounced liberal, though no controversialist. His manuscript sermons are unmistakably Arian, and in the original draft of his 'Remarks' he says, 'Suppose now any legislator should so far forget common sense as to decree three one, and one three, &c.' He was fond of quoting the Greek Testament in his sermons, and (marvellous to say) his draft of a petition to parliament from his presbytery contains two citations from Theodoret in the original. For an incident of his pastoral experience, turning on the difficulties of the then Irish marriage law, see *Mem. of Catherine Cappe*, 1822, p. 268. Montgomery assigns to him 'a singularly vigorous mind, a cultivated taste, a ready wit, a fluent elocution, a firm purpose, an unsullied character, and a most courteous demeanour.' He died 5 Sept. 1811, in his seventy-fourth year. In 1771 he married Elizabeth, eldest daughter of the Rev. Andrew Kennedy, of Mourne, and had seven children, but no son survived him. His daughter Margaret, above mentioned (*b.* 12 Aug. 1782, *d.* 21 May 1875), married John Galt Smith, of Belfast, whose son, George Kennedy Smith, possesses Barber's portrait and manuscripts. He published: 1. *Funeral Sermon for the Rev. George Richey* [Job xxxiv. 15], Newry, 1772. 2. *Volunteer Sermon* [2 Sam. xiii. 28], 1782 (a very spirited piece, under apprehension of foreign invasion). 3. 'Remarks on a Pamphlet . . . by Richard, Lord Bishop of Cloyne,' Dublin, 1787. 4. 'Synodical Sermon at Lurgan' [Rev. xviii. 20], 1791 (reckons the Nicene council as the beginning of the reign of Antichrist, and the French revolution as the omen of its fall). Nos. 2 and 4 appear to have been published, but were also circulated in manuscript.

A. G.

BARBON, NICHOLAS, M.D. (*d.* 1698), a writer of two treatises on money, and the originator of fire insurance in this country, was born in London, and entered as a student of physic at the university of Leyden on 2 July 1661. He was probably the son of Praisegod Barbon [see BARBON, PRAISEGOD]. In October 1681 he graduated M.D. at Utrecht, and

was admitted an honorary fellow of the College of Physicians in December 1664. He represented Bramber in the parliaments of 1690 and 1695. After the great fire of 1666, Barbon was one of the first and most considerable builders of the city of London, and first instituted fire insurance in this country. He 'hath sett up an office for it,' writes Luttrell in his 'Brief Relation,' under date 30 Oct. 1681 (i. 135), 'and is likely to gett vastly by it.' While engaged in rebuilding London, he purchased 'the Red Lyon feilds, near Graies Inn Walks, to build on,' and 11 June 1684 a serious riot took place between his workmen and 'the gentlemen of Graies Inn.' As late as 1692 he was engaged in improving Chancery Lane and Lincoln's Inn. A square near Gerrard Street, Newport Market, is said to have been called Barbon Square in the reign of George II. Reynolds's 'Wells Cathedral' (pref. p. 67) gives the following from Chyle's (unpublished) history of the church of Wells. Exeter House, belonging to the see of Exeter, first went to Lord Paget, then to R. Dudley, earl of Leicester, and then to the Earl of Essex, and was called Essex House, 'which ever since has kept the name, till last year, when one Dr. Barbone, the son, I am told, of honest prays God, bought it of the executors of the late Duchess of Somerset, d. of the said Robert (E. of Essex), not to restore it to the right owner, the Bp. of Exeter; but converted into houses and tenements for tavernes, ale houses, cooks-shoppes, and vaulting schooles, and the garden adjoining the river into wharfes for brewers and wood-mongers.' Barbon was the author of 'A Discourse of Trade' (12mo, London, 1690), and a 'Discourse concerning coining the new money lighter, in answer to Mr. Lock's considerations about raising the value of money' (12mo, London, 1696). This latter work was one of the numerous pamphlets which issued from the presses of London on the subject of the great controversy which raged at that time, when there was such urgent demand for a renewal of the currency—a controversy in which, as Flamsteed, the astronomer royal, is reported to have said, the real point at issue was, whether five was six or only five.

Barbon ranged himself under the banner of William Lowndes, whose 'Essay for the Amendment of Silver Coins' had become the text-book of a party composed partly of dull men who really believed what he told them, and partly of shrewd men who were perfectly willing to be authorised by law to pay a hundred pounds with eighty (MACAULAY, *Hist. of Eng.* iv. 632).

Barbon, in the preface to his second treatise, makes allusion to having, in the 'Discourse on Trade,' defined money differently from Mr. Locke; and begins his argument by disputing Locke's fundamental proposition that silver has an intrinsic value, asserting that there is no intrinsic value in silver, 'but that it is *money* that men give and take and contract with, having regard more to the stamp and currency of the money than to the quantity of fine silver in each piece.' With this as one of his premises, he argues in favour of debasing the currency, or, as he euphemistically terms it, raising the value of money. Mr. Cunningham (*English Industry and Commerce*, p. 368) quotes a passage from the second discourse for a lucid argument against the balance of trade. Barbon took part in the land-bank speculations of the time. He founded one, which is stated by Luttrell, under date 15 Aug. 1695, to 'goe on very successfully,' and under date 4 Feb. 1695-6 to have been united with another land-bank conducted by one Mr. Brisco, and to have offered to advance two millions of money. He died in 1698. His friend Asgill [see ASGILL, JOHN] was the executor of his will, which directed that none of his debts should be paid. Asgill was also soon afterwards his successor as member for Bramer.

H.

BARBON, or BAREBONE, or BAREBONES, PRAISEGOD (1596?-1679), anabaptist, leather-seller, and politician, has an obscure family history. In the 'Spending of the Money of Robert Nowell, of Read Hall, Lancashire' (edited by Dr. Grosart, 1877), one of the objects of his bounty (x\*) was 'a John Barbon.' The following data concerning him are drawn from Dr. Bloxam's 'Register of Magdalen College, Oxford'—'John Barebone, of Magdalen, 1567, aged 16; of the county of Gloucester; B.A. 23 Oct. 1570; probably Fellow 1571-78; M.A. 9 July 1574; Vice-Principall, 1578;' described in 1574 as 'a noted and zealous Romanist' (iv. 170-1, and *Spending, ut supra*, pp. 206, 208). Another was a prominent puritan in Northamptonshire from 1587 onwards (STRYPE'S *Annals*, III. i. 691, ii. 479; STRYPE'S *Whitgift*, ii. 7). Probably the same Barbon took part in a disputation upon nonconformity

held about 1606 at the house of Sir William Bowes, at Coventry (SMYTH, *Parallels, Censures and Observations, &c.*, p. 128; BROOK, *Puritans*, ii. 196).

In notes of a trial in an ecclesiastical case wherein Dr. William Bates was a party, Barbon in giving evidence incidentally mentioned that he was eighty years of age. This was in 1676, so that he was born about 1596 (MALCOLM, *Londinium Redivivum*, iii. 453). While young he became a leather-seller in Fleet Street; he was admitted freeman of the Leathersellers' Company 20 Jan. 1623, elected a warder of the yeomanry 6 July 1630, a liveryman 13 Oct. 1634, and third warder 16 June 1648 (*Notes and Queries*, 3rd series, i. 211; cf. pp. 253, 395).

Probably shortly after 1630 Praisegod Barbon was chosen minister by half the members of a baptist congregation which had been under the pastoral care of Stephen More, but which had on More's death divided by 'mutual consent' into two parties. The one half chose Henry Jessey, and the other half Praisegod Barbon. Those who fixed on Barbon were pædobaptists, maintaining that the baptism of infants was scriptural, while the other part of the congregation comprised baptists proper. Some even of the latter must, however, have adhered to Barbon as well; for in the 'Declaration' of the baptists issued in 1654 'twenty-two' names sign it as 'of the church that walks with Mr. Barebone.' In 1642 Praisegod Barbon published a defence of pædobaptism in 'A Discourse tending to prove Baptisme in or under the Defection of Anti-Christ, to be the Ordinance of Jesus Christ. As also that the Baptism of Infants or Children is warrantable and agreeable to the Word of God. Where . . . sundry other particular things are controverted and discussed.' In Edward Barber's 'Small Treatise of Baptism or Dipping,' also published in 1642 [see BARBER, EDWARD], we read: 'Beloved, since part of this treatise was in presse, there came to my hand a book set forth by P. Barboon, which could I have gotten sooner, I should have answered more fully;' and then he quotes a number of objections to the baptist view urged by Barbon, which he in brief answers. Barbon replied to Barber in another book, published in 1643: 'A Reply to the Frivolous and Impertinent Answer of E. B. to the Discourse of P. B. . . .'

From contemporary references, it appears that those who had chosen Barbon assembled as a church in their pastor's own 'great house,' called the 'Lock and Key,' in Fleet Street, near Fetter Lane. As a preacher he speedily made his mark. The libellers of the puritans called his preaching 'long harangues,'

but he held the allegiance of a large congregation. He combined his 'trade' of leather-seller with his preaching, and he must pretty early have joined to himself in his pastorate one Greene, a 'felt-maker'—the two 'trades' exciting the sarcasms of adversaries of non-conformity. In a contemporary scurrilous pamphlet entitled 'New Preachers, New,' we have mention of 'the last tumult in Fleet Street, raised by the disorderly preachment, pratings, and prattlings of Mr. Barebone, the leather-seller, and Mr. Greene, the felt-maker, on Sunday last, 19 Dec. [1641]. The 'tumult' is jocosely described, and '1,000 persons' are alleged to have been present; but the 'tumult,' so far from originating in the 'disorderly preachment,' certainly originated in violent intrusion upon the worshippers. Another pamphlet on the same disturbance is entitled 'The Discovery of a Swarme of Separatists, or a Leather Seller's Sermon. Being a most true and exact relation of the tumultuous combustion in Fleet Street last Sabbath day, being 29 of Decemb. [19 in text]; truly describing how Burboon, a leather seller, had a conventicle of Brownists met at his house that day, about the number of an hundred and fifty, who preached there himself about five hours in the afternoon. Showing likewise how they were discovered and by what means, as also how the constable scattered their nest, and of the great tumult in the street . . . London: Printed for John Green-smith, 1641.' In this publication we read concerning the persecutors' treatment of the worshippers: 'At length they catcht one of them alone, but they kickt him so vehemently as if they meant to beate him into a jelly. It is ambiguous whether they have kil'd him or no, but for a certainty they did knock him as if they meant to pull him to pieces. I confesse it had been no matter if they had beaten the whole tribe in the like manner' (A 3).

Barbon's position commercially was a stable one. In 1650 he was surety with Sir Fulk Greville, John Harvey, and Thomas Barnardiston, each in 500*l.*, for Dr. Aaron Guerdon, master of the mint, 'for the performance of his covenants and indents' (*Calendar of State Papers*, 25 July, 1649-52, p. 249). On 6 June 1653 Oliver Cromwell summoned Barbon 'to appear,' as the writ runs, 'at the council chamber, Whitehall, on 4 July, and take upon you the trust of member for the city of London' (*Calendar of State Papers*, 1652-3, p. 386). The assembly, which met on 4 July, was christened by its enemies 'Barebone's,' or the 'little' parliament. In the house Barbon does not seem to have spoken at all. But we read that on

Tuesday, 2 Aug., 'the house being informed that there were divers petitioners at the door out of the city of London, Mr. Barbone and Captain Stone were sent forth. Mr. Barbone acquaints the house that the petition was in behalf of Lieutenant-colonel John Lilburne' (BURTON's *Cromwellian Diary*, ed. Rutt, i. p. v, Introduction).

The 'little parliament' had only five months' lease; and Barbon did not again accept the dignity of M.P. He continued to preach as the 'leather-seller of Fleet Street.' In 1659-60 he was again the object of assaults. Samuel Pepys writes: 'February 12th . . . So to my father's, where Charles Glascocke was overjoyed to see how things are now; who told me the boys had last night broke Barebone's windows' (p. 45). 'February 22nd, 1659-60—I observed this day how abominably Barebone's windows are broke again last night' (PEPYS's *Diary*, ed. Bright, i. p. 53).

Barbon did all in his power to hinder the restoration of Charles II. Marchmont Needham confided to Praisegod the manuscript of his book, 'News from Brussels in a Letter from a near Attendant on his Majesty's Person to a Person of Honour here. Dated 10 March 1659[-60].' The object of the work was to expose the evil life of Charles in Holland, and Barbon had it printed and circulated broadcast. Nor did he seek to conceal his responsibility (WOOD's *Athenae* (Bliss), iii. 1187). But Barbon did more in the cause of the Commonwealth. On Thursday, 9 Feb. 1659-60, he presented the famous 'Petition of Mr. Praise-God Barebone and several others to the Parliament' against any kind of reconciliation with the Stuarts or the monarchy. It proposed that all officials should solemnly abjure the Stuarts, and that any one publicly proposing a restoration should be deemed guilty of high treason.

The royalists republished the petition, and in one of their attacks on it—the 'Picture of the Good Old Cause drawn to the Life. In the Effigies of Master Prais-God Barebone. With several examples of God's Judgment on some Eminent Engagers against Kingly Government'—introduced a vividly engraved portrait of its author. Another tract vituperating Barbon's latest act was entitled: 'That wicked and blasphemous petition of Praisegod Barbone and his sectarian crew, presented to that so-called the Parliament of the Commonwealth of England, Feb. 9, 1659, for which they had the thanks of that House, anatomized. Worthily stiled by his Excellency the Lord Generall Monck, Bold, of dangerous consequences, and venomous. By a Lover of Christ and his Ordinances, Ministers and their Calling, Parliaments and their

Freedome; the Town of Ipswich her Peace and Prosperity, Civill and Ecclesiasticall: being sometimes an Inhabitant there. Printed by Philo-Monarchæus [4 April 1660]. Barbon is here pronounced 'worthy of all designation, indignation, and abomination.' Another broadside travesties the petition after this fashion: 'To the Right Honorable the High Court of Parliament sitting at Westminster. The Illegal and Immodest Petition of Praise-God Barbone, Anabaptist and Leather Seller of London: most impudently sheweth that your Petitioner hath known a great while, and indeed long enough to have had more wit and more honesty; &c. (4 July 1660).

Although Barbon took advantage of the temporising 'general pardon' of 1660, he did not forsake his friends after the accession of Charles II. On 5 Sept. 1661 Humphrey Lee writes to Katharine Hurlston that Praise-God Barebones constantly resorts to Major Bremen and Vavasour Powell, prisoners in the Fleet (*Calendar of State Papers*, p. 82). On 26 Nov. 1661 Barbon, along with Major John Wildman and James Harrington, was arrested and sent to the Tower (KENNET, as before, p. 567). On 31 Dec. 1661, interrogations were drawn up by Secretary Nicholas to be administered to Mary Ellis, as to what she knew of Praisegod Barebones and others; their meetings at one Porter's house, where she had been servant; the weekly dining there of the post-office clerks (*ibid.* p. 197). We get a glimpse of Barbon in prison on 27 July 1662, when an order in council on petition of Sarah Barebones released her husband on bail from the Tower, where he had been close prisoner 'many months, and so ill that he must perish unless released' (*Calendar*, p. 447). But under 3 Nov. 1662 we discover that his steps were still dogged: 'Examination of Lieutenant Kingsley as to his acquaintance with Jesse [Henry Jessey?], whom he apprehended two years before, . . . and Praise-God Barebones' (*ibid.* p. 541).

After his release from prison Barbon reappears, in 1676, as a witness on house-rents, whilst he was resident in St. Dunstan's parish, and, as already noted, he was then aged eighty years. He died at the close of 1679. His burial is registered in the parish register of St. Andrew, Holborn, under date '5 Jan. 1679[-80], at ye ground near ye Artillery' (*Notes and Queries*, 4th series, iii. 215).

It has been stated that Barbon had two brothers, respectively named 'Christ-came-into-the-world-to-save Barebone' and 'If Christ - had - not - died - thou - hadst - been -

damned Barebone,' abbreviated into 'Damned Barebone' (GRANGER, *Biogr. Hist. of England*, iii. 68); but there is no proof of this. The only other Barbon known at this period was Dr. Nicholas Barbon, probably Praise-god's son [see BARBON, NICHOLAS].

[In addition to the authorities cited, see Carlyle's *Cromwell*; Picton's *Cromwell*; Whitelocke's *Memorials*; Crosby's *History of Baptists*, ii. 40; Ivimey's *History of Baptists*, i. 156-7; *Fanatics, Puritans, and Sectaries*, 1821, in *Brit. Mus.*; reprint of *New Preachers New*, with a modern Introduction; communications from Rev. S. A. Swaine, M.A., London, and Rev. G. P. Gould, M.A., Bristol; two tracts referred to in *Notes and Queries*, 3rd series, i. 395, seem to show that Barbon, in his despair of monarchy and protectorship alike, fell in for a time with the 'fifth monarchy' enthusiasm; in *Brit. Mus. (Harleian MS. 7332, f. 40)* is a collection of verse 'written (i.e. transcribed) by Ffeare-god Barbon (of Daven-try), who, being at many times idle and wanting employment, wrote out certain songs and epigrams, with the idea of mending his hand in writing.' Cf. *Notes and Queries*, 1st ser., i. 266.] A. B. G.

BARBOUR, JOHN (1316?-1395), Scottish poet, the earliest and one of the best of the ancient Scottish poets, a contemporary of Chaucer, was archdeacon of Aberdeen. The date of his birth is conjectural, but his death, on 13 March 1395, is proved by an entry in the obit book of the cathedral, the cessation in that year of a pension conferred on him by Robert II, and other documentary evidence. In 1357 he appears as archdeacon of Aberdeen in a safe-conduct by Edward III to him and three scholars going to study at Oxford; and in the same year he was named one of the proxies of the Bishop of Aberdeen in the council which met at Edinburgh to provide for the ransom of David II. Nothing is known of his earlier history, and his name derived from a common trade renders the conjectures hazardous which have found for him a parentage in north, midland, and south Scotland. In all likelihood he was an Aberdonian, and minute observers have even detected peculiarities of that dialect in his poems. Similar safe-conducts in 1364 (when he was accompanied by four horsemen on his way to Oxford or elsewhere, as he might think proper), in 1365 (when he had leave to travel through England to St. Denis with six horsemen), and in 1368 (with two valets and two horses to the other dominions of the king in the direction of France), show that in all probability he pursued his studies and superintended those of others, both at Oxford and Paris. In 1372 he was one of the auditors of exchequer, and

in the following year clerk for the audit of the household of the king. In 1375, as he himself records, he composed the poem of the 'Brus,' by which he is best known, as it at once became a national epic, celebrating in short and pithy lines, easy to remember, the story of the war of independence and the deeds of

King Robert of Scotland  
That hardy was of hert and hand  
And Schir James of Douglas  
That in his tyme sa worthy was.

In 1377 he received from Robert II a sum of ten pounds, and next year a perpetual pension of twenty shillings, to be paid from the 'king fermes' or rent of Aberdeen, with power to assign it in mortmain, which is stated in one of the exchequer accounts to have been a reward for his poem. He was again auditor of exchequer in 1382 and 1384, and in 1388 he received a further pension for life of ten pounds from the customs of Aberdeen. It has been conjectured that this may have been a return for a poem, now lost, on the genealogy of the Stuarts, to which Wyntoun refers—

The Stewartis oryginale  
The Archdekyne has treted hale  
In metyr fayre.

(*Chronykil*, viii. 7, 143.)

Another passage of the same author mentions that the genealogy was traced from

Dardane, Lord de Frygya,

Tyl Robert our secound kying  
That Scotland had in governyng. (ii. 1, 130.)

Wyntoun also says that Barbour made a genealogy of Brutus (iii. 3, 139), and some editors have supposed this to be the same work as that on the Stuarts, and have even given it the name of the 'Brute.' But it appears more probable that the reference here is to the legend of Troy, which Barbour, like other writers of his age, is believed to have treated in a poem, two fragments of which have been recently discovered at Cambridge, and printed by the Early English Text Society. A more important discovery, due like the former to Mr. Henry Bradshaw, is the long poem on the 'Legends of the Saints,' which, though without author's name, is proved with reasonable certainty to be Barbour's by the similarity of its metre with that of the 'Brus,' of the dialect with the Scottish of his time, and by the inclusion in the saints whose lives are told of Ninian, the primary saint of Scotland, and Machar, a disciple of Columba, the patron saint of Aberdeen. This poem, which has now been published by Horstmann in his 'Altenglische Legenden,' contains an

interesting notice of its author and allusions to another hitherto unknown work which, assuming it to be of proportionate length with the 'Legends of the Saints,' would make him one of the most prolific poets of the middle ages:—

Tharfor sene I ma nocht work  
As minister of haly Kirke  
For gret elde and feblenes  
Yet for to eschew idlenes,  
I hafe translatit symply  
Sum part as I fand in story  
Of Mary and hir Son Jesu.

From the outline of the contents of this work which follows, it appears to have comprised the whole gospel history with the legend of the Virgin Mary's subsequent life. The 'Legends of the Saints' contains 33,533 verses and lives of fifty saints, commencing with those of the apostles and evangelists, which are followed by various martyrs and confessors, both of the eastern and western church, taken for the most part from the 'Legenda Aurea.' No English saints are included, and only the two Scottish above mentioned—that of St. Machar, probably taken from the Latin life which was one of the lectures or lessons in the breviary of Aberdeen; and that of St. Ninian, from his life by Ailred of Rievaulx, with the addition of a few miracles wrought in the author's time at Ninian's shrine at Whithorn. One of these, whose subject was John Balormy, 'a gudeman in Murrefe' (i.e. Moray), born in Eglyn, of whom the author says, 'I kend hym weill mony day,' confirms the attribution of the poem to Barbour. But the style of verse and tone of the poem so well agree with the 'Brus' that few persons will doubt the authorship which its German editor, as well as Mr. Bradshaw, assumes as certain. From the expressions as to his age and infirmity a date between 1380 and 1390 has been assigned to it. There are frequent notices of Barbour as a witness to deeds in the 'Register of Aberdeen' down to 1392. The payment of his life pension ceased in 1395, and in 1398 he is referred to as deceased in an inquest as to certain lands, the ward of which had been conferred on him by Robert II. This document confirms the date of his death as being in 1395 by the statement that the ward had been held by Alexander Abercromby for rather more than two years and a half since the date of the archdeacon's death.

In 1380, fifteen years before his own death, Barbour mortified his pension of twenty shillings in favour of the cathedral for a mass to be said on his anniversary on behalf of his soul and those of his parents.

Such are the facts known to us of the life of Barbour, few in number, but sufficient to represent the career of a learned and busy, pious and prosperous ecclesiastic. His poems add scarcely any personal details except those already noted, but their spirit reveals a character in keeping with his external circumstances. They are frank and simple expressions of the early style of narrative poetry, free from all effort of laboured art, sometimes tedious from their minuteness of detail, but at other times charming from their naturalness, and occasionally striking a deep note of national or human feeling. The age in which they were written, and the effect of the 'Brus' upon the character of the Scottish nation, give their author a place in literature beyond the intrinsic merit of his works, either as poetry or history. The 'Brus' was in great part copied by Wyntoun, and the main facts, which Barbour may easily have derived from eye-witnesses, one of whom, Sir Alan Cathcart, he names, may be relied on; although, by an inexplicable blunder, he has confounded his hero with his grandfather, the competitor of Balliol for the crown before Edward I at Norham. The aim of true history and the pleasure it gives have seldom been better described than in the prologue of this poem:—

Storyis to red ar delitabill,  
Suppos that tha be nocht but fabill.  
Than suld storyis that suthfast wer  
And tha wer said on gud maner  
Haf doubill plesans in heryng:  
The fyrst plesans is the carping,  
And the tothir the suthfastnes  
That schawis the thing rycht as it wes.

The praise of the national virtue of independence, which is the moral of his poem, was the natural voice of a time when Scotland was rejoicing at its escape from the imperial schemes of the Plantagenet kings; but it deserves note that Barbour bases it on the value of personal freedom—

A! fredom is a noble thing;  
Fredom mais man to haf liking,  
Fredom all solace to man giffis:  
He lifs at es that frely lifs—

and laments the position of the serfs whose emancipation had not yet come:—

Shortly to say is nane can tell  
The sair condicioun of a threll.

In other passages he shows a gentleness which recalls Chaucer, as in the anecdote of the king stopping his host to provide for the delivery of a poor woman. But his humour is far inferior. As a compensation he never trenches on the coarseness to be found not only in the English, but in a worse form in

some of the later Scottish poets. His range and depth of observation are also much more limited. Instead of the comedy of human nature in the 'Canterbury Tales,' he has given us only a drama of war with a single hero. His other poems are almost literal translations: the 'Legends of the Saints' from the 'Legenda Aurea,' and the Troy book from Guido da Colonna's 'Historia Destructionis Troiae.' His imagination required facts or legends to stimulate it. He is not a creative poet. It is only on rare occasions that he indulges even in the graces of composition sometimes thought inseparable from poetry. To one of these, his description of spring, the reader is referred as representing his verse at its best; but to compare it, as has been done, with the melodious ease of Chaucer's rhythm is too severe a trial.

The German edition of the 'Legends of the Saints' claims for that poem a superiority over the 'Brus' in form and skill in composition, but this seems the partiality of an editor. There is little in this respect to choose between them, and the interest of the historical surpasses that of the legendary poem.

The few romances and other poems of earlier date than Barbour, whose authors are for the most part unknown, and which exist only in fragmentary form, cannot displace him from the unique position of being the father both of vernacular Scottish poetry and Scottish history. Blind Harry's 'Wallace' is a century later; Wyntoun was a contemporary, but of a younger generation. In virtue of this position Barbour did much to fix the dialect which sprang from the Northumbrian or northern English, and was preserved by the writers who succeeded him in the form known as broad Scotch, though it is still called by Barbour and even later Scottish poets 'Inglish,' or by one of them 'Inglish of the northern leid.' His works have therefore a special linguistic interest which has attracted the notice of modern philologists.

The chief manuscripts of the 'Brus' are those in the Advocates' Library, Edinburgh, and in St. John's College, Cambridge, both of which are transcripts by John Ramsay towards the end of the fifteenth century. The oldest printed edition extant is that 'imprentit at Edinburgh by Robert Likprink at the expensis of Henrie Charteris, MDLXXI,' of which a copy, probably unique, was sold at the sale of Dr. D. Laing's library for 142l. 10s. This was followed by the edition of Hart in 1616, and there have been many since, of which the best are those of Dr. Jamieson, Mr. Cosmo Innes, and the Early English Text Society (edited by Skeat).

The only manuscripts of the fragments on the Trojan war are appended to two manuscripts of Lydgate's poem on the same subject, one in the Bodleian and the other in the Cambridge University Library. They have been printed by the Early English Text Society. The 'Legends of the Saints' exists only in a single manuscript in the same Cambridge Library. The 'Legend of St. Machar' was printed from it by Horstmann in his 'Altenglische Legenden, neue Folge,' Heilbronn, 1881, and the remainder, along with the fragments of the poem on the Trojan war, were published by the same editor at Heilbronn in 1882.

[Exchequer Rolls of Scotland, vols. ii. and iii.; Registrum Episcopatus Aberdonensis, Spalding Society; Rymer's *Fœdera*. Brief memoirs are prefixed to the various editions of the Bruce, and his position as a poet is estimated in Warton's *History of English Poetry*, Irving's *History of Scottish Poetry*, and Mätzner's *Altenglische Sprachproben*.] Æ. M.

BARCAPLE, EDWARD FRANCIS MAITLAND, LORD (1803-1870), Scottish judge. [See under MAITLAND, THOMAS, LORD DUNDRENNAN.]

BARCHAM, JOHN (1572?-1642), antiquary and historian. [See BARKHAM.]

BARCLAY, ALEXANDER (1475?-1552), poet, scholar, and divine, was born about the year 1475. The question whether he was by birth a Scotchman or an Englishman has been abundantly disputed, but there is no evidence to support the latter contention. Pits considered that Barclay's native district was probably Devonshire, apparently on no other ground than that of his having held preferment there. Wood adds a DE to his name (for which the occurrence of the same prefix in the Prologue of James Locker, 'Ship of Fools,' ed. Jamieson, i. 9, is hardly a sufficient voucher), and idly supposes him to have been born at Berkeley in Somersetshire, for which should be read Gloucestershire. On the other hand, not only do his baptismal name and the spelling of his surname *primâ facie* suggest a Scotch origin, but there remains the distinct statement of a contemporary, Dr. William Bulleyn, who lived many years in the northern counties of England, that 'Bartley' was 'borne beyonde the colde River of Twede.' In his 'Scriptorum Summarium' Bale introduces Barclay simply as 'Scotus,' and Holinshed, cited by Ritson, likewise calls him a Scot. The Scotchman Dempster also claims him as his countryman (*Historia Ecclesiastica Gentis Scotorum*, i. 106), adding that he lived in England,

having been expelled from his native country for the sake of religion; which statement, however, cannot be correct, if Barclay was settled in England by 1508 or earlier, up to which time no religious disputes had occurred in Scotland (Ritson). Little importance attaches to the cavil that, had Barclay been a Scot, he would have taken more frequent opportunities of singing the praises of his native land. This would not have added to his comfort in England; moreover, one of his chief patrons, as will be seen, was the victor of Flodden Field. In the 'Ship of Fools,' however (sec. 'Of the ruyne, &c. of the holy fayth') occurs, subjoined to 'a specciall exhortacion and lawde' of Henry VIII., a warm tribute to James IV of Scotland, consisting of several stanzas, one of them an acrostic, and including a recommendation of a close alliance between the lion and the unicorn. At the time of their publication, hardly any one but a Scotchman would have indited these stanzas. Lastly, the argument in favour of Barclay's Scottish nationality is still further strengthened by the Scottish element in his vocabulary. The words in question are not numerous, but it is difficult otherwise to account for their presence (JAMIESON, i. xxix-xxx).

Possibly Barclay may have first crossed the border with the view of obtaining a university education in England, according to a practice not unusual among his countrymen even in his day (IRVING, 326). He is conjectured to have been a member of Oriel College, as it would seem solely on the ground that he afterwards dedicated his chief literary work to Dr. Cornish, bishop of Tyne (suffragan bishop of Bath and Wells), who was provost of Oriel from 1493 to 1507. As a matter of course, we have a suggestion that Cambridge and not Oxford, and a third that Cambridge as well as Oxford, may have been Barclay's university. Warton cites a line from 'Eclogue I,' which at all events shows that Barclay once visited Cambridge; to this it may be added that in the same Eclogue 'Trompyngton' and 'good Manchester' (query Godmanchester, though the reference may be to Manchester, with which James Stanley, bishop of Ely, 1506-15, was closely connected) are mentioned among the well-known places of the world. But so much familiarity with Cambridge and its neighbourhood might well be acquired by an Ely monk. At the one or the other of the English universities, if not at both, he may be assumed to have studied and to have taken his degrees. In his will he calls himself doctor of divinity, but where and when he took this degree is unknown. Either

before or after his university career, while he was still 'in youth,' he resided at Croydon in Surrey, of which place repeated mention is made in 'Eclogue I.'

Barclay's student life had, according to his own testimony in the 'Ship of Fools' (sec. 'Of unprofytable Stody'), been full of 'foly;' and it has been supposed that this may have induced him to travel abroad before his entrance into holy orders (JAMIESON). The shepherd Cornish, by whom in his 'Eclogues' Barclay evidently, as a rule, designates himself, speaks of Rome, Paris, Lyons, and Florence as towns which he visited among many others, when he saw the world in his youth. We know of no authority for Mackenzie's assertion that he also travelled in the Netherlands and in Germany. In any case his years of travel must have fallen in a most active period of the continental Renaissance, when Englishmen were freely gathering in the learning which they were to acclimatise at home. It is impossible to determine how much of his scholarship Barclay acquired in England. He seems to have had but a slight acquaintance with Greek. Of his knowledge of Latin poets his 'Eclogues' were to furnish ample evidence; of other writers he especially quotes Seneca. But the monument proper of his Latin scholarship is his translation of Sallust's 'Bellum Jugurthinum,' which he published at some date unknown in obedience to the wish of the Duke of Norfolk. It is prefaced by a dedication to this nobleman, in which the author speaks of 'the understanding of latyn' as being 'at this time almost contemned by gentylmen,' and by a Latin letter, dated from [King's] Hatfield in Hertfordshire, to John Veysey, bishop of Exeter. His familiarity with French he showed by composing for publication in 1521, again at the command of the Duke of Norfolk, a tractate 'Introductory to write and to pronounce Frenche,' which is mentioned by Palsgrave in 'L'Esclaircissement de la langue Françoise,' printed in 1530. A copy of Barclay's treatise, probably unique, exists in the Bodleian.

In the early years of the sixteenth century the union between churchmanship and learning was still hardly less close in England than it was in that group of continental scholars, among whom Sebastian Brant was already a prominent figure. Soon after Barclay's return to England he must have been ordained by Bishop Cornish, through whom he was appointed a priest in the college of Ottery St. Mary, in Devonshire, of which the pluralist bishop held the wardenship from 1490 to 1511. The college of secular priests, of which Bar-

clay was a member, was founded in 1337 by John Grandisson, bishop of Exeter; the manor and hundred had been obtained by him in exchange from the dean and chapter of Rouen, to whom they had been granted by Edward the Confessor. It was here that Barclay, in 1508, accomplished the work to which he owes his chief fame, the English verse translation of the 'Ship of Fools,' first published by Pynson in December 1509, with a dedication by the author to Bishop Cornish on the back of the first leaf. In this dedication he speaks of the work as 'meorum primicia laborum quæ in lucem eruperunt,' but he had previously, in 1506, put forth without his name a book called the 'Castell of Laboure,' a translation from the French poet, best known as a dramatist, Pierre Gringoire's 'Le Chateau de Labour' (1499), a moral allegory which, though of no novel kind, was speedily reprinted by a second publisher.

During his residence at Ottery St. Mary Barclay made some other friends and enemies. Among the former was a priest, John 'Bishop by name,' his obligations to whom he warmly attests in the 'Ship of Fools' (sec. 'The descripcion of a wyse man'), gravely playing on his name as that of 'the first ouersear of this warke.' A certain 'mays-ter Kyrkham,' to whose munificence and condescension he offers a tribute in the same poem (sec. 'Of the extortion of Knyghtis'), professing himself, doubtless in a figurative sense only, 'his chaplayne and bedeman whyle my lyfe shall endure,' is with much probability supposed to be Sir John Kirkham, high sheriff of Devonshire in the years 1507 and 1523 (see the authorities cited by JAMIESON i. xxxvii, and cf. as to the family of Kirkham Lysons, *Magna Britannia*, part i. ccii-cciii). In the same section of the poem he departs from his general practice of abstaining from personal attacks, in order to inveigh against a fat officer of the law, 'Mansell of Otery, for powlynge of the pore;' elsewhere (sec. 'Inprofytable bokes') the parsons of 'Honyngton' (Honiton) and Clyst are glanced at obliquely as time-serving and sporting clergymen; and to another section ('Of hym that nought can and nought wyll lerne') an 'addicion' is made for the benefit of eight neighbours of the translator's, secondaries (priest-vicars) of Ottery St. Mary, without whose presence the 'ship' would be incomplete.

Barclay's residence in Devonshire may have come to an end with Bishop Cornish's resignation of the wardenship of Ottery St. Mary in 1511, which was followed two years later by the bishop's death. Remi-

niscences of the West occur even in his later poems ('Bristowe' in *Ecl.* iv., 'the Severn' in *Ecl.* ii.); but in the dedication of 'The Myrrour of Good Maners, translated 'at the desyre of Syr Gyles Alynghton, Knyght,' and printed without a date by Pynson 'at the instance and request' of Richard, earl of Kent, Barclay calls himself 'prest: and monke of Ely.' This 'Myrrour' is a translation from Dominic Mancini's elegiac poem 'De quatuor Virtutibus' (1516); and the address prefixed to it contains the interesting statement that Sir Giles Alington had requested Barclay to abridge or adapt Gower's 'Confessio Amantis,' but that Barclay had declined the undertaking as unsuitable to his age, infirmities, and profession (WARTON, iii. 195). The 'Eclogues,' the early editions of which are again undated, were manifestly also written at Ely (see in *Ecl.* iii. the passage on Bishop Alcock, 'now dead and gone,' Alcock, the founder of Jesus College, Cambridge, who is also lamented in *Ecl.* i., died in 1500; and see in *Ecl.* v. the reference to 'Cornyx whiche dwelled in the fen,' and the detailed description of a mural painting in Ely Cathedral). In the introductory lines he states that he was thirty-eight years of age when he resumed a subject at which he had already worked in his youth; and inasmuch as it is clear that at least one event mentioned in the 'Eclogues,' the death of Sir Edward Howard (*Ecl.* iv.) in 1513, could not have occurred long before the allegory concerning it was composed, the above-mentioned statement fixes his birth about the year 1475 (see the argument in JAMIESON, i. lv-lxiii, but here the death of Howard is misdated 1514; see Lord HERBERT of Cherbury's *Life and Reign of Henry VIII*, 31). While, then, still in the prime of life, Barclay had taken the vows as a Benedictine monk, and thus enrolled himself in the most conservative and aristocratic of the orders (it is curious that in *Ecl.* v. he should rather contemptuously introduce 'a gentell Cluner,' i.e. Cluniac monk, as a purveyor of charms to women). At Ely he also translated from Baptist Mantuan the 'Life of St. George,' which he dedicated to Nicholas West, bishop of Ely (FAIRHOULT); from this translation Mackenzie (ii. 291) quotes some lines in the old fourteen-syllable metre, which are without any striking merit. When certain lives of other saints, said to have been written by Barclay, but all non-extant, were composed, can only be conjectured; the 'Life of St. Thomas of Canterbury' is thought by Jamieson to have been written when its author had become a Franciscan at Canterbury; of the 'Lives' of St. Catharine, St. Margaret,

and St. Ethelreda,' the last-named, of course, directly connects itself with Ely.

Under Henry VII, for whom Barclay cherished, or professed to cherish, a deep regard (see *Ecl.* i.), learning and letters were already coming into fashion, and the early years of Henry VIII were the heyday of the English Renaissance. It is therefore not surprising that Barclay, whose efforts as an author began towards the close of the first Tudor reign, and achieved a conspicuous success at the end of the second, should have had a liberal experience of patrons and patronage. He seems to have enjoyed the goodwill of Henry VII's trusted adviser, Cardinal Morton, a prelate of literary tastes (see *Eclogues* iii. and iv.); but this must have been in the earlier part of his life, as Morton died in 1500. Perhaps, as Archbishop of Canterbury, he had come into some contact with Barclay at Croydon. He was befriended in his maturity by Thomas, duke of Norfolk, the victor of Flodden Field and lord treasurer of England—to whom, as has been seen, he dedicated his translation of the 'Jugurtha,' and the memory of whose second son, Sir Edward Howard, he, after the death of the latter off Brest, 25 April 1513, as lord high admiral in the war with France, sang in the graceful eclogue of the 'Towre of Vertue and Honour,' introduced into his 'Ecl. iv.' Other patrons of his, as has been seen, were Richard, earl of Kent, who died in 1523, and Sir Giles Alington. To another contemporary, of tastes and tendencies similar to his own, he pays in passing a tribute which to its object, Dean Colet, must have seemed the highest that could be received by him. 'This man,' we read in 'Ecl. iv.,' 'hath won some soules.' Little is known as to his relations to Cardinal Wolsey, an allusion to whom has been very unreasonably sought in the mention of 'butchers dogges wood' (mad) in the eulogy of Bishop Alcock in 'Ecl. i.' On the other hand, Jamieson has directed attention to a letter from Sir Nicholas Vaux to Cardinal Wolsey, dated 10 April 1520, and begging the cardinal to 'send to them . . . Maistre Barkleye, the black monke and poete, to devise hystoires and convenient raisons to florrishe the buildings and banquet house withal' at the famous meeting called the Field of the Cloth of Gold (see *Calendar of State Papers*, Foreign and Domestic, Henry VIII, vol. iii. pt. i. 259). It would probably not have interfered with Barclay's execution of his task had he been the author of a tract against the French king's (query Lewis XIII?) oppression of the church, which has been ascribed to him. In the same connection it may be added that a strong antipathy

animated Barclay against a prominent contemporary man of letters. Against Skelton, as a wanton and vicious writer, Barclay inveighed with little or no pretence of disguising his attack. At the close of the 'Ship of Fools' (sec. 'A brefe addicion of the syngularyte of some newe Foly's') he alludes with lofty contempt to the author and theme of the 'Boke of Phyllipp Sparowe,' a hit very good-humouredly returned, as it seems, by Skelton in his 'Garlande of Laurell' (Dyce's *Skelton*, i. 411-12). Very probably, also, it is in allusion to Skelton that, in his 'Ecl. iv.,' Barclay upbraids a 'poete laureat' who is a graduate of 'stinking Thais' (cf. Dyce, xxxv-xxxvi). But though Skelton paraphrased and presented to Wolsey three portions of Locher's Latin version of the 'Ship of Fools' under the title of the 'Boke of Three Fooles' (see Dyce, i. 199-205, and cf. ii. 227), neither jealousy nor partisanship, nor even professional feeling is needed in order to explain Barclay's abhorrence of the Bohemian vicar of Diss, with whose motley the sober hue of his own more sedate literary and satirical gifts had so little in common. Bale mentions (*Scriptorum Brytanniae Centuria*, ix.) a book by Barclay, 'Contra Skeltonium,' which, according to Ritson, 'was probably in metre, but appears neither to have been printed, nor to be extant in manuscript.'

How Barclay fared at the time of the dissolution of the monasteries we do not know. Some time before this he had left Ely, where he had become a *laudator temporis acti*, and deprecated the violence which, in contrast with his predecessors, the 'dredefull Dromo' used towards his flock (see *Ecl.* iii. One would be tempted to identify this personage with Thomas Goodrich, bishop of Ely, 1534-54, who 'reformed' his see, but that the 'Eclogue' must have been written far earlier). At some date unknown he assumed the habit of the more rigorous Franciscan order at Canterbury (BALE, *M.S. Sloan*, cited by Jamieson; cf. Dempster). It is probably a mere coincidence that an Alexander Barclay is mentioned in 1528 as a vehement promoter of the Lutheran reformation and refugee in Germany (see Arber's reprint of ROY and BARLOW's *Rede me and be nott urothe*, Introduction, 13). The reaction of the last years of Henry VIII's reign was clearly not disadvantageous to Barclay, who was presented, 7 Feb. 1546, by Mr. John Pascal with the vicarage of Great Baddow, in Essex, and 30 March of the same year with the vicarage of Wokey, in Somersetshire.

During the reign of Edward VI, through the greater part of which he survived, he must have acquiesced in the religious changes

that seemed good to those in authority: for not only did he hold Great Baddow till his death, but he was in 1552 presented by the dean and chapter of Canterbury to the rectory of All Hallows, Lombard Street, in the city of London. Jamieson has pointed out that Wadding (*Scriptores Ordinis Minorum*), who promotes Barclay to a suffragan-bishopric of Bath and Wells, probably confounds him with Gilbert Berkeley, who was actually consecrated to that see in 1559, and that the same mistake may be at the bottom of a scandalous anecdote against Barclay related by Bale and repeated by Wood, of which the scene is laid at Wells, 'before he was Queen Mary's chaplain.' Queen Mary did not ascend the throne till more than a year after Barclay's death. One is altogether inclined to regard as resting on no better foundation Bale's characteristic assertion that Barclay throughout remained not only 'ueritatis osor,' i.e. a Roman catholic at heart, but also 'sub cœlibatus fœdo foedus adulter.'

A few weeks after his presentation to his city rectory, Barclay died at Croydon, where he had spent some of his younger days. He was buried in the church there on 10 June 1552. Since, as has been seen, he was born about 1475, he had attained to a good old age. In his will, which is extant, he leaves bequests to the poor of Badew and of 'Owkeley' (Wokey). The other bequests are numerous, but have little significance for posterity; a liberal legacy of 80*l.* to the poor and other gifts are dependent on the payment of debts owing by one Outheard Croke, of Winchester (see JAMIESON, i. lxxxvi-lxxxix). Prefixed to Pynson's editions of Barclay's 'Mirror of Good Manners' and 'Sallust' is a representation of the author in monastic habit presenting a copy of his work to his patron. The face is (at least in the Cambridge 'Sallust') interesting; but Jamieson points out that the picture is used for a similar purpose in other publications, so that its chief figure cannot be identified with Barclay.

Even considering the length of his life, Barclay was a very productive writer. No intrinsic importance, however, belongs to any of his minor writings, incidentally mentioned above; in addition to which there has also been attributed to him, on no very satisfactory evidence, the English translation printed by Pynson, as is supposed, between 1520 and 1530, of the travels of Hayton, a Præmonstratensian friar, in the Holy Land and Armenia, originally written in French, and then rendered into Latin by command of Pope Clement V. Warton further mentions, as by Barclay, 'Orationes variæ' and a tractate,

'De fide orthodoxa.' His literary fame rests on his 'Ship of Fools,' and in a less degree on his 'Eclogues.' The former of these works remains essentially a translation, though Barclay truly states himself to have added and given an English colouring to his work. It is in any case the most noteworthy translation into a living tongue of a production of very high literary significance. The 'Narrenschiff' of Sebastian Brant was published at Basel in 1494, and its immediate popularity is attested by the appearance of three unauthorised reprints in the course of the same year. A Low-German translation was published probably as early as 1497, and in the same year Jacob Locher produced his celebrated Latin version, the 'Stultifera Navis.' On this Barclay's translation was founded. He professes, indeed, to have 'ouersene the fyrst inuention in Doche, and after that the two translations in Laten and Frenche' (see the *Prologue of James Locher* in JAMIESON, i. 9; the French translation was probably that of Pierre Rivière of Poitiers, whose original was Locher, and whom, in 1498, Jehan Droyn paraphrased into prose). But at the conclusion of the argument (JAMIESON, i. 18) Barclay directly refers to certain verses by Locher as those of his 'Actour,' or original; and the order of the sections, as well as the additions made to the original German text, generally correspond to those in Locher's Latin version of 1497. Even the preliminary stanzas, headed 'Alexander Barclay excusynge the rudenes of his translation,' correspond to the 'Excusatio Jacobi Locher,' whereas Brant's 'Entschuldigung' occurs near the end of the German book. Curiously enough, however, the poem of Robert Gaguin, of which Barclay inserted a version near the end of his work, had made its appearance, not in Locher's Latin translation, but in that of Jodocus Badius Ascensius (1505). On the other hand, the woodcuts of Barclay's translation are copied from the original Basel edition, for which it has been supposed that these illustrations, that contributed not a little to the popularity of the satire, were invented by Sebastian Brant himself (see ZARNCKE, 234 seq.)

Barclay's 'additions' are mostly of a personal or patriotic nature; but he also indulges in an outburst against French fashions in dress (sec. 'Of newe fassions and disguised garments'), indites a prolonged lament, the refrain of which suggests a French origin, on the vanity of human greatness (sec. 'Of the ende of worldly honour and power,' &c.), and makes a noteworthy onslaught upon the false religious (this is the substance of his 'brefe addicion of the syngularite of some

newe Folyes'). The ballad in honour of the Blessed Virgin, which concludes his work, seems also to be his own. As to his general execution of his task, he on the whole manages his seven-line stanza not unskilfully, and thus invests his translation with a degree of dignity wanting to the original. Like Brant, he never forgets his character as a plain moral teacher. He is loyal and orthodox, and follows his original in lamenting both the decay of the holy faith catholic and the diminution of the empire, and in denouncing the Bohemian heretics, together with the Jews and the Turks. The English 'Ship of Fools' exercised an important direct influence upon our literature, pre-eminently helping to bury mediæval allegory in the grave which had long yawned before it, and to direct English authorship into the drama, essay, and novel of character.

Barclay's 'Eclogues' (or 'Egloges,' as they were first called in deference to a ridiculous etymology) were the first poetical efforts of the kind that appeared in English proper; in Scotland, as Sibbald points out, they had been preceded by Henryson's charming 'Robene and Makynne' (dated about 1406 by H. Morley). The earliest modern bucolics were Petrarch's, composed about 1350, but these are in Latin. Barclay's more immediate predecessor, and one of his chief models, was Baptist Mantuan, whose eclogues appeared about 1400; and before the close of the century the 'Bucolics' of Virgil had been translated into Italian by several poets. The first three of Barclay's 'Eclogues' are, however, adaptations from the very popular 'Miseria Curialium' of Aeneas Sylvius (Piccolomini, 1405-64). The theme was one familiar enough to the Renaissance age, and its echoes are still heard in our own literature in the poetry of Spenser. Though Barclay's execution is as rude as his manner is prosy, his very realistic complaints furnish a very lively picture of contemporary manners: thus, Ecl. iii., which was probably known to Spenser, and perhaps to Milton, introduces an excellent description of an inn; but a more famous passage in this 'pastoral' is the eulogy of Bishop Alcock. Eclogues iv. and v. are imitations of the fifth and sixth of Mantuan. Into Ecl. iv., which treats of the neglect of poets by rich men, is introduced the allegory already mentioned in honour of Sir Edward Howard; the Duke of Norfolk, the Earl of Shrewsbury, and King Henry VIII appear among the inhabitants of the Tower of Virtue and Honour. The effort is as well sustained as any that remains from Barclay's hand. The whole poem has a touch of bitterness resem-

bling that in the October eclogue of the 'Shepherd's Calendar.' Ecl. vi., under the title of the 'Cytezen and Uplondyshman,' treats the familiar theme of the relative advantages and disadvantages of town and country, here discussed by two shepherds warming themselves in the straw at night. After Amyntas has related the curious and pathetic tale of 'Cornix' concerning the unequal distribution among Eve's children of the honours and the burdens of life, Faustus defends the shepherd's estate by dwelling on its representatives from Abel to Christ. In the entertaining colloquy which follows, the town has decidedly the worse of the dispute, though the author is man of the world enough to mingle a little satire in his praise of rustic simplicity.

The following list of Barclay's extant works is abridged from Jamieson, i. xcvi-cix. The doubtful works are queried. Bale's list is incomplete, as is that of Pits. Dempster's and Warton's include several works, already mentioned, which have been attributed to Barclay, but are not extant. 1. 'The Castell of Laboure,' Wynkyn de Worde, 1506; Pynson, n. d. 2. 'The Shyp of Fols of the Worlde,' Pynson, 1509; Cawood, 1570, &c. &c. 3. 'The Egloges of Alexander Barclay, Prest,' n. d.; John Herforde, n. d.; Humfrey Powell, n. d.; Ecl. iv. Pynson, n. d.; Ecl. v. Wynkyn de Worde, n. d., &c.; Powell's edition is in the Cambridge University Library. 4. 'The Introductory to write and to pronounce Frenche,' Coplande, 1521. 5. 'The Myrrour of Good Maners,' Pynson, n. d.; Cawood, 1570. 6. 'Cronycle compiled in Latyn, by the renowned Sallust,' Pynson, n. d.; Waley, 1557; Pynson's edition is in the Cambridge University Library. 7. ? 'Alex. Barclay, his Figure of our Mother Holy Church oppressed by the Frenche King,' Pynson, n. d. 8. 'The Lyfe of the Glorious Martyr saynt George, translated by Alexander Barclay, while he was a monk of Ely,' Pynson, n. d. 9. ? 'The Lyfe of saynte Thomas,' Pynson, n. d. 10. ? 'Haythons Cronycle,' Pynson, n. d.

[The best account of Barclay and his works will be found prefixed to T. H. Jamieson's excellent edition of the *Ship of Fools*, 2 vols. Edinburgh, 1874. Every kind of information as to Sebastian Brant's *Narrenschiff*, with a review of its reproductions, is supplied in Zarncke's celebrated edition, Leipzig, 1854. Of the *Eclogues* there is no complete modern edition; but Ecl. v. is reprinted in Sibbald's *Chronicle of Scottish Poetry*, ii. 393-424, and in vol. xxii. of the *Percy Society's Publications*, with a valuable introduction, containing extracts from Ecl. iv., and notes by F. W. Fairholt. See also Bale's

*Scriptorum Brytanniæ Centuriæ*, 723, Basel, 1559; Pits's *Relationes Historiæ de rebus Anglicis*, i. 745, Paris, 1619; Th. Dempster's *Historia Ecclesiastica Gentis Scotorum*, 2nd ed. (Bannatyne Club), i. 106, Edinburgh, 1829; Wood's *Athenæ Oxonienses*, ed. Bliss, i. 205-9; Warton's *History of English Poetry*, ed. Hazlitt, iii. 189-203, London, 1871; Sibbald's *Chronicle of Scottish Poetry*, ii. 396-7; Ritson's *Bibliographia Poetica*, 44-46\*; D. Irving's *History of Scottish Poetry*, ed. J. A. Carlyle, Edinburgh, 1861. The article on Barclay in Mackenzie's *Lives and Characters of Scottish Writers*, ii. 287-95, is discursive and incorrect.]

A. W. W.

**BARCLAY, ANDREW WHYTE, M.D.** (1817-1884), physician, was born at Dysart, N.B., and educated at the High School of Edinburgh. He studied medicine at Edinburgh University, and after visiting Berlin and Paris took the M.D. degree in 1839. He afterwards entered at Caius College, Cambridge, and proceeded to the M.D. degree in 1852. He was elected assistant physician to St. George's Hospital in 1857, and devoted much attention to the interests of the medical school, lecturing on medicine, and serving as physician from 1862 to 1882. At the College of Physicians he was examiner in medicine, councillor, censor, Lumleian lecturer, and Harveian orator (for 1881), being elected treasurer in 1884. He was president of the Royal Medical and Chirurgical Society for the year 1881, and contributed to the transactions of that society two papers on heart disease. He was shrewd and cautious as a physician, concise and polished as a writer. He wrote the following works: 1. 'A Manual of Medical Diagnosis.' 2. 'On Medical Errors.' 3. 'On Gout and Rheumatism in relation to Diseases of the Heart.' [Brit. Med. Jour. May 1884.] R. E. T.

**BARCLAY, DAVID** (1610-1686), Scottish soldier and politician. [See under **BARCLAY, ROBERT**, 1648-1690.]

**BARCLAY, SIR GEORGE** (fl. 1696), the principal agent in the assassination plot against William III in 1696, was of Scotch descent, and at the time of the plot about sixty years of age. He is characterised as 'a man equally intriguing, daring, and cautious.' He appears to have been a favourite officer of Viscount Dundee, and at the battle of Killcrankie was joint commander of the regiment of Sir Donald McDonald of Sleat, along with that baronet's son (MACPHERSON, *Original Papers*, i. 370). After the death of Dundee he passed over into Ireland, landing there from Mull with the Pink, 19 March 1690 (MACPHERSON, i. 173). Being held by the Highlanders 'in high esteem,'

he returned in 1691 to Scotland, with 'a warrant under King James's hands to treat with the Highland clans' (CARSTARES'S *State Papers*, 140). As an opportunity for a rising did not present itself, he returned again to France; but though he held the appointment of lieutenant in the ex-king's regiment of horse guards, commanded by the Duke of Berwick, he was also frequently employed along with Captain Williamson in negotiations with the adherents of James in England. In 1696 he arrived in England with a commission from James 'requiring our loving subjects to rise in arms and make war upon the Prince of Orange, the usurper of our throne.' According to the Duke of Berwick, 2,000 horse were to be raised to join the king on his arrival from France, Sir John Fenwick to be major-general, and Sir George Barclay brigadier (*Memoirs of the Duke of Berwick*, i. 184). Barclay, however, interpreted his commission as allowing him a certain discretion in the methods to be employed against 'the usurper.' Making the piazza of Covent Garden his headquarters, he gathered around him a body of conspirators—forty men in all, well mounted—who were to pounce on William as he was returning from Richmond to London, the spot selected being a narrow lane between Brentford and Turnham Green, where his coach and six could not turn. The time fixed was 15 Feb., but the plot having been revealed, the king remained at home both on that day and on the 22nd. The principal subordinates were captured, with the exception of Barclay, who made his escape to France. In a narrative published in Clarke's 'Life of James II,' Barclay exonerates his master from all knowledge of the plot; but that he did not strongly reprobate it, is sufficiently proved by the fact that he received Barclay again into his service. During the negotiations with France in 1698, the Earl of Portland demanded that Barclay should be delivered up; but Louis replied that the regiment he commanded had been disbanded, and that he did not know what had become of him.

F. H.

BARCLAY, HUGH (1799-1884), a Scottish lawyer and sheriff substitute of Perthshire, was descended from the old Barclay family of Fifeshire, and was born on

18 Jan. 1799 in Glasgow, where his father was a merchant. After serving his apprenticeship as a law agent he was admitted a member of the Glasgow faculty in 1821. In 1829 he was appointed sheriff substitute of the western district of Perthshire, and in 1833 sheriff substitute of the county. He died at his residence at Early-bank, Craigie, near Perth, on 1 Feb. 1884, having for several years been the oldest judge in Scotland. Sheriff Barclay was the author of 'A Digest of the Law of Scotland, with special reference to the Office and Duties of the Justice of the Peace,' 1852-3, a work which has passed into several editions, and has proved of invaluable service to the class of magistrates for which it was intended. Besides editions of various other legal works, he also published 'Law of Highways,' 1847; 'Public House Statutes,' 1862; 'Judicial Procedure in Presbyterian Church Courts,' 1876; and other minor treatises, such as 'Hints to Legal Students,' 'The Local Courts of England and Scotland compared,' and 'The Outline of the Law of Scotland against Sabbath Profanation.' He was a frequent contributor to the 'Journal of Jurisprudence' and other legal periodicals, and his papers on the 'Curiosities of the Game Laws' and 'Curiosities of Legislation' were also published by him in a collected form. For many years he was a prominent member of the general assembly of the church of Scotland, and, taking an active interest in ecclesiastical and philanthropic matters, he published 'Thoughts on Sabbath Schools,' 1855; 'The Sinaitic Inscriptions,' 1866, and a few other small works of a similar kind.

[*Scotsman*, 2 Feb. 1884.]

T. F. H.

BARCLAY, JOHN (1582-1621), author of the 'Argenis,' was born 28 Jan. 1582 at Pont-à-Mousson, where his father, William Barclay [q.v.], was professor of civil law in the college then recently founded in that town by the Duke of Lorraine. His mother, Anne de Malleviller, was a French lady of distinguished birth; but Barclay always considered himself a Scotsman and a subject of James I, and the attempt to affiliate him to France, of which his native town at that period formed no part, has been renounced even by the French critics who have of late done so much to elucidate the circumstances of his life. He is said to have been educated by the jesuits, and this may partially have been the case; but his father is little likely to have resigned the main charge of his education to other hands, and his writings show no trace of the false taste which had already begun to infect the jesuit colleges. Like

Pope's, his youthful fancy was captivated by Statius, and his first performance was a commentary on the 'Thebaid,' composed at the age of nineteen. The jesuits may well have desired to enlist so promising a recruit in their order; but the usual story that his father carried him off to England to avoid their persecutions is rendered doubtful by the different account of the motive of his visit assigned by himself in one of his poems. The accession of a Scottish king to the English throne would seem quite sufficient inducement to draw a gifted and enterprising young Scotsman to London; at the same time his antipathy to the jesuits, from whatever cause it may have arisen, was unquestionably very genuine, and found vent in his next work. The first part of the 'Satyricon,' published under the name of Euphormio Lusinius, is said to have appeared in London in 1603, but no copy of the edition has ever been found. A second edition was printed at Paris in 1605. Barclay's stay in England was but short; he repaired first to Angers, and in 1605 to Paris, where he married Louise Debonnaire, daughter of an army paymaster, and herself a Latin scholar and poetess. The married pair removed in 1606 to London, where, in the same year, Barclay published his Latin poems under the title of 'Sylvæ,' but the second part of the 'Satyricon' was published at Paris in 1607, an edition entirely unknown until recently brought to light by M. Jules Dukas. Barclay continued to reside in London for nearly ten years, enjoying, as the statement of his friend Thorie and the internal evidence of his works attest, the favour of James I as a countryman and a scholar; but the assertions of some of his biographers fail to convince us that he was entrusted with state secrets or employed in foreign missions. The obloquy occasioned by the attacks made in the 'Satyricon' on the jesuits and the Duke of Lorraine compelled him in 1611 to vindicate himself by the publication of an 'Apologia,' usually but improperly regarded as a third part of the work. This has been usually stated to have been designed as a reply to a particular attack of which the author has remained unknown, but M. Dukas demonstrates that this latter cannot have been written before 1616 or 1617. In 1608 Barclay lost his father, and in 1609 he edited the latter's posthumous treatise, 'De Potestate Papæ,' a work boldly attacking the usurpations of the mediæval popes, which involved him in a controversy with Bellarmine. By other jesuit adversaries he was accused of having dissembled or forsaken his religion to gratify James I, a charge which could have been easily established if it had been well founded. In 1614 he published

the 'Icon Animorum,' generally reckoned as the fourth part of the 'Satyricon,' an animated and accurate sketch of the character of the chief European nations. In 1616 he quitted England for Rome, a step imputed by himself to penitence for having published and defended the errors of his father on the extent of the papal authority; but which the internal evidence of his Latin poems shows to have been rather occasioned by the disappointment of his hopes of reward and advancement at the English court. Though his works continued to be prohibited at Rome, he was pensioned by Paul V and well received by his old antagonist Bellarmine; he repaid their protection, 'meliorē voluntatē quam successu,' says one of his biographers, by a controversial work against protestantism, the 'Parænesis ad Sectarios,' printed at Cologne in 1617. It was probably discovered that theology was not his forte; at all events, his services were not again put into requisition, and he spent his last years in retirement, indulging the innate Scottish taste for gardening by cultivating tulips, and his special literary gift by the composition of his masterpiece, the 'Argenis.' According to a manuscript note in a copy belonging to M. Dukas, founded on information derived from Barclay's son, this memorable work was completed on 28 July 1621; on 1 Aug. the author was stricken with a violent fever, and he expired on the 15th. Ralph Thorie, in his anonymous elegy on Barclay's death (London, 1621), more than insinuates that he was poisoned, and the suddenness of his decease is certainly suspicious. His romance was printed the same year at Paris, under the supervision of his friend Peirescius, whose letters to him remain unedited in the public library at Carpentras. Barclay, by his own direction, was interred in the church of St. Onofrio, which also holds the remains of Tasso. A monument erected to him in another church was subsequently removed, either from the revival of suspicions respecting his orthodoxy; or, according to another account, from his widow's displeasure at a copy having been made for Cardinal Barberini as a monument to a tutor in his own family. Barclay left a son, who became an abbé. His widow returned to France, and died at Orleans in 1652.

Barclay is a writer of the highest merit, who has adapted the style of Petronius, elevated by the assiduous study of more dignified models, with signal success to the requirements of his own day. His 'Satyricon' shows how completely at an early age he had appropriated the fascinating elegance of Petronius, while good taste or good morals kept his

matter singularly pure, considering his age and his vocation as a satirist. There is more of youthful vigour in the 'Satyricon,' more weight and finish in the 'Argenis,' which enjoys the further advantages of an interesting plot and a serious purpose. The 'Satyricon' is partly autobiographical, partly based on his father's adventures, and one main object is the ridicule of persons individually obnoxious to him, such as the Duke of Lorraine, who figures under the name of Callion. The Jesuits are attacked under the collective designation of *Acignii*; and the puritans, whom Barclay hardly liked better, are impersonated under the figure of *Catharinus*. In the 'Argenis,' though most of the characters are real personages, the merely personal element is less conspicuous; the author's purpose is graver, and his scope wider. He designed to admonish princes and politicians, and above all to denounce political faction and conspiracy, and show how they might be repressed. The League and the Gunpowder plot had evidently made a strong impression on his youthful mind. The valour and conduct of Archombrotus and Poliarchus (both representing Henry IV), the regal dignity and feminine weakness of Hyannisbe (Elizabeth), the presumptuous arrogance of Radirohanes (Philip II), are powerfully depicted. As a story, the work occasionally flags, but the style and the thoughts maintain the reader's interest. Fénelon's 'Telemachus' is considerably indebted to it, and it is an indispensable link in the chain which unites classical with modern fiction. It has equally pleased men of action and men of letters; with the admiration of statesmen like Richelieu and Leibnitz may be associated the enthusiastic verdict of Coleridge, who pronounces the style concise as Tacitus and perspicuous as Livy, and regrets that the romance was not moulded by some English contemporary into the octave stanza or epic blank verse. Barclay's own Latin verse is elegant and pleasing, and rarely aspires to be anything more. Very little is known with certainty respecting Barclay's character and personal traits. His elegist Thorie extols his personal qualities with most affectionate warmth, but in very general terms. He is usually said to have been grave and melancholy, but Thorie celebrates his '*facilis lepor*,' and Bugnot speaks of his '*frons ad hilaritatem porrecta*.' He evidently sought the favour of the great, and would concede much to obtain it, but he cannot be reproached with flattery or servility. His adherence to the catholic religion was probably the result of a sincere preference, but his writings are by no means those of a zealot.

[Barclay's biography, as usually narrated, is disfigured by many errors, and many passages in his life are unknown or obscure. The notices of contemporaries and writers of the next generation, such as Bugnot, Pona, Crassus, Erythraeus, were condensed, with many corrections, into an article in Bayle's Dictionary, which has since served as the standard source of information, but which M. Jules Dukas, in the preface to his bibliography of the *Satyricon* (Paris, 1880), has shown to abound with errors. M. Dukas has discovered many new facts, and his essay is the most valuable modern work on Barclay. There is a good Latin dissertation on the *Argenis* by Léon Boucher (Paris, 1874). See also Dupond, *L'Argenis de Barclai* (Paris, 1875). There is no collected edition of Barclay's works, and M. Dukas's exhaustive bibliography of the *Satyricon* is the only important contribution to their literary history. His separate poems appear in the *Delitiæ Poetarum Scotorum*. A fifth part was added to the *Satyricon* by Claude Morisot, under the pseudonym of Alethophilus, and has frequently been published along with it. A translation of the *Argenis* by Ben Jonson was entered at Stationers' Hall on 2 Oct. 1623, but was never published. Two other translations appeared shortly afterwards. The *Icon Animorum* was translated by Thomas May in 1633.] R. G.

BARCLAY, JOHN (1734-1798), minister of the church of Scotland and the founder of the sect of the Bereans, otherwise called Barclayites or Barclayans, was born in 1734 at Muthill, in Perthshire, where his father, Ludovic Barclay, was a farmer and miller. From an early age he was destined for the church. He entered the university of St. Andrews, and took the degree of M.A., afterwards passing through the ordinary theological curriculum. He became an ardent supporter of the views of Dr. Archibald Campbell, then professor of church history. On 27 Sept. 1759 Barclay received license to preach the gospel from the presbytery of Auchterarder, and soon after became assistant to the Rev. James Jobson, incumbent of the parish of Errol, with whom he remained nearly four years, when he was dismissed for his inculcation of obnoxious doctrines. In June 1763 he became assistant minister to the Rev. Antony Dow, incumbent of Fettercairn, in Kincardineshire, where he spent nine years. His eloquence filled the church to overflowing. A change in his opinions was indicated by the publication, in 1766, of a 'Paraphrase of the Book of Psalms,' to which was prefixed a 'Dissertation on the Best Means of interpreting that Portion of the Canon of Scripture.' The presbytery of Fordoun, in which Fettercairn is situated, summoned Barclay to appear before them. He escaped from their bar without censure. The antagonism

against him was revived, however, by his reassertion of doctrines obnoxious to the presbytery in a small work entitled 'Rejoice evermore, or Christ All in All,' against the dangerous teaching of which the presbytery drew up a *libel*, or warning, to be read publicly on a specified day in the church of Fettercairn. The libel had little effect upon the people, whom Barclay continued to instruct in his old methods, publishing in 1769 one of the largest of his treatises, entitled 'Without Faith, without God; or an Appeal to God concerning His own Existence,' which has been several times reproduced, either alone or as part of the works of the author. He produced also in the same year a polemical letter on the 'Eternal Generation of the Son of God,' which was followed in 1771 by a letter on the 'Assurance of Faith,' and a 'Letter on Prayer, addressed to a certain Independent Congregation in Scotland.' The death of Mr. Dow, minister of Fettercairn, 25 Aug. 1772, left Barclay to the mercy of the presbytery, who not only inhibited him from preaching in the church of Fettercairn, but used all their influence to close his mouth within their bounds, which lie in what is called the Mearns. The clergy of the neighbouring district of Angus were much more friendly, and Barclay was generally admitted to their churches, in which for several months he preached to crowded congregations. The parish of Fettercairn almost unanimously favoured the claims of Barclay to the vacant living, and appealed on his behalf to the synod of Angus and Mearns, and then to the general assembly, to support him against his rival, the Rev. Robert Foote. But it was ordered that Foote should be inducted. The presbytery of Fordoun refused Barclay a certificate of character. The refusal of the presbytery was sustained on appeal successively by the synod and the general assembly, who dismissed the case 24 May 1773. Barclay was thus debarred from holding any benefice in the church of Scotland. Hereupon adherents of his teaching formed themselves into congregations in Edinburgh and at Fettercairn, both of whom invited him to become their minister. He preached at Fettercairn two Sundays in July 1773 in the open air to thousands of hearers, and the people of that and the neighbouring parishes erected a large building for worship at a place called Sauchyburn; to the pastorate of which, in default of Barclay's acceptance, James M'Rae was unanimously called. He was accordingly 'set aside as their pastor early in spring, 1774, by the assistance of Mr. Barclay, who was present; and from that period till 1779 Mr. M'Rae

was minister to from one thousand to twelve hundred communicants, all collected together by the industry of Mr. Barclay during his nine years' labour at Fettercairn' (*Life of Mr. John Barclay*). Meanwhile Barclay himself had preferred to accept the call to Edinburgh, in view of which he had repaired to Newcastle for ordination, to which he was admitted 12 Oct. 1773. His followers, sometimes called Barclayans or Barclayites, after their founder, designated themselves Bereans (Acts xvii. 11). Barclay described himself as 'minister of the Berean assembly in Edinburgh.' Their doctrines are in the main those of ordinary Calvinism; but they also hold the opinions (1) that natural religion undermines the evidences of christianity; (2) that assurance is of the essence of faith; (3) that unbelief is the unpardonable sin; and (4) that the Psalms refer exclusively to Christ. 'There are Berean churches in Edinburgh, Glasgow, Crieff, Kirkcaldy, Dundee, Arbroath, Montrose, Brechin, Fettercairn, and a few other places' in Scotland (*Biographical Dictionary of Eminent Scotsmen*), where, however, they are described as a 'small and diminishing party of religionists' (EADIE'S *Ecclesiastical Cyclopædia*), and there are, it is believed, a few congregations of them in America (M'CLINTOCK and STRONG'S *Cyclopædia*, &c., New York). When Barclay had preached for about three years in Edinburgh, he took a two years' leave of absence, during which he proceeded to London. Here he laid the foundation of a church of Bereans, and also established a debating society. Barclay had made ready his way as a propagandist by the publication of a 'New Work in three volumes, containing, 1. The Psalms paraphrased according to the New Testament. 2. A select Collection of Spiritual Songs. 3. Essays on various Subjects,' 12mo, Edinburgh, 1776; including, besides the works already particularised, a treatise on the 'Sin against the Holy Ghost.' Other selected works were published, both before and after this date. To some of these are prefixed short narratives of Barclay's life, as in an edition of the 'Assurance of Faith,' published at Glasgow in 1825; in an edition of his 'Essay on the Psalms,' &c., Edinburgh, 1826; and in an edition of his 'Works,' 8vo, Glasgow, 1852. In 1783 Barclay published a small work for the use of the Berean churches, the 'Epistle to the Hebrews paraphrased,' with a collection of psalms and songs from his other works, accompanied by 'A Close Examination into the Truth of several received Principles.' Barclay died suddenly of apoplexy at Edinburgh, on Sunday, 29 July 1798, whilst kneeling in

prayer at the house of a friend, at which he had called on finding himself unwell whilst on his way to preach to his congregation. He was interred in the Calton old burying-ground, where a monument was erected to his memory.

Dict. of Eminent Scotsmen, 1868; Scott's *Fasti Ecclesiæ Scotticæ*, pt. vi. p. 867; M'Clintock and Strong's *Cyclopædia of Biblical, Theological, and Ecclesiastical Literature*, 8vo, New York, 1867-81.]  
A. H. G.

**BARCLAY, JOHN** (1741-1823), one of the oldest and most distinguished officers who ever served in the marines, entered that corps in 1755 as a second lieutenant, and became first lieutenant in 1756. He served throughout the seven years' war, at first in the Mediterranean, then in the expedition to Belle Isle in 1760, and lastly on the coast of Africa; he was promoted captain in 1762. He served with distinction through the American war, particularly at the Red Bank and in the mud forts, and was in command of the marines on board the *Augusta*, when that frigate answered the fire of the forts, and was deserted on being herself set on fire in the Delaware river. For these services he was promoted major by brevet in 1777. He was one of the commanding officers of marines in Rodney's great action with De Grasse, and was after it promoted lieutenant-colonel by brevet in 1783. He saw no further active service at sea, but was for the next thirty years chiefly employed on the staff of the marines in England. He became major in the marines in 1791, and lieutenant-colonel in the marines, and colonel by brevet in 1794. In 1796 he became major-general, and in 1798 second colonel commandant in his corps. In this capacity he had much to do with the organisation of the marines, and effected many reforms in their uniform and drill. In 1803 he became lieutenant-general and colonel commandant of the marines, and in 1806 resident colonel commandant. He was now practically commander-in-chief of the whole corps under the admiralty, and the universal testimony borne to its good character testifies to the excellence of its organisation, and it must be remembered that not only in the mutinies of Spithead and the Nore, but in all the mutinous manifestations which occurred, the marines proved that they could be depended on to check mutiny among the sailors. In

1813 he became general, and in 1814 retired from the service after continuous employment for fifty-nine years. He went to live at Taunton, where he died in November 1823.

[For Barclay's services see the *Royal Military Calendar*, and occasional allusions in the common military and naval histories.] H. M. S.

**BARCLAY, JOHN** (1758-1826), anatomist, was born in Perthshire 10 Dec. 1758, his father being a farmer, brother of John Barclay [q.v.], founder of the Berean sect in Edinburgh. Obtaining a bursary in St. Andrew's University, he studied for the church, and became a licensed minister; but entering the family of Mr. C. Campbell as a tutor, he devoted his leisure to natural history, afterwards concentrating his attention especially on human anatomy. In 1789 he passed as tutor into the family of Sir James Campbell of Aberuchill, whose daughter Eleanora he long afterwards married, in 1811. The young Campbells, his pupils, entered Edinburgh University in 1789, and Barclay became an assistant to John Bell, the anatomist, and was also associated with his brother Charles, afterwards Sir Charles Bell. To Sir James Campbell Barclay owed the means of completing his medical course. He became M.D. Edin. in 1796, then went to London for a season's study under Dr. Marshall of Thavies Inn, an eminent anatomical teacher, but returned to Edinburgh and established himself as an anatomical lecturer in 1797. Thenceforward until 1825 he delivered two complete courses of human anatomy, a morning and an evening one, every winter session, and for several years before his death gave a summer course on comparative anatomy. His classes gradually grew in reputation; in 1804 he was formally recognised as a lecturer on anatomy and surgery by the Edinburgh College of Surgeons, and in 1806 he became a fellow of the Edinburgh College of Physicians. His style of lecturing was extremely clear, and illuminated by a thorough knowledge of the history of his subject. He contributed the article *Physiology* to the third edition of the '*Encyclopædia Britannica*' (1797), and in it showed good scientific perception, although the amount of knowledge then available for such an article appears extremely small to a modern reader. He developed his ideas of a nomenclature of human anatomy based on scientific principles, and ridiculed many absurdities, which, however, have for the most part persisted, in '*A New Anatomical Nomenclature*' (1803). In 1808 he published a treatise on '*The Muscular Motions of the Human Body*,' arranged according to regions and systems, and with many practical appli-

cations to surgery. This was followed in 1812 by his 'Description of the Arteries of the Human Body,' the result of much original study and dissection. A second edition appeared in 1820. He was ever on the lookout for opportunities of dissecting rare animals, and thus he acquired an unusual knowledge of comparative anatomy, by which he illustrated his lectures. He furnished descriptive matter to a series of plates illustrating the human skeleton and the skeletons of some of the lower animals, published by Mitchell of Edinburgh in 1819-20. Several of his lectures on anatomy were published posthumously in 1827. He died on 21 Aug. 1826, after two years' illness, during which his classes were carried on by Dr. Knox. He left his large museum of anatomy to the Edinburgh College of Surgeons, where it constitutes the Barcleian Museum. One of his most interesting works is 'An Inquiry into the Opinions, Ancient and Modern, concerning Life and Organisation,' published in 1822 (pp. 542). He paid considerable attention also to veterinary medicine, and was chiefly instrumental in the foundation of a veterinary school by one of his pupils, Professor Dick, under the patronage of the Highland Society of Scotland.

[Memoir by Sir G. Ballingall, M.D., prefixed to *Introd. Lectures to a Course of Anatomy* by John Barclay, M.D., Edinburgh, 1827; *Memoir* by G. R. Waterhouse, prefixed to vol. viii. of Sir W. Jardine's *Naturalists' Library*, Edinburgh, 1843; *Struthers's History Sketch of Edin. Anat. School*, Edinb. 1867.] G. T. B.

**BARCLAY, JOSEPH, D.D.** (1831-1881), bishop of Jerusalem, was born near Strabane in county Tyrone, Ireland, his family being of Scotch extraction. He was educated at Trinity College, Dublin, and proceeded B.A. in 1854 and M.A. in 1857, but showed no particular powers of application or study. In 1854 he was ordained to a curacy at Bagnelstown, county Carlow, and on taking up his residence there began to show very great interest in the work of the London Society for promoting Christianity among the Jews. The question of Jewish conversion was at that time agitating the religious world in England, and Barclay supported the cause in his own neighbourhood with great activity, till in 1858 his enthusiasm resulted in his offering himself to the London Society as a missionary. He left Ireland, much regretted by his parishioners and friends, and, after a few months' study in London, was appointed to Constantinople. The mission there had been established in 1835, but no impression had been made on

the 60,000 Jews calculated to inhabit the town. Barclay stayed in Constantinople till 1861, making missionary journeys to the Danubian provinces, Rhodes, and other nearer districts. He acquired a thorough knowledge of the Spanish dialect spoken by the Sephardic Jews, and diligently prosecuted his studies in Hebrew. In 1861 he was nominated incumbent of Christ Church, Jerusalem, a position requiring energy and tact to avoid entanglement in the quarrels of the parties whose rivalries Barclay describes as a 'fretting leprosy' neutralising his best efforts. In 1865 he visited England and Ireland on private matters, received the degree of LL.D. from his university, and married. On his return he found it impossible to continue in his post unless his salary was increased, and the refusal of the London Society to do this necessitated his resignation. This was in 1870; he returned again to England and filled for a time the curacies of Howe in Lincolnshire and St. Margaret's, Westminster, till in 1873 he was presented to the living of Stapleford in the St. Albans diocese. The comparative leisure thus afforded him enabled him to publish in 1877 translations of certain select treatises of the Talmud with prolegomena and notes. Opinion has been much divided as to the value of this work, but Jewish critics are unanimous in asserting that it is marked by an unfair animus against their nation and literature. In 1880 he received the degree of D.D. from Dublin University. In 1879 the see of Jerusalem became vacant, and Dr. Barclay's experience and attainments marked him out as the only man likely to fill the post successfully. He was most enthusiastically welcomed to Jerusalem, and entered on his duties with his usual vigour, but his sudden death after a short illness in October 1881 put an end to the hopes of those who believed that at last some of the objects of the original founders of the bishopric were to be realised. Bishop Barclay's attainments were most extensive. He preached in Spanish, French, and German; he was intimately acquainted with Biblical and Rabbinical Hebrew; he was diligently engaged at his death in perfecting his knowledge of Arabic; and he had acquired some knowledge of Turkish during his residence in Constantinople.

[An elaborate critical biography of the bishop, giving copious extracts from his journals and letters, was published anonymously in 1883.]

R. B.

**BARCLAY, ROBERT** (1648-1690), quaker apologist, was born at Gordonstown, Morayshire, 23 Dec. 1648. His father, David

Barclay, the representative of an ancient family formerly called Berkeley, was born in 1610, and served under Gustavus Adolphus. On the outbreak of the civil war he accepted a commission in the Scotch army. He was a friend of John, afterwards Earl Middleton, who had also served in the thirty years' war. Barclay commanded part of the force with which Middleton repelled Montrose before Inverness in May 1646. On 26 Jan. 1648 he married Catherine, daughter of Sir R. Gordon, and bought the estate of Ury, near Aberdeen. During Hamilton's invasion of England in the same year he was left in a command at home; but retired, or was dismissed, from active service when Cromwell entered Scotland after Preston. We are told that Barclay and Middleton were 'always on that side which at least pretended to be in the king's interest.' Barclay's estate was forfeited, and, in order, it is said, to regain possession, he obtained a seat in the Scotch parliament after the death of Charles, and was also one of the thirty members for Scotland returned to Cromwell's parliament of 1654 and 1656 (*Acts of Scotch Parliaments*, iii. part ii.). He was also a commissioner for the forfeited estates of the loyalists. He was arrested after the Restoration, apparently in 1665 (see a warrant for his committal to Edinburgh Castle, 23 Aug. 1665, in *Additional MS.* 23123); but was released by the interest, it is said, of his friend Middleton.

He had lost his wife in 1663, and at her dying request recalled his son Robert, who had been sent for education to his uncle, then rector of the Scotch college at Paris. The father was afraid of catholic influences, and the son tells us (treatise on *Universal Love*) that he had in fact been 'defiled by the pollutions' of popery. He obeyed his father's orders, and returned at the cost of losing the promised inheritance of his uncle, and for a time remained in an unsettled state of mind. His father was converted to quakerism, through the influence, it is said, of a fellow-prisoner in Edinburgh, James Swinton, and declared his adhesion to the sect in 1666. Robert Barclay followed his father's example in 1667. He studied hard at this time; he learned Greek and Hebrew, being already a French and Latin scholar, and read the early fathers, and ecclesiastical history. In February 1670 he married one of his own persuasion, Christian, daughter of Gilbert Mollison, an Aberdeen merchant, by his wife, Margaret, an early convert to quakerism. He soon afterwards turned to account a degree of learning and logical skill very unusual amongst the early quakers in controversy with one William

Mitchell, a neighbouring preacher. 'Truth cleared of Calumnies' appeared in 1670, and 'William Mitchel unmasked' in 1672. In 1673 he published a 'Catechism and Confession of Faith,' and in 1676 two controversial treatises. The first of these, called the 'Anarchy of the Ranters,' was intended to vindicate the quakers from the charge of sympathy with anarchy, whilst repudiating the claim to authority of the catholic and other churches. The second was the famous 'Apology.' Barclay had already put forth 'Theses Theologiæ,' a series of fifteen propositions referring to quaker tenets. They were printed in English, Latin, French, Dutch, and divines were invited to discuss them. A public discussion took place upon them (14 March 1675) in Aberdeen with some divinity students. It ended in confusion, and conflicting reports were published by the opposite parties. The 'Apology' itself, which is a defence of the 'Theses,' was published in Latin at Amsterdam in 1676. A copy of it was sent in February 1678 to each of the ministers at the congress of Nimeguen; and an English version was printed in the same year. It provoked many replies, and has been frequently republished.

Meanwhile Barclay was suffering persecution at home. In 1672 he had felt it incumbent upon him to walk in sackcloth through the streets of Aberdeen, though at the cost of grievous agony of spirit (*Seasonable Warning to the People of Aberdeen*). He was imprisoned at Montrose in the same year. In 1676 he travelled in Holland and Germany, and there made the acquaintance of Elizabeth, Princess Palatine, who had taken an interest in quaker principles. She was, it seems, distantly related to him through his mother. He heard during his journey of the imprisonment of his father and some thirty other quakers in the Tolbooth at Aberdeen. He returned with a letter from the princess to her brother, Prince Rupert, asking him to use his influence for the prisoners. Prince Rupert, however, was unable to speak to the king on account of a 'sore legg.' Barclay obtained an interview with the Duke of York, afterwards James II, and the king gave him what he calls 'a kind of a recommendation,' referring the matter to the Scotch council. The council declined to release the prisoners unless they would pay the fines and promise not to worship except in the common form. Barclay returned to Ury, and was himself imprisoned in November 1676 (see letters in *Reliquiæ Barclaianae*). His father had apparently been released on parole (*Besse's Sufferings of the Quakers*). Robert was released in April 1677, after a confinement

of five months, during which he composed a treatise on 'Universal Love,' and wrote a letter of remonstrance to Archbishop Sharp.

After his release Barclay joined Penn and George Fox in a visit to Germany, and they had an interview with the Princess Palatine, which has been described by Penn. In 1679 Barclay was again arrested, but released after three hours' detention. By this time he, like Penn, was enjoying favour at court. He frequently saw the Duke of York during his government of Scotland, and was a friend and cousin of James's adherent, Perth. In 1679 he obtained a charter from the crown, in consideration of the services of himself and his father, constituting the lands of Ury a 'free barony, with criminal and civil jurisdiction;' and his charter was confirmed by an act of the Scotch parliament in 1685. He probably hoped to use the privilege on behalf of his sect. Another appointment was more useful for the same purpose. In 1682 a body of twelve quakers, under the auspices of his friend Penn, acquired the proprietorship of East New Jersey. In 1683 the Duke of York gave a patent of the province to the proprietors, who had added to their body twelve associates, including Perth and Barclay. Barclay was appointed nominal governor, with right to appoint a deputy at a salary of 400*l.* a year, and with a share of 5,000 acres of land. One of his brothers, John, settled in the province, and another, David, died on his passage thither. The constitution of the province was intended to be a practical application of the quaker theory of toleration, and to provide an asylum to the persecuted.

Barclay continued to reside at Ury, where his father died, 12 Oct. 1686. He continued to have much influence with James. In a 'Vindication,' written in 1689 (*Reliquiæ Barclaiance*), he defends himself against the suspicion, explicable by his intimacy with James and Perth, of being a Jesuit and a catholic. His wife and seven children were a sufficient proof that the first suspicion was groundless, and he denies that he had any leaning to catholicism, though he confessed to loving many catholics. He says that he never saw James till 1676; but he believed in the sincerity of James's zeal for liberty of conscience, and, he adds, 'I love King James, and wish him well.' Barclay admits that he used his influence with James on behalf of his friends, but denies that he had ever spoken of public affairs. He had received no pecuniary favour, except a sum of 300*l.* in payment of a debt incurred by his father on behalf of Charles I. He disowns, he says, all political bias; but he held that

every established government would be found to favour the doctrine of passive obedience maintained by the quakers. It is said that Barclay visited James at the time when William was expected. Barclay asked whether no terms of accommodation could be arranged; and James replied that he could consent to anything not unbecoming a gentlemen, except the abandonment of liberty of conscience. (This is stated on the authority of his widow in the *Genealogical Account*, p. 86.) Barclay visited the seven bishops in the Tower, to justify a statement of which they had complained, that they had been the cause of the death of quakers, but assured them that the statement should not be used to raise prejudice against them.

In his later years Barclay seems to have published nothing except (in 1686) an English version of a letter to a Herr Paets in defence of the quaker theory of personal inspiration, originally written in Latin in 1676. It has been praised as a pithy exposition of his principles.

He died at Ury 3 Oct. 1690. He left three sons and four daughters, who were all alive fifty years after his death. His wife died 14 Dec. 1722, in the seventy-sixth year of her age.

Barclay's great book, 'The Apology,' is remarkable as the standard exposition of the principles of his sect, and is not only the first defence of those principles by a man of trained intelligence, but in many respects one of the most impressive theological writings of the century. In form it is a careful defence of each of the fifteen theses previously published. It is impressive in style; grave, logical, and often marked by the eloquence of lofty moral convictions. It opens with a singularly dignified letter to the king, dated 25 Nov. 1675. The essential principle (expressed in the second proposition) is that all true knowledge comes from the divine revelation to the heart of the individual. He infers that the authority of the scriptures gives only a 'secondary rule,' subordinate to that of the inward light by which the soul perceives the truth as the eyes perceive that the sun shines at noonday. The light is given to every man, though obscured by human corruption, and therefore the doctrine of reprobation is 'horrible and blasphemous.' All men, christian or heathen, may be saved by it. The true doctrines of justification, perfection, and perseverance are then explained and distinguished from the erroneous doctrines of catholics and protestants which, according to him, imply rather a change in the outward relation than the transformation of the soul which accepts

the divine light. He then proceeds to deduce the special doctrines of the quakers in regard to the ministry, worship, and the sacraments from the same principle, rejecting what seems to him to be outward and mechanical; and (in the fourteenth proposition, on the power of the civil magistrate) argues against all exercise of conscience by secular authority. The last proposition defends the quaker repugnance to outward ceremonies and worldly recreations. Barclay's affinity to the so-called Cambridge Platonists and to the mystical writers is obvious. He quotes Smith's select discourses with approval; and speaks with reverence of 'Bernard and Bonaventure, Taulerus, Thomas à Kempis, and others who have 'known and tasted the love of God.' His recognition of a divine light working in men of all creeds harmonises with the doctrine of toleration, which he advocates with great force and without the restrictions common in his time. For this reason he was accused of leaning towards deism, and is noticed with respect by Voltaire. In fact, if we dropped the distinction which with him is cardinal between the divine light and the natural reason, many of his arguments would fall in with those of the freethinkers, who agreed with him in pronouncing external evidences to be insufficient, though with a very different intention. Barclay's principal writings are as follows:

1. 'Truth cleared of Calumnies,' 1670.
2. 'William Mitchel unmasked,' 1672.
3. 'Seasonable Warning to the Inhabitants of Abersdeen,' 1672.
4. 'Catechism and Confession of Faith' [1673].
5. 'Theses Theologiæ,' 1675.
6. 'The Ahierarchy of Ranters,' 1676.
7. 'Apology for the true Christian Divinity, as the same is set forth and preached by the people called in scorn Quakers,' 1678: a version of the 'Theologiæ veræ Christianæ Apologia,' published at Amsterdam, 1676.
8. 'Universal Love, considered and established upon its right foundation,' 1677.
9. 'The Apology vindicated,' 1679.
10. 'The Possibility and Necessity of an Inward and Immediate Revelation,' 1686: an English version of a Latin letter to Paets, written in 1676.

The 'Catechism' and 'Apology' have been frequently reprinted; and the 'Apology' has been translated into Dutch, German, French, Spanish, Danish, and (part of it) into Arabic.

Barclay's works were collected in 1692 into a folio volume, called 'Truth Triumphant,' with a preface attributed to Penn. They were republished in three volumes in 1717-18, and have also been published in America. Full details and references to

some manuscripts still unpublished are given in Smith's Catalogue.

Mill, 1812; Life by Wilson Armistead (adding little to the above), 1850; Reliquiæ Barclaiæ, a (lithographed) collection of letters, privately printed 1870 (a copy in the British Museum); Life by Kippis, in the Biographia Britannica; Diary of Alexander Jaffray, by John Barclay, (1833); Besse's Collection of the Sufferings of Quakers, vol. ii.; Smith's Catalogue of Friends' Books; Sewel's and Croese's Histories of the Quakers.] L. S.

**BARCLAY, ROBERT** (1774-1811), lieutenant-colonel, entered the army as an ensign in the 38th regiment on 28 Oct. 1789, and embarked with his regiment for the East Indies, where he signalised himself in most of the actions fought there in 1793. He was so distinguished by his talents and courage that he was promoted to a lieutenancy on 31 May 1793, and to a company on 8 April 1795, and on both occasions out of his turn. Having been taken prisoner by the enemy, he suffered much in captivity, and in the year following his promotion he returned to England. Though entitled to six months' leave, he hastened to rejoin his regiment, then in the West Indies.

His distinguished qualities having become known to Lieutenant-general Sir John Moore, he was promoted to a majority in the 52nd on 17 Sept. 1803, and on 29 May 1806 to a lieutenant-colonelcy. In 1808 he accompanied Sir John Moore in the expedition to Sweden, and afterwards to Portugal. He was mentioned in despatches for his distinguished conduct at the battle on the Coa on 24 June 1810. He afterwards commanded a brigade, at the head of which, when charging the French on the heights of Busaco, he received a wound below the left knee. For his conduct at Busaco he was again honourably mentioned in despatches. His wound obliged him to leave the service, and he died from the effects of it on 11 May 1811.

**BARCLAY, CAPTAIN ROBERT** (1779-1854), pedestrian. [See ALLARDICE.]

**BARCLAY, ROBERT** (1833-1876), ecclesiastical historiographer, was born 4 Aug. 1833 at Croydon. He was the younger son of John Barclay (b. 1797, d. 1838), a lineal descendant of the apologist in a younger

branch, the editor of Alexander Jaffray's diary (1833) and other biographical works, of whom his son remarks that 'perhaps no member of the Society of Friends, excepting Sewell, the historian, ever had a more intimate acquaintance with the literature, both printed and manuscript, of the early Society of Friends' (*On Membership*, p. 46). After passing through a preparatory school at Epping, he went to the Friends' school at Hitchin, conducted by Isaac Brown, afterwards head of the Flounders Institute, Ackworth. His education was finished at Bruce Grove House, Tottenham. He attained a good knowledge of botany and chemistry, was fond of electrical experiments, and had skill as a water-colour artist. Trained to business at Bristol, he bought, in 1855, a London manufacturing stationery concern (in Bucklersbury, afterwards in College Street and Maiden Lane), taking into partnership his brother-in-law, J. D. Fry, in 1867. In March 1860 he patented an 'indelible writing paper' for the prevention of forgery, the process of manufacturing which he described in a communication to the Society of Arts. Both at home and abroad he was interested in efforts for the evangelisation of the masses; though not 'recorded' as a minister of the Society of Friends (to which body he belonged), he preached in their meetings and missions. A posthumous volume gives thirty-six of his sermons, which were usually written, an uncommon thing with Friends. In 1868 he delivered a lecture on the position of the Society of Friends in relation to the spread of the gospel during the last sixty years. He endorsed the view of Herbert Skeats (*Hist. of the Free Churches*, 1868) that the early Society of Friends was the first home mission association; and was anxious to see the body regaining its position as an aggressive christian church. He was strongly in favour of the public reading of the Bible in Friends' meetings, and thought Richard Claridge's 'Treatise of the Holy Scriptures,' 1724, presented a more correct view of the sentiments of the early Friends than their controversial writings. He was as strongly opposed to the practice of birthright membership, introduced among Friends in 1737. His opinions on these points led to his undertaking the important series of investigations which culminated in his work on the inner life (meaning the internal constitution) of the obscure commonwealth sects, whose origin, ramifications, and practical tendencies, he traced with a tact and labour and a novelty of research which make his book of permanent value, 'not merely for theologians and students of ecclesiastical history, but for histo-

rical inquiry in its wider sense' (PAULI, in *Göttinger Gelehrte-Anzeigen*, April 1878). His presentment of the doctrinal aspects of primitive quakerism is ably criticised from the standpoint of an old-fashioned Friend, in an 'Examen' (1878), by Charles Evans, M.D., of Philadelphia. Too much application undermined his health, and before the last proof-sheets of his book had been finished, the rupture of a vessel in the brain produced his death on 11 Nov. 1876. He married, 14 July 1857, Sarah Matilda, eldest daughter of Francis Fry, of Bristol, the bibliographer of the English Bible, and had nine children, of whom six survive him.

He published: 1. 'On the Truth of Christianity, compiled from... works of Archbishop Whately. Edited by Samuel Hinds, D.D., formerly Lord Bishop of Norwich,' 1865, 18mo (three later editions). 2. 'On Membership in the Society of Friends,' 8vo [1872]. 3. 'The Inner Life of the Religious Societies of the Commonwealth,' &c., 1876, large 8vo, two plates and chart (actually published 18 Jan. 1877; since twice reissued, 1877, 1878, from the stereotyped plates).

[Smith's Cat. of Friends' Books, 1867; Sermons by Robert Barclay, with a brief memoir, edited by his widow, 1878, 8vo (portrait).]

A. G.

BARCLAY, THOMAS (A. 1620), professor at Toulouse and Poitiers, was one of the numerous Scotch scholars who, in the sixteenth and seventeenth centuries, studied in foreign universities, where they, in many cases, ultimately became professors. He was a native of Aberdeen, but as a young man studied humane letters and philosophy at Bordeaux. Here, we are told, his success was such as to merit the special praise of 'that Phoenix of Greek and Latin learning; Robert Balfour [q. v.], the Aristotelian scholar, whose edition of 'Cleomedes' has remained the standard work on that author to almost our own days. The reputation acquired by Barclay at Bordeaux led to his being called to preside over the 'Squillanean' school at Toulouse, where the Scotch historian Dempster tells us he served his first literary campaign under his fellow-countryman's guidance. This fact supplies us with an approximate date, for it was about 1596 that Dempster left Paris, intending to work his way to Toulouse (IRVING, *Lives of Scottish Writers*, i. 350). At this town, the birthplace of Cujas, the great founder of the systematic study of ancient and modern law, Barclay's attention was directed to this subject; and finding himself unable to pursue this branch of learning in its native place, he accepted the offer of a regius professorship at

Poitiers. His fame and his eloquence while holding this office soon procured his recall to Toulouse, where he was still living when Dempster drew up his '*Historia Ecclesiastica*' about 1620. Dempster tells us that his lectures on civil law were largely attended. There seems to be no record of the precise date of his birth or his death. In some biographical works they are given as 1582-1619; but this is almost certainly due to a confusion of Thomas Barclay with his namesake, John Barclay, the author of the '*Argenis*'. For in this case he would be holding his first, if not his second, professorship at about the age of fourteen, and would at the same time, though a younger man, be the instructor of such a prodigy of learning as Dempster.

Barclay's chief works are said to have been commentaries on Aristotle, and dissertations on certain titles of the Pandects. The last probably implies a confusion with William Barclay [q. v.]

[Dempster's *Historia Ecclesiastica*.]

T. A. A.

**BARCLAY, THOMAS, D.D.** (1792-1873), principal of Glasgow University, was born in June 1792, at Unst, in Shetland, of which parish his father, the Rev. James Barclay, was minister. He was entered of King's College, Aberdeen, in 1808. Here he attained considerable distinction. He took the degree of M.A. 28 March 1812, and subsequently prosecuted his theological studies for four years, during which he taught elocution at Aberdeen. Later he proceeded to London, where for four years, 1818-22, he acted as one of the parliamentary and general reporters of the '*Times*.' He received license to preach the gospel from the presbytery of Lerwick 27 June 1821, and quitted the '*Times*' in the following year, when he was presented by Lord Dundas, and ordained 12 Sept. 1822, to the parish of Dunrossness, in Shetland. Here he remained until his presentation by the same patron to the parish of Lerwick in October 1827, to which he was admitted 13 Dec. following. He was elected clerk of the synod of Shetland 27 April 1831. In 1840 Sir Henry Holland heard 'an admirable sermon' from Mr. Barclay, whom he accompanied the next day on a boating excursion to the Isle of Noss. A sudden and furious squall arose. Mr. Barclay was the only one who retained his presence of mind; but he, 'deemed,' as Sir Henry Holland says, to be 'one of the best boatmen in Scotland, seized the tiller, and by his firmness and skill brought us into safety.' Sir Henry Holland in 1858, on the occurrence of a vacancy in the principalship of the university of Glas-

gow, urged the claims of Dr. Barclay to the appointment upon Sir George Grey, expressing his conviction that the man who could preach such a sermon on Sunday, and next day by his firmness and promptitude save a boat from being swamped, was one eminently fitted for the government of young men and of a great college. 'How far this contributed to it I know not; but Dr. Barclay received the appointment, which he has ever since held with high honour and usefulness' (Sir H. HOLLAND'S *Recollections of Past Life*, 1872). Barclay had removed, September 1843, to Peterculter, in Aberdeenshire, and in July of the following year accepted a call to Currie, in Mid-Lothian, on the presentation of Sir James Gibson-Craig, bart., of Riccarton. On 10 Feb. 1849 the university of Aberdeen conferred on Barclay the degree of D.D. Dr. Barclay took a somewhat prominent part, along with the late Dr. Robert Lee, in 'waging in the church courts the battle of religious liberalism' (*Scotsman*, 25 Feb. 1873). Barclay supported Dr. Lee in the liturgical innovations introduced by the latter into the Scottish system of worship. From the time of his appointment, however, to the principalship of the university of Glasgow, in succession to Dr. Duncan Macfarlane, to which he was admitted 18 Feb. 1858, he devoted himself exclusively to the duties of that office. Latterly his energy was impaired by delicate health and advanced age. For over twenty years, indeed, he was a sufferer from asthmatic bronchitis, and he found it necessary to spend a portion of each winter in Egypt, on the climate of which he wrote a long and valuable article for a medical journal. Dr. Barclay died at his official residence, on Sunday afternoon, 23 Feb. 1873, and was buried at Sighthill Cemetery. The Rev. Dr. Caird, his successor, preached a university sermon, '*In Memoriam*,' on Sunday, 9 March, which was afterwards published, with a dedication 'to Mrs. Barclay and her family.'

Barclay married in 1820 the daughter of Captain Adamson, of Kirkhill; his wife, two married daughters and a son, who was settled as a medical man in China, survived him. Dr. Barclay was not eminent as a pulpit orator, but he was a sound and varied scholar, deeply read, not only in biblical learning, but in various branches of philology, and more particularly in the languages of northern Europe. As Dr. Caird said, he 'wrote no books.' He contributed, however, a sermon on 'Charity the Characteristic of Christianity' to the first volume of the '*Church of Scotland Pulpit*,' Edinburgh, 1845, and also published in 1857 his '*Speech*

against the Transmission of an Overture condemning the System of Government Education in India.'

[Scott's *Fasti Ecclesiæ Scoticanæ*, pt. v. pp. 422, 426; Story's *Life and Remains of Robert Lee*, D.D., 1870; Sir Henry Holland's *Recollections of Past Life*, 1872; *Edinburgh Courant*, 24 Feb. 1873; *Scotsman*, 25 Feb. 1873; *Glasgow Herald*, 24 Feb. and 1 March 1873; Caird's *Sermon* preached before the University of Glasgow, &c., on Sunday, 9 March 1873, Glasgow, 1873.]

A. H. G.

BARCLAY, WILLIAM (1546 or 1547–1608), a Scottish writer on jurisprudence and government, is stated by Sir Robert Sibbald (appendix to the *History of Fife*) to have been descended from the Barclays of Collairnie in Fife; but according to a note attached to James Gordon's 'History of Scots Affairs,' i. xvii, published by the Spalding Club in 1841, he was a grandson of Patrick Barclay, baron of Gartly, Aberdeenshire. As the inscription on the portrait prefixed to his 'De Regno,' but now wanting in most copies, states that in 1599 he was in his fifty-third year, he must have been born about 1546 or 1547, not 1541, the date sometimes given. He was educated at Aberdeen University. In early life he frequented the court of Queen Mary, where he is said to have dissipated his fortune. About 1571 he emigrated to France, where he devoted himself to the study of law, first at Paris and then at Bourges, under Cujacius, Donellus, and Contius. Soon after taking the degree of LL.D. he began to teach law in the university. His uncle, Edmund Hay the jesuit, rector of the recently founded university of Pont-à-Mousson, recommended him to the Duke of Lorraine, who, besides appointing him chief professor of civil law in the university, made him also councillor of state and master of requests. In 1581 Barclay married Anne de Malleviller—not De Malleville, as M. Dubois shows—a lady of Lorraine, by whom he had one son, John [q. v.], the author of 'Argenis.' The son the jesuits endeavoured to attract to their order, and the father's resistance to their efforts having, it is said, provoked their enmity, he lost the favour of the Duke of Lorraine, and deemed it advisable in 1603 to resign his chair. In 1600 he had published at Paris his most important work, 'De Regno et Regali Potestate, adversus Buchananum, Brutum, Boucherium, et reliquos Monarchomachos.' The work was dedicated to Henry IV of France, and consisted of six books, the first two being devoted to a refutation of the arguments of George Buchanan in his dialogue, 'De Jure Regni apud Scotos;' the third and fourth being

directed against the 'Vindiciæ contra Tyrannos' of Hubert Languet, who wrote under the name of Stephanus Junius Brutus; and the last two to an examination of the treatise, 'De Justa Henrici III Abdicacione e Francorum Regno,' written by Jean Boucher, the seditious doctor of the Sorbonne. The doctrine of Buchanan that all power is derived from the people he endeavours to refute by a reference to the patriarchal system, and the appointment of a king over the Jewish people by God. He, however, admits the possibility in certain cases of the king so acting as to unking himself, and therefore to render it lawful to resist his will. The views of Barclay are discussed at some length in the 'Civil Government' of Locke, who names him 'the great assertor of the power and sacredness of kings.' A year before the publication of the work of Barclay James VI of Scotland had published his 'Basilicon Doron,' and possibly Barclay was led to resign his chair and remove to England by the hope that James, who had just succeeded to the English crown, might be inclined to manifest special favour to such a distinguished champion of his own views regarding the divine right of kings. James, it is said, offered him high preferment, but only on condition that he should renounce the catholic faith, whereupon Barclay decided in the beginning of 1604 to return to Paris. The chair of civil law at Angers had been vacant since 1599, and such was the fame of Barclay in France that as soon as his return to Paris was known a deputation was sent, requesting his acceptance of the chair. In addition to this, notwithstanding the strenuous opposition of two professors, he was appointed dean of the faculty of law, the appointment being confirmed by a special decree of the university 1 Feb. 1605. Possibly in order to impress his opponents with the dignity of his position he was accustomed, when he went to lecture, to be habited in a superb robe lined with ermine, with a massy chain of gold about his neck, and to be attended by his son and two valets. Shortly after his appointment he published at Paris 'In Titulos Pandectarum de Rebus Creditis et de Jurejurando.' In the dedication of the work to King James he mentioned his intention of writing a book to record his majesty's character and actions. This purpose he never carried out. He died at Angers 3 July 1608 ('Actes de l'État Civil d'Angers, paroisse Saint-Manville,' quoted by M. Dubois in his 'Discours' on Barclay), and was interred at the Cordeliers. A treatise which he had written, 'De Potestate Papæ: an, et quatenus, in Reges et Principes seculares jus et imperium habeat,' was published in 1609,

probably at London, without an indication of the place of publication, and the same year at Mussiponti (Pont-à-Mousson), with a preface by his son [see BARCLAY, JOHN, 1582-1621]. It was directed against the claims of the pope to exercise authority in temporal matters over sovereigns, and produced so great an impression in Europe that Cardinal Bellarmine deemed it necessary to publish an elaborate treatise against it, asserting that the pope, by virtue of his spiritual supremacy, possesses a power in regard to temporal matters which all are bound to acknowledge as supreme. An English translation of the work of Barclay appeared in 1611. It is also included in the 'Monarchia' of Goldast, published in 1621. The treatise on the Pandects was inserted by the jurist Otto in his 'Thesaurus Juris Romani,' 1725-29. The 'De Regno' and the 'De Potestate Papæ' have both been frequently reprinted.

[The principal source for the facts of Barclay's life is Menage's *Remarques sur la Vie de Pierre Ayrault* (1675), 228-30. There are less correct notices in Ghilini's *Teatro d'Huomini Letterati* (1647), ii. 162; and Crasso's *Elogii degli Huomini Letterati* (1666), ii. 195. The later authorities are Mackenzie, *Writers of the Scots Nation* (1722), iii. 468-78; *Biographia Britannica*, ed. Kippis, i. 587-8; Irving, *Lives of Scottish Writers* (1829), i. 211-30; and especially M. Dubois, in *Mémoires de l'Académie de Stanislas*, série iv. tom. 4 (Nancy, 1872), pp. lviii-clxxvi.] T. F. H.

BARCLAY, WILLIAM, M.D. (1570?-1630?), miscellaneous writer, was a brother of Sir Patrick Barclay, of Towie, and was born about 1570 in Scotland. He was educated for the pursuit of medicine, but is best known by a pamphlet, printed in Edinburgh in 1614, and entitled 'Nepenthes, or the Vertues of Tobacco.' Barclay studied at Louvain under the learned Justus Lipsius, to whom he afterwards addressed several letters which have been printed, and who is recorded to have said of his pupil 'that if he were dying he knew no person on earth he would leave his pen to but the doctor.' To Justus Lipsius's edition of 'Tacitus' (Paris, 1599), Barclay contributed an appendix. At Louvain he appears to have taken the degrees of M.A. and M.D. He became professor of humanity in Peris University, and after a short interval, during which he practised medicine in Scotland, returned to France to pursue his former occupation at Nantes. The tract 'Nepenthes, or the Vertues of Tobacco,' which is dedicated to the author's nephew Patrick, son and heir of Sir Patrick Barclay, of Towie, contains a warm panegyric on the herb, which, the author says, is adapted

to cure all diseases when used with discretion, and 'not, as the English abusers do, to make a smoke-box of their skull, more fit to be carried under his arm that selleth at Paris *du noir à noircir* to blacke men's shoes than to carry the braine of him that cannot walk, cannot ryde, except the tobacco pype be in his mouth.' As in prose, so also in verse, Barclay sings the praises of his favourite weed, in six little poems attached to the treatise, and addressed to friends and kinsmen, all in praise of tobacco, to which he alludes as a 'heavenlie plant,' 'the hope of healtbe,' 'the fewell of our life,' &c. Two years after the appearance of Barclay's work, King James published his famous 'Counterblaste to Tobacco,' in which his majesty denounces smoking as a 'custome loathsome to the eye, hatefull to the nose, harmefull to the brain, dangerous to the lungs, and in the blacke stinking fume thereof nearest resembling the horrible stigious smoke of the pit that is bottomlesse.' Barclay's tract is very rare, but has been reprinted by the Spalding Society. He was also author of 'Oratio pro Eloquentia. Ad v. cl. Ludovicum Servinium, Sacri Consistorii Regii Consiliarium, et in amplissimo Senatu Parisiensi Regis Advocatum,' Paris, 1598; 'Callirhoe, commonly called the well of Spa, or the Nympe of Aberdene resuscitat,' 1615 and 1670; 'Apobaterium, or Last Farewell to Aberdeen' (of which no copy is now known to exist); 'Judicium de Certamine G. Eglisemmii [Eglisliam] cum G. Buchanano pro Dignitate Paraphraseos Psalmi ciii. . . . Adjecta sunt Eglisemmii ipsum judicium, ut editum fuit Londini, typis Eduardi Aldæi, an. Dom. 1619, et in gratiam studiosæ juventutis ejusdem Psalmi elegans Paraphrasis Thomæ Rhædi, Lond. 1620,' 8vo, Lond. 1628; and some Latin poems in the 'Delitiæ Poetarum Scotorum,' i. 137. Barclay died about 1630.

BARCLAY, WILLIAM (1797-1859), miniature painter, was born in London in 1797. He practised his art both in London and in Paris, and whilst in the latter city he was much occupied in making copies from the works of the great Italian masters in the Louvre. He exhibited portraits and some copies in water-colours at the Salon between the years 1831 and 1859, as well as at the Royal Academy between 1832 and 1856. He died in 1859.

[Redgrave's *Dictionary of Artists*, 1878; Royal Academy Exhibition Catalogues, 1832-56; Livrets du Salon, 1831-59.] R. E. G.

**BARCROFT, GEORGE** (d. 1610), musician, matriculated as a sizar of Trinity College, Cambridge, on 12 Dec. 1574, and took the degree of B.A. in 1577-8. He was appointed a minor canon of Ely and organist of that cathedral in 1579, and it is supposed that he died about 1610. Two anthems composed by him are extant, and to him has been ascribed a service in G. It appears, however, that this service was composed in 1632, probably by Thomas Barcroft, who is said to have been organist of Ely about 1535.

[Dickson's Cat. of Ely Music MSS. 14; Willet's Epist. Ded. to Harmonie on 2 Sam.; Cooper's Athenæ Cantab. iii. 14.] T. C.

**BARD, HENRY, VISCOUNT BELLAMONT** (1604?-1660), soldier and diplomatist, was descended from an old Norfolk family, and was the younger of two sons of the Rev. George Bard, vicar of Staines, Middlesex. The exact date of his birth is not recorded, but it was probably 1604. From Eton College, he, in 1632, entered King's College, Cambridge, where he took his master's degree and a fellowship. 'Previous to this he had, without the leave of his guardians, visited Paris, and afterwards he made an excursion on foot into France, Italy, Turkey, Palestine, and Egypt. While in Egypt he obtained, or rather stole, from a mosque an Alcoran, which he some years afterwards presented to his college. Wood, who styles him 'a compact body of vanity and ambition, yet proper, modest, comely,' states that on his return home he lived 'high,' his expenses being met by his brother Maximilian, a wealthy girdler, according to Wood, 'a great admirer of his accomplishments and as much despised by him.' Bard's mastery of several languages, and his experience as a traveller, commended him to the attention of Charles I, and while at Oxford, in 1643, he was nominated for the degree of D.C.L. At the battle of Cheriton Down, between Lord Hopton and Sir William Waller, he greatly distinguished himself, but was so severely wounded as to lose his arm, and was also taken prisoner. Receiving his discharge, he, in May 1644, obtained the reversionary grant of the offices of governor of the isle of Guernsey and captain of Cornet Castle. After joining the king at Oxford, he was appointed to the command of a brigade, and subsequently was made governor of Camden House, Gloucestershire, which, when he found it necessary to vacate it, he, by the orders, it is supposed, of Prince Rupert, burned to the ground. On 8 Oct. following he was created a baronet. Shortly afterwards he married Anne, daughter of Sir William Gardiner, knight, of Peckham,

Surrey. In May 1645, he was present with the king at the taking of Leicester, and, according to Rushworth, was the first along with Sir Bernard Astley to scale the walls. At the battle of Naseby, in June following, he, according to Lloyd (*Memoirs*, 668), led, on the left hand, Tertia, with Sir G. Lisle. On 8 July 1646 he was created Baron Bard and Viscount Bellamont in the kingdom of Ireland. While on the passage from England to Ireland in December following he was taken prisoner, but in 1647 parliament decreed 'that Mr. Bard, long since committed, should be discharged of his imprisonment, provided he give security to the parliament that he go beyond the seas, and never return again without the license of both houses of parliament.' Accordingly he proceeded to the Hague, to the court of Charles II. At the Hague he was arrested 12 May 1649, charged with the murder of Dr. Dorislaus (WHITELOCKE, *Memorials*, p. 402), but the charge turned out to be unfounded. Having been sent, in 1656, from Bruges, by Charles II, as ambassador to the emperor of Persia, he was overtaken, in 1660, by a whirlwind in the desert of Arabia, and choked in the sand. He left his widow in great poverty. A daughter Frances was mistress to Prince Rupert (*Eng. Hist. Rev.* xi. 527, xv. 760).

MSS. 5533 and 5816, ff. 137-9; Gent. Mag. 2nd series, vii. 52-5; N. Manucci's *Storia di Mogor* (Indian Texts Ser., ed. Irvine), i. 72-83 (London, 1907). T. F. H.

**BARDELBY, ROBERT DE** (fl. 1323), judge, acted in a subordinate capacity as one of the keepers of the great seal between 1302 and 1321. He was prebendary of York in 1305. In 1315 he was appointed keeper of the hospital of St. Thomas Martyr of Acon in London, during the temporary absence of Richard of Southampton. In 1315 he was assigned as one of the commissioners to hear petitions to parliament (then sitting at Lincoln), and was entrusted with the business of answering petitions in the parliament of 1320 at Westminster. In 1323 we find him described as canon of Chichester in a writ appointing him one of a commission of justices directed to try certain commissioners of array accused of acts of malversation and oppression, and in 1325 as 'clericus cancellarius' in a memorandum of the appointment of Henry de Clyf as keeper of the rolls.

**BARDNEY, RICHARD** (fl. 1503), a Benedictine of Bardney, Lincolnshire, was educated at Oxford, where he took the degree of bachelor of divinity. In 1503 he wrote in verse 'Vita Roberti Grosthead quondam Episcopi Lincolnienſis,' a work of little or no value, which he dedicated to William Smith, then bishop of Lincoln. He also wrote 'Historia S. Hugonis Martyris.' 'The Life of Robert Grosſtête' is printed with some omissions in Wharton's 'Anglia Sacra,' vol. ii.

**BARDOLF, HUGH** (d. 1203), justiciar of the Curia Regis, is presumed to have been son of William Bardolf (sheriff of Norfolk 16-21 Hen. II), and first appears in attendance on the court at Chinion, 5 April 1181, where he tests a charter as 'Dapifer' (*Mon. Ang.* vii. 1097), a post which he retained till the end of the reign (1189). He held pleas in Worcestershire (1187), and acted as an itinerant justice (1184-9). He also sat in the Curia Regis, and acted as sheriff of Cornwall (1185-7), and Wilts (1188), and was associated in the charge of the kingdom on Henry's departure for France in 1188 (MATT. PARIS). At the accession of Richard I he was sheriff of Somerset and Dorset, and a justice itinerant, and was associated in the justiciarship with the bishops of Durham (Puiset) and Ely (Longchamp), when the king went on the crusade (December 1189), but was one of Richard's sureties at Messina in November 1190 (Rog. Hov. iii. 28, 62), having probably quarrelled with Longchamp. In the possibly spurious letter of February 1191 he was associated with Walter of Coutances in the commission that was to supplant Longchamp (*ib.* p. 96). Returning accordingly, he was among those excommunicated by Longchamp, but was specially offered pardon if he would surrender Scarborough and his counties of Yorkshire and Westmoreland (*ib.* p. 154). In 1193, as 'justitiarius regis' and sheriff of Yorkshire, he assisted the archbishop of York to fortify Doncaster for Richard, but refusing, as John's vassal, to besiege Tickhill, was denounced as a traitor (*ib.* 206), and on Richard's return (March 1194) was dismissed from his post (*ib.* p. 241); but was at once transferred to Northumberland, and ordered to take it over from the bishop of Durham (Puiset), and, on his resistance, to seize it (July 1194). At Puiset's death (March 1195) the castles of Norham and Durham were surrendered to

him (*ib.* pp. 249, 261, 285), and, remaining faithful to Richard, he retained his counties (Northumberland and Cumberland) till John's accession (1199). From John he received the counties of Nottingham and Derby and the custody of Tickhill Castle. He continued to act as an itinerant justice and to sit in the Curia Regis till his death in 1203 (*Ann. Wav.* p. 255). He appears from the rolls to have acted as a baron of the exchequer in all three reigns.

[Eyton's Court and Itinerary of Henry II (1878); Roger of Hoveden (Rolls series); Dugdale's Baronage, i. 683; Foss's Judges of England (1848), ii. 325.] J. H. R.

**BARDOLF, WILLIAM** (d. 1275-6), baronial leader, was lord of Wirmgay, Norfolk, in right of his mother, daughter and heiress of William de Warrenne. In 1243 he had livery of his lands, and in 1258, in the parliament of Oxford, was elected one of the twelve baronial members of the council of twenty-four appointed to reform the realm (*Ann. Burt.*). By the Provisions of Oxford he was made constable of Nottingham (*ib.*), and was among those offered pardon by the king, 7 Dec. 1261 (*Fœdera*). Adhering to the barons, he became one of their sureties for observing the Mise of Amiens (13 Dec. 1263), and was again entrusted by them with Nottingham (WYKES; *Pat.* 47 H. III, m. 6), but surrendered it to the king after his victory at Northampton (13 April 1264), and joining him, was taken prisoner by the barons at Lewes (14 May 1264). He died about 1275, his son having livery of his lands in the fourth year of Edward I's reign (*Fin.* 4 Ed. I, m. 4).

[Dugdale's Baronage, i. 681.] J. H. R.

**BARDSLEY, SIR JAMES LOMAX**, M.D. (1801-1876), physician, was born at Nottingham on 7 July, 1801. His professional education was gained first under the direction of his uncle, Dr. Samuel Argent Bardsley, and subsequently at the Glasgow and Edinburgh universities. From the latter university he received the diploma of M.D. in 1823. While a student at Edinburgh he was elected president of the Royal Medical Society. In 1823 he settled in Manchester, and was appointed one of the physicians of the Manchester Infirmary, an office which he held until 1843. He was associated with Mr. Thomas Turner in the management of the Manchester Royal School of Medicine and Surgery, and took an active part in the early proceedings of the British Medical Association. In 1834 he became president of the Manchester Medical Society, and in 1850 a

similar position in the Manchester Medico-Ethical Association was given to him. The honour of knighthood was bestowed on him as a distinguished provincial physician in August 1853. Dr. Bardsley published a volume of 'Hospital Facts and Observations' in 1830, wrote the articles on diabetes and hydrophobia in the 'Cyclopædia of Practical Medicine' (1833), and made other contributions to medical science, including the retrospective address in medicine at the annual meeting of the British Medical Association in 1837. He died at Manchester 10 July 1876.

C. W. S.

**BARDSLEY, SAMUEL ARGENT**, M.D. (1764-1851), physician, was born at Kelvedon, Essex, on 27 April 1764. His medical studies were begun at Nottingham, where he passed an apprenticeship to a surgeon, and followed up at London, Edinburgh, and Leyden. He was entered of the Leyden University in August 1786, and graduated there in 1789. After passing a short time at Doncaster he removed to Manchester in 1790, and was elected physician to the Manchester Infirmary, a position he retained until August 1823, gaining during the thirty-three years great esteem as 'the very model of an hospital physician.' He relinquished his professional 'practice' many years before his death, which occurred on 29 May, 1851, while on a visit to a friend near Hastings. He was buried at St. Saviour's Church, Manchester. Dr. Bardsley published in 1800 'Critical Remarks on the Tragedy of Pizarro, with Observations on the subject of the Drama;' and in 1807 a volume of 'Medical Reports of Cases and Experiments, with Observations chiefly derived from Hospital practice; also an Enquiry into the Origin of Canine Madness.' To the 'Memoirs' of the Literary and Philosophical Society of Manchester, of which he was a vice-president, he contributed in 1798 a paper on 'Party Prejudice,' and in 1803 one on 'The Use and Abuse of Popular Sports and Exercises.'

[Biog. Dict. Living Authors, 1816, p. 13; London Medical Gazette, 1850, ix. 41; Index of Leyden Students, published by the Index Society.]

C. W. S.

**BARDWELL, THOMAS** (d. 1780?), portrait painter, is known chiefly as a copyist. He painted a picture of 'Dr. Ward relieving his sick and lame patients,' which is libellously described by one authority (Hobbes)

as a painting of a 'quack doctor.' This same Dr. Ward is caricatured by Hogarth. This picture was engraved (1748-9) probably by Baron. There is also a mezzotint by Faber after a portrait by Bardwell of Admiral Vernon. At Oxford, in the university galleries, there are portraits by him of the Earl and Countess of Pomfret. In 1756 he published the 'Practice of Painting and Perspective made Easy.' This work was well thought of in its day. Mr. Edwards thinks, however, that in so far as it treats of perspective, it is a snare and delusion. A pirated edition, omitting the perspective, appeared in 1795. Bardwell died about 1780.

[Edwards's Anecdotes of Painters, 1808; Hobbes's Picture Collector's Manual, 1849; Füssli's Allgemeines Künstler-Lexikon, 1806; Redgrave's Dict.]

E. R.

**BAREBONES, PRAISEGOD** (1596?-1679), anabaptist, leather-seller, and politician. [See BARBOX.]

**BARENGER, JAMES** (1780-1831), animal painter, was born 25 Dec. 1780. He was the son of J. Barenger, a chaser, who exhibited water-colour drawings of insects at the Royal Academy between the years 1793 and 1799, and died in 1813, and he was on his mother's side a nephew of William Woollett, the eminent engraver. He obtained some celebrity as a painter of racehorses, dogs, deer, and other animals, which he exhibited at the Royal Academy from 1807 to 1831, in which year he died.

[Redgrave's Dictionary of Artists, 1878; Royal Academy Exhibition Catalogues, 1793-1831.]

R. E. G.

**BARET** or **BARRET, JOHN** (d. 1580?), lexicographer, was a fellow of Trinity College, Cambridge, and took the degree of B.A. in 1554-5, and that of M.A. in 1558. About 1555 he describes himself as 'having pupils at Cambridge, studious of the Latin tongue.' In later years he is said to have travelled abroad, and to have taught in London. He received the degree of M.D. at Cambridge in 1577, but there is no evidence that he ever practised medicine. Baret died before the close of 1580, but the exact date is uncertain.

Baret published, about 1574, a dictionary of the English, Latin, and French languages, with occasional illustrations from the Greek. It was called 'An Alvearie, or Triple Dictionarie in English, Latin, and French,' and was dedicated to William Cecil, Lord Burghley, the chancellor of Cambridge University. The date, 2 Feb. 1573-4, appears among the

introductory pages, but not on the title-page. The materials for the volume were gradually collected during eighteen years by Baretti's many pupils, and he entitled it, on that account, an 'Alvearie,' or beehive. Every English word is first explained, and its equivalent given in Latin and French. Two indexes at the end of the volume collect the Latin and French words occurring in the text. The expenses of publication were mainly borne by Sir Thomas Smith, 'principall secretarie to the queenes majestie,' and 'Maister Nowell, deane of Pawles' (RALPH CHURTON, *Life of Alexander Nowell*, p. 220). Latin, Greek, and English verses in praise of the compiler and his work were prefixed to the book, among the writers being Richard Mulcaster and Arthur Golding. A second edition of the dictionary, in which Greek took almost as important a place as the other languages, was published shortly after Baretti's death, and bore the date 2 Jan. 1580-1. A lengthy poem 'to the reader,' signed 'Tho. M.,' laments the recent death of the author, and new Latin elegiacs are added by Mulcaster. The title of the book in its final form runs: 'An Alvearie, or quadruple Dictionarie containing foure sundrie tongues, namely, English, Latine, Greeke, and Frenche, newlie enriched with varietie of wordes, phrases, proverbs, and divers lightsome observations of Grammar.' Baretti's dictionary is still of great service in enabling us to trace the meaning of Elizabethan words and phrases that are now obsolete.

[Cooper's *Athenæ Cantabrigienses*, i. 421; Tanner's *Bibliotheca Britannico-Hibernica*; the Prefaces of Baretti's *Alvearie*.] S. L.

**BARETTI, GIUSEPPE MARC' ANTONIO** (1719-1789), miscellaneous writer, traced his descent from a family which formerly flourished in the duchy of Monferrato in Italy. His grandfather, Marc' Antonio, a physician, settled at Mombertaro, where he married a lady who belonged to the illustrious family of the Marquises of Carretto, and who bore him two sons, Luca (born in 1688) and Giambattista. Luca established himself at Turin, where he studied architecture under the Abbé Filippo Juvara. By his first wife, Caterina, Luca had four sons, of whom Giuseppe Marc' Antonio, the eldest, was born at Turin on 25 April 1719. His education was much neglected by his father, who fostered the vanity of his children by reminding them of their descent from the Marquises of Carretto. On two occasions, when secrecy seemed expedient, Giuseppe assumed the name of Giuseppe del Carretto. His father at first destined him for the priest-

hood. Then it was thought he might become an architect, but the plan was abandoned on account of his habitual short-sightedness. He read much Italian; but a pedantic master disgusted him with Latin, and his father would not let him learn Greek. His father's marriage with a young opera-dancer rendered his position so intolerable that he left Turin for Guastalla (June 1735), where his uncle Giambattista procured for him employment as a merchant's clerk. There he became acquainted with two men of letters, Carlo Cantoni and Dr. Vittore Vettori. After staying more than two years at Guastalla, Baretti removed to Venice, where he contracted a friendship with Count Gaspare Gozzi, the 'Venetian Addison.' Subsequently he settled at Milan, and obtained introductions to the men of letters of the *Accademia de' Trasmformati*. He sojourned at Milan nearly three years, studying hard and executing the metrical translation, published several years subsequently, of two of the works of Ovid.

His father having died, he returned to Piedmont, spent the autumn of 1742 at Cuneo, and from 1743 till 1745 was keeper there of the stores of the new fortifications. He returned to Turin in 1747, where he lived with his brothers for three years. He contributed to poetical collections issued in 1741 and the subsequent years. In 1744 he addressed to Father Serafino Bianchi his forty-five 'Stanze,' in which he interwove an account of his own career. Next he brought out an insipid translation in blank verse of the tragedies of Pierre Corneille, printed with the French original on the opposite pages. In 1750 he printed a small volume of 'Piacevoli Poesie.' Literary academies were the fashion in Italy in that age, and Baretti became a member of the *Trasmformati* of Milan and the *Granelleschi* of Venice.

Baretti's frank and impetuous disposition brought him into various controversies. He had a literary passage of arms with Dr. Biagio Schiavo, and in 1750 he, in a satirical piece entitled 'Primo Cicalamento,' ridiculed Dr. Giuseppe Bartoli, professor of literature in the university of Turin, who pretended that he had discovered the true meaning of an ancient ivory bas-relief. His hopes of public employment were destroyed by this attack upon Bartoli, who appealed to the authorities. The matter was referred to the first president of the senate and rector of the university. Baretti escaped with a severe reproof and the forfeiture of the unsold copies of the obnoxious work; but he found that all chance of employment in his own country was at an end, and he seized the opportunity

which presented itself at this juncture of an engagement in the Italian Opera House at London. He left for London towards the end of January 1751. On his arrival he opened a school for teaching Italian, and was engaged to teach Italian to Mrs. Lennox, the author of 'The Female Quixote.' After some time he was presented to Dr. Johnson, who introduced him to the family of Mr. Thrale, and to most of the distinguished scholars and artists of the day. His first literary performances in London were two facetious pamphlets, written in French and published in 1753, relating to the disputes between the actors and the lessee of the Italian Opera House. In the same year he printed in English a 'Dissertation on the Italian Poets,' in which he censured some superficial and inexact criticisms of Voltaire. Next he published in 1757 an 'Introduction to the Italian Language,' and 'The Italian Library,' containing an account of the lives and works of the principal writers of Italy. But his reputation as a scholar was made by his 'Italian and English Dictionary,' which first appeared in the beginning of the year 1760. This dictionary entirely superseded all previous works of the kind, and has been often reprinted. The author prefixed to his work a new grammar, and his friend Dr. Johnson wrote for him the dedication.

Determined to return to Italy, he left London on 14 Aug. 1760, and, after visiting Portugal and Spain, reached Genoa on 18 Nov. Previously to his departure from England he had been recommended by Dr. Johnson to write a journal of his travels, and to this suggestion we owe the charming narrative of his tour.

Baretti first visited his brothers at Turin; he afterwards stayed at Milan, where his friends introduced him to Count de Firmian, the Austrian minister, who was regarded as a Mæcenæ. The account of his travels, in four volumes, was licensed for the press in the beginning of 1762. In the summer the first volume was published, but the complaints of the Portuguese minister in Italy, on account of certain reflections upon Portugal, induced the Count de Firmian to give orders that the publication should not proceed further. Baretti removed to Venice, much dejected, towards the close of the year 1762. There he prepared for the press the three unpublished volumes of his 'Travels,' from which he struck out all the passages relating to the government of Portugal. Baretti now undertook the publication of a periodical sheet which he entitled 'La Frusta Letteraria' ('The Literary Scourge'), himself taking the name of Aristarco Scannabue.

His object was to denounce the worthless books of all kinds with which the press of Italy teemed. In the second number his sarcastic remarks on the work of contemporary archaeologists gave offence to the Marquis of Tanucci, who was president of the academy for publishing the Herculanean monuments. Tanucci insisted that the 'Frusta' should be suppressed and its author punished. Baretti respectfully appeased the marquis's wrath, but his merciless onslaught on bad writers raised up a host of other enemies, and the publication was suppressed in 1765 after the twenty-fifth number.

The suppression of the 'Frusta' gave Baretti such a shock that he was obliged to keep his bed for nearly two months after. He left Venice late in 1765 for Ancona, where for about five months he led a most secluded life. There he printed his reply to an attack upon him by Father Buonafede, called the 'Bue Pedagogo,' in the form of a continuation of the 'Frusta Letteraria.' In sending to his hated adversary a copy of this intemperate reply, he accompanied it with a letter or invective, which was printed in London in 1786 with many variations.

About the middle of February 1766 he proceeded to Leghorn, and after some delay, from illness and want of money, returned to London in the autumn. His old friends received him with cordiality, especially Dr. Johnson, who during Baretti's stay in Italy had kept up a confidential correspondence with him. He now published an 'Account of the Manners and Customs of Italy,' in answer to 'Letters from Italy' by Samuel Sharp. It passed through a second edition in London, was reprinted in Dublin, and led to the author's election as a fellow of the Society of Antiquaries, besides bringing him 200*l*. It was with reference to this work that Johnson said: 'His account of Italy is a very entertaining book; and, sir, I know no man who carries his head higher in conversation than Baretti. There are strong powers in his mind. He has not, indeed, many hooks, but with what hooks he has he grapples very forcibly' (BOSWELL, *Life of Johnson*, ed. Croker, iii. 48). In 1768 he spent several months in France and Flanders in company with Thrale, the wealthy brewer, and in November of that year he visited Spain. An amplified account of his first journey to that country was published in 1770, and was highly praised by Johnson (see Letter to Mrs. Thrale of 20 July 1771), and brought him 500*l*. Johnson says that he was the first author who ever received money for copyright in Italy.

On 6 Oct. 1769 Baretti was accosted in the

Haymarket by a woman of bad character, gave her a blow on the hand, was attacked by three bullies, and in self-defence inflicted mortal wounds upon one of them with a knife. At the next sessions Baretti was tried at the Old Bailey. Johnson and Burke went to see him in Newgate, and had small comfort to give him. 'Why, what can he fear,' said Baretti, placing himself between them, 'that holds two such hands as I do?' (Mrs. Piozzi, *Autobiography*, 2nd ed. i. 97). He declined to claim the privilege of being tried by a jury half composed of foreigners. Sir Joshua Reynolds, Dr. Johnson, Mr. Beauchamp, Fitzherbert, Burke, Garrick, Goldsmith, and Dr. Hallifax bore testimony to the quietness of his general character. The jury acquitted him. It has been supposed that Baretti was assisted in drawing up his defence by Dr. Johnson and Mr. Murphy, but on the other hand it is asserted that he claimed it as his own at Mr. Thrale's table in the hearing of both those gentlemen. The street scuffle and the subsequent trial were made the subject of a poem in Italian *ottava rima* published at Turin in 1857.

In 1770 Baretti determined to revisit Italy and repay his brothers a portion of the money advanced by them. At the end of April 1771 he returned to London after an absence of nine months. Among the works he published about this time were an improved edition of his Italian-English Dictionary; prefaces to the magnificent London reprints of the works of Machiavelli and other standard authors; and a volume of Italian-English dialogues. He likewise began an English translation of 'Don Quixote,' but abandoned it half finished in 1772.

From October 1773 to 6 July 1776 Baretti was domesticated in the family of Mr. Thrale. He had, at Dr. Johnson's request, undertaken to instruct his eldest daughter, Hester Thrale, afterwards Lady Keith, in the Italian language. In 1774 he received an offer of the professorship of Italian in the university of Dublin, but declined it (*Gent. Mag.* lx. 1063). In the autumn of 1775 Baretti accompanied the Thrales and Dr. Johnson on their well-known visit to France. They were about to make another continental tour in 1776 under Baretti's guidance, but were prevented by the sudden death of Thrale's only son. The bitterest enmity had by this time arisen between Mrs. Thrale and Baretti, who finally left the house on 6 July 1776. Baretti's strictures in the 'European Magazine' for 1788 on Mrs. Thrale's marriage with Piozzi are so brutal that even her enemy Boswell could not approve them (Boswell, *Life of Johnson*, ed. Croker, vi. 169 n.). Baretti's

manuscript notes on Mrs. Piozzi's 'Letters of Dr. Johnson' are still more insulting. In a private communication to a friend he accused her of breaking a promise to pension him for teaching her daughter (*Letter to Don Francesco Carcano*, 12 March 1785). Mrs. Piozzi says that Baretti's overbearing insolence was intolerable (Mrs. Piozzi, *Autobiography*, 103 et seq.).

Baretti became embarrassed and again sought help from his brothers; but he received no reply. In 1777 he published in French a 'Discourse on Shakespeare,' which increased his reputation. In 1778 he brought out a Spanish and English dictionary, which has become a standard work. In 1779 he aided Philidor in producing a musical setting of the 'Carmen Seculare' of Horace. Baretti says this work 'brought me in 150*l.* in three nights, and three times as much to Philidor, whom I got to set it to music. It would have benefited us both (if Philidor had not proved a scoundrel) greatly more than those sums' (*Manuscript Note on Johnson's Letters*, ii. 41). He next published, in Italian, 'A Collection of Familiar Letters,' ascribed to various historical and literary personages, but really composed by himself; and in a work entitled 'Tolondron' (1786) he violently attacked Bowle's edition of 'Don Quixote' [see BOWLE, JOHN].

In 1782 he had received from the government an annual pension of 80*l.* Not long afterwards he contracted a friendship with Richard Barwell [q. v.], whom he used to call his rich Nabob, and usually spent several months of the year at Barwell's country seat at Stanstead in Sussex.

He died on 5 May 1789, and was buried at Marylebone. Immediately after his death his legal representatives burnt every letter in his possession without inspection.

His portrait, painted by Sir Joshua Reynolds, has been engraved by Bromley.

Baretti was tall in stature, and had a robust constitution. He was exceedingly temperate. He early abandoned the doctrines of the Roman catholic church, without adopting those of any other; but his scepticism was never offensively displayed. In England he is chiefly remembered as the friend of Dr. Johnson, and as the compiler of the Italian and Spanish dictionaries, though the English account of his 'Travels' is still sometimes read, and always with pleasure. In Italy his fame has been kept alive by reprints of his lively prose writings, and his continued popularity among his countrymen is proved by the fact that in 1870 a philocritical society called after him was founded at Florence.

His works are as follows: 1. 'Stanze al

Padre Serafino Bianchi di Novara, M.O.R., che fa il Quaresimale di quest' anno in Cuneo, Cuneo, 1744, 12mo. 2. 'Lettere ad un suo amico di Milano sopra un certo fatto del Dottor Biagio Schiavo da Este' [Lugano], 1747, 4to. 3. 'Poesie diverse scritte dal Baretti per varie occasioni dal 1741 al 1747.' 4. 'Tragedie di Pier Cornelio tradotte in versi italiani, con l'originale a fronte,' 4 vols. Venice, 1747-8, 4to. 5. 'Primo Cicalamento sopra le cinque Lettere del signor Giuseppe Bartoli intorno al libro che avrà per titolo "La vera spiegazione del Dittico Quiriniano"' [Lugano], 1758, 8vo. 6. 'Le piacevoli Poesie di Giuseppe Baretti Torinese,' Turin, 1750, 1764, 8vo. Minute biographical details concerning Baretti's poems are given by the Baron Custodi in the 'Scritti scelti di Baretti.' 7. 'Fetonte sulle rive del Po,' Turin, 1750, 4to. A dramatic composition on the occasion of the marriage of Victor Amadeus, duke of Savoy. 8. 'Dei rimej d'Amore d'Ovidio volgarizzati,' Milan, 1752, 4to. 9. 'Li tre Libri degli Amori d'Ovidio volgarizzati.' These are given in vols. xxix. and xxx. of the Milan collection of Latin poems in the Italian versions (1754). 10. 'Projet pour avoir un Opéra Italien à Londres dans un goût tout nouveau,' Lond. 1753, 8vo. 11. 'La voix de la Discorde, ou la Bataille des Violons,' &c. Lond. 1753, 8vo. Written in French and in English. 12. 'A Dissertation upon the Italian Poetry, in which are interspersed some Remarks on Mr. Voltaire's "Essay on the Epic Poets,"' Lond. 1753, 8vo. 13. The Italian translation which accompanied 'An Account of an Attempt to ascertain the Longitude at Sea' published under the name of Zachariah Williams in 1755, but really written by Dr. Johnson (Boswell, *Life of Johnson*, ed. Croker, ii. 55). 14. 'The Italian Library; containing an Account of the Lives and Works of the most valuable Authors of Italy; with preface,' Lond. 1757, 8vo. 15. 'A Dictionary of the English and Italian Languages, augmented with above ten thousand words omitted in the last edition of Altieri. To which is added an Italian and English Grammar,' 2 vols. Lond. 1760, 4to, and again 1770 and 1778; corrected and improved by P. Ricci Rota, 2 vols. Lond. 1790, 4to; 2 vols. Venice, 1795, 4to; 2 vols. Lond. 1807, 8vo (called the 4th ed.); revised and corrected by J. Roster, 2 vols. Florence, 1816, 4to; 7th ed. 2 vols. Lond. 1824, 8vo; 2 vols. Leghorn, 1828, 4to; 8th ed. corrected by C. Thomson, 2 vols. Lond. 1831, 8vo; 9th ed. also corrected by Thomson, 2 vols. Lond. 1839, 8vo; and with large additions by John Davenport and Guglielmo Comelati, 2 vols. Lond. 1854, 8vo. 16. 'A Grammar of the Italian Lan-

guage, to which is added an English Grammar for the use of the Italians,' Lond. 1762, 8vo. A reprint, in a separate form, of the grammars prefixed to the 'Dictionary.' 17. 'Lettere familiari a suoi tre fratelli Filippo, Giovanni e Amadeo,' vol. i. Milan, 1762, vol. ii. Venice, 1763, 8vo; 3rd ed. 2 vols. Piacenza, 1805, 8vo. 18. 'La Frusta Letteraria di Aristarco Scannabue, 1763 al 1765,' 3 vols. 4to [see above]; reprinted at Carpi in 1799, and at Milan in 1804. 19. 'An Account of the Manners and Customs of Italy, with observations on the mistakes of some travellers with regard to that country,' Lond. 1768 and 1769, 4to. Baretti added to the second edition of his 'Account' 'An Appendix in answer to Mr. Sharp's Reply.' Baretti's book was translated into French and Italian. 20. 'A Journey from London to Genoa, through England, Portugal, Spain, and France,' 2 vols. Lond. 1770, 4to. This work was translated into French and Italian. 21. 'Proposals for printing the Life of Friar Gerund,' 1771, 4to. It was intended to print the original Spanish. The scheme proved abortive, but a translation by Dr. Warner was printed in 2 vols. 8vo. 22. 'An Introduction to the most useful European Languages, consisting of select passages from the most celebrated English, French, Italian, and Spanish authors; with translations,' Lond. 1772, 8vo. 23. Preface to the new edition of 'Tutte le Opere di Niccolò Machiavelli,' 3 vols. Lond. 1772, 4to. Baretti also wrote the prefaces to the reprints of other classical authors published in London. 24. 'Easy Phraseology for the use of young ladies who intend to learn the colloquial part of the Italian language,' Lond. 1775, 8vo, with preface by Dr. Johnson. 25. 'Discours sur Shakespeare et sur Monsieur de Voltaire,' Lond. 1777, 8vo. Luigi Morandi published at Rome in 1882, 'Voltaire contro Shakespeare, Baretti contro Voltaire. Con otto lettere del Baretti, non mai pubblicate in Italia.' These eight letters appeared in the 'Scelta di Lettere Familiari,' but were omitted from the reprint of that work in the 'Classici Italiani.' 26. 'A Dictionary, Spanish and English, and English and Spanish,' 2nd ed. 2 vols. Lond. 1778, fol.; reprinted in 1786, 1794, and 1800. Other editions corrected and amplified by Henry Neuman appeared in 1827 [1831?], 1853, 1854, and 1857. 27. 'Delle Arti del Disegno, Discorsi del Cav. Giosuè Reynolds, Presidente della R. Accademia di Londra ec., trasportati dall' Inglese in Italiano,' Leghorn, with the imprint of Florence, 1778, 8vo. 28. The Introduction to the 'Carmen Seculare' of Horace, as set to music by Baretti, in conjunction with Philidor, Lond. 1779, 8vo.

29. 'Scelta di Lettere Familiari fatta per uso degli studiosi di Lingua Italiana,' 2 vols. Lond. 1779, 8vo. All the letters except the first were really composed by Baretti himself, although they are ascribed to various eminent men. 30. 'A Guide through the Royal Academy,' Lond. 1781, 4to. 31. 'Disertacion Epistolar acerca unas Obras de la Real Academia Española, su auctor Joseph Baretti, secretario por la correspondencia estrangera de la Real Academia Británica di pintura, escultura y arquitectura. Al señor don Juan C . . .,' Lond. 1784, fol. 32. 'Tolondron. Speeches to John Bowle about his edition of "Don Quixote," together with some account of Spanish Literature,' Lond. 1786, 8vo. 33. 'Quattro Epistole,' Lond. 1787, 8vo. Written in *versi martelliani*. 34. 'Strictures on Signora Piozzi's Publication of Dr. Johnson's Letters.' In 'European Magazine,' 1788, xiii. 313, 393, xiv. 89. 35. Numerous manuscript notes in English written in the margin of 'Letters to and from the late Samuel Johnson, LL.D., published from the original MSS. in her possession by Hester Lynch Piozzi,' 2 vols. Lond. 1788. The annotated copy, now in the British Museum, formerly belonged to George Daniel. 36. Letters in Italian addressed to his friends. One hundred and forty-eight of these, all—except four—previously unpublished, are printed in Baron Custodi's edition of the 'Scritti Scelti,' ii. 7–380.

An edition of Baretti's 'Opere scritte in Lingua Italiana,' in 6 vols., appeared at Milan, 1813–18, 8vo. His Italian writings are also included in the 'Collezione de' Classici Italiani,' 4 vols. Milan, 1838–9, 8vo. An admirable edition of his 'Scritti scelti, inediti o rari' was brought out by Baron Pietri Custodi, 2 vols. Milan, 1822.

T. C.

BARFF, SAMUEL (1793?–1880), promoter of Greek independence, was born about 1793, presumably in England (*Trikoupes' 'Iorropia*, iii. 131). In 1816 he established himself at Zante, became an eminent merchant and banker, and terminated a long career in that island, 1 Sept. 1880, 'at the advanced age of eighty-seven' (*Times*, 23 Sept. 1880).

Barff took an active part in the struggle for independence carried on by the Greek nation at the time of Lord Byron's mission, and he was one of the last survivors of the Englishmen connected with that movement. His reputation for honour, kindness, and disinterestedness, is brought prominently forward in a series of letters addressed to him from Missolonghi by Lord Byron early in 1824, which are preserved in Moore's 'Life of Lord Byron.' It there appears that the negotiation of loans and the distribution of funds were confidently committed to Barff; whilst with patriotic benevolence he protected the persons and interests of stray Englishmen who had mistaken their way into Greece at that disturbed time. In these letters Barff is also recognised as the mediator through whom Georgio Sissenì, the *Capitano* of the rich district about Gastruni, made overtures of adhesion after having for a considerable period held out against the general government. Barff offered his country house to Lord Byron in the event of the health of the latter requiring his removal from Missolonghi.

[*Annual Register*, 1824; *Moore's Life of Lord Byron*, with his Letters and Journals, 8vo, London, 1847; *Trikoupes' 'Iorropia tēs 'Elladikēs 'Enavaρρώδews*, 4 vols. 8vo, London, 1853–7; *Times*, 23 Sept. 1880.] A. H. G.

BARFORD, WILLIAM, D.D. (d. 1792), scholar and divine, was educated at Eton, and elected to King's College, Cambridge, in 1737. He proceeded B.A. in 1742, M.A. in 1746, and D.D. in 1771. He became tutor of his college, was thrice moderator in the Sophs' school, was proctor in 1761, and from 1762 to 1768 public orator, only resigning the post to stand for the Greek professorship, which he failed to obtain. In 1768 his college presented him with the living of Fordingbridge, in Hampshire, and in the year following he was appointed chaplain to the House of Commons by Sir John Cust, the speaker, but held the office for only one session. The next speaker appointed another chaplain, and Dr. Barford's friends feared he would be deprived of the usual preferment conferred on holders of the office; but on the plea that he was to be considered chaplain,

appointed not by the speaker but by the house, it was resolved, 9 May 1770, that the king be addressed to confer some dignity upon him. He was consequently installed a prebendary of Canterbury in June of the same year. In 1773 he resigned Fordingbridge for the rectory of Kimpton, Hertfordshire, which he held along with the living of Allhallows, Lombard Street, till his death in November 1792. He married in 1764. A Latin dissertation of Barford's on the 'First Pythian' is published in Dr. Huntingford's edition of Pindar's works, to which is appended a short life of the author, a list of his works, and a eulogium of his learning. The list consists of poems on various political events in Latin and Greek, written in his capacity of public orator, a Latin oration at the funeral of Dr. George, provost of King's College, 1756, and a 'Concio ad Clerum,' 1784, written after his installation as canon of Canterbury. Dr. Jacob Bryant, in the preface to the third volume of his 'New System of Mythology,' pays a high tribute to Barford's talents and erudition, thanking him for his 'zeal,' his 'assistance,' and his 'judicious remarks.' In the life of Bryant, prefixed to the six-volume edition of the 'New System,' Barford is put first in the list of his friends.

[Gent. Mag. lxii., lxiii. (lxiii. 418 for an account of the proceedings in the House of Commons, and Commons Journal, xxxii.); Harwood's Alumni Etonenses; Concio ad Clerum, Camb. 1784, in Brit. Mus.] R. B.

**BARGENY**, second **BARON**. [See **HAMILTON**, **JOHN**, *d.* 1693.]

**BARGRAVE**, **ISAAC** (1586-1643), dean of Canterbury, was the sixth son of Robert Bargrave, of Bridge, Kent, and was born in 1586. He was educated at Clare Hall, Cambridge, where he graduated B.A. and M.A. On 9 July 1611 he was incorporated M.A. of Oxford, and in the October following became rector of Pythorne. In 1612 he held the office of 'taxor' at Cambridge, and he played the part of 'Torcel, portugallus, leno' in the Latin comedy of 'Ignoramus,' performed at the university before James I on 8 March 1614-15 (*NICHOLS's Progresses*, iii. 52). The author of the comedy, George Ruggle, was Bargrave's 'fellow-collegiate.' Shortly afterwards Bargrave proceeded to Venice as chaplain to Sir Henry Wotton, the English ambassador there, and became intimate with Paolo Sarpi, author of the 'History of the Council of Trent.' In 1618 he returned to England with a letter of introduction from Wotton to the king, in which his 'discretion and zeale' were highly commended

(*Wotton's Letters* (Roxburgh Club), p. 26). In 1622 he received the degree of D.D. at Cambridge, and was appointed a prebendary of Canterbury Cathedral. It was about the same time that he was granted the living of St. Margaret's, Westminster, and became chaplain to Prince Charles, an office which he retained after the prince ascended the throne in 1625. On the death of John Boys, dean of Canterbury, who had married Bargrave's sister, Bargrave succeeded to the deanery, to which he was formally admitted on 16 Oct. 1625. He obtained the vicarage of Tenterden in 1626, and was presented to the benefice of Lydd by the king in September 1627, but only held it for a few weeks. On 5 June 1628 he received the vicarage of Chartham, which he continued to hold till his death.

In the last years of James I's reign Bargrave had shown much sympathy with the popular party in parliament, and had preached a sermon which threw him into disfavour with the court; but as dean of Canterbury he supported the policy of Charles I. A sermon preached by him before Charles I on 27 March 1627 is stated to have greatly aided the collection of that year's arbitrary loan (*BIRCH's Court of Charles I*, i. 214-15). In later years Bargrave did not live on very good terms with his diocesan, Archbishop Laud, or with the cathedral clergy. The latter were constantly complaining of their dean's partiality in the distribution of patronage, and Laud constantly rebuked him for his 'peevisch differences,' his 'petty quarrels,' and the 'revillings in chapter.' In 1634-5 he insisted on the Walloon congregation at Canterbury and the Belgian church of Sandwich conforming to the ritual of the church of England; but the archbishop did not approve of these high-handed orders. Bargrave claimed precedence over the deans of London and Westminster, and was long engaged in a dispute with William Somner, the registrar of the diocese of Canterbury. Soon after the opening of the Long parliament Bargrave became a special object of attack with the popular leaders. When the bill for the abolition of deans and chapters was introduced by Sir Edward Dering, the first cousin of his wife, he was fined 1,000*l.* as a prominent member of convocation. On 12 May 1641 he went to the House of Commons to present petitions from the university of Cambridge and from the officers of Canterbury Cathedral against the bill. Although the bill was ultimately dropped, Bargrave's unpopularity increased. At the beginning of the civil war, in August 1642, Sandys, a parliamentary colonel, to whom the dean is said to have shown special kind-

ness in earlier life, visited Canterbury and attacked the deanery. Bargrave was absent, but his wife and children were cruelly outraged. On hearing that the dean was at Gravesend, Sandys proceeded thither, arrested him, and sent him to the Fleet. After three weeks' imprisonment Bargrave was released without having been brought to trial. He returned to Canterbury broken in health, and died there early in January 1642-3. He was buried in the dean's chapel of the cathedral. In 1679 a memorial was erected above the grave by the dean's nephew, John Bargrave, D.D. [q. v.]. The memorial mainly consisted of a portrait of the dean, attributed to Cornelius Jansen, painted on copper, with an inscription commemorating his virtues, his learning, and his intimacy with foreigners and with the English nobility. An engraving of the portrait appears in Dart's *'Antiquities of Canterbury'* (1726), p. 58. Wotton, in his will dated 1 Oct. 1637, left to the dean all his Italian books not otherwise bequeathed and his viol de gamba, 'which hath been,' says Wotton, 'twice with me in Italy, in which country I first contracted with him an unremovable affection.' Izaak Walton describes Bargrave in his *'Life of Wotton'* as 'learned and hospitable.'

Bargrave published three sermons—one preached from Psalms .xxvi. 6 before the House of Commons 28 Feb. 1623-4; another preached from Hosea x. 1 at Whitehall in 1624, and a third preached from I Sam. xv. 23 before King Charles 29 March 1627. He married Elizabeth, the daughter of Sir John Dering, of Pluckley, and first cousin of the eccentric Sir Edward Dering. Bargrave encouraged Sir Edward in the wooing of a rich widow in 1628-9, but the relatives afterwards seriously disagreed on political subjects (*Proceedings in Kent*, 1640, from the Dering MSS. (Camden Soc.), xxx., xlix. 7). Of Bargrave's children one son, Thomas, was the subject of a petition addressed by the dean to Secretary Windebank in 1639, asking permission for the youth to study at Amsterdam. Thomas married a niece of Sir Henry Wotton, and was an executor of Sir Henry's will. Another son, Robert, was the father of John, Isaac, Henry, Joan, and Robert Bargrave, who, with their father, lie buried in the north aisle of Canterbury Cathedral.

Bliss), i. 345; Le Neve's *Fasti* (Hardy), i. 33, 52, iii. 636; Hasted's *Kent*, iii. 102, 156, iv. 593-4; Dart's *Antiquities of Canterbury* (1726), pp. 56, 189; Verney's *Notes on the Long Parliament* (Camden Soc.), 76; Cal. Dom. State Papers, 1625-42; Laud's Correspondence in vol. vii. of his works.] S. L.

**BARGRAVE, JOHN** (1610-1680), canon of Canterbury Cathedral, was a nephew of Isaac Bargrave [q. v.], and was born in Kent about 1610. He became a fellow of St. Peter's College, Cambridge, from which he was ejected in 1643, and for many years devoted his time chiefly to travelling on the continent. In 1646 and 1647 he was in Italy with his nephew, John Raymond, author of an itinerary in which Bargrave is supposed to have had a considerable hand. He was again at Rome in 1650, 1655, and 1659-60. After the Restoration he obtained several preferments in Kent, and in 1662 was made a canon of Canterbury. Immediately after this promotion he departed with Archdeacon Selleck on the dangerous errand of ransoming English captives at Algiers, for whose redemption ten thousand pounds had been subscribed by the bishops and clergy. He acquitted himself successfully of his mission, and spent the rest of his life at home, dying at Canterbury on 11 May 1680. His sole contribution to literature is a curious account of 'Pope Alexander the Seventh and the College of Cardinals,' not originally intended for publication, consisting of scraps selected from three anonymous contemporary Italian publications (*'La Giusta Statuta de' Porporati,' 'Il Nipotismo di Roma,'* and *'Il Cardinalismo di Santa Chiesa,'* the last two by Gregorio Leti), with considerable additions of his own, and originally designed to illustrate the portraits of the pope and cardinals published by De Rossi in 1657. Though abounding in errors arising from a defective knowledge of Italian, the book is amusing and curious. It was edited by Canon Robertson for the Camden Society in 1897, with a memoir of Bargrave, and a descriptive catalogue of the curiosities he had acquired in his travels which presents many points of interest.

[Walker's *Sufferings*, pt. ii. p. 152; Wood's *Fasti* (Bliss), ii. 267; Canon Robertson's *Memoir of Bargrave*, prefixed to Pope Alexander VII.] R. G.

**BARHAM, CHARLES FOSTER, M.D.** (1804-1884), physician—the second christian name was rarely used—was the fourth son of Thomas Foster Barham [q. v.] (1766-1844), and was born at Truro on 9 March 1804. He was educated privately at several places in Cornwall and at Saffron Walden, proceeding from the latter town to Downing College, Cambridge, where he matriculated in October 1821. In the following January he migrated to Queens' College, and became a foundation scholar in May 1823. The bent of his family was for medicine, and after studying at Edinburgh, as well as at Paris and in Italy, Bar-

ham took the degree of M.B. at Cambridge in 1827, qualifying for the higher degree of M.D. in 1860. For a few years he practised at Tavistock, but in August 1837 he settled at Truro, and remained there until his death. In the following year he was appointed senior physician to the Royal Cornwall Infirmary, and when he resigned that post in 1873 was elected consulting physician. On his settlement at Truro Dr. Barham threw himself with energy into its political and civic life, and on 28 Sept. 1889 became more closely identified with the town by his marriage to Caroline, the second daughter of Clement Carlyon, M.D., who belonged to an old Truro family. In all the proceedings of the Royal Institution of Cornwall Dr. Barham took an active part, and to its 'Reports' and 'Journal' he contributed many articles. He died at Truro on 20 Oct. 1884, leaving a large family behind him.

Though Dr. Barham was interested in antiquarian and geological pursuits generally, the two subjects which had especial charm for him were the climate of Cornwall and the diseases of the miners who contributed to its wealth. The names of many papers written by him on these topics are enumerated in the 'Bibliotheca Cornubiensis,' vols. i. and iii. His services were engaged in 1842 by a commission on the employment of children, and his report, with the evidence which he collected, was printed in the first and second reports of the commission.

**BARHAM, CHARLES MIDDLETON,** first BARON (1726-1813). [See MIDDLETON, CHARLES.]

**BARHAM, FRANCIS FOSTER** (1808-1871), the 'Alist,' fifth son of Thomas Foster Barham (1766-1844) [q. v.], by his wife Mary Anne, daughter of the Rev. Mr. Morton, was born 31 May 1808 at Leskinick, Penzance, Cornwall. After a preliminary training in the grammar school of Penzance, he studied under one of his brothers near Epping Forest, and was then articled for five years (1826-31) to a solicitor at Devonport. In his twenty-third year he was enrolled as an attorney, and settled in London, but ill-health prevented him from pursuing the practice of the law, and he took to writing for literary periodicals. Together with Mr. John Abraham Heraud he was joint editor and proprietor of the 'New Monthly Magazine' from 1 July 1839 to 26 May 1840, when he retired from the editorship, with permission 'to contribute two sheets of matter

to each number of the magazine, retaining exclusive property in his own articles.' During the fourteen years of his residence in London, Barham's most extensive literary undertaking was the preparation of a new edition of Jeremy Collier's 'Ecclesiastical History of Great Britain.' The study of oriental languages kindled in him a great love for philology, and his intense spiritual aspirations led him to attempt to found a new form of religion, which he called 'Alism.' He describes it as 'the supreme central doctrine which combines and harmonizes all partial sections of truth in one divine universal system. After very prolonged and arduous researches I at last discovered this supreme central doctrine, and gave it the name of Alism, a name derived from A, Al, or Alah, the most ancient and universal title of Deity in the Hebrew scripture. By Alism I therefore mean that eternal divinity, pure and universal, which includes and reconciles all divine truths whatsoever to be found in scripture or nature, in theology, theosophy, philosophy, science, or art.'

Barham founded a society of Alists and also a Syncretic Society. He likewise attached himself to an æsthetic society which met at the house of the eminent mystic, James Greaves.

In 1844 he married Gertrude Foster, daughter of the Rev. Thomas Grinfield, of Clifton, rector of Shirland, Derbyshire, and went to live at Clifton. During his ten years' residence there, his time was principally occupied in preparing a revised version of the Old and New Testaments. He resided at Bath from 1854 until his death, which occurred in that city 9 Feb. 1871.

His numerous printed works include:

1. 'The Adamus Exul of Grotius, or the Prototype of Paradise Lost. Now first translated from the Latin,' Lond. 1839, 8vo. This poem is said to be the prototype of Milton's 'Paradise Lost.'
2. 'The Ecclesiastical History of Great Britain. By Jeremy Collier. New edition, with a life of the author, the controversial tracts connected with the history, notes, and an enlarged index,' 9 vols., Lond. 1840, 8vo.
3. 'The Alist or Divine, a message to our times,' Lond. (1840) 8vo; three parts published at 6d. each.
4. 'The Political Works of Cicero. Translated from the original with dissertations and notes,' 2 vols., Lond. 1841-42, 8vo.
5. 'Socrates. A Tragedy in five acts' (and in verse), Lond. 1842, 8vo.
6. 'The Life and Times of John Reuchlin or Capnio, the father of the German Reformation,' Lond. 1843, 12mo.
7. 'The Foster Barham Genealogy,' Lond. 1844, 8vo, privately printed.
8. 'Prospectus. The Alist,

a monthly magazine of divinity and universal literature,' Lond. (1845), 8vo. No portion of the projected magazine was ever published. 9. 'An Odd Medley of Literary Curiosities, original and selected,' Lond. (1845) 8vo. This volume contains a memoir of James Pierrepont Greaves. 10. 'A Key to Alism and the highest initiations, Sacred and Secular. With Miscellaneous Pieces, original and select,' Lond. 1847, 8vo. 11. 'The Bible revised. A carefully corrected translation of the Old and New Testament,' Lond. 1848, 8vo. In three parts, containing the Book of Ecclesiastes, the Song of Solomon, and the Book of Micah. 12. 'The New Bristol Guide, a poem,' Bristol, 1850, 8vo. 13. 'The Pleasures of Piety, a poem,' London, 1850, 18mo. 14. 'A Life of Edward Colston of Bristol.' 15. 'Improved Monotessaron, a complete authentic Gospel Life of Christ, combining the words of the four Gospels in a revised version and an orderly chronological arrangement,' Lond. 1862, 12mo. 16. 'Lokman's Arabic Fables, literally translated into English (word for word),' Bath, 1869, 12mo. 17. 'A Rhymed Harmony of the Gospels. By F. Barham and Isaac Pitman. Printed both in the phonetic and the customary spelling,' Lond. 1870, 8vo. 18. 'The Writings of Solomon, comprising the Book of Proverbs, Ecclesiastes, Song of Solomon, and Psalms lxxii. cxxvii. Translated. Printed both in phonetic and in the customary spelling,' Lond. 1870, 16mo. 19. 'A Revised Version of the Prophecies of Hosea and Micah,' Lond. 1870, 8vo. 20. 'The Book of Job, newly translated from the original. Printed both in the phonetic and the customary spelling,' Lond. 1871, 8vo. 21. 'An Elucidated Translation of St. John's Epistles, from the Greek and Syriac, with a devotional commentary,' Lond. 1871, 8vo. 22. 'The Book of Psalms, translated from the Hebrew and the Syriac. By F. Barham and Edward Hare,' Lond. 1871, 8vo.

Barham left behind him 116 lb. weight of manuscript, much of it in a small handwriting. It consists of treatises on Christianity, missions, church government, temperance, poems in blank verse, rhymed poetry, and a few dramas. From this mass of papers Mr. Isaac Pitman selected about seven pounds, and printed them in his 'Memorial of Francis Barham,' Lond. 1873, 8vo. This volume, which is mostly in the phonetic character, contains reprints of the 'Memoir of James Greaves,' 'Lokman's Fables,' the 'Life of Reuchlin,' and the 'Rhymed Harmony of the Gospels.'

**BARHAM, HENRY, F.R.S.** (1670?-1726), a writer on natural history, was born about 1670, and was descended from the Barhams of Barham Court in Kent. In books of reference he has hitherto been confounded with his son, Henry Barham, M.D. The main events of his life are recorded by himself in one of his letters to Sir Hans Sloane (*Sloane MS.* 4036, pp. 357-358). His father, a physician, intended to give him a university education, but died before he could carry out his wishes. As the mother married soon afterwards, the boy, then about fourteen years of age, was left to his own resources, and became apprentice to a surgeon. This situation he left to become surgeon's mate in the Vanguard, from which he was promoted to be master surgeon in another man-of-war. Tiring of the monotony of his life he went to Spain, thence to Madras, and thence to Jamaica. As in 1720 (*Add. MS.* 22639, f. 19) he refers to his son as having practised physic and surgery in Jamaica for the last twenty years, he himself had probably settled in the island twenty years before the end of the century. According to his own account he obtained a lucrative practice, and was appointed surgeon-major of the military forces in the island. About 1716 he came to England and settled at Chelsea, devoting his chief attention to the rearing of the silkworm and the manufacture of silk, on which subject he published a treatise in 1719. His name appears in 1717 on the list of members of the Royal Society, and he states also that shortly after he came to England he was made free of the Company of Surgeons, but his hopes of obtaining the diploma of M.D. do not appear to have been fulfilled, for the only change that occurs in his designation on the roll of the Royal Society is from 'Mr.' to 'Esquire.' In his application, in 1720, for the situation of mineral superintendent to a company formed to prosecute silver mining in Jamaica (*Add. MS.* 22639, ff. 18-20), he stated that his business prospects were so good that he could not sacrifice them for less than 500*l.* a year. He received the situation on his own terms; but the enterprise, which had been undertaken chiefly through his representations, proved a complete failure, and though a year's salary was due to him it was never paid. He continued, however, to reside in Jamaica till his death at Spanish Town in May 1726 (*Sloane MS.* 4036, p. 377). A memorial tablet is in the cathedral at Spanish Town (*ROBY'S Monuments of Spanish Town*, p. 38).

Barham states that after he came to Jamaica

he 'read many books, especially physical.' His letters and manuscripts indicate that in early life his education had been much neglected; but although apt also to be led astray by fantastic and utopian ideas, he possessed undoubtedly great ingenuity and a very minute knowledge of the fauna and flora of Jamaica. Logwood, now so common there, was introduced by him in 1715. Sir Hans Sloane, who refers to him in terms of high commendation, received from him many valuable communications, of which he made large use in his 'Natural History of Jamaica.' Among these was a treatise, 'Hortus Americanus,' sent in 1711. This treatise was published in 1794 with a preface in which it is stated to be the work of Henry Barham, M.D., who, it is added, practised as a physician in Jamaica from the beginning of the century, and after acquiring large property by marriage returned to England in 1740 and settled at Staines near Egham. The Henry Barham thus referred to was the son of Henry Barham, F.R.S., but that the father was the author of the book is proved beyond all doubt by letters in the Sloane MSS. (4036). Henry Barham, F.R.S., wrote also a 'History of Jamaica,' which his son, after his death, sent to Sir Hans Sloane, 'to see the best method of printing it,' but it was never published. The original copy, in the handwriting of the father, and inscribed 'wrote by Henry Barham, senr. F.R.S.,' is in the British Museum (*Sloane MS.* 3918). In another copy, in a different hand (*Add. MS.* 12422), there is a note by E. Long erroneously attributing the work to Henry Barham, M.D. Barham also wrote two papers for the Royal Society: 'An Account of a Fiery Meteor seen in Jamaica to strike the Earth,' *Phil. Trans.* 1718, *Abrev.* vi. p. 368; and 'Observations on the Produce of the Silkworm and of Silk in England,' 1719, *Abrev.* vi. p. 426.

[*Sloane MSS.* 4036, f. 84, 3918; *Add. MSS.* 22639, ff. 18-20, 12422; *Sloane's Natural History of Jamaica*, Introduction ii. vii.-x.] T. F. H.

**BARHAM, NICHOLAS** (*d.* 1577), lawyer, was a native of Wadhurst, Sussex. His family had been settled there for some generations, being a branch of the Barhams of Teston House, Teston, Kent, descended from Robert de Berham, upon whom the estates of his kinsman, Reginald Fitzurse, notorious as one of the murderers of Thomas Becket, devolved upon his flight into Ireland after the murder. Nicholas Barham was called to the bar at Gray's Inn in 1542, became an 'ancient' of that society 24 May 1552, Lent reader in 1558, and was made serjeant-at-law in 1567, having previously (1562-3) been returned to

parliament as member for Maidstone, of which town he also appears to have been recorder. Dugdale does not place him in the list of queen's serjeants until 1573. He is, however, so designated in certain papers relating to the trial of the Duke of Norfolk for high treason in conspiring with the Queen of Scots to depose Elizabeth, under date 1571-2. He was entrusted with the conduct of that famous prosecution, and seems to have displayed therein considerable ability and energy and some unscrupulousness. Thus it is perfectly clear, from a letter from Sir Thomas Smith to Lord Burghley, that the rack was employed in eliciting evidence from a witness, Banister by name, one of the duke's agents. Yet, on the duke, after the confession of the witness had been read, remarking 'Banister was shrewdly cramped when he told that tale,' Barham, who had been present at the examination, replied without hesitation, 'No more than you were.' The trial of the duke took place in Westminster Hall 16 Jan. 1571-2. In the following February Barham was engaged in prosecuting a less illustrious offender, the duke's secretary, Robert Higford, at the Queen's Bench, on the charge of adhering to and comforting the queen's enemies. Higford was found guilty and, like his master, condemned to death. After this we see no more of Barham until 1577, when we find him present at the Oxford assizes during the prosecution of a malcontent bookbinder, Rowland Jencks by name, a Roman catholic, and vehemently opposed to the existing order of things. Apparently he had been guilty of little more than speaking evil of dignities and keeping away from church; but the university authorities, judging it necessary to make an example, had him arrested and sent to London to undergo examination, whence he was returned to Oxford to stand his trial. This took place 4 July, when he was sentenced to lose his ears, as in due course he did. Jencks, however, was amply avenged. 'Judgment being passed,' says Wood, 'and the prisoner taken away, there rose such an infectious damp or breath among the people that many there present were then smothered, and others so deeply infected that they lived not many days after.' There was a sudden outbreak of gaol-fever of a more than usually virulent kind, which destroyed within a few hours, if Wood is to be credited, besides Barham and Sir Robert Bell, baron of the exchequer, the high sheriff and his deputy, Sir William Babington, four justices of the peace, three gentlemen, and most of the jury, and in the course of the next five weeks more than five hundred other persons. Wood

gives a minute account of the symptoms, the chief of which were violent pain in the head and stomach, frenzy, hæmorrhage, and total inability to eat or sleep. Barham was survived by his wife, Mary, daughter of John Holt, of Cheshire, and one son, Arthur. He was the owner of two estates, one of which, known as Bigons or Digons, he had acquired by grant from the crown in 1554, the former proprietor having been implicated in the insurrection of Sir Thomas Wyatt; the other, the manor of Chillington, he purchased about the same time. Both estates were sold by his son Arthur. In the records of the corporation of Hastings is preserved a letter from one Nicholas Barham to the Right Hon. Lord Cobham, lord warden of the cinque ports, relative to a dispute between Hastings and Pevensey as to the title to some wreckage cast upon the shore in the neighbourhood of the latter town, as to which the opinion of the writer had been taken by the lord warden. The letter was read to the corporation of Hastings 29 April 1599, and, though undated, must have been written about that time. The author of a paper in the 'Sussex Archaeological Collections' identifies this Nicholas Barham with the serjeant; but the contemporary evidence of Camden—who notes the epidemic at Oxford in 1577, and places Barham amongst the victims, and whose account Wood, while adding fresh details, follows in all essential particulars, together with the absence of any mention of Barham by Dugdale after 1573, though had he lived he would in all likelihood have been raised to the bench—appears to be conclusive against the identification, while there is nothing surprising in the coincidence of name, the Barhams being a numerous clan in Kent and Sussex, and Nicholas a name much affected by them. The Sussex branch of the family was largely concerned in the business of ironfounding, of which the county was, during the sixteenth and seventeenth centuries, the seat. Wadhurst Church contains many mural tablets of iron inscribed with the names and arms of the gentry who were engaged in the manufacture, to some of whom the decay of the industry was very disastrous. The Barhams in particular suffered severely, sinking gradually into the position of handicraftsmen. An engraving of one of these iron mural tablets, dedicated to one John Barham, Esq., of Great Butts, who died in 1648, may be seen in the 'Sussex Archaeological Collections,' ii. 200.

**BARHAM, RICHARD HARRIS** (1788-1845), author of the 'Ingoldsby Legends,' was born at Canterbury on 6 Dec. 1788, and was the son of Richard Harris Barham of Tappington Everard in the county of Kent. He was educated at St. Paul's School and at Brasenose College, and, though originally intended for the bar, took orders in 1813, and in 1817 was presented by the Archbishop of Canterbury to the living of Snargate in Romney Marsh. An accident which confined him to the house directed his active mind to literary composition as a resource against *ennui*, and in 1819 he produced his first work, a novel entitled 'Baldwin,' which fell dead from the press. Nothing daunted, he began to write 'My Cousin Nicholas,' and in 1821 was placed in a more favourable position for literary effort by obtaining a minor canonry in St. Paul's Cathedral. His energy, good sense, and good humour soon gained him the esteem and confidence of the chapter, and more especially the friendship of Bishop Copleston, dean of St. Paul's from 1827 to 1849. In 1824 he was presented to the living of St. Mary Magdalene and St. Gregory, and was made priest in ordinary of the chapels royal. The latter appointment brought him into closer intimacy with the eccentric Edward Cannon, and connection with the press introduced him to other kindred spirits, whose society fostered the talent for humorous composition in verse of which he had already given proof. His acquaintance with Theodore Hook dated from their college days. He contributed to 'Blackwood' and the 'John Bull,' and in 1834 'My Cousin Nicholas,' which had long lain in his desk, was completed and published in the former periodical. Though endowed with indefatigable powers of work, Barham seems to have always required some strong external prompting to composition of any extent. His first novel was the result of an accident; his second was forced into completion by a friend who printed the first chapters without his knowledge; and, although he was continually throwing off humorous verse with great freedom and spirit, the 'Ingoldsby Legends' would probably never have existed but for his desire to aid his old friend and schoolfellow, the

publisher Bentley, in 'Bentley's Miscellany,' commenced under the editorship of Charles Dickens in January 1837. The magazine was originally intended to have been called 'The Wits' Miscellany.' 'Why,' urged Barham, when the change of title was suggested to him, 'why go to the other extreme?' This excellent *mot* has been erroneously attributed to Jerrold. 'The Spectre of Tappington' opened the series, and was speedily succeeded by a number of others, at first derived from the legendary lore of the author's ancestral locality in Kent, but soon enriched by satires on the topics of the day and subjects of pure invention, or borrowed from history or the 'Acta Sanctorum.' The later members of the series appeared in the 'New Monthly Magazine.' The success of the 'Legends' was pronounced from the first, and when published collectively in 1840 they at once took the high place in humorous literature which they have ever since retained. A second series was added in 1847, and a third was edited by his son in the same year. In 1842 Barham was appointed divinity lecturer at St. Paul's, and exchanged his living for St. Faith's, also in the city. In 1840 the death of his youngest son had inflicted a blow upon him from which he never recovered, and in 1844 a cold caught at the opening of the Royal Exchange, and aggravated by his neglect of precautions, laid the foundation of a fatal illness. He died on 17 June 1845, having written his pathetic lines, 'As I laye a-Thynkyng,' a few days previously.

Barham owes his honourable rank among English humourists to his having done one thing supremely well. He has thoroughly naturalised the French metrical *conte* with the adaptations necessary to accommodate it to our national genius. French humour is rather finely malicious than genial: Barham carries geniality to the verge of the exuberant. He riots in fancy and frolic, and his inexhaustible faculty of grotesque rhyming is but the counterpart of his intellectual fertility in the domain of farcical humour. There is, indeed, an element of farce in his fun, an excessive reliance on forced contrasts between the ghastly and the ludicrous, and a not unfrequent straining after cheap effects; nor can the most successful work of the professional jester be compared to the recreation of a great poet, such as Browning's 'Pied Piper of Hamelin.' It is nevertheless true that no English author, with the exception of Hood, has produced such a body of excellent rhymed mirth as Barham; and that, if his humour is less refined than Hood's, and his gaiety not equally purified and ennobled by being dashed with tears, he excels his

rival as a narrative poet. He may, indeed, be said to have prescribed the norm in our language for humorous narrative in irregular verse, which can now hardly be composed without seeming to imitate him.

As a man Barham was exemplary, a pattern Englishman of the most distinctively national type. The associate of men of wit and gaiety, making himself no pretension to any extraordinary strictness of conduct, he passed through life with perfect credit as a clergyman and universal respect as a member of society. He mitigated the prejudices of his education by the innate candour of his disposition, and added to other endowments soundness of judgment and solidity of good sense.

[The principal authority for Barham's biography is his life by his son (3rd edition, 1880), a book abounding in excellent stories, excellently told. New editions of the Ingoldsby Legends continue to be called for, and his lyrics were published separately in 1881.] R. G.

BARHAM, THOMAS FOSTER (1766-1844), musician and miscellaneous writer, the third son of Joseph Foster, who took the name of Barham by authority of a private act of parliament, and in accordance with the will of Henry Barham, was born at Bedford, 8 Oct. 1766, and educated at St. John's College, Cambridge, where he graduated B.A. as Thomas Foster in 1792. After his university course he travelled on the Continent. On his return he became connected with the mercantile house of Plummer & Co., but ill-health obliged him to leave London, and to retire into the west of England, where he finally settled at Leskinnick, near Penzance, Cornwall. He died there 25 Feb. 1844. He married in 1790 Mary Ann, eldest daughter of the Rev. Joshua Morton, of Blackheath, and by this lady had six children, of whom Charles, Francis, Thomas, and William are mentioned in separate articles in this work.

His principal publications are: 1. 'Letter from a Trinitarian to a Unitarian,' Penzance, 1811. 2. 'Musical Meditations, consisting of original compositions, vocal and instrumental,' Lond. 1811, 2nd set 1815. 3. 'Abdallah or the Arabian Martyr, a Christian drama in three acts' [and in verse], Lond. 1820, 2nd edit., Penzance, 1821. 4. 'Elijah, a sacred poem in four cantos,' Lond. 1822. 5. 'Colonel Gardiner, a Christian drama in three parts,' Lond. 1823. 6. 'Pergolesi's celebrated Stabat Mater or Calvary; with English words written for the purpose, substituted in the place of the ancient Latin verses, and the instrumental parts arranged for the organ or pianoforte,' &c., 1829.

7. 'Lander Africanus. A musical drama,' Penzance, 1834. 8. 'Reliquiæ Sericæ, or Christian Musings. By 'Ελδχιστος,' Lond. 1836.

[Boase and Courtney's Bibl. Cornubiensis, i. 12, iii. 1049; Pitman's Memorial of Francis Barham, 20, 121-3.] T. C.

**BARHAM, THOMAS FOSTER, M.B.** (1794-1869), physician and classical scholar, was the eldest son of Thomas Foster Barham [q. v.]. The younger Barham was born at Hendon, in Middlesex, 10 Sept. 1794, and sent to Queens' College, Cambridge, qualifying as M.B. in 1820. After taking this degree he returned to Penzance, where he was physician to the dispensary, and in general practice for several years. About 1830 he removed to Exeter and became physician to the Exeter dispensary and institution for the blind. From early life he had been attached to the doctrines of unitarianism, and during the first part of his residence at Exeter actively supported the unitarian congregation which met at George's Chapel, Exeter. After a time he expressed an aversion to all dogmatic theology, as well as to the adoption of any sectarian name, and embodied his views on these points in a pamphlet entitled 'Christian Union in Churches without Dogmatism.' He moved to Newton Abbot, where he conducted religious service for himself, adhering in the main to the religious tenets of his old sect. Being possessed of considerable means, he abandoned the practice of medicine on his removal from Exeter, and gave himself up to good works and the pleasures of literature. He died at Highweek, near Newton Abbot, 3 March 1869, and was buried in Highweek churchyard 8 March. Dr. Barham published many theological works, including 'A Monthly Course of Forms of Prayer for Domestic Worship' and (in union with the Rev. Henry Acton) a volume of 'Forms of Prayer for Public Worship.' His chief work, which dealt with many social questions—such as temperance, cultivation of waste lands and small farms—was entitled 'Philadelphia, or the Claims of Humanity' (1858). The fame of his knowledge of the Greek language was not confined to his own country; his mastery of Greek was shown in his 'Introduction to Greek Grammar, on a new plan,' 1829; 'Greek Roots in English Rhymes,' 1837; and 'The Enkheiridion of Hehfaistiown, with Prolegomena' (highly commended in Grote's 'Greece,' iv. 107) 'on Rhythm and Accent.' A translation, in English hexameters, of the first book of the 'Iliad' was published after his death. He was a contributor to the 'Monthly Reposi-

tory' from 1818, to the Transactions of the Cornish scientific societies, and to the Devonshire Association. The full titles of his books and his papers may be read in the 'Bibliotheca Cornub.' i. 13-14, iii. 1060.

[The Inquirer, 6, 13, 20 March 1869; Western Morning News, 15 March 1869; Register and Mag. of Biog. 1869, i. 306; Munk's Physicians, 1878, iii. 243.] W. P. C.

**BARHAM, WILLIAM FOSTER** (1802-1847?), poet, third son of Thomas Foster Barham (1766-1844) [q. v.], was born at Marazion, Cornwall, 22 Oct. 1802. He was educated in the grammar schools of Bodmin and Leeds, and then proceeded to Trinity College, Cambridge. He won the Porson prize in 1821 and 1822, and graduated B.A. in 1824 as twenty-second senior optime, second in the first class of the classical tripos, and second chancellor's medallist. He went out M.A. in 1827. His death occurred in Kent about 1847. He was the author of an unpublished poem on 'Moskow.' His Greek versions of portions of 'Othello' and 'Julius Cæsar' are printed in a volume of 'Translations which have obtained the Porson Prize from 1817 to 1856,' 2nd edit., Camb. 1857, pp. 16-28.

[Notes and Queries, 3rd series, iii. 266, 399, 455; Pitman's Memorial of Francis Barham, 20, 21, 23, 24, 28; Boase and Courtney's Bibl. Cornubiensis, iii. 1050; Romilly's Graduat Cantab. (1856) 18.] T. C.

**BARING, ALEXANDER**, first **BARON ASHBURTON** (1774-1848), financier and statesman, the second son of Sir Francis Baring [q. v.], who died in 1810, was born on 27 Oct. 1774. As his elder brother received an appointment in the service of the East India Company, Alexander was trained from early life in his father's financial house. The firm had numerous connections with the United States, and he was sent thither to strengthen and extend its business operations. While resident in America he married (23 Aug. 1798) Anne Louisa, eldest daughter of William Bingham, of Philadelphia, a member of the Senate of the United States. To this alliance, and to his acquaintance with the chief mercantile firms of America, he was much indebted in later life. Although he continued to assist in the management of the house, and became the head of the firm on the death of his father in 1810, he took an active part in the debates in the House of Commons on commercial affairs. He represented in turn Taunton (1806-26), Callington (1826-31), Thetford (1831-32), and North Essex (1833-35); of two of these

constituencies, Callington and Thetford, he had acquired full possession. Firmly opposed to the existence of any restrictions on commerce between nations, he was especially antagonistic to the 'system of hostility recommended and practised towards the commerce of America' by the English orders in council, and warmly supported Brougham in his struggles for their repeal. His 'Inquiry into the Causes and Consequences of the Orders in Council' went through two editions. With the nation's desire for parliamentary reform the owner of two boroughs could have little sympathy; he opposed the reform bill of Lord Grey's ministry in all its stages; and when the ministry was defeated in the House of Lords on an adverse proposal from Lord Lyndhurst, Mr. Baring consented, after much hesitation, to take the office of chancellor of the exchequer in the cabinet which the Duke of Wellington was attempting to form. An angry scene in the Commons, and the indignation of the people convinced him of the hopelessness of the enterprise, and it was his proposition that the ex-ministers should resume their seats and be allowed to carry their bill. In Sir Robert Peel's first administration (1834) he was president of the board of trade, as well as master of the mint, and on the dissolution of the ministry he was raised to the peerage (10 April 1835) as Baron Ashburton, a title which he selected because Dunning, the celebrated lawyer, who had married his aunt, had previously assumed it. When differences arose as to the boundary between the United States and the territories of Great Britain, Lord Ashburton was sent to America as the English commissioner, and a treaty, known as the Ashburton treaty, was concluded at Washington in 1842. Daniel Webster praised him highly as 'a good man to deal with, who could see that there were two sides to a question;' and Lord Ashburton and his suite are said to have 'spread a social charm over Washington, and filled everybody with friendly feelings towards England.' The free-trade policy of Peel he regarded with alarm—a circumstance which his detractors contrasted with his opinions in early life, and attributed to his large land purchases—and he resisted the Bank Charter Act of 1844, discussing the question in his pamphlet, 'Financial and Commercial Crisis considered.' Like several other members of his family, he patronised art, and formed a fine collection of pictures. He was one of the trustees of the British Museum and of the National Gallery. He died at Longleat, the seat of his grandson the Marquis of Bath, 13 May 1848, having had issue five sons and

four daughters. On his death a warm tribute to his memory was paid in the House of Lords by Lords Lansdowne, Brougham, and Derby. Lord Houghton, in his 'Monographs' (1878, pp. 227-8), praises Lord Ashburton's extensive knowledge and business experience.

[Burke's Peerage; Gent. Mag. 1848, xxx. 89; C. Greville's Journals, ii. 299, 300; Croker Papers, ed. Jennings, ii. 397-401, iii. 17, 29, 46-8, 69, 72, 76, 105; Webster's Works, vols. i. v. and vi.; Pierce's Sumner, ii. 85, 193-225; Hansard, 1848, xeviii. 979-81.] W. P. C.

**BARING, CHARLES (1807-1879)**, bishop of Durham, was the fourth son of Sir Thomas Baring, second baronet, of the eminent banking firm of Baring Brothers. His mother was Mary Ursula, daughter of Charles Sealy, barrister-at-law, Calcutta. Charles Thomas Baring was privately educated till he entered Christ Church, Oxford, in 1825. At Oxford he greatly distinguished himself, and took a double first-class in classics and mathematics in his final examination in 1829. In 1830 he married his cousin Mary Ursula Sealy, and took holy orders. At first he devoted himself to clerical work in Oxford, and then took the little living of Kingsworthy in Hampshire. In 1840 his wife died, and he married in 1846 Caroline, daughter of Thomas Read Kemp of Dale Park, Sussex. In 1847 he was appointed to the important benefice of All Saints, Marylebone, and became renowned as an earnest, simple preacher of the evangelical school. In 1850 he was made chaplain in ordinary to the queen, and was select preacher at Oxford. In 1855 he left London for the rectory of Limpsfield in Surrey, where, however, he did not long remain. In 1856 he was chosen to succeed Dr. Monk as bishop of Gloucester and Bristol. He entered with energy upon the duties of his episcopal office, but he was not allowed to stay at Gloucester long enough to make a decided mark on that diocese. In 1861 he was translated to the see of Durham, in succession to Dr. Villiers.

The name of Bishop Baring is chiefly associated with the work of church extension in the diocese of Durham. He found a district in which a manufacturing and mining population had increased with great rapidity, and had far outstripped the provision made for their spiritual welfare. A movement had already been set on foot to supply the deficiency. Bishop Baring gave himself most assiduously to carry on the work. So successful was he during his episcopate of seventeen years that he saw the formation of 102 new parishes, the building of 119 churches, and an increase of 186 in the number of

parochial clergy. In his last charge to his clergy in 1878 he expressed his opinion that the limit of the formation of new districts had been reached, and that future progress should be made by erecting mission chapels.

Bishop Baring devoted himself exclusively to the work of his diocese. He rarely appeared in the House of Lords or spoke on any subjects which did not concern his immediate business. He was unsparing of himself in his efforts to discharge his duties to the uttermost. He was, however, reluctantly driven to confess that the work of the diocese was more than one man could accomplish. In 1876 he admitted the necessity of dividing the see of Durham, and at his request provision was made in the act for the extension of the episcopate (1878) for the formation of a diocese of Newcastle.

Bishop Baring was a man of deep personal piety and of great kindliness. Though a wealthy man, he lived with great simplicity, and gave back to the diocese in donations for church purposes more than he received as the income of his see. His personal acts of charity, though done in secret, were very numerous. He was in theological opinions a strong evangelical, and in his public utterances he did not disguise the fact. Those who did not agree with him complained that in the discharge of his official duties he followed too exclusively his own individual preferences. He took a more decided step than any other bishop by refusing to license curates to clergymen whose ritual he thought to be contrary to his interpretation of the Prayer Book. This gave rise to much controversy, but did not impair the respect in which he was personally held. In 1877 the chief laity of the county asked him to sit for his portrait, which they desired to present to Auckland Castle. Bishop Baring, with a stern modesty which was characteristic of him, refused, and no portrait of him remains.

In 1878 Bishop Baring felt his health giving way. He laboured under a painful disease which he knew to be incurable. At the end of the year he went through the fatigue of an episcopal visitation, and immediately afterwards announced his resignation. He declined the retiring pension which he might have claimed, and preferred to leave the income unimpaired to his successor. He left his see in February 1879, and did not long survive his retirement. He died at Wimbledon in September following.

BARING, SIR FRANCIS, (1740-1810), London merchant, founded the eminent

financial house of Baring Brothers & Co. His grandfather, Franz Baring, was the pastor of the Lutheran church of Bremen; and his father, John Baring, settled at Larkbear, near Exeter, as a cloth manufacturer; and it may be well to add that information about the history of the Baring family, during its connection with Devon, is contained in R. Dymond's 'History of the parish of St. Leonard, Exeter,' 1873. Francis Baring was born at Larkbear 18 April 1740, and sent to London to study commerce in the firm of Boehm. Though deaf from his youth, his indomitable energy enabled him to overcome all obstacles, and to establish his business on the firmest foundations. At the time of his death it was calculated that he had earned nearly seven millions of money; and Sir Francis Baring stood forth, in the words of Lord Erskine, as 'the first merchant in Europe.' His advice was often sought on financial questions connected with the government of India. He became a director of the East India Company in 1779, and acted as its chairman during 1792-3—services for which a baronetcy was conferred upon him 29 May 1793. He represented as a whig the borough of Grampound from 1784 to 1790, Chipping Wycombe 1794-6 and 1802-6, and Calne 1796-1802.

Sir Francis Baring's literary works were: 1. 'The Principle of the Commutation Act established by Facts,' 1786; an argument mainly in support of the reduction of duties on tea and other commodities. 2. 'Observations on the Establishment of the Bank of England,' 1797; with 'Further Observations' in the same year, in which he justified the issue of Bank of England notes, with a limit as to the amount in circulation, and suggested that country banks should be prevented from issuing notes payable at demand. 3. 'Observations on the Publications of Walter Boyd, M.P.,' 1801. Sir Francis died at Lee, Kent, 11 Sept. 1810, and was buried in the family vault at Micheldever, Hants, 20 Sept. His wife Harriet, daughter of William Herring, of Croydon, died at Bath 4 Dec. 1804. Five sons and five daughters survived him. His eldest son, Thomas (1772-1848), second baronet, was father of Francis Thornhill, first Lord Northbrook [q. v.], Thomas [q. v.], and Charles Thomas, bishop of Durham [q. v.]. His second son, Alexander [q. v.], was created Lord Ashburton.

[Gent. Mag. 1810, i. 610, ii. 293; H. Greville's *Journals*, ii. 53; Rush's *Residence at London*, 1845, i. 160; Didot, *Nouvelle Biog. Univ.*; H. R. F[ox] B[ourne]'s *London Society*, ix. 367-73.] W. P. C.

**BARING, SIR FRANCIS THORNHILL, LORD NORTHBROOK** (1796-1866), statesman, was the eldest son of Sir Thomas Baring, the second baronet, and was born at Calcutta 20 April 1796. He was educated at Winchester School and Christ Church, Oxford, gaining the distinction of a double first class in 1817. In 1826 he was elected as a whig to the House of Commons for Portsmouth, and represented the place without an interruption until 1865. He climbed from step to step of the official ladder, and was a lord of the treasury Nov. 1830 to June 1834, its joint secretary June to Nov. 1834 and April 1835 to Sept. 1839, and chancellor of the exchequer Aug. 1839 to Sept. 1841. From 1849 to 1852 he was the first lord of the admiralty. He was created Baron Northbrook 4 Jan. 1866, and died at Stratton Park 6 Sept. 1866. Lord Northbrook was twice married: first, 7 April 1825, at Portsmouth, to Jane, youngest daughter of the Hon. Sir George Grey, K.C.B., by whom he was father of Thomas George, created Earl Northbrook in 1876; and secondly, 31 March 1841, at St. George's, Hanover Square, to Lady Arabella Georgiana Howard, second daughter of the first Earl of Effingham. His first wife died at Belgrave Square, Pimlico, 23 April 1838; his second wife is still living. The speech which he made, 17 May 1841, on the budget resolutions for the year, was printed as a pamphlet; his proposals were keenly criticised by Sir Robert Peel. Several improvements were effected at the admiralty during his presidency of the board.

**BARING, HARRIET, LADY ASHBURTON** (*d.* 1857). [See under **BARING, WILLIAM BINGHAM**.]

**BARING, THOMAS** (1799-1873), financier, son of Sir Thomas Baring and brother of Sir Francis Thornhill Baring, the first Lord Northbrook [q. v.], was born 7 Sept. 1799, and educated at Winchester School. From early age he was trained in the family business, and he bore the burden of its financial operations for many years. He sat in parliament as member for Great Yarmouth from 1835 to 1837, but was defeated on three subsequent occasions, 1837, 1838, and 1841. On a chance vacancy in the representation of the city of London, Oct. 1843, he contested the seat, but was unsuccessful by 165 votes in a poll of nearly 13,000. The borough of Huntingdon, however, elected him as one of its mem-

bers April 1844, and he continued to represent it until his death. Unlike most of the members of his family, Thomas Baring was a conservative in politics; and on the formation of two of Lord Derby's administrations, in 1852 and 1858, he was offered the post of chancellor of the exchequer, which his elder brother had filled in the whig ministry of Lord Melbourne. He shared the first Lord Ashburton's taste for pictures. He was chairman of Lloyds, and, like Sir Francis Baring [q. v.], president of the London Institution. He died at Fontmell Lodge, Bournemouth, 18 Nov. 1873. Had he been ambitious he might have played a more important part in history.

W. P. C.

**BARING, WILLIAM BINGHAM, second BARON ASHBURTON** (1799-1864), statesman, the eldest son of Alexander, first Lord Ashburton [q. v.], was born June 1799. He was educated at Oriel College, Oxford, taking a second class in classics in 1821. Through the influence of his family he was elected for Thetford in 1826, and for Callington in 1830. After the Reform Bill he sat for Winchester (1832-7) as a moderate whig, but it was as a conservative that he represented the larger constituency of North Staffordshire 1837-41, and Thetford from 1841 to 1848, when he succeeded to the peerage. In Sir Robert Peel's administration of 1841 he was secretary to the board of control until February 1845, and paymaster-general from that date until July 1846. Lord Ashburton lacked boldness, and his manners failed to impress the world with the respect which his abilities deserved; but he possessed a great thirst for information, and in later life he distinguished himself by his strenuous advocacy of the teaching of 'common things' in national schools. His shyness was more than compensated for in the person of his first wife (married 12 April 1823), Lady Harriet Mary Montagu, eldest daughter of the sixth Earl of Sandwich. Under her auspices his houses of the Grange, near Alresford, and Bath House, Piccadilly, became centres of life for many eminent men in politics and literature, and especially for Charles Buller, Thackeray, and Carlyle. Mrs. Carlyle, indeed—as readers of her Letters and her husband's Reminiscences will remember—resented his attachment to Lady Ashburton. Lady Ashburton had long been in delicate health, but was seized with her fatal illness at Nice in 1857, and died at Paris 4 May 1857. Many of her sayings are recorded, and her character is analysed in a chapter in Lord Houghton's 'Monographs,' 1873, pp. 225-55. Lord Ash-

burton married for the second time, 17 Nov. 1858, at Bath House, Piccadilly, Louisa Caroline, third daughter of the Right Hon. James Alexander Stewart Mackenzie. He died at the Grange 23 March 1864, leaving one daughter, Mary Florence, who married 30 April 1884 Lord William Compton, afterwards fifth Marquis of Northampton; she died in 1902. From 1860 to 1864 he held the office of president of the Geographical Society, and in 1855 he was created a knight of the Legion of Honour.

**BARKER, ANDREW** (d. 1577), merchant of Bristol, in partnership with his brother John, was for some years engaged in the adventurous and often disputed trade with the Spanish settlements. In 1570 one of their ships, named the Falcon, was seized at Terceira, the cargo confiscated, and the greater part of her crew sent to the galleys (*State Papers: Elizabeth, Domestic, Ad-enda*, xix. 13). In 1575 at Teneriffe the Inquisition laid hands on the captain and crew of their ship, the Christopher, and released them only on payment of fines which amounted to the value of the whole cargo. Andrew Barker thereupon fitted out two ships for a voyage of reprisals—the Ragged Staff, of which he himself took command, with one Philip Roche as master, and the Bear, commanded by Captain William Cox. They sailed from Plymouth on Whitsunday, 1576. At the Cape Verde Islands, at Trinidad, at Curaçao, and on the Spanish Main, they took several prizes, and collected a fair amount of booty. Afterwards, however, the crews became sickly and several of the men died. Then the officers quarrelled amongst themselves; Barker and Roche fought, and Cox, heading a mutiny, turned Barker and his adherents on shore in the Gulf of Honduras, where they were presently surprised by the Spaniards. Barker and some eight or nine with him were killed, others were wounded, the rest made good their escape and were admitted on board the Bear, which was still in the neighbourhood. Disaster now pursued the adventurers. Party after party was cut off. The Ragged Staff had early in the voyage proved to be unseaworthy, and had been sunk. All the accumulated treasure was in the Bear, and she was now overset in a squall. Only nine men escaped with their lives, and these, having made shift to build a small vessel and to return to England, were arrested at the suit of Andrew Barker's brother, John, and the chief of them sentenced to a long term of imprisonment.

[Hakluyt's Principal Navigations, &c. (Reprint, 1811), iv. 4.] J. K. L.

**BARKER, BENJAMIN** (1776-1838), landscape painter, son of Benjamin and brother of Thomas Barker [q. v.], called 'Barker of Bath,' resided at Bath, and between 1800 and 1821 exhibited occasionally at the Royal Academy. During the years 1813-20 he was a large exhibitor of views and landscape compositions at the Watercolour Society. He was also an exhibitor at the British Institution. There are three of his watercolour drawings in the South Kensington Museum. He was an artist of some skill and taste, but little power or originality. He died at Totnes after a lingering illness, 2 March 1838, aged 62. Thales Fielding engraved forty-eight of his landscapes in aquatint.

[Redgrave's Dictionary; Cat. of Nat. Gall. at South Kensington.] C. M.

**BARKER, SIR CHRISTOPHER** (d. 1549), Garter king of arms, was the son of William Barker of Stokesley, Yorkshire, by Joan, daughter of William Carlisle or Carlisle, and a relative of William or Christopher Carlisle, Norroy king of arms, who died in 1511. Barker was originally in the service of Sir Charles Brandon. On his creation as Viscount Lisle, Brandon attached Barker to his household as Lysley pursuivant (15 May 1513), and on the viscount's elevation to the rank of Duke of Suffolk, Barker was admitted by Henry VIII at Eltham into the office of Suffolk herald (1 Feb. 1516-17). Shortly afterwards he abandoned the duke's service for the College of Arms, and filled in succession the chief posts there. He was at first Calais pursuivant extraordinary, and afterwards Rouge dragon pursuivant. In April 1522 he became Richmond herald at twenty marks a year. In 1524 he accompanied Sir Richard Wingfield and others on an embassy to Spain. Sir Richard died while abroad, and Barker solemnised the funeral. In 1529 he attended Tunstall, bishop of London, and Sir Thomas More on an embassy to Cambray in Flanders, and in 1530 accompanied the Earl of Wiltshire to Germany. In the capacity of Richmond herald he assisted at the formal creation of Anne Boleyn as Marchioness of Pembroke (1 Sept. 1532) and at her coronation on 29 May 1533. On 26 Nov. 1534 he promised a pension of 10*l.* to Thomas Tong, Clarencieux king of arms, if he should be promoted Garter king of arms, on the understanding that Tong should not himself apply for the post. In June 1536 Barker became Norroy king of arms, and on 9 July following was created Garter king. In 1544 he attended the Duke of Suffolk in

command of the expedition to France (RYMER'S *Fœdera*, xv. 52-3), and was subsequently with Henry VIII at Calais. In 1546 he was present at the trial of the Earl of Surrey, and in February 1547-8 assisted at the coronation of Edward VI. Shortly afterwards Barker was made a knight of the Bath; a special exemption had to be procured to enable him to accept the honour, as the officials of the College of Arms were legally ineligible for such distinctions, and on no other member of the college before or since has a like dignity been conferred.

Sir Christopher died at the close of 1549 or early in January 1549-50. His will bears date 3 Dec. 1549, and was proved on 6 April following. He was buried 'in the Long Chapple next S. Faith's Church in S. Paul's.' Sir Christopher possessed large house property in Lime Street, St. Nicholas and Ivy Lanes, London, and land at Wanstead. He owned a house in Paternoster Row. His property in Lime Street was left on the death of his wife to the Company of Vintners and their successors for ever. Sir Christopher was thrice married: first, to May, daughter and coheir of Robert Spacelby of Worcestershire, who died in 1520; secondly, to Alice or Eleanor, daughter of Richard Dalton, by whom he had two sons; and, thirdly, to Edith, daughter of John Boys of Godneston, near Sittingbourne, Kent, who died in September 1550. Sir Christopher's only children, his two sons Justinian and Christopher, by his second wife, both died before him. Justinian was born in 1523, became Rougecroix pursuivant and Rysbank pursuivant extraordinary late in the reign of Henry VIII, and died while in Spain before 1549. Edward Barker, a nephew, ultimately succeeded to Sir Christopher's property.

A portrait of Barker is given in the picture of the procession of Edward VI from the Tower of London to Westminster before his coronation. He is there riding with the lord mayor between the emperor's ambassador and the Duke of Somerset. The picture, formerly at Cowdray House, Sussex, was burnt in 1793, but an engraving was previously prepared by the Society of Antiquaries and was published in 1797. A reduced copy of the engraving appears in the New Shakspeare Society's edition of Harrison's 'England.' Another portrait of Barker is given in Dallaway's 'Inquiries into Heraldry.'

[Noble's History of the College of Arms; Carlisle's Family of Carlisle, 1822, pp. 371-2; Anstie's Register of the Garter, i. 376-9; Letters and Papers of the Reign of Henry VIII for the years 1523, 1529, 1530, 1532-3.] S. L.

**BARKER or BARKAR, CHRISTOPHER** (1529?-1599), queen's printer, was born about the year 1529, and is said to have been the grand nephew of Sir Christopher Barker, Garter king of arms, whose heir-at-law was Edward Barker, son of his brother John, and believed to have been the father of the printer. He appears to have had some fortune, and was originally a member of the Drapers' Company. Barker began to publish books in 1569, when the first entry in the 'Registers of the Company of Stationers' (ARBER, i. 398) under his name is a license for 'Morning and Evening Prayer . . . made by the Lady Elizabeth Tirwitt,' printed by H. Middleton in 1574. In 1569 he was not a member of the company, and did not own a press. 'Certen prayers of master Bullion' was licensed for him at the same time. In 1575 the Genevan bible was first printed in England, both in quarto and octavo form, as well as two editions of Whittingham's New Testament, all by T. Vautrollier for Barker. In the same year Middleton printed for him, for sale 'at the signe of the Grassehopper,' two editions of Gascoigne's 'Glasse of Government,' with a preface stating that 'this work is compiled upon these sentences following set down by mee, C. B.,' which indicates that the publisher had given some editorial supervision to the book. It contains the punning device of a man barking a tree, with the lines,

A Barker if ye will  
In name, but not in skill.

His first appearance as an actual printer was in 1576, when he produced two different versions of the Bible, each with the imprint, 'Imprinted at London by Christopher Barkar (*sic*), dwelling in Powles Churchyard at the signe of the tygre's head.' One of these versions was revised by Laurence Tomson, under-secretary to Sir Francis Walsingham, in whose service Barker had been, and whose armorial bearing was the tiger's head used by him.

In 1573 Elizabeth granted a patent of privilege, or the right of disposing of certain licenses, to Francis Flower 'as her Majesty's printer of the Latin,' farmed out by him to Vautrollier and others; and about 1575 a patent was granted to Sir Thomas Wilkes as the queen's printer of the English tongue. These and other printing privileges granted by Elizabeth were the subject of one of the earliest and most remarkable documents connected with the history of the English bible and the book-producing trade of this country. This was a representation to the crown of their griefs signed by 45 stationers and printers in the name of 140 others, and prov-

ing that the right of printing the bible had been common to all printers up to that date, and that it had never been attached to the office of king's or queen's printer. The petition was signed by Barker as one of those who 'do lyve by bookeselling, being free of other companies and also hindered by the same privileges' (ARBER, i. 111). But Barker soon afterwards himself joined the ranks of the privileged, as he purchased from Wilkes, on 28 Sept. 1577, a very extensive patent, especially including the Old and New Testament in English, with or without notes of whatever translation. He was thus appointed 'queen's printer.' It may be pointed out that this was merely a commercial transaction between two private persons, and that the patent was not given with any view of insuring the production of accurate editions of the Scriptures. By a legal fiction the deed specified that it was granted on account of Barker's great improvement in the art of printing. The subsequent bible-patents take their rise from this.

He was made free of the Stationers' Company on 4 June 1578, began to take apprentices on 16 June, and was admitted to the livery on 25 June. From a broadside in the library of the Society of Antiquaries we learn that in October of the same year he issued a printed circular to the London companies offering copies of his large bible at the special terms of 24s. each bound, and 20s. unbound. The clerks of the companies were to receive 4d. apiece for every bible sold, and whenever the members of a company subscribed 40l. worth and upwards, a presentation copy was to be offered to the hall (R. LEMON'S *Catalogue*, p. 23). About this time he changed the spelling of his name from Barkar to Barker. In December 1582 he addressed to the lord treasurer as warden a petition which contains a most interesting account of the Stationers' Company and the publishing trade of the time, together with a report on the printing patents granted between 1558 and 1582. After complaining of the abridgment of his own patent by those of Seres and Day, he says: 'But as it is I haue the printing of the olde and the newe testament, the statutes of the Realme, Proclamations, and the boke of common prayer by name, and in generall wordes, all matters for the Church. . . . Proclamations come on the suddayne, and must be returned printed in hast: wherefore by breaking of greater worke I loose oftentimes more by one Proclamacon, then I gayne by sixe, before my seruantes can come in trayne of their worke agayne. . . . Testaments alone are not greatly commodious, by reason the prices are so small, as will scarcely beare

the charges. The whole bible together requireth so great a somme of money to be employed in the imprinting thereof; as master Jugge kept the Realme twelve yere withoute, before he Durst adventure to print one impression: but I, considering the great somme I paid to Master Wilkes, Did (as some haue termed it since) gyve a Desperate adventure to imprint fower sundry impressions for all ages, wherin I employed to the value of three thowsande pounce in the terme of one yere and an halfe, or thereabout' (ARBER, i. 115).

Together with the other warden of the Stationers' Company, Francis Coldocke, Barker made a formal representation to Lord Burghley in 1583 on the dangers to be anticipated from the setting up of a printing press by the university of Cambridge (*Cal. State Papers*, Dom., 1581-90, p. 111). From an inquisition ordered to be made by the Bishop of London in the same year, we find that Barker owned five presses, being more than any one else except Wolfe. There were then in London twenty-three printers, who worked fifty-three presses, a number in Barker's opinion more than doubly sufficient for the whole of England and Scotland. There can be no doubt that between 1580 and 1586 the printing trade had fallen to a very unprosperous state. Some of the smaller men had organised a system of unlawfully producing privileged books: John Wolfe was one of those of whom Barker had to complain in this respect. The quarrel raged for four or five years; eventually some of the richer members of the company gave up certain copyrights to their poorer brethren.

While elder warden, Barker was fined 20s. on 2 May 1586 'for reteyninge George Swinnowe [an apprentice] at his art of printinge a certen space before he presentid him, which is contrary to the ordonance of the cumpanye' (ARBER, ii. 858). From the year 1588 he carried on his business by deputies, George Bishop and Ralph Newbery, and retired to his country house at Datchet, near Windsor. On the disgrace of Wilkes in 1589, Barker obtained (8 Aug.) an exclusive patent from the queen for the lives of himself and his son Robert [q. v.] embracing 'all and singular the statutes, books, pamphlets, acts of parliament, proclamations, injunctions, as of bibles and new testaments of all sorts, of whatsoever translation in the English tongue . . . imprinted or to be imprinted . . . also of all books for the service of God' (*Egerton MS.* 1835, f. 167). Bacon House, in Noble Street, Aldersgate, was occupied by Barker and by his son. Cotton describes thirty-eight editions of the Bible or parts thereof bearing the name of Chr. Barker, and dating from 1575 to 1588, and thirty-four editions as having

been produced between 1588 and 1599 by his deputies. To Barker is first due the use of roman type in printing the Bible. He died at Datchet (where he lies buried) on 29 Nov. 1599, in the seventieth year of his age.

[Ames's *Typogr. Antiq.* (ed. Herbert), ii. 1075-90; *Antis's Reg. of the Order of the Garter*, ii. 379; *Archæologia* (1834), xxv. 100; Notes and Queries, 1st ser. ii. 425, 2nd ser. x. 247; Cotton's editions of the Bible, 1852; *Cat. of the Books in the British Museum*, printed to 1640; Eadie's *English Bible*; Anderson's *Annals of the English Bible*; Report from the Select Committee of the House of Commons on the Queen's Printer's Patent, 1860; *Strype's Annals* (8vo), ii. pt. ii. 74, iii. pt. i. 510, iv. 103, 195; Nichols's *Illustrations*, iv. 164, vi. 421; Nichols's *Lit. Anecd.* iii. 572.] H. R. T.

**BARKER, COLLET** (1784-1831), Australian explorer, obtained a commission as captain in the 39th regiment, and served with that regiment in the Peninsular war; subsequently he was stationed in Ireland, till in 1828 he sailed for Australia, where, immediately on his arrival, he was appointed commandant of Raffles Bay, a small colony on the north coast. The colonial government was anxious to establish some settlements on this coast, in the hope of opening a trade with the natives of the Indian Archipelago through the medium of the Malays, and in 1824 settlers were sent to Melville Island, and in 1827 to Raffles Bay. The settlements did not prosper; Melville Island was abandoned in 1829, and when Barker arrived at Raffles Bay he found the settlers full of complaints of the hostility of the natives and of the unhealthiness of the climate. Scurvy was very prevalent, but Barker, by planting trees and vegetables, restored the health of the community, and his just treatment of the natives speedily removed their hostility. In the face of all opposition he insisted on forbearance and humanity on the part of the settlers, and by trusting himself alone into the hands of the natives and giving them other proofs of his justice and good feeling, he became possessed of great influence among them. Unfortunately, before the news of his success could reach the colonial government, the abandonment of the settlement was ordered, and Barker was appointed to the settlement at King George's Sound, on the south-west coast. Before leaving the district of Raffles Bay he explored the neighbourhood of Port Essington, and on his way to his new command he touched at the Swan River settlement and investigated the country near it. In April 1831 Governor

Darling requested Barker to search for a communication between Lake Alexandrina and St. Vincent's Gulf. Captain Sturt had descended the Murray River and discovered the lake, but had not discovered its communication with the sea. Barker started on this expedition with a fellow explorer, Mr. Kent, and a few soldiers. He ascended Mount Lofty, descried the range to the east, named after him Mount Barker, and saw the plains upon which Adelaide, Norwood, and Kensington now stand. On 21 April, with Mr. Kent and two soldiers, he came to the outlet he was in search of, and, since none of the others could swim, he swam across alone to make some observations. But while separated from his companions he encountered some natives who speared him in revenge for ill treatment suffered at the hands of whites. Barker was an able officer and 'a lover and follower of science,' but he deserves chiefly to be remembered for his patient humanity towards the natives and its complete success. Captain Sturt, in an eloquent eulogium of his brother officer, says of him that 'in disposition as in the close of his life he was in many respects similar to Captain Cook: like Captain Cook he suffered for the sins of others.'

[Wilson's *Narrative of a Voyage round the World*; Sturt's *Two Expeditions into the Interior of Southern Australia*, vol. ii., 1833; Lang's *Historical and Statistical Account of New South Wales*; Heaton's *Australian Dictionary of Dates*; private information.] R. B.

**BARKER, EDMOND** (1721-1780 ?), physician, was born in 1721; his birthplace and parentage are unknown. He studied medicine at the university of Leyden, whose register is the only authority for his age and nationality. The entry of his matriculation, on 16 Sept. 1743, describes him as an Englishman, aged 22. He took his doctor's degree in 1747, and settled to the practice of his profession in London. In the winter of 1749, Dr. Johnson, as yet uncelebrated, and only winning his way to recognition, established the Ivy Lane Club, which met weekly at a 'famous beefsteak house' near St. Paul's; to this conversational society Barker was introduced by a fellow-student, Samuel Dyer. Sir John Hawkins, in his 'Life of Johnson,' has left character portraits of some of the members of the club; he describes Barker as a dissenter by education, a unitarian by religious profession, and a disciple of Lord Shaftesbury in philosophy. According to the same authority, Barker was an acute reasoner on ethics, a deep metaphysician, an excellent classical scholar, and a student of the Italian poets. He was, however, 'a

thoughtless young man,' so slovenly in his habits, dress, and appearance as to be a jest to his companions; and naturally he 'succeeded ill in his profession.' In this sketch there is one characteristic detail which may be accepted with a confidence that Hawkins does not always merit. Johnson, we are told, so often snubbed Barker for his unitarianism that his visits to the club became less and less frequent. Hawkins continues: 'After leaving us' [i.e. the Ivy Lane company] 'he went to practice at Trowbridge, in Wiltshire, but at the end of two years returned to London, and became librarian to the College of Physicians in room of Edwards the ornithologist, and for some misbehaviour was displaced, and died in obscurity.' The third part of Edwards's 'Gleanings of Natural History,' published in 1764, was translated by Barker from English into French, the work being printed in parallel columns in both languages. The books of the Royal College of Physicians show that he was 'library-keeper' to that body from 1760 to 1771; how much longer he held the position—which was one of small emolument, and probably consistent with the exercise of his profession—or for what reason he ceased to hold it, a gap in the college records prevents us from ascertaining. It appears, however, that by 1781 a successor had been found for him. Boswell knew nothing of Barker at first hand, and it seems almost certain that his intimacy with Johnson was not renewed after his return from Trowbridge. To the sombre sequel of his career as described by Hawkins no other evidence is opposed.

[Album Studiosorum, University of Leyden, 1875; Hawkins's *Life of Johnson*, 1787; *Annals of Royal College of Physicians*, 1753-81; Edwards's *Gleanings of Natural History*, 1764.]

J. M. S.

**BARKER, EDMUND HENRY** (1788-1839), a classical scholar of greater industry than judgment, was the eldest son of the Rev. Robert Barker, vicar of Hollym and Welwick, and rector of Holmpton-in-Holderness, and was born at Hollym vicarage December 1788. He was entered at Trinity College, Cambridge, in 1807 as a pensioner, and afterwards became a scholar of his college. Whilst at the university he gained medals for Greek and Latin epigrams, but quitted it through religious scruples without taking a degree. From 1810 to 1815 he lived in Dr. Parr's vicarage of Hatton, in Warwickshire; but at the end of that time the doctor's wife quarrelled with her guest, and Mr. Barker left the house. Shortly after this event he married Miss Manley, a lady

who fortunately had some property settled on herself, and went to reside at Thetford in Norfolk, a circumstance which led him to append to his name on the title-pages of his works the mysterious letters O. T. N., which puzzled the scholars of foreign countries; but they meant nothing more than Of Thetford, Norfolk. His grandfather was the Rev. Thomas Barker, rector of Cherry-Burton, Yorkshire; but there had long been doubts whether Robert Barker, the vicar of Hollym, was born in wedlock or not. After ten years had been spent in accumulating evidence, E. H. Barker brought an action at the York assizes to prove his father's legitimacy, and gained a verdict in his favour. He thereupon endeavoured, on the ground of an alleged but lost will of his great-uncle, to establish his claim to the family estates of Potternewton, estates worth 3,000*l.* a year; but in this he was unsuccessful. Both Brougham and Scarlett were engaged in this cause (the tracts relating to which are now preserved in a bound volume in the British Museum), and its failure involved Barker in ruin. His library was sold, and he was cast into the Fleet prison. After some years he was released. But prudence and he were strangers to one another. He became more and more involved in rash adventures, and ultimately died, 21 March 1839, in a mean lodging-house near Covent Garden Market, leaving two daughters, who survived him. Five days later he was buried in the churchyard of St. Andrew's, Holborn.

Barker edited a vast number of editions, long since superseded, of the works of Greek and Latin authors, from the fables of Æsop to the speeches of Demosthenes. He translated Philip Buttmann's Greek grammar and C. J. Sillig's dictionary of the artists of antiquity. In conjunction with Professor George Dunbar, of Edinburgh, he compiled a Greek and English lexicon, which was well received by the public, and the same good fortune attended his edition of Lemprière's 'Classical Dictionary.' Many of the essays in his 'Classical Recreations' (1812) were written at Hatton and dedicated to Dr. Parr. Whilst living there he conceived the idea of reprinting the 'Thesaurus Græcæ Linguae,' the famous work of Henry Stephens, the French printer of the sixteenth century. This enormous labour was finished in 1826, in twelve folio volumes, but the name of Barker did not appear as its editor. The omission was due to a very severe review by C. J. Blomfield, afterwards bishop of London, which appeared in the 'Quarterly Review,' xxii. 302-48 (1820). Barker retorted with an 'Aristarchus Anti-Blomfeldianus;' but

it fell flat, though it was deemed of sufficient importance to be answered by J. H. Monk, subsequently bishop of Gloucester and Bristol, in the same review, xxiv. 376-400 (1821). In Barker's 'Parriana; or Notices of the Rev. Samuel Parr, LL.D.,' 1828-9, 2 vols., and in his posthumous 'Literary Anecdotes and Contemporary Reminiscences of Professor Porson,' 1852, 2 vols., may be found considerable information about those two scholars; but both works are deficient in discrimination and method. In the 'Pamphleteer,' xxi. 189-205 (1822), is the second edition of a vigorous and manly argument from Barker in support of the Greek cause; and in the same collection of pamphlets (xxvii. 415-80, 1826) is a tract to disprove the claims of Sir Philip Francis to the authorship of 'Junius,' a subject on which he addressed numerous printed letters to his friends between 1826 and 1830. To A. J. Valpy's 'Classical Journal' he was a frequent contributor from its third number to its close, and he also wrote in the 'British Critic' and the 'Monthly Magazine.' He is sometimes credited with the authorship of a few books for children, of some popularity in their day; but this statement can hardly be accepted by those who are familiar with his recognised volumes. Barker's powers of application were unbounded; but his critical acumen was inferior to his industry. He must rank in the annals of classical scholarship with Joshua Barnes.

[Literary Anecdotes of Porson, with Memoir of Barker in vol. i.; Gent. Mag. xi. 543-7 (1839), by B., i.e. George Burges; A. Blomfield's Life of C. J. Blomfield, i. 27-36.] W. P. C.

**BARKER, FRANCIS** (d. 1859?), Irish physician, graduated B.A. at Trinity College, Dublin, in 1793, and afterwards studied medicine at Edinburgh. He there became intimate with Sir Walter Scott. On taking a medical degree at Edinburgh he composed a thesis, 'De invento Galvani,' suggesting the identity of the nervous fluid and dynamical electricity. After residing in Waterford for five years, where he opened the first fever hospital in Ireland, he settled in Dublin; in 1808 was elected professor of chemistry there, and took the M.B. and M.D. degrees in 1810. He started the first Irish medical journal in conjunction with Dr. Todd. In 1804 he was elected senior physician to the Cork Street Hospital, and from 1820 to 1852 was secretary to the Irish board of health. He published many reports on fevers, and in 1821, in conjunction with Dr. Cheyne, a work on 'Epidemic Fevers in Ireland.' In

1826 he edited the Dublin Pharmacopoeia. He died about 1859.

[Dr. Waller in Imperial Biog. Dict.; Cat. of Dublin Graduates, 1591-1868.]

**BARKER, FREDERICK, D.D.** (1808-1882), second bishop of Sydney and metropolitan of Australia, was grandson of William Barker, dean of Raphoe, 1757-1776, and the fifth son of the Rev. John Barker, vicar of Baslow by Bakewell, Derbyshire, who died 6 June 1824. Frederick Barker was born at Baslow on 17 March 1808. He was educated at Grantham School and Jesus College, Cambridge, where he took his B.A. degree in 1831 and proceeded M.A. in 1839. He was appointed 24 April 1831 to the perpetual curacy of Upton, a small village in Cheshire, where he ministered until 28 Sept. 1834, and then spent a few months (4 Oct. to 21 Dec. 1834) in Ireland in the service of the Irish Church Mission. In the beginning of 1835 he was appointed to the perpetual curacy of St. Mary's, Edgehill, Liverpool, and held this preferment for over nineteen years. In the course of his incumbency he manifested a warm interest in scriptural education. On account of failing health Barker was induced to accept from the patron, the Duke of Devonshire, the paternal vicarage of Baslow, which had fallen vacant by the death of his elder brother, the Rev. Anthony Auriol Barker, on 21 Dec. 1853. Before leaving Liverpool Barker published a volume entitled 'Thirty-six Psalms, with Commentary and Prayer for Use in Families,' London, 1854. Barker also contributed to 'A Course of Sermons on the Principal Errors of the Church of Rome, preached in St. Andrew's Church, Liverpool, by Ten Clergymen of the Church of England,' 1838; to 'A Course of Sermons on Romanism, preached in St. Michael's Church, Liverpool, in 1838-9, by several Clergymen of the Church of England,' 1840; and to 'Twenty-two Sermons by different Clergymen, contributed in aid of the Erection and Endowment of a New Church at Grange in the Parish of Cartmel, Lancashire,' 12mo, Liverpool, 2nd edition, 1854.

Barker had been scarcely three months in residence at Baslow, when he was selected by Archbishop Sumner in August 1854 to succeed Dr. Broughton as bishop of Sydney, New South Wales. This office carried with it, by the queen's letters patent, dated 19 Oct. 1854, that of metropolitan of Australia. He was consecrated at Lambeth on St. Andrew's day, 30 Nov. 1854, and received the degree of D.D. *per litteras regias*. He arrived in Sydney in May 1855. His predecessor had procured the erection of the sees of Tasmania

in 1842, and of Adelaide, Melbourne, and Newcastle, all in 1847; and Barker in his lifetime effected the formation of the additional dioceses of Perth 1856, Brisbane 1859, Goulburn 1863, Grafton and Armidale 1866, Bathurst 1869, Ballarat 1875, and North Queensland 1878. Thus Barker's primacy, as first constituted, extended over twelve separate dioceses, in which, one after the other, the principle of constitutional government was developed in conformity with the precedent set by the dioceses of Victoria and Sydney. The first synod of the latter diocese met on 5 Dec. 1866; and in addition to the diocesan synods thus initiated Barker succeeded in establishing a general synod, composed of clerical and lay representatives from the several diocesan synods, for the exercise of certain legislative and administrative authority over the whole church in Australia and Tasmania. The formation of this general synod, which met three times during Barker's primacy, the last time being in his absence in October 1881, was regarded as having perfected the constitution of the Australian church. Under this *régime* the diocese of Sydney continued more and more to prosper, and when state aid to religion was abolished in the colony, it was ordained by the legislature that Barker should continue to receive his government salary of 2,000*l.* a year. Funds were forthcoming for the building of churches and the maintenance of the clergy; a noble cathedral was erected and paid for, and the requisite buildings, endowments, and staff were provided for a college for the education of young men for the ministry. Barker's work was arduous; and he paid three visits to England for the purpose of advancing the diocesan and provincial interests committed to his care. His first wife died in Sydney in 1876: on his third visit to England he married his second wife, Mary Jane, the elder daughter of Edward Woods, Esq., of London, and returned to Sydney in October 1878. He paid a fourth visit to Europe in 1881 in the hope of recovery from an attack of paralysis; after revisiting Derbyshire, he proceeded to the Riviera for the winter of 1881-2. He died after four weeks' illness at San Remo on Thursday, 6 April 1882, and was buried at Baslow on the 18th of the same month. Barker's only episcopal publication appears to have been 'A Charge delivered to the Clergy of the Diocese of Sydney, 23 Nov. 1858, at the Primary Visitation, &c.,' 8vo, Sydney, 1859.

**BARKER, GEORGE** (1776-1845), benefactor to Birmingham, was born in 1776. Notwithstanding his arduous duties as a solicitor, he devoted a large portion of his time both to scientific pursuits and to benevolent and social enterprises. He exerted himself with great energy to extend the advantages of the General Hospital, in behalf of which he was one of the chief promoters of the Birmingham musical festivals. He was the founder of the Birmingham Philosophical Society, and by his lectures on chemistry gave a considerable impetus to certain special manufactures. From the first he took a special interest in the inventions of Watt and Boulton; and it was chiefly owing to his exertions that an act was obtained for that 'gigantic absurdity,' as it was called, 'the Birmingham railway.' In recognition of his scientific acquirements he was in 1839 elected a member of the Royal Society. He died 6 Dec. 1845. His statue in marble is in the General Hospital.

[*Gent. Mag.* new ser. xxv. 324-5.] T. F. H.

**BARKER, SIR GEORGE ROBERT** (1817-1861), colonel in the royal artillery, after studying at the Royal Military Academy, Woolwich, was appointed second lieutenant in the royal artillery in 1834. Not happening to be employed in any of the colonial wars of the next twenty years, he had no opportunity of showing his qualities; but in the Crimea, whither, as captain, he proceeded at the beginning of the struggle, he speedily attracted the favourable notice of Sir Colin Campbell, afterwards Lord Clyde, to whose division he was attached. He commanded a battery at Alma and Inkerman, was in command of the artillery in the expedition to Kertch, and commanded the batteries of the left attack at the fall of Sevastopol. He returned to England a colonel, and when the news of the mutiny led to the despatch of a force of royal artillery to India, he was at once selected for service in that country. Under his old chief he served, with the local rank of brigadier-general, in command of the artillery at the siege and capture of Lucknow. Subsequently, at the head of a mixed brigade, he defeated the mutineers in force at Jamoo, and captured the stronghold of Birwah, for which services he was made K.C.B. After the suppression

of the mutiny Barker was engaged in measures for the consolidation of the material of the royal and Indian artilleries, a work of considerable difficulty. A military career of much promise was cut short by his death, which occurred at Simlah in July 1861.

[Army Lists; London Gazettes, 1854-56; Biographical Note in Off. Cat. of Museum of Artillery, Woolwich.] H. M. C.

**BARKER, HENRY ASTON** (1774-1856), younger son of Robert Barker [q. v.], the panorama painter, was born at Glasgow in 1774. As a boy he began to assist his father in painting his panoramas. When only twelve years old he was set to work to take outlines of the city of Edinburgh from the top of the Calton Hill observatory, and a few years later made the drawings for the view of London from Albion Mills. These drawings he afterwards etched. In 1788 he came with his father to London, and soon afterwards became a pupil at the Royal Academy. Barker continued to be his father's chief assistant in the panoramas till the latter's death in 1806, when, as executor, he took the panorama into his own hands, and for twenty years carried on the exhibition with great success. He frequently travelled to make his own drawings for his pictures, and in August 1799 left England for Turkey, to make drawings for the panorama of Constantinople. When he arrived at Palermo, he called on Sir William Hamilton, then English ambassador at the court of Naples, and was introduced by him to Nelson, who 'took me by the hand and said he was indebted to me for keeping up the fame of his victory in the battle of the Nile for a year longer than it would have lasted in the public estimation' (Barker's memoranda).

The panorama of Constantinople was exhibited in 1802, and the drawings were engraved and published in four plates. In 1801 Barker went to Copenhagen to make drawings for a picture of the battle, and while there he was again kindly received by Lord Nelson. In May 1802, during the peace of Amiens, he went to Paris and made drawings for a panorama of the city. After this many other panoramas were exhibited, the later ones being chiefly from drawings by Mr. J. Burford, who shared with Barker the property in a panorama in the Strand, purchased in 1816 from Mr. Reinagle. Barker, however, still travelled from time to time, and visited, among other places, Malta, where he made drawings of the port, exhibited in 1810 and 1812; Venice, of which a panorama was exhibited in 1819; and Elba, where

he renewed his acquaintance with Napoleon. After the battle of Waterloo, Barker visited the field, and went to Paris, where he obtained from the officers at headquarters all necessary information on the subject of the battle. A series of eight etchings by Mr. J. Burnett from Barker's original sketches of the field of battle were printed and published, as were also his drawings of Gibraltar. His last grand panorama was the coronation procession of George IV, exhibited in 1822. Of all the panoramas exhibited, that of the battle of Waterloo was the most successful and lucrative. By the exhibition of this picture Barker realised no less than 10,000*l*. About 1802 he married the eldest of the six daughters of Rear-admiral William Bligh, who commanded the *Bounty* at the time of the celebrated mutiny. By her Barker left two sons and two daughters. In 1826 he transferred the management of both the panoramas to Messrs. John and Robert Burford, and went to live first at Cheam, in Surrey, and afterwards in the neighbourhood of Bristol. He died on 19 July 1856 at Belton, near Bristol. In his works, his writing, his conversation, and his dress, the most remarkable characteristics were neatness and precision. A list of most of the panoramas painted and exhibited by the two Barkers will be found in the 'Art Journal' for 1857, p. 47.

[Gent. Mag. 1856; Art Journal, 1857, vol. ix.; Chambers's Journal, vol. xiii. 1860.] R. H.

**BARKER, HUGH** (*d.* 1632), an English lawyer, was educated at New College, Oxford. He was master of the free grammar school at Chichester, when it was attended by Selden, who received from him his instruction in 'grammar learning.' On 17 June 1605 he graduated D.L. at Oxford, being about this time chancellor of the diocese. He was admitted of the college of civilians on 9 June 1607. The statement that for several years before his death in 1632 he was dean of the court of arches in London is an error. He was buried in the upper end of the New College chapel, Oxford, where his virtues are commemorated in a Latin epitaph.

[Wood's *Athenæ*, iii. 367; Fasti, i. 307; Hist. and Antiq. of the Colleges and Halls of Oxford, ed. Gutch (1786), p. 200.] T. F. H.

**BARKER, JAMES** (1772-1838), captain in the royal navy, son of Mr. James Barker, shipowner at Rotherhithe, was born on 2 March 1772, and was entered on the books of the *Beaver* sloop, as early as 13 June, 1780. He afterwards, whilst still a child, was on board the *Prudent* in the West

Indies, and was present in the engagement at St. Kitts 25 and 26 Jan. 1782. In 1794 he was serving on board the *Russell*, of 74 guns, and in her shared in the glories of 1 June. He was then transferred to the *Jupiter*, carrying the broad pennant of Commodore J. W. Payne; and in the following spring was in the royal yacht, on the occasion of bringing over the Princess Caroline of Brunswick, a service that gained for him promotion to the rank of lieutenant, 13 April 1795. He was afterwards appointed to the *Orion*, with Captain Sir James Saumarez, and, continuing in her, had a part in the victories of L'Orient, Cape St. Vincent, and the Nile; the last engagement gave him commander's rank on 8 Oct. 1798. Later he commanded the hired ship *Moriston* in the Bristol Channel and on the coast of Cornwall, and was made post-captain on 12 Aug. 1812. He had no further employment in the navy, but settled down in the neighbourhood of Bristol, where he died 4 May 1838.

[Marshall's Roy. Nav. Biog. vii. (Supplement, part iii.), 96; Gent. Mag. cxii. ii. 203.]

J. K. L.

**BARKER, JOHN** (*n.* 1464), scholar of King's College, Cambridge, came up from Eton in 1464, and was author of a book called '*Scutum Inexpugnabile*,' a work on Logic. From this he was called the *Logic* or *Sophister* of King's College, *Sophister* being the name for a student in his second year, when logic was principally studied. This book was read in King's College, but apparently not elsewhere. Mr. Brian Rowe, scholar of King's College in 1499, wrote a recommendatory preface to it. No trace of the work is to be found in the Cambridge University library or the British Museum. Barker died 'a brother of the order of the Fryars Minorets.'

[*Skeleton Collegii Regalis Cantab.* by Anthony Allen, MS.]

O. B.

**BARKER, JOHN** (*d.* 1653), captain in the navy, was in earlier life a merchant, shipowner, and shipmaster of London, probably the same who, in 1627, in partnership with Matthew Cradock, John Fowke (afterwards, in 1653, lord mayor), and others, obtained letters of marque for the *Golden Cock*, of 200 tons (7 March, 17 July, 1627), which Barker commanded in the Mediterranean, and in which, in the course of 1629, he recaptured a Venetian vessel from a Turkish corsair in the neighbourhood of Zante. The grand signor demanded and enforced satisfaction from the Levant Company, at whose instance Barker was thrown

into prison, and so kept for more than a year (September 1630). His affairs after this do not seem to have prospered; and whilst his former partner, John Fowke, advanced to be alderman and lord mayor, he was still a shipmaster, and on 12 April 1652, when war with Holland was imminent, he hired his ship, the *Prosperous*, of 600 tons and 44 guns, to the state, as a man-of-war, himself remaining in command. It does not, however, appear that the *Prosperous* was with Blake in the engagement off Folkestone on 19 May; but from the general gathering of ships which immediately followed, we may feel certain that she was with him in his cruise to the northward, when he captured or dispersed the Dutch herring fleet. In September she went to Denmark, as part of the squadron under Captain Ball [see BALL, ANDREW], and narrowly escaped being lost at the same time as the *Antelope*. On her return to England, towards the end of October, she was sent into the river to refit, and was still there when the battle was fought off Dungeness on 30 Nov. In the stern remodelling of the navy which took place after this defeat, Barker was confirmed as captain of the *Prosperous*, and was present with the fleet off Portland on 18 Feb. 1652-3. From his relations with Ball during the previous summer, it is probable that the *Prosperous* formed part of the red division, under Blake's immediate command; it is, at any rate, certain that she was in the very thick of the battle; was engaged by several ships at once, led on by De Ruyter in person; and that, after a brilliant defence, Barker and a great part of the crew were killed, the rest wounded or overpowered, and the ship taken possession of. Her men were hastily transferred to De Ruyter's own ship, and a prize-crew put on board the *Prosperous*, which before nightfall was won back by the English; but the men remained prisoners, and were not released for some months. A gratuity of 400*l.* was assigned to Barker's widow, and the command of the *Prosperous*, whilst in the state's service, was given to his son William, who had himself been badly wounded when his father was killed.

[Calendars of State Papers, Domestic, 1627-1654.]

J. K. L.

**BARKER, JOHN** (1682-1762), presbyterian divine, was born in 1682, but neither the locality of his birth nor the condition of his parents has been ascertained. It is probable that he was related to the Rev. Matthew Barker, who was ejected from St. Leonard's, Eastcheap, London, in 1662, and

died on 25 March 1698 (CALAMY'S *Continuation*, p. 63). After the ordinary school training he was educated for the presbyterian ministry by Timothy Jollie, at Attercliffe, Yorkshire. Having been 'certified' by Jollie, Barker proceeded to London, and was licensed by the presbyterians as a preacher of the gospel. In 1709 he was chosen assistant preacher to one of the foremost presbyterian congregations in London, viz. of Crosby Square. The senior pastor was Dr. Benjamin Grosvenor, with whom Barker lived on the most affectionate terms.

On the death of Matthew Henry the commentator in June 1714, his congregation in Mare Street, Hackney, London, invited Barker to succeed him. There was division of opinion as to the new minister, and a secession followed, which culminated in the Gravel Pit congregation. But the majority adhered to Barker, and so rare was his tact and so unquestionable his pulpit power, that very soon the congregation was as large as it had ever been. Shortly after his settlement at Hackney, Barker took part in the historic controversies on the Trinity, which divided protestant dissenters into two hostile camps, respectively known as subscribers and non-subscribers. Barker belonged to the former, and delivered a series of discourses on the supreme and absolute divinity of Jesus Christ. In 1718 he was assailed by a member of his congregation, the Rev. Martin Tomkins, on the use of doxologies in prayer and praise. Prefixed to what Tomkins called 'A Calm Inquiry whether we have any Warrant from Scripture for addressing ourselves in a Way of Prayer or Praise to the Holy Spirit,' is 'A Letter to the Rev. Mr. Barker.' Barker did not allow himself to be drawn into controversy here, but the attack led to correspondence with Dr. Isaac Watts.

In 1729 the Rev. Philip Gibb was chosen as Barker's co-pastor. He was a man of ability, but his orthodoxy was questioned; in 1737 he was forced to retire, and in 1738 the place was filled by the Rev. William Hunt. It was in the same year that Barker himself suddenly resigned, to the grief of the congregation. He assigned no reasons, but after-events make it probable that he had adopted Baxter's religious opinions, and held it due to his rigorously Calvinistical congregation to withdraw.
